The Dutch administration. Since the sultanate was swept away by the Atjeh War, the highest authority was considered to have passed to the “regents” of the sultan, the ulêebalangs. This administrative institution which drew its sanction from ‘âdat (local customary law) was fitted into the Dutch administrative system in the following way. The ulêebalangs’ territories were recognised as “native states” (zelfbesturende landschappen), and their relationship with the Dutch government was regulated by the korter verklaring. Exceptions to this were the district of Great-Atjeh, and the sub-district of Singkel, both of which were classed as “directly ruled territories” (rechtsstreeks bestuurd gebied). Great-Atjeh, the territory of the three sagis, was included in this category because after the conquest it had wrongly been assumed that here, in contrast to the rest of Atjeh, the chiefs were dependent officials of the sultan. The border territory of Singkel was included on historical grounds. A section of this district had been brought under Dutch rule earlier, forming part of the residency of Tapanulu, and therefore in determining the form of administration the system in force elsewhere in that residency was followed. But here too the existing administrative frame-work based on ‘âdat law was maintained, so that the panglimas sagi, the ulêebalangs, and so on, as ‘native chiefs’ were made government officials.

The ‘âdat system which was thus embodied in the administration presented a picture of infinite diversity. It embraced about 100 ulêebalangs acting as independent rulers, and about 50 panglimas sagi, ulêebalangs and local chiefs with various other titles in the directly ruled territories. The size of each territorial unit varied from a village to the equivalent of a Dutch province, the populations from a few hundreds to more than 50,000, and the educational background of the rulers from a simple primary school course to training at the Civil service college (Bestuurschool) in Batavia.

Over this Indonesian administrative framework extended the Dutch administration; its task was the creation and enforcement, through these institutions, of peace, order and the rule of law, and the economic and cultural development of the land. The Government (later Residency) of Atjeh and Dependencies, administered by a Governor (later a Resident), was for these purposes divided eventually into four districts, each administered by an Assistant Resident. These were the district of Great-Atjeh, and the districts of the North Coast, the East Coast, and the West Coast. They in their turn were subdivided into a total of 21 sub-districts, each administered by a Contrôleur (District Officer).

The policy of government was consistently directed towards promoting a larger measure of personal initiative on the part of the chiefs, and bringing the Indonesian administration into line with Western standards. So the old type of chief, ruling like a patriarchal despot, gradually made way for more progressive younger men.

Thus under the Dutch régime the administration remained wholly in the hands of the hereditary ulêebalang caste, a caste consolidated on the one hand
by intermarriage between families already related to each other in a variety of ways, and divided on the other hand through the operation of adat, or customary, feuds. The hegemony of this caste, moreover, was not confined to the sphere of government. In accordance with the *adat* the administration of justice was also in the hands of the *uleebalangs*, whilst in accordance with the *hukom* they were the religious leaders of their own territory. In addition they had often important trading and other economic interests, and usually disposed of extensive estates, particularly in Pidie, where a medievel system of feudal holding still prevailed. Finally— their sons being considered first for all forms of education and training—they had in a certain sense also an intellectual monopoly.

When the Japanese War broke out there were three *uleebalangs* of outstanding importance: Teuku Nja' Arif, the chief of the sact of the XXVI Muhims, had represented *Atjeh* in the *Volksraad* until 1931. Teuku Muhammad Hasan, ruler of Glumpang Payong (Pidié), had previously been employed in the Residency offices at Kutaraqja, where he exercised a great influence on political policy. Teuku Haqji Tjihi Muhammad Djohan Alamsjah was the ruler of Peusangan (Bireun).

While the *uleebalangs* linked itself increasingly closely with the Dutch régime, amongst the *ulama* group, taken as a whole, the anti-Dutch tradition was maintained. The predominant position which the *ulamas* had attained during the *Atjeh* War was lost again with the return of peace, and the traditional superiority of the *uleebalangs* was restored. So there developed gradually between these two groups, which had co-operated during the war, an antipathy—a recurring theme in the history of Atjeh—as the result of which the *ulamas* regarded the *uleebalangs* as traitors.

Religious life itself was left to develop freely, in keeping with the tradition of the Dutch régime. At first Tuanku Radja Keumala (whose father was a great-grandson of Sultan Muhammad Shah, *supra* XXI), acted as adviser on religious affairs. But after his death this office was not refilled, whilst the advisory council on religious affairs established in 1919 under the title "raad ulama" ("Council of "Ulama") , of which this learned descendant of the sultan formed the central figure, was discontinued. For this reason the Dutch authorities were subsequently dependent for their information about developments in the religious sphere upon the *uleebalangs*, who were considered legally the religious leaders of their own territories. Ultimately, just before the Japanese invasion, another descendant of a former sultan, Tuanku 'Abd al-'Aziz, *imeum* of the great mosque at Kutaraqja, was made unofficial religious adviser. He was not an *ulama* in the sense which was attached to that word in Atjeh, and although known as *ulam* (see above) he did not enjoy anything like the prestige of his eminent predecessor.

Religious instruction retained an important place next to secular education. Besides elementary religious education *Atjeh* possessed a large number of so-called religious secondary schools in which geography, history, economics, etc., were also taught. Many *uleebalangs* made a point of having one or more religious schools in their territory, which through the fame of the *ulamas* trained in Egypt, Minangkabau, or in Atjeh itself who taught in them, would enhance their own reputations. That these *ulamas* were often more or less openly anti-Western in outlook they accepted as part of the bargain.

As for the third component in the struggle against the Dutch—the Sultan's party—its rôle was played out. The "pretender-Sultan" fled in exile in 1939 in Batavia. His son was allowed to return to *Atjeh*. The other descendants of the sultanate remaining in *Atjeh* wielded little influence. An exception was Tuanku Mahmud, an important political figure, who had been trained at the Civil service college in Batavia. He held a government post in Celebes for some years before returning to *Atjeh* as senior native official in the service of the Dutch there. In 1933 he succeeded Teuku Nja' Arif as a member of the *Volksraad*, and after the death of the "pretender-Sultan" became undisputed head of the sultan family. A campaign started in 1939 by some Achehnese merchants for the restoration of the sultanate met with little response; there was practically no support for it from the *uleebalangs*, who saw in it a threat to their own position.

The political situation itself developed favourably. The last resistance incident took place in 1933, and the military garrison was gradually reduced. The *hajr*-hate and the idea of a holy war—negative expressions of the religious consciousness—gave way to a positive local Achehnese patriotism, which expressed itself in the normal impulse to be master in one's own house, or more specifically to get an increased number of posts in the administration occupied by one's fellow countrymen.

Modern nationalist ideas had as yet hardly any hold on the Achehnese people. The same was true of the Muhammadiyya movement, which originated in Java. Though it fixed as its target the advancement of religious life, and had its connexions over the whole of Indonesia, it struck no responsive note in Achehnese religious life. It remained—despite its Achehnese leadership—a distinctly non-Achehnese movement, which attracted mainly non-Achehnese elements, or locally the militant part of Achehnese society, which in the absence of a purely political movement sought in it satisfaction for their political and social aspirations. The religious ideas of this young Islamic modernist movement were quite alien to the more conservatively orientated religious life of the Achehnese.

As a counter-weight to the modernist ideas of the Muhammadiyya, the *PUSA* or *Persatuan Ulama-ulama Seluruh Atjeh* was founded at Bireun in 1939, under the influential patronage of the ruler of Peusangan. Under the direction of *Atjeh* 's most prominent *ulamas* it was to be the vehicle of that typically Achehnese strictly orthodox religious life. Its membership was not necessarily limited to *ulamas*. Anyone else who could identify himself with its aims could join it, and its most prominent leader was Teungku Muhammad Dawud Beureu'eh from Keumangan (Pidié). The movement seemed to fulfill an important need. Through it both conservative and progressive *ulamas* were brought together, and branches were set up throughout *Atjeh*. To have assumed a political, let alone an anti-Dutch, character, would have been inconsistent with the aims of the movement. Its attitude towards the government and the *uleebalangs* was completely correct, and many *uleebalangs* accepted the position of adviser to their own local branch. The position of patron was offered to Tuanku Mahmud. A youth movement was founded under the name *Pemuda Pusa*, with its headquarters at Idi. The more advanced and militant elements, reacting against the pressure of the *adat* authorities, sought within this movement a refuge, and a means of expressing
their own ideas. As a result the youth movement quite quickly began to take on a more militant and subversive character. So the Pusa itself gradually developed into a new and potent weapon in the hands of the ulamas in their struggle against the Dutch régime and the ulëbalangs.

We have already dealt briefly with economic developments in this period, and with education in its religious aspect. Secular education expanded steadily. At the time of the Japanese invasion Atjeh had one higher grade school, thirteen schools giving Western elementary education, 348 elementary vernacular schools, 45 vervolgscholen or advanced vernacular schools and one trade and handicraft centre, founded either by the Dutch government or the native states. There were besides a number of private schools giving elementary Western education, supported by the Muhammadiyya and Taman Siiswa societies.

The Japanese occupation. Even before Japanese troops occupied Atjeh in March 1942 rebellions against the Dutch government broke out in Great-Atjeh and in the North and West Coast districts. These took on the character of a national rising, particularly in the sari of the XXII Mukims and in the sub-district of Tjalang, on the West coast. After the Japanese troops had landed the rebellion spread quickly. As during the Atjeh War the most important component of the rising was formed by the ulamas. It was led by Teungku Muhammad Dâwûd Beuereu’êh at the head of the Pusa and the Pemuda Pusa, which provided a single organisation spread over the whole of Atjeh, admirably suited for the preaching of the holy war. The participation of the ulëbalangs was at first limited to a number of discontented political elements of purely local importance. That the rebellion in the sari of the XXII Mukims was able to assume the character of a national rising is explained by the support which the ulamas experienced from the chief of the sari, the son of the great resistance leader of the Atjeh War, Teuku Panglima Pöûm Muhammâd Dâwûd, who had died shortly before the outbreak of the war in Tjalang. The participation of Teuku Sabi of Lageuân, one of the only two native rulers who had earlier supported the movement for the restoration of the sultanate, set its stamp on the nature of the rising there, so that the third component from the Atjeh War, that of the sultanate, re-appears at this time too. The movement from the Japanese side, for immediately after the fall of Penang in December 1941 a fifth column organisation was formed from the Achehnese colony there, which sent its agents back to Atjeh as “refugees” from Japanese violence. Shortly before the Japanese landing Teuku Nja’ Arif, the chief of the sari of the XXVI Mukims, joined the rebellion, whilst later Teuku Muhammâd Hasan of Glumpang Payöng also declared that he had already been in contact with the Japanese before their attack.

From the beginning the Japanese stood in a different relationship vis-à-vis the ulëbalangs and the ulamas than had the Dutch. From the outset they received support from the ulamas more perhaps than from any one else. An attempt by the Pusa to take over power locally from the ulëbalangs, however, was not sanctioned by the Japanese, since they could not allow the existing social order to be dislocated by the sweeping aside of the government machinery based on the ‘ddat. It would have undermined their own military strength. Instead Japanese policy was aimed at linking both of these political forces, that of ‘ddat and that of ḥukûm, in order to obtain the co-operation of the people as a whole in their war effort. The Japanese tried therefore just like the Dutch to keep a balance between both groups. The fact that the ulëbalangs too had taken an important share in the rising made this policy acceptable.

The rule of the ulëbalangs was thus maintained. In the sphere of government the position of the ulëbalangs was even strengthened. Dutch government officials made way for Indonesian gun-chôs who were chosen, with a single exception, from leaders of the ulëbalangs families. Two ulëbalangs represented Atjeh in the delegation from Sumatra which visited Japan in 1943, one—Teuku Muhammâd Hasan—being designated as its leader. In the advisory council for Atjeh created at the end of 1943, Teuku Nja’ Arif was appointed chairman, and Teuku Muhammâd Hasan deputy chairman. As it was first constituted, the majority of its members belonged to the ulëbalang class; but this was no longer the case when it was re-constituted in 1945.

Nevertheless the position of the ulamas was considerably strengthened, at the expense of the ulëbalangs. At the beginning of 1943 Tuankan ’Abdul Azîs was appointed adviser for religious affairs for the whole of Atjeh, and some months later he was made chairman of the newly created advisory council on religious affairs. Teungku Muhammâd Dâwûd Beuereu’êh was appointed deputy chairman of this council, which had branches throughout Atjeh, and he quickly became the leading figure in it. The principal object of this and similar organisations was to bring religion into the service of the Japanese war effort. In 1944 a court was established to hear religious cases under the name of shahâ-yûn, and in this too Teungku Muhammâd Dâwûd Beuereu’êh and his Pusa predominated. Eventually one of the members of the executive committee of Pusa was appointed inspector of religious education. Teungku Muhammâd Dâwûd Beuereu’êh and a number of other ulama were members both of the first and of the second Council for Atjeh.

The administration of justice too was re-organised, and largely withdrawn from the control of the ulëbalangs. In the magistrates courts (hu-hüm) in particular a large number of those appointed as members were supporters of Pusa, leaders of the resistance movement, and other enemies of the ulëbalangs.

This policy of holding a balance between both groups could satisfy neither the ulëbalangs, nor the ulamas. To be sure, the ‘ddat was no longer the mistress and the ḥukûm her obedient slave-girl. But the ulamas would only be satisfied with a position in which the ḥukûm would be mistress and the ‘ddat the slave. So both groups conducted a remorseless struggle over the heads of the Japanese governor. Meanwhile the pressure on the Japanese was growing from day to day. The Japanese army of occupation was dependent on what the country itself could provide both for its food and for the labour supply needed for the construction of roads, airfields and fortifications. To provide this, an almost intolerable burden was placed on the Japanese, whilst it became ever harder for the ulamas to co-operate in satisfying the Japanese demands. In September 1943 mass arrests took place throughout
Atjeh and amongst those arrested were several ulêbalangs. In August 1944 the ruler of Glumpang Payong, who was suspected of underground activities and of conspicing with the Dutch, was arrested with some other ulêbalangs, and executed shortly afterwards. At the moment of these mass arrests the ruler of Peusangan was already for some months in prison. The possession of a copy of the Hikayat prang sabi (“Summons to the Holy War”) or its recitation was made an offence. In two instances this was open resistance. As early as 1944 there was an insurrection in Bayu, in the sub-district of Lhôl Seumâwê. There an ulama Teungku ʿAbd al-Djâll who, despite his youth, was already head of a large religious school, is said to have preached the prang sabi against the Japanese. He and his followers were killed in the bloody conflict which followed. In 1945 there was another insurrection in Pandrath, in the sub-district of Bireuen. Here the heavy economic burden of compulsory deliveries and “voluntary” labour produced an outbreak which was savagely repressed.

The Japanese invasion brought at first a revival of the negative element of kâfir hatred. But as Japanese pressure increased the positive element of local patriotism grew, stimulating the urge to take control into Acehnese hands. In the end, as the result of the Japanese promise of independence, this developed into the idea of a unity, based on religion, which would embrace the whole of Indonesia.

Indonesian Independence. The Japanese surrendered in August 1945 did not bring any restoration of the Dutch régime in Atjeh and only the island of Sabang was occupied by Dutch troops. The way was thus open for a final reckoning between the ulâmas and the ulêbalangs. In December 1945 a civil war broke out which ended in February 1946 with the annihilation of the power of the ulêbalangs. A number of ulêbalang families were massacred to the last male child. Hundreds of members of ulêbalang families disappeared into republican internment camps as “enemies of the Republic”, and their property was confiscated. Amongst them were the chief of the sâqi of the XXVI Mukhims and the ruler of Peusangan.

This annihilation of the power of the ulêbalangs cannot be viewed solely as a result of the antithesis between ʿiddat and bûkim. Social, political and economic factors were also involved. Religion played the part of the instrument of a social revolution against the position which the ulêbalang class held in society as a whole, a position which has been described at some length above.

Soon after the Pusa emerged victorious from the civil war, its leader Teungku Muhammad Dâwûd Beureu'êth became military governor of Atjeh. His adherents filled those posts in the administration, the police and the judiciary which had formerly been occupied by the ulêbalangs. The lack of experience, high-handedness and corruption of the new rulers, who in fact were supported by only a minority of the population, soon led to increasing unrest, and in 1948 there was an abortive insurrection in Kutafrâdja. But so long as the central government of the Republic had not reached a settlement with the Dutch, its hands were full elsewhere and there was no question of its intervening in Atjeh. The common struggle for the recognition of Indonesian independence was in these years the only aim; Acehnese local patriotism and the idea of Indonesian unity for the moment coincided.

After the transfer of sovereignty from Holland to the Republic of Indonesia at the end of 1949 the intervention of the central government could no longer be avoided. For administrative purposes Atjeh was included in the province of North Sumatra, so that Teungku Muhammad Dâwûd Beureu'êth lost his position as governor. Achehnese military units were gradually replaced by non-Achehnese troops, thus depriving the Pusa of their military support. In 1951 a large number of Pusa leaders were arrested under cover of the general round up of Communist leaders, undertaken throughout Indonesia at this time, and inefficient Pusa adherents in official positions were removed from their posts. But the expectation of the central government that they could in this way gradually steer the government in Atjeh back into normal channels, was not realised. In September 1953 Teungku Muhammad Dâwûd Beureu'êth and his followers launched a rebellion against the central government. A bloody guerrilla warfare followed, which lasted until the middle of 1957 when an informal truce was reached between Teungku Muhammad Dâwûd Beureu'êth and the local authorities. The year before, in October 1956, Atjeh was again granted the status of an autonomous province.

(À. J. PIEKAAR)

AL-'ATK, a valley in Nadjd, the northernmost of those cutting through the western wall of the cuesta of Tuwayk. It is a true wadi with a strong flood whenever there is enough rain. The valley forms the dividing line between the district of Sudayr to the north and the district of al-Mahmal to the south. Its head (far'a) is in the low ground west of Tuwayk in the vicinity of the oasis of al-Ḳasab, south of which there is a large salt pan (mamâlaha or sabâḥa). After passing north of the hills of al-Bakarat (pl. of bakra = sheep; 3-5 years old), the valley goes through the escarpment of Tuwayk by a narrow passage. Just east of this passage, the valley of Urât descends from the uplands of Sudayr and the valley of Thâdik comes up from the south to join al-'Atk.
Farther on, the main valley of Sudayr—in which lie Dialadjil, al-Awda, and other oases—and the valley of al-Atk flows through savage gorges to reach the "southern Aures depression", which sinks down to below sea level. The Nememcha rises the Aures (Awras), the only massif of the Sahara, though it no longer retains everlasting snows. Hemmed in to the west by the Sūs and the Hawr of Marrakesh, and to the east by the Dj. Bani, it breaks up, despite several considerable peaks, into ridges and deep transverse valleys, and may only be crossed by high cols, historical routes to the Sus (Tizi n-Test) and the High Dra (Tizi n-Tishka). In the centre and the East it becomes primarily calcareous (liassic and jurassic), with narrow faulted anticlines and broad synclines; after the Dj. ‘Ayyaṣhi (3,752 m.), the chains lose height and peter out in the South of Eastern Morocco. The "wādīs" of the Dj. Saghro or al-Mahmal or proceed westwards to the "southern Aures depression", which lies Dialadjil, al-Awda, and other oases—and the valley of al-Atk flows through savage gorges to reach the "southern Aures depression", which sinks down to below sea level. The Nememcha rises the Aures (Awras), the only massif of the Sahara, though it no longer retains everlasting snows. Hemmed in to the west by the Sūs and the Hawr of Marrakesh, and to the east by the Dj. Bani, it breaks up, despite several considerable peaks, into ridges and deep transverse valleys, and may only be crossed by high cols, historical routes to the Sus (Tizi n-Test) and the High Dra (Tizi n-Tishka). In the centre and the East it becomes primarily calcareous (liassic and jurassic), with narrow faulted anticlines and broad synclines; after the Dj. ‘Ayyaṣhi (3,752 m.), the chains lose height and peter out in the South of Eastern Morocco. mountains to the East of the Aures tower above this depression and then subdivide northwards into isolated ridges, the remains of broad domes. In Tunisia, the chains deriving from the Saharan Atlas cover the entire mountain country, except the north-west. The structure of domes, frequently faulted, and of broad basins, to be observed in the Tebessa mountains, is continued in the Dorsal range of Tunisia. Its anticlines, generally calcareous, (1,154 m. at the Dj. Chambi) and separated at times by broad transverse rift valleys, rendering communications easy, converge towards the N.E. to form one single chain bristling with sillas (Dj. Zaghwân, 1,298 m.) extending as far as the Gulf of Tunis. North of the Dorsal range, the High Tell and the Medjerda regions are composed of compressed folds, which, however, only produce mountains of moderate height, separated by broad basins, by the deep depression of the Middle Medjerda and by its tributary valleys: the "wâdîs" of Mellêgue, Tessa and Siliana. In the south the anticlinal chains of limestone or sandstone rise among broad plains, generally synclinal and covered by alluvium: from a W.-E. direction on the parallel of Gafsa, they are turned back in a S.-N. direction, bordering the plains of Eastern Tunisia.

North of the High Atlas and of the Sahara Atlas of Algeria, extend vast regions of low relief, which, however, are twice intersected by transverse chains: the Middle Atlas and the mountains of the Hodna. The Middle Atlas has the same rocks and the same style as the central High Atlas with narrow faulted anticlinal folds (Dj. Ben Nacer, 3,334 m.) and broad synclinal depressions. But in the N.W. it descends in step plateaux; the faults separating them are covered with volcanic cones and coulées. Heavily watered, it gives birth to the principal rivers of Morocco: Oum er-Rebia (*Umm al-rabîbah*), Sebou, Mouloïya. The Middle Atlas separates the rigid block of primary terrains of the Moroccan "meseta" (central plateau, hills of the Rehamna and of the Djebilet, sedimentary phosphate plateau, alluvial plains of the Tadla, the Bahrai and of the Hawf of Marrakesh) from that of the Oran-Moroccan borders, which is almost completely concealed by secondary sediments. The Rokam, to the East of the Mouloïya, is extended by the Debou and Djéreda plateaux, in Morocco, and by the undulating and faulted plateaux of the Tell Atlas of Oran: the mountains of Tiemcen, of the Mekarra, of Saïda and Frenda. North of the Sahara Atlas, the High Algero-Moroccan plains, rising to 1,200 metres in the West and 800 metres on the meridian of Algiers, are structurally similar, consisting of simple exhausted folds, which, however, are three quarters buried beneath considerable old alluvial deposits (basins of the Chott Gharbi and Chott Cheguel and of the Zabr); only the Oued Trouches reaches the sea. Further to the E., the narrow chain of the Hodna mountains and the Belezma massif, separate the very low lying basin of the Hodna (400 m.) from the high plains of the eastern and Constantine regions of Algeria (800 to 1,050 m.). The W.-E. secondary chains of which they are made up, calcareous domes or ridges, leave gaps between them and continue, intermittently spaced out, across the high Constantine plains, which they dominate, rising to several hundred metres. The so-called region of the Sebhâch in the south escapes the drainage of the Rhumel, the Seybouse and the Meskiâna (Mellêgue). As for the plains of Eastern Tunisia, these are incompletely drained behind the camber of the Sabel.

Bordering the Mediterranean, a second complex is formed, extending from Tanger to Bizerta, by the chains of the Rif and the Tell Atlas. They are very complex in structure. The cemented and loose sediments of the Secondary and Tertiary have on several occasions been heavily folded. They have been pushed and overlapped southwards by the primary eruptive masses of the "coastal belt", which only subsist still South of Ceta and Kabylia; these masses dominate in the south the lofty calcareous sieras of the Djebala and the Bokkoya (Morocco), the Djurdjura and the chain of Numidia. All the rest is formed of a thick and plastic mass of clay, sandstone and schistous sediments, usually discharged in "slip sheets" and, in Morocco, clearly carried down in a southerly direction. These structurally very complex mountains have been cut and broken up by transverse gorges and longitudinal valleys due to the vigorous erosion caused by Mediterranean torrents. The chain of the Rif, from Ceta to Melîla, forms a crescent of mountains (2,450 m. at the Dj. Tidighine), which is enlarged in the south by a variety of hills carved by the tributary rivers of the Ouergha and Sebou in the Rif and Pre-Rif sheets. From the Melîla peninsula to the Trara massif, the heavily folded zone narrows and follows the hills of the Low Mouloïya to the Djem Snassen mountains and the Tell plateaux of Oran. Then it bifurcates, continuing on both sides of a long depression, running from the sebâh of Oran to the elbow of the Middle Chelif; to the North are the hills of the Sabel of Oran, which are succeeded by the Dahra and Miliana mountains (Zaccar, 1,579 m.), and to the south, the Tessala and the Ouled Ali and Beni Chougrane mountains, which border the intermontane plains of Sidi Bel Abbès and Mascara, giving way in the East to the great Ouarsenis massif (1,985 m.), which directly dominates the high plains. The longitudinal depression recommences East of Medea and runs down by the valley of the wâdî Sabel-Soummam as far as Bougie (al-Bigâya); along its northern edge runs the Mittâja Atlas, rising above the alluvial plain of the Mittâja and the hills of the Sabel of Algiers, after which it is bordered by the Djurdjura Kabylia, culminating in the Lalla Khasidja peak (2,308 m.); to the south rise the Titeri mountains and the long Biban chain. East of Bougie, the Babor (2,004 m.) and the chain of Numidia are contiguous to Eastern Kabylia and directly dominate the plains of the Serjona and Constantine mountains. The crystalline terrains of Eastern Kabylia are partly obscured by oligocene clays and sandstones, bearing cork forests. These same sandstone form the mountains encircling the littoral plain of Bône and, in Tunisia, Khroumiria and the Mogod regions.

The Atlas makes North Africa a country of mountain chains encircling plains, which are often both elevated and arid. The relief accentuates and diversifies the climatic contrasts due to the proximity of the Mediterranean and the Sahara. Dominating the Tell regions, the steppe areas of the high plains and the desert of the Saharan Piedmont, the principal massifs are original geographical environments, which have played a considerable though mainly negative rôle in the history of the Maghreb.

**ATOM** [see AL-DIJUZ ALLADHIN LA VATADJIZZA*].

**ATRÂBULUS** [see TARÂBULUS].

**ATREK**, a river in the north of Khurasan, which has its source on the mountain of Hazâr.
Masjid on the Gulistan ridge of the Kopet Dagh, 37°10' N, ca. 59° E, NE of Közan (Kudan), which he drowned in blood (1078). He was unable to prevent the Egyptian army coming to threaten him in Palestine, which he sent him a high-flown message of congratulation and appeared before him at Nasā, but died shortly afterwards at Khabūshān on the Atrek (9 Dżumādā II 551/30 July 1156).

According to him and his followers, he was a hero and stood against the Seljūks and the Karā Khiṭāy (to both of whom he had eventually to pay tribute), as well as by the expansion of his territory northwards, and so layed the foundation stone of its position as a great power which lasted up to the Mongol invasion.

in Syria proper, and appealed to Malikshah, who decided to make Syria an appanage for his own brother, Tutush. Atsiz may perhaps have hoped to be able to retain a territory as a vassal, but in the interview which took place between the two chief-tains, Tutush rid himself of Atsiz by assassination (1079).

The episode of Atsiz is interesting as the first successful attempt to establish a Turkoman principality on the Western confines of the Saldjukid empire. As such it is directed against the Saldjukid regime. Naturally the Turkomans made themselves felt by their ravages in the surrounding countryside, as everywhere else; but once he had subdued the country, he took care to restore agriculture; the townspeople, in contrast, complained that he showed no interest in them. The episodes narrated above are sufficient evidence of his religious indifference; the hostility shown to him by the urban aristocracy, both pro-Saldjukid and pro-Fatimid, doubtless explains in part his evident relations with the Christians, especially the Monophysites, who, in spite of what has been said on the subject, were spared at the time of the Jerusalem massacre in 1078. It is therefore wrong to consider him, as one of those responsible, by repercussion, for the preaching of the crusade in Europe.

The sources are indicated particularly in the first of these works; much the most important is the Mir'al al-Zamān of Sibt Ibn al-Djawai.

---

**'Atṭāb b. Asīd b. Abī'l-‘Īs b. Umayya Al-Umawī, a Companion of the Prophet, who was converted on the day of the capture of Mecca; shortly afterwards, during the battle of Hunayn (6/629), he was appointed governor of Mecca by Abī Bakr. He agreed to marry Djuwayriya bint Umayya, a Companion of the Prophet, who was appointed governor of Mecca by Muhammad, and continued to hold this post under Abū Nuwas, whom al-'Atṭāb admired (see Aghānī, iv, 39); a panegyric on al-Rašīd enjoyed considerable fame (see the quotation by al-Djahiz, iii, 353 and the note by the ed.). With the exception of al-Marzubānī, this poet was greatly esteemed by the men of the Islamic Middle Ages. As regards literary history, al-'Atṭābī represents the beginning of the neo-classical current, which started in Northern Syria and was later represented by Abū Tammam and Buhurt (q.v.).**

**Bibliography:** Fihrist, 121 and also 316-18 (reproduced by al-Kutubi and Yākūt) gives a list of six works written by al-'Atṭābī; to judge from the titles, these were probably works on philology and adab. To assess al-'Atṭābī's merits as a prose writer, one must turn to the citations made by al-Djahiz and Ibn 'Abd Rabbih. Al-'Atṭābī's poetical writings seem to have been considerable (the Fihrist, 163, speaks of a collection of 100 folios) and Ibn Abī Ṭayfur, d. 280/893, gave a selection from them; see ibid., 146 in fine. Today they are only known to us-
know the mixing of drafts and potions, powders and spicest (al-Dimashkî, Kitâb al-Ishdâr wa-Makâsin al-Tâdîrî, cf. H. Ritter, in IsI, 7, 50). Today, the term also sometimes includes dyers and dye-

scholars for whom this calling may well have served as an additional source of income. The best known instance is Farid al-Dîn 'Attar.

The same word is used in India to denote an alcohol-free perfume-oil produced by the distillation of sandalwood-oil through flowers (for instance, roses).

Bibliography: (Apart from works already mentioned in the text): A. Dietrich, Zum Drogen-

handel im islamischen Ägypten (Veröffentlichungen aus der Heidelberger Papyrussamm lung, N.F. no. 1), Heidelberg 1954; G. Wiet, Les marchands d'épices sous les sultans mamlouks (Cahiers d'Histoire Ég ypienne), Cairo 1955. (A. DIETRICH)

'ATTAR, Farid al-Dîn Muhammad b. Ibrâhim. Persian mystical poet. The dates of his birth and death cannot be fixed with any certainty. According to Dawlatshâh, he was born in 533/1140 and the general belief is that he was killed by the Mongols in Nishâhpûr in the year 627/1220. This would mean that he lived to the age of 114, which is improbable, and besides, Nishâhpûr was conquered by the Mongols as early as 617/1220. According to a la'tîhî page in some manuscripts (e.g. Ibrâhim Ef. 579), in other sources (Sa'd Na'îf, Dîjâstu'dîfî, 607), and according to the inscription on the tomb erected by Mir 'Ali Shâr, he died as early as 586/1190, that is to say, three years after writing Manâth al-Tayr (Sa'd Na'îf 129). Sa'd Na'îf adheres to 627 as the date of his death, but he bases this assumption on the spurious book Mişâk al-Fustûk and on the statement of Diâmî that 'Attar had given the Asrâr-nâma to Djalâl al-Dîn Rûmî who had emigrated from Balkh with his father in 618/1221. This emigration, however, probably took place as early as 616/1219 (Ritter in IsI, 26, 1942, 117-8). Nothing definite concerning the dates of his life can be got from 'Attar's own works. The one which seems to contain most biographical information, Mashâr al-'Adîdî, is a forgery, which unfortunately misled Mirzâ Muhammad Kazwînî as well as the author of this article. 'Attar was a pharmacist and doctor, and whilst not actually a Şûfî, he admired the holy men and was edified by the tales told about them, from his youth onward. When attempting to complete his list of 'Attar's works, one meets with a pecu

larly short—subsidiary tales. These tales reflect a wealth of religious and profane life. Told with

...
of one's self as everything, as God, as identical with all prophets. People are repeatedly recognised as God by others, and addressed as such. The presentation is broad and ill-ordered, and full of tiresome repetitions. Frequently one does not know who is speaking or who is being addressed. Anaphora is used excessively: on occasions a hundred consecutive lines begin with the same words. Sa'd Nafisi considers the works of this group as spurious, and attributes them to the writer of the third group, a man from Tus who lived in Tus for a long time, who was undoubtedly a shī'ite and must have lived in the 9th/15th century. He considers the change of style, which had been accepted both by Muḥammad ʿAlī al-ʿAskarī and by the author of this article, to be impossible. One might object that a change of style and a limitation of the field of interest are not out of the question in a poet; that the beginnings of the use of anaphora can be found in the works of the first group; and also that some of the themes frequent in the second group are traceable in the first. I therefore do not regard it as utterly impossible that the works of the second group should be genuine, though it is rather doubtful. In the time of Dīlām—that is to say in the 9th century—at least, these works were considered genuine, because Dīlām's remark in the Naṣḥāt al-ʿUmān that the light of ʿAllāh had manifested itself after 150 years in Āṭṭār, can be based only on the works of the second group, in which Hālālā plays an extensive part.

The epics of the third group, on the other hand, have been conclusively proved to be spurious. In the Mashar al-ʿAqlī, the poet asks the reader to read Ῥāżī (died 791 A.H.) and Ḳāsim-i Anwār (died 832 A.H.) and prophesies the appearance of Dīlāl al-Dīn Rūmī (Sa'd Nafisi 151 ff.). I find such a difference in style and content between the works of the second and those of the third group, that—unlike Sa'd Nafisi—I should not ascribe them to the same poet. With regard to the probable chronology of the works (on the basis of self-quotation), see my Philologica X, in Isl. 25, 1939, 144-156. The conclusions drawn in that article from the statements in the Mashar al-ʿAqlī (whose author had the audacity to claim all Āṭṭār's greatest and famous works as his own) as also in my own article "Āṭṭār" in IA, are now superseded.

Individual works: First group:
1) Dīwān: apart from love poems, this contains the exposition of the same religious thoughts as govern the epics. Printed in Tehran, but not in a critical edition.
2) Muḥākār-nāma: a collection of quatrains arranged according to themes, with an elegiatic prose introduction describing the origin of the work—which originally formed part of the Dīwān—and the destruction of the two works Dīwawāth-nāma and Shahr al-Ḵalīb (Ritter, Philologika X, 152-155). Incomplete publication, Tehran 1353.
3) Godār al-Ṭayy (Māmaṭ al-Ṭayy): grandiose poetic elaboration of the Risālat al-Ṭayy of Muḥammad al-Qazāż. The birds, led by the hoopoe, set out to seek Simurgh, whom they had elected as their king. All but 30 perish on the path on which they have to traverse seven dangerous valleys (Haft wādī: this part appears as an independent work in some manuscripts). The surviving 30 eventually recognise themselves as being the deity (ṣīrāt = Simurgh), and then merge in the last land in the divine Simurgh. Inadequate edition by ʿAlī ibn ʿUsayy, Paris 1257; Mantic uttar or le langage des oiseaux . . . . par Farīd-uddīn Āṭṭār; Traduction française and La poésie philosophique et religieuse chez les Persans d’après le Mantic uttar, ou le langage des oiseaux de Farīd-uddīn Āṭṭār; Alte Ausgabe; Paris 1860; on the translation by Baron E. Hermein, Stockholm 1929, see Jan Rypka in Archiv Orientalni 4, 1932, 149-160. The best edition known to me is the one which appeared in Bombay in 1313 A.H., published by Cooper and Cooper. For other editions see ʿAlī ibn ʿUsayy, Mantiḥ al-Ṭayy and for works of Āṭṭār in general, see E. Edwards, A Catalogue of the Persian printed books in the British Museum, London 1912; A. J. Arberry, A Catalogue of the Library of the India Office, Vol. II, Part IV. Persian Books, and the catalogues of manuscripts. A Turkish commentary was written by ʿAbd ʿAllāh ibn ʿAbd ʿAllāh ibn ʿAbbās in 1005/1596-7 (MS. Carullah 1716). For Turkish translations and studies, cf. my article on "Āṭṭār" in IA.
4) Muṣḥbat-nāma: a sāfī disciple (ṣāfī), in his helplessness and despair, is advised by a fīr to visit successively all mythical and cosmic beings: angel, throne, writing tablet, stèles, heaven and hell, sun, moon, the four elements, mountain, sea, the three realms of nature, Iblis, the spirits, the prophets, senses, phantasy, mind heart and soul (the self). In the sea of the soul, in his own self, he eventually finds the godhead. The tale may have been inspired by the hadīth al-ṣafātā. Printed in Tehran 1298 A.H.
5) Ilākī-nāma: a king asks his six sons what, of all things in the world, they wish for. They wish in turn for the daughter of the fairy king, the art of witchcraft, the magic cup of Dīm, the water of life, Solomon's ring, and the elixir. The royal father tries to draw them away from their worldly desires and to inspire them with higher aims. Edition by H. Ritter, Istanbul-Leipzig 1940, Bibliotheca Islamica 12. Concerning a Turkish version, cf. the article Āṭṭār in IA.
6) Aṣrār-nāma: it has no framework-story, and repeatedly mentions the gnostic motif of the entanglement of the pre-existing soul in the base material world. Āṭṭār is supposed to have given a copy of this book to the young Dīlāl al-Dīn Rūmī. Printed in Tehran 1298/1880 cf. M. Ritter, Seele, Mensch, Gott und Welt in den Geschichten des Farīd-uddīn Āṭṭār (Leiden 1955) for content and ideas of Nos. 3, 4, 5 and 6.
7) Ḳhūṣraw-nāma: a romantic novel of love and adventure, concerning Ḳhūṣraw, the son of the emperor of Rūm, and Gul, the daughter of the king of Ḳhūzūstān, with many adventures, befalling above all the faithful ʿAbū, who is besieged by a succession of suitors. Synopsis in Philologika X, Isl. 25, 160-173. Printed in Lucknow 1295/1878.
8) Pand-nāma: a small moral treatise which enjoyed great popularity; it has been printed in Turkey alone at least eight times (1251, 1252, 1253, 1257, 1260, 1267, 1291). Concerning further editions see Sa'd Nafisi 109-10 and the above mentioned catalogues. It has been translated into several languages (compare Geiger-Kuhn, Grundrisss der Iranischen Philologie, ii, 603 and Sa'd Nafisi 108-10). As early as 1809 it was published in London by J. H. Hindley, then by de Sacy together with a French translation: Pandeau ou Livre des Conseils, Paris 1819. For the Swedish translation by Baron Erik Hermein, see Jan Rypka in Archiv Orientalni 4, 1932, 148 ff. The Turkish translation, completed in 164/1257, was by Emr, who died in 988/1580, and it was repeatedly printed in Turkey together with the Persian text (1229, 1266, 1280, 1282). Turkish commentaries: ʿAbd ʿAllāh ibn ʿAbd ʿAllāh ibn ʿAbbās; Shuʾūrī
(died 1105/1693-4 autograph of 1083 A.H. Istanbul, Dar-ulmesnevi 185; *AbdI Pasha (died 1115/1702-3), Mūfi; Bursâli İsmâyil Hâkî (died 1357/1934-5), in great detail, printed Istanbul 1250; Mehmed Murâd (died 1264/1849) Mâhadâr, Istanbul 1252, 1260.

9) Tadhkîrât al-Awliyâ': an extensive prose work which contains the biographies and sayings of Muslim mystics. It ends with a biography of Hallâdî, who plays such an extensive part in the works of the second group. Other biographies—over 20 in number—have been added in some manuscripts. In these, as also in his epic, ʻAttâr has used his sources freely, and has often altered them in the light of his own religious ideas. For the numerous Turkish studies and translations, see the article Attar in IA; in addition Sâ'id Nafisi 110-112. The text of the edition by R. A. Nicholson, The Tadhkîrât ʻi-awliyâ' of Shaykh Faridu'd-din ʻAttâr, London-Leiden 1905-1907, Persian Historical Texts 3 and 5, is not always trustworthy. Other editions in Sâ'id Nafisi 112 and in the above mentioned catalogues.

10) Bulbul-nama: the birds complain to Solomon about the nightingale which, they say, disturbs them with her song to the rose. The nightingale is called upon to defend herself. Eventually Solomon orders that she be left in peace. Sâ'id Nafisi (106-9) regards this book as spurious. Printed in Tehran 1314. Mirdâd-nama: could well be an excerpt from the na'f of any mathnawi. In the only manuscript which I have seen, it covers a mere two pages.

11) Djuumâjuma-nama: a rather short story which might come from any of ʻAttâr's epics. Jesus resurrects a skull in the desert; the dead man, who had been a great king, tells Jesus about the torments of the grave and of hell; he then embraces the true faith and dies for a second time. For Turkish editions of this little work, see IA: Attâr.

The works of the second group (described above):

12) Ughur-nama: the central figure of the first part of this work is a Turkish puppet player, who appears as a symbol of the deity. He has seven curtains to his stage and has seven assistants. He breaks the figures which he himself had created and tears the curtain. He sends his assistants in all directions and himself withdraws in order to guard his secret. A wise man asks him for the reason for his actions. By way of a reply, he is sent in front of seven curtains. There he beholds a strange, fantastic series of events, the meaning of which is to be understood symbolically. He is always sent on by a pîr without any clear information, and on his arrival at the 7th curtain he is asked to fetch from a grave some writing written on silk in green letters. On this God has revealed matters concerning Himself, the way towards Him, the creation, and the prophet Muhammed. There is repeated mention of decapitation as a means of reaching God, and Hallâdî is repeatedly pointed to as the great example. The fruitless wandering from one curtain to another is reminiscent of the cosmic journey of the sa'îd in the Musibat-nama. The second part deals almost exclusively with ʻAttâr. On the scaffold he has talks with Djuunayd, Shaykh-i Kabîr (Ibn al-Khaffî), Bâyazîd and Shîbîl, and in these, as God, he develops a monistic-pantheistic theology. In spite of its length, the Ughur-nama is an important and interesting work which deserves closer study. Metre: Ramâl.

14) Djuunayd (Djuunâyîr) al-Dhâlî: this epos was written after the Ushkur-nama, because the latter (as well as the Musibat-nama) is quoted in it. In this work, too, Hallâdî is continuously presented as a model of the fanj and of becoming God. Among other stories, it contains the one of ʻAll whispering the divine secrets into a cistern. These secrets are then betrayed by a reed which had grown in the cistern and had been cut into a flute. The connexion with the 18 introductory lines of the Mathnawi, by Djalâl al-Dîn Rûmî, is obvious. My assumption is that it is this story (which goes back to Midas' donkey-ears via Niţâmî) which has inspired Djalâl al-Dîn; Sâ'id Nafisi, who considers the work a later forgery, assumes the reverse to be the case (p. 114) (H. Ritter, Das Prooemium des Mathnawi-i Mawlawî, in ZDMG 93, 169-196). The epic also contains the story of the youth who went on a sea voyage with his father, recognised himself as God and jumped into the sea in order to lose himself completely in the divine nature. The youth is also recognised as God by a fellow-passenger. The motif of the recognition of a man as a God by another man also appears in other works of this group. This work was printed in Teheran in 1315/1355.

16) Mansûr-nama: a short tale in the metre Ramâl, beginning: Bûd Mansûr ay ʻadâb shûrû ba'll. It is a short description of the Travels of a King. Printed in Tehran 1312. Mansûr-nama: a short Mathnawi, the centre of which consists of self-deification (Man khudâyam man khudâyam man khudâ) and fanj by decapitation. It contains verses from other mathnawis of this group. Its content is connected with the second part of the Ughur-nama. Lithographed, Tehran 1319 and several times in Lucknow.

The works of the third group (undoubtedly by another hand):

18) Maşhar al-ʻAddîbâ (the "place where miracles appear") is an honorary name for ʻAll, to whose glorification this work is dedicated. He is the divine man, the bearer of divine secrets, the Shâh of all beings, prophets and angels. Legends about ʻAll play a large part. The author claims all the works of ʻAttâr as his own, and gives a great biographical detail, including the meeting with Nadjm al-Dîn al-Kubrâ. Lithographed, Tehran 1323. Sâ'id Nafisi 126 II, 154; Sâ'id Nafisi 127. 156; Sâ'id Nafisi 128. 131-132. These two works have no literary value.

Works of the fourth group (demonstrably spurious on the basis of internal evidence):

23) Misfâd al-Fusâk: compiled 688/1289-90, according to other manuscripts 587/1191-2, by a man from Zanjân, Philologika X, 157; Sâ'id Nafisi 127-128.

25) Kans al-Hâdîk: contains a panegyric to a prince by name of Nîkî ʻGâzî. Concerning the possibly corrupt name of this prince see Sâ'id Nafisi
AL-‘ATTAR, Ḥasan b. Muḥa мм, Egyptian scholar of Maghribine origin, born in Cairo after 1180/1766. He studied at al-Azhar, and was one of the few šulami who, after the occupation of Egypt by Bonaparte, entered into relations with the French scholars and took an active interest in the new learning. He then spent many years in Syria and Turkey, and on his return to Egypt was employed as editor of the Official Journal (al-Wafr al-‘Arabī) founded by Muḥammad ‘All (1244/1828). In 1245/1830 he was installed as Shaykh al-Azhar by Muḥammad ‘All, with whose programme he was thought to be in sympathy, and died in office in 1250/1835. He was probably most influential as the teacher of Rifa‘ī al-Tahtawi, the author of the first major modern classical work of the period in Egypt and Syria. In 1821, after the revolt of Sūltān ʿAbd al-‘Azīz (q.v.), the Russians were shortly afterwards expelled from Avaristan. The surrender of the Imam Shāmil (q.v.) on 22 February 1863, Ibrahim Khan was arrested and sent into exile; on 2 April 1864, the Khanate and its territory annexed to the Avar obrug were administered directly by the Russian authorities.

After the October Revolution, the Avar territory became part of the autonomous Soviet Socialist Republic of Dagestān, attached to the Russian Soviet Federative Socialist republic (decrees of the Supreme Soviet of January the 20th 1921).

The Avar language belongs to the North-Eastern branch (Dagestān) of the Northern group of Ibero-Caucasian languages. Its sphere extends from the azi of Çirinot to Novo-Zakatali in Azerbaijan, 170 km. further to the South; it is subdivided into numerous dialects (almost one to each clan) forming two main groups: the Northern (or Khūznāk) dialects and the Southern dialects (Antaukh, Kökh, Gidatli and Zakatali). The literary language was formed from the Boluntu ("language of the country"), the vehicle of inter-tribal relations from the 16th century onwards. In the middle of the 17th century, Avar was endowed with an Arabic alphabet (completed by numerous signs for the transcription of...
Ibero-Caucasian phonemes), (called "Old 'Ajam"), which was finally perfected by Dibir, kâdi of Khûnâzk (1747-1827). Avar literature was born at the same period with Muhammad b. Mûsâ of Kudatli (died 1708), who wrote in Arabic, and Dibir, kâdi of Khûnâzk, who translated Kalîla va Dimna into Avar. At the beginning of the 19th century, it was enriched by a spate of religious and didactic works, then, in Shâmil's time, by satirical and lyrical works, the chief representative of which was the poet Maḥmûd of Betl-Kâğb rosso (1873-1919). This literature first of all found expression in Arabic and then in Avar. In 1920 the old alphabet was replaced by a simplified Arabic alphabet of 38 letters (called "New 'Ajam"), for which in 1928 a new Latin "New Avar" was substituted and then in 1938 a Cyrillic alphabet.

At the present time (1957), the Avars are numerically the largest nationality in Dâghîstân (200,000 for a total population of one million) and the most advanced. They have a literature of their own, the most famous representative of which is the poet Shâmil (died 1708), who wrote in Arabic, and Dibir, kâdi of Khûnâzk, who translated Kalîla va Dimna into Avar. In 1920 the old alphabet was replaced by a simplified Arabic alphabet of 38 letters (called "New 'Ajam"), for which in 1928 a new Latin "New Avar" was substituted and then in 1938 a Cyrillic alphabet.

The literary Avar language is used by the Æçî [q.v.] and by the thirteen small, Andi [q.v.] and Russian, however, language and are rapidly becoming absorbed into the Avar nationality; it also serves as a secondary language for certain other peoples of Upper Dâghîstân, who are subject to the cultural influence of the Avars (Dargin, Laks [q.v.]).

The present village had 884 inhabitants in 1950, ardent Shî'îites as in the past in the vicinity of Awa, and an old smârzâda in the village.

**Bibliography:**

1. A town of Awa, at present called Āwâdî, lies 70 m. (111 km.) S.-W. of Kûm on the road to Hamadân, ca. 35° 35' N. lat. and 49° 15' E. long. (Greenw.). The town is reckoned in the cold zone (sardstr) because of its altitude. In 1950 it had ca. 1800 Persian and Turkish speaking inhabitants.

There are only short notices of the town in medieval geographers. Yakût, i, 387, mentions a savant called Āwâkî from there. The only old building in the city is a caravanseray from the time of Shâh 'Abbâs.

2. Another town, also called Āhek, is now a village in the Dîzbarâbâd county of the Sâwa district, ca. 187/4 m. (30 km.) west of Kûm on the usually dry Gâwarnâ River, 34° 15' N. lat. and 50° 20' E. long (Greenw.). The medieval geographers mention it together with Sâwa. It was plundered by the Mongols but apparently regained importance, if this is the Āwa where Il-khanîd coins were minted (see B. Spuler, *Die Mongolen in Iran*, Berlin 1955, 129).

The present village had 884 inhabitants in 1950, ardent Shî'îtes as in the past in the vicinity of Awa, and an old smârzâda in the village.

**AVADH (Oudh),** a tract of country comprising the Lucknow and Faydâbâd divisions of the Indian State of Uttar Pradesh. It has an area of 24, 168 square miles and a population of 15, 514, 950, of which 14, 156, 139 are to be found in the rural districts. (Census of India, 1951). From very early times Awadh, which forms part of the great alluvial plain of northern India, has been the peculiar home of Hindu civilisation. It corresponds roughly to the Middle Country, the Madhya-desha of the sacred Hindu writings, where dwelt the gods and heroes of the Epic Period whose deeds are recorded in the *Mahâbhârata* and the *Râmâyana*. Here too arose a number of religious reactions against the sacerdotalism and the social exclusiveness of Brahmanism.

Apart from marauding expeditions, such as Maḥmûd of Ghazâna's attack upon Manaî and the doubtful exploits of Sâlar and Ghâzî recorded in the *Mîrât-i Mašrûl* of 'Abd al-Rahmân Cîshî, it was not until the last decade of the twelfth century, in the days of Kûtb al-Dîn Aybak, that the Muslim invaders established themselves in Awadh and annexed it to the Dîhil Sultânate. It formed a province of Muhammad b. Tughlûk's extensive empire, but towards the close of the fourteenth century was absorbed by the Shârîfî kingdom of Dâmnpûr, of which it remained an integral part until reconquered by the Lodî sultans of Dîhil. In the reign of Akbâr it was annexed to the Mughal empire. According to Abu 'l-Faqî it was divided into five sârkârs and thirty-eight parganas. It extended from the Ganges on the south-west as far as the Gandak on the north-east; and from the river Sai in...
the south to the Tarai of Nepal in the north. (Ālīn-i
Akbari, ii, 170-7. Jarrett, H.S., Bib. Ind., 1891). Local traditions in Awadh, however, conflict with the Muslim accounts and suggest that the Rādīpuś chief maintained their authority practically intact throughout the Mughal period. (W. C. Benett, The Chief Clans of the Roy Bareilly District, 1895). The weakness of the central government after the death of Awrangzib gave the nawābs of Awadh an opportunity of asserting their independence, although nominally they still acknowledged the authority of the Mughal emperor.

Sa'dādat Khān Burhān al-Mulk, the founder of the Awadh dynasty, was descended from a respectable Sayyid family of Nāshāpur (Muntakhab al-Lubāb of Khāfī Khān, ii, 902). During his nawabship (1722-39) Benares, Ghāzpūr, Dīawnāpūr and Ćūnār were annexed to his dominions. His successor, Šafdar Dīąרג (1739-54), was appointed wazīr of the empire in 1748. He invited the Marāthās to assist him against the Bangash Pathāns of Farrūkhābdābū who were supported by the Rohillās. The engagements entered into at that time formed the basis of later Marāthā claims on Rohlīkhānd. Šafdar Dīąרג's son and successor, the nawāb-wāzīr Shudjarā al-Dawla (1754-75), came into conflict with the rising power of the English East India Company and was totally defeated at Baksar in 1764. This left Awadh at the disposal of the Company. By the treaty of Allāhābād (1765) Clive restored Awadh to Shudjarā al-Dawla with the exception of Kora and Allāhābād, which were handed over to the emperor for the upkeep of his dignity and expenses. This alliance with Shudjarā al-Dawla was purely defensive. It was the germ of all subsequent subsidiary alliances with Awadh because the extraordinary expenses of all troops supplied by the Company were to be defrayed by Shudjarā al-Dawla. By these means Awadh was converted into a buffer state against Marāthā encroachments. In the main this was a sound policy. Its chief weakness from a strategic point of view was the handing over of Kora and Allāhābād to the Mughal emperor as the defence of Awadh necessitated the defence of these districts. Clive restored Shudjarā al-Dawla to his dominions in 1767. The resentment of Shudjarā al-Dawla was a wise move as the Company at that time were in no position to annex and administer Awadh. By the treaty of Benares (1773) Warren Hastings placed the Company's relations with this important buffer state between Bengal and the Marāthās on a firmer footing. In future its ruler had to defray all the expenses of the Company's troops required for the defence of his country, namely 210,000 rupees a month. The emperor had deserted the Company and became a puppet in the hands of the Marāthās, Kora and Allāhābād were sold to the ruler of Awadh for fifty lakhs of rupees. (For these negotiations see The Benares Diary of Warren Hastings, ed. C. Collin Davies, Camden Miscellany, Royal Historical Society, vol. lxxix, 1948).

The accession of the incapable Āṣaf al-Dawla (1775-97) enabled the hostile majority on Warren Hastings' council to alter his policy towards Awadh. By the treaty of Faydābād (1775) the subsidy for the use of the Company's troops was raised to 260,000 rupees per mensem and the new nawab was forced to cede Rājā Chait Singh's sainīndārī of Benares, Dīawnāpūr and Ghāzpūr in full sovereignty to the Company. By the treaty of Ćūnār (1781) Hastings, who had regained control over his council, proposed to reform Āṣaf al-Dawla's administration by reducing the number of English troops stationed in his territories. Unfortunately the weakness of the nawāb's government prevented this, and Hastings was forced to retain both the permanent and temporary brigades. His share in the resumption of the dāğiārs and in the sequestration of the treasures of the bēgūms of Awadh, the mother and wife of Āṣaf al-Dawla, formed one of the charges against him on impeachment. Certain conclusions may be drawn from Hastings' conduct of the Company's relations with Awadh. His object was to prevent any development which would impair the efficiency of the buffer state and weaken the Company's defences. He therefore contended that the Company had a right to dethrone a disloyal or unsuitable ruler. He also insisted on ministers favourable to the British connexion. The trouble he experienced in controlling the English Residents in Awadh, both Middleton and Bristow, illustrates the difficulty of formulating written instructions which were not liable to misinterpretation. Because of the close connexion between Awadh and Bengal a policy of non-intervention was impossible. Under the incapable Āṣaf al-Dawla Awadh could not have preserved its independence without the Company's assistance. It certainly would not have been free from Marāthā depredations. In the main Hastings' policy was followed by Lord Cornwallis and Sir John Shore. Cornwallis reduced the Company's demands on Awadh to fifty lakhs of rupees a year, but, on the accession of Sa'dādat 'Allā Khān (1798-1814) Shore raised the subsidy to seventy-six lakhs. In 1801 Lord Wellesley forced Sa'dādat 'Allā Khān to cede Rohlīkhānd, Farrūkhābdābū, Mainpur, Etawah, Cawnpore, Fatehgarh, Allāhābād, Azimgarh, Bāstī, and Gorakhpūr. This meant that Awadh ceased to be a buffer state, for, except when it was surrounded by Nepal, it was entirely surrounded by British territory. Its weakness as a buffer state had been Wellesley's excuse for these annexations. Sa'dādat 'Allā Khān was succeeded by his eldest son, Ghāţī al-Dīn Ḥaydār, who was the first ruler of Awadh to assume the title of king. The remaining kings of Awadh were Nasir al-Dīn Ḥaydār (1827-37), Muhammad 'Allā Shāh (1837-42), Amjadi 'Allā Shāh (1842-47) and Wādjud 'Allā Shāh (1847-56).

It was a provision of the treaty of 1801 that the ruler of Awadh should introduce into his country a system of administration conducive to the prosperity of his subjects and calculated to secure their lives and property. In spite of repeated warnings nothing was done and misgovernment continued unchecked. On these grounds Awadh was annexed by Lord Dalhousie in 1856. Wādjud 'Allā Shāh received a pension and was allowed to reside at Calcutta where he died in 1887, his title expiring with him. The annexation of Awadh was one of the causes of the 1857 Mutiny. Some of the fiercest fighting during this uprising took place at Lucknow and Cawnpore.

After its annexation Awadh was controlled by a Chief Commissioner, until, in 1877, both Agra and Awadh were placed under the same administrator, who was known as the Lieutenant-Governor of the North-Western Provinces and Chief Commissioner of Awadh. The title of Chief Commissioner was dropped on the formation of the United Provinces of Agra and Oudh in 1902. It was not, however, until 1921 that this administration was raised to the status of a Governor's province.

The first land revenue settlement after annexation was carried out with a lack of consideration for the great talukdārī families of the province, who were ousted from the greater part of their estates. This
was reversed after the Mutiny when Lord Canning reverted to a talukdāri settlement and confirmed the rights of the talukdārs by sanads.

To-day in Awadh Muslims are to be found chiefly where they held sway in the past, their preference for urban life explaining their presence in the chief towns. The old talukdāri system has been abolished and a new rural hierarchy of officials and village organizations has sprung up as a result of the Uttar Pradesh Village Panchayat Act of 1947. Villages or groups of villages with a population of 1,500 have been constituted into a gōν sabhā with certain powers of local administration. Groups of gōν sabhās are controlled by panchāyät ‘addālats with judicial powers extending to civil, criminal and revenue cases. There are about 9,466 gōν sabhās and 1,380 panchāyāt ‘addālats in Awadh.

Awadhila [see awadhila].

Awā'il. Plural of awwil “first”, technically used to denote various ideas such as the “primary data” of philosophical or physical phenomena; the “ancestors” of either pre-Islamic or early Islamic times; and the “first inventors” of things (or the things invented or done first).

In the last mentioned connotation, the term characterizes a minor branch of Muslim literature with affinities to adab, historical, and theological literature. Among the Muslims themselves, only the 10th/17th-century Ḥādīdī Khalīfa (Flügel), 1, 490; Istanbul 1943-3, col. 1996, defines the awā’il as a separate “science” relating to history and adab.

Curiosity about the origin of things was deeply rooted in the historical consciousness of the ancient Semites and reached the Arabs through such literary media as the Bible. The Hellenistic world possessed a literature on the first inventors (Peri Heurēmaton, cf., most recently, A. Kleingüßer, Phīlosōphas, Supplementband XXVI, i, 1934), the history of science, such as the origins of medicine, became known in Islam directly through translation (cf. Ishāk b. Ḥunayn, Ta‘rikh al-Aṣbābī, in Oriens, 1954, 55-80, whose source was Ps.-Galen’s Commentary on the Hippocratic Oath, or, more generally, the ample material preserved in the introduction of Abū Sulaymān al-Sidjīstānī’s Sīrān al-Ikhāma). For the Muslims, the knowledge of the “firsts” connected with the history of Muhammad and the beginnings of Islam was a matter of far-reaching legal and practical importance in many respects, and already the earliest known literature on the biography of Muhammad pays attention to it. Muslim customs, such as clipping the moustache, using the toothpick, etc., were justified by ascribing their first use to the great religious leaders of the past, in this case Abraham (cf. al-Ṭalibī, Lādā‘ī al-Ma‘ārīf (De Jong), 6).

With the growing historical interest of the Muslims not only in political history but also in the history of civilization and science (cf., especially, the introductory remarks to each chapter of the Fihrist, on the origin of the science treated in that particular chapter), the question: Who was first?, was soon asked in connexion with every conceivable subject and always answered, though often in a rather fanciful manner. Nevertheless, the awā’il works of Muslim literature contain brilliant expressions of the cultural outlook and historical sense of their authors, and they are full of valuable material and interesting ideas. The wide intellectual appeal of the subject shows itself in the fact that since the beginning of our era, the Chinese also had a literature on the origins (cf. J. Needham, Science and Civilisation in China I, 51 ff., Cambridge 1954) and again in late medieval Europe, successful works on the first inventors were produced, such as the alphabetically arranged chapter on the inventors from De viris illustribus by the fourteenth-century Guglielmo da Pastrengo (published in Venice 1547, under the title De originibus rerum fol. 78a-89a) and the famous, widely read De originibus rerum, by Polydore Vergil which first appeared in 1499.

Our oldest known representative of the Muslim awwil literature dates from the beginning of the 3rd/9th century. The large Muṣanaf of Abū Bakr b. Abī Shayba (d. 235/849; Brockelmann, S I, 215) is said to contain, at (or rather, near) the end, a section on awwil, which was used as a source in al-Sbīli, Maḥbūn al-Wasā’il ilā Ma‘ṣūrāt al-Awwāl, which appears to have dealt with the awwil of early Islam and the origins of Muslim history and customs. The end of the section is preserved in MS Berlin 9409; the large sets of the Muṣanaf could not be consulted.

At the same period, works entitled Kūtāl al-Awwāl were composed by Hishām b. al-Kalbī (Yaḵūt, Iṣrā‘īl, vii, 252); al-Madā‘in al-Fihrist (Fihrist, 104); al-Hasan b. Maḥbūb (Fihrist 221), whose list of works is duplicated in Yaḵūt, Iṣrā‘īl, ii, 97; a certain Sa‘dīn b. Šā‘ārī (Fihrist 171) of unknown date. Since none of these works is preserved or quoted in the later awwil literature, it remains extremely doubtful whether they dealt with awwil in the sense discussed here (or, at any rate, contained some awwil material). According to the description given in Fihrist 133, the Kūtāl al-Awwāl by the 4th/10th-century Yaḵūṭ al-Marzubānī appears to have dealt not with first inventors but with the history of the ancient Persians and the Mu’tazila.

Late in the 3rd/9th century, Ibn Ḥūtayba, Ma‘ārīf (Wüstenfeld), 273-7, devoted to the awwil a chapter in a historical context (cf. also the later
al-Tha’alibi, op. cit., 3-17). In an adab context, a chapter on awd’il appears in the early 4th/10th century in al-Bayhakî, Maḥdîn (Schwally), 352-6. Theological awd’il works were written at about that time by Abû ʿArnûb (q.v.) and al-Ṭabarînî (d. 360/971; Brockelmann, I, 279).

Adab literature provided its first monograph treatment of the subject in the Kitâb al-Awd’il of Abû Hillâl al-Askarî (d. 395/1005), who claims to have had no predecessors. He restricts himself to material derived from Arab and Muslim history, with the inclusion of some Persian and biblical references, and ignores ‘Greek’ cultural and scientific data. He succeeds in clearly underscoring the view of Muslim historians that every important and good invention dates back to the pre-Islamic and early Islamic period while subsequent ages as a rule produced insignificant and undesirable inventions. Al-ʿAskarî’s book remained a much quoted standard work which served as a basis for later efforts, such as the awd’il works of the 8th/14th century al-ʿAttâ’îl and al-Suyūṭî (cf. Brockelmann, I, 132; S I, 193 f.).

There appears to have been a gap of about two centuries in the awd’il literature. From the early 7th/13th century, we then have the Ghayyat al-Wasd’il ilâ Maʾrifat al-Awd’il by al-Mawsîli (cf. Brockelmann, S I, 397 f.; H. Ritter, in Orients, 1950, 86 f.). A historical handbook based on the awd’il thematics of the above-mentioned Maḥdîn is the 8th/14th century Shibli (cf. Brockelmann, II, 90 f.; S II, 82; F. Rosenthal, A History of Muslim Historiography, 129, fn. 1), a highly informative work. Al-Shibli’s literary effort appears to have been continued by the poet Ibn Ḥâdîd Dârayyâ (cf. Brockelmann, II, 17; S II, 71 Ḥâdîdî Dâhilî (Flügel, i, 490). On the other hand, the theological inclination of some 9th/15th-century scholars finds expression in their awd’il works, which might have followed the lead of Ibn Ḥâjjar’s Iḥbāmat al-Dalâ’il ilâ Maʾrifat al-Awd’il (which has not yet been recovered, cf. Ḥâdîdî Dâhilî, loc. cit.). Abû Bakr b. Zayd al-Dîrâ’il (form uncertain, d. in 885/1478, cf. al-Sakhlî, Daws, xi, 32 f.) thus arranged his Kitâb al-Awd’il (Ms. Berlin 985) as an appendix to the chapters of the science of traditions, and the same was done by al-Suyūṭî, in his instructive Wasd’il ilâ Maʾrifat al-Awd’il which was based to some degree upon al-ʿAskarî. In turn, the Suyūṭî’s work was used by All Dede al-Bonsawî (d. 1007/1598, cf. Brockelmann, II, 562 f.; S II, 635) who, as was the custom among certain later authors, also included the “last things (awdîkhir)” that happened (cf., in this connexion al-Sakhlî, ʿIḍān, Damascus 1280/1930-1; 13; F. Rosenthal, op. cit., 214 ff. For a further user of al-Suyūṭî, cf. G. Vajda, in RSO, 1950, 3).

Another great historian of that time, Ibn Tulûn (d. 953/1546), wrote ʿUmawwāl al-Rasâ’il ilâ Maʾrifat al-Awd’il (Ms. Cairo, Taʾrifû, 1247; cf. Ibn Tulûn, al-Rassîl al-Mawsîlî, Damascus 1418/1939-30). The subject was also versified in a work entitled Wasd’il al-Sâ’il ilâ Maʾrifat al-Awd’il (cf. Ḥâdîdî Dâhilî (Flügel), vi, 435) which appears to have been preserved in MS. Cairo, Madâjûn 474, fols. 288b-306. In the Cairo manuscript, the author is called Shams al-Dîn Muhammad b. Muḥammad b. (Abî) ʿLutf, apparently either the father or the son (d. 552/1156 and 993/1585, respectively, cf. ibn ʿImdâd, Shâhâdât; Brockelmann, II, 367; S II, 394). The active literary interest in the subject continued into modern times (cf. M. al-Thârîfânî, al-Dhârî ilā Taṣālîn al-Sâ’i, ii, 481).

Eine literarhistorische Studie, Halle 1867, which includes the edition of a small portion of al-Suyûṭî’s. Al-Suyûṭî, al-Wasd’il ilâ Maʾrifat al-Awd’il, Cairo 1950. None of the independent awd’il works has so far been edited in its entirety. Brockelmann, I, 132, S I, 193 f., S III, 1265; S I, 279 f.; S I, 597 f.; II, 90 f.; S II, 82; II, 203; S II, 197; S II, 635; A. J. Wensinck and others, Concordances, i, 134 f.; Ahlwardt, Catalogue Berlin nos. 9368-76 (most of the works cited under no. 9376 are, however, no awd’il works); MMFA, 1941, 357-9, on the section dealing with awd’il in ʿAbd al-Rahmân al-Bistâmî (Brockelmann, II, 300 f.; S II, 323 f.), al-Fasîdil al-Miskhîyya. The awd’il are treated as part of the historical equipment of the government secretary by al-Kallâshandi, ʿSûbî, i, 412-36. A short Syriac text of the Muslim period in E. Sachau, Versenniss d. syr. Hss., 331. Berlin 1899. (F. Rosenthal)

ʿAWALIK [see ‘Awtâr].

ʿAWAMIR, al- (sg. ʿAwâmîr), a tribe of Bedouins and villagers in Southern and Eastern Arabia. The tribe is split into three main groups living in the following areas: (1) al-Kaff between the southern edge of al-Rubʿî al-Ḫālí and Wâdî Ḥadrâmawt, (2) southern al-Ẓafra between ʿAṣrâr and al-Buraymîn, and (3) ʿUmân. The groups are completely separate and have little intercourse with each other, though they recognize their common kinship, and the two main divisions of the tribe, Al Badr and Al Lazz, exist in all three groups. The southern group, whose range abuts on that of al-Ṣayyâr at the well of Tamlîs in the west and on that of al-Manâshîl at the well of Ṭhâmîd in the east, is mainly nomadic, though its members are not accustomed to pasturing their herds in the sands of al-Rubʿî al-Ḫâlî, as is by most of the Bedouin tribes in this region. The chief (tamîna) of this group is Ibn al-Ṭabāzâ of Al Badr. Like most of the Arabs in this part of Arabia, the southern ʿAwâmîr are Shâfiʿîs. The central group consists entirely of nomads, who are among the hardiest sand-dwellers of eastern al-Rubʿî al-Ḫâlî, moving about so much that they have no claim to a range of their own. The shaikhly clan headed by Ibn al-Rakkâd of Al Badr is said to have had an origin outside the tribe. Some of these ʿAwâmîr are Ḥanbalîs, the rest Shâfiʿîs. The eastern group is found almost entirely in villages in the area between Ṭâbîhânf and Wâdî ʿAndâm south of the Samâʿîl pass through the mountains of al-Ḫâjar, with some offshoots in al-Bâṭîna, al-Ẓâhirâ, and the vicinity of Muscat. There are two principal chiefs in this group, Ibn Khâmil of Al Badr in Kalʿât al-ʿAwâmîr and Ibn Sulaymân of Al Lazz in al-Ḥumâyda. As ʿAbîd b. the eastern ʿAwâmîr recognise the ʿAbîdî Imam of ʿUmân and the temporal authority of his lieutenant in al-Shârîṭiya, ʿṢâḥî b. ʿIsâ al-Ḥârîtî. These ʿAwâmîr have a tradition of having emigrated long ago from Najd, and their war-cry of Yâ awd’d ʿAmîr b. ʿṢâḥî indicates their claim to a descent from the famous tribe of ancient times (see ʿAMĪR b. ʿṢâḥî). Certain smaller elements in Eastern Arabia such as al-Sîmî and Bayt ʿĀyâl tend to associate themselves with the ʿAwâmîr; in some cases this may be due to the attraction of a glorious name.

from the generality of tax-payers, or from those of particular areas; and it was to these demands that the term \textit{\'{a}w\'arid} was applied, apparently because the total exacted varied according to the government's need and was hence regarded as \textit{\'{a}rid}, "accidental". \textit{\'{A}w\'arid} were imposed, not directly on individuals, but on what were called \textit{\'{a}w\'arid-\textit{\'{a}kk\'anes}}, which, however, were not actual "households", but rather "contribution units", so that a whole village or quarter of a town, for instance, might constitute no more than a fraction of one of them. Care was taken, when \textit{\'{a}w\'arid} were first imposed, or at least when their imposition was regularised, to ensure a just apportionment of the burden amongst all contributors to their resources, and if for any reason those resources were impaired as time went by, the government's demands were adjusted accordingly.

It seems to be uncertain whether \textit{\'{a}w\'arid} were originally money payments on the one hand, or contributions in kind or by way of service on the other. Eventually, in any case, units that rendered services, or furnished supplies, were exempt from payments in cash (\textit{\'{a}w\'arid a\text{\^{k}}\'ess}). As regards these latter, when in any emergency it was decided how much mony was needed, the total was apportioned amongst all the \textit{\'{a}w\'arid-\textit{\'{a}kk\'anes}} concerned and the provincial \textit{k\'al\'um} were instructed to collect a similar sum from each. As for persons rendering services to the state on the \textit{\'{a}w\'arid} principle, typical of these were the \textit{h\'ar\'e\'es} (oarsmen supplementing the war captives and criminals likewise employed in the imperial galleys), each of whom was supported during his term of service by contributions from the other members of his \textit{\'{a}w\'arid-\textit{\'{a}kk\'ane}}. Among supplies furnished as \textit{\'{a}w\'arid} were barley, straw and other provisions, together with carts and animals to transport them, for troops on campaign; timber, pitch, sailcloth, etc. for the admiralty; foodstuffs for the imperial kitchens; and cloth for the uniforms of the Janissaries.

Units that normally performed services or furnished supplies might be obliged, if they were unable, or were not required, to do so for any reason, to make cash payments to the treasury instead. The term applied to such payments was \textit{bedel} (plural \textit{bedeld\text{\^{t}}}) (see \textit{bad\text{\^{a}}}l), but became more and more usual from early in the seventeenth century, by which date the exactation of \textit{\'{a}w\'arid} was no longer occasional; and that these \textit{bedeld\text{\^{t}}} were distinguished from the \textit{\'{a}w\'arid a\text{\^{k}}\'ess} proper may indicate that \textit{\'{a}w\'arid} had been in origin cash exactions, from which units performing services or furnishing supplies were exempted by way of recompense, and that this exemption endowed those units with as it were an \textit{od\'j\ac} status, which they preserved by paying \textit{bedeld\text{\^{t}}} instead of reverting to the payment of \textit{\'{a}w\'arid a\text{\^{k}}\'ess}.

During the seventeenth and eighteenth centuries many fresh \textit{\'{u}r\text{\^{f}}t} contributions were exacted from tax-payers under a large variety of names; and since little care was by that time taken to ensure that the tax-payers could meet the demands made upon them, many found it hard to do so. It therefore became a practice among the charitable, when founding \textit{\'{u}r\text{\^{f}}fs}, to devote all or part of the revenues so engaged to the assistance of such needy contributors; and the term \textit{\'{a}w\'arid-\textit{\'{u}r\text{\^{f}}t}} was used of such foundations. In course of time, however, the original object of such \textit{\'{u}r\text{\^{f}}fs} would often be forgotten; and then the revenues in question would be devoted to

\textbf{\textit{\'{A}w\'an\text{\acute{a}}} B. \Al-Hakam Al-Kalbl — \textit{\'{A}w\'arid}}

\textit{\'{A}w\'an\text{\acute{a}}} B. \Al-Hakam Al-Kalbl, Arabic historian, d. 147/764 or 153/770. His genealogy and descent are given. His father's name is given as al-Hakam b. \textit{\'{A}w\'an\text{\acute{a}}} b. \textit{\'{I}y\ac\text{\acute{a}}} b. \textit{\'{W}izr} (\textit{\'{Y}\acute{a}k\text{\acute{u}}}t, vi, 93; cf. \textit{Di\text{\acute{a}}\text{\acute{m}}ar\acute{a}} (L\acute{e}vi-Proven\c{c}al), 428, and \textit{Futufy} 134); Ab\text{\acute{u}} \textit{\'{U}bay\acute{d}a}, however, asserted that al-Hakam's father was a slave tailor (\textit{\'{Y}\acute{a}k\text{\acute{u}}}t, ibd., citing verses by Dhu 'l-Rumma, for which cf. Ibn Sall\text{\acute{a}}m, \textit{T\acute{a}b\acute{a}l\acute{a}t al-\textit{\'{S}aw\acute{a}}}rd? (M. \textit{S\acute{a}h\acute{a}k\text{\acute{a}}}r), 482, and \textit{Aw\acute{a}n\text{\acute{a}}}ni, xvi, 121). Al-Hakam was the lieutenant of Asad al-Kasri in Khurasan in 727, the latter, when in any emergency it was decided how much money was needed, the total was apportioned amongst all the \textit{\'{a}w\'arid-\textit{\'{a}kk\'anes}} concerned and the provincial \textit{k\'al\'um} were instructed to collect a similar sum from each. As for persons rendering services to the state on the \textit{\'{a}w\'arid} principle, typical of these were the \textit{h\'ar\'e\'es} (oarsmen supplementing the war captives and criminals likewise employed in the imperial galleys), each of whom was supported during his term of service by contributions from the other members of his \textit{\'{a}w\'arid-\textit{\'{a}kk\'ane}}. Among supplies furnished as \textit{\'{a}w\'arid} were barley, straw and other provisions, together with carts and animals to transport them, for troops on campaign; timber, pitch, sailcloth, etc. for the admiralty; foodstuffs for the imperial kitchens; and cloth for the uniforms of the Janissaries.

Units that normally performed services or furnished supplies might be obliged, if they were unable, or were not required, to do so for any reason, to make cash payments to the treasury instead. The term applied to such payments was \textit{bedel} (plural \textit{bedeld\text{\^{t}}}) (see \textit{bad\text{\^{a}}}l); but became more and more usual from early in the seventeenth century, by which date the exactation of \textit{\'{a}w\'arid} was no longer occasional; and that these \textit{bedeld\text{\^{t}}} were distinguished from the \textit{\'{a}w\'arid a\text{\^{k}}\'ess} proper may indicate that \textit{\'{a}w\'arid} had been in origin cash exactions, from which units performing services or furnishing supplies were exempted by way of recompense, and that this exemption endowed those units with as it were an \textit{od\'j\ac} status, which they preserved by paying \textit{bedeld\text{\^{t}}} instead of reverting to the payment of \textit{\'{a}w\'arid a\text{\^{k}}\'ess}.

During the seventeenth and eighteenth centuries many fresh \textit{\'{u}r\text{\^{f}}t} contributions were exacted from tax-payers under a large variety of names; and since little care was by that time taken to ensure that the tax-payers could meet the demands made upon them, many found it hard to do so. It therefore became a practice among the charitable, when founding \textit{\'{u}r\text{\^{f}}fs}, to devote all or part of the revenues so engaged to the assistance of such needy contributors; and the term \textit{\'{a}w\'arid-\textit{\'{u}r\text{\^{f}}t}} was used of such foundations. In course of time, however, the original object of such \textit{\'{u}r\text{\^{f}}fs} would often be forgotten; and then the revenues in question would be devoted to
other reeds of the village, or the quarter of the town, concerned.

\textit{Al-Awâsîm}, name of a part of the frontier zone which extended between the Byzantine Empire and the Empire of the Caliphs in the North and North-East of Syria. The forward strongholds of this zone are called \textit{Al-Thughār} [q.v.] or frontier strongholds proper; those which were situated further to the rear, are called \textit{Al-Awâsîm}, literally "the protectresses" (sing. \textit{al-Awâsim}).

Following their quick successes in Syria and Mesopotamia, the Arabs for a while made no attempt to extend their conquests and confined themselves to making raids into Byzantine territory, on the further side of the Amanus (al-Lukâm, [q.v.]) and the Taurus. In the time of \textit{Umar} and \textit{Uṯmân}, the Muslim frontier strongholds were those which were later to be called \textit{Al-Awâsîm}, situated between Antioch and Manbiǧ, whilst those which were more precisely to bear the name \textit{Al-Thughār} were in a kind of no man's land, in the vast region extending to the North of Antioch and Aleppo, up to Tarsus and the Taurus, where the towns had been purposely depopulated by Heraclius when he withdrew from Syria, and where the Byzantines only left guard-posts (\textit{masâlîh}) held by local irregular troops, the Mardaṭṭes; they are perhaps to be identified with the \textit{Djaradîima} [q.v.] who were sometimes on the Byzantine side and sometimes on the side of the Arabs, whom they also provided with \textit{masâlîh} and spies.

This region, periodically ravaged by Muslim incursions, was designated by the Arabs by the name \textit{Al-Dawdî'l-Rum}, the outside country, or \textit{Dawdî' al-Râm} (al-Ṭabarî, ii, 1317; cf. Ibn al-\textit{Aḥrâr} under 98), an expression still in use in \textit{Abbâsîd} times by the poets Abû Tamâm and Buhṭurî. The Umayyads began to acquire a footing in this zone on the further side of Antioch and to occupy the main strategic points situated where roads intersected or at the entrance to the mountains. According to Theophanes (ed. Bonn, 555-6, A. M. 6178), the withdrawal of the Mardaṭṭes, as a result of the treaty of Justinian II with \textit{Abd} al-Malik, left this whole region undefended, and was subsequently disastrous for the Byzantine Empire.

The whole of this frontier zone in the beginning was dependent on the \textit{Jund} of Ḫıms. But from the time of Yazd b. Muṣâwiya, it was detached and made into a special \textit{Jund}, that of Kinnârsîn. In 170/986, Hârûn al-Râshîd, with a view to ensuring the defence of the frontier region exposed to Byzantine attacks, rather than with any offensive objective, (for he also organised the advanced zone for defence), detached from the \textit{Jund} of Kinnârsîn a certain number of strongholds, Manbiǧ, Dûlûk, Râ'fân, Kûrus, Antioch, Tînût, which he called \textit{Al-Awâsîm}, because the Muslims protected themselves by them and because they afforded them protection and defended them when they returned from their expeditions and left the frontier (\textit{Bağhâr}) (al-Balâdîhûrî). Another definition is provided by Ibn \textit{Ṣaddâd}: "because the inhabitants of the frontier strongholds (\textit{akhir} al-\textit{Thughâr}) protected themselves by them when a danger threatened them from the enemy", and al-Kalkashandrî gives another: "because they protected from the enemy the Muslim territory which was behind them (\textit{dânaḥā}), for they bordered upon the country of the Infidels". The same author thinks that the expressions \textit{Al-Thughār} and \textit{Al-Awâsîm} are different names applied to the same thing, which is certainly not correct, for they are both quite distinct and must have been so at an early period. But as, at the time of the creation of this province, which from 173 had the \textit{Abbâsîd} \textit{Abd} al-Malik b. \textit{Ṣâliḥ} as governor with residence at Manbiǧ, the advanced strongholds were included in it, both expressions must have been used interchangeably (see al-Ṭabarî, iii, 604: Hārûn al-Râshîd separated all the frontier strongholds of the \textit{Djazîrâ} and Kinnârsîn, made them into a single territory and called them \textit{Al-Awâsîm}).

\textit{Al-Awâsîm} and \textit{Thughâr} are often united under a single command, at times with the \textit{Jund} of Kinnârsîn. At other times the \textit{Thughâr} form a separate province. The geographers do not agree on the number of localities which form part of the \textit{Al-Awâsîm}: Ibn Khurradâdhîbî also includes al-Djûmâ, Bâdâ, Bâlîs and Rusûfât Hîghâm; Ibn Hawâlî, Bâlîs, Sandyâ, Samosate (Sumaysât), Diṣr Manbîdî, Ibn \textit{Ṣaddâd} also names Baghrâs, Darbasâk, Artâb, Kaysûm, Tall Kabbâsîn. Yâkût includes other localities. In the 10th century, the capital of the \textit{Al-Awâsîm} was Antioch.

The region of the \textit{Al-Awâsîm}, like that of the \textit{Thughār}, was the scene of bloody wars between Byzantium and the Arabs; it was reconquered by Nicephorus Phocas, who obliged the emirate of Aleppo to cede him the whole western and northern part of the region. Thenceforth, the word \textit{Al-Awâsîm} is simply a geographical expression, which continues to be used in the period of the Crusades and the Mamlûks by the Arab geographers.

We have only sparse information on the economic situation of this region, which seems to have been fairly prosperous in \textit{Abbâsîd} times. The sum of the taxation of the \textit{Jund} of Kinnârsîn and the \textit{Al-Awâsîm} together was 400,000 dinars according to Ibn Khurradâdhîbî, and 360,000 according to Kudâmâ. The population was very mixed. It included, besides \textit{Christians} of the towns and settlements, \textit{Djaradîima} of the Amanus) several elements which had emigrated or been transported thither: Arab tribes, especially \textit{Kaysîtes}, who had established themselves there, the \textit{Kîlâb} extending up to Dûlûk, foreign elements coming from India via Mesopotamia, such as the \textit{Sayâbîdâ} [q.v.], brought to the region of Antioch by Muṣâwiya, and the \textit{Zotti} [q.v.], also the same region by Muṣâwiya, then by al-Walîd b. \textit{Abd} al-Malik. It is known that some of the reasons why the \textit{Zotti} were settled in this country (as in Cilicia by Yazid II and by al-Muṣâsîm), is that this tribe practised the breeding of water buffaloes, and the presence of buffaloes cleared marshy territories, such as those of the \textit{Amâk} [q.v.] of Antioch, or of Cilicia, of the lions which infested them (see al-Balâdîhûrî, 164, 376; Wellhausen, \textit{Das Arabische Reich}, 415; M. Hartmann, \textit{Das Lived Haleb}, 7).
The population was very scanty, trade exiguous, and the inhabitants maintained themselves almost exclusively by camel breeding. Doubtless, Awdaghost's disappearance coincided with the ultimate destruction of the power of the Zanata.

Dozy and De Goeje, 34; Barth, Reisen, iv, appendix 1, 602-4 (according to the Ta'Arakh al-Sudân by Sa'dî); P. Laforgue, Notes sur Aoudaghost, in Bull. Soc. Géogr., 9, 19, 190, 221, etc. (see passim); A. Sprenger, Les ruines de Tegdaoust et la question d'Aoudaghost, in Notes Africaines (IFAN), Oct. 1950. (G. Vves)

Awdaghost (or Awdaghost) African town, now no longer extant. According to al-Bakri, it was situated between the country of the Blacks and Sidjilmassa, at about 51 days' march from this oasis and 15 from Ghana. Barth thinks that it must have been situated between long. 10°-11° W. and lat. 18°-19° N., not far from Kshâr and Borka, that is to say to the South-West of the post of Tidjikja in French Mauritania.

Little is known about this town, which seems to have been at the outset a trading colony established by the Zenaga (Sanhâdja) on the Northern border of the Kingdom of Ghana. At the end of the 15th century, after the Zenaga, had conquered a large part of the Kingdom of Ghana, Awdaghost became the capital of a powerful state. As its sovereign, from 350-60/961-71, it had a Sanhâdja, who numbered more than thirty black kings among his vassals and whose empire measured sixty days' march in length and breadth. In the following century, Awdaghost was attacked by Ibn Yânî, the founder of the Almoravid dynasty. The town was taken by assault, pillaged and its inhabitants massacred (446/1054-5).

From that time onwards, the power of the Zenaga progressively declined; their kingdom was invaded by the Sústh, at the beginning of the 7th/13th century; they had to abandon it, or were reduced to the rôle of tributaries.

In al-Bakri's time (5th/11th century), Awdaghost was still a flourishing city. The population, quite considerable in numbers, was composed of Arabs from the Maghrib and Ifrikiya, Berbers (Berkadjenna, Rawâta, Zanâta, Naftâa and especially Nafzâwa) and doubtless also Blacks. The town, surrounded by a suburb of gardens and palm groves, contained mosques and schools, sumptuous public buildings, elegant houses and busy markets. An important trade flourished there in cereals and fruits from the Muslim lands, ambergris brought from the Atlantic coast, worked copper and gold thread; gold dust served as money. Signs of decadence were already visible in the time of al-Idrîsî (6th/12th century). The population was very scanty, trade exiguous, and the inhabitants maintained themselves almost exclusively by camel breeding. Doubtless, Awdaghost's disappearance coincided with the ultimate destruction of the power of the Zanata.

Awdjila. This name designates both an oasis and a group of three palm groves situated on the traditional caravan route, which in the South of Cyrenaica and between the 30th and 29th parallels, joins Siwa, in Egypt, and Djaraboll to Tripolitania and Fezzân by Marada and the Djofta. Awdjila has been known, since Herodotus (IV, 172, 182) and the classical authors, for its abundance of dates and as a halting place. Its rôle as a halting place seems to have been enhanced by the Arab conquest of the Maghrib. Ibn Hâwâkal (trans. de Slane, JA, 3rd series, xiii, 163) describes it in the 4th/10th century as a small town recently attached to the province of Barka; likewise, 200 years later, al-Idrîsî (trans. Jaubert, i, 248) in the 5th/11th century, al-Bakrî (Description de l’Afrique septentrionale, trans. de Slane, 32) speaks of it as an important centre with several mosques and bazaars; he notes that Awdjila is the name of the district, that of the town being Arzajciyya. In the 10th/16th century, grain was imported from Egypt (Leo Africanus, Description de l’Afrique, trans. Épaulard, 456A). Awdjila was occupied by the Turks in 1640. It has been visited and described by the travellers Hornemann (1798), Hamilton (1852), Beurmann (1862) and Roblî (1869 and 1879) (see the bibliography). The development, from the middle of the 19th century, of the intransigent Sanusî order has kept Europeans away, except Rosita Forbes and Hassenein-bey (1920). It has only been studied during the Italian occupation (1928-1943), in particular by the geographer Scarîn. Since then, it has formed part of the Kingdom of Libya. The name Awdjila only designates the most westerly oasis whilst that of Djiâlo (which is applied to El-Erg and El-Lebba, 30 km. to the S.S.E.) has imposed itself on a whole area, which also includes the mediocre palm grove of Djikerra (or Legherreh), 30 km. to the North. The three oases, which are situated in slight depressions with scanty pastures in the middle of a vast desolate plain of sand and gravel (serir), have a continental and very arid climate, with little wind: the annual rainfall between 1931 and 1940 was 11 mm. 7.

Water, which is not far below the surface and is fairly copious, is obtained by draw-wells (worked by donkeys) and from wells functioning with balance-beams. It is used primarily to water the palms, occasional pomegranate and fig trees, little patches of cereals, lucerne and vegetables. Stockbreeding is very poor and trade dwindling, even at Djiâlo, which for a century has taken Awdjila’s place in the caravan trade with the Sudan and Egypt. This economic and demographic decline, due to emigration, was halted by the Italians, who established their residence at El-Erg (Djiâlo) and joined the oasis of AWDJILA by a track extending for 270 km. (and from there a road, 190 km. long, goes to Benghazî).

Awdjila itself, very much in decay, possessed in 1934 18,000 palm trees, 170 gardens, and 1,500 inhabitants, who have remained Berber-speaking and are grouped in four divisions, living in four adjoining wards: Es-Sobka, Es-Sarahna, El-Hati and Ez-Zegagna—plus a small group of Madjabra, Arabic-speaking, living dispersed in the palm grove. Djiâlo, which has not declined to the same extent, has 50,000 palm trees, 123 gardens and 2,700 inhabitants divided up into 14 “families”. They are distributed between two villages, one of which, El-Erg, is rather dispersed, whilst the other, El-Lebba, is more con-centrated, and in a number of dwellings scattered throughout the oasis. These are the Madjabra most of whom are former nomads who have become arabised and who have a taste for trade. Djikerra is simply a palm grove (13,000 palm trees) and not systematically irrigated; it is inhabited only by a few very poor families (400 inhabitants) and visited for the date harvest by the Zâlya nomads of the Ouadi Fareg region to the North-West. The houses of these settlements, built of large unbaked bricks and more rarely of loose stones, have no upper storeys, and are strung out along twisting lanes and blind alleys. The dwellings, located apart in the gardens, often inhabited by former slaves, are usually palm huts (serîba). The mosques, very rustic in character, have multiplied under the influence of the Sanusîyye; those of Awdjila generally have several domes; the mosque of Djiâlo is made of palm trees, including the minaret.

AWFAT (or WAFAT; in the Ethiopian chronicles Irât), an Ethiopian Muslim state (1285-1415) situated in the plateau region of Eastern Shoa, including the slopes down to the valley of the Mawâg. At the end of the 7th/13th century a number of Muslim states existed in eastern Shoa; the preeminent one (whose Maḫžûmîd dynasty had been founded according to tradition in 283/896) shown in a document recently discovered by E. Cerrulli to be in the last stages of disruption, was conquered in 684/1285 by the ruler of one of its tributaries, whose dynastic title was Wâlasmâa. He conducted campaigns to reduce various Shoaan and S’arar regions, including the nomad state of Adal. The reconstituted state, under the name of AWFât, is first mentioned by Ibn Sa’îd, who says that the region was also known as Djaibara (Djâbarta). AWFât seems to have been alternately tributary to the powerful pagan kingdom of Dikmot, to the Christian kingdom of Abyssinia, and at times independent. The northernmost of a number of Muslim states (Hadya, Fatâjdak, etc.), it became the buffer-state against the advance of the Abyssinian power southwards. Hâkk al-Dîn, warring against ‘Amâda Šyoûn, was overwhelmed in 1328 and AWFât made tributary to Abyssinia. Al-‘Umârî’s important account of AWFât at this time shows that its territory extended eastwards to include Zaylâ’. Continually in revolt against Abyssinia, its last attempt to regain independence was under Sa’îd al-Dîn, with whose defeat and death in 817/1415 the kingdom came to an end and its original territory was annexed to Abyssinia. When the Wâlasmâa, after brief exile in Yaman, returned to
Africa they formed a new state out of their former provinces of Adal-Zayla, and took the title of kings of Adal or Zayla with their capital at Dakar and later Harar.

(J. S. Tringham)

'AWFĪ, MUHAMMAD B. MUH., SADĪD AL-DIŃ (wrongly called Nūr al-Dīn) Bughārī, renowned Persian anthologist. 'Awfī traced his descent from ʿAbd al-Raḥmān b. ʿAwfī, a companion of the Prophet, from whom he derived his surname. He came from a learned family of Transoxiana, and was the author of a dīwān which amounts to about ten thousand verses. Some of these are eulogies of his patrons, Abū Saʿīd, the Iltūṭshāh, and his vizier, Ghiyāth al-Dīn Muḥammad, son of Raṣḥīd al-Dīn Faḍl Allāḥ. In one of his poems he attacks the pretensions of a contemporary poet, Salmān of Sāwā.

As a poet, Awhadī displays little originality. He is reckoned by most Persian critics as second-rate in view of some weakness which is to be found in his poetic diction. Moreover, the greater part of his verse, although not without some grace, is often laboured and lacks that subtle light and shade in bringing his ideas before the reader which is characteristic of the best Persian poetry.

Awhadī’s best work is to be found in his two mağnawāt poems, the earlier of which is entitled Dāk-nāma or, as it is called in some MSS., Manīc al-ʿUghdād. This consists of ten letters addressed by an imaginary lover to his mistress and is not of outstanding poetic merit. It was dedicated to Wadjīl al-Dīn, grandson of Naṣīr al-Dīn of Ūsūn, in 706/1306-7. The other mağnawāt, the Diwān-i Dīwān (the greater part of Dīwān), is longer and far better known. It displays a more fully developed talent, and when it was first composed, achieved a great measure of popularity. Like the Ḥadīktāt al-ʿUbaṭa of Sāfārī, it covers the whole field of ethics, with advice on moral discipline, the upbringing of children, civic responsibilities and so forth; but the last part changes its theme and deals with the Sūfī Path and all that appertains to it. The Diwān-i Dīwān was written in 733/1332-3 and was dedicated to Ghiyāth al-Dīn Muḥammad.

(G. Meredith-Owens)

AWKĀF [see WAKF].

'awl (Ar. “a little”) literally “deviation by excess”), the method of increasing the common denominator of the fractional shares in an inheritance, if their sum would amount to more than one unit. This has, of course, the effect of reducing each individual share. For instance, a man dies leaving a widow, two daughters and both parents. The share of the widow would be 1/4 = 1/24, that of the father 1/4 = 1/24, and that of the mother 1/4 = 1/24, total 1/24. The denominator is therefore increased to 27, and the two daughters receive 1/27, the widow 1/27, and the
father and the mother each 1/27. This particular
problem is called al-mas'al al-minbariyya, because
Ali is reported to have solved it on-the-fly when it
was submitted to him, whilst he was on the minbar.
The 'awl is accepted by all the Sunni schools of
Islamic law. The Ibadiis, too, recognize it, but they
asccribe its introduction to 'Umar. The Ибн-
'ashariyya or "Twelver" Shi'ites, on the other hand,
reject it and reduce the share of the daughter (or
dauthers) or that of the full or consanguine (but
not of the uterine) sister (or sisters) instead.

**AWLAD AL-BALAD** (followed by the name of the eponymous
ancestor of a tribe, see under the name of that an-
ccestor).

**AWLAD AL-NAS.** The mamluk upper class
were a branch of whom emigrated to Syria and
fukahd, and Shafi
ī and other places in Syria. Hence he became the
ancestor of the Syrian and Egyptian division of the
family; but the connexions with the Iranian branch
were maintained (Sibt Ibn al-Djawzū, *Mirād al-
Zamān*, Haydarābād, 272). Of these his brother

**AWLAD AL-SHAYKH** (Banū Ḥamawiyā) were
originaly an Iranian family of ḥabīb and Shī'ī
wukāb, a branch of whom emigrated to Syria and
became influential under the later Ayyūbid kings,
al-Malik al-Kāmil (615-35/1218-38) and
the member of the clan earliest known, Abū 'Abd
Allāh Muḥammad b. Ḥamawiya (Pers. form Hama-
wiya) l-Faradj Ibn al-Djawzū, appointed him inspector of all the
privileges of full-fledged soldiers.

The Awlad al-Nās, for but for quite a small number of
exceptions, attained no higher rank than that of
Amīr of Ten and Amīr of Forty. Occasionally the
Awlad al-Nās were favoured for political reasons.

Thus sultan al-Nāṣir Ḥasan (748/1347-752/1351)
preferred amirs from Awlad al-Nās to mamluk
amirs. The privileged position of the Awlad al-Nās
under sultan Ḥasan was, however, exceptional, and
contrasted sharply with their status under other
rulers. Since theirs was an element which, by its
very nature, was excluded from the ranks of the
mamluks, their chances for advancement and for
attaining key positions were seriously limited. In
the course of time they declined together with the
Halba, and saw the same restrictions applied to
them as to the rest of that body, viz. reductions in
pay, sale of their fiefs, exemptions from military
experiences and other obligations.

There was, both among the Awlad al-Nās and
the other members of the Halba, a strong leaning
toward piety and pre-occupation with other-worldly
affairs. Many of them left the military service and
became theologians or faıkhs. (See D. Ayalon, *Studies
on the Structure of the Mamluk Army*, in *BSOS*,
1953, 456-58 and references on p. 456, n. 1).

(A. Ayalon)

The leader was the Khalifa Muhammad Sharif. In 1886
this group attempted to overthrow 'Abd Allāh but
failed. The Awlad al-balad were seriously weakened
by the defeat of the Mahdi's invasion of Egypt at
Tūshkh in 1889, since they had formed the bulk of
the expeditionary force and large numbers perished,
including their leading general 'Abd al-Raḥmān
al-Nujjām. A rising of the Aḥrāf and Danakla in
Omdurman in 1892 was foiled by 'Abd Allāh and
was followed by repressive measures. In 1897 the
Danakla moved to the upper class and were automatically ejected from
them as to the rest of that body, viz. reductions in
pay, sale of their fiefs, exemptions from military
experiences and other obligations.

'Abd al-Wahid (died 588/1192; Ibn al-Furat, cod. \textit{Vind. iv}, 1464), and his grand-nephew Sa'd al-Din Muhammad (died 650/1252; \textit{EI} ii, 260 & IV, 33; Sibt Ibn al-Djawzi, 651) are the best known. —\textit{Imad al-Din} 'Omar had two sons: \textit{Shaykh al-shuyukh} Sadr al-Din Abu 'l-Hasan Muhammed (543/1152/1148-1220), was born in Khurásan, came with his father to Damascus and became his successor. He married the daughter of the famous \textit{Kādi} Ibn Abl 'Asrūn (died 585/1189; Ibn Khalikīn, no. 334; transl. de Slane, ii, 32-3) by whom he had four sons famous as Awd (Bānū) \textit{shaykh al-shuyukh}. Sadr al-Din, a friend of Sultan al-Malik al-'Adil, 595-615/1198-1218, later went to Egypt, where he was invested with the same offices as he had held at Damascus. He died at Mawṣil on the way to Baghdad as an ambassador of al-Malik al-Kāmil.—His younger brother Tādž al-Din Ablū Muhammad 'Abd Allāh, 572-642/1177-1244, went in 593/1196 to the Magrib and served under the Almohad sultans al-Mansur Shārūn (580-95/1184-98) and al-Nasir Muhammad (595-610/1198-98) and al-Nasir Muhammad (595-610/1198-1213) for seven years in a military capacity. After his return he settled down at Damascus and followed his father and brother as an inspector of the safi institutions of the Syrian capital. He wrote several works on history only the titles of which have survived; Ibn Khalikīn saw an autograph of one of his books about Spain at Damascus in the year 668/1269 (Ibn Khallikan, no. 839, transl. de Slane, iv, 337).—The fame of the family rests upon the four sons of Sa'd al-Din, especially on Fakhr al-Din Yūsuf. Born about 580/1184, he entered upon a political career, and al-Kāmil sent him in 614/1217 as his envoy to the caliph. He gained his reputation as a skilled diplomat, being al-Kāmil’s ambassador to the Hohenstaufen emperor Frederick II from 624/1229 until the conclusion of the treaty concerning Jerusalem, February 18th, 1229. During this period he became the friend of the emperor who discussed with him even non-political problems and wrote him two letters after his return to Italy (Ibn Nasīf al-Hamawi, \textit{Ta’rīkh al-Mansūrī}, M. Amari, \textit{Bibl. Sic. App.} ii, 25). Fakhr al-Din Yūsuf held several high positions during the latter part of the reign of al-Kāmil and was a member of the crown council at Damascus after the king’s death in Radjab 635/February-March 1238. After his return to Cairo al-Adil II b. al-Kāmil (635-7/1238-40) dismissed him despite his good services and even threw him into prison. He remained out of office until 643/1246, when al-Adil’s successor and brother al-Šāhīl Nādim al-Din Ayyūb b. al-Kāmil (637-47/1240-9) restored him to all his former honours and appointed him commander-in-chief of the Egyptian army. When in 1249 Louis IX of France threatened to attack Egypt, Fakhr al-Din Yūsuf was entrusted with his defence; but after the Frankish invasion of the Nile Delta he sacrificed Damietta and retreated with his army southwards to al-Manṣūrah. When al-Šāhīl died shortly afterwards (Monday 14th Sha’bān 647/February 1249) the sultana Sharīlah al-Durr made Fakhr al-Din regent in the absence of the new sultan al-Mu’āẓma Tārānshāh b. Nadīm al-Din Ayyūb. In the meantime the crusaders slowly advanced towards al-Manṣūrah and in a surprise attack crossed the Nile and entered the city. In the fighting Fakhr al-Din was killed on Thursday 4th Dhu ‘l-Ka‘dha 647/8th Feb. 1250. —The three brothers of Fakhr al-Din, ‘Imad al-Din ‘Umar, Kamāl al-Din Aḥmad and Mu‘ūn al-Din Hasan started their political activities only in the later part of al-Kāmil’s reign having been before engaged in the teaching of the Shāhīl Mutadhāb at Cairo. They, too, belonged to the crown council after al-Kāmil’s death at Damascus 26th Dhu ‘l-Ka‘dha 640/22nd Nov. 1243. They, too, belonged to the crown council after al-Kāmil’s death at Damascus 26th Dhu ‘l-Ka‘dha 640/22nd Nov. 1243. After the death of the third brother ‘Umar al-Kāmil’s son was elected vice-regent of Damascus. When he conspired against al-Adil II, the sultan sent ‘Imad al-Din back to Damascus in order to force the abdication of al-Djawwāl. But al-Djawwāl had him arrested soon after his arrival and murdered on Thursday 637/1240 and four years later became his representative and commander-in-chief of an army to regain Damascus. But Kamāl al-Din was defeated by al-Djawwāl and al-Nāṣir Dawūd b. al-Mu’āẓma (died 656/1258) in Dhu ‘l-‘Aṣād 648/25th Aug. 1241, and taken prisoner. He died a year later on 13th Safar 640/22nd Aug. 1242 at Qāhza. —The youngest brother Mu‘īn al-Din Ḥasan was appointed wāsr by al-Sāliḥ in 637/1240 and four years later became his representative and commander-in-chief in the campaign for the reconquest of Damascus. The siege began at the end of 642/May 1245, and six months later Mu‘īn al-Din forced ‘Imād al-Din and ‘Adil to give up the Syrian capital, which he had held since 637/1239, in return for Ba‘albak, Borsa and some other places. Mu‘īn al-Din survived his triumph for only a few months and died of typhoid on Monday 24th Ramadan 643/12th Feb. 1246. Of the two sons of Tādž al-Din Muhammed the elder Sa’d al-Din Ḥafid 592-674/1196-1256, is known as the author of a small chronicle from which Sibt Ibn al-Djawzi and al-Dhahābī drew most of their information about the Banū ‘shaykh al-shuyukh. \textbf{Bibliography:} The chronicles of Ibn al-‘Aṣir, Sibt Ibn al-Djawzi, Ibn Wāṣil, Ablū Shāma, Ibn al-Furat, al-Nuwayrī and al-Makrizī. \textbf{Awdal (pl. Awdalīk, vulg. Mawdλeį; for the etymology, see Landberg, ii, 1684 f.)} (\(a\) tribal confederation and (\(b\) territory in South Arabia, between the Indian Ocean and the desert (Ramlat Sabatayn)). It is the easternmost district of the Western Aden Protectorate. The boundaries are, in the \(W\) the Fādλī, \Awdalī, and Bāγhān districts, in the \(E\) the Dhīlībī territory of \textit{Irka}, the Wādīlī sultanate of Bil-Hāf and the indeterminate area of Djerdān. \textit{Urmā} (\textit{Urmā}) with Shabwā, and Aţ Bāryāk. This country is divided by Kāw ar-\Awd (the continuation of Kawr \Awdhilla) into two halves of very different character: 

\begin{itemize}
  \item[i.] Upper Awdalīk territory (ca. 100,000 sq. km., 30,000 inhabitants) is by far the richest and most powerful. The climate is tropical, the fertile ground produces wheat, maize, tobacco and indigo. \textit{Arḍ al-Maḥḍūr} in the \(N\) belongs to this tribal confederation (cf. \textit{al-Ḥamdānī}, 89) which comprises the subtribes Marāţlīk, Rabīz, Hammām, Dayyān and Daţkār. They inhabit the district round Anţab (Nīṣāb), where the Sultan of Upper Awdalīk has his residence.
\end{itemize}
He also controls the wide plateau Ar<J Markha, where Nisiyym bedouins live in Wasit, Hadjar and Tawsala, Mikraha and Thawban. For the most part is chosen from the Ma

It lies in the bay of the same name, and is some 21/4 m. (4 km.) inland from the harbour. It played an

important part in antiquity as Aulon (hence Awlona). Its territory (ca. 80,000 sq.km.,

2. Lower 'Awlaki territory (ca. 80,000 sq.km.,

12-15,000 inhabitants) is for the most part arid and

barren; there is seldom rain enough in the mountains to

make the eddis flow. The most important valley-
system is that of W. Ahwar (also called 'Ughrub),

formed by the junction of W. Dibr, coming from

Daghtna, and W. Deka (Laiq), which starts S of

Hasib [q.v.] and passes through the heart of

Munka's. Here live Hunyadite clans (maga'dha),

the Kumush in W. Labakha and Ahl ShamHa in

Ma'din S of Yeshbum; they exercise a certain

authority over the primitive bedouins of the tribe

Bä Käzm, who are scattered all over the W and S

parts of the territory. Other towns in W. Deka are:

Khabr, Shadjma and Kuliyya. On the coast are

small villages, inhabited by fishermen. The Sultan

resides at Ahwar (Hawar), ca. 5 km from the coastal

and a little E of the wadl. Just as Abyan and Labdi,

Ahwar properly denotes the district, then its centre,
al-Madjâbil (acc. to Landberg II, 273, 326, 1834),

which is a series of villages rather than a town. The

population (ca. 5,000) is chiefly agricultural. A

treaty with the British of 1888 was renewed in 1904

by Sultan 'Aydûrûs b. 'All (murdered in 1948). The

adviser agreement has resulted in better security

and a revival of agriculture and trade. There is an

aerodrome and a wireless station. One sub-grade

and a little E of the wadl. It played an

important part in antiquity as Aulon (hence Awlona).

Concerning its history in the Middle Ages, cf. Konst.

Jireck, Valona im Mittelalter, in: Ludwig v. Thall-
cobe, Itlyrisch-albanische Forschungen, i, Munich and

Leipzig 1916, 168-87. In June 1417, the Ottoman

armies entered the area of Valona, and occupied the
town, together with the fortress of Kanina and Berat. The general Ťamza-Beg became commander-

in-chief of Awlonya, and the Ottomans—who had

never before possessed an Adriatic port—soon began

to build ships there. In 1438, there was a vain

attempt by the seigniory of Venice to regain

Awlonya for its former owner Rugina (the widow

of Duke Mrlska), a citizen of Venice. Awlonya

remained Ottoman property, admitted Christians as

farmers of taxes, and was governed by a Sandjak-Bey;

it was an important bulwark against the West. As

late as the 14th century, the inhabitants (apart from

Albanians and Slavs) were mostly Greeks, and
denominationally belonged to the autocephalous
archbishopric of Ohrd up to the 18th century.

Awlonya was used twice during the 15th century

by the sultan Mehmed II as a base for a raid on

Apulia, Italian territory only 47 m. (75 km.) away.

from the 19th century and bears no inscription. On

the other hand the grave of the "little holy one"

(Kísîkh Auliya) there is an inscription of 660/1262;

the grave is that of the prince Ughl Bîge Ikbâl
since the time of Bayezid II and were related to him by marriage (cf. Ekrem Bey Vlora, Aus Berat und vom Rumelische Streifen, No. 13) and who traced their origin back to Şahîd Sinân-Paşa (cf. F. Babinger, Rumelische Streifen, Berlin 1938, 24 f.). In the 17th century, the fortress of Awlonya was surrounded by high and thick walls with many bastions. Within the fortress, there was a mosque endowed by Sulayman the Magnificent, and in the middle there was a tower—identical with the white tower of Salonica—built for the same sultan, supposedly by the Ottoman architect Sinân. There is a clear description by Ewliya Celebi of the Awlonya of his day (cf. the German translation by F. Babinger, Rumelische Streifen, 25 f.). The order of the Bektashi appears to have been very active around Valona. After 400 years of Turkish rule, Albanian independence was declared in Awlonya in 1912, and it seceded from the Ottoman Empire. From 1914 to 1920, the town was occupied by the Italians, and during the First World War it formed an important base for military operations in the Balkans. By the Treaty of Rapallo, this bridge-head on the Adriatic and barrier in the Straits of Otranto had to be returned to Albania—with the exception of the island of Saseno. From April 1939 to autumn 1943 Awlonya, together with the rest of Albania, was once again in the hands of the Italians.

Bibliography: Apart from works mentioned in the text of Pouqueville, W. M. Leake, Lord Holland, L. Heuzey, G. Weigand, C. Patisch, which give a description of old Awlonya.

‘AWNĪ [see MUHAMMAD II].

AWRANGHĀB, a town and district in the state of Bombay having in 1951 a population of 1,179,494. During the reign of ‘Alî al-Dîn Khâlîl the Hindu rulers of this part of the Deccan were forced to pay tribute to the Muslim invaders. In 1347 it was incorporated in the Bahmanî kingdom and with the disintegration of that kingdom became part of the Niţâm Shâhî sultanate of Ahmadnagar. Under Malik ‘Ambar, an able Abyssinian minister, Ahmadnagar offered a stubborn resistance to the Mughal invaders, but, after his death in 1626, it was annexed to the Mughal empire. During the decline of Mughal power in the first half of the eighteenth century Awranghāb was added to the dominions of the Niţâm of Haydarâbâd. In 1936 it was incorporated in the state of Bombay.

The town of Awranghāb, previously named Khirkâ, was the capital of the Ahmadnagar sultanate in the days of Malik. ‘Ambar. It was burned to the ground by Mughal forces in 1612, but was rebuilt and renamed Awranghāb in honour of Awrangzib, who lived there during his second viceroyalty of the Deccan. The neighbouring village of Khuldâbâd contains the tombs of Malik ‘Ambar, Awrangzib, and Asaf Dîjâh, the founder of the Haydarâbâd state. It was once famous for its gold brocade, but this and other industries have declined. There is another small town of the same name in the Gâyâ district of Bihâr.

(C. Collin Davies)

AWRANGHĀB SAYYID, a small town in the Bulandshahr district of Uttar Pradesh, founded in 1704 by Sayyid ‘Abd al-Azîz, a descendant of Sayyid Dîjâlî al-Husayn of Bebdagh. (C. Collin Davies)

AWRANGZĪB, Abu’l-Muṣāffar Muḥammad Muḥyī ‘l-Dīn Awrangzīb ‘Alâmîr Bâdshāhī}

Ggâzî (1027-1119/1618-1707), the third son of Shâhâdîyâhân and Mumtâz Maḥâlî (daughter of Asâf Dîjâh) was born at Dhojî in Mâlîwâ on 15 Dhu ‘l-Ka‘da 1073/Nov. 1658.

I. Early Years (1027-68/1618-58). He certainly received a very good education according to the standards of the day, for throughout his life he could hold his own in disputations with the ulama as well as men of letters, and his Persian compositions have been regarded with respect.

In 1044/1635 Awrangzib was made a commander of ten thousand and put in nominal charge of a successful campaign against Dîdîjâhîr Singh Bundelâ. In 1045/1636 he was appointed Viceroy of the Dakhin but resigned in 1053/1644, either owing to a fit of religious fervour or on account of his bitterness against Dârâ, his elder brother, whom Shâhâdîyâhân seems to have had chosen as his successor. Nevertheless he accepted the governorship of Gugîjârî and was thence transferred in 1055/1646 to the command of Balîk, which the Mughal officers had conquered under the nominal command of Murâd Bâlkâshî, the Emperor’s youngest son. But the Uzbek were too strong and Dîhîfî was too far; Awrangzib established his reputation as a general and an administrator, but he had to give up Balîk to Nâsîr Mûlîmâd Khânîr and beat a retreat. Appointed governor of Multân in 1057/1648, Awrangzib was directed by the Emperor to recapture Kânâdâhîr from the Persians. He besieged Kânâdâhîr twice—in 1058/1649 and 1061/1651—but the enterprise was too difficult and he had to retreat. Awrangzib can hardly be blamed for this, for Dârâ Shûkîhî to whom the third siege of Kânâdâhîr was assigned failed even more disastrously.

Awrangzib was assigned the Viceroyalty of the Dakhin for a second time in 1062/1652. His revenue expert, Murshîd Kull Khânîr, did much to settle that desolated territory by his revenue system (dîhara). In 1065/1654 Awrangzib laid siege to Gulkûnda and could have extinguished that kingdom but the Emperor ordered him to accept a tribute and make peace. In 1066/1657 he attackedBidîpârî and had captured Bidîr and Kalyânî when orders once more came from the Emperor directing him to accept peace terms. Soon after that Shâhâdîyâhân fell ill (17 Dhu ‘l-Ka‘da 1067/Sept. 1657) and his four sons prepared to fight for the throne.

II. War of succession, 1067-68/1658-59. The war of succession shows Awrangzib at his best as a general and an administrator; he was never to attain that standard again. Dârâ Shûkîhî, the heir-designate at Agra, had the prestige of the imperial authority and the advantage of moving on interior lines. But he showed himself lacking both in capacity of organisation and strategy. Shûdîîr, the second son, who was governor of Bengal, assumed the crown (as did the youngest brother, Murâd) and moved towards the capital. But he was decisively beaten at Bahâdûrpûrî (12 Dju‘ādâd 1 1068/14 Feb. 1658) by the imperial army under Râjîa Dînî Singh and Sulaîmân Shûkîhî and fled back to Mungrî. But Dârâ’s southern army, under Djaswînt Singh, could not prevent Awrangzib and Murâd from joining their forces near Udîjîâin. The two brothers crushed Djaswînt’s forces at Dharîm (12 Râjîb 1068/15 April 1658) and then crossing the Chambal, defeated Dârâ decisively at Sâmûrgârî, eight miles from Agra (26 Sha’bân 1068/29 May 1658). Awrangzib interned his father in the Agra fort and then arrested Murâd near Mâthûrâ and sent him to Gwâîlîr where he was executed in Râbi‘ II-Dju‘ādâd 1 1072/Dec.
1661. Awrangzib crowned himself hurriedly at Delhi and then marched as far as Multan. Then he had to march eastwards to meet Shudja, whom he defeated signally at Khadjwah, near Allahabad (10 Rabî' II 1069/5 Jan. 1659). Leaving Mir Djumla to pursue Shudja to Arrakán, where that unfortunate prince met his death, Awrangzib once more marched west because Dārā, supported by Shāh Nawâz Khān, the governor of Gudjârat, had entrenched himself at Deorai, near Ajgâmez. Dārā was defeated after a three day battle (28 Dijumâdâ II 1069/23 March 1659) and, while he was fleeing towards Kandahâr, Malik Djuwân, his Balûc host, captured him and brought him to Agra, where, after being paraded with every disgrace, he was put to death as a heretic. Awrangzib's power was now unchallenged and he celebrated his second coronation on 14 Ramadân 1069/5 June, 1659.

First half of the reign, 1068-92/1658-81. The Mughal Empire during Awrangzib's long reign was really ruined by a series of wars, many of which were of his own seeking. His general, Mir Djumla, conquered Kûl Behâr and Assâm (1071-3/1661-3) with a terrible loss of life, including his own, but the territory was lost within four years. The Pathâns rose in revolt—the Yâsautâls in 1077/1666 and the Afrâdis in 1078-9—though the Emperor stationed himself at Hasan Abdâl (Râwalpindî district), the efforts of the imperial officers were strangely unavailing and peace could not be restored till 1085/1675. The death of Mahârâdja Diwânsânt Singh of Mârwar on 25 Shawwâl 1089/10 Dec. 1678, started the Râdîjâit war. Awrangzib stationed himself at Ajgâmez for the better conduct of the campaign, but his own son, Prince Khânâr, rebelled against him and fled to Sambhâdji. The Emperor made peace with Râna Râdji Singh in Dijumâdâ I or II 1092/June 1681, but the Râthors of Mârwar continued their struggle till Adûtii, son of Mahârâdja Diwânsânt, entered Dijodhpur as a victor in 1118/1707.

Meanwhile a new opponent of the Empire had risen in the Deccan. Shiwâdji son of Shâhîdî Bhonsla, a first-rate diplomat, guerrilla warrior and organiser of victory, Shâhîstâ Khân, the Emperor's uncle, was sent against him and failed disastrously, but Dâlî Singh, who succeeded Shiwâdji, compelled Shiwâdji by the treaty of Purandar (Dju 'l-Ka'da-Dhu 'l-Hijjâj 1075/June 1665) to hand over 23 out of his 37 forts. Shiwâdji came to Awrangzib's court, found that he would only be given the status of a pandji-kadâri (commander of five thousand), and pretended to faint owing to a weak heart; he was interred by the Emperor's order but succeeded in escaping back to his homeland. In 1080/1669 he began offensive operations against the Empire, plundered Sûrat for a second time (1081/1670) and started a series of plundering raids for the levy of dzîiya, on both sides. Even with reference to his religious policy has been a matter of controversy, which will continue to simmer on for some time to come. Equally valid evidence seems to be available on both sides. Even with reference to his dzîiya, a retrogressive poll-tax on the higher classes of Hindus at the rate of Rs. 3 1/3, 6 2/3 and 12 2/3 (but not higher) per year, we have Khâfi Khân's statement that it could not be levied and remained largely a tax on paper. To avoid misunderstanding it should be added that the term dzîiya was used in a very loose sense in medieval India and often meant any tax other than the land-tax (khârdî).

Bibliography: A complete list of all the available authorities on Shâhâbjâhân and Awrangzib is given in Storey, 564-99. Only the more important printed works are listed here: Dialal Tabâtabâ'i, Pâdshâh-nâma, Lucknow 1852; Salih Kanboh Lhâwri, 'Amâini Shaikh (Bibliotheca Indica); Wâhid-i 'Alâm-giri (ed. by Syed Zafar Hasan), Aliârâ; 'Alâm-giri-nâma (Bibliotheca Indica); Wâhid-i Ni'imat Khân 'Ali, Lucknow and Cawnpore; the Djuâng-nâma of Ni'imat Khân 'Ali, Lucknow and Cawnpore, also English translations by Chandra Lal Gupta and Agan Lal Verma (Agra 1909) and by Baij Nath Figâr (Lucknow 1928); Mâlûdîr 'Alâm-giri (Bibliotheca Indica); Akhâm-i 'Alâm-giri, Persian text and English translation by Sir Jadunath Sarkar; Khâfi Khân, Munâqashul Lûbâb (Bibliotheca Indica). Two contemporary works—Bernier, Travaux et Manuscrits, Storia do Mogor, 1656-1708 (Ed. W. Irvine)—are available in English. Among modern works, Sir Jadunath Sarkar, History of Awrangzâb, 5 vols. stands pre-eminent. Reference may also be made to Mawlânâ Shâhî, Awrangzâb, 'Alâm-giri (in Urdu); Lane Poole, Awrangzâb; Zaheeruddin Faruqî, Awrangzâb (Newal Kishor); Sir J. N. Sarkar, Anecdotes of Awrangzâb. (W. Irvine-Mohammad Habibi)
The Awrás is a compact massif 8,000 sq. km. in area, which extends from the depression leading from Batna to Biskra as far Khenchela and the valley of the Wādī 'l-'Arab, between the high plains of southern Constantine (Šābkh) and the Saharan depression of the 8th/9th century; it was from the Awrás that Abū Yazīd appeared, whose revolt for a brief moment imperilled the Fāṭimīd Empire. The Hīlāl invasion contributed to the arabsisation of the whole area of the mountain massif, but the populations succeeded in retaining their independence intact, escaping from the authority of the Ḥafṣīds [q.v.], then from the domination of the Turks; the latter, however, set up in the area some chieftains devoted to their policy, whose authority remained precarious. From the 10th/16th century, preachers from the extreme South of Morocco gave the Islam of the Awrás the appearance which it was to retain until about 1935: a religion closely linked with a specific social structure. At this last date, the Algerian 'ṣālmād' intervened, especially against the cult of Saints.

The inhabitants of the Awrás have always retained their old political organisation, of which the village remained the basis, a true municipal republic administered by the assembly of the people, or ǧāmi‘a, in conditions analogous to, though rather more sketchy than, those which existed in Kabylia. The French occupation only superficially put an end to this state of affairs. In 1845 the Due d’Aumale took Mghānegh, whilst Besançon made the main tribes recognise French authority; further expeditions, however, were required in 1848-1849 and 1850 to repress a revolt; French troops had to intervene again in 1859 and 1879, when risings had broken out. In 1866, the judicial system of the Mālikīs was applied to the Awrás and Kādās were sent there, but local customary law continued to be applied, as a supplement to Islamic Law and the French Penal system.

AL-AWS, one of the two main Arab tribes in Medina. The other was al-Khazraj, and the two, which in pre-Islamic times were known as Banu Kayla from their reputed mother, constituted after the Hijra the 'helpers' of Muhammad or Ansar [q.v.]. The genealogy as given by Ibn Sa'd (iii/4,1) is:

The name al-Aws probably means 'the gift' and seems to be a contraction for Aws Manāt, 'the gift of Manāt' (the goddess whom they worshipped). The fuller form tends to be restricted to the clans of Wāṣif, Khāṭma, Wā'īl and Umayya b. Zayd, and was changed in Islamic times to Aws Allāh; but these four clans seem to be called simply 'Banu al-Aws' in the Constitution of Medina (Ibn Ḥishām, 341-3).

The traditional story is that, some time after the emigration from the Yemen led by Amr Muraykiyya, his descendants quarreled, and al-Aws and al-Khazraj separated from Ghassān and settled in Yathrib or Medina, which was then controlled by Jewish clans. For a time Banū Kayla were subordinate to the Jews, but under the leadership of Malik b. al-ʿAqlīn of the Khazraj clan of Sālim (Kawākila) they became independent and obtained a share of the palm-trees and strongholds (iḍām, sing. iṣṭām). A contemporary and rival of Malik was Uḥayyā b. Dhiṣḥāb, chief of the Aww clan of Amr b. Amr. It is to be doubted whether there was at this time any conception of the Aww (or the Khazraj) as a unity. The effective units seem to have been the subdivisions of these tribes, here called 'clans'. Even the clans may not have been constituted as

The genealogies lead one to suppose, since the genealogies, which are later compilations, are entirely patrilineal, whereas there are many indications that matrilineal kinship was important in Medina. The feuds at Medina in the decades before the hidjra are commonly said to be between the two tribes, but the sources speak of fighting between clans and groups of clans; and even in the Constitution of Medina the units responsible for blood-money, which are apparently independent political entities, are single clans or groups of clans, like al-Nabīt, which consisted of the clans of ʿAbd al-Aṣghāl, Zafar and Ḥārība. It is probable that the conception of the Aww and the Khazraj as tribes was fostered shortly in order to create closer ties between the clans in alliance with one another, and that this was happening shortly before the hidjra and more particularly after it.

In the generation before the hidjra the leading man among the Aww was ʿHuḍayr b. Simāk, who by genealogy belongs to ʿAbd al-Aṣghāl, but appears at one point as leader of the clan of Amr b. Amr, against the Khazraj clan of Ḥarība, while the chief of ʿAbd al-Aṣghāl was Muṣādh b. Nūmān. Another leader was Ḥubayy b. Waṣl at the clan of Wāli b. Umayya, but on several occasions when he was in command of a party his fellows fled, and latterly he yielded the supreme command to Ḥudayr where both were present. During this period various small feuds became linked with one another, until there was a conflagration in which most of Medina and some of the surrounding nomads were involved. After a serious defeat the clans of ʿAbd al-Aṣghāl and Zafar had withdrawn from Medina, while Amr b. Amr and Aww Manāt had made peace. The oppressive policy, however, of the Khazraj clan leader, Amr b. Nūmān of Bayḍa, drove the Jewish tribes of Kurayya and al-Nādir into alliance with the two exiled clans, and enabled them to fight back. They were also helped by the nomadic clan of Muzayna, and the other clans of the Aww joined in, with the exception of Ḥārība, which had been driven from its lands by ʿAbd al-Aṣghāl. The ensuing battle of Buʿāth went in favour of the Aww and their allies, but their leader Ḥudayr was killed. Peace was not made after this battle, but there was no further large-scale fighting.

Such was the situation when Muhammad commenced negotiations, first with the Khazraj and then with the Aww also. While nearly all the Khazraj entered into agreement with Muhammad, many of the Aww held back, viz. the clans of Khāṭma, Wālī, Wāṣif and Umayya b. Zayd, and some of Amr b. ʿAww. Nevertheless the conversion of Sa'd b. Mūṣādh b. Nūmān, chief of ʿAbd al-Aṣghāl,
was a decisive event in the growth of Islam in Medina, and from the battle of Badr until his death in 5/627 he was the leading Muslim of the Banū Kaylā or Ṣanār (q.v.). The enmity between the Aws and the Khazraj died away gradually, and is not heard of after the institution of Abū Bakr as caliph.

AWS b. ḤADJĀR, the greatest pre-Islamic poet of the tribe of Tamīl; al-ʿAṣmaʾ frequently praises and comments on his poetry; in contrast the early anthologies, except the Ḥamīda of al-Ḥuṭārī, do not mention him at all. Whether al-Farazādāk, when he boasts of having “inherited from the family of Aws a tongue like poison”, means our poet, cannot be ascertained. Fragments of some length do not appear before the time of Ibn al-Sikkīt, who probably wrote a commentary to his ḥudūd, and quotes him in his lexicographical work.

With the early critics Aws was famous for his description of the (wild) ass, the bow, and “noble words” Tippot and dīwāl Thus in the Pseudo-Plotinus as the equivalent in Arabic of the Greek philosophical term, was brought into Muslim philosophy; in this sense it is usually employed alone, though at times such reiterative expressions as al-mahdā’ al-uwal, First Movement, are to be encountered.

III. In several compound expressions, awwal indicates essentially causal priority, and secondarily temporal priority, as in the terms maʿātīl al-uwal (First Caused), al-adīsām al-ūlā (First or Elementary bodies), al-ḥarāba al-ūlā (First movement).

IV. Used in the plural, awdāl [q.v.] indicates the first ones in date and, in philosophy, the thinkers of former ages.

V. Likewise in the plural, awdāl also indicates the first principles in the order of being and knowledge; for example: al-mahdāt al-ūlā, the First Principles in the order of Being or Separate Intelligences, or al-maʿātīl al-ūlā, the First Intelligibles that is to say, the First Principles of Knowledge.

VI. From awwal is derived the abstract noun awwaliyya (plur. awwalliyāt), which in the Philosophers indicates the essence of that which is first.

VII. In the plural, awwaliyyāt translates τὰ πρῶτα καὶ ἄγγελοι indiscriminately and means the First Principles in the order of knowledge, that is to say, the propositions and judgements immediately evident by themselves.

AL-ʿAWWĀl, Abū ʿAmr Abū ʿAbd al-Raḥmān b. ʿAmr, the main representative of the ancient Syrian school of religious law. His mīmāk is derived from al-ʿAwzā’, a suburb of Damascus, so called after a South Arabian tribe, or an agglomeration (awdā’) of clans, who lived there (Ibn ʿAsākir, Taʾāwak Dimashq, ed. al-Munādjidīdīdī, ii, 1954, 144; Yākūt,
An ancestor of his had been made a prisoner in Yaman (al-Mas'udi, Murudi, vi, 214). He seems to have been born in Damascus, and he died about the middle of the 3rd (9th) century, in Syria towards the end of the 4th (10th) century (J. Lopez Ortiz, La recepción de la escuela malequi en España, Madrid 1931, 16 ff.; R. Castejon Calderon, Los juristas hispano-musulmanes, Madrid 1948, 32, 43 ff.; Heffening, 148; Barthold, ibid.). The anecdotes on how al-Awza'i overcame Malik in disputation (Ibn Abi Hātim, ibid., 185 f.), reflect the struggle between the two schools.

**AYA**-pl. ayā, a sign, token, miracle, verse of the Qur'ān. The original meaning is a sign or token and as such is found in the pre-Islamic poetry (plur. āyāt, with plur. of plur. āyāt, cf. Nöldke's Belegworterbuch, sub voc.), where it is the equivalent of the Hebrew עָיָה, Aramaic āḏāḏ; Syriac āḏāḏ, the plur. āḏāṯ occurring in the Lachish Letters (iv, 12) for the fire-beacons used for signalling. This original meaning occurs in the Qur'ān, where the ark is called the token of Saul's kingship (ii, 248/249), and the sun and moon are signs of day and night (xxvii, 12/13). The wonders of nature are also tokens of Allāh's presence and power (xxx, 20/19 ff.; xii, 105 etc.), but such are also portents from which men should take warning (ii, 164/159, 266/268; xxvi, 67 ff. etc.). It is the duty of the Messengers whom Allāh sends to rehearse to men these demonstrations of Allāh's power, or wisdom, or judgment as they appear in nature or in history, and it is the condemnation of communities that they reject the signs of Allāh that are rehearsed to them (ii, 61/58; x, 73/74; xxvii, 81/83 ff.; vii, 182/181). From wonder to miracle is an easy step (xliii, 47; iii, 49/43; xii, 38; xvi, 134), and by a further step the accounts of such portents or tokens of Allāh's might could be called His signs (ii, 252/253; xii, 7; xv, 75; xxxiv, 19/18; v, 75/79). By a final step each verse of such an account becomes a sign (vi, 124; xxviii, 87; iii, 403 f.).
The Massorah to the Qur'an ayā (plur. ayāt) always means verse, and there was considerable discussion as to verse-endings (ru'āt al-ayāt), number-ending, and the faddūl of certain verses such as the "Throne Verse" (ii. 255/256), the "Light Verse" (xxiv, 35), the final verses of sūra ii, etc., which brought peculiar blessings to such as recited them in specified ways. These various meanings of āya, save the last, correspond closely with Jewish and Christian usage, where the particular religious use of the word is for signs that attest the divine presence and which accompany and testify to the work of the Prophets.

Spitaler, Die Verszählung des Qurʾāns, 1935; C. A. Keller, _Das Wort Oth als Offenbarungsteichen Gottes_, 1946; R. Bell, _Introduction to the Qurʾān_, 153 ff. (A. Jeffery)

*AYA SOFYA,* the largest mosque in Constantinople (Istanbul), and at one time the leading Metropolitan Church of Eastern Christendom. It was known generally as Ḥ Meγάκη Ḫύσκλησία up to 1453, having been called Ζυρίτρα (without the article) around 400 A.D., and since the 5th century, Ḥ Ἅγια Σοφία.

According to the most recent research, the original Aya Sofya was not built by Constantine the Great, but, in accordance with his last wishes, by his son, Constantius, after the latter's victory over his brother-in-law Licinius. It was then built in the shape of a Basilica, and consecrated on 15 February 360 (cf. A. M. Schneider, _Die Justinianische Sophienkirche_, in _BZ_, 1935, 36). This "Great Church" met with frequent and diverse changes. There were fires and earthquakes which ravaged it (the first wooden-roofed basilica went up in flames on 20 June 404 on the occasion of the expulsion of Bishop John Chrysostom). Reopened on 8 October 415, it remained undamaged for over a century until the night of the 13th of January 532, when once again it went up in flames (as did the greater part of the city, including the imperial archives) during the fight between the rival hippodrome factions.

The emperor Justinian immediately made known his decision to rebuild the church in such splendour as had never been seen before. Even before this, Justinian had already ordered that valuable materials from old monuments in the provinces of his vast empire (where heathen works of art were deliberately left to decay) were to be sent to the imperial residence, and after the fire these materials were largely used to rebuild Aya Sofya. Two of the greatest architects of all times, Anthemius of Tralles and Isidore of Miletus, were placed in charge of the reconstruction. Since the emperor had ordered that the new building must be proof against both fire and earthquake, they decided to use a dome-and-cupola design as being the surest means of escaping these dangers. The opening of this magnificent building took place on 27 December 537 with enormous pomp, and the proud Justinian could exclaim "Solomon, I have surpassed you!"

Even during his own reign, however, the eastern part of the dome collapsed in an earthquake (on 7 May 558) and the ambo, tabernacle, and altar were smashed. The dome had been designed too flat, and it was now raised by more than 20 feet, whilst the supports of the big pillars were strengthened. It was ready for reopening on 24 December 562. The church has an enviable position: to the south is the Augusteum, with an equestrian statue of Justinian, meant for national festivities; to the north (well within the Saray walls of today) are court churches, noble monasteries and the palaces of the court officials; and to the east, that is to say towards the sea, stands the imperial palace.

The west presented a court-yard called the Atrium, flanked by open halls, to the visitor. From here, a number of doors (perhaps four or five) led into an enclosed hall (Exonarthex) which still belonged to the Atrium. From this, five doors led to the actual Narthex (Esonarthex), in addition there is a door at the extreme north and south ends. Further passages branch off, and nine rectangular openings from the entrances to the inner part of the church. The centre one of these was elaborately coloured and used to be the king's door.

The area covered by the church is almost square: the internal length is about 75 metres (excluding the main apse to the east) and the breadth is about 70 metres. The floor is shaped in the form of a cross, and above it the almost hemispherical pendentive dome rises to a height of 56 metres. Since the outside walls alone could not have carried it, it had to be supported in addition by four pillars, and these in turn are supported by small but structurally important arches and their corresponding pillars. To the east and west of the dome, there are two further semi-circular chambers, each of which has three semi-domes over it. Of greatest importance for the shaping of the interior was the two-storey arrangement of all the side-chambers adjacent to the central aisle, where the galleries (as was customary in Byzantine churches) were reserved for women. The weight of the building is carried by 107 columns (40 below and 67 above),usually monoliths of coloured marble (verde antico), but in some cases of red porphyry. An overwhelming impression was created for the mediaeval spectator by the wealth of ornaments: the lavish use of marble everywhere, the pictures of Christ and of the Mother of God, the Prophets, Apostles, and other saints which turn the walls into a sea of colour, not to mention the mighty Seraphim (in the spherical triangles of the main dome), and the gold-mosaic which adorned the dome and walls with such a splendour as had never been seen before. The mosaic ornamentation was probably not finished until the last years of Justinian, and during the reign of Justinian II.

The original walls and vault of the original building consist of brick throughout. The sanctuary (βυτικά) lay to the east of the central part of the church and was divided from it by an iconostasis of considerable height, adorned with pictures and open-work pillars. It contained the altar and the ciborium and led into the main apse. There were 425 priests (who additionally also served three other churches) and 100 doorkeepers in the days of Justinian. Shortly before the collapse of the Byzantine Empire, the number of church officials in the Aya Sofya was estimated at 800.

The first major repairs to Aya Sofya were made in the time of the emperor Basil II. A part of the dome collapsed during an earthquake on 26 October 916. The emperor had the damage repaired (the clumsy flying buttresses on the western façade probably date from that time; cf. A. M. Schneider, _Die Grabungen im Westhof der Sophienkirche_, Berlin 1941, 32 ff.). In 1204 the church was severely damaged during the Latin
sack of Constantinople, when it was ruthlessly plundered, the holy vestments and vessels even being used to clean and feed the invaders' horses; yet it became, nevertheless, the chief church and place of coronation for the new dynasty. The most extensive changes still undertaken in Byzantine times were made in the 14th century. In the first half, the walls were strengthened on all sides, the eastern wing in particular being buttressed from outside by high and broad supports.

We have no description of the interior of Aya Sofya in Byzantine times from Muslim reports. The first Muslim who mentions the cathedral in detail is Ahmad b. Rusta (1244 ff.; trans. G. Wiet, Cairo 1955, 139 ff.); the author lived around 290/902-903 but derives his description from Harun b. Yahya, who was a prisoner of war in Constantinople some time during the ninth century. Harun does not really describe the building, which he calls al-Kanisa al-'Uzma (i.e. Meveddjâl 'Ezkâhçêtêz), but he does describe in vivid detail a feast-day procession, to the church of the Byzantine emperor. On this occasion, the Muslim prisoners of war were led to the church (this might perhaps mean to the atrium of it), and there they greeted the emperor with the cry "May God preserve the king for many years" (ibid. 125). One detail is of particular importance: he mentions that beyond the Mağlis (by which he presumably meant benches) there were 24 small doors with openings a span square, at the western gate (these are not mentioned anywhere else). One of these little doors opened automatically, and closed again of its own accord, at the end of each of the 24 hours. With the decline of the Caliphate, the Muslims after Ibn Rusta grow more and more silent about far-away Constantinople. Only four centuries later, after Asia Minor had been occupied by Turkish tribes, Shams al-Din Muhammed al-Dimaşkî (ed. Fränk and Mehren, St. Petersburg, 1865, 227)—who, however, is dependent on the work of the slightly earlier paper-merchant Ahmad (ibid., viii)—mentions the Aya Sofya in a few lines. The one remarkable thing is his statement that the church harboured an angel whose home was surrounded by a barrier three cubits high, presumably meaning the area of the altar and ciborium together with the iconostasis itself.

A few decades later, Muhammed b. Batthîta (ed. Defrémery and Sanguinetti, ii, 434) is the first to ascribe the erecting of Aya Sofya to Âṣaf b. Barâkyâ [q.e.], supposedly a cousin of king Solomon. Ibn Batthîta's main merit is the detailed description of the atrium. As he stresses, he was not allowed to enter the church itself, possibly because he would not comply with the order (mentioned by him) to kneel before the cross at the entrance.

When the Turks conquered Constantinople (29 May 1453), crowds of the defenceless population fled into the church, in the firm belief that an angel would appear in the sky and drive the victors forever back into their Asiatic home-country after they had advanced as far as the column of Constantine the Great. However, the Turks came on, smashed the doors of the house of God, and dragged the frightened people—both men and women—away to slavery. Eye-witnesses do not, however, mention any blood-bath in the holy place, as was often stated to have been the case. After this wild spectacle of loot and plunder, the church was, though not seated upon a horse, as it was usually stated—entered the church. His mu'adhîdân spoke the invitation to prayer which contains the confession of faith, and he threw himself down— together with his followers—before the one God, and thereby the temple of Constantius and Justinian was dedicated to Islam.

There are very considerable changes in the interior resulting from the rules of the victorious religion. The mosaics which had formerly adorned the walls and vaults, and which had seemed to their Greek creators to have been fashioned for eternity, were hidden under a grey lime-wash (since Ewliya Celebi, Strykâmâne, i, mentions the mosaics, a few must still have been visible in his time, that is to say, in the 17th century). The iconostasis between the priests and the lay folk was torn down, and the rich decorations of the east wing, the Bema, were stripped. As the ancient Byzantine churches faced Jerusalem, whilst the Sultan had to be performed facing Mecca, the Turks have prayed more towards the south, and not towards the eastern wing of the mosque, ever since the days of the conquest. From the time of Mehemmed II, the preacher—bearing a wooden sword—ascended the pulpit on Fridays, on every afternoon of Ramazan, and on Bayramids festivals (see the article 'AANAZA and Juynboll, Handbuch der islam. Gesetze, 8, 87); and there were always two flags by the side of the pulpit. Furthermore, we know that Mehemmed II erected the mighty buttresses against the south wall, where he also built the first of those high, slim minarets. Selim II erected the two buttresses in the north and the second minaret on the north-east corner. His son, Murad III, was responsible for the other two.

Sultan Murad III undertook thorough repairs of the mosque. In the first place, this meant the correction of minor defects which had come to light as time went on, but he also contributed considerably to the embellishment of the bare chamber. He placed the two huge alabaster urns on the inside near the main entrance; each of which holds 1250 litres; he also donated the two large esrades (masâfâba). On the right hand one, the Kurân was recited during most of the day in that chanting intonation which is peculiar to the oriental liturgy of all denominations, whilst the other was meant for the prayer leaders. At great expense, Murad III also gilded the half-moon which crowned the dome. This had a diameter of 50 ells, and had replaced the cross. Thus the Muslim subjects of the Porte could behold the emblem of their faith from as far off as the summit of Bithynian Olympus.

In the second half of the 16th century, the conversion of the churchyard immediately to the south of the mosque into a mausoleum for the sultans was begun. The oldest tomb is that of Sultan Selim II. His son Murad III and his grandson Mehemmed III are also buried there. Sulthan Mehemmed III's 19 brothers, whom he had killed on his accession to the throne, are also entombed here. A few decades later, the dethroned sultan Mustafâ I suddenly died, and a suitable grave could not be found immediately; the old baptistry (on the southern side of the narthex), which the Turks had used for oil storage since their conquest, was taken over for the purpose. Later on, the nephew of Mustafâ I, Sultan Ibrâhim, was likewise buried there. Since then, the large oil stores have been kept in the hall and courtyard on the north side of the baptistry.

Sultan Murad IV (1623-1640), whose reign saw a certain measure of general revival, had the bare walls emblazoned in a memorable way by the great calligrapher Bicâdji-zâde Mustafâ Celebi, with large gold-lettered quotations from the Kurân. Some
Immediately after the conquest, the Turks took over the many legends which had grown up concerning the origin and the consecration of the church during the last years of Byzantine rule, refurbishing them in Muslim terms. A history of Aya Sofya (library of Aya Sofya, No. 3025) was written very shortly after the victorious entry, by Aḥmad b. Aḥmad al-Gilānī (in Persian, on a Greek model) at the order of Mehmed II. This was later translated into Turkish by Ni'mat Allāh (died 969/1561-2). According to Kātib Čelebi (ed. Flügel, iII, 116) there was a second Persian work written for the same ruler by the astronomer and cosmographer ʿAli b. Muhammad al-Kūshdī [q.v.]. This work, however, can apparently no longer be identified. There is another version of the year 888/1483-4, by an anonymous author, which is now in the Staatsbibliothek Berlin (MS. Orient. 8°. 821) as an appendix to an Ottoman history (the Tāwarīkh-i Kostanfiyya [Fleischer, Kat. Dresden, No. 113; Pertsch, Türkische Hss. zu Berlin, no. 231, written three years later) which is more interesting but otherwise similar in thought and sources. According to the Tāwarīkh-i Kostanfiyya the story is that Aṣḥafyya, the extremely wealthy wife of the great Kūstān̄ (b. ʿAlānīyya, died very young and ordered in her last testament that a church should be built which should exceed all other buildings of the world in height. An architect is said to have arrived from Fīrangušan. He is reported to have begun by digging down 40 ells, in order to reach water; then, having built the church with the exception of the dome, he is said to have fled. The building then stood untouched for 10 years, until he returned and put on the dome. It is also stated that the particular marble—otherwise only known by the Diwān (it is actually “marble metal”, Mermer Ma'deni)—was brought from many countries. The “metal” for the four mottled (somāhī) pillars (in fact, of course, they are simply of the hardest marble) is said to have come from Mount Kāf, and the large doors are alleged to have been made from planks of Noah’s ark and already used by Solomon for his buildings in Jerusalem and Kyzikos (Aya Sofya). The total expenditure is said to have come to 360,000 gold bars (each of 360,000 filori). In the time of the grandson of Constantine the Great, emperor Heraclius (a contemporary and secret follower of the Prophet), the dome is said to have come down, but the pious ruler rebuilt it immediately. The Tāwarīkh-i Kostanfiyya wa Aya Sofya wa ʿAli al-ʿArabī Ḥyrā, who was then in the service of the Grand Vizier ʿAlī the Fat (died 28 June 1565) and was a teacher (Flügel, Kat. der Kais. Hofbibl. Vienna, iii, 97), dates from the time of Suleyman the Great. The earliest edition belongs to the year 970/1562-3. Two years later, the author added a few insignificant details to the work and brought it out under a different title (Tāwarīkh-i Din-yi Aya Sofya, in the Bibl. Nationale in Paris, Turkish MSS. Suppl., no. 1546; Tāwarīkh-i Kostanfiyya wa Aya Sofya wa baḍ-ʾi Ḥikayāti, in Pertsch: Catalogue of Turkish manuscripts of the Kgl. Bibl. Berlin, no. 232. Fourmont has a further manuscript, Cat. cod. man. Bibl. Reg., 319, no. 147, 1). According to this, Aya Sofya was built under the emperor ʿUṣṭūnānūs by the architect Iğndaus (as also in Mehmed ʿAṣḥik). Generally speaking, the author of this is more plausible. He also gives far more detail building its predecessor in the 13th century, because he gives various versions. Thus, he must be regarded as the best Turkish authority on the history of their greatest mosque, immediately after the conquest, the Turks took over the many legends which had grown up concerning the origin and the consecration of the church during the last years of Byzantine rule, refurbishing them in Muslim terms. A history of Aya Sofya (library of Aya Sofya, No. 3025) was written very shortly after the victorious entry, by Aḥmad b. Aḥmad al-Gilānī (in Persian, on a Greek model) at the order of Mehmed II. This was later translated into Turkish by Ni'mat Allāh (died 969/1561-2). According to Kātib Čelebi (ed. Flügel, iII, 116) there was a second Persian work written for the same ruler by the astronomer and cosmographer ʿAli b. Muhammad al-Kūshdī [q.v.]. This work, however, can apparently no longer be identified. There is another version of the year 888/1483-4, by an anonymous author, which is now in the Staatsbibliothek Berlin (MS. Orient. 8°. 821) as an appendix to an Ottoman history (the Tāwarīkh-i Kostanfiyya [Fleischer, Kat. Dresden, No. 113; Pertsch, Türkische Hss. zu Berlin, no. 231, written three years later) which is more interesting but otherwise similar in thought and sources. According to the Tāwarīkh-i Kostanfiyya the story is that Aṣḥafyya, the extremely wealthy wife of the great Kūstān̄ (b. ʿAlānīyya, died very young and ordered in her last testament that a church should be built which should exceed all other buildings of the world in height. An architect is said to have arrived from Fīrangušan. He is reported to have begun by digging down 40 ells, in order to reach water; then, having built the church with the exception of the dome, he is said to have fled. The building then stood untouched for 10 years, until he returned and put on the dome. It is also stated that the particular marble—otherwise only known by the Diwān (it is actually “marble metal”, Mermer Ma'deni)—was brought from many countries. The “metal” for the four mottled (somāhī) pillars (in fact, of course, they are simply of the hardest marble) is said to have come from Mount Kāf, and the large doors are alleged to have been made from planks of Noah’s ark and already used by Solomon for his buildings in Jerusalem and Kyzikos (Aya Sofya). The total expenditure is said to have come to 360,000 gold bars (each of 360,000 filori). In the time of the grandson of Constantine the Great, emperor Heraclius (a contemporary and secret follower of the Prophet), the dome is said to have come down, but the pious ruler rebuilt it immediately. The Tāwarīkh-i Kostanfiyya wa Aya Sofya wa ʿAli al-ʿArabī Ḥyrā, who was then in the service of the Grand Vizier ʿAlī the Fat (died 28 June 1565) and was a teacher (Flügel, Kat. der Kais. Hofbibl. Vienna, iii, 97), dates from the time of Suleyman the Great. The earliest edition belongs to the year 970/1562-3. Two years later, the author added a few insignificant details to the work and brought it out under a different title (Tāwarīkh-i Din-yi Aya Sofya, in the Bibl. Nationale in Paris, Turkish MSS. Suppl., no. 1546; Tāwarīkh-i Kostanfiyya wa Aya Sofya wa baḍ-ʾi Ḥikayāti, in Pertsch: Catalogue of Turkish manuscripts of the Kgl. Bibl. Berlin, no. 232. Fourmont has a further manuscript, Cat. cod. man. Bibl. Reg., 319, no. 147, 1). According to this, Aya Sofya was built under the emperor ʿUṣṭūnānūs by the architect Iğndaus (as also in Mehmed ʿAṣḥik). Generally speaking, the author of this is more plausible. He also gives far more detail building its predecessor in the 13th century, because he gives various versions. Thus, he must be regarded as the best Turkish authority on the history of their greatest mosque.
although he is utterly unreliable from our point of view,

The contents of the legends which continue to be woven around Aya Sofya change from one epoch to the next. They seem to have their spiritual peak in the 17th century, a time when the Ottomans in general appear as the greatest despisers of this world. At that time the place was shown on which the Arabic heroes of the first century A.H. were said to have prayed on the occasion of their siege of Constantinople; the place lies in the centre of the nave, from which Khidr supervised the building of the church. In the southern gallery a hollowed stone is pointed out as having been the cradle of Christ.

One of the anecdotes which one could still hear told by young theologians in much later years mentioned Hüssey-i Tabrizl and the way in which he is supposed to have got his professorship in the mosque: the mystic (Sa'di) Sultan Mehemmed II the Conqueror had held out his hand to him so that he had to kiss the inside (ayâ), instead of the back of the hand, whereupon he promptly asked for the appointment as mu'dir of the Aya Sofya. The so-called "Damp Pillar" (yasâk desteğ) and the "Cold Window" (sotûk ûpendère) near the Kâbla gained great fame as places of pilgrimage where miracles happened within the holy walls of the church. In the southern gallery a hollowed stone was where Sheykh A'b Shams al-Dîn (whose words had a truly rousing influence on the men of his time, amongst them Mehemmed the Conqueror himself) first expounded the Kur'an. Until very recently, everyone was still convinced that the blessings brought by the currents of fresh air which entered through this "Cold Window" were of beneficial influence to the depth of theological knowledge.

In 1934, President Kemal Atatürk decreed that Aya Sofya was to cease being a place of Islamic worship, and put it under a museum administration. Subsequently, the lime-wash which had covered the figures in the mosaics was removed, and amongst others the following pictures reappeared in 1936:

- A beautiful representation of an enthroned Madonna and Child, surrounded by twelve apostles, (with a model of the town he founded) and Justinian (with a model of the church of St. Sophia) above the southern narthex door; and over the central door, leading from the narthex to the church (the old Emperor's Door), a representation of Christ enthroned, with an emperor (Leo VI? or, more likely, Basil I, cf. A. M. Schneider in Oriens Christianus 1935, 75-79) at his feet in adoration; and, finally, a Madonna in the curve of the apse.

On the description of Hârûn b. Yahyâ see M. Izzedin, Un prisonnier arabe à Byzance . . ., in REI, 1941-6, 41 ff., where earlier studies are cited; on the Muslim legends see F. Tauer, Notice sur les versions persanes de la légende de l'édition de Aya Sofya, in Mélanges Faud Köprülü, Istanbul 1953, 487 ff.; idem, Les versions persanes de la légende de la construction d'Aya Sofya, in Byzantinoslavica xlv/1, 1954, 1-20.

Not far from the Great Sophia, there is the Small Aya Sofya (Kiçük Aya Sofya) near the Djundî square. It was built by Justinian, and was formerly dedicated to Saint Sergius and Saint Bacchus. A cupola rose from an octagonal base (which was extended by four apses). The guardian of the harem of Mehemmed II (Kîzar Aghâd) changed it into a mosque, and since then it has been fully equipped for Muslim teaching and worship. The porch, and the five flat cupolas rising from it, are of Turkish origin.

(KESSLER: [FR. TAENSCHEE])

**AYA SOLÜK,** Ayasulûk, Ayasulûğ, Ayatholûğ (from "Αύαςοφα θεολόγος, i.e., the apostle and evangelist John, who lived and died there.

In mediaeval western (Latin) sources, the town is referred to as Altoluog, today (since 1914) it is known as Selûk. It is a small town on the southern coast of Anatolia, 35° 55' north, 27° 20' east, on the site of the Ephesus of antiquity (still referred to as Afsûs or Ufsûs by Arabic geographers) in the plain which surrounds the mouth of the river Kûçük Menderes (the Kaystros of antiquity), at the foot of the Biilbul Daglî (Koresos), and now on the railway between Izmir and Aydın. It is the capital of the K联系我们 of Kusadasi in Aydın. It is the capital of the Kusadasi in Aydın. It is the capital of the Kusadasi in Aydın. It is the capital of the Kusadasi in Aydın.

In the Middle Ages, Aya Solûk was a town of considerable importance. Ibn Battûta, who visited it in 733/1333 (ii, 308 f.), describes it as having 15 gates, and it was an important commercial centre on the banks of the river Kaystros, where gardens and vineyards flourished. The harbour, which had been the source of the town's prosperity, was silted up with deposits from the river Kaystros as early as the Middle Ages. Instead of Ephesus, the harbour of Kusadasi, some 15 kms. to the south-east (referred to as Scala nova in western mediaeval sources) began to flourish; this had 5,442 inhabitants in 1945.

The advance of the Arabs to Ephesus was only a temporary one (282/798). Similarly, the occupation by Turkish troops after the victory of Melkazgerd (1071)—under the Saltînjîk sultan Alp Arslan—came to an end with the victory of the crusaders of the
first Crusade near Dorylaeum (1097). When the Rûm-Saljuq Empire fell into decline, Turkish troops again penetrated western Anatolia as far as the Aegean coast. Under their leader, they founded principalities, and then Ephesus/Aya Solûk came under the principality of Aydîn. Here Ibn Baṭṭûta met the Aydîn-oghlu Khânîr Beg as the local prince. He was in contact with the Italian Republics, and there was a Venetian and a Genoese consulate in Aya Solûk. In 1391, when Bâyazîd II absorbed the principality of Aydîn, Aya Solûk came under Ottoman rule for the first time, but after his defeat, it was returned to the princes of Aydîn by Timûr in 1402. Under Murâd II, Aya Solûk finally became part of the Ottoman Empire in 1425, and henceforth it was a kadî of the sandjak of Aydîn (evlêt of Anadolu, later wilayet of Aydîn). The fortress, however, was under the Kaptan Pâsha, being a part of the sandjak of Şugla (Izmir). Aya Solûk gradually fell into decay, and is now little more than a village. This is due in part to the changes at the mouth of the river Kayströs, where the plain is now a fever-infested swamp, and in part to the growth of the neighbouring Kuskhasî.

Noteworthy monuments include the ruins of the ancient Ephesus, the remains of the Basilica of St. John, and the imposing Mosque of Aydîn-oghlu. In 1393, the Venetians built the first fort, and in 1398, under the Kaptan Pâsha, the fortress was transferred from the sandjak, which had abused it, to the Grand Vizier; and in 1786 it was decided to abolish a'ydnîks altogether. On the outbreak of war again in the following year, however, the Porte, as before, found itself unable to dispense with the aid of these local notables; and in 1790 a'ydnîks were duly revived. Many a'ydnîs in both Rumelia and Anatolia came during the reigns of Selîm III, Mustafa IV, and Mahmûd II, to play a part in Ottoman affairs very similar to that of the dere-beyis [q.v.], often defying the Porte for long periods and managing the districts over which they had extended their control in virtual independence, although often providing contingents for the Ottoman army in time of war. Among these most the celebrated were perhaps Pâkwan Oghlu [q.v.] (who, if not strictly speaking an a'ydn himself, was the son of one), Bayrâkdär Mustafa Pâsha [q.v.] (who became one early in his career), and İsmâ'il Bay of Serer. It was chiefly to breaking the power of the a'ydnîs (and dere-beyis) in the provinces that Mahmûd II successfully devoted the first half of his reign.

AYÂS, town on the coast of Cilicia, on the western shore of the gulf of Iskenderun, to the east of the mouth of the river Ījâhîn (Pyramos), 36° 55' north, 35° 46' east, capital of the nahiye of Yumurâlîk in the bâdî of Ceyhan (wilayet Seyhan/Adana). In antiquity it was known as Aigai (Ramsay, Historical Geography of Asia Minor, 385 f.). Italian seamen and merchants in the Middle Ages knew it as Ajazzo or Lajazzo. In 1935 it had 667 inhabitants (the nahiye 11,024) (Pauly-Wissowa, i, 943).

The harbour of Ayâs (which at that time formed part of the Christian principality of Little Armenia) only became important in the second half of the 13th century. As a result of the withdrawal of the Franks from the lands of the Crusaders on the eastern shores of the Mediterranean, and also of the silting up of the harbour of Tarsus, the whole of the trade between the West and the Orient was concentrated in this harbour, which was also connected by good overland routes with Syria and Mesopotamia, as well as with Iran via eastern Anatolia. It was from here that Marco Polo started out on his journey across country through Asia in the year 1271. At the end of the 14th century, the Florentine Pegolotti describes the caravan route to

AYA STEFANOS [see YEGHIYKOV].

A'YÂN. Plural of the Arabic 'âyn in the sense of 'notable person' and often used to denote the eminent under the caliphate and subsequent Muslim regimes (cf. the celebrated Wâfâyât al-'A’yân—'Obituaries of Notable Men'—of Ibn Khallikan). Under the Ottoman regime, from having at first denoted merely the most distinguished inhabitants of any district or town-quarter, the term, often used as a singular, acquired a more precise significance, coming, in the eighteenth century, to be applied to those among such persons as then first exercised political influence and were accorded official status. A factor in their rise to such influence was the institution by the Porte, during the 17th century, of Mâlikîne tax-farms—that is to say of farms leased to holders for life. For many of these were taken up by such local notables, who not only prospered financially thereby, but also came virtually to control the districts to which these tax-farms related. During the Russo-Turkish War of 1767-1774, it was largely to a'yânîs all over the country that the Porte resorted in order to raise funds and recruit for the army; and in due course they were accorded official recognition as the chosen representatives of the people vis-a-vis the government, the provincial wâlis furnishing them with documents known as a'yânîk buyuruluşu on payment of a fee called a'yânîye. In 1779 this right of appointment was transferred from the wâlis, who had abused it, to the Grand Vizier; and in 1786 it was decided to abolish a'yânîks altogether. On the outbreak of war again in the following year, however, the Porte, as before, found itself unable to dispense with the aid of these local notables; and in 1790 a'yânîks were duly revived. Many a'yânîs in both Rumelia and Anatolia came during the reigns of Selîm III, Mustafa IV, and Mahmûd II, to play a part in Ottoman affairs very similar to that of the dere-beyis [q.v.], often defying the Porte for long periods and managing the districts over which they had extended their control in virtual independence, although often providing contingents for the Ottoman army in time of war. Among these most the celebrated were perhaps Pâkwan Oghlu [q.v.] (who, if not strictly speaking an a'ydn himself, was the son of one), Bayrâkdär Mustafa Pâsha [q.v.] (who became one early in his career), and İsmâ'il Bay of Serer. It was chiefly to breaking the power of the a'ydnîs (and dere-beyis) in the provinces that Mahmûd II successfully devoted the first half of his reign.

The town was plundered by Muslim armies in 665/1266 and 674/1275, conquered in 722/1322 by the Mamlūk sultan al-Maḥmūd, and rebuilt by the Christians after the peace treaty of 1325; it finally fell into the hands of Egyptian Mamlūks in 748/1347. It then began to decline, and the process was accelerated by the fact that sedentary broadened the mouth of the river Dıyâbân, until the whole area around Ayas became a fever-infested swamp. It is, however, still mentioned in 1400 as the administrative centre of the province of Halab. After the conquest of the Mamlūk Empire by the Ottoman Selim I (886-79/1481-1512), Ayas Pasha became a bāša in the eydlet of Adana. Today, Ayas/Yumur탈 is an impoverished coastal town with a great number of ruins.

Bibliography: Dimashqī’ (ed. Mehren), 214; Abu ‘l-Fida’ī, Tabwīn, 248 f.; Kalkaghandī, Subh al-‘āgha, xii, 165; Muhībāṣar S. al-‘āgha, Cairo 1266, i, 297; K. Ritter, Erdkunde, xix, 1, 125, 126; W. Texier, Asie Mineure, 729 f.; Sāḥīm al-Wilāyāt ad-Adana, 12th year, 1319/1903; V. Guimet, La Turquie d’Asie ii, 107 f.; IA, ii, 42 f. (Besim Darxot).

AYAŞ PASHA (886-7-946/1482-1539), Ottoman Grand Vizier. Ayas Pasha was an Albanian born in the region of Cimera (Himara) not far from Valona (‘Ālī; Bragadīn (9 June 1526); Geuffroy). According to Bragadīn, Ayas Pasha was 44 years old in 932/1526, had three brothers (‘tre fradelli’: not, as in Abdullah); Pecevi, Ta’rīkh-i Miṣr al-Dawla, prince of Albistan (921/1515) against 3 Al(l); Pedewi). Ayas Pasha died on 26 Safar 946/13 July 1539. In the eyes of his contemporaries he had the reputation of being an illiterate man endowed with no great political talent (‘Ālī; Bragadīn; Gēvay).

Of his daughters one was married to Guzeldje Rustem Pasha, who became Beglerbeg of Buda (Sīgīl-i ‘Othmānī), while (or perhaps the same?) daughter is mentioned as having married the sandık beg of Silistria (Gēvay). A brother of Ayas Pasha, Ayed, was governor of Karamān and, later, of Damascus, according to the information given in Ibn Tūlūn (Laoust).

AYZ, Abu 'l-NADJM, favourite slave of Sultan Mahmūd of Ghaznīn. Details of the life of the historical Ayz are difficult to discover, but he was a Turkomān and, if the tradition utilised by Djalal al-Dīn Rūmī he figures as a model of loyalty and sagacity and as describing Ayz as his father's 'sneeze' and as unsuitable for appointment to the office of regent, but retained a high political standing; he died in Cairo in 646/1248-9.

In Persian literature Ayz appears as a symbolic figure under many guises. In the Gūlistān and Bustān of Sa'di he appears as a symbol of true love, in the Maḥnūnāt of Dīlāl al-Dīn Rūmī he figures as a type of the Perfect Man, in 'Avīf's Dīwān al-Maḥzdāt as a model of loyalty and sagacity and as a fit brother-in-law to Mahmūd. In the Čahār Maḥzdā the cutting off of Ayz's locks in a fit of passion by Mahmūd is made the occasion of a display of poetical skill by 'Unsūr; in the Tadhkīrât al-Awliyā' an unsuccessful attempt by Mahmūd to pass off Ayz as a sultan before Shāhiyāb Abl-Ḥasan Khūrkānī is used as proof of that saint's sagacity. In Ibn Khallikān, see under BIBLIOGRAPHY: Abu 'l-Fadl Bayhaqī, Ta'rif-i Bayhaqī, ed. AYAZ, the Amir, lord of Hamadhan, played an important rôle in the struggles for the throne between the rival Sālūdūk princes Barkiyārūk and Mahmūd I. After having first taken the side of the latter, in 494/1000 he went over to the side of Barkiyārūk, and, after the latter's death, became the Ata-be of his son Malikshāh, who was a minor. He could not, however, hold his own against Muizz al-Dīn, who was treacherously murdered by him in 499/1005.

AYBAK (Turkish pronunciation Aybey), properly called 'Īz al-Dīn Abu 'l-Maṣūṣ Aybāk (Aybe), Ak-Ma'mūzām (as a mamlūk of al-Malik al-Ma'āzim) Sharaif al-Dīn ʻĪsā, who was first (597-615/1200-1218) governor of Damascus and then (615-624/1218-1227) sultan of the empire of Damascus after the death of his father al-Malik al-ʻĀdil. In 608/1211-2, Aybēg received the town of Šalḫād in the Ḥawrān and the adjacent lands as a fief and was appointed major-domo (ustad-dīr). When al-Malik al-ʻNāṣir Dāwūd succeeded his father on the throne of Damascus, Aybēk even became regent of Damascus and had the entire political administration in his hands. Shortly afterwards, however, al-Malik al-ʻAṣraf Dāwūd's uncle, took possession of Damascus; Aybēk was deprived of the office of regent, but retained his fiefs in the Ḥawrān. In 569/1228-9, he was still called "Lord of Šalḫād and of Zur'a". He was subsequently suspected of treason and lost his political standing; he died in Cairo in 646/1248-9. His remains were taken to Damascus and placed in the mausoleum built for him. The districts dependent on Aybēk were indebted to him for buildings of various types which he undertook. He created three Hanifi academies at Damascus and one in Jerusalem. As major-domo, it fell to him especially to attend to the building of khanān: as governor of Šalḫād, he sought to render flourishing that part of the trade route from Northern Arabia and from Babylonia to Damascus which crossed his territories; he built the desert fortress, Kal'a al-Asrār and repaired the great reservoir (māṭḥī; elsewhere birkah) at 'Ināk and had a great khanān set up at Šālā. His zeal for building communicated itself to his subordinates, especially to his mamliḳ 'Alam al-Dīn Kāyār. Among the buildings which he erected in his fiefs, the following are especially worthy of mention: a khanān at Šalḫād (611/1214-5); a tower in the fortress of Šalḫād (617/1220-1); arcades and a tower (minaret) in the mosque of Šalḫād (630/1232-3); a fort in the Kal'a al-Asrār (634/1237-8); a khanān at Zur'a (636/1238); a reservoir at 'Ināk (636-637/1236-1234); a mosque at al-ʻAyn (638/1240-1). The monument and khanān of Šālā must have been built about 630/1232-3. The exact date cannot be established because of the fragmentary state of the inscriptions.

Sharaf al-Dīn ʻĪsā and his mamliḳ Aybēk are both known at the time of the Crusades. BIBLIOGRAPHY: Ibn Khallikān, see under Mu'āzzam ʻĪsā; van Berchem, in ZDPV, xvi, 84 ff.; E. Littmann, Semitic Inscriptions, 204 ff.; Dussaud and Macker, Missions dans les régions désertiques de la Syrie moyenne, 326 ff., 336 ff. (E. Littmann)

AYBAK KUTB AL-DIN [see Delhi, Sultanate of]

'AYDARĀS ('Edrūs, often misunderstood as Idrūs; etymology obscure, cf. Shill, Maslagh, ii, 152) a family of learned sayyids and šāfs in South Arabia, India and Indonesia, belonging to the Sālūdūk branch of the Bā ʻAalwi (q.). and still playing an important rôle in Ḥadramawt, Wustenfeld (Culimen, 29 ff.) quotes from al-Muhibbī the details on more than thirty members of the family down to the 11th century. In the 19th century there
were in Hadramawt five ʿAydarūs mansābūn, at Ḥāzm, Bawr, Ṣallīla, Thībī and Ramla. Among the numerous members of the clan, known for its literary activity, are:

1. The ancestor, ʿAbd Allāh b. Abū Bakr (al-Sakrān) b. ʿAbd al-Raḥmān al-Sakkāf (811/865-1408/1461) of Tarim, who was called by his father al-ʿAydarūs. He received the ḥikra from his uncle Ṣumār al-Miḥṣār and succeeded him at his death (833/1429) as nāṭib (manṣab) of the Bāʿ Alawī. By that time he had already won a reputation for piety by means of severe asceticism. He taught ṭafsīr, ḥadīth and fīqh, but had a predilection for the mystics (al-Ghaṣāʾīl). Writings: (a) Kashf al-Wahm ‘an mad Ghamada min al-Fahm; (b) Mfrāḍi al-Jīfariyya; (c) al-Fattāʾl al-Abd Allāh (945-1019) and Ḥatīm al-Aḥtab in whose memory he wrote ṭafsīr al-Zahr (al-Darr) fī ṭafsīr al-Abd Allāh. See al-Ṣakīfī, al-ṣakhawī, Path al-Rafrim al-Rahman i, 161 ff.; Wūst., Qufiten 372 ff.; al-Ṣakīfī, i, 617 ff.; Brockelmann, S II, 617; Sarkis 1399 f.

2. His son, Abū Bakr b. ʿAbd Allāh al-ʿAydarūs, Fakhr al-Dīn (b. 851/1447 in Tarim, d. 914/1508 in Ḥadramawt), was in Ḥāzm, Bawr, Ṣalīla, Thībī and Ramla. Among his disciples were Ḥusayn al-ʿAbd Allāh b. Ḥāzm, Abīdīn, Nāṣir al-Dīn, ʿAbd al-Raḥman al-Sakkāf (811-865; no. 5), Abī Bakīr b. Ṣumār al-Maḥṣūrī (922/1517-951/1544) who wrote Mawā’il al-Kudūsā fī Manāḥif Ibn al-ʿAydarūs. Writings: (a) al-Djurūs al-Lajīf fī lʿīm al-Takhīm al-Sharīf (on ṣīfis) cf. Serjeant, Mal., 581; (b) three lītanīs (awrād); (c) Dīdar (a muṣannaf) was commented upon by ʿAbd al-Ḳādir, below, no. 4). His mausoleum, built by the amīr Murūdīn, who also was buried there in 927/1512, and his mosque are in the Aden Crater, where the ṣuyūrā of the saint is celebrated on the 15th Rabīʿ II. ʿAlī al-Ghāzī in his chronicle (see below) has written a ḥallī bi-ṭawafī al-ṣuyūrā for ʿAbd Allāh b. Ṣumār al-Maḥṣūrī and his uncle Abī Bakīr b. Ṣumār al-Maḥṣūrī (d. 940/1534) who wrote al-Nuṣrī fī ṭawafī al-ṣuyūrā. See al-Ṣakīfī, i, 85 ff.; al-Ṣakīfī, ii, 19 ff.; Brockelmann, S II, 181, S II, 233. See Wūst., Qufiten.

3. Shaykh b. ʿAbd Allāh b. Shaykh b. ʿAbd Allāh (no. 1), b. 919/1513 in Tarim, d. 950/1542 in Ḥadramawt (Gudjarāt). After studies in Mecca, Zabīd and Shīhr he removed to India, where he had many disciples. After studies in Mecca, Zabīd and Shīhr he removed to India, where he had many disciples. After two visits to Mecca and Medina he went to India, where his uncle ʿAbd al-Kādir in Ahmadābād and was taught by him. From there he went to Deccan and was favourably received by Sulṭān Būrḥān Nizām Shāh and his Grand Vizier, Malik ʿAmar. After a rupture he entered the service of Ibrāhīm II ʿĀḍil Shāh at Bijapur. He held a privileged position with this sultan, whom he had cured from a disease. After the death of ʿĀḍil Shāh he returned to Dawlatābād and was in high favour with the vizier Fāṭh Khān, the son of ʿAmar. He wrote a book on ṣīfis called al-Silsila but it fell into oblivion. See Majdāʾ, ii, 117 ff.; Wūst., Quf., 39 f.

4. ʿAbd Allāh b. Shaykh (no. 7), b. 1017 (?)/1608 in Tarim, d. 1073/1662 in Shīhr. He was educated by his uncle ʿAll Zayn al-ʿĀṣīfīn (no. 7) and his cousin ʿAbd al-Raḥmān al-Sakkāf, whom he succeeded in the dignity of a mansāb. After two visits to Mecca and Medina he went to India, where he had a hight position a the court of the Kathīrī sultan. His literary production is restricted to a collection of Rasāʾil, among them one sent to the Zaydī Imām al-Ḥusayn b. al-Kāsim in answer to his claim for obedience from the people of Ḥadramawt. See Majdāʾ, ii, 117 ff.; Wūst., Quf., 56 f.

5. Shaykh b. ʿAbd Allāh b. Shaykh (no. 3), called Zayn al-ʿĀṣīfīn and Tadj al-Ārisīn (984-1041/1577-1632) of Tarim. He had many disciples, and won great influence at the court of the Kathīrī sultan. His literary production is restricted to a collection of Rasāʾil, among them one sent to the Zaydī Imām al-Ḥusayn b. al-Kāsim in answer to his claim for obedience from the people of Ḥadramawt. See Majdāʾ, ii, 211 ff.; Wūst., Quf., 56 f.

6. ʿAbd Allāh b. Shaykh (no. 5), b. 1017 (?)/1608 in Tarim, d. 1073/1662 in Shīhr. He was educated by his uncle ʿAll Zayn al-ʿĀṣīfīn (no. 7) and his cousin ʿAbd al-Raḥmān al-Sakkāf, whom he succeeded in the dignity of a mansāb. After two visits to Mecca and Medina he went to India, where he had a hight position a the court of the Kathīrī sultan. His literary production is restricted to a collection of Rasāʾil, among them one sent to the Zaydī Imām al-Ḥusayn b. al-Kāsim in answer to his claim for obedience from the people of Ḥadramawt. See Majdāʾ, ii, 117 ff.; Wūst., Quf., 39 f.
Kuddäst ji 'l-Naḥm al-'Adwarūsī (comm. on a muwashšah of Abū Bakr, no. 2); (d) Ārd al-Lālī (on a baṣīda by 'Umar B. Maḥmūr [q.v.]); (e) Dīwān. See al-Sakkāf, Ta'īrīk, ii, 78 ff.

to. 'Abd al-Rahmān b. Muṣṭāfā b. Shāykh b. Muṣṭāfā b. 'All Zayn al-Abīnī (no. 7), b. 1135/1723 in Tarīm, d. 1192/1778 in Cairo, the most extensive traveller and most productive writer among the Bāʾ Alawi. Having spent the years 1151-1155 in India (Sūrat, Bāhrū) he returned to Arabia, stayed for some time in Tām, then settled in Cairo (1174). After a visit to Damascus (1182) he returned to Egypt. The long series of his travels in the Near East was concluded by a visit to Istanbul in the year before his death. He had numerous disciples from all parts of the Islamic world, among them Sūlaymān al-Ḥadhīlī, his son ‘Abd al-Rahmān and Muḥammad Muṭṭalā al-Zābīdī [q.v.], who wrote al-Naḥḍah al-budādīyya [cf. Brock.] on the principles of the ṭarīqa. His literary production comprises more than sixty works, the titles of which are given by al-Sakkāf and Brockelmann. Only two collections of poetry have so far been published: (a) Tarwīk al-Bāl wa-Tawāqīq al-Balūq, Būlāq 1328; (b) Dīwān (1304) in three parts: Taṃmīth al-Asāfīr, T. al-Sāfīr and Dījāyīl. Among the remaining titles the following categories can be distinguished: (a) treatises on Ṣūfism, e.g. Miṣrī al-Ṣūmaṣī (on the Ayyūdhisīyya, al-Iṣrājjādī al-Sanīya [on the Nakḥbāndīya], al-Nāfṣat al-ʿAkīya [on the Kādīrīya]); (b) commentaries, e.g. al-Fāth al-Mūbīn (on a muwashšah by Abū Bakr, no. 2, with the supercommentaries Taṃmīth al-Kuṣāmin faṣīga yā Julymūṣī Abīn al-'Adwarūsī and Taṃmīth al-Kuṣāmin fīn Fād Taṃmīth al-Kuṣāmin), Shārkh al-Rāmīna bi-Shārkh Sāḥib Abī Fīyūn (i.e. al-Badawī, cf. Brockelmann, i, 450) and a comm. on a poem by 'Umar Bā Makhṭama [q.v.]; (c) maqālib works, e.g. Ḥādīkāt al-Safā (on Abī Ḥāfīz al-Bāhirī b. Muṣṭāfā), Taṃmīth al-Sāfīr (on Shāykh b. 'Abī Ḥāfīz, no. 3). Taṃmīth al-Sāfīr bi-baʿdat Lajāfī al-Wādī, listed by al-Sakkāf among his works, is accord. to Brockelmann, III, 1290 a comm. on his Risāla fi-'l-Wādī by 'Abd al-Rahmān al-Uḏbūrī, who also commented al-Isṭāğīhātā al-'Adwarūsīyya. In his poetry this author also used the special ḥaramā form called ḥumaynī (see Serjeant, Poetry 5). His grave with a monument is in an open place close to the mausoleum of Zaynab bint Fāṭima in Cairo. His biography (maqālib) was written by his son Muṣṭafā with the title Fāth al-Kuddāsī. See Maʿrūdī, Dilḵar al-Durār, ii, 328; Diжābāri, Aḏrāʿ al-Āṭhar, ii, 27-34; 'Ali Mubārāk, al-Khulṣāṣt al-Šaḏraṣarī (Paris 1956), ii, 484-5; M. Congu, Le Routes d'Aṣhdāb, BIFAO viii, 1911; G. W. Murray, in Geographical Journal, lxviii, London 1926, 235-40; and works mentioned in the article.

AYDIN, also known as Güzel Hisar (“Beautiful Fortress”), formerly Tralleis, a town in western Anatolia 60-80 m. above sea level, 37° 50' north, 27° 48' east. It lies at the foot of the Gevîzi Dağlî (Messogis), which forms the northern boundary of the valley of the Büyük Menderes (in antiquity the Maeander), on the little river Tatak Çay (formerly Eudon) which flows thence to the Menderes. It is surrounded by fields and gardens, and the railway line from Izmır (via Dinar) to Afyon Karahisar passes through it. It is the capital of the vilâyet of the same name and has 18,504 inhabitants (1945); at the end of the last century there were, according to Cuinet, 36,250 inhabitants with a strong Greek minority; the vilâyet (with 394,075 inhabitants) consists of the following kazās: Aydın (105,155 inhabitants), Bozdag, Çine, Karacau, Nazilli and Söke.

Tralleis was occupied by the Turks for the first time after the victory of the Salqīn sultan Alp Arslan over the Emperor Romanus IV at Malāzgerd in 1071. It was surrendered, however, after the crusaders' victory at Dorylaeum in 1098. It was occupied by the Turks for the second time— together with the Maeander valley— in 1176, after Sultan Kılıç Arslan II's victory over the Emperor Manuel; the Emperor succeeded in winning it back before long. The sâhib begi Amir Menteshē brought it finally under Turkish rule in 1280, in the time of Ghiyāth al-Dīn Kay-Khusraw III, and henceforth it became known as Güzel Hisar. In 1350, another
Turkish prince took possession of the town, Aydln-oghlu Mehmed Beg, whose family name was henceforth added to that of the town; the actual capital of the principality of Aydln was, however, generally Brgi. The Ottoman Sultan Blyazid I absorbed the principality of Aydln, but Timur re-established it. In 806/1403 both town and principality finally came into Ottoman possession, and from then on formed a sandjak of their own (with Tire as capital) within the eydil of Anadolu. In the 18th century, the sandjak of Aydln and the sandjak of Saruhan together formed the hereditary governorship of the family of the Kata-Uthman-oghullar; it was not until 1249/1833 that Mdmud II brought it again under the direct administration of the Porte, when it again became a wilayet in its own right. In 1850, however, it was brought under the wilayet of Izmir as a sandjak. Kemal Ataturk re-instituted it as a wilayet in 1924. In the war between Turkey and Greece, the town of Aydln was burnt down on 7th September 1922.

Historical buildings of the town are the Uways Diimti (before 988/1589), RamaAn PaSa Diimti (1000/1594-95), Sulayman Bey Diimti (1005/1683) and Dihanzade Diamti (built in 1170/1756 by Dihanzade ʿAbd al-ʿAziz Efendi).

(A. TARBSCHER)

AYDIN-OGHLU, a Turkomian dynasty which reigned from 708 to 829 (1308 to 1425) over the emirate of the same name. Aydln-oghlu Mehmed Beg (708-734/1308-1334), subbagh of the emir of Germivn, separated from him in the early years of the 8th/14th century and started to make war on his own account, associating himself with Sasa Beg, son-in-law of the emir of Menteqe. After having conquered Brgi, Ayaqoluk and Keles, Sasa turned against his former ally and was defeated and put to death by him in 730/1308. Mehmed Beg added to his conquests those of the acropolis of Izmir, Tyre, Sultan-Ḥisār and Bodemaya. His son Umur Beg (734-748/1334-1348) added to the glory of the dynasty by his victories which were celebrated in a destin. He took possession of the fortress of the port of Izmir, held by the Genoese Martin Zaccaria, and organised a fleet, with which he proceeded to lay waste the islands of the Archipelago, even extending his incursions into Greece. On the death of Andronicus III, John VI Cantacuzenus, who a few years previously had succeeded in winning the emir's friendship, appealed to him for help in his war against the supporters of the rightful heir, John V Paleologus. Umur Beg proceeded to Rumelia in 741/1344, 744/1347, and 741/1345 and helped Cantacuzenus to subdue Thrace. But whilst he was engaged in making his contribution to the triumph of his friend, Pope Clement VI preached a Crusade against him, in which Venice, Genoa, the King of Cyprus, the Knights Hospitallers of Rhodes and the Duke of Naxos participated and which culminated in the taking of the fortress of the port of Izmir in October 1344. Shortly afterwards, the leaders of the Crusade perished in a fight against the emir, who also, in 746/1346, repulsed the Crusade of the Dauphin, Humbert II le Viennois. Umur, however, was killed in the spring of 1348 whilst attempting to retake the fortress of Izmir. The immediate result of his death was the treaty of 18 August 1348 which gave the Latins great advantages, amongst these of his brothers, Khidr 748-760/1348-1460 and ʿIssa (760-791/1360-90), the emirate lost its importance and was finally annexed by Blyazid I, who in 1390 ratified the treaty of commerce of 1348, to the Venetians' advantage. In 1402, after the battle of Ankara, Timur restored their principality to ʿIssa's two sons, Mūsā and Umur II. After the death of these princes, the power passed to their cousin Djmeyd (808-828/1405-25), the son of Ibrāhīm Bahādūr b. Mehmed, well known for his intrigues against the Ottomans. He supported the claims of Dūmezde Muṣṭafā and his son, but was defeated by Murād II and took refuge in the port of Ipsili, from whence he sought unsuccessfully to obtain the assistance of Karamān-oghlu and of Venice. He was besieged by the Sultan, taken prisoner and executed together with all the members of his family in 829/1425-6. This was the end of the Aydln-oghlu, and the emirate was finally annexed by the Ottomans.

AL-AYKA [see MADVAN].

AYLA, seaport at the north end of the Gulf of ʿAḵaba, now succeeded by al-ʿAḵaba [q.v.].

Nelson Glueck, who excavated the site of Biblical Ezion-geber (Tall al-Khulayfya) near the shore of the Red Sea about three kilometres north-west of al-ʿAḵaba, has concluded that the original sites of Biblical Ezion-geber and Elath (the predecessor of Ayla) are identical. The Biblical narrative sometimes distinguishes the two (Deut., ii, 8, I Kings, ix, 26, II Chron., viii, 17), while at other time it gives the impression that they were one (II Kings, xiv, 22, 16: 6). The Old Testament name Elaḥ, of doubtful etymology, is the ancestor of the Arabic Ayla.

Judaean control of Elath-Ezion-geber, established since the time of Solomon, was finally lost to the Edomites in the reign of Ahaz (735-15 B.C.), and the site remained occupied until the 4th century B.C. In the following century the town was transferred, probably by the Nabataeans, a short distance to the south-east, where it was situated at the time of the Islamic conquest.

During the Ptolemic period (when it was known for a time as Berenike), Ayla continued as a port for trade with Arabia and Ethiopia. Under Roman rule it was garrisoned by the 10th Legio Fretensis and constituted the southern terminus of the road built by Trajan (A.D. 98-117) to connect the port with the important/ commercial centre of Bostra (Busra) in Syria. Already in A.D. 325 Ayla was the seat of a bishopric and four capitals of its Byzantine church were to be seen in the courtyard of the customs house at al-ʿAḵaba in 1940. Just prior to Islam, Ayla lay in the territory controlled by the Ghassānid phylarchs on behalf of Byzantium.

Ayla first makes its appearance in the Islamic
period in the year 9/630-1, when the town under its bishop Yuhanna b. Ru'ba made peaceful submission when the town under its bishop Yuhanna b. Ru'ba made peaceful submission. Under Islam Ayla became an important meeting-place for Mecca-bound pilgrims coming from Egypt and Syria, and trade flourished. Although the town stood at the meeting-point of Egypt, Syria, and the Hijaz it was generally considered as belonging to Syria and is described by al-Mu'addasi (178), writing in 985-6, as “the port of Palestine.” The 4th/10th century marked the height of its prosperity under Muslim rule, as is clear from the account of al-Mu'addasi. In 415/1024-5 Ayla was sacked by 'Abd Allah b. 'Irath al-Dzari and some of the Banu al-Dzarrith, while in 415/1022-3 it is said to have been destroyed by an earthquake (Ibn Taghribirdi, Nusjum (Popper), ii, 239).

The Crusading period brought a long era of strife to Ayla and at the end of it the town lay largely in ruins. Baldwin I, King of Jerusalem, took Ayla (Helm) in 1116 and it became incorporated into the Latin Kingdom of Jerusalem under the barony of al-Karak and Montreuil. In 1171 the Franks were driven out by Saladin, who left a garrison in the town. Frankish control was briefly reasserted by Renaud de Chatillon, lord of al-Karak, in 1182-1183 during his remarkable but foolhardy campaign against the coast of the Hijaz and the Red Sea. With the destruction of Renaud de Chatillon's fleet by Saladin's commander Husam al-Din Lu'lu' in 1183, Ayla passed permanently into the hands of Islam, but in a depleted condition. Abu'l-Fida' (1273-1332) states that in his time nothing was left of the town but the stronghold near the shore (Tabarissi, 86-7).

This stronghold, which probably was the predecessor of the still-standing late Mamluk fortified caravansarai in al-'Aqaba (q.v.), does not represent the original fortification of Ayla. The original fort that protected Ayla lay on the island now known as Dzaizarat Fir'awn, which lies on the opposite side of the Gulf of the coast of Sinai but within sight of the town. This island was already occupied by Byzantine times. It was this island fort which was besieged by Renaud de Chatillon in 1182, and the first fort on the mainland appears to have been built by Renaud de Chatillon in 1182 or 1183. In Abu'l-Fida's day this mainland stronghold was the residence of an Egyptian governor.

AYLÜL [see Ta'rīg] AYMAK, Mongol and Eastern Turkish word meaning “tribe” and “group of tribes” (= Turkish il); in Modern Mongolian, “province”; in the USSR, “rayon.” In Afghanistan the four nomadic tribes of partly nomad origin: Dzamshidi, Hazara, Firstezkhi and Tayman, are called the “Four Aymaqs” (Cahar, or Cahar. Aymak) [see Cahar Aymak].

Arabic ُغِیْبُ" (i.e. anything that can be thought of) into two classes, things that exist in the exterior world, and things that exist in the mind, and they use for the former the expression ٌلاَّعْیِنَ، for the latter ٌژِدْحَمَ (ژِدْحَمَ) is the plural of ژِدْحَمَ (ژِدْحَمَ, mind) and it is in this opposition of the exterior world to the purely mental entities that the term ُعِیِنَ is specially used by the philosophers. In this sense ُعِیِnَ is synonymous with ُغِیْبُ, intisâb-um, and it can express also the identity of the individual thing. But a common word denoting a concrete individual, like "horse", can signify both a particular horse, e.g. the horse in my stable, and the class "horse", when you say "this is a horse", meaning that this is an animal which possesses the nature, the general characteristics of a horse (according to the Arabic grammarians an اسم ُعِیِnَ, a word denoting a concrete individual is an اسم ژیِیِنَ, a generic word).

The philosophers give to this universal character of a thing the name of ماْحیِی‌ة, quiddity, or ژِلَه, essence, but in theology and mysticism the term ُعِیِنَ is frequently used to express this meaning. And since according to the neoplatonising mystics and philosophers the universals exist eternally in God's mind, these eternal ideas are called by the mystics ُعِیِنَ or ُعِیِنَ ظِبْلَا (ظِبْلَا means stable or eternal), whereas the philosophers, use different other terms like ژِلَّظِبْلَا and ُعِیِنَ ژِلَّظِبْلَا (some Mu'tazilites too employ the terms ُعِیِنَ or ژِلَه to express the eternal ideas in God). Now, since for the neoplatonising mystics our world is but a dream—world and true reality lies in a world beyond and God is the one truly Real and the ultimate source from which all being and all beings spring, ُعِیِnَ in its double sense of the real and of source—for in Arabic ُعِیِنَ can mean also source—is used by the mystics to indicate the super-existence of God's deepest essence. In this sense it is rare in philosophy, but we find it in Avicenna, for instance when he speaks in the ژیِیدْرَد (ed. Forget 205) of those mystics who penetrate to the ُعِیِnَ, the contemplation of God's inner nature. Finally it may be remarked that the term ُعِیِنَ ظِبْلَا, the contemplation of the evident, can be used in the double sense of "intuition", i.e. the pre-rational sense of intuitive understanding of the philosophical first principles, and the post-rational sense of the intuitive understanding of super-rational mystical truth.

Bibliography: see ANNIVYA; for the mystical use of the term see R. A. Nicholson, Studies in Islamic Mysticism. (S. VANDEN BERGH)

"AYN in the medical terminology of the Arabs, like "eye", "œil", "Auge" etc. in that of the Europeans, not only refers to the bulb or eye-ball, Ar. مُهَلا، کُرَات ال-اَیْنَ, but also to the whole of the organs which make up the apparatus of vision, جِمْوَلُ دِاد ال-بَسَارَ.

The study of the human eye, for the doctors of medicine and those who wrote on the subject in the Islamic world, constituted one of the most remarkable branches of their science. This branch of knowledge, which is the equivalent of the ophthalmology of the West at the present day, has borne different names at various periods. Thus it was called کُبْلُ, a word which originally designated collyrium (black) of antimony—the pre-eminent medicine and cosmetic in the east—which was subsequently used in a much wider sense for the "science and art of caring for the eyes"; --کَحوْلَة, from the same root and used in the same wide sense; --طِبّ ال-اَیْنَ, طِبّ ال-بَسَارَ, an expression still in use; --طِبّ الرَمَادِ and ژِلّ ال-رَمَادِ, where this latter term, which originally only meant "conjunctivitis", now embraces eye diseases of all types.

From the point of view of the history of medicine, this branch synthesises and reflects the evolution of Arab Medicine as a whole. Thus it is that two periods are distinguishable here: the initial period of formation, when the scholars of the East, for the most Christians, translated Greek ophthalmological science into Arabic and used it as it stood; and secondly, the period of development, during which other scholars systematized this matter of medicine and enriched it by their original contributions. Among the former must be mentioned Yuhanna b. Mâsawayh, a native of Djundishâmûr and the author of the ژیِذبِuds-Daghal al-اَیْنَ, and Hunayr. b. ژیِشَکُ b. ژیِیدْرَد (ژیِیدْرَد), also a Christian, of Baghda'd (first half of the 5th/11th century), author of the celebrated تَذْکَرَهُ al-کَحَوْلَة. and his great contemporary "Amâr b. "Ali (ژیِیدْرَد), a Muslim of Mawâlî, who practised in Cairo, author of the ژیِذبِuds-Munâshâb fi ژیِذَبَهُ Amârâd al-اَیْنَ. The works of these four authors must be considered as the cornerstones of Arab ophthalmology.

To give an idea of the originality of Arab thought on this subject, it is sufficient to recall the relationships of cause and effect, which "Ali b. ژیِشَکُ was the first to discern, between trachoma (دَجَأَرِبَ ال-اَیْنَ, today رَمَاد ژیِیدْرَد, ژیِیدْرَد, ژیِیدْرَد) and the acute conjunctivitises which precede it, on the one hand, and the "cornea pannus" (سَبَال) and "entropion-trichiasis" (ینِسَبُت al-ژیِیدْرَد) which follow it, on the other hand; and in the operation of cataract (مُرَبَع, مُرَبَع al-ۤاَیْنَ and in Arabic ژیِیدْرَد فَوْرَا) the astonishing suction of the (soft) crystalline lens performed by al-Mawâlî, which eight centuries later, was to be adopted in the West and continued down to the present day. New contributions in this special field are to be sought in the treatises on general medicine, like the ژیِیِنَ of Ibn Snâz, where, for example, we find the first "anatomical" description of the eye motor muscles, as well as of the lachrymal ducts; also in the works of non-medical authors, such as the famous فرْبْیِ on Optics, the ژیِذبِuds-Manâsir, of Âbû "Ali b. al-Haythâm, of Başra (died ca. 431/1039), in which this great scholar put forward his rational theory of vision, refuting that of the Greeks' "sight-spirit", inherited by the Arabs (رَبَّ ال-بَسَارَ, رَبَّ البَسَارِ, رَبَّ النَّارِ etc.). Neither should the numerous minor works on ophthalmology be neglected which appeared everywhere and with great frequency in Islamic countries, some of which are in dialogue form (see the ژیِذبِuds-MusâmÂa fi ژیِذَبَهُ, author unknown, Vat. Borg. 377). Finally it should not be forgotten that there were oculists who enjoyed great fame, none of whose works on the subject have yet come to our knowledge. Such is the case, for example, of ژیِشَکُ-یزَرَفâli (3rd/9th century), who practised in Cairo before moving to al-Kayrawân, where he became one of the most enlightened masters and authors on general medicine of the Middle Ages.

Bibliography: (confined to works by oculists who were themselves Arabic scholars, or who worked in collaboration with Arabic scholars): J. Hirschberg, Geschichte der Augenheilkunde bei den Arabern, Leipzig 1908; M. Meyerhof, The Book of the Ten Treatises on the Eye ascribed to Hunain ibn Isbaq, Cairo 1928, and the whole of his valuable series of studies and original memoranda

**AYN, “evil eye”.** Belief in the evil eye is well established in Islam. According to Abū Hurayra, the Prophet said al-ayn baham “The evil eye is a reality” (al-Bukhari, commentary of al-Kastallani on the Sahih, viii, 390, 463); it is the evil action of an envious glance which is envisaged by the recommendation given in the Kūrān, cxii, 5. Orthodoxy, however, makes the Prophet condemn this belief (Munshāhīb Kanī al-Ummāl, iv, 22; Nikāyā f Ghariib al-Hadīth, iv, 202). This superstition, universally current, dates from before Islam in the Muslim countries, where it continues to be prevalent. It frequently finds expression both in religious traditions and in popular folklore: “the majority of human beings die as victims of the evil eye”, “the evil eye empties the houses and fills the graves”, etc. The effect of the evil eye, ṣūba bi-l-ayn, laḥša, ṣuha etc. is generally instigated by a desire to harm transmitted by a look pregnant with hate or envy, naḍīs, naḍīš or naḍīf, but it can be involuntary and result from the naturally injurious power of a strange or staring look masfuʿ (Ibn al-Sikkt, Takhabib al-Atlās, ed. Cheikh, 545-46; al-Mubarrad, Kāmil, 329). Deep-set eyes, blue eyes or eyebrows which meet are reputed to be baneful. Some animals, such as the viper (al-Damīrī, Ḥayāl al-Ḥayawān, i, 24) are considered as having a poisonous glance. The eye suffices to disseminate the evil. Its power, however, may be coupled with that of the spoken word: evil eye, fascinum oculo, and evil mouth, fascinum lingua, frequently go together. An unfortunate word or misplaced praise is capable of harming the person to whom they are addressed and of releasing the malefic action. Of all people suspected of possessing the evil eye, the most feared are women, especially old women or those who are unmarried or sterile. But likewise equally all who are ill-favoured or consider themselves placed at a disadvantage by nature. As a corollary, pregnant women, small children and, generally speaking, everything which is beautiful, happy, or precious, is liable to the assaults of envy and certain circumstances augment the vulnerability of persons and things which are enviable: pregnancy, childbirth, marriage and in general, feasts and celebrations. Illness, debility, death of those concerned; loss of livestock, deterioration or destruction of objects or situations; the consequences feared from the evil eye are innumerable. People strive to protect themselves against it or to remedy its calamitous effects. Whether preventative or curative, the prophylaxis of the evil eye is varied (al-Suyūṭī, Raḥma, 56-58): use of formulas, gestures; fire rites, fumigations; use of salt, alum, horn, metal, etc.; the wearing of phylacteries, amulets, jewels; tattooing. Originally, doubtless the veil worn over the face was one of these means of prophylaxis. The most effective protective symbol is the number five, ḥamsa [q.v.] and thefiguration of thefive-fingers of the hand spread out (Lefebure, in *Bull. Soc. géogr. Alger*, 1907, 411-417). The ritual attaching to the evil eye, like the belief itself, is very much more a matter of magic and superstition than of religion, even where the formula is derived from orthodox Islam.

**AYN DILFA** is a spring in the north of Syria which is of some importance on account of its situation on the road between Antioch and Aleppo, somewhat west of the large ruins of the monastery of Kaṣr al-Banāt. Its source is on the northern slope of the Diabāl Bālrīša and it runs through a narrow channel cut out in the rock into a well-house (sabīl). According to an Arabic inscription, this well-house was built in 877 (1472-1473) by an inhabitant of the neighbouring village, of the name of Mahmūd b. Ḥamād. It is highly probable that on account of the spring a settlement already occupied the spot in ancient times. A few remains of buildings from the Christian era, still more from Islamic times, can yet be seen. There are also a few inscribed Muslim tombstones. The place is nowadays uninhabited; it belongs to the people of Sermedī. From time to time nomadic Turcomans or Kurds used to camp there in their tents. The spring was of importance for the caravans between Antioch and Aleppo, which often used to rest there.

Dijālūt is chiefly known as the site of the famous battle, fought on Friday 25 Ramaḍān 658/ 3 September 1260, in which a Mongol army, commanded by Kitbuga Noyon, was defeated by a Mamlūk army from Egypt, led by the sultan Al-Malik al-Muẓaffar Kutuz. The vanguard of the Mamlūk army was commanded by Baybars [q.v.]. The strength of the Mamlūk force was estimated at 120,000; that of the Mongols at 10,000 horsemen.
(thus the Syriac and Arabic texts of Bar-Hebraeus; Rashīd al-Dīn speaks of "a few thousand"). The Mongol forces and their Christian auxiliaries, after at first being defeated at the Mamlūk left wing (or, according to others, vanguard) before them, were set upon and annihilated by the main body of the Mamlūk army. The Mongol general Kitbuga was captured and put to death. Hūlekū, infuriated by the defeat, prepared to send a punitive expedition to Syria, but was prevented from doing so by the inner struggle within the Mongol Empire following the death of Mongke Kaan (Munkū Khan) in September 1259 (cf. Rashīd al-Dīn, 359).

The Arabic and especially the Egyptian chroniclers regard the battle of ʿAyn Dīlūt as a decisive victory, which saved the Suṣo-Egyptian Empire and indeed Islam itself from the Mongol menace. For the first time, a Mongol army had been defeated in pitched battle; the fact that the victors were largely Turkish, and overcame the Mongols by using their own methods of warfare against them, if anything added to the significance of the victory, for it meant that the vitality and energies of the steppe peoples were now being harnessed to the service of Islam (see for example the remarks and verses of Abū Shahim, Tarāḍīḍ, 208 and Yunūl 167; D. Ayalon, in his The Warfādiya in the Mamlūk Kingdom, IC, 1951, 90, has drawn attention to the highly significant comments of Ibn Khaldūn, al-ʿIbar, Tardīrim, 371, on the rôle of the steppe peoples in rejuvenating and renewing Islam). The Persian and other sources sympathetic to the Mongols tend rather to present the battle as an inconclusive engagement in which a small Mongol force was overwhelmed by vastly superior numbers, who were saved from retribution only by Hūlekū’s preoccupation with other and more important matters.

The victory by no means ended the danger from the Mongols, who continued to hold Meṣopotamia and ʿIrāk and to threaten Syria from both north and east. In the event, however, ʿAyn Dīlūt was the high water mark of Mongol advance, though it seems likely that the ebbing of the Mongol tide was due to events in the East at least as much as to Mamlūk resistance.

Bibliography: the contemporary Egyptian accounts of the battle are those of the two biographers of Baybars, Ibn Shaddād and Ibn ʿAbb al-Ẓāhir, whose narratives seem to underlie those of most subsequent Egyptian historians. Ibn Shaddād’s account of ʿAyn Dīlūt is unfortunately not included in the surviving fragment of his work (MS. Selimiye 1507, Edirne; published in Turkish translation only: M. Şerefabric Yaltkaya, Baybars Tarihi, Istanbul 1941). which, however, contains several allusions to the victory. A probably abridged version of Ibn ʿAbb al-Ẓāhir’s narrative was published from the B. M. manuscript by S. F. Sadeque, Baybars I of Egypt, Dacca 1956 (13ff., and index). A fuller text of the same book is to be found in Istanbul (MS. Fatih 436). Ibn ʿAbb al-Ẓāhir is at some pains to emphasise Baybars’ vital contribution to the victory. Of the later Egyptian accounts, the most accessible are those of Maqrīzī (Suhrak, i, 430 ff. = Quatremère, Sultans Mamelouks, i, 1, 104-6) and Abu ‘l-Maḥāsin, Cairo ed., vii, 79. There are also Syrian (Abū Shahim, Tarāḍīḍ Riqqī al-Karmām al-Sulṭān wa l-Turk, Cairo 1948, 207-9; Yunūl, Dhuṣayr Muḥammad al-Zamān, i, Haydarābād 1954, 360 ff., citing Ibn al-Dīfazār, etc.) and ʿIrākī (Ibn al-Fuwātī, Al-Hamādīk al-Dīfazār, Baḥrābād 1351, 344) accounts, as well as brief allusions in Frankish and Eastern Christian sources (Eraclès, ii, 444; Win. Tyre Cont. ed. Migne 1044; the Armenian chronicle of Grigor of Ak’ans, ed. R. H. Bliss, HIAS, xii, 1949, 139; Muṣafād b. Abī l-Fadl, ii, ed. and tr. E. Blochet, Patr. Or. xii, 417; Bar-Hebraeus, Chronographia, Oxford 1932, 439-40; Abu ʿl-Faradīj, Taʾrikh Muḥāṣar al-Duwal, Beirut 1890, 489; al-Makīn b. ʿAmīd (ed. Cl. Cahen), Bēt. Or. xv, 1955-7, 175). The chief Persian source is Rashīd al-Dīn (ed. and tr. E. Quatremère, Paris 1913, 349-351). See further B. Spuler, Die Mongolen in Iran, Leipzig 1939, 57; H. H. Howorth, History of the Mongols, iii, London 1888, 167 ff.; R. Grousset, Croisades, iii, 603 ff.; Runciman, Crusades, iii, 312-3; Stevenson, Crusaders, 334; A. Waas, Geschichte der Kreuzzüge, i, Freiburg 1956, 317; Cl. Cahen, La Syrie du Nord, Paris 1940, 710-1.

AYN AL-DJARR, an ancient and important site in the Biqāʾ (q.v.) and an Umayyad residence, the Arab name of which, now pronounced ʿAndjar, corresponds to the Greek and Syriac Gerch and An Gero. The main source of the Lītānī, which comes forth at the foot of the Anti-Lebanon, not far from the modern road from Beirut to Damasūs, for a long time formed a swampy lake there stretching to Karak Nūḥ, which was only finally drained in the Mamlūk period. The remains of a temple, later converted into a small fort (hence the expression ḫam Maḍjal used at the period of the Crusades), which still dominate the present-day village of Maḍjal ʿAndjar, doubtless mark the site of ancient Chalics of the Lebanon, the capital of a state which extended from Coelesyria to Ituria, before being annexed to the Roman Empire. In contrast, the archaeological remains which exist not far away, in the interior of a vast enclosure furnished with towers, and which the excavations now being undertaken will make better known to us, have been identified by J. Sauvaget with the Umayyad town founded about 95-96/714-715 by the Caliph al-Walīd b. ʿAbd al-Malik and built, as is attested by inscriptions and the Aphrodisio papyri, with stones from the quarries of Kāmid in the Biqāʾ and by the use of forced labour. Its character as an agricultural settlement has been inferred from the existence of hydraulic works, contemporary with the ruins, but at what period it was completely abandoned is not known. The Arabic texts, which first speak of the victory there of Marwān b. Muḥammad, in Safar 127/November 744, over the troops of Sulaymān b. Hāghām and the passage of the ʿAbbāsid forces when they occupied Syria, continue in fact to mention it incidentally without giving any precise information as to the actual condition of the old Umayyad town at the time.

(J. SOURDEL-THOMINE)
АЙН МУСА: (i) A spring at the entrance of the Siq at Wādī Mūsā (Petra). It was a source of water for the later Edomite site now known as Ṭawilām and occupied in the 13th-6th centuries B.C. (Nelson Glueck, The Other Side of the Jordan, New Haven, 1940, 24). Islamic tradition associates this spring with Kuṭrān 2:57, where Moses strikes a rock with his staff and brings forth twelve springs. This appears to represent a blending of the twelve springs of Elim (Exodus 15:27) with the striking of the rock at Horeb in Exodus 17:6. Yākūt (s.v. Wādī Mūsā) gives the same story repeated later by al-Baydāwī (Tafsir, commentary on Kuṭrān 2:60 according to the Egyptian verse numbering) that the twelve springs burst forth from a stone that Moses had carried with him and set down on this spot. William of Tyre (A History of Deeds Done Beyond the Sea, tr. E. A. Babcock and A. C. Krey, New York, 1943, i, 124) associates the spot with Exodus 17:6, which probably represents the then current Crusader tradition. Musil (Arabia Petraea, iii, Vienna 1908, 330) reports that in his day the spring was venerated by the Liyāḥina Arabs because of its association with Moses.

(3) A small spring near the foot of Ḍiabal al-Muṣattām east of Cairo (Les Guides Bleus, Egypte, Paris 1950, 253).

АЙН АЛЬ-ТАМР, a small town in ʿIrāq in a fertile depression on the borders of the desert between Anbār and Kūfah. It is 8 miles west of Karbala. The Arabic name means fountain of dates. It was probably called so because of an abundance of palm trees (Yākūt, iii, 759).

According to Ibn al-Kaldūn, it was part of the ʿIrīte kingdom of Dīdāhyma al-Abrash (al-Ṭabarī, 750; Yākūt, ii, 376). There Ṣāḥib is said to have married Naḍīr, the daughter of the King of Ḥatta. (Al-Ṭabarī, i, 829; Yākūt, ii, 283; al-Hamdañī, al-Buldān, 130). It was probably also a tawšādi of the ʿatās of Bihkubāḏ al-Aʿlā, as it was in the ʿAbbasid period (Ibn Khurraḍaǧib ibn Khudā, 8; Kūdāma, 236; Yākūt, i, 241, 771).

When the Muslim commander Khalīl b. al-Walīd attacked it in the year 12 A.H., ʿAyn al-Ṭamr was a military post (al-Ṭabarī, i, 2057; al-Baladhūrī, 246) with a fortified citadel (al-Baladhūrī, 6-7). Khalīl defeated and massacred the garrison (al-Ṭabarī, i, 2064; al-Baladhūrī, 110; Yākūt, iii, 759; Caetani, Annales, ii, 261, 940, 991). He captured and enslaved some of its non-combatant inhabitants. These were the first enslaved captives to arrive in Medina (al-Ṭabarī, i, 2076). The sons and grandsons of many of these captives became prominent figures in the military, administrative and intellectual life of Islam (cf. their names in al-Ṭabarī, i, 2064, 2121, 3472, ii 802; al-Baladhūrī, 247, 230, also 14, 142, 352, 357; Yākūt, iv, 807; Aḥmadī, iv, 3256).

Scanty information about the Muslim conquests indicates that ʿAyn al-Ṭamr had a Christian population and a church (al-Ṭabarī, i, 2064; al-Baladhūrī, 247; Yākūt, iv, 807), and also a Jewish Community and a synagogue (al-Yaḥṣūbī, ii, 151). But probably the majority were Arabs from the tribes of Ṭaghlib, Namīr and Asad, who were sedentary agriculturists.

ʿAyīn al-Ṭamr preserved its importance in the Islamic period, not only for its products by which the nomads of Arabia and ʿIrāq were supplied, but also for its geographical situation on the routes of communication between the fertile centre of ʿIrāq and the Syrian desert. It also commanded the military approaches from the western desert to ʿIrāq and especially to Kūfah (cf. al-Ṭabarī, i, 2069,
Its importance led the governors of Kufa to station it in a military force to protect one of the approaches to their Miṣr (cf. al-Tabari, i, 3444; ii, 773, 1352, 1945, 1946; ii, 21; al-Baladhuri, Ansâb, v, 295).

By the end of the 3rd/4th century ʿAyn al-Tamr was inhabited by the Banī Asad (al-Tabari, iii, 225).

ʿAyn al-Tamr was a fortified town (al-Muḳaddasî, 117) in the 4th/5th century, a tâṣṣadî of the ʿâṣlân of Bû Khûdâbûd al-ʿAṣā. At this time its products included 14 ba.Stdar, 300 ḥurr of wheat, 400 ḥurr of barley and 45,000 dirhems per year (Ibn Khûrâdâdhibh, 10; Kudâma, 237). Its lands were considered ṭuṣr (al-Baladhuri, 248).

For the period of the decline of ʿIrâk from the 6th/7th century onwards, information on ʿAyn al-Tamr is scanty and it is confused with Shthatha, a neighbouring village. It was captured and looted by the Mongols who captured Bahgâd (ʿAzâzî, Ṭârîkh ʿIrâk baṣîr al-Hâlîdîyân, i, 357). During the turbulent 10th/11th century some of the Bedouins used it for a refuge (ʿAzâzî, op. cit., v, 182).

Gertrude Bell visited ʿAyn al-Tamr and described it as a walled village with a citadel. She mentioned its sulphurous waters, cereals and 170,000 palm trees (Armarth to Amarah, London 1924, 139).

At present ʿAyn al-Tamr is the centre of a district (nâdîya). It has four quarters: Alûbû Hardán, Kâṣr Thâmir, Kâṣr Al-ʿAyn, and Kâṣr Abî Iwâydi. The sedentary population numbers 2144, and the rural and nomadic population is 3183 (1947 Census of ʿIrâk).

Bibliography: quoted in the article.

ʿAYN AL WARDÂ is a locality which, according to Yâkût, is identical with Râsʿ Ayn (p. c.). It owes its fame to the great battle of Dhammâk I 65/ 6 Jan. 685, in which the Shîʿahs of Kûfa were slaughtered by the Syrians. See Well, Chakhsân, i, 360 ff.; Müller, Der Islam im Morgen- und Abendland, i, 374; al-Ṭâbarî, index and especially i, 257 and ii, 554 f. (Ed.)

ʿAYN ZARBA, deserted town of Anatolia, situated to the south of Sîs and to the north of Miṣrâ (the former Mopsuestia), a little to the north of the confluence of the Sûmbâz Cay with the Djîyân, built on an isolated hill in the middle of the plain, on top of the ruins of an ancient town which was called Anazarba (cf. Hirschberg in Pauly-Wissowa, i, col. 2101). The Arabs took the first element of the name Ana for ʿAyn, spring; cf. Sahmu, in ZA VIII, 98. It acquired a certain importance from the time of Harun ar-Rashid who organised the frontier for defence. In 180/796 he rebuilt and fortified it, and settled people from Khurâsân there (al-Baladhuri, 172; Ibn Fâkîh, 113; Ibn Shahhâdî, in Ibn al-Shihhân, al-Durr al-Munštâhâd, 185). In 212/827 ʿAbd Allâh b. Tâhir, governor of the region between Râṣûk and Egypt, settled Africans from the town (Michael the Syrian, iii, 60). In 180/795 al-Muṭaṣâmî, himself in some Zoṭ (al-Baladhuri, loc. cit., al-Mâṣūdî, al-Tanîkh, 335) were the object of a Byzantine attack in the same year, and in another in 241/855 when they were captured with their families and their buffaloes and carried off to Constantinople (al-Ṭâbarî, iii, 1169 and 1426; cf. Vasiliev, Byzance et les Arabes, Fr. ed., i, La dynastie d'Amorium, 126 and 224). In 289/900, the eunuch Wâṣîf, who wanted to cross from ʿAyn Zarba into Byzantine territory was captured by the troops of al-Muṭaṣâmî to the north of the place.

ʿAyn Zarba is included by the Arab geographers among the frontier towns of the Thughûr (Ibn Khûrâdâdhibh, 100; Kûdâma, 229, 253; Ibn Rusta, 107, al-Yâkûbî, 362 etc.). It flourished mainly in the 4th/5th century. In his book on the Thughûr, Ibn Hawkal, 121, described it as a town as like those of the Gâwûr (probably because of the similarities of climate and products), in the middle of a plain where palms grow, and surrounded by fertile lands (cf. al-Īṣâkhî, 55, 63). It was fortified by the Hamdânî Sayîf al-Dawla who, says Yâkût, iii, 761, spent 3 million dirhems on it. Nevertheless it was taken by Nicephorus Phocas, to whom it surrendered at the end of the year 250/962 (see Zonk, a detailed description of the siege and the ravages of the Byzantines, particularly the felling of 50,000 palm trees, in Ibn Miskawayh, ii, 190-1; for other references see M. Canard, Histoire de la dynastie des Hamdanides, i, 806-8). The Muslims were expelled and emigrated to Syria. The town remained in Byzantine hands until the time when the Armenians, expelled from Armenia, occupied it together with the other towns of Cilicia, and it became part of the territories belonging to Philaretus. But, a little before the arrival of the First Crusade the Sâldjûk took Tarsus, Miṣrâ and ʿAyn Zarba (Michael the Syrian, iii, 173, 179). Tancred, nephew of Bohemond, conquered Cilicia in 1097 and Bohemond, installed in the principality of Antioch, took possession of it and also of Tarsus, Adana and Miṣrâ in 1098. These places, the object of a dispute between Bohemond and the Byzantines, were recaptured by the latter, but the Armenian Thoros I, a descendant of Roupen, who was established in the mountains to the north of Sîs, and who reigned from 1100 to 1129, took Sîs and Anazarba from the Byzantines (RHC Arm. I, 490). During the reign of Leo I, brother of Thoros, Bohemond wanted to establish himself again in Cilicia and marched on ʿAyn Zarba, but he came into conflict with the Dânishmand of Cappadocia who also wanted the country, and was killed in 1130. After Leo had conquered Tarsus, Adana and Miṣrâ in 1132-33, the Byzantines invaded Cilicia in 1137 and John Comnenus recaptured ʿAyn Zarba and took Leo prisoner (Kâmûl al-Dîn, ed. S. Dâban, ii, 263), but in 1151 Thoros II, son of Leo, regained ʿAyn Zarba as well as all the other large towns in Cilicia. Kilîd Jâr Aslân II of ʿOnya, at the instigation of his ally Manuel Comnenus, attacked ʿAyn Zarba without success. In 1159...
Manuel reoccupied it with the other places in Cilicia, but Thoros II took it again in 1162 (cf. concerning these events, F. Chalandon, Les Commmunes, ii, 115-6, 426-30 and R. Grousset, Hist. des Croisades, ii, 51, 86, 333, 399, 566).

The Rumelians kept Cilicia until the 14th century. From 1266 the Mamluks of Egypt made numerous invasions into the kingdom of Little Armenia (see the articles Armenia, Cilicia, Missisa, Slv); during one of them the region of 'Ayn Zarba was pillaged (in 1279, Bar Hebraeus, Chronography, 462). Finally in 823 Arm. = 776 A.H. = 1374 A.D., in the reign of Malik_Aghraf Sha'bdn, Cilicia was conquered, 'Ayn Zarba destroyed, and Leo led into captivity in 1375 (see RHC Arm. i 686 and 719). After this the town lost all importance. Like the rest of Cilicia it passed into the hands of the Turkoman family of Ramdan-oglu in the 15th century and then to the Ottomans in the 16th.

In the 14th century the name of the town was corrupted into Nawar沙 (cf. Abu 'I-Fida', ii, 2nd part, 29). To-day the place is in ruins and is known as Anavarra.

AYNABAKHTI, Turkish name for Lepanto, or Naupaktos, in Greece. It is on the Gulf of Corinth, has a picturesque position, but is—these days—an Anavarra.

Bibliography: In addition to the sources mentioned in the course of this article, see Le Strange, 129; Ritter, Erdkunde, xIX, 56; G. Schlumberger, Un empereur_byzantin au Xme sicle, Nickelhore Phocas, 191 ff. (M. CANARD)
 persona grata with the rulers of his time, the Sultans al-Mu'ayyad, al-Malik al-Zahir Tatar and al-Malik al-Aghraf Barnbây. He translated al-Kuduri's legal treatise into Turkish for Tatar; he read his Arabic chronicle, translating it orally into Turkish as he went along, to the Sultan al-Malik al-Aghraf in the long and frequent interviews he had with him. For the rest, the one-time Şüfi of the Barkûkıyya, now become a perfect courtier, composed panegyrics in honour of his masters (a Life of Mu'ayyad, an Eulogy of al-Malik al-Zahir Tatar and al-Malik al-Aghraf. Appeared in 829/1425-6. chief hâdi of the Hanafis, he occupied this post for 12 consecutive years. In 846/1442-3, he even succeeded of the Hanafis, he occupied this post for 12

The life of al-‘Ayni affords a most interesting testimony on the relationships of the scholar class with the Mamluk Sultans. This scholar took an active part in the intellectual movement of his century and was in contact, though on rather bad terms, with two of the most outstanding men in Muslim science of the period, al-Makrizi and the Shaykh al-Islâm Ibn Ḥajjar al-Askalânî; he supplanted the former in the office of muhâtasib, thus incurring his hatred; he sustained a very lively argument against the latter concerning his commentary on the Şâhi of al-Bukhârî. Al-‘Aynî’s works are at any rate very numerous; some of them are in Turkish, though the majority are in Arabic. The three best known are: (1) his general history called Úbd al-Dîjamîn fi Ta'rikh Ahi al-Zamân (an extract in Recueil des historiens des croisades, Hist. or., II, 183-254); (2) his commentary on the poetical examples cited in four commentaries of the Alîfiyya of Ibn Mâlik, entitled al-Mabâhid al-Nabîyya fi Şarî' al-Mu'awwâdî (printed on the margin of the Kâzînân al-Âdâb of al-Baghâdî, Bâbîk 1299, 4 volumes); (3) his great commentary on the Şâhi of al-Bukhârî, entitled Umdat al-Kâtî fi 'Arî' al-Bukhârî (printed in Cârî 1308, and Constantinopile 1309-1310, 11 volumes); in this last work, al-‘Aynî shows proof of a certain method, which contrasts with the usual confused disorder prevalent in the work of Muslim exegetes; in the study of each hadîth he proceeds in the following order: connexion between the hadîth and the chapter heading; study of the isnâd, of its peculiarities and its authorities; enumeration of other works or other chapters of the Şâhi where the hadîth occurs; study of the literal sense; study of the juridical or ethical rules which can be deduced from the hadîth.

‘AYNṬAB (Arp. Antaph, Lat. Hamtab, to-day Antep or Gaziantep since 1921: ethnically ‘Ayn, and also ʻAynabî, see 1001 Nights, Night 864, Cairo edition) important town, chief place of a vilayet in the south-east of Anatolia, with 50,000 inhabitants (1935). The vilayet has five katas: Gaziantep, Kilis, Nizip, Islahîya and Pazarcik.

The town is situated on the upper Saljûq, a tributary of the Euphrates, near the junction of two important roads, one running north-south from Marâs to Aleppo, with a fork south of Marâs to Malatya; the other east-west; the latter runs from Diyarbakîr, Urfa (Edessa) and Bireçikj on the Euphrates, and, after following a short section of the Marâš road just outside Gaziantep, branches off towards Adana. Secondary roads also diverge from Gaziantep, one to Besni (Bahasmâ) to the northeast, the other to the Syrian frontier in the south-east. A new railway line links, through Gaziantep, the Adana-Malatya line to the Bagdad line, thus avoiding the détour into Syrian territory via Aleppo. Gaziantep is 55 km. from Bireçik, 45 from the Syrian frontier and 100 from Aleppo.

The region of ‘Aynîbî has always been the hub of important routes, but it was Doliche (Dülük, now Dülük-baba), a little to the northeast, in which ancient times took the place of ‘Aynîbî and the latter, which was probably the Diba of Ptolomy, the Tyba of Cicero, was only a dependency of it. It was not until Dülük had been taken by the Byzantines in 351/962 under the Ḥamdânî Sayf al-Dawla that ‘Aynîbî began to assume the importance lost by Dülük, with which Yâkût wrongly identifies it. On the eve of the First Crusade it was part of the domain of the Armenian Philaretus. It was allotted to the Franks, with Tell Bâghîr, to Joscelin of Courteney, vassal of Baldwin of Le Bourg, count of Edessa, then to his son Joscelin II. After the capture of Joscelin II by the troops of Nûr al-Dîn in 1150, it was ceded by the Franks, together with the rest of the region, to the Byzantine emperor Manuel Comnenus, but in 1151 the Saldjûks or Kûnya, Masîd, annexed it. After his death in 1153, it was taken by Nûr al-Dîn. It was from then on part of the province of Aleppo and was an advance post, first for the Ayyûbids and then the Mamlûks, against the Saldjûks and the Armenians. It was temporarily occupied by the Mongols in the course of their expeditions against northern Syria in 1271 and 1280. Taken in 1400 by Timûr, it was then annexed by Khârâ Yûsuf of the Turkomân dynasty of the Kûra-Koyûnlu, master of the two İrâks, and then it passed to the Turkomân dynasty of the Dhu'l-Kadr, who submitted to the Ottomans in the 16th century. It was from then on part of the Ottoman empire, and was only temporarily detached to Egypt in the time of Muhammâd Alî, between 1832 and 1840. At the end of the First World War, ‘Aynîbî was occupied by the English in 1919, then by the French until 1921.

Before the First World War ‘Aynîbî contained a large proportion of Armenians, nearly a third of its total population. It was also the centre of an American mission which had a college there. The region is also the centre of the preserve or must of grapes called pekmez. It was a stronghold with its citadel towering on a great mound on which the ruins are still visible.

AYT, a Berber word meaning “sons of”, the singular of which, w (and var.: w, aw, ag, ag(e), i) appears in compounds and before proper nouns. Ayt consists of a suffix of number iyt, aw, ?g, ag(g), i(1) element “sons of mother = brothers”), or before a proper noun to indicate a tribe (Ayt Isgad, Ayt Warayn, etc.), in the same conditions as the Arabic Banu (> Bni) or Awlad (> Úld); in the more evolved dialects, Ayt tends to be replaced by these Arabic terms, but it is still very prevalent in the more conservative dialects (particularly in Morocco, where, however, in the Ssâ, it is challenged by a composite id-aw: Id-aw Samalal; in the pirant dialects (Rif, Kablya, etc.), the evolved form Ath, from which the actual radical has disappeared, has replaced Ayt (Ayt Iznason, Ath Iratan, etc.). In Touareg, ayt is very prevalent in its primary function (see Ch. de Foucauld, Dict. touareg-français, Paris 1935, iii, 1440 ff.), but in the names of tribes, although it is known, it disappears before Kgl (Ch. de Foucauld, Dict. abrigé touareg-français des noms propres, Paris 1940, passim). (Ch. Pellat)

AYWALK, (Greek Kydonia), small town on the Aegean coast of western Anatolia. Situated on a peninsula in the gulf of Edremit, 39° 18' north, 26° 40' east, opposite the island of Mytilene, Kgl Dîjîr on ikinci asirda Istanbul hayatl, Refik, Hicri on tkinci asrda Istanbul hayatl, Istanbul 1930, 171). To what extent Greeks were in fact so employed is not clear. This order could have had no lasting effect, for an ayyaz called Sergis, an Armenian of Van, is one of the stock figures in the Karagöz shadow-plays: in modern Arabic he is known as 'aywâh, and has a wife, Umm Ma'waqa (A. Barthelemy, Dictionnaire Arabe-Français, Paris 1935-54, 562, 567).

The duties of the ayyaz included waiting at table, lighting and stoking the mangals, filling and cleaning the lamps, and doing the shopping for the household (basara giden in the hukm quoted above). There is reason to suppose that this last duty was sometimes a source of profit to both servant and tradesman: ayyaz hasap hep bir hasap (“ayyaz and butcher; it all amounts to the same”) is still a Turkish saying used of two identical things. A senior ayyaz who acted as steward was entitled ayyaz khyâya (kethhûdâ).

The usual dress of an ayyaz was a purple jacket, waistcoat and trousers, variously coloured woollen stockings and black shoes, with a white towel over the shoulders, a broadstriped apron, and a fez surrounded by a turban.

Pakalla (see Bibliography) states that certain men-servants in government offices were also called ayyaz, and that there was an ayyaz in the Foreign Ministry “till recently”, whose job was to clean the carpets.

The origin of the word is dubious: it is thought to be a corruption of the Arabic 'iwaâd (so IA: see Bibliography): the plural awwâd would seem a more likely etymology, on formal grounds, though ayyaz is the form taken by the Arabic 'iwaâd in the dialect of Gaziantepe (Ömer Ashm Askoy, Gaziantep ağıl, Istanbul 1945-6, iii, 60). Either way, the connexion of ideas is hard to see. (2) Ayyaz ('Awwâd or 'Iwaâd Khân) is the name of a leading character in the Körôglû folktales: he is the son of a butcher (from Georgia, Urfa, or Üskûdar in the several versions), who is kidnapped by Körôglû and eventually becomes his most valiant follower (see Pertev Naili, Körôglû destanî, Istanbul 1931, passim; and Pertev Naili Boratav, Halk hikâyeleri ve halk hikâyeciliği, Ankara 1946, Index s.v. Ayyaz).

Bibliography: IA, article Ayyaz, by Sabri Esat Siatavyglu, from which the present article is largely drawn, as is the article Ayyaz in M. Z. Pakalln, Osmanlî tarîh deşımleri ve terimleri sözlüğü, Istanbul 1946-56. (G. L. Lewis)

AY_YAM AL-ADJOZ “the days of the old woman”. In the Islamic countries bordering on or near to the Mediterranean, certain days of recurrent bad weather, generally towards the end of winter, are called “days of the old woman”. This expression, which is old, is also to be met with in contemporary folklore. It refers to a period of variable duration, from one to ten days, though more frequently of one, five or seven days duration. Its place in the yearly cycle varies according to the country. There is only

AYWAN [see Iwân].

AYWAZ, ‘Aywap. (1) A term applied to the footmen employed in great households in the later Ottoman Empire. They were generally Armenians of Van, sometimes Kurds. A hâkm-i şerif to the cavughbashl, dated Rabî‘ I 1164/1751, speaks of “the Armenian dhimmis who have for some little time been employed in the houses of the râjdî-i dewlet-i ‘âsîye” and who drink wine and steal in their places of employment and evade payment of dijya: henceforth Armenian and Greek dhimmis are not to be employed in the houses of the great, but are to be replaced by Muslims (Ahmet Efîk, Hicri on tkinci asrda Istanbul hayatl, Istanbul 1930, 171). To what extent Greeks were in fact so employed is not clear. This order could have had no lasting effect, for an ayyaz called Sergis, an Armenian of Van, is one of the stock figures in the Karagöz shadow-plays: in modern Arabic he is known as ‘aywâh, and has a wife, Umm Ma’waqa (A. Barthelemy, Dictionnaire Arabe-Français, Paris 1935-54, 562, 567).
one reference mentioning the winter solstice (see R. Basset). It often involves the last four (or three) days of February and the first three (or four) days of March (months of the Julian calendar or their equivalents): this is the case with the Turks, in Syria and the Lebanon and in Egypt. These seven days each have a special name: Şinn, Şinnabar, Wahr, Âmir, Mu'tamir, Mu'allil, Mutfi? al-Dimâr (var. Mu'fi? al-Żâ'n); if there are five days, the fourth, fifth and sixth names are omitted: the study of these eight names has still to be undertaken (see an interpretation in R. Basset). In the West, this seven day period at the end of February and the beginning of March bears another name, and it is the last day of January or the first of February which is connected with the legends about the "old woman", though it is rarely called "day of the old woman". In point of fact, this appellation, even in the East, has numerous variants based on Arabic, to which must be added, for the West, the Berber variants: 1.—"days of the old women"; or indeed "cold of the old woman" (Turkey, Persia, Syria, Lebanon, Egypt); "the old woman" (Berber Morocco); 2.—"the borrowed day or days" (Syria, Lebanon, Kabylia, Northern Morocco). 3.—"cold or bad weather or period of the goat" (Egypt, Tunisia, Algeria, Morocco). These various expressions are almost always connected with a legendary commentary in which an old woman is the main actor; an old woman dead from cold, an old woman predicting a cold spell, an old woman killed by the wind when the people of 'Ad were exterminated, in the case of the old texts, and, as regards contemporary folklore, in the majority of cases, a story about the old woman and her calf, her goat or her flock, combined with the legend of the borrowed days, explaining why February has only 28 days (hence the expressions 2 and 3 above). This legendary old woman seems to come from remote ages. No doubt this tradition should be linked with those existing in the countries of Europe and which concern certain meteorological phenomena, certain place names and perhaps certain themes of folklore involving an old woman.

(A. GALAND-PERNET)

AYYAM AL-'ARAB, "Days of the Arabs", is the name which in Arabic legend is applied to those combats (cf. Lisân, s.v. yâum xvi, 139, 1 according to Ibn al-SikKitî) which the Arabian tribes fought amongst themselves in the pre-Islamic (some times also early Islamic) era. The particular days are called for example Yaum Bu'dth = "Day of Bu'dth", Yaum Dhl Kar = "Day of Dhl Kar". Their number is considerable. Many of them however are not commemoratives of proper battles like the "Day of Dhl Kar", but only of insignificant skirmishes or frays, in which instead of the whole tribes, only a few families or individuals opposed one another. The Arabs themselves sometimes noticed this fact. Al-Zubayr b. Bakkar for example, when speaking of the combats between the Aws and Khazrajî tribes, observes that only on the day of Bu'dth a proper battle had been fought, and that on the remaining days the fight had been limited to throwing of stones and beating with sticks (Aghâni, ii, 162, 1. 12; this passage was evidently derived from Zubayr's account of the combats between the Aws and Khazrajî, which is mentioned in the Fihrist i, 110). The number of these combats, handed down by tradition, has moreover been increased by the fact that a great many were called by different names after the settlements, well-springs, hills etc., near which they took place. Consequently one and the same occurrence has been recorded in various places under different names.

The course of events on each individual day follows a somewhat similar pattern. In this respect what has been said by Wellhausen (Sitten und Vorarbeiten, iv, 28 ff.) about the particular combats between the Aws and Khazrajî, applies to the Ayyâm in general. At first only a few men come to blows with one another, perhaps in consequence of a border dispute, or some insult offered to the proteges of a man of influence. Then the quarrel of a family spreads into the hostility of whole races or even of entire tribes. They meet in battle. Bloodshed is generally followed by the intervention of some neutral family. Peace is soon restored. The tribe which has lost fewer men, pays to the adversary the price of blood for the surplus of dead bodies.

The accounts of the Ayyâm, written in good old prose, together with the ancient poems, supply excellent information concerning conditions before Islam. They especially afford us an insight into the chivalrous spirit, by which the old Arabian warriors were inspired. Popular memory kept the recollection of these heroes alive for centuries. Hence similar subject-matter to that found in the Ayyâm often recurs in later popular romances, drawn out, it is true, in legendary fashion. One example may suffice: Zîr, a hero of the Siyar Bani Hilîl is none other than Muhalhil, brother to Kulayb Wâhî, who acts a leading part in the Basîs war between the Bakr and Taghlib tribes (Muhalhil is already called al-Zîr = "the visitor of women" in Aghâni IV, 143, 15).

Tradition affirms (cf. Ibn ʿAbd Rabbihî, ʿAbd, Cairo 1302, iii, 61 towards the end), that Muhammad's companions already discussed the events of the Diâbelîyyûn in their assemblies (mâdîbîs). Consequently the Ayyâm al-'Arab afforded at an early period a favourite subject of study to the Aâbdîryûûn, i.e. traditionists, who were engaged on the Aâbdî al-'Arab, the old Arabian tales, amongst which the Ayyâm are included. In the Fihrist (mâkîla iii, fann i) several of these authors are mentioned as having written narratives of particular battle-days or of all of them. None of these works on the Ayyâm has come down to us in its original form; but considerable extracts by
subsequent writers are extant. Most of these have borrowed from Abu 'Ubayda (d. 210/825). Of his works on our subject only the title is mentioned in the Fihrist (i, 53 fl.). Something more concerning him is reported by Ibn Khallikân (ed. Wüstenfeld, no. 741, who is followed by Hâdidjî Khalîfî, i, 499 no. 1353 s.v. 'Im 'Ayyâm al-'Arab). According to these authorities Abu 'Ubayda wrote two books on the Ayyâm, a shorter one describing 75 days, and a more extensive one, in which he treats of 1,200. The information concerning the Ayyâm which later writers have preserved is partly given in scattered bits, and partly in entire chapters in proper sequence. Instances of the former are found in al-Tibrîzî's Hamâsa commentary, in the Kitâb al-'Aqâdq, where they are inserted by way of explanation of events alluded to in the ancient verses, in the collections of proverbs, and in the works on geography (al-Bakrî, Yâkûtî). Examples of the latter are contained in the 'Ibîd al-Fardî of Ibn 'Abd Rabbîhi (iii, 61 fr.), in al-Nuwayrî's encyclopaedia Nikâyât al-'Arab fi Funûn al-Adâb (fann v, hîsîm iv, kitâb v) and in Ibn al-'Athîr's historical work al-Kâmî li 'l-Ta'rikh (i, 367-517).

The account in the 'Ibîd was probably based on the minor work of Abu 'Ubayda. It is very concise, often to such an extent as to obscure the meaning, which can only be ascertained by comparison with more detailed accounts by other writers. Al-Nuwayrî has—apart from details—copied the whole chapter on the Ayyâm from the 'Ibîd. Ibn al-'Athîr has tried to arrange the separate "Days" in chronological order, in accordance with the character of his history. His account goes into greater detail than that of the 'Ibîd. A great deal of it must doubtless be traced back, either directly or indirectly, to the larger version of Abu 'Ubayda's work; much also to other sources all of which cannot be retraced.

Finally, it should also be noted that al-Maydânî treats of the Ayyâm al-'Arab in the 29th chapter of his Mağmûa al-'Amâkhî. His narratives are extremely short, but very useful for quick orientation. He restricts himself as a rule to giving the pronunciation of the name, explaining its meaning and enumerating the tribes which engaged in the battle. In this way 132 pre-Islamic days are dealt with by al-Maydânî. In addition to those, 88 Islamic days are moreover enumerated in a second section of that chapter. For further bibliography cf. E. Mittwoch, Procli Arabum paganorum (Ajjâm al-*Arab) quomodo litteris tradita sint (Diss.) Berlin 1899; C. I. Lyall, Ibn al-Kalbî's account of the First Day of al-Kuldh, in Orien

AYYÂR [see ta'ârîk] 'AYYÂR, literally 'rascal, tramp, vagabond'; Arabic pl. 'ayyârîn, Persian pl. ʿayyârân. From the 9th to the 12th century it was the name for certain warriors who were grouped together under the futuwwa [q.v.] in ʿIrâk and Persia, and gradually also in Transjordania, similar to the ʿahdâh [q.v.] in Syria and Mesopotamia, and to the rindân (v. Aqût) in Anatolia. Occasionally, the term is used to mean the same as jîyân (v. Fâta). Thus one of their leaders might sometimes be referred to as sar-ʿayyârân, and sometimes as râl-ʿayyân. On occasions they appeared as fighters for the faith in the inner Asian border regions, on others they formed the opposition party in towns and came into power at times of weakness of the official government, when they indulged in a rule of terror against the wealthy part of the population, as they did, for instance, in Baghhdâd in the years 1133-44.

It is perhaps of interest, concerning the attitude of the ʿayyârân, that in the Kâbas-nâma (written in 475/1082), or Andar-nâma, ed. R. Levy, 142, ll. 13-143, l. 4, trans. 248, there is mention of rivalry between the ʿayyârân of Marw and those of Khušktân over the futuwwa (dâwânamardi) being resolved by virtue of "juridical expedients" (bîyâl [q.v.]). In Šûfī literature there is mention of a Šûfī by the name of Nûb al-ʿAyyâr al-Nâshrî as a representative of the futuwwa (cf. R. Hartmann in ZDMG 72, 1918, 195; and idem, in Der Islam, 8, 1918, 191; Fr. Taeschner in: Der Islam, 24, 1937, 50 ff.). At any rate, a distinction was made between the ʿayyârân and the Šûfīs as far as the futuwwa was concerned. In this connexion, the following remark is of some interest: Hûjîwîrî (d. 465/1072) mentions that this very Nûb al-ʿAyyâr has said that the futuwwa of the ʿayyârân consisted in their wearing the muraḫkaʿa of the Šûfis, in other words that they behave like Šûfîs and keep the holy law, the şârâʿa, whereas the futuwwa of the Šûfîs of the Malâmât persuasion (see Šala
tamiyya) consisted not in wearing any external marks, but in keeping the mystical spirit (kâlîkâ). (The Kashî al-mâkîyîn, al-Hujwîrî trsl. by R. A. Nicholson, Leiden and London 1911, 183; Kitâb-i Kasî fi maqâliîb, ed. V. Schukovskij, Leningrad 1926, 228. lines 10-18; Fârîd al-Dîn ʿAṭṭâr, Tadhkhirat al-Awliyâ', ed. R. A. Nicholson, i, 332, lines 9-16). The same Nûb al-ʿAyyâr defines the difference between these two futuwwa by saying that the one of the ʿayyârân consists in faithfulness to the spoken word (maqâliîb) but that of the Šûfîs consists in faithfulness to the spirit. This report first appears in Ibn Dîjâdawayhî (5th/11th century) (Fr. Taeschner in: Documenta Islamica inedita, Festschrift R. Hartmann, Berlin 1952, Sentence No. 19, 113 and 118).

AL-ʿAYYÂSHI, Abu ʿl-Nâṣr Muhammad b. Masûd b. Muhammad b. ʿAyyâshî, a Šîʿite writer of the 3rd/9th century. He was a native of Samârkand, and was said to have been descended from the tribe of Tamîm. Originally a Sunnî, he was converted while still young to Šîʿism, and studied under the disciples of ʿAll b. al-Ḥasan b. Fadlî (d. 242/859-860/Târîkh 93) and of ʿAbd Allâh b. Muhammad b. Khâlid al-Ṭayyâlîstî (al-Astarâbâdî, 211). He spent his patrimony of over 300,000 dinârs on scholarship and tradition, and his house was a centre of Šîʿite learning. He is credited with the authorship of over 200 books. Though accused of relating traditions on weak authorities, he is often cited by later Šîʿite writers. Muhammad b. ʿUmar al-Kâshî, author of a well-known Šîʿite biographical work, was his pupil.
AL-'AYYASHI — AYYUB 795

(B. LEWIS)

AL-'AYYASHI, ABD SALIM 'ABB AL-LAH B. M.U.M.A.M.M.A.D, mn. of letters, traditionist, lawyer and Sufi scholar, born in the Berber tribe of the Aft (Ayt) 'Ayyash of the Middle Moroccan Atlas at the end of Sha'ban 1037/April-May 1628, died of plague in Morocco on 10 Dhu 'l-Ka'da 1090/13 December 1679. After having travelled through Morocco "in search of knowledge" and obtained an sijda from 'Abd al-Kadhir al-Fasi (q.v.), in 1059/1649 he made his first pilgrimage to Mecca going via Toussi, Ouargla and Tripoli; then, in 1064/1653-4 he made a second pilgrimage, on returning from which he wrote his Rikhah, called Ma' al-Muwaid (Fez 1316/1892, 2 vols.). This is one of the most important travel accounts for information on the road taken by caravans going from the Maghrib to Mecca, in spite of the fact that the author attaches less importance to describing the countries through which he passed than he does to the enumeration of the celebrated men whom he met, especially scholars and Sufis; the style of the Rikhah is faidy simple when al-'Ayyash is not speaking of Sufism, though it is lacking in colour and vivacity. This work, which enjoys great popularity in the Maghrib, has only been partially translated into French (see A. Berbrugger, Voyages dans le Sudan de l'Algérie . . ., in Exploration scient. de l'Algérie, ix, 1846, and Motylinski, Itinaires entre Tripoli et l'Egypte, Algiers 1900). Another travel account, composed in letter form, has been translated into French by M. Lakhdar (Les étapes du pèlerin de Sidi Jalilma à la Mecque et Médine, in 4e Congrès Fédér. Soc. sav., Algiers 1939, ii, 671-88).

Al-'Ayyash is, moreover, the author of several further works: Mansima 'li 'Ibunya, a treatise in verse on sales, with a commentary; 2) Qadimah 'li 'Himam al-'Aliya 'alal 'Izahd 'li 'I-Dunya 'li 'I-Dinma, treatise on Sufism; 3) a study on the particle law; 4) al-Hum wa l-'Adl wa l-'Insaf al-Dahl 'li 'I-Khadij fi-ma waba'a bayn Fuhabah? Sijdimalwa min al-Tahlid; 5) Ibtihaj al-Adar ba'd Dhahib Ahi al-Akkar, biographical collection; 6) Tuhfat (Iftik) al-Akhillah bi-'Asadiha al-Akhbair, biographies of his masters (these last two works probably forming his Fakhrasa).

(M. BEN CHENEN-[CH. PELLAT])

AYYUB, the Biblical Job. The name apparently occurs in pre-Islamic Arabia but only as a name derived from the Biblical story. Job is mentioned twice in the Kur'an in lists of those to whom Allah had given special guidance and inspiration (iv, 165/161; vi, 84), and fragments of his story are given in xxi, 83-84; xxxviii, 41-44; Muhammad being expressly bidden to make mention of him in his preaching. These fragments merely tell of his suffering affliction at the hands of Satan, crying unto his Lord for relief, and being healed, so that his case becomes an admonition for men. In the story of the Quran, Quarah and Wadd, the latter being considered as the best one, is commonly explained by Arab lexicographers as meaning the mountain-goat (waHl). This identification, however, is not fully borne out by the descriptions of the waHl which are given by Muslim zoologists. Here, the properties and ways of behaviour of the animal only partly apply to the mountain-goat, while, in the main, they rather point to the deer, which is also in keeping with the meaning commonly attributed to corresponding forms in other Semitic languages. This conclusion, moreover, gets support by a comparison of the terms used in earlier foreign sources and in the respective accounts as transmitted in Arabic zoological literature. However, in pre-Islamic and early Islamic poetry (see, e.g., Nûdke's Belegwörterbuch, 53, and TA, ii, 121; against Hommel, 279) waHl may actually mean the mountain-goat, since the deer probably never existed in the Arabian peninsula.

These facts can serve as an illustration of the inconsistencies in medieval zoological terminology, which not infrequently denotes different animals by one name and vice versa. For this reason, too, part of the information given by several writers with regard to the waHl is to be found, e.g., in Kazwini under the heading bakar al-wakhr. Comp. also Dîhîz, iv, 227 with vii, 30 f. (on waHl). Because of the graphic similarity of waHl and ibil both words have sometimes been confused through mistranscription, and the accounts on either animal became transferred to the other.

A considerable part of the information on the waHl contained in Arabic works goes back to foreign sources, such as Aristotle's Historia Animalium (quoted, e.g., by Dîhîz) and the ancient Physiologus literature. The latter, especially, contributed a number of fabulous accounts.

According to Arab pharmacologists certain parts of the waHl's body and in particular its horns can be put to various medicinal uses. For this reason, too, the interpretation of dreams, which is pointed out, e.g., in 'Abd al-Ghanî al-Nâbulûsî's Ta'hir al-Anâm (s.v.).

(L. KOPF)
taking a bundle in his hand and striking with it, there may be a similar confusion with the story in 11 Kings xiii, 14 ff. (See Bell, Qurʾān, 454 and Introduction to the Qurʾān, 163.)

Later Muslim writers greatly amplified this meagre Kurʾānic account, drawing partly on the Biblical Book of Job, (which Ibn ʿAshkīr actually quotes), partly on Rabbinic tales from Talmud and Midrash (for which cf. Encyclopaedia Judaica, s.v. Job) and the Greek Testament of Job, but also exercising pious imagination in developing various details of the story. That Job was a descendant of Abraham through Isaac is generally agreed, though generally there is great confusion in the names which appear in his genealogy. His mother was a daughter of Lot. His wife, who figures so largely in the story, is generally called Rahma, daughter of one of the sons of Abraham, though some said she was Leah the daughter of Jacob (obviously a confusion of Leah with Dinah, who in Rabbinic sources is said to have been Job's wife). His great wealth is described in the account of the...
dādīds lost Dvin, Shādhā entered the service of the Saljūq military governor of Irāq, Bihruz; Bihruz, who held Takrit as an ifrāt, made Shādhā governor of a part in which his son Ayūb soon succeeded him (V. Minorsky, Prehistory of Saladin, in Studies in Caucasian History, Cambridge 1953, 107-129). It was in this capacity that Ayūb earned the gratitude of the master of Mawsil and Aleppo, Zangi (Zanjī), who after being defeated by the Caliph, was able, with the help of Ayūb, to cross the Euphrates and withdraw without a disaster. In the country behind Mawsil, Zanjī first of all adopted a systematic policy of subduing and then of recruiting the Kurds. In 532/1138, Ayūb entered his service. He was at once used by him in Syria, being appointed governor of Bālṭabak, opposite Damascus. On Zanjī’s death, Ayūb placed himself under the Būrīd prince of Damascus, who gave him the governorship of that town, whilst his brother Shirḵūh, followed Zanjī’s son, Nūr al-Dīn, the master of Northern Syria, who gave him Hims as an ifrāt. However, the trend of public opinion in Damascus finally led to the unification of Muslim Syria, with a view to the more effective prosecution of the war against the Franks, under the command of the prince with the most power and the greatest enthusiasm for the dījāhād, Nūr al-Dīn; in the surrender of Damascus the activities of the two brothers Shirḵūh and Ayūb played a major role, and Ayūb chose the side of Nūr al-Dīn, the governor of the Syrian capital.

It is impossible to describe the activities of Shirḵūh in Nūr al-Dīn’s service in detail here. The family fortunes began, when he was chosen, rather against his will, by Nūr al-Dīn, to lead the army to Egypt, which, at the request of the wāza Shirḵawr, was to intervene in that country against his adversaries. The result of several years of difficult fighting was the assassination of Shirḵawr and the proclamation of Shirḵūh as his successor to the wāza. It is true that he died a few weeks later (564/1169), but his nephew, Șalāh al-Dīn b. Ayūb, was with him, and quickly succeeded in getting himself recognised by the occupying troops as his successor. Șalāh al-Dīn (known in Europe as Saladin) is the real founder of the dynasty. Its history can be divided into three periods: that of Șalāh al-Dīn himself, a formative period bearing the imprint of his personality, the strongest in the family, to which, however, the policy of his successors was opposed on many points; the period of his early successors, a period of organisation, up to the death of al-Malīk al-Kāmil (615/1218); lastly, the period of long-drawn-out decline. Under the second period it will be convenient to group together the study of several problems of interior organisation, which are common to the whole history of the régime.

I. The detailed history of the reign of Șalāh al-Dīn cannot be given here, but will be given in the article concerning him; an attempt will only be made to reveal those features which are indispensable for the understanding of the following period, which one has especially in mind when speaking of the Ayūbīds.

Although the assumption of power by Shirḵūh and Șalāh al-Dīn took place in Egypt with much the same forms as in the case of the preceding wāzas of the Fāṭimid régime, by the conferment of a diploma by the Caliph al-Âdīd, they were none the less the representatives of the carthaginian tradition inherited from the Saljūqids, more or less common to all the Turkish princes of Muslim Asia at that time, and especially typified by Nūr al-Dīn. In 566/1171, Șalāh al-Dīn considered he was able to suppress the Fāṭimid Caliphate and proclaim the return of Egypt to the caliphate in a state of open allegiance to the ʿAbbāsīd Caliph of Baghdad. For the first time in two centuries, Egypt became officially Sunni again; in point of fact, the majority of the population had never been won over to the Ismāʾīlīsm of the Fāṭimidids, and although those elements which were most strongly attached to the régime, and which were, moreover, partly of foreign origin, attempted to re-establish their position by revolts, the advent of the new régime was received among the masses with the same passivity which they had shown to its predecessor.

Invested by the Fāṭimid Caliph, then by the ʿAbbāsīd Caliph, and at the same time a vassal of Nūr al-Dīn, Șalāh al-Dīn found himself in an equivocal position vis-à-vis the latter, which would doubtless have led to conflicts, had Nūr al-Dīn not died in 569/1174. Disagreements and the weakness of his successors produced the immediate result that the dominant military power in the neighbourhood of the “Latin Orient”, which for fifty years had resided in Northern Syria, now passed to Egypt. Whilst Nūr al-Dīn’s successors dropped the policy of the holy war, which had given the former his prestige and strength, Șalāh al-Dīn adopted the idea, though it is not possible to discern to what extent ambition was combined with undoubtedly sincere conviction. (H. A. R. Gibb, The Achievement of Saladin, in Bull. of the John Rylands Library, xxxv-1, 1952, 46-60). However that may be, this idea led him to claim for himself the unified command of the Muslim armies, to win a large share of public opinion for his cause and, ultimately, to constitute to his own advantage a state, in which the heritage of Nūr al-Dīn, including Egypt, Muslim Syria and a part of the Džazira, was regrouped and extended, in a more solid manner than that of his predecessor’s kingdom, at the time of its brief and final apogee; this was an accomplished fact in 1183. At the same time, relatives of his established themselves in the Yemen and one of his generals, Kārkush, on the borders of Tunisia.

The power formed in this way enabled Șalāh al-Dīn to utilise the internal crisis of the Kingdom of Jerusalem, the difficulties of the Byzantine Empire and the tension which had arisen since 1180 between himself and the Latins, to undertake to drive the latter out of Palestine and Syria. His success was his main title to glory among his contemporaries and posterity; in 583/1187 the Franks were crushed at Hattīn, Jerusalem became Muslim again after eighty years, and in the ensuing months, almost all the Christian territories fell, including a large part of the coast, where only Tyre, Tripoli and Antioch still held out against him.

Șalāh al-Dīn’s power was founded on the strength of the army, and his whole policy required a strong army. This was no longer, with the exception of a few contingents of irregulars, the army of the Fāṭimidids. It was the Kurdo-Turkish army, completely alien to the Egyptian population, inherited from Nūr al-Dīn and developed by Șalāh al-Dīn by means of the resources of Egypt. In 577/1181, the Egyptian army amounted to 111 amīrs, 6,970 jawālī (cavalrymen with full equipment) and 1,135 haraghalīm (second grade cavalrymen), without mentioning the Arab frontiermen, unfit for foreign campaigns (H. A. R. Gibb, The armies of Saladin, in Cahiers d’Histoire Égyptienne, iii/4, 1951, 304-320). To this
army must be added the Syro-Djaziran contingents, including those of Maw'il, which the treaty subse-
tquent to the hostilities of 1174-1183 allowed Salāh al-Dīn to call together in case of need: a little
over 6,000 men in all. It was with almost his entire
forces, some 12,000 horsemen, that Salāh al-Dīn won
the victory at Hāṭṭīn and his later successes. But, as
was the case with the European armies, such an
assembly of troops could not normally be kept on
campaign for a protracted period, owing to the
revictualling requirements of the soldiers (cf. tāra'il).
And considerable efforts and conviction would be
required to maintain the indispensable effective
strength over the whole of the time which the
struggle against the Third Crusade lasted. Campaign
and siege equipment, which had probably increased
in quantity and quality, was also the object of
attention, as is shown by the treatise on gun-making
of Murdāb (or Murdīb) b. 'All, which has come down

In the first years of his rule, Salāh al-Dīn had been
threatened by the Byzantine, Norman and Italian
flotillas, using the bases in the Latin Orient. He made
a great effort to reconstitute the Mediterranean navy
of the Fāṭimid, which had deteriorated in the 6th/12th century as the result of internal troubles
and the progress of the Crusaders and the Italians.
By this means he was even able to carry out offensive
operations against the nearest Frankish ports. The
possibility cannot be excluded that the expansion
of Karakūsh along the African coast had as its aim,
at the same time as providing an outlet for turbulent
Turkmān. The control of the shores along which
Muslim vessels were able to range, and a closer
approach to the source of supplies of wood and
salt, the Crusade put an end to this effort, which
was weakened by Egypt's inferiority in these last
two respects, and it does not seem to have been
repeated by his successors (A. S. Ehrenkreutz, The
place of Saladin in the naval history etc., in JAOS.,
LXXV-2, 1955, 100-116).

There is no doubt that it was partly the need to
procure the raw materials required by his armament
on land and sea, and not only preoccupation with
commercial interests, that led Salāh al-Dīn, very
soon after he came to power, to renew and increase
the connexions which had existed under the Fāṭimid
with the Italian trading cities, including Pisa, which
had gone furthest in encouraging the Franks to
attack Egypt. Pisans, Genoans and Venetians
flocked to Alexandria, where the Venetians found,
more than at Acre, compensation for the impossibil-
ity of trading at Constantinople, a situation in
which the Byzantine government placed them from
1171 to 1184 (Cl. Cahen, Orient Latin et commerce du
Levant, in Bull. de la Fac. des Lettres de Strasbourg,
xxix-5, 1951, 332). Salāh al-Dīn could boast in his
letters to the Caliph that Franks themselves were
delivering arms to him which were destined to be
used against other Franks (Aḥū Shāmī, i, 243).

Saladin also took advantage of political develop-
ments in Byzantium and Cyprus to negotiate, un-
beknown to either of them, with their princes
against the Franks. When he felt the approach of the
European menace, he attempted, after having been,
via Karakūsh, the ally of the Almoravid Banū
Ghāniya of the Balearic Islands against the Normans
and the Almohads, to draw near to the latter to
form an alliance, mainly maritime, against the
Crusaders: this attempt, however, met with no
success (cf. Gaudefroy-Demobynes, in Mélanges
Rene Basset II, and Sa'd Zaghlūl 'Abd al-Ḥamīd,
in Bull. Fac. Arts Univ. Alexandria, vi-vii, 1952-3,
24-100). The same reasons explain his negotiations
with the Saldjukids of Asia Minor.

A war policy, naturally, was expensive and all
the evidence goes to show that Salāh al-Dīn was a
bad financial administrator, always on the point of
going bankrupt. In necessary conformity with the
religious ideal with which he infused all his propaga-
ganda, he everywhere suppressed the taxes deemed
by fiqh to be illegal. Similarly, his desire to eliminate
all traces of the Fāṭimid régime, led him to replace
the coinage by a new one, of variable weight, in the
case of both gold dinars and dirhams, which could
no longer be obtained at a fixed value; but the burden
of expenditure, the decline in income, especially to
begin with, as the result of disorders, the exhaustion
of Egyptian gold, the precariousness of the routes
towards Sudanese gold, which were controlled by
the Almohads, even caused instability in the standard
of the dinar, the minting of dirhams containing
variable quantities of alloy in addition to the legal
Egyptian dirham, (which contained 30 % silver,
worth 1/40th of a dinar), and, as a natural con-
sequence, the disappearance of sound coinage.

Salāh al-Dīn, and after him, al-'Aẓīz, lived on loans
from the merchants and amirs, which were never
repaid. Of course, it could be maintained that the
profits derived from the war would make it possible,
in the long run, to restore financial stability. But
this calculation, if ever made, turned out to be
wrong, as the result of the Third Crusade (cf. A. S.
Ehrenkreutz, Contribution to the knowledge of the
fiscal administration of Egypt . . . . , in BSOS., xv-3,
1953 and xvi-3, 1954; The standard of fineness of
gold coins in Egypt . . . . in JAOS.. lxxiv/3, 1954;
The crisis of the dinar in the Egypt of Saladin, ibid.,
xxiv/3, 1956).

One of the results of Saladin's policy was the
formation of a coalition, for the salvation of the
Latin Orient, of the western forces, which was even
joined by the Italian towns, adversely affected by
the loss of the Syrian ports. In the end, even if the
Franks did not retake Jerusalem, at least they
recovered the major part of the Syro-Palestinian
coast; moreover, they laid hands on Cyprus, which
henceforth provided a secure naval base and a
position to which they could withdraw. Salāh al-Dīn
was by no means defeated. But the formidable
effort which he had had to sustain for two years,
convinced him that it was fruitless to wish to expel
the Franks, and made a period of détente and recovery
a matter of urgency. It is impossible to know what
Salāh al-Dīn might have done, for he died a few
months after the conclusion of peace (589/1193).

II. The period of the reigns of al-Malik al-Âdīl
and al-Malik al-Kâmil (died in 635/1238) appears
especially as one of détente and organisation after
the disorders which followed the death of Salāh
al-Dīn.

The first eight years which followed the disap-
pearance of the founder of the dynasty put to the
test the conception of family unity which he had
entertained as regards his monarchy and succession.
He had granted, either in the form of fiefs during
his lifetime or as shares in his inheritance, in addition
to the Yemen, where two of his brothers reigned in
succession, Central and Southern Syria to his son
al-Âdīl, Egypt to his other son al-'Aẓīz, Aleppo to
a third son, al-Ẓāhir Ḡāṣil, whilst Ḥamā passed to
his nephew Tāk al-Dīn 'Umar, Ḥimṣ to his cousin,
Shirkuh's grandson, al-Mudjāhid, and lastly the
Djazira to his brother al-Âdīl Abū Bakr. The
latter, who had played an important rôle during the reign of Salâh al-Dîn as a diplomat and administrator, was now the eldest member of the family and indisputably the most eminent of its surviving members. The sons of Salâh al-Dîn, who were incapable of doing anything but amuse themselves or wrangle among themselves, upon several occasions solicited his alliance or his arbitration. Whether or not al-‘Aḍîl was an ambitious man, it was becoming clear that the security of the Ayyûbid monarchy required him to take over its destinies. In 597/1200, he had himself proclaimed Sulṭân in Cairo, distributed the governments of Damascus and Diyar Bakr among his sons, and after the last hostilities in 1201, of the other former princes, he only permitted those of Aleppo, Hims and Hâmâ, who were forced to do homage to him, to continue to exist. Naturally, after al-‘Aḍîl’s death, similar problems again arose. The presence at that moment (625/1227) of a Crusade at Damietta maintained solidarity for a time around his eldest son, al-Kâmîl, who, like him, governed Egypt, and was moreover an imposing personality. Once the Frankish danger was removed, the agreement between him and his brother al- Mu’âṣẓam of Damascus, who died in 625/1228, and then the latter’s son and successor, al-Nâṣîr Dâ‘îd, was disrupted. Al-Kâmîl was helped by the loyalty of his other brother Al-Âṣḥâf, to whom he gave Damascus in exchange for Diyar Muṣdâr, whilst Dâ‘îd was relegated to Karâk. Then, for a few years, al-Kâmîl was the undisputed head of the family; however, a coolness was making itself increasingly felt between al-Âṣḥâf and himself, when the former died (635/1237). Al-Kâmîl then took Damascus away from the other brother, al-Sâlîh, whilst al-Âṣḥâf had designated as his successor, but he himself died at the beginning of the following year; he was the last Ayyûbid who might have been able to unite the whole Ayyûbid family behind him. One should not be misled by the disagreements; up till then there had always been a majority of members of the family willing to place solidarity in the face of their common enemies above their individual interests, and, in one way or another, solidarity had always been restored for half a century or so; after the death of al-Kâmîl the situation changed.

Ayyûbid rivalries with neighbouring princes, however, interfered with their dissensions among themselves. In 604/1207, the troubles at Aḥlāf provided al-Awhâd, the son of al-‘Aḍîl and at that time governor of Diyar Bakr, with the possibility of annexing to Ayyûbid territory the inheritance of the Shâh-Armin (upon al-Awhâd’s death, he was succeeded there by al-Âṣḥâf). Other annexations were carried out in Diyar Bakr and Diyar Râbî’a, and lastly, in 631/1233, that of Ââm and Hûs Kayâfî; only a single branch of the old Arûkîd dynasty subsisted, that of Mârdîn. Thus it was that the Ayyûbids emerged from these wars increased in stature.

However, from about 1225, Mesopotamian-Iranian politics were dominated by the approach of Djâlîl al-Dîn Manguberti, who at the head of his Khwârîzmians fleeing before the Mongol invasion, was putting Iran and its borders to fire and sword. Al-Mu’âṣẓam and the Diyar Bakr opponents of al-Âṣḥâf and al-Kâmîl adhered to him, and he was eventually able to take Aḥlāf, which was pillaged in terrible fashion (1229). The Khwârîzmiâns then invaded Asia Minor, where the Salâḫûkîd Sulṭân was reinforced by al-Âṣḥâf: this time the invaders were crushed near Erzinjân (628/1230). There were more lasting causes of friction between the Salâḫûkîds and the Ayyûbids. The interests of the two dynasties had already clashed at Diyar Bakr in the time of Salâh al-Dîn, and in the 13th century the development of the Salâḫûkîd power made conflicts inevitable. The Salâḫûkîds sought to spread from their mountains over the Arab plains, from Northern Syria to Diyar Bakr. According to circumstances, they achieved this either by attacking the Ayyûbid territories or by posing as the sovereign protectors of the Aleppo branch against their Egyptian cousins. Al-Âṣḥâf’s expedition to the assistance of Kaykubâd gave al-Kâmîl the impression that the conquest of the Eastern part of the Salâḫûkîd territory would be an easy matter: in 1233, a coalition of all the Ayyûbid forces invaded it. Ignorance of the country and the lack of enthusiasm of some of those taking part led to failure of the enterprise. Later, the Salâḫûkîd army took Ââm from al-Kâmîl’s successors (1241). It had already taken the ruins of Aḥlāf from the lieutenants of al-Âṣḥâf.

Finally, there were the Christian enemies: the Georgians, whom it had been necessary to fight in the vicinity of this same Aḥlāf, and, naturally, the Franks themselves. In the latter case, the Ayyûbids drew from the Third Crusade a moral diametrically opposed to the policy of Salâh al-Dîn. Their purpose was to preserve the peace, by avoiding any hostile action, on the one hand in view of the economic advantages of peaceful relations, and on the other hand to avoid giving any pretext for further crusades. Further crusades did in fact take place, but their immediate initiative came entirely from Europe, rather than from the Franks of the East. Naturally the Ayyûbids took every precaution in their way to resist them, and there was no question of military negligence. The fall of Byzantium and the decline of the Almohads deprived them of the possible allies which Salâh al-Dîn had endeavoured to obtain, and, having relinquished the maintenance of a large and vulnerable fleet, they afforded Egypt protection by the land army, by fortifications, sometimes by destroying coastal installations (Tinnis), and by espionage. However, with the Crusaders, even al-‘Aḍîl and al-Kâmîl had tried as far as possible to replace the costly chances of war by diplomacy.

In accordance with the tendencies of this policy, in 1204 al-‘Aḍîl restored to the Franks the coastal places which he was occupying, which reconstituted the continuity of the Frankish territories, with the exception of the enclave of Lâdîkîyâ, which belonged to the principality of Aleppo. At the time of the Fifth Crusade, his successor al-Kâmîl, whilst calling his brothers in Asia to his assistance, offered to restore Jerusalem to the Franks, who refused it, in exchange for the evacuation of Damietta, and took care to avoid any real battle. It was especially at the time of the Crusade of Frederick II that this attitude was disclosed in a manner most calculated to affect public opinion. Al-Kâmîl’s desire for peace with the Franks was then strengthened by the menace of al-Mu’âṣẓam, the ally of the Khwârîzmiâns. Aware of circumstances which predisposed the Emperor for his part to negotiations, he finally granted him Jerusalem, with the reservation that it should not be fortified and freedom of worship should be maintained; pious Muslims and pious Christians were equally scandalised. A real friendship arose between the two sovereigns, which was to continue even between their successors.

The principality of Aleppo was confronted by slightly different local problems. These princes,
disturbed at being the only direct descendants of Saladin to confront the family of al-Adil, sought both to ally themselves with them by marriage and to guard themselves against the masters of Egypt, sometimes through the Ayyubids of Djazira, Hims and Hamah, and at other times through the Seljukids of Rum, and naturally also, at times, with the ones against the others who had encroached too far. The ambitions of the Armenian kingdom of Cilicia also troubled them, and they several times intervened, with the Seljukids against it, giving assistance to the Frankish princes of Antioch, who were weaker.

A normal and intended consequence of the peace policy adopted towards the Franks was the resumption and intensification of commercial relations with the Italians (and now, to a lesser extent the Southern French and the Catalans). Even before formal treaties had been concluded once more, as is shown by the private documents in the Venetian and Genoan archives, Genoan, Pisan and Venetian ships, after the Third Crusade, were once again going to Alexandria, and, to a lesser extent to Damietta. Under al-Adil, a series of agreements confirmed their rights, a reduction in customs' dues and administrative and judicial facilities. Furthermore, the accessibility of the principality of Aleppo to the sea had the result that even in Syria, Italian merchant vessels were to be seen no longer confining themselves to Frankish ports, but were also disembarking at Ladhikiya and regularly visiting the markets of Aleppo and Damascus. An important personage of Genoa, William Spinola, seems at one time to have enjoyed al-Adil's special favour, accompanying him on his journeys through his estates (this can be seen from a comparison between the Annals of Genoa used by Schaube, Handelsgeschichte der Mittelmeer-Romanen 121, and Ibn Natli, cited in Amari, Biblioteca arabo-sicula, ii, Appendix, 35, which was unknown to Schaube).

Egypt sold to Europe, besides the products of the Indian Ocean which passed through its territory in transit, native resources, the chief of which at this time seems to have been alum. Naturally the Crusaders, or the fear of such, were not likely to provoke crises, as for instance the day in 1215 when three thousand merchants assembled at Alexandria were temporarily arrested. But even after the Damietta Crusade, relations were resumed (as is shown among other things by a document of immunity in Arabic from al-Kamil to the Venetians which is to be published by Subhi Labib) and lasted in the main without undue interruption until the middle of the century.

But, though the Italians were the masters in the Mediterranean, and Egypt played a purely passive rôle in trading with them, only making a profit from the taxes and commissions, they were prevented from access to the Red Sea, and the commerce of the Indian Ocean remained exclusively in the hands of the subjects of Muslim (or Hindu) states. We are not in a position to determine exactly what rôle the Egyptians played, or that of the Yemenites or other more easterly peoples. The exact nature of the merchants called Karimi, specialists at Aden and in Egypt in the trade in products brought from the Indian Ocean and especially spices, still remains obscure; they appear to have existed since Fatimid times, but it is in the Ayyubid period that they really made their appearance in the rôle which was to be more especially theirs in the following century (cf. the elucidations of Goitein and Fischel in the press for the Journal of the Economic and Social History of the Orient, 1958, and G. Wiet, Les marchands d'Epices... in Cahiers d'Histoire Egyptienne, 1955). The occupation of the Yemen by the Ayyubids may have had as its primary motive the hemming in of the supporters of a Fatimid restoration or the formation there of an eventual refuge for the Ayyubids; but its object was doubtless also the improvement, which in any case occurred, of commercial relations, of primary importance for both parties, between the Yemen and Egypt, with whom Yemenite currencies and some measures were aligned (Ibn al-Mudjawir, ed. L. LoGren, 12 ft.).

The almost complete internal peace which Egypt enjoyed, and the relatively long periods of peace from which Syria profited, certainly had a favourable influence, though it is difficult to give precise indications, on their economy, which was also stimulated by the possibilities of trade and which the Ayyubids deliberately strove to promote, even though only for their fiscal interests. For Syria and the Djazira we are able to gain a certain idea of their resources through the 'Adik of Ibn Shaddad, who describes the situation on the eve of the Mongol assault; more precisely, for the crafts of Damascus, much information is to be found in the treatise on hiba composed about 600/1200 by 'Abd al-Rahman b. Nagi al-Shayrawi (ed. 'Arifl, Cairo 1946, trans. Bernhauer, Les institutions de po& e etc. in JA, 1860, where the author is called Nabrawi), apparently the prototype of all successive treaties of this kind in Syria and Egypt. For Egypt, besides the information preserved by al-Makrizi, many indications are to be found in the treatises of Ibn al-Mamm& and al-Nabulusi (cf. infra); the latter especially attests al-Kamil's interest in the maintenance of forests, irrigation works, state cultivation of sugar cane etc. In general, Egypt, in contradistinction to the other Ayyubid states, remained, as always, the country par excellence with a partly nationalised economy, especially for mining and forest production, trade in metals and wood, certain means of transport and tools, arms etc. The Lam of al-Nabulusi, a pamphlet composed after the disorders which followed al-Kamil's death, outlines these in detail, and by the interference of private undertakings with those of the State, and by the frauds perpetrated by officials at the first relaxation of control. Under al-Adil and al-Kamil, in addition to the attention paid to economic matters, a strict financial policy was maintained. Al-Adil's great minister, Ibn Shukr, made himself famous by his competence combined with intractable behaviour towards everyone, including his own sovereign. After him, al-Kamil maintained an equally energetic control over expenditure and resources (including the ibd of the amirs) and on his death left a treasure almost equal to a year's budget. For Egypt, the inquiry carried out by al-Nabulusi in the Fayyum, although relating only to 642, shows the minuteness of the cadastral survey and accounts (cf. Cl. Cahen, Le &ime des impôts dans le Fayyûm ayyubûde, in Arabica iii/1, 1956). For the northern states, Ibn Shaddad has left us lists of taxes for the towns of Aleppo, Manbij, Sarbij and Balis. The care taken with the finances and the economy also made possible the resumption of the large-scale minting of dinars at the standard normal before 619 al-Din. Nevertheless, it seems to have been difficult to check the flight of silver coinage before that of copper (De Bouard, L'évolution monétaire de l'Egypte moderne, in L'Egypte Contemporaine, 1939).
The internal history of the Ayyubid states has been the subject of few studies. Yet it is essential that it should be known, especially for Egypt, since it is at this period, by means of a partial break with the Fatimid past and the introduction of Saljūqid and Zankid traditions from further Asia, but also inevitably with some retention of the Egyptian heritage and with innovations and adaptations, that the foundations were laid of the régime which, to a large extent, the Mamluks, for two centuries, simply prolonged and completed in detail. Naturally only a few rather incidental allusions can be made here.

The Ayyubid régime, approximately up to the late years of al-ũlũ, was a semi-feudal family federation, as, for example, had been that of the Buɣyids and, to a lesser extent, of the Saljūqids and Zankids. Under a sovereign to whom all owed allegiance, a certain number of territories were distributed to vassal “princes of the blood” who, apart from the limitations imposed by their primarily military allegiance to the ruler, enjoyed complete autonomy in administering them (cf. for example, the diploma of investiture of a prince of Hamā by al-ũlũ preserved at the end of the Chronicle of Ibn Abi ũ-Damm, Oxford Bodl. Marsh 60). Within these great appanages there were lesser ones, likewise distributed to princes of the blood of second rank or to a few great officers, whose loyalty was to the vassal prince, and whose effective independence was naturally more restricted. It was only still lower down the scale that the military šīḥā proper so-called, of which we shall speak later, were to be found. However, towards the end of al-ũlũ’s reign, this régime began to undergo certain modifications; the aggravation of family conflicts obliged the Sulṭān, who during his absence in Egypt had himself represented by a nāʾib, sometimes belonging to his family and sometimes not, to replace the princes in the Asiatic provinces also by governors, taken from among their domestic attendants, as for example at Dīyār Bakr, Ħams al-Dīn ũwāb, either standing beside a young prince or not, and whose title of nāʾib also stressed his dependence better than any other title would have done. The conditions in which, after al-ũlũ, al-ũlũ Ayyūb reconstituted Ayyūbīd unity, led to the triumph of this centralist conception; moreover, in Egypt, there had never been autonomous appanages, except as a quite exceptional and temporary measure (for example in Fayyūm). In Asia, on the other hand, all the autonomous princes, like the sovereign in Egypt, now bore the title of Sulṭān, which ūlalah al-Dīn had never officially made use of, perhaps because of its connexion, in the Fatimid heritage, with that of mašir; and even the subordinate Ayyūbīd lords bore that of mašīkh.

The organisation of the Ayyūbīd states, as a natural result of the preceding considerations, was never unified. In general, leaving aside the Yemen, there can be distinguished on the one hand the territories of Asia, which perpetuated Zankid institutions without any great modifications, and on the other, Egypt, where newer institutions were introduced, or at least newer as regards Egypt. As is normal, the central organs of government there were transformed to a greater extent, in relationship to the Egyptian past, than the fundamentals and rules of local administration. An attempt to adjust matters was made, once the initial troubles were over, during the lifetime of ūlalah al-Dīn himself, as is shown by the description of Fatimid institutions composed for the new régime by ūb al-ũtwār (extracts in al-Makhrūz and Ibn al-Furâr), the treatise of the ũdī Abu ũ-Hasan on ḥasād (extracts in al-Makhrūz) and the famous ʿusūl al-Darrārīn of Ibn al-MMnīt, which have been preserved; others could be added, as, for example, a little later the more literary work of Ibn ʿSbīl al-ũ-Kūrī on the diwāns. As the counterpart of this and in contrast to these methodical accounts, there appeared at the end of the Ayyūbīd régime the various treatises, preserved or known only through quotations, of ʿUthmān b. ʿIbrāhīm al-Mnbulus, which are a vivid witness of his concrete experience.

The central government was naturally directed, more or less effectively according to temperament, by the Prince himself; most of the princes holding appanages had a mašīr, that is to say, an official who ensured in the Prince’s name the unity of direction of the whole administration. But the institution was less usual in Egypt; whatever prestige the ũdī al-Fādīl may have enjoyed in ūlalah al-Dīn’s eyes, he certainly never, despite what has been said, bore the title or fulfilled the functions of mašīr, first because this sovereign himself performed the functions of government, and second because it was as mašīr that he had originally come to power in Egypt in accordance with the late Fatimid practice of conferring the wazīrate with plenary authority. For quite a long time his brother al-ũfīl had the redoubtable ūb ʿShukr as his mašīr, whom he had learned to value as his associate in directing ūlalah al-Dīn’s navy; al-ũlũ took him back for a time, but then subsequently assumed the direction of the administration himself, with the help of high officials, to whom he sometimes, but not always, gave the title of nāʾib of the wazīrate. After him, al-ũlũ Ayyūb had as his mašīr one of the “Sons of the Shaykh”, of whom we shall speak again later. Princes who were minors and orphans had an atabeg [q.v.]. The uṣūl al-Darrārī, a kind of intendant of the Sovereign’s “Household”, played an important political rôle.

Below the prince and the mašīr, the central administration was divided between the diwāns, the names and attributions of which no longer exactly corresponded to those of the Fatimid period. It was essentially the army for which this régime still operated, hence the importance of the Diwān al-Diwān, a section of which dealt with the šīḥā and, in this respect, possessed a competency which in part coincided with that of the Diwān of Finance; on this latter were dependent all questions of taxation, income and expenditure, and the Treasury, with a section devoted to the finances of “the Gate itself; it is described in detail, with the exclusion of the others, in the treatise of Ibn al-MMnīt. The third great Diwān, which in certain respects was pre-eminent among those just mentioned, was the Diwān al-Inqūl, the Chancery, entrusted with correspondence and the composition of diplomas; of this the director enjoying the greatest reputation was al-Fādīl, who had been taken over from the Fatimid régime (“Inmād al-Dīn al-Ifshānī, who emulated him in belles-lettres, was private secretary to ūlalah al-Dīn). Finally, marginal, though of no less importance, was the Diwān of the ubās, indicated by al-MMnbulus, which naturally evolved complete autonomy as against those just mentioned. The Ayyūbīds adopted the Saljūqid taẖra, which they distorted (Cl. Cahen, in BSOAS, xiv/1, 42). The work of these offices involved large numbers of documents and employees supervising...
The military policy of the Ayyubids was completed by the construction of impressive fortresses both urban (Aleppo, Cairo etc.) and rural, which they matched especially against those of the Crusaders. At times there has been speculation as to the extent to which certain characteristics of the Ayyubids can be attributed to their “Kurdism”. Considerations of this kind too often derive from gratuitous prejudices and falsified information. It does not seem that the presence of Turks beside Kurds in the Ayyubid regime differed profoundly from that of Kurds beside the Turks in the Zankid régime, and both institutionally and intellectually the two regimes are related, allowance being made for the consequences of environmental conditions. Yet it is probably not a matter of chance that the Ayyubids sought to expand to Diyar Bakr and Akbät, that is to say towards their country of origin, or at least into Kurdish territory, so as to ensure the continuity of Kurdish recruitment. However, within the actual dynasty, in the course of successive generations, Turkish and Kurdish blood was mixed; and we shall see that in its last days the régime divested itself of its Kurdish aspect.

The Ayyubids in any case, like the Zankids and their other contemporaries, were staunch Sunnik Muslims, working, under the aegis of the sovereign, to promote Orthodox Islam against heresy. This attitude was first of all revealed by the reintroduction of Egypt into the ‘Abbâsid family, and more durably, at a time when the Caliph al-Ņâṣir had restored a certain prestige to the Caliphate, it was manifested by an expression of respect, of a concordance of opinions which, whilst not naturally diminishing the autonomy of the Ayyubids, were not however purely verbal, authorising, for example, in the settlement of disputes, the frequently effective mediation of such caliphal ambassadors as Ibn al-Djawâzî. Furthermore, the Ayyubids, like other rulers of their times, entered the kind of futuwwa order by which al-Ņâṣir tried to take in hand the lower classes of Bagdad and at the same time consolidate his administration and reassert his moral authority among the aristocracy; he had to associate the princes with himself in this undertaking, both in order to attach them to himself and to enable them to conduct a similar line of action among their own people (cf. the latest assessment of this question by Fr. Taeschner, Die Futuwwa etc., in Schweizerisches Archiv für Volkskunde, LIII, 1956).

The orthodox attitude of the Ayyubids is also shown in the concrete encouragement which they and their high dignitaries gave, after the Saldjûkids and Zankids, to increasing the numbers of madrasas in Syria and the Dîjâzra, and to their introduction into Egypt. Al-Ṣâlîh Ayyûb appears to have been the initiator of a new form, the madrasa for the four rites including in its buildings the tomb of the founder. On the other hand, the Ayyubids welcomed the mystical orders, often originating in the East, for whom they founded various khanaksîhs, under the direction of a shaykh of shaykhs. More generally evident is the fact that quite a few immigrants of recent or remote Iranian origin are to be found surrounding them, as with the Saldjûkids and Zankids, especially in the controlling spheres of intellectual life; there seems also to have been a tendency for them to associate the kâhsîs and religious circles more extensively with the government. Especially remarkable under their rule was the so-called family of the Sons of the Shaykh, of Khurâsânian origin (see Awlâd al-Shaykh), who,
contrary to the almost universal particularisation between the military, religio-legal and administrative castes, succeeded in being eminently represented in all three, especially in the case of the ma'mir Ma'in al-Din and his brother the amir Fakhr al-Din who, for a short time before his death in the battle of Mansûra, acted as regent of the realms.

Nevertheless, if one compares the behaviour of the Ayyubids with that of the Great Saljuqs, a greater flexibility is certainly to be observed. This is doubtless connected with the general aim of relaxing tension which we have noted, moreover, in the policy adopted towards the Franks. But it must also be said that the heretics of Syria had been sufficiently weakened by the Zankids for it to be no longer really necessary to fight them, and that in Egypt Islam seems hardly to have left any regrets. At Aleppo, however, the government of al-Zahir Ghâzi was stained by the blood of the Iranian mystic Suhrawardî Maqûl, executed during the lifetime of Shâh al-Din; but it must be said that this was a very special individual case, and that this measure was demanded by pietistic circles of Aleppo. The majority of the Ayyubids were Shâfî'is, in contradistinction to the Turks who were Hanafis, and although doctrinally this does not impinge to the latter a stronger degree of intolerance, the result may nevertheless have been that the Ayyubids had a less intimate contact with the pietists, devoted to the militant spiritual mission of the Saljuqs. However, al-Mu'azzam and his son Dâûd were Hanafis, and this perhaps partly explains their conflicts with al-Kâmîl; they certainly appear, for example, at the time of the dealings with Frederick II, doctrinally to represent the intransigent party.

Christians and Jews, generally speaking, likewise appear to have had no grounds for complaint against the dynasty. As is almost always the case, when an exception occurs, the motive is political and not confessional. There is no doubt that the Ayyubid occupation impaired the exceptionally favourable conditions enjoyed by the Armenians under the last FâtiMids (see ARMENIA). But it was the Copts who profited from these confiscations and not the Muslims. Similarly, when Shâh al-Din retook Jerusalem, he favoured such of the native Christian communities there as could not be suspected of conniving with the Franks (cf. inter alia Cl. Cahen, Islamisme et Croisades, un médecin d'Arménie et de Saladin, in Syria 1934, and E. Cerulli, Etoïps in Paléstine, I, Rome 1943). The Ayyubid period in Egypt was one of vitality for the Coptic Church.

When moments of arousal were in general as a counter effect of Crusades, in so far as collusion might be feared, for example, between Melkites and Latins. That it was not considered necessary, however, in normal circumstances, to prohibit intercourse between indigenuous and Latin Christians is shown by the permission accorded by the Ayyubids for Dominican and Franciscan missionaries to enter their kingdom, provided that no attempt was made to convert Muslims. It is true that the traditional discriminatory measures in respect of non-Muslims were from time to time revived, always with the same ineffectiveness. The Jews were also passably well treated, even being invited to return to reconquered Jerusalem, and refugees from Spain, such as Maimonides, were favourably received (see E. Ashtor-Strauss, Saladin and the Jews, in Hebrew Union College Annual, 1956, 303-26).

The climate certainly offers a partial explanation for the intensity of cultural life in the Ayyubid domains. Syria in the 13th century was truly the heart of Muslim culture in the Arabic language. Egypt was soon to rival her, but had not as yet quite achieved a synthesis between the survivals from her own past and the imported elements disfavoured by the Ayyubids. All the credit for this flowering cannot indeed be claimed by the Ayyubids, but it would be unjust to deny them any credit, who were themselves frequently men of letters and scholars, and who in general sought to protect and attract the representatives of all disciplines compatible with orthodoxy. The economic progress and the general advance of Muslim recovery in the area which the Crusades had involved most directly in the struggle, must have accomplished the rest.

There is little object in giving a list of names of men of letters and scholars. The names of the historians and geographers will be found in the bibliography of sources; Ibn al-Kîfî (ma'mir of Aleppo) and Ibn Abî Usaybî'a, biographers of scholars and physicians, draw our attention to the importance of the support given to these latter in the hospitals; among the poets (some of whom were studied by Rikabi, La Poësie profane sous les Ayyubides, 1949), the historian will perhaps more especially note al-Amîjd Bahârmîkh, himself an Ayyubid, or a man of the sâks such as Ibn al-Djazarî (cited in the Mughrib of Ibn Sa'id). Furthermore, emphasis should be laid on the many Spanish refugees who established themselves in the Ayyubid domains, men as diverse as the historian-geographer Ibn Sa'id, the grammarian Ibn Malik, the botanist Ibn al-Baytar and the mystic Ibn al-Târîkh. It is not possible to speak at length here of the Ayyubid principality of the Yemen; Ayyubid intervention here certainly had the same importance for the country as was the case in Egypt. Ayyubid rule to a certain extent restricted the quarrels of sects and princepings who divided the country among themselves, and brought about a political unity which was to survive them; although, from 629/1232, the Ayyubids were supplanted by the Rasûlîds, the latter had their origins in their officer milîw and continued their traditions. The Ayyubid régime reintroduced Sunnî Islam to the Yemen and linked it more closely to Egypt, politically, economically and institutionally. The persistence of religious divisions in the population may have been the origin of the strange attempt on the part of the third Ayyubid to pass himself off as an autonomous Umayyad Caliph; after his overthrow, al-'Adîl and al-Kâmîl stressed their intention of not allowing the Yemen to escape from their hands by sending one of the sons of the latter to take over the succession. Al-Kâmîl, however, was unable to prevent the accession of the Rasûlîds, but the latter were at pains to show themselves, at least at the outset, as allies of the Ayyubids; later there arose conflicts of influence between them at Mecca; commercial relations, however, seem never to have been broken off.

III. The death of al-Kâmîl marks the end of the true Ayyubid régime, with the reservation that the resulting degradation was in a large measure, implicit in its very constitution. al-Kâmîl had relegated his eldest son al-Šâlîh Ayyûb to the government of Hisn-Kayfaya and designated jiś youngest son al-'Adîl to succeed him; al-'Adîl made himself disliked and his opponents appealed to al-Šâlîh. The latter, in the course of fierce struggles, accompanied by
many reverses, conquered his throne and restored the unity of command of the Ayyubid states (a unity restored epistemically by his death), not only at the expense of his younger brother, but also of the majority of the Ayyubids of Syria, especially al-Shālīb Ismā‘īl, who had become master of Damascus.

It is true that there had already been conflicts between Ayyubids, but these conflicts did not prevent either of the protagonists from in the first place receiving the territories which they governed from the Sultan, the head of the family, or family solidarity from keeping the harmful effects of these conflicts within definite limits. This time, the adversaries viewed one another as usurpers, and it was naked strength which gave the victory to al-Šālīb. Nevertheless, this strength was no longer derived from the old Kurdo-Turkish army; during al-Kāmil’s lifetime, the disgrace of al-Šālīb had been due to the fact that, as his father’s lieutenant in Egypt, in his distrust of the Kurds, he had carried out a large scale recruitment exclusively of Turkish slaves. The army which he organised on becoming master of Egypt was exclusively Turkish. But, in the meantime, his successes had been due to an even more disquieting element: the Khwārizmians who, after the defeat and death of Dżālāt al-Din, had been driven back from Asia Minor where for a time they had served the Salğūks, and were seeking an employer and a territory. He invested them with Dīvār Muṣṭar and summoned them to fight against his enemies in the Djuždra and in Syria; it was partly due to them that these wars were of so devastating and ruthless a character, until at last al-Šālīb, having no further need of them, caused them to be annihilated by his cousins of southern Syria. Furthermore, though the previous Ayyubids had kept the peace with the Franks, and at one point al-Kāmil had even entertained an alliance with Frederick II against his brothers, such plans had never been actually realised. This time, the Franks appeared in alliance with al-Šālīb Ismā‘īl and with al-Nāṣir Dā‘ūd of Karak himself against al-Šālīb Ayyūb and the Khwārizmians, which resulted in an irreparable disaster for both of the former. This marks the appearance in al-Šālīb of a warlike spirit against the Franks which was unknown to his predecessors, and the ordeals of the Franks gave rise to a new Crusade, that of St. Louis, at the beginning of which the Ayyubid ruler died.

In effect, he was the last Ayyubid. His son Tūrānshāh was massacred after a few months by his troops, and even though several child puppets still carried on the name of the Ayyubid dynasty for a time, it was in fact from 647/1249 that the establishment of the new so-called Mamlūk régime dated. Al-Šālīb was the real creator of this régime. The well-knit and well-disciplined army of Turkish slaves, called the Bahriyya from the name of the barracks on an island in the river (Bahr), was the real arbiter of the situation; neither al-Šālīb nor Tūrānshāh were military leaders. The dynasty might have lasted longer if the latter had not been unbalanced; it was inevitable that sooner or later the Bahriyya would supplant him by a leader promoted from among themselves, which they in fact did when, on the death of Tūrānshāh, they raised the Turkomān ʿĪzā al-Din Aybak to power, first as aṭābeq and then as sultan. The “Kurdish” dynasty was succeeded by the “Turkish” régime, in the words of contemporaries.

The Northern Ayyubids continued for a little while longer, but without further success. Their lives were spent under the shadow of the terror caused by the approach of the Mongols. They hesitated between submission which they feared might be annihilation, and armed resistance of which they despaired in advance. However, al-Nāṣir of Aleppo, with the advent of the Mamlūk régime, had become the standard-bearer of the Ayyubid cause, and it required the mediation of the Caliph in face of the Mongol danger to bring about an agreement that all Syria belonged to him, the Mamlūk Sūltān being satisfied with Egypt. But in 1258 Baghdād fell and, in 1260, Aleppo, Damascus and Mayyafarīkn were either taken or capitulated of their own accord before the invader, who seemed to be invincible. The unfortunate al-Nāṣir, who unlike others did not dare to seek refuge in Egypt, was finally captured by the Mongols and, well treated at first, paid with his life when news arrived of the defeat of a Mongol army by the Mamlūks at ‘Ayn Dżālūt [q.v.] in Syria at the end of the same year. In the ensuing conquest of Syria by the Mamlūk sultan Baybars, the principality of Karak (which moreover had been lost to the family of Dā‘ūd in 1248), which was of great strategic importance, was subjugated; the principalities of Aleppo and Hīnḫ had disappeared of their own volition; that of Hamāh alone, made illustrious by its writer-prince Abu T-Fidā‘l, was restored, and existed (with one interval) until 1342, by reason of its absolute docility.

There was however another branch which survived for more than two centuries under the Mongols and their successors, in the vicinity of Ḥīn Kayfā; reduced to the level of a local seigniory, it returned in a rather odd way to its origins, in that it drew a large part of its strength from the Kurdish tribes who had become powerful in the region and among whom it attempted to play an ever-repeated rôle as arbiter. It succeeded in surviving the Timūrid catastrophe, preserving a centre of culture, but in the end succumbed to the Āk Koyūnlā; nevertheless several of its members regained a minor local importance at the time of the Ottoman conquest (cf. Claude Cahen, Contribution à l’Histoire de Djužar Bahar au XIVème siècle, in Jd, 1955).

Bibliography: A. Sources. A number of archival documents of the Ayyubid period have been preserved; official documents, reported in Sinai (A. S. Atya, The Arabic MSS. of Mt. Sinai, Baltimore 1935), or discovered in the Italian archives and published (M. Amari, Diplomi arabi del Archivo Fiorentino, 1863-67; Tafel and Thomas, Urkunden zur älteren Handelsgeschichte Venedig, 3 vols. 1856-7); cf. also ʿubd al-Lābîb cited above); private documents, in the collections of papers of Cairo, Vienna, etc. (cf. for example A. Dietrich, Eine Eheurkunde aus der Aiyubidenzeit, in Doc. islam. med., Berlin Akad. Wiss. 1952). Moreover partial collections have been preserved of copies of the correspondence of the Kādī al-Fādīl (con whom see A. N. Helbig, Der Kadi al-Fadhl, 1909, inadequate), of the Ayyubid al-Nāṣir Dā‘ūd (Broekelmann, 1, 18, and Cl. Cahen, REI, xxiv, 341), and of al-Afdāl’s maṭrī, Ḍiyā al-Dīn b. al-Āṯīr (analyses of MSS. by Margoliouth, Xth Congress of Orientalists, Ḥābib Zayyāt, in Machqiq xxxvii/4, 1939; and Cl. Cahen, in BSOAS, xiv/1); numerous extracts of the first also occur in Abū ʿAbdāl Shāmīa cited infra; various Jewish documents in the collections of the Cairo Geniza.
On the whole, the essential sources for us continue to be the narrative sources, on which several comprehensive studies are to be found in the Introductions of Cl. Cahen, *La Syrie du Nord à l'époque des Croisades*, 1940, and H. Gottschalk, *Malik al-Kāmil* (in the press); for the times of Salāḥ al-Dīn, H. A. R. Gibb, *The Arabic Sources for the Life of Saladin, in Speculum*, xxvii, 1950. For this first period, the main source is ʿImād al-Dīn al-Isfahānī, *al-Barak al-Shāmi*, of which only two fragments exist, at Oxford (cf. H. A. R. Gibb, in WZKM, iii, 1953), but of which more or less complete summaries are given in all the subsequent literature and especially in Abū Shāma, *K. al-Rawdatayn*, Cairo ed. 1287/1872, 2 vols. (the first part of a new critical edition by Hilmy M. Ahmad appeared in Cairo in 1956; it goes as far as 558/1163); extracts in *Hist. Or. Crois.*, iv and v; it should be completed by al-Fath al-Kūsī, edem., E. Landberg, devoted to the events of 1187 (cf. J. Kraemer, *Der Sturz des Königreichs Jerusalems in der Darstellung des—*, Wiesbaden 1952). The other important Arabic sources are Ibn Shaddād, *Life of Saladin*, in *Hist. Or. Crois.*, iii; Ibn Ābī Ṭāyyīf quoted in Abū Shāma, op. cit.; the *Dustān al-Dīwān*, ed. Cl. Cahen, in BEO, Damascus 1937 and the Christian Abū ʿAlī the Armenian, *Churchier*, etc., ed. Everts. For the beginning of the 7th/13th century, the Kāmil of Ibn al-ʿĀthīr becomes the main Arab source, to which must be added the last pages of Ibn Ābī ʿl-Damm (Oxford MS. Marsh 360), Ibn Natīf (MS. Leningrad IM 159 ed. in preparation by H. Gottschalk: a few extracts from Amari, *Bibliotheca Arabo-Sicula*, ii, Appendices; continuously utilised in Ibn al-Furūt, *infra*), the extracts from the Memoirs of ʿAbd al-Laṭif preserved in the *Taʾrīḵ al-īslām* of Dihābī and the authors quoted for the following period. For the 7th/13th century of the Ayyūbīd family as a whole and especially from about 1220, the fundamental source is the *Maʿrajirī al-kurūb* of Ibn Wāṣil (ed. undertaken by al-Shayyāl, who so far has published the first two volumes stopping at the death of Saladin; extracts quoted in the *Bibliothèque des Croisades* of Michaud, iv (by Reinnaud) and in the comments on the translation of Makrīzī by Blochet in *ROL*, ix-xi); this work and the *Mīrāṭ al-ʿāmān* of Sīhī Ibn al-Dīwāzī (facsimile ed. Jewett, on which is based that of Haydarābhādī, ii, 1952, inadequate, cf. *Arab. 1957/8* review by Cl. Cahen), especially important for Damasc, are the two sources used almost exclusively for the whole of the subsequent historiography; the overrated Abuʿl-Fidāʾ in the main only reproduces the work of his less noble compatriot for this period; Ibn Wāṣil had previously written a more concise *Taʾrīḵ al-Sīhābī* based on different sources of information (unpublished). To these authors must be added especially Abū Shāma, *Dhayl al-sāla al-Rawdatayn*, Cairo ed. 1366/1947, the Christian al-Makīn b. al-ʿAmīd (edition in BÉLOR, 1958, by Cl. Cahen), the *History of the Patriarchs of Alexandria* (this part unpublished, quotations, among others, in Blochet-Makrīzī loc. cit.), the extracts of Saʿd al-Dīn (Cl. Cahen, *Une source pour l'Histoire des Croisades*, in *Memoires de —*, in Bull. Fac. Lettres Strasbourg, xxvii-7, 1950); for Northern Syria, the *Zubād of Kāmāl al-Dīn* Ibn al-ʿAdīm (ed. undertaken by Samī Dahān; meanwhile, Blochet trans. in *ROL*, iv-v) and the *Bughyā* by the same author (unpublished), and *ʿĪz al-Dīn Shaddād, cf. infra; the ʿīrāt point of view is to be found in Ibn al-Fuwati, *al-Ḥawādīth*, etc., ed. Cl. Cahen, *Dīwān*; the Khwārizmīzī in Nasawī, *Vie de Djalāl al-Dīn Shaddād*, ed. trans. Houdas; the Sajdūkī (of Rūm) in Ibn Bībī, ed. Houtsma (somewhat abbreviated; in Persian). See also the historians of the Mongols and of the first Mamlūkīs. Among later Arab historians who have preserved some original materials, *Bzäzīr* (Cl. Cahen, in Orients, ix/1, 1951, 153-31), *Dīwān al-Dīwān* (ed. in preparation), Nuwayrī (Cairo ed.), Ibn al-Furūt (this part unpublished), Makrīzī (Ṣulāḥ, ed. Must. Ziyād; Ḳhīāt, Būlāk ed. and, for the beginning, ed. Wiet, the only good edition). For the Yemen under the Ayyūbīds, better than the celebrated Khazraḍī (ed. trans. Gibb Mem. Ser.), of late composition, the contemporary Ibn Muʿādhwīr (ed. Lőfgren) and Hamdānī (Brokelmann, I 323, unpublished). For the principality of Ḥūn Kayfā, the anonymous Vienna manuscript studied in Cl. Cahen, *Contributions etc.* cited above.

A general history of the whole Ayyūbīd family was composed at the beginning of the 9th/15th century by an anonymous Syrian (Brit. Mus. Add. 7311, unpublished). On the whole, too many important sources are still in manuscript form and their publication (at least photographically) is a pressing desideratum. Translated extracts from the Arabic historians will be found in F. Gabrielli, *Storici arabi delle Crociate*, Rome 1957, and J. Östrup, *Arabiske Kronkiler til Kortogenes Periode*, Copenhagen 1906.

To the historians must be added the biographers, not only Ibn Khallīkān, but also Ibn al-Kīṭīf (ed. Lippert) and Ibn Abī ʿUsāṭībī (ed. Aug. Müller), and the geographers, Yākūt, Ibn Saʿīd (unpublished), and especially ʿĪz al-Dīn b. Shaddād (Northern Syria, ed. Ledit in Machriq, 1935; Aleppo, ed. Sourdel, Damascus 1958; Damascus, ed. Dahān 1957; Dīwānī, analysis by Cl. Cahen in REI, 1934; further extracts by Sobernheim in *Centenario di Amari*, ii, (Baʿbak) and in the *Corpus Inscriptionum Arab. passim*), historical and administrative, to be compiled by Sīhī Ibn al-ʿAdīm, *Les Tétrici d'Or*, analysis and trans. Sauvaget, 1950, and ʿUlaymī, *Description de Damas*, ed. Sauvare, in JA, 1894.

The *diwāns* of the poets should not be neglected.

Naturally non-Arab and non-Muslim literature must also be consulted, which cannot be given in detail here: especially the Latin and French historians of the Crusades and of the Latin Orient, and Syriac literature (Michael the Syrian, ed. and trans. Chabot; Bar-Hebraeus, ed. and trans.)
Budge; Chronique anonyme syriaque, ed. Chatob, in Corpus Script., or., iii, 14-15.
The epitaph material has been collected in the RCEA, viii-ix; the inscriptions of Sulaymân al-Dîn studied by Wiet in Syria, iii. To the numismatic material provided by the usual catalogues, should be added the recent studies of Balog, Minost and Jungfleisch in MIE since 1950.

B. Modern Works. There is no complete general study on the Ayyûbids. The two best general accounts, though short, are those of G. Wiet in the Histoire de la Nation Egyptienne edited by Hanotaux, iv, and of H. A. R. Gibb in History of the Crusades (Philadelphia), i, (Saladin) 1955 and, ii (The Ayyûbids after Saladin) in the press. There is not even a serious biography of Saladin; the latest is that of A. Champourris, Paris 1956, and the least bad still that of Lane-Poole, New York 1898. Of the rest of the Ayyûbids, al-Kâmil alone has just been the subject of an important work, by H. Gottschalk (in the press; the same author has given notice of an article on Ayyûbid Yemen).

The studies on various special problems have been quoted in the article. For trade, hardly anything new has been added from our point of view to the two old classical works of W. Heyd, Histoire du Commerce du Levant, i, 1882, and of Schaub, Handelsgeschichte der Mittelmearommanen, 1906, which view matters from the Western point of view. Some information on institutions is contained in W. Björkmann, Beitrag zur Geschichte der Staatskanzlei im islamischen Ägypten, Hamburg 1929. See also the general histories on the Crusades and the Latin Orient; F. Butcher, The history of the church of Egypt, 1897; and supra and infra the articles devoted to the Adilshah, diebedjis, and again unmarried, the term azab, who, like those employed at sea, were Treasury-paid. Their duty was to guard war-ships whilst in dock.

AZAD, ABU’L-KALAM [see Supplement].
AZAD, MUHAMMAD HUSAYN, an Indian Muslim writer and poet, who wrote in Ùrdû and is noted for the unique charm of his agreeable and picturesque style and for the important role he played in the field of literature and education. He was born in Delhi about 1834, being the son of Mawlân Muhammad Bâkîr, himself a pioneer of journalism in Northern India. After the political upheaval of 1857, he left Delhi and after several years’ wandering arrived in Lahore in 1864. He spent the rest of his life there in the service of the education department of the Government of the Pândjab, writing among other things textbooks for students of the Ùrdû and Persian languages. He also made journeys to Persia and Central Asia. He died at Lahore in 1910.

His principal works are: Ab-i Hayât, a history of Ùrdû poetry, with an introduction on the history of the Ùrdû language; it is his greatest and best-known work, which is celebrated and highly prized not only for its subject-matter but also for its vivid and graphic style; Subjan-i Pârs, on Persian philology and the development of Persian prose style; Nigarîstân-i Pârs, dealing with Persian poets of India and Persia; Nayrang-i Hayât, a collection of allegorical essays, translated or adapted from the English; Darbâr-i Akbar, which deals with the reign of the Mughal Emperor Akbar the Great and his brilliant court, and Kâysâr-i Hind, or stories from Indian history. He also collected and edited the poetical compositions of his master, Muhammad Ibrâhîm Dhâwûk.

He used Azad as his pen-name; and along with Atâf Husayn Hall [q.v.] he is regarded as a pioneer
of the new school of Urdu poetry, which is characterised by naturalness and greater breadth of subject and treatment and also by increased attention paid to

AZAD BILGRAMI, Mir Ghulam 'Ali b. Noh Al-Husayn Al-Wasta'bi, b. at Bilgram on 25 Safar 1116/29 June 1704; he received his early education from Mir Tufayl Muhammad Bilgrami (Subha al-Mardjani 99-100).

When his friend Samsam al-Dawlawa Shab Nawaz Khan [q.v.] died at Haydarabad, was murdered and his house plundered (1171/1758), Azad recovered most of the dispersed fragments of the unfinished MS. of the latter's Ma'dhbir al-Umarai, which he re-arranged and edited. The works of Azad himself cover hadith, belles-lettres, history, biography and poetry. His Arabic hadid in praise of the Prophet have earned him the title of Hssain al-Hind, after the Prophet's progeny Hassan b. Thabit [q.v.].

His notable works are: In Arabic: (1) Subha al-Mardjani fi Ajab Hindustani (lith. Bombay 1303/1886), incorporating two independent works by the author: Shamlamul 'Anbarah and Tasiliyat al-Fudah, the former containing references to India in Kur'anic commentaries and hadith and the latter on biographies of Indian scholars and ulama'. The chapter on rhetorical figures was later translated into Persian by the author himself under the title of Ghidwan al-Hind (MSS. Asafiyya, i, 169; Eth6, 2135; Berlin 1051); (2) Diman in 3 vols. (Haydarabad 1300-1882-3) containing more than 3000 verses; a selection from his seven other diwaani entitled al-Sab'a al-Sayyida was published at Lucknow, 1280/1910; (3) Daya al-Darari Sharah Sakhih al-Bukhari, an incomplete commentary on al-Bukhari (MS. Nadwat al-'Ulama', Lucknow, 99); In Persian: (4) Khasa'i-i 'Amira, alphabetically arranged notices of some 135 ancient and modern Persian poets with a brief history of the Marathas, (Cawnpore 1871, 1900); (5) Ma'dhbir al-Kirdam, on the pious and learned men of Bilgram (lith. Agra 1901); (6) Sura-i 'Asad, biographies of 243 Persian and Urdu poets of India (Lahore 1913); (7) Yadi-i Bayat, alphabetically arranged lives of 532 poets, originally compiled at Swat in (i.e. Sihwan, in Sind, where he was nabh Wakhri-nigah in 1145/1732) (MS. Asafiyya, ii, 162; Ind. Off. 3966 b); (8) Rawda al-Auliya, a short compendium on the saints of Deccan (lith. Awrangabad 1310/1892).

For a detailed list of his works see GJAS (L), 1936, 119-180; Shams Allah Kadir, Rumi al-'Ulama, i, 32-5; Storey, ii/2, 255-66.

(A.S. Bazmee Ansari)

AZAK, Russian Azov; called Tana by the Italians after the ancient Tana (the Old-Tana of Jos. Barbaro) is first found on an Italian map of 1306. The Turkish name Azak has appeared on coins since 717/1317. First the Genoese around 1316, then the Venetians in 1332, established trade colonies in Azak. It appears, however, to have remained essentially a Muslim-Tatar city which was administered by Tatar governors such as Muhammad Khaz'dia about 1334. Sich-beg in 1347 and 1349, Toloby about 1358. A mint of the khans was active there as late as 1411. An emporium of the East-West trade in the 14th century, Azak declined perhaps more from the competition of the Genoese Kaffa than Djani-bek's hostile policy toward the Italian colonies (1343-1358) or Timur's depredations (September 1396). Conquered by the Ottomans in 1475, Azak is described as a hadid of the sandjak of Kaffa in the defter of 1545. The town consisted of three parts: 1. Venedik-kaleesi (in Ebuya Celebi, Frenk-hisari) with 128 Muslim families including garrison; 2. Djenevi-kaleesi (later Orta-hisari) with 109 Muslim families including garrison; 3. Toprak-kale with 500 Tatar akhndj and 104 families of fishermen and 57 Greek families. Extensive fisheries and large production of caviar as well as slave-trade were the chief economic resources in this period. Later when the Cossacks, Cerkes and Russians began threatening it Azak was transformed into the main Ottoman bastion in the North. The first serious siege was attempted by Dimitrash, a chief of the Cossacks, in 1559. They eventually captured it in 1637, but had to abandon it in 1642. As the attacks were renewed in subsequent years especially in 1656 and 1659, the Ottomans made it stronger than ever (in 1666 Ebuya Celebi saw a garrison of 13 thousand men and numerous canons in it) and later erected new fortifications around it such as Seddi-i Islam. After an unsuccessful attack in 1695, Peter the Great captured Azak on August 6, 1696. Compelled to surrender it at the treaty of the Prut (1711), it eventually only evacuated it two years later. The Russians recaptured it in 1736.

AZAL [see KIDAM]

AZALAY (current orthography: azala), a term for the great caravans made up of several thousand camels (or to be more precise, dromedaries) which in the spring and autumn carry the salt from the salt deposits of the Southern Sahara to the tropical
regions of the Sahel and the Sudan. This salt, which
used to be exchanged by the Blacks against its
weight in gold, if one is to believe al-Bakri (trans-
de Slane, 2nd. ed., 327), is exchanged today for
food-stuffs: rice, millet, sugar, tea ... The salt from
I'jil, to the West, which has perhaps been known
since the 6th century A.D. (Anonymus of Ravenna),
is collected by manumitted slaves of the Kounta
(Moors) of Chinguetti and transported by the Moors
to the markets of the Western Sudan. The salt
depots of Taoudenni have replaced those of
Teghaza, a source of wealth of the kings of Mali
and of Gao (14th-15th centuries), and have been
worked since 1585; the salt, after being collected by
sedentary miners, is taken to Timbuctoo by the
Kounta and by a few small Touareg caravans; it is
distributed throughout the whole of the Central
Sudan and the Upper Volta. To the East, the salt
depots of Bilma, Seguine and Fachi are worked
by the Kanouri and the salt transported by asalay
by the Touareg of Air and Damerou; it is sold in
Nigeria and in the Niger Colony. The salt of Borkou
(Faya) and of Ennedi furnishes supplies to the
blacks of the plains of French Equatorial Africa.

As regards the salt of Amadror, to the North of
Nigeria and in the Niger Colony. The salt of Borkou
(Faya) and of Ennedi furnishes supplies to the
blacks of the plains of French Equatorial Africa.

As regards the salt of Amadror, to the North of

part is rather uncertain), and Ch. Le Coeur, Le rite et l'outil, Paris 1939. (R. RICARD)
AZAR, the commonly accepted name of Abra-
ham’s father, based on Kūrān, vi, 74. “When
Abraham said to his father, Azar: ‘Dost thou take
idols as gods?’”, where Azar is taken as a proper
name in approimation to “father”, though some of the
commentators, aware that the name of this father was
Terah, explain Azar as an exclamation of disgust,
an abusive epithet, or the name of an idol. The
majority opinion, however, is that it is the name
of Abraham’s father, either a second name for
Terah, as Israel was for Jacob, or a title. In any
case it was recognised as a foreign word and is listed
among the mu‘arrabāt of the Kūrān. There can be
little doubt that it is a deformation of the Hebrew
Eleazar, the name of Abraham’s faithful servant in
the Genesis story which, as that story came to
Mu‘ammed, was mistaken for the name of his father. (Cf. also Ibrahīm).

suchungen, 85, 86. (A. JEFFERY)

AZARĪKA, One of the main branches of the
Kharidjītes [q.v.]. The name is derived from that of
its leader Nāfī‘ b. az-‘Azrāk al-Ḥanafi al-Ḥanzālī,
who, according to al-‘Ash‘ārī, was the first to cause
disputes among the Kharidjītes by supporting the thesis according to which all adversaries should be
put to death together with their women and children
(ishtirāq). As regards the man himself, it is known
that he was the son of a manummated blacksmith
of Greek origin and that in 64/683 he came to the aid
of Ābd Allāh b. al-Zubayr, besieged in Mecca by the
troops of the Syrian general Ḥusayn b. Numayr al-
Ṣakūnī. Once the siege was raised, Nāfī‘ with other
Kharidjīte leaders, including Naqḍāja b. ‘Amīr and
‘Ābd Allāh b. Ḥarāj, returned to Baṣra, where he at
once took advantage of the situation which had
broken out on the announcement of the death of
Yazīd b. Mu‘āwiyah. It was the Kharidjītes under his
orders who assassinated the governor nominated by
‘Ūbayd Allāh b. Ziyād, Mas‘ūd b. ‘Āmr al-‘Atākī,
and who subsequently refused to recognise the
governor sent by ‘Ābd Allāh b. al-Zubayr; ‘Umar
b. ‘Ūbayd Allāh, so that the latter was obliged to
use force to gain possession of the town; in this
he was helped by the inhabitants, who found it
difficult to tolerate the Kharidjītes’ importunities.
Expelled from Baṣra, Nāfī‘ encamped at the gates of
the town and, after collecting reinforcements,
succeeded in defeating ‘Umar b. ‘Ūbayd Allāh in the
course of fierce fighting and in retaking the town.
To re-establish the situation, Ibn al-Zubayr dispatch-
ed an army under the command of the general
Muslim b. ‘Ūbayy. It is probable that it was on this
occasion that the opposition between the moderate
elements and the extremist elements arose in Baṣra
which led to the division of the Kharidjītes into
Ibādites and Azarīkā, an event placed by tradition
in that year (65/685-6). Whilst the former, less cour-
gage, preferred not to fight Muslim and remained in
Baṣra, the latter, resolved to fight to the end, left
the town and under the leadership of Nāfī‘ withdrew
to Khuzistān (al-Ahwāz). Muslim caught up with
them at Dālāb: in the severe fighting which ensued,
both Nāfī‘ and the Zubayrid general met their
deaths (65/685). The Azarīkā, however, reorganised
themselves under the command of ‘Ubayd Allāh b.
al-Māḥzūr and continued the struggle until the
enemy troops, exhausted and discouraged, withdrew
to Baṣra. For several months the region between
Baṣra and a-Ahwāz was the scene of massacres,
looting and arson, the Azarīkā massacring all who
refused to recognise their sect. The population of
Baṣra in alarm called upon al-Muhallab b. ʿAbī
Ṣuḥra, who agreed to lead the struggle against the
Azarīkā. After dislodging them from their stronghold at the
East of Dūdjayl (66/686), following which they
withdrew into Fārs. ‘Ubayd Allāh b. al-Māḥzūr was
killed in the fighting and the command passed to his
brother Zubayr, who, having reorganised his sup-
porters within a short space of time, again set out on
a campaign. Descending once more into Ḥirāk, he
advanced as far as al-Malā‘īn, where he sacked, mas-
sassing the inhabitants. But, faced by an army from
Kūfah, he turned about and attacked Isfahān, which
was governed by ʿAttāb b. Warkṣ. In an engagement
near the town, the Azarīkā suffered a reverse and,
on the death of Zubayr b. al-Māḥzūr, they fled in
complete disorder into Fārs and thence into the
mountains of Kūrmān (68/687-8). It was a warrior
from Lurisṭān, Ḥaṭkārī b. al-Fūjā‘ī’s, who, combining
fierce energy with exceptional gifts as an orator and a
poet, succeeded in rekindling their enthusiasm
and reorganising their ranks. After a period of time,
he became active and, having occupied al-Ahwāz,
descended once again into Ḥirāk and advanced towards
Baṣra. The new governor of the town, Muṣṭāb b.
al-Zubayr, convinced that only al-Muhallab would
be capable of opposing the Azarīkā, recalled him
from Mawṣil, where he had sent him as governor,
and entrusted him with the direction of the campaign.
But, although al-Muhallab succeeded in launching
a wide offensive against the Azarīkī condottiere,
the latter succeeded in keeping him in check for a long
time and in holding his position on the left bank of
the Dūdjayl, even after Ḥirāk had fallen into the
hands of Ābd al-Malik following the defeat of Muṣṭāb at Maskin (71/690). The situation did not
change until al-Hadīdijāb b. Yūsuf, having completed the pacification of Western Arabia, took over the
government of Ḥirāk (73/694). The latter confirmed
al-Muhallab in his command of the operations and ordered him to go over to the attack at once. Then it
was that there started a long series of campaigns,
conducted by al-Muhallab against the Azarīkā, which led
to their being increasingly relegated to the periphery
of the Empire. For, in spite of their fierce resistance,
they were compelled to abandon Dūdjayl, retreat
to Kāzīrūn and finally to evacuate Fārs and with-
draw into Kūrmān. Having established their head-
quarters in the town of Dījūrt, they managed to
hold their positions for a few years until the diver-
gencies which arose in their army between Arabs and
Muslim led to a split. Whilst Ḥaṭkārī with the
Arabs was compelled to abandon the town and to
take refuge in Ṭabaristān, the Muslimīn continued
to hold Dījūrt under the command of Ābd Rabbih
al-Kabīr (in addition to whom the sources speak of an
Ābd Rabbih al-Ṣaḥḥīr, who is supposed to have
commanded a second group of dissidents). Whilst
al-Muhallab was easily able to deal with the Azarīkī
remains in Kūrmān and massacred them all, the
Kalībī general Sūfyan b. al-Abraḍ, who had joined
the governor of Ṭabaristān, caught up with Ḥaṭkārī
in the mountains of this region and inflicted a
decisive defeat on him. The brave condottiere, having fallen from his horse and been abandoned by his own men, was discovered and killed (76-79/669-670). His head was taken to Damascus to be shown to the Caliph. The remnants of the Azrīka who, under the leadership of ‘Abdī b. Hilāl, had barricaded themselves in at Sadjahwa, near Kūmis, after a prolonged siege were exterminated in an attempted sortie. In this manner the revolt, which of all the Khārijī disturbances was undoubtedly the most dangerous to the unity of the Muslim Empire and the most terrible by reason of its savage fanaticism, came to an end.

**Doctrines:** The principal religious theses which separate the Azrīka from the other Khārijītes are, according to al-‘Ash'arī: 1. The exclusion from Islam (barā’a) of the quietists (al-ḥadha’ī); 2. The examination (mi‘āna) of all who wished to join their army; 3. Regarding as unbelievers (taḥkīf) those Muslims who did not make the hīdāra to them; 4. The slaughter of the women and children of their adversaries (istīrāḍād); 5. The exclusion from Islam (barā’a) of those who recognised tabiyya either in word or deed: 6. The children of the mushrikin are in Hell, as are their parents. Further, according to al-Šahrastānī and al-Baghdādī: 7. Suppression of the stoning of adulterers which is not prescribed by the Kur‘ān; 8. The exclusion from Islam (isti‘rāḍ) of those who were Jews, Christians or Zoroastrians (evidently before Sīs mission; further, according to Ibn Hazm: 9. Amputation of the thief’s hand, which is not prescribed by the Kur‘ān; 10. Women during the menses must perform the prayers and observe ritual fasting; 11. Ba‘īf on killing those who acknowledged that they were Jews, Christians or Zoroastrians (evidently before Sīs mission).

*AZD* (by assimilation from Asd, both spellings are current), name of two ancient Arab tribal groupings in the highlands of ‘Asr (Azd Sarāt) and in ‘Umān (Azd ‘Umān), which united in Basra and Khorāsān in Islamic times. Hence the latter reports that the Azd were a tribe in Yemen, of whom part migrated to the north and part to the east, after the breach of the Mārib dam. One cannot, however, prove any basic relationship between these two tribes of the same name. In the genealogical system (al-‘Azd b. al-Ghawīb b. Nabd b. Mālik b. Zayd b. Kahlān b. Saba‘), where al-Azd is the surname of the tribal ancestor Dir‘i‘i‘rā‘b b. al-Ghawīb) there is a fusion not only of the Azd Sarāt and the Azd ‘Umān, but also of the Ghassān, Khuzā‘a, al-Aws and Khuza‘āi appear as part of the Azd in it. The name Azd, however, can only be applied to those tribes who derive from Naṣr b. a. ‘Azd (in Sarāt and ‘Umān), to the Bārīk and Shahr (Sarāt), derived from ‘Adī b. Ḥāriskh b. ‘Amr Muzayyikīyā, to the ‘Al‘ṭik and al-Ḥādir (‘Umān), derived from Sīs ‘Abbās b. ‘Amr Muzayyikīyā, and to the tribes of al-Hinw b. al-Azd, Ḥarrān b. ‘Abbās b. al-Azd, ‘Arman, ‘Alma‘ and Ḥadi‘n b. ‘Amr b. al-Azd (Sarāt).

The Azd Sarāt, who were well known as weavers, were largely settled, hence their homes remained essentially static. The tribes of Daws (Sulaym b. Fāhr, Ṭārīf b. Fāhm, Munhib b. Daws) and the Banū Māshīkah were the ones furthest north, parts of them as far as north-east of Tā‘if, most of them on the upper Wādī Dawkā. To the east and south-east of them were the tribes of Zahrān (Ṣalāmān, Kaddā, ‘Ubayd b. ‘Ubrā); further east, in the Sarāt Ghānīn were the Namir b. ‘Uğmān, al-Qaṣārī‘, Zārā, Abābīb, Karrān b. ‘Abdān and others. Their area reached from the upper Wādī Kanawān eastwards. These tribes were separated from their relatives living further east by the Kaḥṭām. To the east of the Kaḥṭām were the al-Beṣām (from Ḥwālà b. al-Hinw) in Turābā, the Banū Ṣāḥr (Banū Wālān) were to the north-west and the Karr b. ‘Abbāl to the south of Tabālā. Further south, still in the Sarāt al-Ḥādir, were the numerous branches of al-Ḥādir b. al-Hinw (the most important were the Banū Shahr with the Bal-Asmar) who were in the area round Ḥalābā in the north and reached as far as the areas south of the Wādī Ta‘āmān/Wādī
Bal-Asmar. Their main centres were: Ḥalabāb, al-
Ḳaḍrāb, Ṣuḥār, Ta’izz. Some few lived further
south still, towards the Wādī Bārīk to the west, enclosing the Ḫaṭḥām enclave
from the south. On the whole they lived in the
valleys, whilst the Ḫaṭḥām inhabited the highlands.
A few groups of the Azd (ʿAlma), ʿAlfā b. al-Hinw
and parts of the al-Ḥādir b. al-Huw) were settled as neighbours of the Khina on the coast
around Ḥatt. Originally, the Azd Sarāt
had been much further south, and only in compar-
tatively recent times did they penetrate to their later
region, after continuous battles against the Ḫaṭḥām. Remnants were still living under the Banū Maʿāfīr
in Islamic times, south-west of Ta’izz, and under the
Banū ʿAwd in the Daḥṣūna. The frequent term
Ṣanāʿa remains obscure. As the name appears as a
war-cry in a poem by the poet Ḥadījīz b. ʿAwf, one
may suppose that it is a genealogical rather than a
topic term. The current explanation (Ṣanāʿa
b. al-ʿAzd) is obviously erroneous; which individual
tribes belonged to the ʿṢanāʿa can no longer be ascertained.

The Azd ʿUmān consisted of those tribes which
descended from Mālik b. Fahm in genealogy (Huna ʿAwf)
Farāḥb, Ḥudaydān, Nawā, Muʿād, Djarāmī, ʿUqā a,
Kasāmūn, Sulaymī, ʿAshākīr), some descended from Naṣr b. Zahrān (Yaḥmād, Ḥudaydān, ʿAwf)
and those descended from ʿImrān b. ʿAmr Muʿāk-kiyā, that is, the al-ʿAtik and al-Ḥādir b. ʿImrān
(it is probable that the link with ʿImrān, which
made them brother tribes of the Anṣār, was postu-
lated in honour of the Muhallabids; the true link
was preserved in the genealogy al-ʿAtik b. al-ʿAzd
b. ʿImrān). There is little information concerning the
sites on which the individual tribes lived. The
Maʿ āwil were in and around Ṣuḥār; the Yaḥmād and
the Ḥunā on the neighbouring coastal areas. The
Humaym (from Maʿ n b. Mālik b. Fahm) were in
Nazwā; al-ʿAtik in Dābā and al-Ḥādir nearby;
the Ḥudaydān were in the hinterland of the Pirate
Coast. In between, there were settlements parti-
cularly the Sāmā b. Luʿayy, who were later collec-
tively known as the Nīzār. The Banū Djuḍayd (from
ʿAshākīr) advanced in Islamic times to the west as
far as Zufār Ḥadrāmawt, where they captured the sea-port of Raysūt after battles against the Mahra.
Even in pre-Islamic times, parts of the Azd ʿUmān,
such as the Salimā b. Mālik b. Fahm, migrated to the
islands in the Persian Gulf and to Kirman. As
fishermen, sea-farers and merchants, the Azd ʿUmān
did not enjoy a good reputation among the other
Arabs. The term Muṣūn, occasionally applied to
them, seems to have been a nickname. It may be
supposed that they immigrated from the north and
imposed themselves on the previously settled non-
Arab inhabitants. The tradition which identifies them with the Asad (2), (g.,q.) mentioned in inscrip-
tions, and which makes them the allies of the Tānūk, is
erroneous.

Little is known of the Azd Sarāt in pre-Islamic
times, as there are hardly any poetic writings; the
only well-known poet was Ḥadījīz b. ʿAwf (Banū ʿAlāmān).
There is mention of battles against Ḫaṭḥām
and Khina, and fights by some tribes against the
powerful clan of the Al ʿAtifīt of the Wādī Ḥanaw-
ānā) at the beginning of the 7th century. Members
of that clan are said to have been the keepers of the
shrine of Manāṭ in Kudayd. It is possible that the
name ʿAtifīt in the genealogical lists of Medina from
came that quarter. The following are mentioned as
deities of the Azd Sarāt: Dhu-ʿAlām, Ṣināʿa, Dhu-ʿAlāyā
(shrine in Tabālāh), Dhu-ʿAbd b. Kaftām and ʿAṭīm. Still
less is known of the early history of the Azd ʿUmān.
Apart from mythical fights against Persians and Mahra, there is mention of one against the ʿAbd al-
Kays. Bāḍiʾ/Nādīir is mentioned as their deity.

The Azd Sarāt accepted Islam in 10/631. Small
risings during the ṭiḍda were quickly put down in
11/632 by ʿUmmān b. ʿAbd-Asmāʾ, the governor of Taʿizz. As early as 13/634, there was a short-lived
alliance which ʿUmmān sent to the Euphrates.
Some Azd Sarāt were amongst the first settlers in
Basra and Kufr and some went to Egypt. On the
whole, however, there was little emigration. Islam
had already entered ʿUmān a few years before. This
was due to a difficult situation into which the
brothers ʿAbayd and ʿAbd—heads of the ruling
group, the al-Djuḍaydā (from Banū Maʿ āwil in Ṣuḥār)—had got themselves in relation to ʿAtik b.
and other tribes of the inland regions under the
leadership of ʿAmīr b. Mālik al-ʿAtikī. ʿAmmān b. ʿAb-
As was sent to Ṣuḥār in the year 8/629, and with
his assistance, the tribes managed to recover their
power completely. ʿAtikī tried his luck once
more during the ṭiḍda and ʿAbd had to flee, but in
the year 12/635 the rising was finally put down by ʿIrān b. ʿAbd ʿAṭīlāḥ. The Banū ʿDjuḍaydā
remained practically completely rulers in Ṣuḥār for
many years. ʿAbbād b. ʿAbd b. al-Djuḍaydā took
over the rule in the time of ʿUmānā. He was killed
in battle against the Khawārīdī of the Yamānā in
67/686. His sons Saʿīd and Sulaymān succeeded him. It was not until the time of al-Ḥādirījīdī that the
two brothers could finally be ousted from Ṣuḥār, and
the territory re-incorporated. A great number of Azd ʿUmān had emigrated to Basra in 60/659–67. In the process, some of them remained in
eastern Arabia, where an Azd emirate was founded
in Żārā in the 3rd/9th century. They united them-
sew themselves with the Azd Sarāt who were already settled in Basra, made an alliance with the ʿAbdī in
and thereby became the opponents of the Tamīn. As early as 39/659, the Azd Sarāt of Basra had protected the
governor Ziyād b. Abīb against the Tamīn. Simi-
larly, ʿAbayd Allāh b. Ziyād got assistance from the
Azd, when, after the death of Yazīd I (64/668) the
Tamīn rose against him. The subsequent tribal
warfare, in the course of which Masʿūd b. ʿAmīr al-
ʿAtikī, the leader of the united Azd and ʿAbdī was
killed, with be settled by ʿAbd aḥāf, the leader of
the Tamīn. The enmity, however, remained, and
spread to Khurāsan, especially when the Azd there
(always in league with the ʿAbdī) became the leading
tribes among the Muhallabīdīs after 78/697. They
were greatly offended at the removal of the Muhallabīdīs
and were largely responsible for the events which
led to the defeat and death of Kuṭayba b. Muslim in
66/675. The Azd remained the leading group up to
the beginning of the reign of Yazīd II in 107/720.

The subsequent systematic extermination of the
Muhallabīdīs brought for them a time of subjugation
by Kyṣīdī governors. Their enmity against these
contributed greatly to the fall of the ʿUmayyādīs.
During the troubled times at the end of the reign
of the ʿUmayyādīs, the Azd—apart from a few short-lived alliances—remained in opposition to the
governor Naṣr b. Sayyūk, a fact which considerably
facilitated the advance of Abū Muslim. In Basra
too, the Azd followed the ʿAbbāsīdīs, having risen
against ʿUmayyādī rule and having been beaten by
Tamīn and Syrian troops. ʿAbdī teaching, brought
over from Basra, began to be accepted in 'Uman atba out the same time. In 132/749, al-Djidzilanda b. Mas'ud, a member of the old ruling house of the Banu 'Djidzilanda, was elected the first Imám. He was killed in 134/751, fighting against Kházím b. Khuzyáma, general of Abu 'l-Abbâs. The subsequent years were very troubled ones for the country. Nominally, it was under an Abbâsid governor, but there were constant battles, usually between the Banu 'Djidzilanda—who were trying to re-establish their former rule—and the Ibâd. It was not until 177/793 that the latter gained the upper hand and elected a new, rightful Imám. Henceforth, Nazwa became the seat of the Ibâdi Imáms, who were, almost without exception, of the Ya'izí' tribe. After 230/844 troubles broke out again. In addition to the activities of the Banu 'Djidzilanda, there was tribal warfare between the Azd and the Nizar. Azd b. Azzan b. Azzan b. Tamîl fell in 288/893, fighting against Muhammad b. Nûr, the Abbâsid governor of Bahrain. After 288/893, there were again Ibâdi Imáms in Nazwa, but their powers remained limited.

AL-AZDI, ABU ZAKARIYYA *YAZID B. MUH. B.

Azimabad (Patna) on the request of Rayi posed at

Azerbajxân [see ARZHAVJAN].

AZER mistakes a woman's death.

AZEMMUR [see AZAMMUR].

AZERBAYDJAN [see AZAFARI].

AZAFARI, MUHAMMAD ZAMIR AL-DIN MIRZA 'ALI BAQIR BAHADUR GÜRÜĞI, a lineal descendant of Arawangzî and a grandson of 'Ifftâr Arâ Begum (daughter of Muhammad Mu'azza al-Din Pâghîb, i.e. Djalâhdâr Shâh), son of Shâh 'Ali (Bahâdur Shâh I), was born in the Red Fort at Delhi in 1172/1758 and educated within the fort. Like other princes of the line of Timur, Azerfârî was in receipt of an allowance from the East India Company. Azerfârî decided in 1202/1789 to escape from the fort. Passing through Dîjâpur and Dîjodhpûr, Azerfârî reached Lucknow where he was received with open arms by Aşaf al-Dawla, the ruler of Awadh. For seven years he stayed there and then left for Patna en route to Maksûdâbâd, (an old name for Murshidâbâd [q.v.]) where he arrived in 1211/1797. After a stay of some ten years he left for Madras, where he stayed until his death in 1234/1818. Azerfârî was polyglot and spoke Arabic, Persian, Turkish and Urdu fluently; during the closing years of his life he also learned a little English. He was well-versed in different sciences such as medicine, astrology, prosody, geomancy and metrics, but was more attracted by poetry. In addition to an Urdu dâstân he left behind a large collection of verses in Persian and Turkish. These Persian and Turkish collections as well as some of his works enumerated at the end of his memoirs (a Câghatay grammar, Tenkari Târ—a Turkish-Hindi compilation) are, however, lost.

His chief work is the Wâbûtâdi Azerfârî (MS Berlin 496, Rieu, iii, 1051 b; Madras, i, 450, 451) commenced in Mursûhidâbâd in 1211/1797 and completed at Madras in 1221/1806. It is an account of his wanderings and personal experiences in addition to being a valuable historical sketch of the ephemeral rise of Ghulâm Kâdir Rohilla [q.v.], who captured Delhi in 1203/1788 and blinded the Emperor Shâh 'Ali I. This work is also of great geographical value.

At the end of his above-noted memoirs Azerfârî mentions 7 of his works, in addition to an earlier one: (i) Lughât-i Turkî-î Caghdâmi (compiled during his stay in Lucknow); (ii) A Persian translation in rhymed prose of 'Ali Shâr Nawât's [q.v.] Turkish work Mâbâb al-Kulub; (iii) Nisâb-i Turkî, (in verse); (iv) Tenkari Târ, a Turkish-Hindi compilation on the lines of Khâkî-kâbî, erroneously ascribed to Amâr Khusrâw; (v) A Persian metrical translation, from Arabic, of the Risûla-i Kabriyya, a supposed treatise by Hippocrates on the signs of approaching death; (vi) Nûshka-i Sânhât, detailing his experiences and tribulations. It contains 109 anecdotes; (vii) A metrical grammar of Câghatay Turkish (composed at 'Azimâbâd (Patna) on the request of Râyî Tikà Râm, a hereditary bakhshî [q.v.] of his family; (viii) Wâbudî al-Mubâdî. **Bibliography:** Muh. AL-AZHAR [AL-DJIZM] AL-AZHAR. This great mosque, the 'brilliant one' (a possible allusion to Fatîma al-Zahrâ', although no ancient document
confirms this) is one of the principal mosques of present-day Cairo. This seat of learning, obviously Isma'ili from the time of its Fatimid foundation (4th/10th century), whose light was dimmed by the reaction under the Sunni Ayyubids, regained all its activity—Sunni from now on—during the reign of Sultan Baybars. Its influence is due on the one hand to the geographical and political position which Cairo occupies in the Muslim world (especially since the downfall of the Bagdad 'Abbásids), attracting scholars and students and accommodating many Maghribi pilgrims on their way; on the other hand it is due to the situation of this capacious mosque itself in that quarter which was up to the 19th century the epicentre of the town of Cairo. One institution of learning among many others in the Mamlûk era, it benefited from the almost complete disappearance of all the Cairo colleges under Ottoman domination, and became the only stronghold in the capital where the study of the Arabic language and religious learning could be maintained. From the 18th century, in spite of the decadence of its intellectual methods, its organisation, becoming consolidated, gained for it the dignity of a harmonious whole, at once a school and a university; and it can be considered from that time as the principal religious university of the Islamic world. In the 20th century, al-Azhar, outgrowing the framework of its mosque, began to acquire a whole network of establishments of Islamic education. With its faculties in Cairo of university status, and with the various primary and secondary institutions in Egypt which are directly connected with it, its strength in 1933 was a total of 30,000 pupils and students, 4,500 of whom were foreigners. Some institutions thus functioned, and took to himself the privilege of the kubãba; the Friday prayers in al-Khùrìra took place only in the al-Hâkîmi mosque. This mosque had been restored to Muslim worship by Sâlâh al-Dîn after having been used by the Franks as a church. Al-Azhar continued to exist, although on the decline ('Abd al-Latif al-Baghdadi taught medicine there at 567/1171-2). Sâlâh al-Dîn had certain ornaments torn down (silver band from the minaret which was at a dangerous angle was demolished at the same time), but the buildings were very neglected. With the Mamlûk sultans the situation changed. The amir 'Izz al-Dîn Aydimur al-Hillî, residing in the neighbourhood, was so distressed by the dilapidation of al-Azhar that he financed some works with the help of sultan al-Zahir Baybars, who amongst other things permitted the kubãba to be read again in 665/1266 (Corp. Insr. Arab. Egypt., i, no. 128). Some wahfîs were allocated to provide for Sunni teachers. Once again vigorous life returned to it, never to cease up to the present day. Badly damaged (sabâta) by the well-known and disastrous earthquake of 702/1302-3, it was restored by the amir Salâr. Marble made its appearance, discreetly, in the undated repairs of the minaret (beginning of the 14th century), though it was used with magnificent effect in the madrasas of the three small new erections of fine stone built against the exterior of the mosque, which were later to be incorporated with it: the madrasa of the amir Tâybars, founded in 709/1309 to the right of the west door; that of the amir Akhûgâhid 'Abd al-Wâhid in 733/1335 to the left of this door; and the charming madrasa founded by the eunuch Djawhar al-Kâfûkâbî, who was buried here in 844/1440, at the eastern corner of the mosque. In 725/1325 some constructions are recorded, and about 761/1360 the makhtâras were rebuilt, some improvements were made, funds for feeding the poor and for teaching were established, e.g., a sabîl for water, and teaching the Qur'an by new minarets, which was at a dangerous angle was demolished and then rebuilt on three occasions for the same reason (800, 817, 827/1397-9, 1414-5, 1423-4). On this last date, a cistern (zâkîrî) with a wash-basin (mi'da) was built in the middle of the mosque, and an unsuccessful attempt was made to
establish four trees in the courtyard. The sultan Sytbay was responsible for much work: for the west door, which he demolished, he substituted an elegant doorway with minaret attached (873/1469; Corp. Insr. Arab. i, no. 21), had a host of little dwellings, which were excrescences on the terraces, cleared away (881/1476), and ordered a general restoration (901/1496). Kânsîh al-Ghîrîl bestowed on al-Azhar another minaret, thanks to which it can today be recognised from afar among the assembly of minarets in Cairo (915/1509). Funds for teaching continued during this period. At the time of the Ottoman conquest the sultan Selîm looked with favour on al-Azhar. The 18th century was, in the history of al-Azhar, as important as the Fâtimid era; possessing from that time on the monopoly of religious studies in Egypt, the mosque was considerably enlarged. A chapel for the blind (Zâwiya al-‘Umâyän) was built by ‘Uthmân Katkhûdâ al-Kazâdîgil (Kasîd Oghîlî), who died in 1149/1736. But its greatest benefactor was ʿAbd al-Rahmân Katkhûdâ or Kîhya (died 1190/1776, buried in the mosque), who caused the following constructions, which lack the beauty of the ancient works, to be carried out: demolition of the ṣâhib wall of the prayer-hall except for the original mihrâb which remains, the addition at the rear of four new bays of stone arches on slightly raised ground, a new mihrâb, a minbar, his tomb, a cistern, and a Kurzânîc school for children. Victuals and gifts in kind were provided for poor students. A new enclosure, with doorway, brought in on the west the two madrasas of Taybars and Akbûgâhî, whose façades were rebuilt (1157/1743).

The Azharîs, like students of all countries, came out into the streets from time to time. Al-Dîjabarti indicates that there were some troubles in the quarter, in which they took part. He makes mention of the rising against the French under Bonaparte who were occupying Cairo (10 Dîjmâdâ I 1213/20 October 1798); the immediate repression found in al-Azhar and its neighbourhood the last bastion of resistance. The mosque suffered from the final bombardment, and was profaned by the troops. The restoration of autonomous rule, under Muhammad ʿAll, was scarcely favourable to al-Azhar, whose wahfîs were misused. Later the Khedives and then the kings of Egypt became its benefactors, reserving to themselves the upper hand in its affairs, and hoping in return for the tractability of its shâhkhs, a hope which was generally realised except in a few cases of proud and sudden boldness which even today form a topic of conversation. ʿAll Pasha Mubârâk, and for the modern period Van Berchem and Fluri, are collected with references in Creswell, The Muslim Architecture of Egypt, i, Oxford 1952, 36-64, with plates and plan. See also Hauteceur and Wiet, Les mosquées du Caire, Paris 1932, 2 vols; Hasan ʿAbd al-Wahhâb, Târîkh al-Masâjidîd al-Athâriyya, i, Cairo 1946. See also EI, article Ḥashar § I.

II. Al-Azhar as a sanctuary and house of the people. Like all mosques, al-Azhar had this dual function. The regular prayers were said here, as well as those on exceptional occasions. Its history from this point of view is linked with that of Egypt: people collected here in times of catastrophe (such as epidemic, famine, or war) to call upon God, and to hear special readings from the Kurān or from the Bulğârî; it was also a place of refuge for fugitives (see Ibn Ilyâs, ii, 177, 264, iii, 106, 132, 167). In modern times also, some events of national significance have been organised there. The spaciousness of its buildings, and the constant presence of students, were appropriate for large meetings, e.g., that of 1919 (see Madâni Kitâb al-Azhâr, xxvii, 306-400). Here they extorted the Muḥajirîn or combatants during the Palestine war (1948), and at the time of the guerilla warfare against the British in the Suez Canal in 1951-2. Al-Azhar is, moreover, a 'people's house' for those poor men who, since its...
foundation, have found there either a temporary or a permanent shelter: many have spent the night there, as al-Makrī points out with regard to the intervention of the amīr Sudūb, nāṣir al-azhar, who in 818/1415-6 wished to free the mosque of all who were dwelling therein, whether students or otherwise. His intervention was the occasion for pillage, and opinion turned against him. Some inhabitants of Cairo, even the well-to-do, would pass the night here, specially in Ramaḍān, at the beginning of the 15th century (Khitat, iv, 54-5). At the present time, among the poor pilgrims coming from as far as North Africa and the Atlas Mountains (1400 in 1952), many stay at al-Azhar during the month of Ramaḍān before setting off for the Hīdāz. Many Azhari students give them moral and material help (in the middle ages the Maghribi pilgrims camped at Ibn Tulun—Khitat, iv, 40). Countless āifts have been made by rich Muslims at all times for the poor of al-azhar, in the middle ages al-Azhar was open to āifts also, although its tendencies were predominantly juridical. Umar b. al-Fārābī chose to live there towards the end of his life (Ibn Iyās, i, 82, 3). One text mentions the dhikr which took place there (Khitat, iv, 54). Akhūdža’s madrasa is also said to have had a permanent group of āifts (ibid., iv, 225).

The mosque of al-Azhar was above all a ‘people’s house’ for the teachers and the pupils whom it housed under its arcades, and its history here again is inseparable from that of Islamic teaching in Egypt (see Ibrāhīm Salāmā, L’enseignement islamique en Égypte, Cairo 1939). Teachers found within it peace and adequate quarters; sometimes, however, their position was not official: at times we hear of passing scholars supported by a sovereign during their stay. There were in the course of time schools for orphans. In 784/1382-3 a decree of Sultan ʿAbd al-Malik al-Būyānī, māʾīlī law at al-Azhar, and dictated the Mukhtasar, a work of his father’s (Khitat, iv, 156; Brockelmann, Sl, 325). After having been named waṣāṭ, Ya‘kūb b. Killis held in his own home meetings of litérateurs, poets, jurists and men of the kāhad (theologians), to whom he gave a pension, and who thereafter taught the Ḥadīth doctrine in the mosque of ‘Amr. Al-Azhar profited by this trend. In 378/988-9 al-ʿAzīz assigned to 35 jurists a house near to al-Azhar, with provision for their support. On Fridays, between midday and the asr prayers, they held meetings, and their chief, Abū Yaʿkūb Kāḍī al-Khandaḵ, was responsible for the teaching. (Khitat, iv, 49; al-Kāshāshbāndī, III, 507). Al-Makrī, writing of the al-Anwar (al-Ḥākim), notes only recently inaugurated, notes that in Ramaḍān 380/990-9 groups of listeners followed courses there given by the teachers who instructed in the mosque of Cairo, that is to say, al-Azhar (Khitat, iv, 55), which implies that it must have always had a stable organisation. It is known, moreover, that Ibn al-Haytham elected to live at al-Azhar (Ibn Abl Usayfiʿa, ii, 90-91). But the remarkable effort of the Fāṭimid rulers in both sacred and secular culture is specially evident in the Dār al-hikma founded by al-Ḥākim in 395/1005, which became the real cultural centre of Cairo at this period (Khitat, iv, 158). Under the Ayyūbids the Šīʿite teaching was swept away. Al-Azhar had always opened its doors to scholars (e.g., for Abd al-Lāṭif al-Baghdādī), but it was supplanted by the official Sunnite madrasas recently created. Under the Mamlūks al-Azhar regained its position.

In 665/1266 the amīr Bīlāk al-Khāzīndār installed a vast maṭṣāra and provided it with a fund in order that a group (gīmāṣa) of jurists might teach Šīʿī law there. He appointed a teacher of hadith and spiritual doctrine (ḥādīth), seven people to ‘read’ the Qurʿān, and a tutor (muḍārīz) (Khitat, iv, 52). In 761/1359-60 a course of Hanafi law was started, at the same time as a Qurʿānic school for orphans. In 784/1382-3 a decree of Sultan Ṣūlṭān Bārkūk provided that students should inherit their property of those of their friends who died without heir (see Tritton, Education 123, for a discussion of arrangements of this kind). Al-Makrī, on the events of 818/1415-6, mentions 750 provincial or foreign inhabitants, ranging from Maghribis to Persians, as residing in the mosque, grouped according to strict riwāāt. They read the Qurʿān and studied it. They devoted themselves to law (fikr), to tradition (ḥadith), to commentaries on the Qurʿān, to grammar (naww), to meetings devoted to preaching and to dhikr (Khitat, iv, 53-4). It is often said nowadays that al-Azhar was always the Egyptian Muslim university excellence; in fact, in the Cairo of the Mamlūks, bursting with life, it was an important centre of learning, but a centre among many others (see Masqīdī). Al-Makrī, writing in the 15th century, makes mention of more than 70 madrasas in Cairo (Khitat, iv, 191-258). He points out the intellectual activity within the mosques: in that of ‘Amr, before the great plague of 749/1348, he mentions forty-odd courses or ṣalāha (ibid., iv, 227); in that of Ibn Tulun, at the beginning of the 14th century, there were all the wāḥis maintaining what could be described as chains of learning, and others again for the maintenance of certain categories of students.

III. Teaching in the mediaeval and post-mediaeval periods. Information on the situation in early times is both fragmentary and incomplete. Under the Fāṭimid s in 365/975 the great official proprietor of his arrival in Cairo in 784/1383, taught at al-Azhar, which he later left in order to teach elsewhere (Ibn Khaldūn, Tawrīḥ, 248). The courses in the four schools and a course in medicine (ibid., iv, 40-1); in that of al-Ḥakīm, in the same period, law courses in the four schools (ibid., iv, 57). There was moreover still ṣūfī teaching in the convents or khānsūqās. Ibn Khaldūn, for example, from the time of his arrival in Cairo in 784/1383, taught at al-Azhar, which he later left in order to teach elsewhere (Ibn Khaldūn, Tawrīḥ, 248). The courses in the four schools were of more than 2000 works belonging to the fikhrī doctrine in the mosque of ‘Amr. Al-Azhar profited by this trend. In 378/988-9 al-ʿAzīz assigned to 35 jurists a house near to al-Azhar, with provision for their support. On Fridays, between midday and the asr prayers, they held meetings, and their chief, Abū Yaʿkūb Kāḍī al-Khandaḵ, was responsible for the teaching. (Khitat, iv, 49; al-Kāshāshbāndī, III, 507). Al-Makrī, writing of the al-Anwar (al-Ḥākim), notes only recently inaugurated, notes that in Ramaḍān 380/990-9 groups of listeners followed courses there given by the teachers who instructed in the mosque of Cairo, that is to say, al-Azhar (Khitat, iv, 55), which implies that it must have always had a stable organisation. It is known, moreover, that Ibn al-Haytham elected to live at al-Azhar (Ibn Abl Usayfiʿa, ii, 90-91). But the remarkable effort of the Fāṭimid rulers in both sacred and secular culture is specially evident in the Dār al-hikma founded by al-Ḥākim in 395/1005, which became the real cultural centre of Cairo at this period (Khitat, iv, 158). Under the Ayyūbids the Šīʿite teaching was swept away. Al-Azhar had always opened its doors to scholars (e.g., for ‘Abd al-Lāṭif al-Baghdādī), but it was supplanted by the official Sunnite madrasas recently created. Under the Mamlūks al-Azhar regained its position.
and sub-commentaries on these glosses (kalāhir). All the energy of the students was absorbed by the effort of memory necessary to retain by heart this complicated learning, which was presented with no pedagogical method whatever. General culture was non-existent. Arithmetical studies were limited to that elementary technique necessary for apportioning an inheritance, and astronomy to that which allowed the times for prayer, or the beginning of the lunar months (al-nilā), to be determined. But one should not judge the mediaeval intellectual activity of Cairo by this period of post-mediaeval decadence.

In the middle ages, the office of superintendent (nādir) of al-Azhar was held by a person of high rank. Moreover, each riwaḍ, a group analogous to the 'nations' of the mediaeval universities of Europe, as well as each faculty, had its own head (shaykh, naḥḥib). From Ottoman times al-Azhar had its rector (shaykh al-Azhar), who remained in office until his resignation, dismissal or death. The shaykhāt of the different departments were subordinate to him, and he was directly responsible to the government. Al-Djabarti gives us a partial roll of these from the beginning of the 18th century (see § V, below).

Al Paşa Mubarak has described (Khitat Di., iv, 26-30) life at al-Azhar as it was in 1875 at the dawn of the modern reforms. This picture gives an idea of the ancient customs: the students were grouped in a circle (kalba, literally 'circle'), extended to mean 'course', seated on the mats (ḥusra) of the mosque around the teacher, who himself was seated Turkish-fashion on a low wide armchair placed at the foot of a pillar, each pillar having its own accredited holder and being, moreover, up to 1872 the undisputed owner of part of the property of the juridical school. Morning lectures were reserved for the most important subjects, that is to say successively taṣfir, hadith, fiqh, then at noon the Arabic language; other subjects were kept over for the afternoon. At the end of each class the students kissed the hand of their teacher. The Azharīs lived meagrely on the regular issues of food (qiṣrīyāt), supplemented by that which came from his family and which would often work in order to earn a little more, by giving readings from the Qur'ān, copying manuscripts, etc. He lived in the mosque or in the town. There was no examination at the end of the course of study. Many of the students were well advanced in years. Those who left al-Azhar obtained an idāza or licence to teach; this was a certificate given by the teacher under whom the student had followed courses, testifying to the student's diligence and proficiency. Teacher-pupil relationships had a rather patriarchal aspect, disturbed only by rather rare rebellions. Quarrels between rival cliques of students were more frequent.

A proctor (qiṣā), was responsible for the administration of the rules, for the care of the books, and for distributing the provisions in kind; he had a staff of some size under his command. In 1293/1876 the distribution of the 361 teachers and 10,780 students according to schools was: Shafi'īs: 147 teachers, 5,651 students; Mālikīs: 99 teachers, 3,826 students; Hanafis: 76 teachers, 1,278 students. The Ḥanbalis were poorly represented: 3 teachers, 25 students. There were in addition some non-registered students. The students were grouped into 15 kāiras and 38 riwdīs (Khitat Di., iv, 26). There were numerous foreign students (see list of riwdīs, E1, s.v. Aṣhār, § II, VI). The vacation began in the month of Raqiţ and ended in mid-Shawwal; there was in addition the twenty days leave for the great Bayrām (festival of sacrifices), the same for the

Encyclopaedia of Islam
consist of three *ulamā* from al-Azhar and two official *ulamā* from the government; it fixed the minimum age for the admission of pupils at 15; declared that conditions of admission were to be able to read and write, and to know half the Kurān by heart; it reorganised the programmes, forbade the teaching of glosses to new pupils and restricted it for the older ones. Two examinations led, either after a minimum of 8 years study, to the diploma of *ahliyya*, or after 12 years, to the diploma of *šālimyya* (with three honours classes). Modern subjects were introduced, either obligatory (such as elements of arithmetic, algebra) or optional (such as the history of Islām, composition, elements of geography, etc.).

The length of the vacations (summer, Ramadān, festival of sacrifices) was fixed. A medical officer was appointed to be in charge of health and hygiene. A list of prescribed texts for the syllabus was drawn up. The implementation of this law came up against fierce resistance, which was likewise expressed in the press.

—In 1903 came the foundation of the institute of Alexandria, affiliated to al-Azhar.—In Muḥarram 1325/Feb.-March 1907 came a law instituting the ḥādis' school in the orbit of al-Azhar.—The law of 2 Saḥīr 1326/6 March 1908 set out the studies in three standards, primary, secondary and higher, each of four years’ duration, with a certificate given after each final examination. The optional subjects of 1896 were made compulsory. This law was regarded as a blow to the autonomy of al-Azhar, and provoked an outcry. There was a serious student revolt in Cairo, and in Ṭanṭā (quickly put down), but nowhere else. It was decided to apply this law only gradually.—In December 1908 came the foundation of the Free University of Cairo, the embryo of the four modern faculties, and of the western type. This was the origin of a competition that was painful for al-Azhar.—The law of the 14 Džumādā I 1329/13 May 1911 harked back to that of 1908: it laid down that the rector was to be nominated by the Khedive, enlarged the advisory council (the rector, the *shaykhās* of the four schools, the director-general of the *msāfah*, and three members nominated by the decision of the council of ministers), created the tribunal of the 30 chief *ulamā* who were incumbents of the 30 special chairs, from among whom the rector was to be elected. In the conditions of entry for pupils, the age limit was from 10-17 years; other provisions were as in 1866. Modern studies were slightly augmented, etc. This law was still the subject of opposition. One interesting problem arose, in that the graduates of the dār al-*ulum* and of the school of the ḥādis' obtained situations more easily than the Azharis, and earned more.—In 1921 the conditions for entry required the knowledge of the whole of the Kurān, no longer just half.—In the law of 13 Muḥarram 1342/26 August 1923 the highest standard was renamed 'specialisation' (*taβabsus*) and comprised many branches. The school of the ḥādis, which since 1907 had been banded about between different ministries, was at last affiliated to al-Azhar and abolished as such, becoming simply a branch of specialisation (1923-5). In this period several missions from al-Azhar were sent to study in Europe before returning to teach at al-Azhar.—In 1925 the State University of Cairo (Futūd al-Awlia' University) replaced the Free University.—A law of the 24 Džumādā II 1349/16 November 1930 laid down that the Tribunal of the chief *ulamā* was competent to judge whether any *šālim* was guilty of any act not in conformity with his dignity. It enlarged the advisory council of al-Azhar (Grand muftī; the *shaykhs* of the three faculties instead of the *shaykhs* of the four schools, etc.), and stipulated that students should be under 16 years of age on admission (18 in the case of foreigners, who were exempted from knowing the whole Kurān by heart). The primary course was 4 years, the secondary 5 years, the higher 4 years, in one of the three faculties constituted by this law (Islamic law or *shari'a*, theology or *usul al-din*, the Arabic language or *lugha al-arabiyah*), and in appropriate cases more specialisation or *taβabsus*, in those faculties which existed only in Cairo, was allowed. The programme of the higher standard (*šālimyya*) was completed by the special mention of those who had attained distinction in their specialist studies, for example the grade of *usālīd* in such and such a subject, etc. A ‘general section’ was created for those unable to take the normal courses. The vacations were to be fixed each year.—The law of the 3 Muḥarram 1355/26 March 1936, still in force in 1955, provided that the age of entry be from 12-16 years; duration of specialisation, 2 years. The regulations concerning the subjects to be taught (these were to be still more detailed in the individual syllabuses printed later) make this law the real charter of present-day teaching. Apart from the traditional subjects, the following should be noted: English or French language (compulsory for the *usul al-din* faculty, optional for the two others); rudiments of philosophy, history of philosophy, etc., for the *usul al-din* and *lugha al-arabiyah* faculties; common international law, and comparative law, in the *shari'a* faculty. Certain branches of *taβabsus* had in addition a compulsory Oriental language (section of *waṣīya wa rūhādi*), or the elements of Hebrew and Syriac (sections of *ba'idha* and *balidha*), the history of religions, etc. The normal programme (*nisām*) of the secondary course had as modern subjects the rudiments of logic and the art of rhetoric, of medicine (with the use of the microscope), of chemistry, zoology, botany, history and geography. The primary course comprised history, geography, arithmetic, algebra (up to simple equations with one unknown), and hygiene. The *al-bu*warzīth, reserved for foreigners who were unable to follow the normal courses, comprised 12 years’ study divided into three courses of four years, with an easier syllabus. Of modern subjects they had only arithmetic, history, geography and logic. It must not be forgotten that all these modern subjects take a secondary place in the teaching, and that little time is given to them.—In 1945 the dār al-*ulum* was affiliated to the University of Cairo, with the status of Faculty. In 1952 the dār al-*ulum* ceased to be reserved for Azharis, and admitted candidates coming from Government schools. A women's section was opened in 1954.—About 1954 there was a slight alteration of the programmes at al-Azhar; a foreign language became compulsory in the faculty of *lugha al-arabiyah*. The retirement age for teachers was fixed at 65; this applied equally to the chief *ulamā*, who previously had been appointed for life.—In 1955 came the abolition of the *shari'a* tribunals, thus doing away with the chief outlet for the Azharis of the *shari'a* faculty. There was talk of opening a women's section at al-Azhar; by the end of 1957, everything was ready, only budgetary credit was lacking for the law. In 1953, the faculties comprised respectively 1,603 *shari'a* students, 1,655 for *lugha al-arabiyah*, 707 for *usul al-din*. The institutes had 12,598 primary students, 6,559 secondary, and 3,703 in the attached
sections; the free institutes had 2,458. At the end of 1955 there were in Egypt some ... man of character, admired by the Egyptians, had had in the law school an influence on his disciples, who played an im-

In 1953 the number of foreign students was as follows: Sudan, 2,634; Nigeria, Gold Coast, Senegal 141; Abyssinia, Eritrea, Somaliland, Zanzibar, 309; French Sudan, 57; Uganda and South Africa, 37; India and Pakistan, 46; China, 8; Java and Sumatra, 60; Afghanistan, 15; Kuwait, 6; Iraq, Bahrayn, Iran (rivâd al-'Abbâd) 21; Turkey, Albania, Yugo-

Until the Law no. 15 of 1927 was promulgated, al-Azhar was directly responsible to the King. The rectorship was a coveted post with regard to the biographical notice of a third party, that al-Djabarti mentions the name of a rector, the earliest that is known to us, 1. Muḥ. b. 'Abd Allâh al-Khirshî, d. 1101/1690; 2, Muḥ. al-Nasrî, d. 1120; 3, 'Abd al-Bâqî al-Qašînî, whose nomination was the occasion of a battle, and some firing, within the mosque; 4, Muḥ. Shânân, one of the richest men of his time, d. 1133; 5, Ibrâhîm b. Muḥ. al-Fayyûmî, d. 1137; 6, 'Abd Allâh al-Qâhârî, poet and wit, frequented and defended the Sâlihî, d. 1177; 7, Muḥ. sâlim al-Hînâwî al-Khalwâtî, Şûfî and jurist, author of glosses, d. 1181, perhaps poisoned by the amîrs; his tomb became an object of veneration (Brockelmann, II, 323; S II, 445); 8, 'Abd al-Ra'ūf al-Sâdjînî, d. 1182; 9, Ahmad b. 'Abd al-Munîm al-Damanhûrî, d. 1192; 10, 'Abd al-Rahmân al-

The well-organised library of the mosque contains upward of 20,000 manuscripts, and has a printed catalogue. The libraries of some rivâds have interesting manuscripts, but still uncatalogued in 1955. Each establishment has in addition a library for its students. Since 1349/1930 al-Azhar has had its monthly review, the official organ of its teachers, and whose title Nûr al-Islâm was changed to Madjillat al-Azhar at the end of its sixth year. A second monthly review, the organ of the wa'y wa irdâd section, has retained the name of Nûr al-

The Islamic Congress, dating from 1953, has received in all £E 8. Certain countries added a supplementary lodging allowance for their nationals.
portant part in Egyptian politics; he had presided over the Governing Body of al-Azhar, was chosen to supervise the 1896 reforms, and resigned in 1317/1899; 24, Abd al-Rahmân Kûthî al-Nawâwi, his brother, d. the same year: the rapid resignations of his successors show the unrest that the reforms had provoked; 25, Salîm al-Bîshrî, a pious man who had known poverty, the last in date of the muhaddithin (he knew the very authorities for the traditions), fiercely opposed to Muḥ. 3Abu and to the reforms which he instigated, resigned in 1320; 26, Allâ al-Bîblîwî, resigned in 1323; 27, Abd al-Rahmân al-Shirînî, greatly esteemed for his piety and integrity, resigned 1324; 28, Ḥassân al-Nawâwi, for the second time, resigned in 1327/1909 consequent on the 1908 law. 29, Salîm al-Bîshrî, for the second time, d. 1335; 30, Muḥ. Abd i-Fâdj al-Djizâwî, d. 1346/1928; 31, Muṣṭâfâ al-Marâghî, disciple of Muḥ. 4Abu, resigned in 1348/1929; 32, Muḥ. al-Aẖmîd al-Zâwîhî, resigned in 1354/ 1935; 33, Muṣṭâfâ al-Marâghî, second time d. 1364/ 1945; 34, Muṣṭâfâ 4Abu al-Râzîk, a very cultured man, admirer of Muḥ. 4Abu, had taught Arabic at the University of Lyons (France), and later Muslim philosophy at the Egyptian University. He was nominated by King Fârûk although he was not of the body of the chief 4Abu and as such he was the victim of such hostile demonstrations that he died of a heart attack in 1366/1947; 35, Muḥ. Ma’mûn al-Shînhâwî, d. 1369/1950. The brief duration of the following rectorships corresponds to the political undercurrents of Egypt: the struggle against the British in the Canal Zone, the Cairo riots of 26 January 1952, the coup d’etat of 23 July 1952. In several cases, the Government brought pressure to bear on the rectors in order to secure their departure. 36, Abd al-Madîd Sa’mîn, resigned, 4 September 1951; 37, Ibrâhîm Hamrûgh, resigned 10 February 1952; 38, Abd al-Madîd Sa’mîn (second time), resigned 17 September 1952; 39, Muḥ. al-Khîdîr Ḥusayn, resigned at the beginning of January 1954; 40, Abd al-Rahmân Tâdî, docteur ès lettres of the University of Paris, nominated 8 January 1954.

VI. Results of the reform. It is difficult for those who are neither Muslims nor Egyptians to assess these; one requires to know in what spirit the programmes were implemented, and in each case the portion of them which is made effective in the classes. From the outside it can only be assumed that, in spite of the significant improvements referred to above, all is not well. Further signs, indicated by the Egyptians themselves, are revealing. Many teachers of al-Azhar send their sons to Government schools and not to their own establishment. The Government has not accepted the principle of equality between the teachers of the State Universities and those of the higher standard at al-Azhar. Outside their functions as teachers, in their own establishment, as imâms, and as preachers, which are theirs by law, the Azharis have positions in life inferior to those of their colleagues in the State universities. The recent suppression of the sharîṭ tribunals has abolished a traditional outlet for Azharis. The channel of Azhâr study to which one is committed at the age of 6 on entry into a Kûrânic school, and that of normal secular study, are poles apart. Entry as a student into the State Universities is refused to Azharis. If the latter wish to be admitted as teachers of Arabic into the cadre of the Ministry of National Education they have to pass through the Dâr al-‘ulûm or through the Institute of Education. Furthermore, al-Azhar feels that she is criticised by the State Universities, and suspects certain opponents of resenting her autonomy, and of wishing to abolish the primary and secondary institutes, perhaps even of wanting to tamper with the faculties (see Mâjidât al-Azhar, xxvii, no. 4, Rabî’ II 1375/ 1955, entirely devoted to defending herself against such attacks). The question becomes complicated when one sees, among the Egyptians who desire more far-reaching reform, not only atheists but also sincere Muslims, even members of the Muslim Brotherhood. For sixty years the question of al-Azhar has from time to time been a vexed one. Fundamentally it is a question of knowing what exactly al- Azhar’s real mission is with respect to the needs of the Muslim community of the twentieth century, and further whether the intellectual and moral instruction that she provides is adapted to these needs. Al-Azhar has laid great stress on the place that her teachers and former pupils have held, and continue to hold, in the life of Egypt and the Islamic countries. She has asked for recognition of the fact that she has deserved well of scholarship. This scholarship, in fact, presents many aspects. First of all stands that knowledge of the great Muslim values that her students absorb by the very atmosphere of their place of study as much as through the intellectual content of the courses. Al-Azhar has in this way continued to maintain Islamic ideas in traditional circles, both rural and urban. She has upheld those virtues which made up her appeal: a religious and serious attitude to life, hospitality, respect of parents and teachers, and the duty of almsgiving. She recalls the finest aspects of the Kûrâ of and of the hadîth that are traditionally stressed. Some of her teachers, specialists in the Arabic language and in law, have again taken up the traditional subject-matter and restated it in simpler forms, without, however, modifying the basic assumptions and principles, except on a few points (polygamy, etc.). In history, certain modern monographs (for example, on al-Azhar itself) fulfil the same function as the mediaeval works, and use the same methods (compilation of documents, biographies, etc.). Other teachers, who are conversant with an impressive number of ancient linguistic or religious treatises, have been able to produce editions of texts invaluable to scholars. Such scholarship as a whole is adapted to the needs of millions of Muslims whose peaceful and untroubled faith has not been touched by foreign ideas, or even to those people ‘nearer to nature’, as the present rector calls them, among whom, as in Africa, Islam does not cease to make progress. Azhârs agree, however, that there is a decline in the Muslim faith in many universities, and that the West is impervious to the message of Islam. As a counter-measure, they teach their pupils to answer this by short compositions, rather stereotyped, educational or apologetic, which are taught in the mukāf or essay classes of the primary and secondary courses (e.g., personal hygiene, the use of the ritual alms or saḥâb, the evils of wine, the wisdom of polygamy, etc.). Reviews and sermons continually give examples of these apologetics. But more vital problems are not considered in them. Some of the Muslim brotherhood in their exhortatory efforts, while developing this sort of stereotyped apologetics, have seemed more aware of modern difficulties. In 1951 one of them urged al- Azhar to speak of such topics as the dignity of labour, of social questions, of Capitalism, of Marxism, etc. (Sayyid Kûthî, in the review al-Risâla, 18 June 1951). The Mâjidât al-Azhar followed this with
several replies (among others, xxii (1371), 89-95). But the substance of these replies is very brief, and it does not appear that the defendants would have recognized themselves in the picture that has been drawn of them, elementary as it is.—Such a conception of scholarship has given and still gives service, but those Westerners who are in the best position to observe events are struck by its limitations, which Egyptians educated by modern methods also perceive. There is as yet no question at al-Azhar of studies profiting by modern historical methods or broadening themselves under the influence of modern trends of thought. Learning by heart, and storing up pages of texts in the memory, seems to be the essential requirement of students. Some would wish to attribute the cause of this limitation to a withering casuistry in which vital subjects, e.g., divorce, are taken as subjects for abstract logical exercises, wholly oblivious of their human repercussions (see the daily al-Diyumharyya from 9 to 17 January 1954). Others reproach al-Azhar with having always put a brake on any reforms, and of posing as the only defender of Islam, although Islam is a religion based on equality, refusing clericalism, and one in which every intelligent believer has a voice in affairs. Some bodies, such as the State Universities, which have their own courses of Kur'ānic exegesis, of Islamic law, of Arabic, etc., would wish to be their own masters and the only judges of such culpable deviation: among their students or their teachers as is a matter for internal discipline (case of Muḥ. Ahmad Khalaf Allāh, 1947-51, see MIDEO, i, 39-72). Recently two censures made by al-Azhar have been quashed by the civil tribunals (judgment of 27 May 1950 permitting the reprinting of the proscribed book Min hund nabeeda of Muḥ. Khalīl Muḥ.; the case of Shaykh Bahktī in 1955 (MIDEO, iii, 46, 8). The Grand National Assembly at Ankara has likewise discussed the question of al-Azhar with regard to according or refusing student status to Turkish subjects who are students there: the final vote was negative (13-16 February 1954).

But, in their turn, Azharis reproach their adversaries with forgetting the needs of the Muslim community. Few Azharis would willingly consent to a reduction of their establishment to the status of a Faculty of Higher Religious Studies as was the case with the Zaytuna at Tunis a short while ago. On the contrary, although the prestige as-
Azhar enjoyed great renown in his time. Al-Suyūtī is reckoned as one of his pupils. 

(C. Brockelmann *)

AL-ĀZHARī, Abū MANSūR MUḤAMMAD b. AHMAD b. AL-ĀZHARī, Arab lexicographer born in 282/895 at Harāt, died in the same town in 370/980. Al-Āzhari was a pupil of his compatriot, the lexicographer Muḥammad b. Ḫudayr al-Mundhīrī (329/940), who was himself a disciple of Thālab (q.v.) and al-Mubarrad (q.v.)

Azhar enjoyed great renown in his time. Al-Suyūtī, who was himself a disciple of Thālab (q.v.), includes Al-Āzhari in the list of his masters, he must have had a thorough knowledge of Shāfiʿī law. In 312/924, he was returning from Mecca to Kūfa with the pilgrim caravan, when they were attacked by the Ḷārāmītā (q.v.) at al-Habīr and partly massacred or taken prisoner. Al-Āzhari spent two years as a prisoner of the Bedouins of Bahrayn who were converted to Carmathianism. In a passage cited by Yakut and Ibn Khallikan, he describes how he took advantage of his sojourn among these nomads to study and teach those who were converted to Carmathianism. In a passage cited by Yakut and Ibn Khallikan, he describes how he took advantage of his sojourn among these nomads to study their language, which according to him, was very pure. The rest of his life remains a mystery for us and seems to have been spent in his birthplace in study and retirement.

Al-Āzhari’s work is known to us by a list containing fourteen titles provided by Yakūt and Ibn Khallikān (reproduced in part, by al-Suyūtī, Bughyat al-Wuṭūrī, 8); with the exception of his commentaries on the Muṣallākāt and the Divān of Abū Tammām, these are lexicographical studies. Among these works, a dictionary has come down to us (ten volumes in Ibn Khallikān’s time) entitled Tahdhib al-Lugha. The work has not been edited; there are MSS. of it in London, Istanbul and in India; see list in Brockelmann. This is a compilation made by means of the materials, which Al-Āzhari received from his master al-Munqidhīr; Yākūt, Irshād, loc. cit., even speaks of a riwāya of a dictionary of al-Munqidhīr. The essential feature of the work is that it continues the tradition initiated by Khall in his Kitāb al-ʿAjwān: the roots are not arranged in the usual alphabetical order, but in accordance with a phonetic classification, commencing with the “gutturals” and ending with the labials. The Tahdhib was copiously used by Ibn Manṣūr in his Liṣān al-ʿArab.

(ʿABDULLAH MORTADHLA)

ʿĀZĪM ALLĀH KHĀN, said to have been the brain of the political upheaval (known as the Mutiny) of 1857 in India, came of a poor Pathān family which had settled in Cawnpore long before the famine of 1857-8 (George Dunbar, A History of India from the Earliest Times to the Present Day, London 1943, ii, 485). An orphan, saved from starvation by a Christian missionary, he began life as a khdīm adīr in an Anglo-Indian family of Cawnpore (Mowbray Thompson, The Story of Cawnpore, London 1890, 54; G. O. Trevelyan, Cawnpore, London 1907, 58), who sent him to school, where he learnt English and French, and acquired high proficiency in both. Soon after completing his education he joined the same school as a teacher. On the request of Nānā ʿṢāhib, adopted son of Bāḍūr Rāo II, the last of the Pāshwās, he entered his service as a private tutor and English secretary. He soon found favour with Nānā who appointed him as his political adviser. Following the death of Bāḍūr Rāo II in 1851, Nānā ʿṢāhib succeeded to his title, pension and estate but the Governor-General of India, Lord Dalhousie, discontinued his pension and refused to recognise him. Thereupon ʿĀzīm Allāh Khān prepared a memorial for his master which was submitted to the British authorities in 1852. It was, however, rejected by the Court of Directors of the East India Company. In 1853 ʿĀzīm Allāh Khān left for England to plead Nānā’s case personally. Here he failed in his mission but through the charm of his personality he won the heart of many ladies who continued to write him scores of letters even after his return to India in 1855. These letters were later published in two vols., The Indian Prince and the English Press and Love Letters, which were soon proscribed (Trevelyan, 59).

On his way back from England, ʿĀzīm Allāh Khān visited Paris, Constantinople, Sebastopol and the theatre of war in the Crimea (Russell, My Diary in India, London 1860, 169). A frustrated and disillusioned man, having spent £50,000 on his fruitless mission to England and anxious to continue in the favour of his master, ʿĀzīm Allāh Khān suggested to Nānā the overthrow of the British power in India through a military coup d’etat. With this aim in view he visited, early in 1857, along with Nānā, military stations in northern India but met with little success. The Indian princes falsely promised help to Nānā’s emissaries sent out at the instance of ʿĀzīm Allāh Khān, who himself took part in many of the lost actions which his master subsequently fought against the British. On the fall of Bithūr, Nānā’s stronghold near Cawnpore in Dhu ʿl-Ḥididja 1273/July 1857, he disappeared from the scene, never to be heard of again. He is said to have died in Rabī’ 1-II 1276/October, 1859 at Bhūṭwāl (Nēpāl) where he had fled along with the other leaders of the Revolt. His end, however, like his origin, still remains shrouded in mystery.

(ʿABDULLAH MORTADHLA)
The reign of al-'Aziz was in fact a period of luxury. His fondness for precious stones, cut glass from observing the dietary laws, if there is danger to health or life. Ābd al-Wahhāb al-Sha'rānī, in his Kitāb al-Mizan al-Kubrā, consistently explains the divergent opinions of the several schools of religious law as expressing these two complementary tendencies. Cf. Goldziher, in ZDMG, 1884, 676 f.; idem, Die Zählerin, Leipzig 1884, 68 f.

In magic, an adjuration, or the application of a formula of which magical effects are expected. Cf. Goldziher, in Orientalische Studien Theodor Nöldeke ... gewidmet, Giessen 1906, i, 307. (1. Goldziher*)

AZIMECH [see NUDJUM].

AZIMA [see NURDÜM].

AL-'AZIZI [see AYYUBIDS].

AL-'AZIZ BILLĀH NIZĀR ĀBD MANSŪR, fifth Fātimid Caliph and the first whose reign began in Egypt. He was born on 14 Muharram 344/10 May 955 and had been designated as his successor by his father al-Mu'izz after the death of his brother Ābd Allāh in 364/974. He succeeded his father on 11 Rabī' II 365/18 December 975 (or 14 Rabī' II 21 December) after the latter had had him recognised as his successor by his family and dignitaries on the preceding day. The official proclamation, however, only took place on 10 Dhū 'l-Hijjah 365/9 August 976.

The sources describe him as tall, with red hair and blue eyes, generous, brave, fond of horses and hunting and very humane and tolerant in disposition. He was an excellent administrator, subjected the State finances to a rigorous supervision, introduced the system of fixed salaries for officials, whom he forbade to accept bribes and presents, and issued an order that no payments should be made except on the production of written documents. He was the first to assign fixed rates of pay to his troops and police personnel. He, moreover, the first of the Fātimid Caliphs to employ Turks in the army, a practice which was later to be fraught with serious consequences.

He was well supported by his minister Ya'qūb b. Killis, the director of taxation, to whom in 968/979 he gave the title of wazir, previously unknown to the Fātimids, and who remained wazir until his death in 980/991, with two short periods in disgrace, one because he was accused of having had the Turk Alptakin (Aptegin; see below) poisoned in 968/979, and the other in 373/984 when he was imprisoned and had his possessions confiscated, perhaps because of the famine which broke out in that year, but two months later he recovered his liberty, possessions and offices. It was to Ibn Killis that al-'Aziz's finances owed their prosperity. He also played an important literary rôle, according pensions to the men of letters, lawyers and poets whom he gathered round himself, and composed a book of Isma'ili Law based on pronouncements by al-Mu'izz and al-'Aziz.

The wazirs who succeeded him did not remain as long in office. These were all 'Alī al-Addās, Ahmad b. Faḍl b. al-Farāt in 381/992, al-Husayn b. al-Hasan al-Bāzīyārābād, Muḥammad b. 'Ammār, al-Faḍl b. Sāliḥ, who had been a collaborator of Ibn Killis, and lastly in 385/995–996, the Christian Šāh b. Nešṭūrs, formerly Secretary for Finance. Another important officer of al-'Aziz was the Jew Manasšah (Manasseh), Secretary for Syria. The employment of a Christian and a Jew in high offices was in keeping with the spirit of toleration of the Fātimids in matters of religion and race. Al-'Aziz was still further inclined to toleration, being influenced by his Christian wife, the mother of his son and successor al-Ḥākim. This Princess's two brothers were indebted to his influence and to the Caliph's recommendation for being appointed, the one, Orestes, Patriarch of Jerusalem, and the other, Arsenius, Metropolitan of Miṣr and Cairo in 375/986. The Christians, throughout his reign, enjoyed great freedom. The Coptic Patriarch Ephraim, in spite of strong Muslim opposition, obtained permission to rebuild the Church of Abu 'l-Sayfayn (St. Mercurius) near al-Fuṣṭāt, The Caliph looked favourably on the controversies between the Bishop of Aḥmūnayn, Severus b. al-Muqaṣṣa and the kadi Ibn al-Nu'mān, president of the Court of Mašūlim. He refused to take action against a Muslim who had become a Christian convert. This policy was bound to cause considerable discontent among the Muslims, and tracts were circulated against Manasṣah and Ibn Nešṭūrs. To appease the Muslims, the Caliph had the Jew and the Christian imprisoned, but as it was difficult to do without their services, they soon re-established their position. In 386/996, this dis- content provoked a popular movement against the Christians, following the burning of the fleet, of which some merchants from Amalfi were accused; the latter were massacred and several churches were looted.

Though al-'Aziz was tolerant towards Christians and Jews, he was less so towards the Sunni Muslims. He followed a strict Isma'ili policy (defamatory inscriptions for the companions of the Prophet; suppression of the salāt al-ta'rīwī of Ramaḍān in 372/982; the punishment in 381/993 of a man who had in his possession the Muwatta' of Mālik). In 366/976, he inaugurated in Cairo the mourning ceremonies on the feast of the ʿAshūrā'. On the other hand, however, the holding of solemn processions on the Fridays in Ramaḍān and the distributions of sweetmeats at the feast ending the fast (jīfā) are due merely to his love of display.

The reign of al-'Aziz was in fact a period of luxury. His fondness for precious stones, cut glass
ware, rich materials of *dabīsh* and of *siqlān*, rare animals, truffles and sea fish etc. (once cherries who received a salary of 100,000 dinars, also lived in great style. Al-ʿAzīz also spent a great deal on buildings like the ʿArṣ al-Dhāhab, the ʿArṣ al-Bahr, parts of the group of buildings known under the name of Great Palace, the Mosque of al-Karāfa and that called the Mosque of al-Ḥakim, which however was started by al-ʿAzīz.

The foreign policy of al-ʿAzīz was really only active in Syria. In North Africa, he confirmed Yūsuf Bulukkīn in his office. The latter's son, al-Manṣūr (373-386/984-996), however, likewise confirmed, by the Caliph, was by no means docile; he did not hesitate to go to war against the Kutāmā, in spite of the Caliph's disapproval, and progressively detached himself from Egypt. Similarly in Sicily, the Caliph confined himself to bestowing the investiture, after the event, on amirs of the Kalbite family. He entertained diplomatic relations with the Buwayhīd ʿAḍūd al-Dawlā who, according to Ḥīlāl al-Ṣāḥī (in Siḥ Ibn al-Dḥawī) is said to have taken the initiative in the matter. The letter of ʿAḍūd which has been preserved, seems to indicate that he recognised the Fāṭimid's sovereignty, but this seems doubtful, for, according to Ibn Ṣāfīr, ʿAḍūd al-Dawlā disputed the official Fāṭimid genealogy.

Al-ʿAzīz's principal aim was to ensure his possession of Southern and Central Syria, and latterly that of the Amirate of Aleppo, so as to realise his dreams of expansion at the cost of Byzantium and the Ṭabbās. In Southern Palestine, the Bedouin chief Mufarrīdī b. Daḥfal al-Ṭaʿūsī charged with the government of Damascus. He was joined by Ibn Killīs, who distrusted Bakdīr and Mufarrīdī, and who made several attempts to rid himself of Bakdīr, led finally to his being expelled from Damascus by a Fāṭimid army in 378/988. He took refuge at Raḥṣa. After the death of Ibn Killīs in 380, Mufarrīdī obtained the Caliph's pardon and Bakdīr once again won al-ʿAzīz over to the idea of a conquest of Aleppo. The Caliph promised him the support of the garrison of Tripoli. However, at the instigation of the secretary Ibn Nestūrīs, whom Bakdīr had made ill-disposed toward himself, the Fāṭimid general abandoned Bakdīr at the decisive moment in the fighting against Saʿd al-Dawlā, so that he was defeated and handed over to the Ḥāmānīd in 381/991, being then put to death. After his victory, Saʿd al-Dawlā threatened him from putting his plan into execution.

The Caliph was once again urged to undertake the conquest of Aleppo by the former secretary of Bakdīr, ʿAlī b. ʿAlī b. ʿAlī b. ʿAlī b. Ḥusayn al-Maghribī, who had taken refuge in Egypt, as well as several amirs who had left the Ḥāmānīd Abu ʿl-ʿAṣāfīl. From 381/992 until his death, al-ʿAzīz methodically pursued his attempts to take Aleppo, but without any success, owing to the support given by the Byzantines to their dependant, the amir of Aleppo. The first attempt, led by the Turkish general Mangūṭakīn, supported by Ibn al-Maghribī, was marked by an unsuccessful siege of Aleppo, though there were successful engagements fought to the north of Aleppo against the Byzantine governor of Antioch, Burżes (al-Burğī), whom the Emperor Basil II, informed by Ḥāmānīd messengers when in Bulgaria, had instructed to intervene. At the end of 382 (end of 992 or beginning of 993), Mangūṭakīn, without
authorisation from the Caliph and at the instigation of al-Maghribi, who was dismissed for that reason, raised the siege and returned to Damascus. After the consolidation of Fāṭimid territorial gains south of the amirate of Aleppo, a second attempt took place in 386/994. There was a first period of siege lasting two months, then Mangūtkān was obliged to march against Burzuz, and routed him at the ford of the Orontes in September 994, after which he resumed the siege, which lasted until May 995 and was only lifted on the arrival after forced marches of the Emperor Basīl II in person, whom the Hamdanid messengers had again gone to summon from the Bulgarian front. The Emperor saved Aleppo, but did not succeed in adequately ensuring the defence of the advance positions of the amirate of Aleppo against the Fāṭimids, for though he placed a garrison at Shayzar, he was unable to take Tripoli. Al-ʿAzīz resolved to intensify the struggle and the close of the year 385/995 and the beginning of 386/996 were marked by great military and naval preparations in Egypt.

The navy built by Ibn Nəstūr having been accidentally set on fire (see above), a new navy was immediately called into existence and sent against Anṭartūs, a Byzantine stronghold, to which Mangūtkān, after having executed in the spring of the year 996 several incursions in the direction of Antioch and Aleppo, was laying siege. The intervention of the Byzantine troops from Antioch caused the operation to fail, but the southern region of the amirate of Aleppo remained under Fāṭimid influence. The Caliph decided to take the field in person, and set out to place himself at the head of his armies, accompanied by the coffins of his ancestors, like al-Murād on his departure from Africa. However, he fell ill and died at Bilbays on 28 Ramadan 386/996.

Al-ʿAzīz was certainly the wisest and the best of all the Fāṭimid Caliphs of Egypt. Though he did not realise all his aims, it was, nevertheless, during his reign that the domination of the Fāṭimid Caliphate reached, at least nominally, its greatest extent, for the Khawba was read in his name from the Atlantic Ocean to the Red Sea, in the Yemen, in Mecca, and on occasion, even at Mawṣūl under the ʿUkaylid ruler.

AZIZI — AL-AZRAKI

no. 772) shows him with a white beard. Among the poets his contemporaries who used the nom de plume 'Azizi he was the most famous.

All his biographers found it noteworthy that, in contrast to the works of most of the other poets of his time, his poetry was inspired not by boys, but by women. This reputation seems to have derived from his most famous poem, a *şahrengiz* on the courtesans of Istanbul, entitled *Rengin-nâme*, which is remarkable for its lively style and bold use of idiosyncratic expressions and proverbs; each of the 49 beauties is described, in a set of three couplets, with images befitting her name or nickname. Other poems by him are found scattered in *tekhibres* and anthologies.

Bibliography: Gibb, Ottoman poetry, iii, 179-86 (1904), with English translation of 12 stanzas of the *şahrengiz*; Sadeddin Nûzet Ergun, *Türk şairleri*, i, 632-37 (about 1938), containing passages on 'Azizi from various tekhibres, and several of his scattered poems; Istanbul Üniversitesi Küütphanesii, Turkish MSS. no. 6492, is a complete copy (dated 1304/1886-87) of the *Rengin-nâme*; article in *IA*. (A. Tiitter)

'AZIZI [see KARAÇELE-DE-ZADE].

'AZL, coitus interruptus. According to the hadîth this practice was not unknown to the ancient Arabs, and the Messenger of God did not declare it to be *harâm*. The doctors of the Law agree that the master can practise it with his slave concubine unconditionally, and he who has a wife; in the latter case, however, there is controversy on the question whether the wife's permission is necessary. According to al-Ghazâlî, although 'azl is not in conformity with the general spirit of marriage, it is not forbidden, and is at the most only mildly reprehensible: it may also be practised with a view to ensuring, for example, that the consequences of a confinement do not imperil the husband's "continued enjoyment of marital rights"; with greater justification, and although it is preferable to leave the matter trustingly in God's hands, "the fear of incurring great financial hardship on account of the size of one's family" renders this contraceptive practice admissible.

'AZL, dismissal [see supplement].

'AZMÎ-ZADE MUSTAFA, Ottoman poet and stylist, as a poet known under the name of Hâletî. Born in the so-called *laylat al-barâd* in Istanbul on 15 Shabân 977/23 Jan. 1570. He was the son of 'Azmî-Efendi, who was the well-known and well-respected tutor of Murâd IV as well as a poet, writer, and translator (died 990/1582). As a pupil of Sa’d al-Dîn (q.v.) who became famous as a historian, he studied law, and to him he owed his special love for historical investigation. He became mûderris at the madrasa of Hâdîjî-Khatîn in Istanbul, but in 1011/1602-3 he was transferred to Damascus as a judge. Two years later he went to Cairo in the same capacity. When Dâmûd Ibrâhîm-Paşâ (cf. Hammer-Purgstall, iv, 156 ff.) the governor of Egypt, was killed in a military rising in Cairo, 'Azmî-zade (who had occasionally represented him) was dismissed because of his lack of prudence, and soon afterwards (1015/1606-7) he was moved as Mulla to Brusa. As a reward for his good services in the fight against the 'Alîd rebel Kaleder-oghlu, he became Mullah of Adrianople in 1020/1611-2. His behaviour when a judge was punished for wrong-doing led to his transfer to Damascus where, however, he remained only until 1023/1614, to go from there to Istanbul as a judge. This important office he held for four years. Subsequently he was sent to the provinces once again, this time to Cairo. In Rabî’ II 1030/ Feb.-March 1621, he next became a military judge in Anatolia and in Rabî’ I 1037/Nov. 1627, in Rumelia, where he had again been without office (ma’tûl) since Dhul ‘Il-Kâda 1032/Sept. 1623. This last post, too, he held only for a short time. He was dismissed in Ramadân 1038/April-May 1629, and moved to the school attached to the Sulaymâniyya mosque (dâr al-hadîth) in Istanbul. He died soon afterwards (26 Shabân 1040/30 March 1631), and is buried in the courtyard of his school, not far from his house in Sofular Cârığusu.

As the poet Hâletî, 'Azmî-zade achieved fame because of his *diwân*, his *Sâkî-nâmé*, and his quatrains (*rubâ‘i*), and he was known as the Turkish 'Umar Khayyâm by his successors. He was very widely read and left a library of manuscripts of some 4000 volumes, all of which are annotated in his own hand. The library was dispersed. None of his works has yet been printed, and his poetry deserves a fuller critical appreciation. 'Azmî-zade's *Sulaymân-nâmé* would appear to have nothing to do with the sultan Sulaymân the Magnificent; the contents stands in need of an examination (there is a manuscript in the Ef‘ad-Efendi library in Istanbul (No. 2284, cf. GOW, 76)). The best example of his skill in this genre is his *Munshidât*, of which there is a manuscript in the Hamidiyya library in Istanbul (No. 599). There is another one in London, in the British Museum (Or. 1169, cf. Rieu, 96b.) with a reference to a further manuscript in Vienna (Nationalbibliothek) containing only 13 letters (cf. G. Flügel, catalogue i, 265), Cf. also Hammer Purgstall, iv (1828), vii.

AL-AZRAKI ABU ‘L-WALID MUHAMMAD b. ‘ABD ALLAH b. AHMAD, historian of Mecca and of its sanctuary. The ancestor of the family was a Byzantine (Rûmi) slave of Kalada or al-Hârij b. Kalada in al-Tâ‘îf, called al-Azrâk on account of his blue eyes. According to Ibn ‘Abd al-Barr (*Isti‘âb*, s.v. Sunayya), he married Sunayya, the mother of Ziyâd b. Abâhi. During the siege of al-Tâ‘îf in 8/630 al-Azrâk went over to Muhammad, was freed, and settled at Mecca. His descendants rose to power and influence and married into the Umayyad aristocracy. In order to obliterate their humble origin they pretended to belong to the clan of Ikâbb of the Banû Taghlib (Ibn Sa’d, iii, 176) but later, when the antagonisms between Kays and Yaman
became prominent, they were persuaded by the Khuzaca to join the Yamanite camp by maintaining that al-Azraq was the son of 'Abdirr b. al-Harith b. Abi Shamir and hence a member of the royal family that al-Azraq was the son of

A great-great-grandson of al-Azraq was 'Abd b. al-Walid b. 'Abdirr b. Abi Shamir and hence a member of the royal family that al-Azraq was the son of 'Abdirr b. al-Harith b. Abi Shamir and hence a member of the royal family.

al-Azraq's book was translated with many additions, especially about the renovation of the Ka'ba in 281-474/4, and transmitted the book to his grand-nephew 'Abd al-Mu'min b. al-Khuza'i and others to prove that visits to the shrines of saints and divines are unlawful; al-Durr al-Manafi'd af'tu imra'at al-Majahid. He is also the author of a short biographical work on Urdu poets entitled Tadhkira-i Mukhabbar dar Hāl-i Raghbaguyān-i Hind (Browne, Šubpt, 304). Some of his poems were reproduced by (Sīr) Sayyid 'Almād Khān in the Åkhar al-Sānādī, Delhi 1827, 70-11.

BA (cf. B0), genealogical term used in S. Arabia, especially among the sayyids and mashā'ik of Hadramawt, to form individual and (secondarily) collective proper names, e.g., Bā 'Abbād, Bā 'Alawi, Bā Ḍafīl, Bā Ṣakāf, Bā Ḥasan, Bā Ḥassān, Bā Ḥurrūz, Bā Wāzīr (see special articles and the lists of Nallino (in Gabrieli, Nome proprio arabo-musulmano, Rome 1915;忽然, secondarily collective proper names, e.g., Bā, Bā Alawi, Bā Ḍafīl, Bā Ṣakāf, Bā Ḥasan, see below).

The genuine Bā thus would be identical with indeclinable Abā “father” forming individual (pseudo) kunyas, with the actual function of a nisba in -i, or of ḍāḥū in western Yamanite tradition. This is the view of Ibn al-Mujādīwar, al-Shilli (Masgra'a, i, 281), al-Sakāf (Ta'rikh al-Shu'ārā' al-Hadramiyin, i, 53 n.) and Flügel (ZDMG, ix, 227). In order to indicate the tribe or family Abl or ṣawālūd is prefixed to Bā, e.g., Abl Bā 'Alawi, Ablūd Bā Ḫūḍayr; this may have caused the equation Bā = Banū found in al-Muḥḥibb (Khuldsat, i, 74) and approved of by Wüstenfeld (Geschichtsschreiber, 256; Čuflen, 4 n. 1).

From this primary Bā-formation must be distinguished another with Bā (sometimes Bil) < bin Ab-, e.g., Bā-Ṣakāf (not identical with the Bā-Ṣakāf cited above) = Ibn al-Ṣakāf (al-Sakāf, op. cit. ii, 54 n. 2), Bā-Ḥadsī (surname of members of the Bā-Ṣakāf) = Ibn al-Ḥadsī. The use of Bin, along with the nisba in -i, as a nomen unitatis of Bā-names, attested by van den Berg (loc. cit.), as also that of Ibn Ḥassān for Bā/Abū Ḥassān (cf. MO, xxv, 131 and BSOAS, xii, 293-299), may reflect different local habits or even some uncertainty on the part of native authorities.

BĀ 'ABBĀD, a family of Ḥadrami mashā'ik and scholars, associated with the shrine of the prophet Hud. Among its members were (1) ‘Abbād Allāh b. Muḥammad b. ‘Abbād al-Ḳalāmān Bā ‘Abbād al-Hadrami (d. 687/1288) and (2) Muḥammad b. ‘Umar b. Muḥammad b. ‘Abbād al-Ḳalāmān (d. 721/1321) both of them buried in Shāhān (al-Shāriji, Ta'rika 70, 136). For two mashā'ikh-works on this family, see Serjeant, The Sayyids of Hadramawt, 6, 11 f. (O. Løgren)

BĀ 'ALAWĪ (more precisely: Al Bā 'Alawi, cf. art. Bā; according to al-Shilli [Masgra'a, i, 31] alawī is “a well-known bird”; nisba: al- 'Alawi [also al-Bā'Alawi], not to be confounded with the usual nisba belonging to 'Allī, a large and influential clan of S. Arabian sayyids and ʿūṣūs, for the most part living in Ḥadramawt, in or near the town of Tarim [q.v.], and buried in the Zanbal cemetery there. The noble descent of the Bā 'Alawi sayyids is said to have been checked in the sixth century by the traditionist 'Allī b. Muḥammad b. Abīd b. Duḍū (d. 620/1223); Ta'rika[=]thabār 'Adān, i, 157; [Masgra'a, ii, 233) by means of trustworthy witnesses. Special works on S. Arabian sayyids are: al-Qaṣṣār al-Shaffā'ī by Abd al-Ḥajj Ṣakāf (1353/55). Here only the most prominent members of the main line can be listed; for the branches of al-Muḥḥibb's Khuldsat al-Ṭabarān, only the 11th/12th century, but gives useful genealogical tables of different branches of the Bā 'Alawi sayyids (to be used with caution as to details). Much material is to be found in the Ta'rika[=]al-Shīrāzī al-Hadramiyin by 'Abbād Allāh b. Muḥammad b. Ḥāmid al-Sakāf (1353/55). Here only the most prominent members of the main line can be listed; for the branches of}

3. Abū Ali b. Muhammad (no. 4), d. 669/1270, and his son Abū Allāh b. Alawi (672/1272-731/1330), both of them renowned Sufis, introduce the line-bal al-Alawi, strictly speaking. For details on their life see the full biographies in MAṣḥaṣ, i, 211, esp. 184 ff.

4. Muhammad b. "Ali b. Muhammad (no. 3), d. 705/1305 in Tarim, d. there 705/1305. Having performed the pilgrimage he settled in a place near the tomb of Ťūrī called Yabhar, hence his surname Mawla al-Ŷunus al-Ḏātī. His son is Abī al-Raḥmān al-Sakkāf (730-819), ancestor of the important branches Sakkāf and Aydarus (see these arts.). MAṣḥaṣ, i, 199 ff. and MAṣḥaṣ, ii, 158-159; MAṣḥaṣ, ii, 127-135; Serjeant, S II, 535 (with two more titles).

called Ibn Shihab (1262-1341/1846-1923), see Sarkis 140 f. (with titles of nine works, printed in India 1305-1331).

e) Muḥammad b. 'Alī b. 'All b. Yaḥyā (1279/862-1350/1931) wrote al-ʿĀlab al-djamīʿ (pt. 1342); Brock., S II, 822.

**BĀB** = Gate. This question is best treated under two headings, (i) in mosques, (ii) in fortifications.

(i) **IN MOSQUES, MAUSOLEUMS, ETC.**

Down to the end of the 3rd/9th century, no mosque had a monumental entrance. All mosques, large or small, were entered by simple rectangular doorways in the enclosure wall, e.g. the Mosque at ʿAṣ-Ṣaḥrah al-Sarkhi (110/729), the Great Mosque at Ḥarrān, entrance, c. A.D. 744-50; the Mosque of Cordova, 710/787; the Mosque of ʿAmr (ibid., Plate 358). The entrance which dates from 221/836 and is 8.86 x 18.83 m. with its flanks decorated by projection and 15.50 in width, against 3 m. x 8, is the Entrance Bay of the Masjid-eʿAtiq at Mahdiyya (Plate 541 A), 750/1349, the Great Mosque at Varamin (ibid., Plate 406), reproduced here, Plate XXVIII b). During the 14th century, portals usually take the form of a high arched bay, like a small ṭahrīm, covered by a semi-dome on stalactite pendentives (quite different, however, from the Egyptian variety), e.g. the Khan-kākh at Naṭanj (ibid., Plate 369), 704/1304-5, the Shrine of Shāykh Bāyazīd at Bīšām (ibid., Plate 416, reproduced here, Plate XXVIII b), 713/1313, the Great Mosque at Varāmīn (ibid., Plate 406), 723/1323-5, the Mausoleum of Bābā Kāsim at Isfahān (ibid., Plate 417), 741/1340, the Great Mosque at Kirmān (ibid., Plate 541 A), 750/1349, and the Madżīdī Pā-Manār, 794/1391, also at Kirmān (ibid., Plate 451 B). At the end of the 15th century we have the remarkable portal at Balkh belonging to the Shrine of ʿAbū Naṣr Pārā (ibid., Plates 422 and 424), which projects boldly from the façade. In the central part is a high arched bay, with the entrance at the back as usual, but the flanks are bevelled off at 45°, and are in two storeys, each with a pointed arched recess, against 3 m. x 8 for Mahdiyya. This type was brought to Egypt by the Fatimids, where it appears in the Mosque of al-Iḥākim in 933/1043, but on a more imposing scale (6.16 m. x 15.50 m. in width). The earliest portal of this type is the Masjīd al-ʿAkmar, 519/1125 on a much reduced scale, and in the Mosque of Baybars, 665/1266-9 on a very large scale (8.86 x 18.83 m.) with its flanks decorated by three arched panels, against 2 m. x 4 m. for Mahdiyya. It also appears in the Mosque of al-Aṭar, 519/1125 on a much reduced scale, and in the Mosque of Baybars, 665/1266-9 on a very large scale.

(ii) **IN FORTIFICATIONS**

The earliest gateways of Muslim fortified enclosures were usually "straight-through" entrances defended by a machicolli and a pair of half-round flanking towers, e.g. the single gateway of the Sāmarrā, where a deep entrance bay is covered by a semi-dome on a pair of squinches. Given this scheme it is obvious that, on its importation at a later date into Syria, the squinches would be replaced by the device there in use for supporting domes. That this has actually happened may be realised on comparing our earliest example, the entrance bay of the Madrasa of Shābdābkht (Plate XXVII a) with the pendentives of the dome in front of the mihrāb of the nearly contemporary Masjīd al-ʿAṣrār at Aleppo, 608/1211-12. In both cases we have the typically Syrian treatment, a series of horizontal courses, decorated with niches, set straight across the corner and advancing one over the other.

In Persia the earliest portals such as that of the Mausoleum of Chīl Duḥṣṭārān at Dāmghān (Sarre, _Dennämder_, Abb. 136), 856/1454, the Gunbad-i Surkh at Marāḡā (Pope, _Survey_, Plate 34 A, and Godard in _Atgār-e ʿIrān_, I, fig. 89), 542/1448, and the Mausoleum of Muʿīnma Khāṭūm (ibid., Plate 345 and Sarre, op. cit. Taf. 3, reproduced here, Plate XXVIII b) at Nakhdīvān, 582/1186, consist of a rectangular doorway with an arched tympanum above, set in a shallow rectangular recess. The next step, apparently, was to replace the arched tympanum by a shallow recess filled with stalactites, e.g. a tower-tomb at Khīov (Pope, _op. cit.,_ Plate 343) and another at Salmās (ibid., Plate 344, reproduced here, Plate XXVIII e). During the 14th century, portals usually take the form of a high arched bay, like a small ṭahrīm, covered by a semi-dome on stalactite pendentives (quite different, however, from the Egyptian variety), e.g. the Khan-kākh at Naṭanj (ibid., Plate 369), 704/1304-5, the Shrine of Shāykh Bāyazīd at Bīšām (ibid., Plate 416, reproduced here, Plate XXVIII b), 713/1313, the Great Mosque at Varāmīn (ibid., Plate 406), 723/1323-5, the Mausoleum of Bābā Kāsim at Isfahān (ibid., Plate 417), 741/1340, the Great Mosque at Kirmān (ibid., Plate 541 A), 750/1349, and the Madžīdī Pā-Manār, 794/1391, also at Kirmān (ibid., Plate 451 B). At the end of the 15th century we have the remarkable portal at Balkh belonging to the Shrine of ʿAbū Naṣr Pārā (ibid., Plates 422 and 424), which projects boldly from the façade. In the central part is a high arched bay, with the entrance at the back as usual, but the flanks are bevelled off at 45°, and are in two storeys, each with a pointed arched recess, against 3 m. x 8 for Mahdiyya. This portal may well be the prototype of some of the monumental Indian examples such as the famous Buland Darwāzā at Fathpur Sikrī, 1020/1612, and the main entrance of the Great Mosque at Delhi, A.D. 1644-58.

At Constantinople mosque entrances are usually in the form of a slight salient, in which is set the entrance bay, covered by a very high stalactite hood composed of very small niches, e.g. the Mosque of Sultan Bāyazīd, 906-11/1500-1505, the Mosque of Sultan Selim (Plate XXIX a), 929/1522, the Mosque of Shāhzāde, 955/1548, etc.

In North Africa the entrances of mosques are usually emphasised, not by a vaulted salient (as at Mahdiyya), but by an elaborat eawning resting on brackets and covered by a sloping roof of tiles, e.g. at Fez (see H. Terrasse, _La Mosquée des Andalous_, pl. XV-XVII).
Lesser (Plate XXIX a) and the four gateways of the Greater Enclosure of Kasr al-Hayr al-Sharqī, built by the Caliph Hishām in 110/729.

But as early as the building of Baghdad by al-Manṣūr in 145-7/762-5 a new type appears—the bent entrance—which was employed for the four gateways of the outer wall. This is clear from the description of al-Khaṭṭāb, who says: "When one entered by the Khurāsān Gate one first turned to the left in an oblong passage (āshārī dādāyī) with a vault of brick, 20 cubits wide and 30 cubits long, the entrance of which was in the width and the exit in the length, and passed out into a ṭabaḥa . . . at the far end of which was the second gateway which was that of the city". Only one turn is mentioned, and as one then passed into a courtyard at the far end of which was the main gateway, it follows that the first direction must have been at right angles to the direction of exit, so it is obvious that the entrance must have been in the flank of the gateway tower.

It is frequently stated that bent entrances occur in Byzantine fortifications in N. Africa. It is not going too far to say that not a single example of such an entrance is to be found in any work of Justinian's reign, or before it, either in North Africa, Rome, Constantinople itself, or anywhere else in the Byzantine Empire (see my art. in the Proc. Brit. Academy, xxxviii, 101-5). The first bent entrance in Byzantine architecture is the south gate of the inner Citadel at Ancyrā built, according to an inscription, by Michael III in A.D. 859.

It is probable that the device was brought by the 'Abbasids (who came from the north-east) from the Oxus region, where pre-Muslim fortified enclosures have recently been discovered by the expedition led by Tolstov. The oldest of them, Djanbas Kālā, is about 50 km. from the river, in a region no longer irrigated. It consists of a fortified enclosure of mud brick, measuring 200 × 170 m. with walls still standing 10 m. high, provided with a bent entrance (see Field and Tolstov, in Arts Islamica, vi, 150).

The Arabic term for a bent entrance is bāẖāra, as is perfectly clear from the passage in which Makrīzī describes the Bāb Zuwayla of Cairo: "... he (Badr al-Djamālī) did not make a bāẖāra, as is the custom for the gates of fortresses. This disposition consists in arranging a bend ('āfīf) in the passageway to prevent troops taking it by assault during a siege, and to render impossible the entry en masse of cavalry" (Bāẖāra, ii, 380, l. 35, 381, l. 5).

Normally, therefore, the bāẖāra was an integral part of the gateway (as in all the examples of a bent entrance cited below), but it could happen that alterations were made subsequently to an old "straight through" gateway to convert it into a bent entrance, e.g. the Bāb al-Shārī at Damascus. This was a triple gateway of the usual Roman type, but von Kremer (c. 1850) found that the central and southern openings had been walled up and an addition (long since removed) built in front of the northern one, so as to force people to make a right-angled turn to pass through (Topographie von Damascus, 1, fig. on p. 10). This helps us to understand what Makrīzī means when he speaks of a bāẖāra at the entrance of the Bāb al-Nāṣr and Bāb al-Futūh, although they disappeared in the xvth century. They must have been built in front of them subsequently, as at Damascus, to remedy the weakness of these "straight through" gateways. I say "subsequently" because there is no trace on the well preserved masonry of these two gates of anything having been torn away.

On the other hand it follows than when a bāẖāra is mentioned anywhere (e.g. at Subayba near Baniyās) and the gateway itself has a right-angled turn ('āfīf), there is no need to assume that there was ever any structure in front of it.

But in spite of its obvious advantages the bent entrance did not become the general rule henceforth; it was not even employed by al-Manṣūr himself when he built Raīkā a few years later. The architect merely adopted the "oblique approach" system (see my E.M.A., ii, 38-45).

Nevertheless a very formidable type of gateway is employed in the famous Ukhaydīr (Plate XXIX a) towards the end of the 2nd/8th century. The entrance arch, which is 3 m. wide, is set back 92 cm. between two quarter-round towers. On both sides, close up to their inner corners, a deep groove 20 cm. wide runs right up, showing that there must have been a portcullis here. Behind this entrance arch, at a distance of 1.95 m. is another archway, and between the two is a vestibule, 3 m. wide and 1.95 deep, covered by a tunnel-vault in which there are three slits 17 cm. wide running from wall to wall (Fig. 1).

Now supposing Ukhaydīr were about to be attacked, the portcullis would be kept in a hauled-up position.

Fig. 1. Ukhaydīr: plan and section of west entrance.

Nevertheless a very formidable type of gateway is employed in the famous Ukhaydīr (Plate XXIX a) towards the end of the 2nd/8th century. The entrance arch, which is 3 m. wide, is set back 92 cm. between two quarter-round towers. On both sides, close up to their inner corners, a deep groove 20 cm. wide runs right up, showing that there must have been a portcullis here. Behind this entrance arch, at a distance of 1.95 m. is another archway, and between the two is a vestibule, 3 m. wide and 1.95 deep, covered by a tunnel-vault in which there are three slits 17 cm. wide running from wall to wall (Fig. 1). Now supposing Ukhaydīr were about to be attacked, the portcullis would be kept in a hauled-up position.
until a party of men entered the outer archway to try to break down the door behind the inner archway. At a signal, given by men looking through the slits in the vault, the portcullis would be released and missiles, molten lead, or boiling oil dropped on the storming party trapped below. It was impossible for a storming party to approach the door without exposing themselves to be fatally trapped in this fashion.

The finest gateways of the 5th/11th century are the three Fatimid gates of Cairo, the Bab al-Nasr, Bab al-Futuh (Plate XXX) and Bab Zuwayla, built by 578/1182, in the three gateways of the Northern Enclosure of the Citadel of Cairo, 571-9/1176-84, and likewise the gateways in that part of the Wall of Cairo due to him (Plate XXXIb). So thoroughly were the advantages of the bent entrance appreciated that it had even reached the Far West of Islam before the end of the 6th/12th century, e.g. the gateway of the Kasba of the Oudaya at Rabat in Morocco.

For the 7th/13th century three typical examples of it may be cited: Ka'far al-Nagi on the Tigris, 605-12/1208-15; and two at Bagdad, the Talisman Gate (blown up by the retreating Turks in 1918) and the Bab al-Wustani.

The supreme example of a bent entrance is al-Malik al-Zahir's gateway in the Citadel of Aleppo finished according to Ibn Shaddad in 611/1214. Here there are no less than five right-angled turns in the passage-way (Plate XXXII and Fig. 2).

(B. LEWIS)

Bab, a term applied in early Shi'ism to the senior authorised disciple of the Imam. The hagiographical literature of the Twelver Shi'a usually names the bāb of the Imams. Among the Ismā'iliyya (q.v.) bāb was a rank in the hierarchy. The term was already in use in pre-Fatimid times, though its significance is uncertain (cf. W. Ivanow, The Alleged Founder of Ismailism, Bombay 1932, 125 n. 2, citing al-Kašshī, Sīdīqī, 322; idem, Notes sur l'Ummu 'l-Kitāb, in REI, 1932, 455; idem, Studies in early Persian Ismailism, Bombay 1955, 19 ff.). Under the Fatimidns in Egypt the bāb comes immediately after the Imām, from whom he receives instruction directly. He in turn instructs the ḥudū⃣ṣī, who conduct the da'wa. The term thus appears to denote the head of the hierarchy of the da'wa, and to be the equivalent in Ismā'ili terminology of the expression dā'ī al-duʿā', which is used in the general historical literature but rarely appears in Ismā'ili texts. Thus, for example, al-Mu'ayyid fi 'l-Dīn al-Shirāzī, who is described in Ismā'ili writings as the bāb of al-Mustanṣīr, is called his dā'ī 'l-duʿā' by the historians (e.g. Ibn Muyassar, 10) and is actually named as such by al-Mustanṣīr in a sigillū of Ramāḍān 481/July 1069 addressed to the Sulayyīd ruler of the Yaman (Al-Siqillūt al-Mustansīriyya, ed. Abū al-Munṣīr Mājdīd, Cairo 1954, 200). Some indications of the status and functions of the bāb in Fāṭimid Ismā'iliism will be found in Ħamīd al-Dīn al-Kirmānī, Rābat al-ʿAbī, ed. M. Kāmil Ḥusayn and M. Muṣṭafā Ḥilīm, Cairo 1953, index; cf. R. Strothmann, Gnosis-Texte der Ismailiten, Göttingen 1943, index, esp. 82, 102, 175; W. Ivanow, Studies, 20-23). In the post-Fāṭimid da'wa the office dwindled in importance and seems eventually to have disappeared. In the description of the da'wa organisation at Alamūt given by Naṣr al-Dīn al-Ṭūsī, (Taṣawwurāt, ed. W. Ivanow, 97, introduction xiii), there is only a bāb-i bāmīn, who ranks with the dā'ī, and in later Ismā'ili writings the term seems to drop out altogether.

In the system of the Nuṣayrīyya (q.v.) the bāb comes after the ism and is identified with Salmān (q.v.). The bāb is personified in each cycle. (Lists of Nuṣayrī bābs are given in R. Strothmann, Morgenländische Geheimkünste in Abendländischer Forschung, Berlin 1953 (Abhandlungen der deutschen Akademie der Wissenschaften zu Berlin, Klasse für Sprachen, Literatur und Kunst, Jahrgang 1952 Nr. 5) 34-5; L. Massignon, Nuṣairīyya, in ERI; for a similar Ismā'īlī list see Dīāfār b. Maḥṣūr al-Yaman, Kitāb al-Kaṣhī, ed. R. Strothmann, 1952, 14).

BAB, an appellation [see the preceding art.] made specially famous by Sayyid 'Ali Muhammad of Shiraz, the founder of the new religion of the Babis [q.v.] and, according to the Bab's precursor the new prophet Bahá'u'lláh [q.v.] is the mirror of the breath of God', were arrested, brought before the Governor of Shiráz, Mirzá Husayn Kháán 'Abdu'lláh, severely punished, and expelled from the city. A representative of the reigning sovereign (Muhammad Sháh), Sayyid Yáhúd-i Dárábí, sent to conduct an enquiry, was won over by the charm of the Bab, and became converted to the new doctrine. Whilst all this was going on, Mirzá Núrí (the future Bahá'u'lláh) and his brother Mirzá Yáhúd Núrí (the future Sháh-i 'Asul) at Tehran, at the same time, persisted in the faith, after a meeting with Mullá Husayn. At Shiráz an epidemic of cholera broke out, and everyone from the Governor down prayed for deliverance. The Bab remained at Isfahán, where he was protected by the governor, the Georgian Manúchehr Kháán Mu'tamad al-Dawla. On the death of the latter the Bab was called to Tehran by order of the minister Hájjí Mirzá 'Abdu'lláh, but shortly before arriving in the city he was arrested and sent as a prisoner to the fortress of Mákú in the trackless mountains of Ādharbayjádán (summer of 1263/1847). In 1264/ April 1848, following more serious disorders which had broken out in different parts of Iran on account of Bábí propaganda [see Bábis], the Báb, whose powerful religious influence had converted the governor of the fortress of Mákú, 'Abdu'lláh Kháán, was transferred to a more rigorous prison, the remote castle of Cíhrík, from which he was shortly afterwards to be removed to Tabríz to be questioned by a committee of muddájhíds; it was decided to commend him forthwith. The powerful minister Mirzá Ta'íl Kháán, who had succeeded Hájjí Mirzá 'Abdu'lláh after the latter's dismissal by the new sovereign Náṣir al-Dín Sháh (1848), considered that the death of his enemy would break up this dangerous movement which was continuing to attract new adherents. In the spring of 1266/1850 the news of the execution of the seven martyrs of Tehran [see Bábis], among whom was his uncle and well-beloved tutor, reached the Bab in the fortress of Cíhrík where he had been imprisoned, and greatly distressed him. He prophesied that his end was near. He was taken at the end of the month of Sháh Wal id 1266/July 1850 to Tabríz, and was condemned to be shot at the same time as two of his disciples, Mullá Muhammad 'Ali of Yazd and Áqá Sayyid Husayn. The second, during the doleful procession of the three condemned men through the streets of Tabríz, under insults and blows, made pretence of abjuring the Bábí faith, and was released; he had previously been charged by the Báb to carry out his last wishes and to deposit some of his personal belongings and writings in a safe place. (He was, however, killed at Tehran shortly after having carried out this mission). The Báb was secured with the same ropes as his disciples to a pillar in the courtyard of the barracks at Tabríz, and the Christian regiment of the Frúd-dárún, commanded by Sám Kháán, fired. The first shot, according to the descriptions even in Muslim sources and others hostile to the reformer, merely severed the ropes, leaving the Báb completely free. Sám Kháán, terrified, refused to re-open fire, and consequently another firing-squad was detailed. On 9 July 1850, about midday, the Báb prays for preaching his doctrine with his life. The mangled body was thrown into a ditch in the town and after many vicissitudes (disinterred by the Bábís, hidden for several years at Tehran), it was removed on the order of Bahá'í Alláh [q.v.] to 'Akka, where it now rests in a large mausoleum on the slopes of Mount Carmel.

Encyclopaedia of Islam 53
Works.—The works of the Bab, all manuscript—some lost, others of doubtful authenticity (partially due to an unexpected feud after his death between Bahá’ís and Azals, see Bábís)—are very numerous. In more or less chronological order, and mentioning only the best known, they are: 1. The Káyyám al-Asmá’ or commentary on the súra of Yúsuf, referred to above, of more than 9,300 verses divided into 111 chapters (one verse of the famous súra), which opens with the well-known apostrophe to the kings of the earth: ‘O kings! do not take unto yourselves that which are the witnesses (the imams) of God for his creatures ...’, he means to say that ‘they have been created in another world but also to that of the prophetic cycle. From the castle of Cihríj, etc. Although the Babís interpret as predicting the prophetic vision of Bahá’ Alláh (q.v.) in the Tehran prison in the year 9, i.e., 1269/1852-3, various other passages of the Bayán effectively suggest that the Bab believed the Future Manifestation possible at a nearer date. Particularly interesting is the fine chapter XI of the IVth wáhid of the Arabic Bayán (138-9): ‘Be not the instruments of your misfortunes, for not to be grieved is one of the greatest commands of the Bayán. The fruit of this command shall be that you shall not grieve Him Whom God Shall Manifest.’

The metaphysics of the Báb is similar in certain ways to that of the Ismá’íllís. It sets out, in essence, as opposed to the unitary conception of existence as in Pantheism and to the dual conception (divine/human) of orthodox Islám, a division of Being into three parts: the World of the Essence of God, absolutely unattainable and transcendent, the World of Nature and of Man, and the World of Manifestation, that very pure mirror in which alone God can see himself. The Báb’s doctrine seems to attach very great importance to this invisible world which is concealed behind and between visible things: thus, all the eschatological terms, such as beatific vision, death, eternity, paradise, etc., being solely in this sense, appears in the Kur’an and other sacred works, such as the ‘Promised One’ towards whom alone all must travel, will be made manifest (ibíd., 166). The care for property, particularly recommended by the Báb, is justified eschatologically, in order that the eyes of ‘Promised One’ shall not look upon anything unclean (159). As well as the familiar passage (166) ‘All of you get up from your seats when you hear the mention of the name of Him Whom God Shall Manifest .... And in the ninth year you shall attain to perfect Good’, which the Bahá’ís interpret as predicting the prophetic vision of Bahá’ Alláh (q.v.) in the Tehran prison in the year 9, i.e., 1269/1852-3, various other passages of the Bayán effectively suggest that the Báb believed the Future Manifestation possible at a nearer date. Particularly interesting is the fine chapter XI of the IVth wáhid of the Arabic Bayán (138-9): ‘Be not the instruments of your misfortunes, for not to be grieved is one of the greatest commands of the Bayán. The fruit of this command shall be that you shall not grieve Him Whom God Shall Manifest.’

The metaphysics of the Báb is similar in certain ways to that of the Ismá’íllís. It sets out, in essence, as opposed to the unitary conception of existence as in Pantheism and to the dual conception (divine/human) of orthodox Islám, a division of Being into three parts: the World of the Essence of God, absolutely unattainable and transcendent, the World of Nature and of Man, and the World of Manifestation, that very pure mirror in which alone God can see himself. The Báb’s doctrine seems to attach very great importance to this invisible world which is concealed behind and between visible things: thus, all the eschatological terms, such as beatific vision, death, eternity, paradise, etc., being solely in accordance with the vision of the prophet, there remains only very little room in which to interest oneself in the life of the other world, which has led certain authors, perhaps wrongly (see E. G. Browne in the Preface to M. H. Phelps, Abbas Effendi, London 1912), to believe that the Báb denies the immortality of the individual soul, at least in the traditional sense of the word. In the same way, his conception of the return of Muhammad, of the imams, etc., in its actual presentation has led some writers wrongly to believe that he subscribes to the doctrine of reincarnation. On the contrary, the Báb in his original conception of the novelty of the different ‘worlds’ of the successive prophetic cycles, besides denying the Islamic and Christian dogmas of the resurrection of the body, denies as well the reincarnation of the soul in another body; when he writes (Arabic Bayán, wáhid 1, chapter 11.) ‘Those (our lieutenants) are, firstly Muhammad, the prophet of God, then those who are the witnesses (the imams) of God for his creatures ...’, he means to say that they ‘have been created in another
world, i.e., that God has re-created them ex novo in the world of the Bayan after having created them in the world of the Qur'an. It is easy to deduce from such a 'bookish' conception of the worlds of nature and of the spirit that letters, the written word, and the corresponding numerical values have enormous significance for the Bab. The love of calligraphy (according to tradition, his own writing was superb) is for him a feature of religion, and more than once, in the Báb, he commands that copies of the Holy Book should be conserved in the most elegant writing possible. The number 19, for instance, has great importance in Báb numerology; having abolished the 'natural' calendar, the Báb substitutes for it a purely spiritual and mental calendar of 19 months each of 19 days, each one bearing the name of an an attribute of God. The last month (that of 'A'id) is that of fasting, effective from dawn to sunset. This calendar, with some minor modifications, has been adopted by the Bábís also. The Báb took pleasure also in writing the most complicated haykal (pl. of haykal, 'temple' or 'shape'), a kind of talisman in an obscure gishasta script, which he considered to be the most acceptable to God.

It would be difficult to put into order the very varied moral and juridical precepts contained in the Babí writings. Besides such excellent verses as 'Each day recollects my Name. And if each day my thought penetrates into your heart, then are you among those who are always in God's thoughts' (Arabic Bayán, wáhibi, chapter 9), one finds prescriptions which seem not a little strange, such as the injunction, already quoted, not to possess more than 19 books, or discussions on the correct way to eat eggs. The extreme leniency of the penalties, which are reduced to fines and to the prohibition of sexual relations with one's own wife, is characteristic. The greatest penalty is incurred by the homicide: the culprit is condemned to pay 11,000 mighdás of gold to the heirs of the victim, and to abstain from all sexual activity for 19 years. Some penalties are likewise inflicted not only on those who strike their fellow-creatures, but also on those who lift their voices against them. Certain passages seem, however, to deal with relations between believers and unbelievers (it is only in the Bahá'í doctrine that Holy War and the confiscation of the goods of unbelievers have been definitely abrogated). There exist, moreover, regulations concerning taxes on benefits, on capital, etc. Divorce is allowed, but discouraged. Widowers and widows are obliged to remarry, the first after 90 days, the latter after 95. Ritual purity and seclusion of women are abolished. Public worship is abolished, except for the rites of the dead. The Báb's birthplace, the places of his imprisonment, etc., are considered as places of pilgrimage. Every 19th day one should invite 19 persons, giving them 'if only a glass of water'. All alcoholic drinks are forbidden, and it is as strictly forbidden to beg as to give individual alms to beggars.

BAB AL-ABWAB — BAB-I HUMAYUN

The principal source of information about them is an anonymous 11th-century Turk i al-Bab, which is quoted by Ahmad b. Lu'lu' Allah Minagdiri (Muneccim) Baj in (17th century) in his Dtim al-Duwal. This source adds considerably to our knowledge of the movements of the Rûs, e.g., it mentions that in 423/1032 the ghâISIS of al-Bab caught and destroyed a party of Russian raiders in a defile of the Caucasus (Minorsky, Studies in Caucasian History, 77).

The period of Turkish predominance at al-Bab, in common with the neighbouring provinces, begins in the time of the Saltikovs (cf. A. Zeki Velidi Togan, Umum Turk tarihine giris, i, 190, 411). Under the Mongols al-Bab figured in the march of Subutai northwards through the Caucasus (1222). Timir and Djiaba (Jebe) campaigned more than once in the neighbourhood. The general effect of the Mongol period was to confirm the Turkification of the N.-W. provinces of what had formerly been the Caliphate.

The most detailed account of Bâb al-Abwâb comes from al-Kazwînî (674/1275), who describes the place as a thriving Muslim town, built of stone, its wall washed by the waters of the Caspian. In length it was about 2/3 of a farsakh and in breadth a bow-shot. There were towers on the city-wall, at each of which was a mosque, to serve the neighbourhood and those occupied with the religious sciences. Guards were constantly maintained upon the wall, and a beacon-fire on an adjoining peak was kept in readiness against the danger of invasion from the N. Al-Kazwînî mentions what he calls talismans set up to keep back the Turks, probably remains of sculpture from the pre-Moslem period. He speaks of a cistern outside the city with steps descending to the water. Outside the city wall, on the latter road that the main entrance is to be found, corresponds to the Turkish Kapu (Lowenklau alias Leunclavus and Dukas, in the 9th/10th and 16th centuries, etc.).

Up till the end of the Empire, the Sublime Porte also housed the Ministry of the Interior (Dâhidîyye Nêtâret), the former offices of the Keşigâhâ (Kekâya, Kekâya, Kikâya) Bey, the Ministry of Foreign Affairs (Khedîjiyye Nêtâret), the former department of the Reis ul-kultûb (Reis-kîap), literally “Chief of the Secretaries”, the Council of State (Şarâyî Edevel), without counting two more modern commissions which were suppressed by the Young Turks.

Five days after the abolition of the Sultanate (1 November 1922), the premises, prior to becoming the seat of the ülâyet of Ankara, served for the offices of the Delegation of the Government of Ankara (Refet Paşa, soon replaced by Rauf Bey and Adnan Bey Adivar, all three of whom later belonged to the opposition).

The road formerly called Bâb-i dli dîddesî, which climbs northwards from the station of Sirkelî and circles round the enclosure (which also contains a mosque), has been renamed Ālâddî dîddesî. It is lined with bookshops and runs into the Souk Çeçmâne road, passing between this enclosure and that of the Top Kapî Saray. It is in this latter road that the main entrance is to be found, opposite the gate of the Saray, which is called the Souk Çeçmâne gate; at a short distance from this is to be found a huge belvedere, called Ayâ Înâka, incorporated in the same wall. Since last century its population has shown a slight increase, but evidently it is of much less relative importance than formerly.

BAB-I ÂLÎ (modern orthography Babî âlî), less frequently Bâb-i âsafî, the (Ottoman) Sublime Porte, former ministerial department of the Grand Vizier, originally called Paşa (or Vent) Kapusu.

The custom of calling the palace, court of government of a ruler “ort” or “mûderris” was very prevalent in ancient times (Iran of the Sasanids, Egypt of the Pharaohs, Israel, Arabs, Japan). The term returned to Isfahân in the more Turkish form of Âlî Kapu (Chardin).

The “Porte”, which a the same time was the personal dwelling of the Grand Vizier and at the outset tended to be rather mobile, gradually lost the character of a semi-private residence and became finally established, under what was henceforth to be its official name, from 1718, when the Grand Vizier Newshenhirî İbrahim Paşa returned with his father-in-law, Sultan Ahmad III, from Adrianople to Istanbul, after the peace of Passarowitz (Sigilk-i Ormândî, iv, 750). Prior to this date the term Bâb-i âlî denoted rather the palace of the Sultan or the Imperial diwan. The same confusion arises in Byzantine and European usage with the terms Porta, Porte, Porte, Πόρτα, which moreover corresponded to the Turkish Kapu (Lowenklau alias Leunclavus and Dukas, in the 9th/10th and 16th centuries, etc.).
the effects of those who died without known heirs were deposited here; at others it served as a treasury or for other purposes.

Many European writers, especially in the 19th century, ignoring Hammer (Staatsverfassung, ii, 95) and D’Ohsson (Tableau, viii, 158), asserted that Böbi Humayun meant “Sublime Porte” (the Western name for the Ottoman Government), while in fact the latter denoted the Grand Vizier’s residence (see entry Bab-i Khiran). There is even no reason to assume that the term “Porte”, which until the 18th century signified the Sultan’s Court, originated from this gate, as some travellers (e.g., Tournon, Voyage du Levant, Paris 1717, i, 496) believed (cf. Dergah, Kapu).

**BĀB AL-LĀN** (Bāb Allān), ‘Gate of the Alans’, Persian Dar-i Alan, mod. Darial (Darial), a pass in the middle Caucasus, E. of Mt. Kazbek and S. of Vladikavkas. It is described as a magnificent gorge through which the Terek rushes between granite cliffs rising to heights of from 4,000 to 5,000 ft., and was apparently known to the ancients as the Caucasian Gates (cf. Pauly-Wissowa, XXXII, i, col. 325). It lay in the territory of the Alans, in the early days of Islam and later a national group of hardy mountaineers, distinct from and usually independent of their neighbours N. and S. of the Caucasus. Their present-day representatives, the Onsetes, live athwart the pass.

Bāb al-Lān was scarcely reached by the first wave of Muslim conquest. It is mentioned in 105/724, when al-Djarrāb b. ‘Abd Allāh al-Ḥakami invaded Khazaría by this route. Next year al-Djarrāb is said to have received the ḥiyya and ḥulul from the Alans (Dhahabi, Ta’rikh al-Islām, ed. Cairo, iv, 88), but Maslama b. Abd al-Malik in 109/727 had to occupy Darial (Yaḵūt, ii, 395). It was perhaps at this time that Maslama placed an Arab garrison, mentioned by al-Mas‘ūdī (Murūjīdī, ii, 44), in the fortress which defended the pass. This fortress was built on a massive rock overhanging a bridge across the ravine and was, says al-Mas‘ūdī, one of the most famous in the world. Yet in 112/729 the Khazars marched through the pass, defeated al-Djarrāb in a pitched battle and captured Ardabīl, before retiring with their booty (Tabarī, i, 530-35). In the operation of Marwān b. Muhammad against Khazaría in 119/737, he himself advanced through the Darial pass to a rendez-vous with Abū Yaqūb al-Sulāmi advancing from Bāb al-Abwāb. This was the beginning of a highly successful campaign north of the Caucasus, but Marwān did not attempt any permanent occupation. The Arabs made sporadic attempts to hold Darial, e.g., again under Yaqūb b. Uṣayd al-Sulāmi circa 147/758 (Baladī, 290-210). But no great fortress-city developed here as at Bāb al-Abwāb (q.v.). Al-Mas‘ūdī states that in his time (4th/10th century) there was still in the pass an Arab garrison, provisioned from Tiffis, at five days’ distance through infidel country (ibid.).

Darial pass is mentioned repeatedly in the Mongol period, and later retained its importance.

**BĀB AL-MANDAB**, the straits between the Red Sea and the Gulf of Aden. They are divided by the volcanic island of Mayyūn (q.v.), called Perim by Westerners, into Large Strait, c. 14 km. wide, and Small Strait, c. 2.5 km. wide, the former being generally used by large vessels. Water runs out of the Red Sea during the south-west monsoon from June to September and into it during the north-east monsoon from November to April, causing currents which make the passage dangerous for sailing craft. The hill of al-Manhall (270 m.) on the Arabian shore rises east of Small Strait, and just north of this is the site of al-Shaykh Saʿīd (q.v.), from which, as from Mayyūn, entrance into the Red Sea can be controlled.

Arab tradition holds that Asia and Africa were joined together until Dhu ‘l-Karnayn split them asunder here and created the Red Sea. Yaḵūt associates the origin of the name al-Mandab (‘place of lamentation for the dead’) with a crossing of the Abyssinians over the sea to the Yemen. The Mandānī applies it to a not clearly identified portion of the southern Yaman coast, which lay within the territory of Banū Madjad and Farasān. Amber (called ḥaddīkh al-bahr) used to be collected in al-Mandab.

Two Sabaean inscriptions of the early 6th Christian century (Ky 507 and 508) mention stil (or sīl) mubn (= silsilat al-Mandab) in connexion with the conflict between Yūsuf Asʿar Dhu Nuwas and the Abyssinians; this may have been a chain stretched across the very narrow and shallow mouth of the inlet at al-Shaykh Saʿīd, if al-Mandab lay as far south as that, as its appearance in the name of the straits would suggest. Such a barrier may well have been the source of the implausible tradition of a chain across the straits themselves.

The variant Bāb al-Mandam, probably to be explained by no more than the not unusual substitution of m for b, is especially current among seafaring Arabs, who often refer to the straits simply as al-Bāb.

**BĀB-I MASHIKHAT**, (also Shāykh al-Islām Kapīlī, Bāb-ī Pètwā and Pītwārīnī), a name which became common in the Ottoman Empire during the 19th century for the office or department of the Shāykh al-Islām (q.v.), the Chief Mufti of Istanbul. Until 1241/1826 the Chief Muftis had functioned and issued their rulings from their own residences or, if these were too distant, from rented quarters. In that year, after the destruction of the Janissaries, Sultān Mahmmūd II gave the former...
residence of the Agha of the Janissaries, near the Suleymaniye Mosque, to the Chief Mufti, who thus acquired a permanent establishment. This step, taken simultaneously with the creation of an Inspectorate of wa'af to centralise the supervision and control of wa'af revenues, prepared the way for the bureaucratisation of the ‘ulama. Deprived of both their financial and their administrative autonomy, the ‘ulama were gravely weakened as against the sovereign power, and were unable to resist effectively successive diminutions of their competence, authority, and status. In the course of the 19th century, they lost control of education and justice to the new Councils and Ministries created for these matters, and even the drafting of fetwas was entrusted to a committee of legal specialists in the Chief Mufti’s office. The Chief Mufti himself became a government office-holder, a minister or head of department and a member of the cabinet. Eventually a point was reached when his term of office ended automatically with the fall of the cabinet. Unlike the other ministers, he was appointed by the Sultan and not by the Grand Vizier, with whom he was theoretically equal (cf. Art. 27 of the 1876 constitution). The office however declined steadily in influence and importance, especially after the Revolution of 1908. Finally, on 3rd March 1924, the Office of the Chief Mufti was ended, the office of Shaykh al-Islam, which had lapsed with the Sultanate in 1922, was replaced by a department of religious affairs attached to the office of the Prime Minister in Ankara. The head of this department (Diyanet İşleri Reisî) is the chief religious functionary of the Turkish Republic, with responsibility for mosques and mosque personnel, but not for wa'af, law, etc.

BABA-I SERASKERI or SERASKER KAPÎSÎ, the name of the War Department in the Ottoman Empire during the 19th century. After the destruction of the Janissaries in 1826, the Agha of the Janissaries was replaced by a new commanding officer, the Ser’asker [q.v.]. The title was an old one, given to army commanders in former times. As applied by Mahmûd II, it came to connote an officer who combined the functions of commander-in-chief and minister of war, with special responsibility for the new style army. In addition, he inherited from the Agha of the Janissaries the responsibility for public security, police, firefighting, etc. in the capital. In a period of growing centralisation and enforced change, the police function came to be of increasing importance and the maintenance and extension of the police system one of the chief duties of the Ser’asker. In 1262/1845 the police were taken from the jurisdiction of the Ser’asker and placed under a separate department called Zabtiyye (see ZABTIYYA) Mubahîrîyyetî.

Mahmûd II at first lodged the Ser’askerate in the old Saray, from which a few remaining parts of the Imperial Household were transferred to the new Saray. Later, in 1282/1865, new buildings were provided for the Ser’asker and his staff. For a short time in 1297/1879-90, and then permanently in 1324/1908, the old name of Ser’askerate was replaced by Ministry of War (Harbîyye). These buildings remained the seat of the Ministry until the time of the transfer of the capital to Ankara, when they were handed over to the University of Istanbul.

BABA, (Turkish and also Persian) “father”; in East Turkish it also denotes “grandfather” (Vambahy, Cagatay, Sprachstudien, 240; Süleyman Efendi, Lughat-i diaghatay, 68). Baba, put after the name, is used in various ways as an honorific for older men, and in Turkey it is used as a form of address even today. As part of a name, it is best known from the story of “Ali Baba and the 40 thieves” in The Thousand and One Nights. As a cognomen, it was used particularly in Dervish circles (e.g. Geyikli Baba, who is said to have accompanied Orkhan Beg in the siege of Brusa), and there particularly with the Bektaşî. Aḥš Bābā [q.v.], in corrupt form also Aḥū Baba and similar forms) was the title of Aḥšl Eywârîn’s [q.v.] successor in his Tekke in Kırşehir (Anatolia) and master of the leather cutters (tanniers, tanners, and shoemakers), in which he held the privilege of inducting apprentices into the guild. There was a movement of dervishes who called themselves Bâbâ’is [q.v.] under the Rûm Sâlîdî Sultan Kayhüsraw II. The epithet Baba also occurs with non-religious civil servants in the ancient Ottoman Empire, e.g. Agha Babaî (Barber de Meynard, Supplement, i, 257), the leader of the 40 guards of the imperial harem, who were white eunuchs. In Iran the epithet Baba precedes the name, again frequently in the case of dervishes (e.g. the dialect poet Bâbâ Tâhir ‘Uryân [see BABA-TAHIR]). Occasionally, Bâbî appears in its own right, e.g. a member of the Khân family Girây on the Crimea, Bâbî Girây, son of Muhammed Girây, who, after the death of his father, succeeded him as Khân, but was murdered six months later (929/1522); as also the Özbek prince Bâbû Beg [q.v.].

As part of a place name, Bâbî indicates that the place had dervish associations. Thus, for example, Bâbâ Daghî [see BABA-DAGH], in the Dobrajdja, where the tomb of the famous saint Şarî Şaltîk Baba is; there is another Bâbâ Daghî near Denizli in Anatolia, and foothills called Bâbû Burnu (formerly Assoe) in western Anatolia, a part of mount Ida in Troas, at the foot of which lies the harbour Baba Liman. In eastern Thrace there is a small town called BABAESKI [q.v.].

BABA AFDAL AL-DIN MUHAMMAD B. HUSAYN KÂSHÂNÎ (or Kâgîl), generally called Baba Afdal, a Persian thinker and the author of poems in quatrains, born in Mârakh near Kâshân, where he is also buried. His dates are still rather uncertain. According to Sayîd Nafîî he was born around 582/ 1186-7, or 592/1195-6, and died after 654/1256 or 664/1265-6; the date given as the date of his death by Brockelmann, ii, 280, viz. Rabjâd 666/March-April 1266, is near to this. According to M. Minovî, Bâbû Afdal died considerably earlier, at the beginning of the 7th/13th century; the date of death given by

...
E. G. Browne and others, 707/1307-8, is certainly incorrect. There is scant information on his life, and that of little importance. Thus, for example, the relationship between Baba Afdal and Nasir al-Din Tusí (q.v.), which has been accepted by some, proves on closer examination to have been impossible. Admittedly Nasr al-Din Tusí had a teacher named Kamál al-Din Muhammad Ḥāsíb, who had been a pupil of Baba Afdal. Of the two quatrains in praise of "Afdal" ascribed to Nasr al-Din Tusí, one is not definitely his whilst the other is in self-praise. The assertion that Nasr al-Din had protected Kāghān from Ḥollāgū to please Baba Afdal is a fiction. It is hardly possible that there was ever a meeting between Baba Afdal and Sa’dí. Baba Afdal’s thought was influenced by the Bājnīyīya and Avicenna, whom he resembles also in his attempts to substitute Persian technical terms for Arabic ones. His writings comprise 16 treatises, a posthumous book of questions and answers, some 40 short essays, 6 letters, a collection of quatrains, some ghazals and kifas. These figures, especially where the short essays and letters are concerned, must not be regarded as final, because—though most of his treatises had already been printed individually before—scientific and systematic research into his works has only recently commenced. He wrote chiefly in Persian, though occasionally also in Arabic (cf. primarily the Madārij al-Kamal, which he later translated into Persian by request). His prose works are concerned with philosophy, theosophy, ethics, and logic; they are partly original, partly editions or translations, and are distinguished by their simple, clear and readily intelligible style, which follows that of the ancients closely. M. Bahār regards his translation of the Kūšd al-Mafṣūs of Aristotle as exemplary. Baba Afdal’s logic al-Mishkād al-Mubin is based on al-*Ibn aos-l-Nafs of Aristotle though it is not identical with its model, but has independent developments of its own. Baba Afdal’s Ḫakār "Umūnīn gives a selection from Ḥazzālī’s Kimyā-yī Sa’dād, which consists partly of selected pieces from the Persian text of Ḥazzālī, partly of translations of the Arabic parts of the book, which Ḥazzālī had not included in the Persian version. Baba Afdal’s quatrains are extremely attractive, and their occasionally shrill note has already been remarked on by E. H. Whinfield. It is no wonder that several of them have achieved currency as works attributed to ’Umar Khayyām.

BABA BEG, an Ozbek chief of the family of the Keneges, who was till 1870 prince of Shahrisabz. This town having been conquered by the Russians, he fled with a small body of those faithful to him. Finally he was seized in Ferghanā and obliged to reside at Taškent. In 1875 he entered Russian military service and took part in the campaign against Khoshand. He died about 1898 at Taškent. (W. B. SPULER)

BABA DĀGHĪ [see BABADAGH].

BABA ESKİSİ [see BABAKES].

BABA FIGHÂNĪ [see FIGGAN].

BABA ISḤĀK [see BABAI].

BABA-TĀHIR, a mystic and poet who wrote in a Persian dialect. According to Riḍā Kūl Khánum (19th century), who does not give his source, Baba-Tāhir lived in the period of Daylamī rule and died in 401/1010. Among his quatrains there is an enigmatical one: “I am that sea (baḥr) which entered into a vase; that point which entered into the letter. In each alif (‘thousand’, i.e., of years?) arises an alif-badd (a man upright in stature like the letter alif). I am the alif-badd who has come in this alif.” Mahdī Khánum in the *JASB* has given an extremely curious interpretation of this quatrain: the letters alif-kadd have the value 215, the same as the letter alif in the word qasār (Persian equivalent of the Arabic baḥr “sea”) and those of the name of the poet Tāhir. If we add alif-kadd (215) to alif (111) we get 326 (the same value by the way as the Persian word kāzār, “thousand”), if we spell it kā, zā, alif, rā. In this way the phrase “an alif-badd came into the alif” would give the date (326) of the birth of Baba-Tāhir who may well have lived till 401.

In spite of the ingenuity of this explanation, it is nevertheless true that the only historical evidence that we possess about Baba-Tāhir is that of the *Rubāt al-Ṣūdar* (c. 601/1204, GMS, 98-99), the author of which “had heard” that when the Saljuq Sultan Tughril entered Hamadān (in 447/1055), Baba-Tāhir addressed an admonition to him (“O Turk, how are you going to act towards the Muslims?”) which much impressed the conqueror. The anecdote suggests for the death of Baba-Tāhir a date later than 447/1055 but is in no way contradictory to the statement that Baba-Tāhir flourished under the Daylamīs, i.e., under the Būyids and their relatives, the Kāköyids, whose rule in Hamadān lasted till the expedition of Ibrahim Yinal in 435/1043-4. Baba-Tāhir may well have been the contemporary of Avicenna (Ibn Sīnā) who died at Hamadān in 428/1037, but the legends which make him a witness of
the execution of the mystic Ayn al-Kudat of Hamadan in 533 and the contemporary of Nasir al-Din Tusi (672) are pure inventions.

The sources sometimes call Bábá-Tahir Hamadán (cf. the Arabic MS. 1903 of the Bibl. Nat. Paris, the Sarandjád, etc.), sometimes Lurí (Lurí). This latter form—in place of Lur [q.v.], is somewhat puzzling: does it mean some other connexion than that of origin between Bábá-Tahir and Luristán? It is certainly well to remember that in the 5th/11th century there were very close links between Hamadán and Luristán and the poet may have spent his life between the two places. In Khurramábábá there is a quarter bearing the name of Bábá-Tahir (cf. Edmonds, Geogr. Journ., June 1922, 443). The association of Bábá-Tahir with Luristán in the beliefs of the Ahl-i Hákk [see below] is also significant. In the quatrains of Bábá-Tahir (cf. nos. 102, 200, 274 of the Díván), Mount Alwand [q.v.] overshadowing Hamadán is frequently mentioned. The tomb of Bábá-Tahir lies on a little hill to the north-west of the town in the Bun-i-bazar quarter; beside the tomb of Bábá-Tahir are those of his faithful Fátima [see below] and Mírzá ‘All Naqí Kawkhi (19th century); the building is a humble one and of no interest. The tomb is mentioned in Šád Allah Mustawfi, Naṣaḥ (740/1339, 75); cf. the photograph in Moxorský, Malevásh, Moscow 1911, xi, and Williams Jackson, A Visit to the Tomb of Bábá-Tahir at Hamadán, in A Volume presented to E. G. Browne, Cambridge 1922, 257-260.

The stories one hears in Mázandarán about Bábá-Tahir’s connexion with that province have no foundation and may have been brought by immigrants from Luristán (the Lák). Besides, all the nomads of Persia like to claim Bábá-Tahir as a compatriot.

The language of Bábá-Tahir. Since all the facts and traditions connect the poet with Hamadán and Luristán, it is reasonable to expect to find in his dialect traces of a dialect of this region of Persia. But as this dialect was very close to Persían and as so many different mouths have been trying to render more comprehensible the verses transmitted orally, there is little hope of re-establishing the text in its dialectic purity. It is not an improbable suggestion that Bábá-Tahir simply wanted to imitate the dialects of his adorers. In our own day a Kurd Christian claims to have made verses in the Gurání dialect, quite distinct from his own, in order to “transmit the message” to the Ahl-i Hákk (Dr. Sa’dí Khán, in MW, Jan. 1927, 40).

The country between Hamadán and Khurramábábá still has many dialects, but that of Bábá-Tahir is not connected with any definite one and seems to borrow from all. The closeness of the present text of Bábá-Tahir to literary Persian is undeniable; on the other hand changes like nám > nám “name”, daslam > dastum (“my hand”), raštam > raštum (“I have gone”), dór > dir (cf. Huart, xiv = Díván, no. 82) are typical of the Lur dialects; the stems wádí “to speak”, hár “to do” are common to the Kurdish and central dialects; the forms mi-har-á “he does” and dá-yá “he comes” recall particularly the Gurání spoken much farther to the west. For certain peculiarities (dáram > dārum) we only find analogies at Kárán (near Shíráz).

Hodák’s detailed analysis has clearly proved this mixture of dialects (Dialektgemisch) in the quatrains, at least as we know them now. The term “Muhammadan Pahlavi” proposed by Huart (1885) for the language of Bábá-Tahir has not been accepted by scholars.

The metre of the quatrains of Bábá-Tahir and of his ghásals is almost exclusively hasádi muasaddas mahdūf ——— | ——— | ——— which has made the new editor call the quatrains du-baytī (distichs) instead of rubá‘í, the last term being too closely associated with some regular rubá‘ī attributed to Bábá-Tahir. The metre of Bábá-Tahir is also found in popular songs (Mírzá Día’far [Korsch], Gramm. Pers. Yázka, Moscow 1901, 308).

Bábá-Tahir—poet. Down to 1927, all that was known of his poems was a rather small number found for the most part in anthologies of the 18th and 19th centuries. Huart’s researches produced in 1885, 59 quatrains, and in 1908, found 3 new quatrains (they are moreover very doubtful). Leszczyński (who used the Berlin manuscripts) has translated 80 quatrains and one ghásal (a different one from Huart’s). Finally Husyn Wahíd Dastgirdl ʻIṣfahān, editor of the Persian review Armaẖān, published in 1906/1927 at Tíhrán a Díván of Bábá-Tahir containing 296 du-baytī and 4 ghásals of this poet; as an appendix the editor gives 62 du-baytī found in the “different collections” and the 3 rhymes added by or for K. L. Allen. The quatrains of the Díván are arranged in the alphabetical order of the rhymes. The editor unfortunately gives no details of the manuscripts of the Díván reproduced in his edition. The new quatrains several of which mention Táhir’s name, the mountains of Alwand and Maymand (?) etc., confirm the characteristics already known of Bábá-Tahir, while making them a little more banal by the inevitable repetitions. The dialectical flavour of most of the quatrains is in favour of their authenticity, although an imitation of the peculiarities of the language of Bábá-Tahir would really not be a very difficult matter. The question of the authenticity of the quatrains of Bábá-Tahir certainly arises, as it did in the case of those of Šáhír Khayyát. Zúkowski says that quatrains of Bábá-Tahir are found in the Díván of Mulla Muhammad Šufí Mázandarán (5th/11th cent.). A certain Shahtir Beg Muhammad, a modern poet of Hamadán, claimed to be the author of several “Kurdí (Pahlawí)” quatrains attributed to Bábá-Tahir (cf. Díván, 21).

The choice of subjects in Bábá-Tahir is very restricted, but the poet’s work bears the stamp of a distinct personality. We give an analysis of the 59 quatrains published by Huart to enable the reader to judge. As usual it is difficult to draw a rigid distinction between the expression of mystical and that of profane love; 34 quatrains are almost equally divided between two categories of lyric poetry. Two quatrains are simple hymns to God. The rest is more individual and characteristic. Bábá-Tahir often refers to his life as a wandering darvishi-baladun, without a roof above his head, sleeping with a stone for a pillow, continually harassed by spiritual anxieties (nos. 6, 7, 14, 28). Cares and melancholy torment him; the “flower of grief” alone flourishes in his heart; even the charms of spring leave him still unhappy (34, 35, 47, 54). Bábá-Tahir professes the philosophy of the true Súfí, confesses his sins, implores forgiveness for them, preaches humility, invokes nirvana (fanép) as the only remedy for his misfortunes (1, 13, 45, 50, 58). One human failing is especially
characteristic of Bābā-Tahir: his eyes and his heart do not readily detach themselves from the things of this world; his rebellious heart burns with love for them, leaves him no rest for a moment and the poet cries in anguish: "Art thou a lion, a panther, O my Heart, thou who art continually struggling with me. If thou fall into my hands, I shall spill thy blood to see what colour thou art, O my heart" (3, 8, 9, 26, 36, 42).

Bābā-Tahir's psychology shows striking contrast to that of 'Umar Khayyām. Bābā-Tahir shows no trace of the hedonism of the latter (d. 517/1123?) nor of his serenity in face of the changes brought by death, while 'Umar Khayyām lacks the mystical fire of Bābā-Tahir (cf. Christensen, Critical Studies in the Rubā‘iyāt of 'Umar-i Khayyām, Copenhagen 1917, 44).

What pleases in Bābā-Tahir is the freshness of his sentiments which Šāfi routine had not yet stereotyped, the spontaneity of his images, the naïveté of his language, with the local tang.

Bābā-Tahir—mystic. The Persian dervishes with whom Žukowski talked about Bābā-Tahir knew that he was the author of 22 metaphysical treatises (cf. also Rīdā Kull Khān) but it is only from Ṣūfī and Ḡloch oth that we have learned in Europe of the existence in Oxford and Paris of commentaries on the maxims of Bābā-Tahir. The complete treatise [al-‘Ikhld, iHikfr], ("The brief sayings") has now been published in the edition of the Armaqāh. This treatise consists of 368 Arabic maxims divided into 23 bāb dealing with the following subjects: knowledge (‘ilm); gnosis (ma‘rifa); inspiration and penetration (iḥkām, fi‘rāsā); reason and the soul (‘aḥl, nafs); this world and the beyond (dunyā, ‘aḥlāh); the musical performance (samā‘) and the dhikr; sincerity and performance (qiyād, ‘iḥfād), etc.

Here are a few specimens of these maxims: no. 86: "Real knowledge is the intuition after the knowledge of certainty has been acquired" (al-hakīmat al-muqadhamat ba‘da ‘ilmī li-yahshīn); no. 96: "Ecstasy (wa‘idā‘) is the loss (of the knowledge) of existing things and is the existence of lost things"; no. 368: "he who has been the witness of predeterminations (coming) from God remains without movement and without volition"; no. 300: "he whom ignorance has slain has never lived, he whom the dhikr has killed will never die".

The "Brief Sayings" seem to have enjoyed considerable popularity among the Šāfis. The Persian editor mentions the following commentaries on this treatise: the Arabic commentary attributed to ‘Ayn al-Kuţd al-Hamadānī (d. in 533/1138-9 but often associated in legends with Bābā-Tahir); another Arabic commentary by an unknown author; the Arabic and Persian commentaries by Mulla Sulṭān ‘Alī Gunabādī; the Persian commentary was printed in 1326/1906 but is very rare. The editor of the Armaqāh expresses the hope of being one day able to publish the "Brief Sayings" accompanied by one of the commentaries.

The Arabic manuscript 1903 of the Bibl. Nat. contains the first 8 chapters of the maxims of Bābā-Tahir in an abridged form (fol. 100b-105b), as well as a commentary on them (fol. 74a-100a) entitled al-Futūḥāt al-Rabbānīyya fi Ighārat al-Hamadānīyya.

The manuscript seems to be in the hand of the author of the commentary, Ḥanī Beg al-‘Azīzī who began his work in Shāhwa‘l 889 and ended it on 20th Shāhīn 900/1 September 1485. The commentary was written at the request of a certain Ṣ̄aybī Abū l-Bākā who had possessed the Ighārat of Bābā-Tahir since 853/1449-50. He had let them fall into the well of Zamzam at Hamadān but the manuscript was miraculously recovered. The ‘u‘lamā‘ had dissuaded Abū l-Bākā from writing a commentary on the text on account of its profundity and obscurity. Finally Abū l-Bākā engaged Ḥanī Beg to accomplish this task. The commentary deals with the text of the maxims of Bābā-Tahir word by word.

Bābā-Tahir—saint. As is the case with the majority of the mystical poets (Aṭṭār, Djalāl al-Dīn Rūmī, Ḥāfiz), there are numerous legends of the life and miracles of Bābā-Tahir. It is related that when Bābā-Tahir had asked the students of the madrasa of Hamadān to show him the way to acquire knowledge, the students as a joke told him to spend a winter night in the icy water of a tank. Bābā-Tahir carried out the advice and next morning found himself enlightened and exclaimed: Āmsaytu Kurdisīyān wa-asbahū ʿAbīshīyān ("last night I was a Kurd and this morning I have become an Arab"). This story was heard by Žukowski in Tehran and by Heron Allen's informant at Būshīr; it is widely current in Hamadān (cf. the preface to the Dīwān, 17 and the manuscripts from Hamadān). This Arabic utterance is found in the preface to the Majma‘a of Djalāl al-Dīn Rūmī, where however it is referred to an unknown (mystic?) ancestor of Ibn Āẓīr, a Turk of Urmīya. In the Nafashāt al-Uns of Ẓāmīlī, ed. Nassau Lee, 362-363, the phrase is attributed to Abū ‘Abd Allāh Bābūnī (a Gūrān tribe, see Ibn Āḏīr, ix, 247).

Other pious legends represent Bābā-Tahir as making the snow on Mount Alwand melt by the ardour of his spiritual fire, tracing with the point of his great toe the solution of an astronomical problem which had been put him, etc. (Žukowski, Heron Allen, Leszcynski, preface to the Dīwān, manuscripts from Hamadān).

Gobineau, Trois ans en Asie, Paris 1859, 344, already knew that the adepts of the Ahl-i Ḥaqq sect were in the habit of "praising exceedingly and giving pride of place to the names of famous Šāfis, notably of Bābā-Tahir whose poems in the Lur dialect are highly esteemed, and of his sister Bībi Fatīma" etc. The discovery of the religious work Saranāyām has enabled us to locate Bābā-Tahir in the theogony of the sect. The Ahl-i Ḥaqq (q.v.) believed in 7 manifestations of the divinity, each of which was accompanied by a retinue of 4 angels, each of whom had special duties. Bābā-Tahir is regarded as one of the angels of the third period and the incarnation of Azrā‘īl and Nuṣayr. The mystic stage to which the period of Bābā Khoshshīn generally corresponds is the ma‘rifa. The events of this cycle take place in Luristān and Hamadān. The manuscript of the Saranāyām recounts the visit of the "King of the World" to Bābā-Tahir in Hamadān. Bābā Khoshshīn is meant by the "King of the World" but the legend seems to be inspired by memories of the episode of Tughrl (see above). Bābā-Tahir and Fāṭima Lārā ("the thin") of the tribe of Bārā Shāhī (of the Gūrān country?), who was in his service, fed the whole army of the King with a dūr-yāh of rice. The latter tempts Bābā-Tahir with all the treasures of the world but he only desires the “beauty of the King”. Fāṭima wants to follow the King of the World; she lays her head on his knees and gives up the ghost. The King consoles Bābā-Tahir for his loss.
and promises that on the day of the Last Judgement he will reunite him to Fātima so that they shall be like Laylā and Majānūn. 13 poetical fragments (mutated but in the style of Bābā-Tāhir) are scattered through the text (cf. Minorsky, 29-33, 99-103; these facts have been utilised by Leszczynski, op. cit., 18-25). Fātima Lārā, who is mentioned in the text is buried beside Bābā-Tāhir. According to the custodians of the tombs of Bābā-Tāhir, she is not to be confused with another Fātima also buried in the same bukhā (?). Gobineau and A. V. W. Jackson mention the sister of Bābā-Tāhir, Bībi Fātima or Fātima Laylá. Āzād-i Hamadānī (Diwan, 16-21) speaks of the tomb of the dāvd “nurse” of Bābā-Tāhir: everyone seems to endeavour to translate into the language of everyday life the mystic relations of Bābā-Tāhir to Fātima.

The quatrains already quoted at the beginning of this article (all, aif-hadd) may reflect some high aspiration of Bābā-Tāhir.

**Bibliography:** The MSS. containing the quatrains of Bābā-Tāhir are as follows: Konya Museum no. 2347 (88/I,1444); 2 Khān, 8 du-baytī, see M. Minuwi, Madājdla-yi Dānshqada-yi Adābyyāt, Tehran, iv/2, 1325, 54-9; Asiat. Soc. Beng., Pers. no. 923, Catal. Ivanow, 424 (a madjam‘a of 1000 [1592]); Preuss. Staatsbibl., Catal. Pertsch, 727, no. 697 (written in 1820 and used by Leszczynski): 56 quatrains; Bibl. Nat. de Paris, pers. 174, Cat. Blochet, ii, 290-292 (collection made by Baksh ‘Abbās Karabaghl, dated 1820 [1844]): 174 quatrains and a ghasal. In the library of the mosque of Sipāsālār in Tehran, Ūzkowski found a manuscript, Ḥādī-i Bābā-Tāhir bā-indimām-i aṣhārāz, but the title does not correspond to the contents of the MS. The MSS. of the mystical treatises of Bābā-Tāhir are as follows: Bibl. Nat. de Paris, Arāb 1903 (Blochet, o.l., ii, 291) and the Oxford MS. Ethé, Cat. Pers. Mss. Bodleian Lib., no. 1296, fol. 302b-341. The anthologies which mention the poet are: ‘Ali Kuli Khān Wālī, Ṣiyāḥ al-Shu‘arā’, 1161/1748, cf. Leszczynski, 10; ‘Utūf ‘Abbās beg, Aqāshqāda, 1303/1799, Bombay 1277, 247 (25 quatrains); ‘All ‘Ibrāhīm Shāh, ‘Ṣubūt-i Ibrāhīmī, 1205/1791, unique MS. in the Preuss. Staatsbibl., Pertsch, 627, no. 663 (utilised by Ūzkowski and Leszczynski); Riḍā Kuli Khān, Madjam‘a al-Faṣāḥā, Tehran 1295, i, 326 (10 quatrains); idem, Ṣiyāḥ al-arifīn, Tehran 1303, 102 (24 quatrains); 57 quatrains of Bābā-Tāhir were published at Bombay in 1297 and 1308 (with those of Umar Khayyām); 32 quatrains (with the Mundāḏīl of Āṣārī) at Bombay 1301; 27 quatrains (with those of Khayyām) at Tehran 1274; the ghasal of Bābā-Tāhir is given in the appendix to the Diwān of Shams-i Maghribī, Tehran 1298, 158, in the appendix to the Mundāḏīl of Āṣārī etc. The Diwān of Bābā-Tāhir (cf. text) with the Kalimāt-i ḥijdār, a preface by the editor, a biography by Māhmūd ‘Irīfān, a description of the tomb of Bābā-Tāhir by ‘Āṣād-i Hamadānī, etc. were published as a supplement to the 8th year of the magazine Armagan, Tehran 1306/1927, i-124.—Huart, Les quatrains de Bābā-Tāhir ‘Uryān en pekhārī musulman, in J.A, series viii, vol. vi, Nov.-Dec. 1885, 502-545; Ūzkowski, Koye ṣote o B. Tāhirī Gottkē, Zap., 1900, xiii, 104-108 (bibliography, 3 anecdotes, 2 new quatrains one of which is no. 146 of the Diwān), cf. also Zap., ii, 12; E. Heron Allen, The Lament of Bābā-Tāhir, London 1902 (text of 62 quatrains, transl. by the editor and verse by Elisabeth Curtis Brenton); Browne, i, 83-87, ii, 259-261; Mirzā Mahdī Khān (Kawkāb); The quatrains of Bābā-

Tāhir, in JAS, 1904, no. i, 1-29 (new edition of the quatrains of Heron Allen [1-4] quatrains with important corrections and a very interesting commentary); Huart, Nouveaux quatrains de Bābā-Tāhir, in Spiegel Memorial Volume, ed. J. J. Moï, Bombay 1908, 290-302 (28 quatrains and 1 ghasal) completing the collection of 1885 recently discovered: in an extract from the Kaḡḵbāl al-Fuhārd of which the original is in the Muḥammadīyya mosque (Fāṭih) of Constantinople, in the Diwān of Maghribī and in an album (dūng). This second collection of quatrains published by Huart contains sundry pieces, the translation of which is not certain; Minorsky, Materiali ("Materiālia per servire à l’étude des croyances de la secte persane dite les Ahl-i Haqq ou ‘All-i Nā‘īrī"), vol. xxxiii, of the Trudt Lassaei, Instituta, Moscow 1911, 29-33 (transl. of the passages from the Sarandjāmīn), 99-103 (Persian text of the intercalated poems and notes) G. L. Leszczynski, Die Ruʾbā’iyāt des Bābā-Tāhir ‘Uryān oder Die Gottestränen des Herzens, aus d. west-medischen [sic] Originalen, Munich 1920 (biographical and bibliographical, verse transl.); H. Hadane, Die Mundarten v. Ḥumān, etc., in Kurd.-pers. Forsch. v. O. Mann, series iii, vol. i, Leipzig 1926, introduction, xxxvii-iv (complete study of the question of the language of Bābā-Tāhir, bibliography); A. J. Arberry, Poems of a Persian Sūfī, being the quatrains of Bābā-Tāhir, Cambridge 1937, (60 dūngs) translated into excellent five-lined stanzas in the style of a E. Housman). (V. Minorsky)

**BABADAGH,** a town in the Dobrudja, now part of Rumania. Its Turkish name refers to the semi-legendary dervish (Baba) Sarī Saftīk, who is said to have led a number of Anatolian Turcomans to the Dobrudja in the mid-thirteenth century, and to have settled with them in the neighbourhood of Babadaghi. (On this settlement see Paul Wittke, Yassighoq ‘All on the Christian Turks of the Dobruja, in BSOAS, 1952, 639 ff.). There are several tombs of Sarī Saftīk in various towns; the most generally accepted is that of Babadaghi. What appears to be the first reference to it occurs in a passage in a travel in the language of Bābā-Tāhir, bibliography; A. J. Arberry, Poems of a Persian Sūfī, being the quatrains of Bābā-Tāhir, Cambridge 1937, (60 dūngs) translated into excellent five-lined stanzas in the style of a E. Housman). (V. Minorsky)

and is consecrated by Bayezid II as a waḥf for Sarī Saftīk and his followers. Two documents relating to the waḥf of Bayezid, of 1078/1667 and 1111/1699, are listed in the catalogue of the Topkapı Sarayl (Arşiv Klasavv, Istanbul 1935, i, 52). The area was no doubt occupied by Bayezid I in the course of his Danubian campaigns, but its final annexation by the Ottomans would seem to date from 1332-3.

According to Ewliya Čelebi, the town was first conquered for the Ottomans by Bayezid I, and was consecrated by Bayezid II as a waḥf for Sarī Saftīk and his followers. Two documents relating to the waḥf of Bayezid, of 1078/1667 and 1111/1699, are listed in the catalogue of the Topkapı Sarayl (Arşiv Klasavv, Istanbul 1935, i, 52). The area was no doubt occupied by Bayezid I in the course of his Danubian campaigns, but its final annexation by the Ottomans would seem to date from 1332-3.
the tomb of Sarî Saltûk (Mohâtdnâmâ; Hammer-Purgstall, ii, 152). At this time it seems to have been included in the sandîqâ of Silistre, though it was not large enough to be listed as a town (M. Tayyib Gökbilgûn, Kanuni Sultan Süleyman devri başlarindan Rumeli eyaletleri, iv, 278-82). At this time it seems to have been of great importance in the general history of the social and cultural development of the Turkish people. It can only be understood by reference to certain general features of the development of the Seljûq state of Rûm. By the 13th century, the latter had become a state with a strong administrative and cultural framework, the product of Iranian influence, based on the Muslim and mainly Sunnî population of the towns; the Seljûq element of the rural areas and the frontieriers, which had remained far more faithful to the old Turkish traditions and had been penetrated to a much greater extent by heterodox doctrines, was thus becoming more and more isolated. At the very moment when the rift between the State and the Seljûq element was widening in this way, the Seljûqams, as the result of the influx of their Seljûq cousins who had been pushed back first by the Khwarizmians, then by the Mongols, received simultaneously reinforcement in numbers and the seeds of future troubles, in the form of doctrines stemming from Central Asia. This was the environment in which shortly before 638/1240 a Baba (popular preacher), Ishâk, better known under his self-assumed title of er-sül (Allâh), who came from the Kafarsûd region on the Syrian border, began preaching to the Turkomans both of the region south of the eastern Tarus, and of the region of Amasya, and then of all the intervening and surrounding districts. In 638, taking advantage of the fact that the breach between Kay-Khusraw and the Khwarizmians, the remnants of whom, after finding a temporary home in Asia Minor, had taken refuge in Djišra, had weakened the regime, Bâbâ Ishâk raised the standard of revolt. He successively defied several large Seljûq armies, and was only finally defeated and captured by the employment of ‘Frankish’ mercenaries; even then the movement was not completely suppressed.

Little is known of the distinctive features of the movement. The adepts wore a red cap (as did, later, the kâtîl-bâqî), black robes, and sandals. Ishâk called himself a prophet, and allied himself to the extremist forms of Shi‘ism which were prevalent in Irano-Turkish popular circles; his precise relations with another Bâbâ, of Khurâsan origin, Ilyâs, and with the kandars (Djiawâlîq) of Asia Minor, are yet to be established. At all events, the movement was fundamentally opposed to the aristocratic movement of Djiâl al-Dîn Kûmî and the Mawlawîs.

Although so little is known about it, the Bâbâî movement must have been of great importance, since it is mentioned, apart from the Seljûq kid chronicler Ibn Bîbi (phot. MS. ed. 498-502, Houtsma’s summarised ed. 227-231), by the contemporary Arab from Damascus Sîbîn al-Dîjâwî (ed. Jewett 845),

The town has two mosques, one dating from the time of Mehmed II, and the other built by the architect Sinân in the name of the Grand Vizier Allî Paşa Semsî (p.v.): A stone bridge, built during the reign of Murâd IV on the river Ergene, to the west of the town, also deserves mention as a historic monument.

the Franciscan missionary Simon of St. Quentin (in Vincent of Beauvais, *Speculum, xxxi*, 139-40), and, a little later, by the Byzantine historian Bar Hebraeus (ed. trans. Budge, 405-6). The basic problem is to establish the connexion between this movement and, on the one hand, the creation of the Karamânid principality of Taurus, and, on the other hand, in the second half of the century, the religious group of Ḥādījī Kębţah; Eflaki (amend Huart’s trans., i, 296, following Köprülî, *Orig.* (see bibl. below), 407) explicitly connects the latter, which was destined to have such important developments, with the Bâbâ’î movement. There are doubtless other popular creeds of the period of the Mongol Protectorate which are worthy of consideration. Although the texts are so vague, there is little doubt that the Bâbâ’î movement was at the head of currents which the dislocation of the Saljuq state later rendered irresistible, and it is this which gives it its importance.

#### Bâbâk

**Bâbâk, head of the Khurramî sect** [see Khurramî]; his name is an arabised form of the Iranian Pâpak. The son of an oil-merchant from al-Madâ’in (or, according to some, the descendant of Abû Muslim), he was following an obscure calling in Adharbayjan when he was noticed by Diâwedân b. Sahî, head of the Khurramîs, who died shortly afterwards. Bâbâk claimed that the spirit of Diâwedân had entered into him, and began to stir up the people living in the region of al-Badhdh, a place, not extant to-day, situated in the mountainous region of Arrân, not far from the Araxes [see Âgbarbayân, map]. He imparted new vigour to this religious and social movement, derived in part from Mazdakism, and employed particularly violent methods. It appears that his operations date from 201/816-7, and that they were assisted by the rebellious schemes of the governor of Armenia, Hätim b. Hartama, and facilitated by the various difficulties in the eastern province which followed al-Ma’mûn’s return to Baghdad. In 204/819-20, al-Ma’mûn sent against Bâbâk Yahya b. Mu’âdh, who attacked him without success on several occasions, as did other commanders whose efforts were attended by no better fortune. By the end of al-Ma’mûn’s caliphate the revolt had spread as far as the Dîbâl, and first concern of al-Mu’tasîm was to extirpate the insurgents in this region. In 220/835, he placed al-Afghân [g.v.] in charge of operations against Bâbâk. This commander rebuilt the fortresses on the al-Badhdh road which Bâbâk had destroyed, and, despite the defeat suffered by Bughâ the Elder at Hashtâd-Sar, succeeded in surprising one of the rebel leaders, Târkhan. Then, reinforced by troops under Diâ’far al-Khayyât and by Abû Dula’s volunteers, he established in 222/837 a camp, protected by mountain scouts, from which he harassed the fortress of al-Badhdh. After an unsuccessful attack by the volunteers, al-Badhdh was taken and sacked on 9 Ramaḍân 222/15 August 837 as the result of an assault by the troops from Fârghânâ. Bâbâk fled, and after being handed over to al-Afghân by the Armenian elder Sahî b. Sunbât, with whom he had taken refuge, was sent to Samarrâ where he arrived on 3 Saḥar 223/4 January 838. Al-Mu’tasîm had him paraded on an elephant and executed with extreme cruelty; his body remained hanging on the gallows, which gave its name to a quarter of the town.

The capture and execution of Bâbâk did not put an end to the Khurramî movement, which continued to give evidence of its existence during the 3rd/4th century; the devotees of the former rebel, calling themselves Bâbâkiyya, continued in the 5th/11th century, at al-Badhdh, to wait for the Mahdî and to practise certain special rites.

Egypt and Western States, written in Latin and published by Amari. The name may also be found in the contemporary literature of Europe as well as in charters; for example in the works of the traveller Mandeville and of Boccaccio who calls Saladin “Soldano di Babilonia”.

BāBān, the name of an important family and dynasty of Irākī Kurdistan. It rose early in the 11th/17th century from an obscure origin in the Fīshād country in the person of one ʿAbd al-Fāqīh, whose son became a power, and his grandson Sulaymān Beg a major power, in the Sharḥīʿīr era. They made their home at Kūt Kāla, which remained the Bābn head-quarters until the foundation of Sulaymānīyya [g. v.] in 1708/1783; and in spite of an unsuccessful invasion of Persia, and chequered fortunes in his own newly-crested principality, Sulaymān Beg gained a measure of recognition from the sultan and transmitted a princely position (or at least princely pretensions) to his sons. Under his grandson, in the 12th/18th century, Bābān rule, always insecure and unaccompanied by any regular administration, stretched from the Lesser Žāb to the Sirwān (DIYĀLĪ). In spite of the violent fall of Bakr Beg and the re-assertion of Turkish authority, the Bābān prince of the time (Khāna Pasha) gave important military help to the Žāb of Baghdad in the struggle against the Persians (1316-1326/1754-1764). Under his nephew Sulaymān Pīshā (1167/1754) Bābān rule covered the sīndāb of Koy, Khānīḵān and wide areas of Western Persia; but it remained precarious, resented by the Turkish authorities in the Irākī u/Irākī, threatened by rivals in the same family, and weakened by ceaseless intrigues with (and by) Persian supporters of this or that candidate. In these conditions, even valuable services rendered from time to time to the pāshās of Baghdad could not secure consistency in Turkish policy towards the Kurdish principality, nor a respectful attitude by the latter; even the greatest of the Bābāns—notably ʿAbd al-Rāḥmān Pāša, in power (with interruptions) from 1304/1789 to 1227/1812—fell victims every few years, or months, to the constant vicissitudes of frontier warfare and intrigue, and the rivalries among their brothers and cousins. Their territory was more than once occupied by Persian or Turkish forces.

The final eviction of the Bābān rulers, which was anyway inevitable under the modernising policy of the Turkish Government after 1246/1830, was the easier since the appearance of signs of Turkic-Persian accord—frontier agreements were reached between the two powers in 1235/1812 and 1264/1847—and the destructive rivalries of the sons of ʿAbd al-Rāḥmān Pāša. In spite of a brief “Indian summer” when new weapons and modern military methods were introduced in the Bābān armed forces, the centralising efforts of the mid-century wāli of Irāk prevailed finally in 1267/1850, when the last of the Bābāns prince left Sulaymānīyya. Numerous descendants of the family survive.

BāBār, the name of a certain distinctive charm. He is however, chiefly remarkable for the virtuosity and richness of his letters in rhymed and cadenced prose. In this genre, and in his own period, he stands out as a master.

Mubarak, La Prose arabe au IVe s. H., Paris 1931, 129 ff.; idem, al-Nāṣr al-Fānnī, Cairo 1934, i, 286-96, ii, 226-42; for the rest of the bibliography,
The information previously possessed on Babylon’s history and culture, following its downfall, was in a state of confusion and contrasts, as set forth above. Actually, they had no other established reference on this subject but the relevant accounts mentioned in the Old Testament, statements related by some of the ancient Greek historians of the classical period and sagas transmitted by uninformed people.

The real facts about this city were not discovered until the arrival of archeologists at its ruins early in the 19th century A.D.; they brought to light innumerable relics and artifacts, among which were tablets with cuneiform inscriptions. Upon deciphering these writings, practically all of the facts about this city were set in the right order, thus putting an end to the numerous previous legendary and unfounded accounts; these are now replaced by established facts, which are found in the many works on this city in various European languages.

**Bibliography:**

**Bâbis** followers of the religion founded by the Bâb [q.v.]. The history of the Bâbis has been and still is, at least in the East, one of persecution. It can be divided into two phases: the first, from the foundation of the new faith (1844) up to the persecutions following the attack on Najîr al-Deh Shâh (1868-1852), which seemed as though they would crush the new movement for ever, a period characterised by a frequently violent attitude on the part of the Bâbis themselves; the second, which might be called ‘pacifist’, from that date to the present day, a period which has seen the schism of the Bâbis into two factions of unequal numbers and importance. After the first dissemination of the faith following the declaration of the founder’s mission (see Bâb) and the first persecutions, which the Bâbis in various localities r.sisted with force, the most important event in the history of the community is the convention of Badaṣht (1264/1848), at which the Bâbis, abandoning their initial pre-cautions, openly declared their total secession from Islam and the khāṭa; in this a major role was played by the famous Bâb heroine, the beautiful and cultured poetess Zarrîn-Tādî, better known by the names of Kurrât al-ʿĀyn and Dînâbâbī Tâhîra (‘H. H. The Pure’), born at Kazwîn, the daughter of the erudite theologian Mullâ Šâhîb. There, first among Persian women, she dared to show herself unveiled to her brothers of the Faith, a living example of the abrogation of the Islamic khâṭa. After the convention, in which many of the principal Bâbis, among them the future Bâhá’ Allâh [q.v.], took part, Mullâ Ḥusayn of Bûshrâyâ (see Bâb) ascended himself with a small troop of Bâbis in the
sanctuary of Shaykh Tabarsi near Bārfurūsh, where with another ‘Letter of the Living’, Mullā Muḥammad ‘Allī Khān Khānlī called Kuddūs, he resisted heroically the troops of Nāṣīr al-Dīn Shāh (shortly afterwards succeeded by Muḥammad Shāh), even making successful sorties; but eventually Mullā Ḥusayn was killed, and Kuddūs and the other survivors surrendered when it was promised that their lives would be spared, though they were in fact vilely and cruelly massacred (Ramadan 1265/July–August 1849). Shortly afterwards, at Nayriz in Fārs, another heroic Bābī insurrection took place, led by one Sayyid Yāḥyā-ī Darbī, who had been converted by the Bāb at Shīrāz (see Bāb) and who had assumed the name of Wāḥib; the Bābīs, barricaded within the old citadel of the town, defended themselves bravely, with the sympathy of the population, for several days until they were all massacred (January 1850).

Almost at the same time there occurred an insurrection of even greater magnitude at Zangān. The Bābīs, under the leadership of Mullā Muḥammad ‘Alī-ī Zendānī, surnamed Ḥudjdijat (‘the Proof’), barricaded themselves in the citadel called Kīn-ī ‘Alī Mardān Kūsh. After various turns of fortune the Bābīs, who numbered more than 3,000, were cruelly massacred (February 1850). Four months prior to the execution of the Bāb, Tehran also had her heroes, the so-called ‘secrets martyrs of Tehran’, one of whom was the tutor and uncle of the Bāb; their heroic conduct in the face of most horrific punishment is a glorious chapter in the history of the Bāb faith. The unsuccessful attempt on Nāṣīr al-Dīn Shāh (28 Shawwāl 1268/16 August 1852) by two Bābīs maddened by the persecutions led to a new reign of terror, to which numerous personalities of the Bābī faith fell victims. Among these was the poetess Kūrrat al-Ḍhirī (q.v.) and the followers of Ṣubb-ī Azāl, who adhered to the letter of the Bāb. The Azāls remained always in the minority, however, and even the number of 50,000 which some authorities have ascribed to them seems in fact to be somewhat exaggerated.

BĀBūR, Zohīr al-Dīn Muḥammad, soldier of fortune, one of the Mughal rulers in India, diarist and poet, was descended on his father’s side in the fifth generation from Timūr and through his mother Kūṭūk Nūgār Kānum in the fifteenth degree from Čingīz Khān. He was born on 6 Muḥarram 888/14 February 1483 and succeeded his father ‘Umar Shāykh as Mirāz of Fārgānā in Ramadan 899/June 1494.

Bābur inherited his father’s struggle with his kinsmen for the towns and fertile areas of Central Asia. By Rabī‘ I 903/November 1497 he had fended off the attempts by his elder paternal uncle Sultan Ahmad Mirzā of Samarqand and by his elder maternal uncle Sultan Muḥammad of Taqḵent to deprive him of his father’s position in Fārgānā, and using quarrels among his cousins had occupied Samarqand. Four months later lack of booty and conspiracy at Andīḏīn, his headquarters, forced him to let Samarqand go. Andīḏīn he soon recovered and then so as soon lost to the Mughals under Taqḵal who nominally were supporters of his brother Djaḥāngīr. In 905/1548-9 Bābur divided Fārgānā with his brother, married and was forestalled in a race for Samarqand by Shāybaṇ Khān Uzbak (Ozbek). Next year he took the city by surprise, only to be starved out by Shāybpān Khān after losing the battle of Sar-i Pol in Ramadan 906/April-May 1501. Bābur, having relinquished Andīḏīn to his brother when he took Samarqand, now became a fugitive nomad, dependent for his personal safety on ties of kinship.

His uncle, grudging hosts, the Khāns of Taqḵent and northern Mughalāstān, furnished him with troops against Taqḵal and finally marched to his support. Taqḵal however appealed to Shāybpān Khān who routed and executed the Khāns at Arīqyān in Dhu ‘l-Hijjah 908/June 1503.

For nearly a year Bābur wandered with a small following among the nomads of remote Sugh and Ḥusayn, safe in their hospitality. But Shāybpān Khān’s continuing success decided Bābur to seek a headquarters outside the main area of Uzbak interest. In Muḥarram 910/June 1504 he turned for Kābul, an uncle’s possession until 907/1501, but then in Aḏrūg hands. Joined by other refugees from the Uzbaks, Bābur, with his brother, secured Kābul and successfully asserted his claims to tribute from the surrounding Aḏrūg tribes. By 911/1506 Bābur could leave Kābul for Herāt, in response to Sultan Husayn Mīrzā Bāykapār’s appeal for aid against the Uzbaks.

The death of Sultan Bāykapār and the ineffectiveness of his sons allowed Shāybpān Khān to conquer most of Kūrkhāsān, so that Bābur recrossed the Hindū Kūsh empty-handed. In 913/1507 he took Kandahār from the Aḏrūgs, but withdrew towards India rather than defend it personally when Shāybpān I Khān besieged the new acquisition. But Shāybpān Khān came into conflict with Shāh Ismā’īl Šafawī,
who defeated and slew him at Marw on 1 Ramadan 916/2 December 1510. Babur thereupon occupied Samarkand for the third time, in Rajab 917/October 1511, but as a client of Shāh Ismā‘il, making an outward profession of Shi‘ism and probably striking coins in the name of his Safavid overlord. (The numismatic evidence on this is equivocal. See bibliography). His acceptance of Shi‘ism cost him popular support, and when defeated by the Uzbek at Kul-i Malik in Şafar 918/15 May 1512, he could not hold the city. On the defeat at Ghujjūwān on 3rd Ramadan 918/12th November 1512 of the brutally intolerant Safavid general Najdmi Thānī, whom Babur hastily abandoned, Babur’s last attempt to win the city nearest his heart ended.

After two years adventuring in the Kandahar area Babur returned to Kābul, his centre thenceforth for enterprises to the more promising east and south. Several attempts to retake Kandahar from the Ardhanās ended in its occupation by negotiation in Dżumādā I 928/May 1532. This secured, Babur turned more vigorously towards Hindustān, probed by minor expeditions since 922/1516.

The victor at Kandahar was invited into Hindustān by Dawlat Khān Lodī of Lahore and ʿAlam Khān, uncle of Ibrāhīm Lodī, sultan of Delhi, to help them against Ibrāhīm. On his second advance, having dispossessed Dawlat Khān and utilised ʿAlam Khān to attract Afghan support, Babur destroyed the forces of Ibrāhīm Lodī at Fādpat in Rajab 932/April 1526. He occupied Delhi and his forces pressed as far eastwards down the Ganges as Dżiwānr and Uñŷāpurū. Babur’s victory at Āḏbāḏūn over Rānā Sānuč of Čitor in Dżumādā II 933/March 1527 had the result that the encircling movement with telling effect in his Indian career. His experience enabled him to hold together small collections of defeated but still personally ambitious Timūrids, and the even less reliable Mughals, who had gathered around him in Kābul, until success gave him the undisputed power to command.

LITERARY WORKS: i. Bābūr-nāma. In this famous autobiography, written in Caghatay Turkish, Bābūr tells his story from childhood to the last years of his life, with no attempt to conceal his weaknesses, his mistakes, or his defeats. It is in no sense an apologia pro vita sua; indeed, so matter-
of-fact and unemotional is the tone of the work that the casual reader might not recognise it as the memoirs of a skilful and valiant soldier and the founder of a dynasty, which closer study reveals it to be. It cannot be said that Bābur is impartial in his picture of himself, his friends, or his enemies. For example, we can see that his feelings got the better of him in his evident desire to belittle the important and worthy Shāybin Khān. But despite occasional injustices of this nature, the Bābur-nāme is far more reliable than the general run of such works. The author's keen powers of observation and his analytical mind are apparent in his descriptions and explanations of works of art, of flora and fauna, of the group-psychology of peoples, and the characters of individuals. As a literary work, the simple and chaste language of the Bābur-nāme, its natural style, its colourful and lively descriptive passages, are some of the reasons which justify our regarding it as one of the finest examples not only of Caghātay but of Turkish prose generally.

2. Arād risāle is. It was known that Bābur had written a Caghātay treatise on prosody, from the Bābur-nāme, certain copies of his Dīwān, and the Muntakhab al-Ṭawārikh of Bādānūn (Calculta 1668, i, 343), but the work did not come to light till 1923, when it was discovered by M. Fuad Köprüli in a Paris manuscript (E. Blochet, Cat. des MS turcs, Paris Bibl. Nat. Supp. no. 1308). It does not differ greatly from similar works in Persian; its chief importance is that on certain Arūd verse-forms used by the Turkish poets its information is fuller than that given by Nawā'ī in his Mitān al-Awzān. Bābur gives both Persian and Turkish examples of metres in general use, including some from his own poems, but only Turkish examples of metres of his own invention. At the end of his Dīwān he states that the Arūd risāle was finished 2 or 3 years before the completion of the conquest of India; i.e., between 932 and 934/1525-6.

3. Mubayyān. A mathnawi in ḫuff trimeter catalectic (fa'slatun maš'īlun fa's'īlum), completed, according to a reference in the Arūd risāle, in 928/1522-3. It deals with some problems in Ḥanafī law, together with some verses of paeinquent. This simple didactic work is of no artistic importance, but it does show that Bābur was interested in ḫīb and was a sincere Ḥanafī. Till recently it was known to Orientalists as Mubīn; A. S. Beveridge so refers to it, even though he mentions that the Indian historians Abu 'l-Faḍl and Bādānūn read the title as Mubayyān (and that Sprenger called it Fīkh-i Bābur). Mubīn is in fact the name of a commentary on this work, written by Bābur's secretary, Shāybin Zayn.

4. Translation of Risāla-i Wādiyya. The author of this work on Şūfi ethics was Khāzва 'Abayd Allāh Aḥrārī, the great Central Asian Şūfi and spiritual guide of the Timurids. As the title implies, he wrote it at his father's insistence. Bābur's Caghātay translation was made in 935/1528-9, and forms part of his Dīwān. It is a mathnawi of 243 lines in Ramāl trimeter catalectic (fa'slatum fa's'īlum fa's'īlum). Though pleasantly and simply written, it has no aesthetic merit, but is of interest as showing Bābur's Şūfi leanings.

5. The Dīwān. The bulk of this is in Turkish, but some of the poems are in Persian. The verse-forms represented include the ghásal, mathnawi, rubā', ḫīfa, tuṣug, mu'allama, and mulad. We find in it the various verses whose composition he mentions in the Bābur-nāme. The existing copies are not arranged in the classical Dīwān manner; the poems are set down in no apparent order. In the technique of versification Bābur was not inferior to any of the 16th-century Caghātay poets, not even Nawā'ī, and he expresses his thoughts and feelings in an unaffected language and style. Side by side with Şūfi songs of love and wine there are poems on everyday themes. Signs of the influence of earlier poets, especially Nawā'ī, are not wanting, but there are no slavish imitations. Though Bābur had a taste for literary artifices and poetic tours de force (there are 19 of the latter in the Dīwān), and though, in obedience to the fashion prevailing at the time in both Persian and Turkish literature, he wrote numerous mu'allamāt (the Dīwān includes 52), the greater part of his work is simple, sincere, and natural. He wrote a number of tuṣugāt, a verse-form peculiarly Turkish, as well as some rubātis of great beauty. Among his turkis, which belong to popular poetry, we find one poem in syllabic metre (cf. MTM, i, 27). He was capable of writing Persian poems—there are over 20 in the Dīwān—but his affection for his mother-tongue is evident in the preponderance of Caghātay. Further, in his poems he often refers to the valour of the Turks, and the fact that he is one of them. In this respect he was following the intellectual and literary trend which had begun with Nawā'ī in the previos century and which prevailed not only in Khūrāsān but at all the Timurid courts. The literary influence of Bābur was responsible for the subsequent rise of poets writing in Caghātay both among his descendants and among their courtiers. Certainly the literary historian must assign Bābur a leading position among the Caghātay poets after Nawā'ī.

BABI — BABAD
As Sh! cite theology in general is influenced by Muctazilite speculation, so the Muctazilite argument exist till the object of it exists; what does not yet exist (ma`badm) cannot be known and therefore His knowing follows His not-knowing as soon as things exist (Abd al-Kahir al-Baghdadi, Kitab al-Fark bayn al-Firak, Cairo 1326/1910, 49), subtleties which appear in modern times in the Shi`ite Shaykh sect (RM, xi, 435 ff.). This idea allows for a knowledge in God corresponding to fresh phenomena and a change of mind determined by them. Muslim historians of the sects agree that the idea of badd was first suggested by Mukhtar [q.v.] and then became part of the creed of the Shi`ite Kaysaniyya (al-Fark bayn al-Firak, 36; cf. Ahmad b. Yahya al-Murtada in M. Horten, Die philos. Probleme der spek. Philosophie in Islam, Bonn 1912, 124). This origin of the idea is also ascribed to `Abd Allah b. Nawf (Tabari, ii, 732). When Mukhtar had to fight the decisive battle of his career against the superior force of Mus'ab b. al-Zubayr, he (or `Abd Allah b. Nawf) announced that God had revealed to him that victory was certain. When the alleged oracle was proved false by his defeat, one of the two said, referring to Sura xiii, 39, that something had intervened (badad lahu) which had made God change His mind.

During the calamities which befall the Shi`ite community this idea was accepted as a convenient explanation of the failure of the hopes and prophecies of the defeated imams. It had been God's purpose that the deliverance (farad) and victory of the lawful imamate should take place at a certain moment; He had however changed His plan on grounds of expediency. His promises were an encouragement; had the Shi`a known that victory would come only after one or two thousand years, they would have lost heart. This principle also serves to explain the change in the legitimate succession of the imams when, in place of the predestined Isma`iil, his brother Musa al-Kazim succeeded Dja`far as the seventh imam. They ascribe to Dja`far the words, “God has never been led by a new consideration (to change His mind) as in the case of my son Isma`iil” (ma badad la`dhi kamadi badad fi Isma`ili smi). To many Shi`ite theologians this crass application of badd might have seemed discreditable; so the speech of Dja`far has been made more tolerable by transferring it to abd; God's change of mind is hereby transferred from the son to the ancestor of the imams, to Isma`iil the son of Abraham, the expected `ghabias; God released Abraham from offering the sacrifice which He had originally ordered.

The most important arguments adduced by the Shi`a in support of badd are: A) passages in the Kur'an: xiii, 39; xiv, 11/108 (these are the strongest proofs); lv, 29b; the frequent assertion that God will change His resolve to punish sinners when they repent vii, 152/153; stories like the sparing of the people of Yunes x, 98; the sacrifice of Isma`ili xxxvi, 101/102-107; Moses' talk with God prolonged from 30 to 40 nights, vii, 138/142; B) traditions telling that by the practice of certain virtues (e.g., honouring one's parents) the allotted span of life might be lengthened and the appointed destiny (al-badd al-mubram) might be changed; the prayer of Umar that “God might strike his name out of the book of the damned and write it in that of the blessed” Ibn Khatiba, Ta`wil mukhali al-Badrih, Cairo 1256, 71; C) pious legends from which it is plain that misfortunes threatening individuals may be averted by acts pleasing to God; D) the doctrine of the abrogation of divine laws (masah) which is a tenet of Sunni doctrine; badd is creative cancellation and cancellation is legislative badd.

As Shi`ite theology in general is influenced by Mu'tazilite speculation, so the Mu'tazilite argument
based on al-aslah (the most expedient) is connected with bada*, that God in His dealings with men is guided by expediency and the common good. Accordingly it considers bada* from the point of view that divine decrees may change with changes in the demands of the general good (kadidráli um-umur talabaddal bi-tabaddul al-mas'ildh). Moderate Shi'ites had to exercise much ingenuity in evading the theological antinomies which this conception implies in order to reconcile the assumption of the appearance of new determining moments in God's knowledge, as expressed by bada*, with a belief in His absolute omniscience, in the eternity of His knowledge which is identical with His being, as most Mu'tazilites believed; and to meet the objection of the orthodox to the assumption that God might be ignorant of the end of things (waq'id al-umur) which the admission of bada* implies (cf. Djurgänni on Ṣidd. Mawṣūli, Leipzig 1848, 346). The effort to meet the objections raised from this angle led them, in spite of their protests against the Jews and Sunnites who denied bada*, to devise formulae which would meet these objections and to accuse their Sunnite opponents of crediting them with a false idea of bada* which was invented by the Sunnites. Their contention is that the term bada* is not to be understood in its literal meaning but metaphorically (madjdz an); the latter explain that a future bada* implies a change in the divine knowledge or regret for what has happened. God does not will absolutely what He has announced but only so far as it is determined by the common good. In fact, the difference between the Shi'ite and Sunnite theologians is only an idle war of words for the former explain that a future bada* is decreed in the eternal foreknowledge of God which includes all particulars (sād waq'id al taṣfī). A remarkable way of reconciling bada* with the doctrine of the Preserved Tablet (al-lash al-makfīz, Sūra lxxxv, 22) is the assumption of two tables of fate, one on which the unalterable decrees of fate are set out and a lash al-makw wa 'l-iṣhāq (cf. Sūra xiii, 39) which contains those decrees which may be altered by the intervention of new determining moments (Dildār *Allī, i, 114 foot), a view which has also penetrated into Sunni circles and given rise to esoteric mystical subtleties (kalimāt 'adāq wa asrār khāmida, Fakhir al-Dīn al-Rāzī, Maṣ'īth al-Ghayb, 5, 310). Therefore two kinds of divine knowledge must be distinguished; 'im maškūm, the unalterable knowledge the details of which God makes known to prophets and angels, and 'im maškūm, the knowledge entrusted by God to no one, which concerns matters in suspense (umr mašb̲a'fa 'ind alāh) (Kulīn 85). Thus God knew that He would not punish the people of Yūnus and did not tell him so that he might worship God wholeheartedly while in the fish. A contrary view is that "angels write on lash al-makw wa 'l-iṣhāq". According to the Shi'ite Fakhr al-Dīn al-Rāzī, the greatest stress on the concept of bada* was that of Abū al-Muḥāfīz al-Firārī, one of the Shi'ite Zaydi sect, who rejected the Imāmītes with embracing two errors, takhyya [q.v.] and bada* (Shahrastānī, 119 foot). The bitterest opponents of bada* were the Jews who based their rejection of the abrogation of divine law (naṣṣḥ al shari'a) on the fact that this proposition implies the recognition of bada* as was shown by the Jewish theologian Yabāy b. Zakariyya al-Kātib al-Ṭabarānī in his controversy with al-Mas'ūdī al-Ṭanbīh, 113, 13; cf. Faruqī.'

In the 3rd/9th century bada* seems to have been one of the problems for testing sagacity and shrewdness because of the difficulties it raised which could only be resolved by hair-splitting. This can be inferred from Djāhīz, Tarbiy (ed. Pellat, §§ 74, 189; however see ibid., index, s.v. RDF).

BADAJOZ [see bātalwās].

BADAKHSĀN, also frequently written BADAKHSHĀN and sometimes in the literary language (with the Arabic plural Inflection) BADAKHSHĀN, a mountainous region situated on the left bank of the upper reaches of the Āmū-Daryā or more accurately of the Panj, the source of this great river; the adjective derived from this noun is Badakhshāni or Badakhshāni. J. Marquart (Ernäshahr, 279) gives this name the meaning of "region of Badakhshā or Balaksh, a type of ruby, which, it is said, is only found in Badakhshān, on the Kokha". It is more probable, however, that the word Badakhshān (whence the French Balais, the English Balas) is a dialectal form which originally denoted the region and which only later came to be used to denote the type of ruby in question. Yākūt (i, 528) gives the form Badakhshān as the one most popularly used for the name of the region. Marco Polo also gives the same form. The mines from which the rubies were extracted were situated, as is already asserted by Marco Polo, outside Badakhshān proper—in Shughnān on the right bank of the Āmū-Daryā; during the historical period, however, the country was usually subject to the same power as Badakhshān. The rubies (Ar. la', Pers. lâl) of Badakhshān were famous in the Middle Ages throughout the Muslim world. In Persian poetry, the expression "lâl-i badakhshān" or "lâl-i badakhshāni" often denotes in a figurative sense wine or the lips of the Beloved. In Central Asia, this expression is today in universal popular use. The region which contains the mines in question is at present a dependency of the territory of Bukhārā, which is subject to Soviet rule. Nevertheless the mines are worked with the same primitive methods as before, and still have not acquired any importance for the European precious-stone market.

The Kokča or Kōkče, called Khirnāb in the Budād al-ʿĀlam (written in 372/982-3), a tributary of the Āmū-Daryā, waters Badakhshān. From the economic point of view, the valley of the Kokča and its tributaries alone have always played an important part for the region. In this area were situated the towns of Badakhshān—doubtless near the present capital of Fayghābād—Djirm and Khām. The last two, which are mentioned in the earliest Arab documents, have preserved their names to this day. The lapis lazuli of Badakhshān, equally famous in the Middle Ages, came from mines situated on the upper reaches of the Kokča. The trade in these gems at present a monopoly of the Afgān government,
and they are only exported to India. In addition, Badakhshan possesses iron and copper mines.

The first mention of the name of Badakhshan occurs in the Chinese documents of the 7th and 8th centuries A.D., in Hsuan-tsang in the form Po-t'o-ch'angna, the ancient pronunciation of which, according to Schlegel, was Pat tok-ts'ong-na, in T'ang-shu in the form Pahto-shan, in the Encyclopaedia Ce-fu-yuen-koci in the form Pu-t'o-shan. The Chinese described the country as forming part of Tuho-lo (Turkistan). The Arabs also gave two meanings to the word Tukhristan: in the strict sense, Tukhristan was only the region situated between Balkh and Badakhshan, in the wide sense, it comprised all the regions east of Balkh and on both banks of the Amu-Darya. The name clearly derives from the Turks who made their appearance in the 2nd century A.D. and conquered the Graeco-Bactrian empire. In the 5th century A.D., these same territories were occupied by the Haxtal (the Ethnolatines of the Byzantines); in 'Awil's Anthology, compiled in the 7th/11th century, we find a story which describes how a king of the Haxtal conferred on his son the domain "of Dzirm and Badakhshan" (Barthold, Turkestan, 1, 91). In the 6th century A.D., the Turks put an end to the empire of the Haxtal; at the time of the first Arab invasions by the order of Tukhristan (in the wide sense) bore, according to Arabic and Chinese documents, the Turkish title of Yabghu (Budíin) (in Arabic_Djapbhaña); the princes of every country, including also the prince of Badakhshan, were his vassals. We have no precise information on the date of the conquest of Badakhshan by the Arabs and the manner in which Islam was introduced there. Abu Bakr only mentions the name of the country once. Among the events of the year 118/736, he describes a campaign against "Kishm in the country of Djapbhaña" and against more distant places. According to al-Ya'kubi (Buldán, 288), Djirm in Badakhshan was the city which marked the frontier of Islam on the trade route to Tibet via Wakhsh. In the same passage, a Turkish prince, otherwise unknown, called Khwa-ham (this is the correct form of the name), is described as "king of Shikinan and Badakhshan". Al-Iṣṭakhrî (278) describes Badakhshan as the "territory of Abu 'l-Fath"; this is doubtless a reference to the prince Abu 'l-Fath al-Yaftali, whose son Abu Nasr, according to Sam'ud (W. Barthold, Turkestan, 1, 69) and Yaftali (iv, 1023), fought against Kara-Tegus, the lieutenant of the Tukhristan (d. 340/952-2, cf. Ibn al-Aghir, viii, 157, 370). Apart from these facts, we know nothing of the political situation of Badakhshan during this period.

In the 9th/10th century, the poet Nasir-i Khusrav brought Isma'ili doctrine to Badakhshan and preached it there with success. His tomb on the upper reaches of the Kokcha is still shown today. His teachings have been preserved to this day in the formal and the frontier regions. In the second half of the 6th/12th century, Tukhristan in the wide sense (with Badakhshan) came under the rule of a side branch of the house of Ghúr, which resided at Bámíyán and which, like other branches of this dynasty, was dispossessed at the beginning of the 7th/11th century by the Khwarizm-shah Muhammad.

Badakhshan escaped the fury of the Mongol invasion and remained up to the 9th/15th century in the hands of its national dynasty. The legend which traces the descent of this royal family from Alexander the Great was first quoted by Marco Polo, and is subsequently frequently mentioned by the Muslim historians. Muhammad Haydar (Ta'rikh-i Kashf, trans. E.D. Ross, 203) attributes to the daughter of the last ruler the statement that her ancestors had been kings of Badakhshan for 3000 years. Timür himself and his successors only succeeded after hard battles in obtaining recognition of their suzerainty, and the country was only annexed to the Timúrid empire by Timúr's great-grandson, Abú Sa'id. The last prince, Sháh Sultan Muhammad Badakhšán, had previously renounced obedience to the ordinances of Alexander the Great, in order to compose, under the pseudonym of Láli, a Persian diván (Ta'rikh-i Kashf, 147). He submitted without resistance to the army sent by Abú Sa'id, and went to Haráth; his son fled to Káshghávar; Mirzá Abú Bakr, son of Abú Sa'id, was named prince of Badakhshán.

Shortly afterwards, the prince returned from Káshghávar; Abú Bakr was driven out, and Badakhshán had to be conquered afresh. With this object, Abú Sa'id had Sháh Sultan Muhammad executed in 871/1466-7 (Dawlatsháh, 453). It follows that, on the inscription discovered in 1883 by the British, according to which this Muhammad constructed a stone bridge in 881/1479-80 (Ta'rikh-i Kashf, 221), the date has doubtless been misread. Abú Bakr was later driven out of his kingdom by his brother Sultan Mahmúd, prince of Hijar. Up to the conquest of Hijar by the Ōzbegs (beginning of the 15th century), Badakhshán continued to form part of its territory. A national movement arose in Badakhshán against the Ōzbeg conquerors. At the head of this movement were Mubárak Sháh and Zubayar Rágí. It is said that they took as their base a fortress situated on the left bank of the Kokcha, which still today bears the name of Kálªa-i Zafar ("Victory Fort") given to it by Mubárak Sháh. The Ōzbegs were driven back; the Timúrid Násir Mirzá (brother of Bábúr), whose aid had been invoked by the insurgents, was proclaimed ruler of Badakhshán (end 910/February 1505), but, unable to come to terms with the leaders of the rebellion, was driven out two years later. In 913/1507-8, the Ōzbegs, led by Sultan Mahmúd Mirzá, went to Badakhshán with the consent of Bábúr and was received at Káľa-i Zafar. Shortly before, Mubárak Sháh had been killed by his comrade Zubayar. The latter, who tried to keep power in his own hands even after the arrival of the new sovereign, was removed by assassination. Shortly afterwards, Sháh Rájî al-Din, leader of the Ismá'íllis of Kuhistan, made his appearance in Badakhshán, gathered round him the followers of this sect, and subjugated part of the country. However, he was put to death in the spring of 1509, and his head taken to Káľa-i Zafar and presented to Mirzá-Khán. The latter died in 926/1520 on the throne of Badakhshán. Bábúr summoned Súlaymán the son of Mirzá-Khán, who was still a minor, and replaced him in Badakhshán by his own son Humáyún. In 935/1528-9, Humáyún was recalled by his father and sent to India. After an unsuccessful attempt by Sa'id Khán, ruler of Káshghávar, to seize possession of the country, Súlaymán was recognised as prince of Badakhshán both by Bábúr and by Sa'id Khán (1536). Súlaymán reigned until 983/1575; driven out in the first half of that year by his grandson Sháhrukh, he retired to India and thence to Mecca, but later returned to his own country. In 1584, Badakhshán was conquered by the Ōzbegs under 'Abd Alláh Khán. Súlaymán and Sháhrukh were forced to flee to India, but
returned later and made several attempts to repel the conquerors. At the beginning of the 17th century there occurred another insurrection, provoked by Badi' al-Zamán, son of Shahrukh. In 1665, the Timúrids occupied both Balkh and Badakhshán, but in the autumn of 1669 the two countries were finally ceded to the Özbegs. The Özbeg empire in the 17th century was still divided into several independent states. In Badakhshán, a dynasty was set up founded by Yār Beg, who built the town of Fayžhābād. The representatives of this dynasty also, claimed descent from Alexander the Great, a claim which they still maintained in the 19th century. Like the other Özbeg princes in present-day Afghánistán, these princes bore the title of Mir, an abbreviation of Amir. In 1822, Mir Muhammad Sháh was dethroned by Murád Beg, ruler of Kunduz. Mirzá Kalán, a dependant of Murád Beg, was despatched as prince of Badakhshán. After the death of his sovereign, he declared himself independent and even became for a time master of Kunduz. His son and successor, Mir Sháh Nizám al-Dún, died in 1862. The latter’s son Džáhnádár Sháh, from 1867 onwards had to contend for his throne with another prince of the same dynasty, Mámúd Sháh. In 1869, Džáhnádár was decisively repulsed and, after one last effort, he withdrew in 1872 to Russian territory, and Učkurgán in Farghánā was allotted to him as his place of residence. An annual pension of 1500 roubles was assigned to him. In 1878, however, he was assassinated at Učkurgán by unknown assailants. In 1879, the Afghán government deposed Mámúd Sháh; he was sent to Kábúl, where he remained until his death. His territory was annexed to Afghánistán, and formed part of the province of Turkistán.

From 1725 onwards, there are reports in Russia of the rubies and lapis lazuli of Badakhshán and also of its alleged gold and silver mines. In 1733, “the conquest of the rich country of Badakhshán” is mentioned as one of the aims of Russian policy in Central Asia, but Russian penetration only really began after 1876. In 1885, Post Pámírskii was founded on the Murgháb, and in 1891-2, after an armed encounter at Yeşálí-Kul, the Russians occupied the whole of eastern Pámír, which became the “district of Pamír” of the region (oblast) of Farghánā, administered by the leader of the Russian military detachment in Pámír.

On 11 March 1895, an exchange of notes between the British and the Russians in London delimited the frontiers of Pámír between Afghánistán and the principality of Buhkará under Russian protectorate; Badakhshán proper was left in the hands of the rulers of Afghánistán, while the territories of western Pámír lying north and east of the Pándj were allotted to Russia.

The revolution of 1918 abolished the principality of Bukhárá, but Soviet power did not become firmly established in Pámír until 1925, after four years of fighting between the “White” elements and the basmagí [q.v.].

Autonomous region of Soviet Gorno-Badakhshán.

On 2 January 1925, the two parts of Pámír (east and west) were reunited in a “Special Region of Pámír”, attached administratively to the Central Executive Committee of the Soviet Socialist Republic of Turkistán (founded on 14 October 1924), in December of the same year its name was changed to the Autonomous Region of Gorno-Badakhshán, forming part of the Autonomous Soviet Socialist Republic of Tadjikistán (which on 5/12/1929 became the Soviet Socialist Republic of Tadjikistán). Its capital is Khorog (Khorg).

Gorno-Badakhshán comprises all the territory of Soviet Pámír; it is bounded in the north by the Trans-Alaí chain, in the east by Chinese Sinkiang, in the south by the Afghán possessions and in the west by the Pándj and by the Darwáz and Academy chains. Its area is 61,900 sq. km.—In 1951, the Autonomous Region was divided into 7 districts (tuman = “zone”):

1. Shughán (administrative centre Khorog), comprising the Ghund valley.
2. Ishkashim (administrative centre Ishkashim), comprising the upper valley of the Pándj and the former territories of Wakhán, Ishkashim and Ghurán, up-stream from the confluence of the Pándj and the Shákhp-dara.
3. Roshk-Kal’a (administrative centre Roshk-Kal’a) in the Shákhp-dara basin.
4. Roshán (administrative centre Roshán) in the Pándj valley downstream from Khorog.
5. Bartang, comprising the basin of the Bartang river and its tributary the Kudara, as far as Lake Sarez.
6. Murgháb (administrative centre Murgháb, the former Post Pamírskii) comprising the whole of eastern Pámír.
7. Wán (administrative centre Wán), comprising the Wánč and Yaghulán valleys.

In 1954, the Bartang district was abolished, and its territory incorporated in the Roshán and Wánč districts.

At the beginning of the 20th century, the total population of Pámír (Russian and Bukhárán) did not exceed 20,000; since 1925, as the result of improved communications and the introduction of new agricultural techniques, it has increased appreciably. At the 1926 census, there were 28,924 inhabitants, and at the 1939 census, 41,789. In 1956 the total population was in the region of 62,000.

Ethnically, Gorno-Badakhshán comprises two quite distinct regions: 1) the high plains of eastern Pámír are inhabited by a small number of Kirghiz nomads. In 1926, there were 2,660 belonging to the Ičiklik tribes, made up of the following clans: Kesek, 1,400: Teit, 800: Kıpčak, 300: Naiman, 100. In 1939, their number did not exceed 3,000, or about 11% of the total population of the region. These Kirghiz are nominally Sunnis of the Hanáfi rite. 2) In the valleys of western Pámír live Iranian peoples whom their Tadjik neighbours call “Chaláč”, and the Russians “Gornyje tadjikí” (an inaccurate term, which causes confusion with the Tadjik of the mountainous regions of Darwáz, Karataegín and Zarafshán), or “Pámírsku Narody” (“Peoples of the Pámír”). The inhabitants themselves call themselves “tadjikí”, a term which also leads to confusion, and call their neighbours in Darwáz who speak Tadjik, people who speak Persian (pársí-gúy). Their total number is estimated at more than 50,000 or 85% of the total population of the Autonomous Region. They are for the most part Nizáří Ismá‘ílíls [q.v.], apart from a small number of the Bartang, the majority of the Yárghuláni, and all the Wánč, who are Hanáfi Sunnis.

The people of the Pámír constitute several groups:

1. The Shugháno-Roshk group, numerically the most important (35-40,000 people), comprising: a) the Shughí (Hugnî), numbering 20-30,000, in the districts of Shughán [q.v.] and Roshk-Kal’a (valleys
of the Ghurid, Pandj and Shakh-dara); b) the Roshan: about 8,000 in the Roshan district north of the Shughni (Pandi valley); c) the Bartang: about 2,000 in the Bartang district (valley of the river Bartang), and d) the Oroshor (300 in 1925). These four peoples speak closely-related dialects.

2. The Wakhi (Wukh, Wakhabd) [q.v.], numbering 6-7,000, living in the district of Ishkashim situated in the southern part of Soviet Pamir, the high valleys of the Pandi and the Wakhan-Darya (a similar number of Wakhi live in Afghanistan).

3. The Yaguhlami (Yuzdom, Zgamik), whose number does not exceed 2,000, distributed among 13 villages situated in the valley of the river Yaguhlami (Wan district).

4. The Ishkashimi (Ishkashum), numbering 400 in Soviet Badakhshan (1,500-2,000 of their brothers, who speak the Zebaki and Sanglicl dialects, live in Afghanistan), living in one village only, Rym, on the upper Pandi (Ishkashim district).

Finally, in the extreme north of the Autonomous Region, in the valley of the river Wanâ, live the Wanâ, who are completely tajikised and whose language has not been in use for more than a century.

The peoples of the Pamir belong to the eastern Iranian linguistic group; none of the languages is fixed by writing, despite an abortive attempt by the Soviet authorities in 1931 to give the Shughni a Latin alphabet and make it a literary language (in 1931 a Shughni primer for children was published in Stalinabad (A. Djakov: Xugnoni alifba Kudaken âat, and in 1936 Tadjikistan State Publications published the first works in Shughni: cf. Revolution i Nationalnost, No. 4, 1936). Tadzhik is the language of civilisation (administration, courts, schools, the Press), and bilingualism (local dialect + Tadzhik) is general. Some languages, such as Ishkashimi, are fast disappearing and only survive as “domestic languages”, others (Bartangi, Roshan . . .) are strongly tajikised; on the other hand Yaguhlami, which is extremely isolated, and Wakhi are putting up a more effective resistance.

In 1954, Gorno-Badakhshan possessed seven newspapers; two of these were regional organs appearing at Khorgor: Krasnyi Badakhshan (in Russian) and Badakhshanskii Svidkh (in Tadzhik); four were local papers in Tadjik, namely the Roshani-Svidkh (at Roshan); Habbati-Wan (at Wan) and the Buxori-Svidkh and a Kirghiz paper at Murghab.

Tadzhik influence was also exerted through teaching. In 1954, there were in the region some 200 schools, of which 11 were secondary (decennial schools), and a teaching institute at Khorgor with a total of 12,000 pupils.

Formerly extremely isolated, Gorno-Badakhshan has since 1934 been connected with the Farghana valley by a motor road (the Osh-Murghab-Khorgor road, 740 km. in length), completed in 1940 by the Khorgor-Stalinabad road which follows the Pandi valley. The economy of the region nevertheless is still of a traditional type: nomadic stock-breeding (cows, caprines), terrace horticulture, and silk production in the western part of the region. The country is rich in deposits, some of which have been exploited for a very long time: lapis lazuli and malachite in the Shakh-dara valley, precious stones, gold and copper (near Porshniv).

The capital of the region, Khorgor (927 inhabitants in 1926, 2,500 in 1954) has a few small industrial undertakings.

Information concerning the regions situated on the upper reaches of the Oxus in the 19th century has been collected with the greatest care, based on the accounts of English travellers, by J. Minajew, Swjedjeniya o stranach po verchovjam Amu Darji, St. Petersburg 1879. Barthold was in addition able to consult the narratives of two Russian travellers of the year 1878, which are not generally available.

On the state of these regions, on the eve of the Revolution, cf. especially Count A. Bobrinskoy, Gortzy verchovov Pjandza, Moscow 1908, partly based on R. Leitner, Darasdan in 1866, (1889 and 1892), and idem, Darasdan in 1893. In 1957 the Academy of the sciences of the Tadjik SSR published an excellent work by A. M. Mandel'shtam: Materialy k Istoriko-geograficheskoi obzaru Pamira i prispamirskich oblastii, Stalinabad 1957 (vol. II of the proceedings of the first of hist., ethnol. and ethnology of the Acad. Sci. Tadjik SSR), containing the descriptions of the Pamir by Greek, Chinese and Arab historians and geographers to the 10th century.

Tadjik is the language of civilisation (administration, courts, schools, the Press), and bilingualism (local dialect + Tadjik) is general. Some languages, such as Ishkashimi, are fast disappearing and only survive as “domestic languages”, others (Bartangi, Roshan . . .) are strongly tajikised; on the other hand Yaguhlami, which is extremely isolated, and Wakhi are putting up a more effective resistance.
BADAL (Turk. Bedel: plural bededli), a term used under the Ottoman regime to denote a contribution made by a tax-payer in lieu of his performing some service for the government or furnishing it with some commodity. Certain categories of the sultans' subjects were excused payment of duties and taxes on condition of their discharging such duties. If they failed to fulfil their obligations, however, or if the government forwent its rights in this regard, instead of again becoming liable to ordinary taxation, they were required to make special "substitute" contributions; and it may have been in description of these that the term bedel first came into use.

From the end of the 16th century, when the Ottoman central treasury was frequently short of funds and generally pursued short-sighted policies, harassed Defterdarlıs were often tempted to forgo services or supplies from those bound to render or furnish them—even though these might later have to be bought at equal cost—in order to exact such cash contributions in lieu. By the middle of the 17th century quite half the cash revenues accruing to the MiRı were obtained from bededli of many different kinds (see the "budget" of Tārkhundjī Ahmed Paşa in the Teyābî Kândî of 9Abd al-Rahmân Wefik, i, 327 ff., and the Osmanî Tārîkhî of Ahmed Râsim, ii, 214 ff., notes). Of these one of the best known, from its being of wide-spread application, was the bedel-i nâṣûl, apparently exacted in lieu of the supplies and accommodation with which, according to an original arrangement, inhabitants of places through which travelling officers and officials passed were obliged to furnish them free. This became so general a contribution that it is linked in some accounts with the "awârid [q.v.]."

Two or three other "old-regime" bedels may be mentioned as of particular interest. One is the bedel-i dīwāni paid by the Hospodars of the Danubian principalities and the republic of Ragusa. This was a contribution received in lieu, not of any service, but of the payment of dīwāna [q.v.] by the individual Dhimms [q.v.] of those territories. A second was called bedel-i ẓimâr. It was first exacted in 1069/1659—apparently from ẓimâr-holders who were no longer performing the military duties in return for which they held their fiefs, to the extent of as much as half their revenues, and even if it did not become a permanent impost was still in force five years later. Another levy on fief-holders was first imposed somewhat later and long continued, viz. the bedel-i dīvešt, which, as its name indicates, was paid by those of them whose revenues exceeded a certain sum, originally 40,000 akçe a year, in lieu of their maintaining and appearing in the field accompanied by one or more armed and mounted retainers.

Although many ancient usages were abandoned under the new régime of Maḥmûd II and his successors, recourse was still had to bededli in several connexions during the second half of the 19th century. Thus in 1272/1856 what was later usually referred to as the bedel-i 'aškerî was instituted under the name of vâme-i 'aškeriyya. By the famous Khâdi-i Humâyûn of that year (see art. 'Abd al-Mâdiq [q.v.]) the Ottoman reformers sought to abolish all legal distinctions between the sultan's Muslim and his Dhimmi subjects, and to this end both abrogated the collection of dīwāna from the Dhimms and declared them now for the first time liable for military service. In practice, however, they did not wish to employ Dhimms as soldiers, any more than the Dhimms wished so to be employed themselves; and it was decided that the Dhimms should instead pay this bedel, which thus became to all intents a substitute for the dīwāna. At first collected by government agents from individuals, its collection was later delegated, until its abolition in 1907, to the leaders of each religious community primarily concerned.

Two other late contributions of this kind were alike called bedel-i nâšû, "cash payment in lieu". The first was instituted by a decree of 1302/1886, from which date it might be paid by men conscribed for lot for military service by way of exemption either from serving altogether or else from serving more than a shortened term. The sum payable for total exemption was then fixed at 50 Ottoman gold pieces. By another decree of 1332/1914 those paying this bedel (still of the same amount) were obliged to perform six months' service and were then relegated to the reserve. The practice of selling exemption was even continued under the republican régime, a decree of 1346/1927 fixing the payment for a shortened term of service at 600 liras.

The second bedel-i nâšû was a payment accepted from persons in the provinces who were obliged by law to maintain roads in their area in lieu of this service.

BADAL [see ABDAL and NAHW].
BADAN [see DJISM].
BADĀRĀYA [see BADAR].
BADĀ'OON (BUDĀ'ON or BADAYUN), an ancient town, about a mile east of the river Sot and headquarters of the district of the same name in India, situated in 28° 2' N. and 79° 7' E.; it is variously spelt by native historians as BEDAMA'ON, BHAĐA'ON and BADĀWAN. Population (1951) was 53,521.

Little authentic is known about the town before the advent of the Muslims towards the end of the 6th/12th century when Kûth al-Dîn Aybak [q.v.], the wali 'aškî of Mu'izz al-Dîn b. Sâm in India, invaded and captured it in 594/1197-8 (Fakhîr-i Mudabbir, ed. Ross, 24). Tradition, however, ascribes its fall in 411/1020 to the pseudo-historical figure, Ghâzî Mâṣûd Sâlîr [q.v.], said to be a nephew of Maḥmûd of Ghazna. Tâj al-Dîn Yıldız, after his defeat by Iltutmîsh near Lahore in 612/1215, was sent to Badā'ûn as a captive where he died in 628/1230. It served as a military station during the Khâlidî period. In 690/1291 Dîjlî al-Dîn Khâlidî came to Badā'ûn with a large army in order to quell the revolt of Malik Čâdîdî. Muḥammad b. Tughluq, however, did not favour the idea of retaining it as an army base. Consequently the refractory tribes all round rose in revolt. Fêrîd Tughluq marched down to Badā'ûn in 787/1385, crushed the revolt, appointed Čâbûl Čân Şirwânî as the military governor and retired. 'Abâl al-Dîn, the
last king of the Sayyid dynasty, abdicated from the throne of Delhi in 855/1451 (Ahmad Yadgar, Ta’rikh-i Bada’uni, Bibl. I nd. 257, 10) and passed the rest of his life in Bada`un where he died in 883/1478.

Under Akbar the town was formed into a sarkar of the saba of Delhi in 964/1556; and a mint was established where only copper-coins were struck. In 979/1571 a great fire broke out, consuming the entire town, in which a large number of the residents perished.

The town lost its importance during the reign of Shâhjahân when the sarkars of Bada`un and Sambhal were amalgamated under the new name of Kateehr with head-quarters at Bareilly. With the decline of the Mughal power the town lapsed to the service of Husayn Khan as the latter’s sadr. In 981/1574 they quarrelled and parted. During the intervening years Bada`uni continued his religious education by visiting such saints as Shâykh Nizâm al-Din of Ambeth, Shâykh Aban of Amroha, Shâykh Allah Baksh of Garmatkesar and Shâykh Muhammad Husayn of Sikandra. In 981/1574 Bada`uni was presented to Akbar through the good offices of A’yân al-Din Kúchí a mansâbdar of 500 and Hákim A’yân al-Mulk a court physician. Impressed by Bada’uni’s ability as a controversialist, in 982/1574-5 Akbar appointed him an imám and ordered him to bring horses to the brand as a mansâbdar of 20. Bada`uni’s failure to match Abu ’l-Faḍl’s efforts in this sphere (the latter had come to court about the same time as Bada`uni) embittered him and led him to accept a madâd of 1,000 bighâs (originally at Baswar but transferred in 991/1583 to Bada`un). Bada`uni’s failure after this error of judgment to gain the preferment he considered he deserved, undoubtedly influenced his view of Akbar’s court and of the religious activities in which Abu ’l-Faḍl was prominent. For absenting himself on attendance from Akbar, Bada`uni nearly forfeited his grant, being saved largely by the good offices of Khwadja Nizâm al-Din al-A’lî, author of the Ta’dik-i Akbari, whom he had met at Ágra in 957/1559. Akbar continued however to employ Bada`uni on literary work from 982/1574 onwards. His date of death is variously given, (see Storey, i/1 437) but as Storey points out (i/2, 1309)”1024/1615 must be nearest to the truth, if the reference to the death of “Zuhúr” and “Mailk” Kummi is not a later insertion in the notice of “Zuhúr” in the Muntakhab al-Tawdrikh, iii, 269”.

Bada`uni’s literary work comprised: (1) Kûtub al-l’Hadîth, now lost, or a collection of 40 traditions on the merit of waging holy war, presented to Akbar in 986/1574; (2) Nâma-yi Khwâdja-afzâ, a translation of the Sing’i hajam batîsî, a collection of 32 tales about Râdja Bikramâlî of Mâlwa, ordered by Akbar in 982/1574; (3) Rasm-nâma, a translation of the Mahâbhârata, undertaken at Akbar’s request in 990/1582; (4) A translation of the Râmâyana begun at Akbar’s command in 992/1584 and submitted to him in 997/1589; (5) Part of Ta’dik-i Akbari, a general history of Islam down to the thousandth year, commissioned by Akbar in 993/1585 the first two volumes of which were revised by Bada`uni in 1000/1592-3; (6) Nâma-yi Râshdâd, a work on Sûfism, ethics and the Mâhdawi movement of Bada`uni’s day; (7) A rewriting and abridgement of a translation by Mullâ Shâh Muhammad Shâhâbodî of a history of Kashmîr (probably the Râdja-tarangî); (8) A part of a translation into Persian of Yâkût’s Mu’jam al-Buladîn; (9) A translation in epitome of Râshdâd al-Din’s Dâmî-yi Ta’wârîkh, requested by Akbar in 1000/1592-3; (10) The completion of Bada`uni’s translation into Persian of a Sanskrit tale, apparently the Kathâsârit-sâgara, made earlier for Sultan Zayn al-Ábidîn of Kashmîr. Akbar ordered this task in 1003/1595; (11) Muntakhab al-Tawdrikh, a general history of the Muslims in Hindustân from
Subuktig to 1004/1595-6, commenced in 999/1590, followed by biographies of shaykhs, scholars, physicians, and poets. Until 1002/1595, the Munta-
kh al-Tanzâlî, is based largely on Ibn Khaldun, Nizâm al-Din Ahmad’s Tabâkât-i Akhbarî, with characteristic
asides by Bâdâwâli. The work is noted for its hostile comments on Akbar’s religious activities. Its existence was apparently kept secret until at least the tenth year of Dîjahângîr’s reign, (Mulla ʿAbd al-Bâqî Nahâwundi, author of Muḥâibîr-ı Rackîmî, did not know of it when he completed his work in 1025-1616). According to the Mi’irâd al-ʿÂlam, by
Sayyîkh Muḥammad Bâkî Şâhâranpûrî, composed in 1087/1677, Bâdâwâli’s children asserted to Dîjahângîr that they did not know of the existence of the work (British Museum Add. MS. 7657, folio 452 a-b). Bâdâwâli himself hints at an intention to conceal the work (M. al-T., iii, 398).

BADAWI [see ÂHMAD AL-BADAWI and BAWI]
AL-BADAWIYYA [see ĀHMAD AL-BADAWI]
BADAWLAT, a title of the chief Ya’âkbî Beg of Kâshâghar (q.v.).

BADGHIS or BADGHI, a district in the north-western part of modern Afghanistan, in the province of Harât; the name is explained as being derived from the Persian bädhîz (“a place where the wind rises”) on account of the strong winds prevailing there. By the geographers of the 4th/10th century only the district to the north-west of Harât, between this town and Sarâq, is called Bâdghîs. The author of the Ḥudâd al-ʿÂlam, probably writing from personal knowledge, describes it as a prosperous and pleasant place of three hundred villages. Later the name was extended to the whole country between the Harîrûd and the Murghâb; at any rate it is used in this sense as early as the 4th/10th century by Yaḵût. There have never been any cities in Bâdghîs and its small towns and fortresses have never been of great importance. At the time of the Arab conquests Bâdghîs became known as a Hepthâlîte stronghold and it is said that Nizâk Târkhan the Haytal retreated there after the loss of Harât. Yaḵût writes of it as dâr manâmakht al-
Havaylân, but this can only refer to the very end of the period of Hepthâlîte power. Even under the Tâḥrids and the Šâmânsk Bâdghîs remained a hotbed of sedition.

At the present day Kalâ-ʾi Naw is regarded as the chief town. The rivers, including the tributaries of the Murghâb, still contain, as a thousand years ago, only small streams of brackish water; for the irrigation of the cultivated fields the people are for poetical artifices, such as metaphors and similes, on a scale unprecedented in pre-Islamic poetry. Hence, there arose among some ‘Abbâsîd circles of critics, the idea that this art was a bâdî, an innovation or a new creation. The word began to be used in that wide undefined sense in the critical writings of the 3rd/9th century. It occurs in more than one place in the writings of al-Ḍâbi; in one of them the author quotes a line of poetry containing a figurative expression and says: “This and what they call bâdî (‘Al-Bayân wa*l-Tabyin, Cairo 1948, i, 51, iv, 55). The first author to attempt a treatment of bâdî as a literary art and to define what he took to be its principal categories, was the caliph-poet Ibn al-Muṭazz (247-296: 861-908). In a book entitled Kitâb-al-Bâdî, Ibn al-Muṭazz tried to show—by quoting copious examples from the Karâns, the Traditions, speeches of Bedouins, and early classical poetry, that what the moderns called bâdî was not a creation of Bâshshâr and his contemporaries. These merely extended the already known art of literary figures in their poetry until it became widely used, and was given the name bâdî. Then came the poet Abî Tamâm (d. 231/850) who was very fond of this art and used it extravagantly to show himself as a poetical innovator. Its hostile comments on Akbar’s religious activities. Its active sense it means Creator or Originator, hence its use as an Attribute of God. In the passive sense it means ‘discovered’ or ‘invented’, and from this, it became a name for the innovations of the ‘Abbâsîd poets in literary figures, and later for trope in general; ‘îm al-bâdî was a branch of rhetorical science which dealt with the beautification of literary style. Some ‘Abbâsîd poets of the 2nd/8th century, like Bashshâr, Muslim b.

(275-337/888-968, a polymath), tended to depart in certain respects from the established ways of the classics and especially in the use of poetical artifices, such as metaphors and similes, on a scale unprecedented in pre-Islamic poetry. Hence, there arose among some ‘Abbâsîd circles of critics, the idea that this art was a bâdî, an innovation or a new creation. The word began to be used in that wide undefined sense in the critical writings of the 3rd/9th century. It occurs in more than one place in the writings of al-Ḍâbi; in one of them the author quotes a line of poetry containing a figurative expression and says: “This and what they call bâdî (‘Al-Bayân wa*l-Tabyin, Cairo 1948, i, 51, iv, 55). graficheskiy oboz Iran, St. Petersburg 1903, 33 ff.;
book on the whole field of Arabic rhetoric, al-Askari devoted a long section to the explanation of baldgha and the enumeration of its kinds and categories. Al-Rummani (296-386/908-996), a Mu'tazilite rhetorician, considers baldgha [q.v.] or eloquence as one of seven directions in which kūranī 'idās can be seen, and without mentioning baldgha, he includes some of the figures of speech as categoric of baldgha. But the Sunnite al-Bakillani (d. 403/1013) in his Ighās al-Kur'dn, devotes a long chapter to the baldgha of speech, maintaining that baldgha [q.v.] could help to appreciate, but could not sufficiently explain 'idās. Ibn Rashīk, the author of Al-'Umda, "On the Excellencies and Requirements of Poetry", illustrates in his book more than sixty categories under the heading "The Invented and the baldgha". Ibn Khaldūn points out that Ibn Rashīk's Al-'Umda had a great influence in the Muslim West, in North Africa and Spain, where the use of baldgha was highly appreciated and practised. The turning point however in the history of Arabic rhetoric in general, and of baldgha in particular, as a separate science of stylistics came about in the hands of al-Sakkaki (555-626/1160-1228), who in his book Miṣḥāt-al-'Ulam built a logical system for the classification of the instrumental sciences of literature, making use in the section on rhetoric of the solid philosophical foundations laid down earlier by 'Abd al-Kahir al-Djurdjâni (948-1013). From al-Sakkaki's time down to the present, books on Arabic rhetoric have revolved round the compact text of his book, its abbreviations and the long and detailed commentaries on those texts. Notable among the epitomisers and the commentators of the Miṣḥāt were al-Khaṭṭîf al-Kaẓwîni (666-739/1267-1338) and al-Tâfâšâfî (722-793/1322-1390). This period was characterised in literature by ingenuity in using ornaments of style and by love for the art of baldgha. Some poets of the period delighted in using all kinds of figures of speech in one and the same poem. Such poems, called baldgha'iyya, were composed by Saḥ al-Dîn al-Ḥilîî and others. In that period, the sciences of rhetoric were clearly and rigidly delineated. Thus, aspects of literary structure became the domain of the science of baydn or "Exposition". The artifices of the ornamentation and embellishment of speech remained the instruments and categories of baldgha.

Khalafallah, al-Bâdi', al-Asṭurlâbî, Hîrat Allah b. al-Husayn b. 'Aḥmad (also Yûsûf), Abu 'l-Kâsim, illustrious Arab scholar, physician, philosopher, astronomer and poet, who distinguished himself particularly for his knowledge and construction of the astrolabe and other astronomical instruments. The date of his birth is not known. In 520/1126-7, we find him at Isfahân in intimate contact with the Christian physician Amin al-Dawla Ibn al-Tînlîghî. Later he lived in Baghâdad, where the excellence of his art, so it is said, brought him a considerable fortune under the Caliph al-Mustâshîrî. According to Abu 'l-Fâdî, astronomical observations were made under his direction in 524/1130 in the palace of the Saljûqids sultans at Baghâdad. It is probable that the tablets of Muḥmûd composed by him and dedicated to the Sultan Abu 'l-Kâsim Muḥmûd b. Muhammad (1118-31) are the result of these observations. He died at Baghâdad in 534/1139-40 and it is said (Abu 'l-Fârâdî is the sole source of this tradition) that he was buried in a state of coma. As regards his poetical works, Ibn al-Khiṣṭ maintains that they were "beautiful and excellent", Ibn Khallîkîn that they reached the limits of lechery and obscenity. Ibn Khallîkîn and Ibn Abî Usaybi'a give examples of his best pieces. In addition to a Dies irae, poems, al-Bâdi', al-Asṭurlâbî published a selection of the poems of Ibn Hadjîdî in one volume, divided into 141 chapters and entitled Dururat al-Tâdîn min ghîr Ibn Hadjîdî (Brocckelmann, S I, 130). The praise which the Arab biographers liberally bestow on al-Bâdi', al-Asṭurlâbî, should not lead us to place his merits too high. The historians and biographers of the 7th/9th century possessed too little mathematical and astronomical knowledge to enable them properly to appreciate the really eminent services which the scholars of the 9th/10th centuries rendered these sciences. They thus frequently fell into the error of extolling to excess the work of scholars closer to them in time, to the detriment of the works which mark the zenith of Arab science. Nowhere are the praises of al-Battânî, Abu 'l-Fârâdî and al-Bîrûnî sung so eloquently as those of al-Bâdi', al-Asṭurlâbî, though the former are scholars of much greater distinction than the latter. Bibliography: Ibn al-Khiṣṭ, 339; Ibn Khallîkîn, Cairo 1310, ii, 186 (trans. de Slane, iii, 380); Ibn Abî Usaybi'a, i, 280; Abu 'l-Fârâdî (ed. Şâlîbînî), 366; Abu 'l-Fâdî, Annals (ed. Bâdi', al-Dîn, surnamed Kutb al-Madar (axis of the Universe) and popularly known as Šâh Madâr, is the Methuselah of Indian hagiological literature and one of the most celebrated saints of India. He is said to have been born at Aleppo in 290/864, and to have been descended from Abû Hurayra [q.v.], one of the companions of the Prophet. The statement in the Miḥâl-i Madârî that he was a Jew and embraced Islam at al-Madînâ is not supported by other authorities. Like his descent, his date of birth is also controversial, the Taḏkhirat al-Muttaḥîn gives it as i Shawwâl 442/Feb. 1053; the Miḥâl-i Madârî has 715/1315, which is most probable. According to the Kitâb-i Aṭrâs and Mihr-i...
BADIS, a town (now in ruins) and anchorage on the Mediterranean coast of Morocco. It is 69 m. (110 km.) south-east of Tetuan, between the territory of the Ghumara [q.v.] and the Rif [q.v.] properly so-called. It is situated on the territory of the Banū Yaṣṭūfat (utafa: Bni Yitṣūft) near the mouth of a torrent named Tālān-Badīs (tulga: Tālemštāds). An attempt has been made to identify it with the Partīnsa of the Itinerary of Antoninus; but this ancient place-name could equally well refer to the more sheltered cove of Yallish (= Iris on our maps) which is only 7 km. to the south-west.

The town of Badīs and its port formed part of the kingdom of Nukūr, and later of the Idrīsid principality of the Banū Ṣumayr. The Almoravids, the Almohads and the Marinids used it as a naval base and devoted their energies to fortifying it.

The author of the Maṣḥad (end of the 7th/13th century) and especially Leo Africanus (beginning of the 10th/16th century), describe Badīs as a township of 600 households. Under the Marinid Abū Sā'id (709-31/1310-31), it paid 1000 dinārs in taxes, as did Melīla and Larache. The port possessed an arsenal where foists and other kinds of galleys were built of cedar-wood from the neighbouring mountains; it was frequented by Venetian merchants, and was the terminus of the shortest route from the Mediterranean to the Banū Khālid. The population devoted themselves to trade, fishing (sardines) and also to piracy on the coasts of Spain. The governor of the Rif had his residence there; his authority extended over the coastal towns from Yallish to Wādī Nukur, and also over certain tribes of the interior: Bukkāya, Banū Mansār, Banū Ḥabbāl, Band Yaddīr.

Less than 100 metres out to sea there were two small rocky islands, the larger of which was called Ḥadjar Badīs, the Peñon de Velez of the Spanish. In 1508 the latter, in order to put an end to the activities of the pirates, occupied it and fortified it. In 1520, however, they lost it as the result of treachery. In 1526, the Wattasid sultan Abū Ḥassīn, deposed by his brother, received as an appanage the Rif, with his seat at Badīs, whence he acquired the surname of al-Badīsī [q.v., No. 3]. In 1554, he ceded the town and the Peñon to his Turkish allies from Algiers: the latter made it a lair for corsairs operating in the region of the Straits of Gibraltar. The Sa'dīd sultan Abū Allāh al-Ǧalīlī bīlālī was alarmed by this activity, and feared that the Turks might use Badīs as a base from which to undertake the conquest of Morocco. In 1564, he forced the Moroccans to evacuate the town, Velez, perhaps has its origin in the town called Velez (de) Malaga (Ar. Balish).

The old town of Badīs is now in ruins. After the Rif war (1927), the Spanish attempted, without success, to establish nearby a small settlement called Villa Jordana. The Peñon still belongs to Spain and constitutes a sovereign territory: Peñon de Velez de la Gomera. The Spanish corruption of the name of the town, Velez, perhaps has its origin in the existence, opposite, on the European coast, of a town called Velez (de) Malaga (Ar. Bālij)
BADIS — BADJ

BADIS B. HABUS [see ZIRIDS OF SPAIN].

BADIS B. AL-MANSUR B. BULUKKIN B. ZIRI, alias ABU MANAD BADIS NASIR AL-DAWLA, third Zird of Ifrîkiya, enthroned on 16 Rajab 386/8 April 996. Entrusting eastern Ifrîkiya to a devoted Arab vice-amir, he set about containing a powerful Zanatan offensive which, from 386/996 onwards, pushed forward from Tiaret to Tripoli. In 389/999, he faced the amir of the Maghrîba, Zirb. b. Aţtiyya, who had as allies Fulful b. Sa'id, chief of the Zanata, and his own great-uncles. He finally defeated them (391/1001), his triumph being mainly due to his great-uncle Hammad b. Bulukkîn. From 395/1004 onwards, the latter repelled a new Zanatan offensive. From 390 to 406/990-1007, the Zird also fought in Tripolitania against Fâtûmid intervention and against Yânis, Fulful b. Sa'id and Warrû b. Sa'id. While the Zanatan menace gradually abated in the south-west, in the east he had to suppress the revolt of Hammad, founder of Kala in 398/1007-8. In the course of this campaign, which commenced at the end of 405/May 1015, after having won a decisive victory at Chelif (1 Dju'madî 406/17 October 1015), but failed to take Kala which had been besieged for six months, Bâdis died on 30 Dhu'l-Ka'da 406/10 May 1016. The creation of the Hammadid state had begun, and the anti-Shî'ite disturbances at Tunis (406/1015-6) portended the break with the Fâtûmids which occurred under his son and successor al-Muẓaffar b. Bâdis.

AL-BADISI, ethnic adjective referring to the town of Bâdis [q.v.], and borne by three notable Moroccan personalities:

1. ABU YA'KUB ÝUSUF AL-ZAHAYLÎ AL-BADISI, saint and savant of the 8th/14th century, who is buried outside the town. The author of the Makâbîd (cf. infra, a) devoted a notice to him (cf. trans., i, 14 and 218). Ibn Khâlidûn regarded him as the last of the great Moroccan saints (cf. Prolegomena, trans., ii, 199; Histoire des Berbères, i, 230). Leo Africanus (ed. Schefer, ii, 273; ed. Épaulard, Paris 1956, 274) speaks of his shrine which is still venerated: Sidi Bû Ya'kub.

2. 'Abd al-Ĥaţî al-Bâdisî, still living in 722/1322. He is the author of a collection of the lives of the saints of the Rif entitled Al-Makâbîd al-Sharîf fi Dhikr Sulahâ al-Rif, which has come down to us in two editions which differ appreciably from the point of view of vocabulary; annotated trans. by G. S. Colin in Archivio Marocaines, vol. 26 (1926).

3. 'Ali, son of Muhammed al-Shaykh al-Wâltâsî. His normal kunya was Abu 'l-Hasan, but he is known by the hypocoristic name of Abu Ĥassûn. His father, while still young, was entrusted with the government of the Rif, with his residence at Badis, and, when he was deposed, he received the same province as an appanage. He lived there from 1526 to 1549; hence his surname al-Bâdisî, and title “king of Velez” given to him by European chroniclers.

BADYA (see Supplement).

BADJ, the Arabicised form given to the Persian bâdî in the Islamic period (al-Sayyid Addî Shîr, Kitâb al-Alfâz al-Fârisîyya al-Mu'arraba, Beirut 1908). From the roth to the 14th century bâdî is more common; thus it is usual form in the Shâh-nâma (though bâdij occurs too), and the phrase bâdî u sîrî is not infrequent, while the expression bâdî u rûm is used there with reference to the tribute and indemnity paid to the victorious Persians by the rulers of the Eastern Roman empire (Fritz Wolff, Glossar zu Firdowski Schâhname, Berlin 1935). The Ghaznawid poet Bahârîu uses bâdî, whereas the 15th-century poet Bâbâ Fighânî uses bâdji (see Amîn Ahmad Râzî, Haft Ikhâm, Bibl. Indica, Calcutta 1939, i, 267), and it was in the latter form that the word entered Turkish. After the Ottoman occupation of the Balkans the word was borrowed by the Bulgars and Serbs (Kari Lokotsch, Etymolog. Wörterbuch, Heidelberg 1927), and it is used in Armenian with the same form and meaning (Horn, Grundriss der Neupersischen Etymologie, Strassburg 1893, 34).

Asadi, in his dictionary (Lugata-i Furs, ed. P. Horn, Berlin 1894), defines the word simply as kharâdî. 'Abd al-Kâdîr Bâgîdâdî (Abdulqâdir Bagdadînîs lexicon Sânâmamum, ed. Salemann Wood Petersburg 1895) explains it as meaning 'customs-dues, title, and tax': the words bâdîbân, bâdîbêdîb and bâdîdår he explains as 'desiring toll, customs-officer', and bâdîgêh as 'place where customs-dues are levied' (all four words occur in the Shâh-nâma). In the Turkish translation of the Burhân-î Kâtîfî, in addition to the meanings 'title, tax, customs-dues', it is stated that the word was also applied to money and gifts received by suzerains from vassal rulers. In Turkish texts generally, as in Persian, the meaning is 'tax'. The word became current as a fiscal technical term among the Turks, because a number of Turkish states were founded in the Persian area, beginning with the Ghaznawids and Sâlğûks, and because the Sâlğûk administration preserved Sâmânid and Ghaznawid traditions. It will also be recalled that Persian was the official language of Asia Minor under both Sâlğûks and Iklhâns. A study of the available documents shows that as well as being used for 'tax' in general, the word was applied to various forms of tax. The poet Nasîr-i Khurâsânî, describing Aleppo in his Sânâmamum (ed. Ch. Schefer, Paris 1883, 19), says that it was a bâdîgêh (i.e., customs-post) between the cities of Syria, Rûm, Diyarbakîr, Egypt, and 'Irâq. Nasîr al-Dîn Tûsî, in a risâla containing his views on politics and finance, presented to the Iklhâni Abdâb (Şerefeddîn Yaltkâya, Ilkhanler dei rîvî idârî tekiştîndîn dârî Nisârebânî Tûsî'în bir eseri, in Türk tarihî ve tctiât tarihî mecman, ii, 135; M. Minovî and V. Minorsky, Nasîr al-Dîn Tûsî, Monograph on Finance, in BSOS x. 3, 1941, 763), uses it in the general sense; Yaltkâya translates it as 'customs-dues' in this somewhat ambiguous passage, but as customs-dues had been levied from ancient times it is certain that there would be nothing shameful in a ruler's

See the article WATTANISI. (G. S. COLIN)
exacting them. As the context indicates, and as Minorsky rightly shows, the bddi here referred to must be the râkdârî (‘traveler's protection tax’) levied in the Ilkhanid dominions in return for maintaining peace and security on caravan-routes and lakes. The historian of the Ilkhanid period, Rashâd al-Dîn (Ta’rîkh-i Mudràrak-i Ghiyâtî, ed. K. Jahn, GMS, London 1940, 280 ff.), when describing measures taken to safeguard the great caravan-routes in Ghiyât’s time, speaks of bddi taken from travelers at certain specified places, according to a fixed scale. He also uses the word of a tax of one third, when discussing Ghiyât’s agricultural reforms.

A century later, the historian Shâraf al-Dîn Yazdî uses bddi together with saw, kharâdî, and diisya, i.e., loosely in the sense of ‘tax, impost’ (Zafar-nâmâ, Bibl. Indica, Calcutta 1888, ii, 378). At the end of that century the historian Khândâmî (Dastur al-Wuṣûrî, ed. Sâdîd Nafti, Tehran 1327/1909-1910, 463) mentions bddi along with the tamgha taken from merchants, sawâr, and kharâdî, but apparently as a general term only, for he gives no information about its nature. The early Şâfawîd historian Hasan Rûmî states that some neighbouring tribes had long paid bddi to the rulers of Harât (Ahsan al-Tawâriskh, ed. C. N. Seddon, Baroda 1931, i, 357). He establishes the sense of such a word, legislative texts are clearly of more use than historical texts, but the oldest relevant ones, those of the Âk Köyûnlî, have not come down to us in their original forms. Thanks however to the tenacity of tradition, common in medieval Turkish and Muslim bureaucracies, we find Âk Köyûnlî laws surviving, at most slightly altered, in Ottoman bdnâns (as is expressly stated in the Ottoman fiscal bdnâns for the eastern Anatolian vâlayets, formerly subject to the Âk Köyûnlî); and in them the word bddi occurs frequently (cf. W. Hinz, Das Steuerwesen Ostanatoliens im 15. und 16. Jahrhundert, in ZDMG, 1930, 179-201).

These laws were first discussed by I. H. Uzuncârlî (Osmanî devleti teşkilâtına mededdîh, Istanbul 1941, 213, 276, 302) who sets out to explain such expressions as bddi-i tamgha and bddi-i buzurg. He states, on the basis of the Farkang-i Şâwîrî and the Shâraf-nâmâ, that the tamgha was branded on animals and that bddi-i buzurg was the tax peculiar to land customs, and he notes that bddi-i buzurg was the name of two taxes, one levied on subject rulers and princes, the other on commercial goods in transit and articles brought from village to city. He explains bddârdî as ‘a guardian of roads, taking money from caravans in return for maintaining the security of the roads, in the Ilkhanid period’.

But in this he is incorrect: the bddârdî was a tax collector, in the Ilkhanid and Djalârîd periods, who collected tolls at certain places, according to a tariff fixed by the central government (this tariff is mentioned in Italian sources for oriental trade in the Ilkhanid period: see G. I. Brattini, Recherches sur le commerce génos dans la Mer Noire au XIII s., Paris 1929, 184, 189). The ‘guardian of roads’ was quite distinct; he was the tutbavmî (Persian râkdâr), paid by the central government and under the orders of a senior military commander. At times when the central government was weak, however, lawless men assumed this title and took protection-money arbitrarily from caravans, thus performing the functions of râkdâr and bddârdî. The vagueness of I. H. Uzuncârlî’s explanation of the words bddi-i tamgha and bddi-i buzurg is due to his reliance on dictionaries rather than on bdnânâmâs. It is possible to get a clearer and more accurate picture from a set of bdnânâmâs of the Âk Köyûnlî period, published by Omer Lütfî Barkan (Osmanî devrinde Âk Köyûnlî hukûmâtır Uzun Hânîn Beyi aî kânûnlar, in Türkîc veikalarî, i, no. 2, 91-106; no. 3, 184-97). These bdnânâmâs, termed yasa under the influence of the Ilkhanid administrative tradition, relate to the regions of Diyârbakr, Mardin, Erzûh, al-Ruhâ (Urfa), Erzindâm, İshiyurt (Harput), Çermik, and ‘ArabÎbîk, and are mainly of the time of Uzun Hân. From a study of them the following facts emerge: bddi is generally used for ‘tax’, as in the expression bddi-i tamgha.

The meaning of tamgha is quite plain; it is the tax levied on all kinds of goods bought and sold in cities, on woven stuffs and slaughtered animals, and is normally referred to as ‘black tamgha’ (tamgha-i sîyâk). Bddi-i buzurg was the customs-duty levied on goods in transit through or imported into the country; such goods, when sold in the market, were also liable to ‘stamp duty’ (bddi-i tamgha). It is expressly stated in the bdnân of Erzûh that tamgha was levied on the buying and selling of immovable property; i.e., the word is here used in the general sense of ‘tax’. It is apparent that bddi in these bdnânâmâs is not a technical term.

This observation is confirmed by the use of the word in Ottoman literary texts. Sâdî al-Dîn uses it in the general sense when he says that the bddi and kharâdî in 14th-century Rûm were not onerous as they were in Persia (Târîkh al-Tawâriskh, i, 214). So too a number of Ottoman poets use it as synonymous with kharâdî in the phrase bddi u kharâdî. On the other hand, the word is used as a technical term in some historical texts and above all in the early bdnânâmâs of the Conqueror, apart from the non-technical use, we find bddi applied to a sum denoted in local towns. This bdnânâmâ lays down that bddi is not levied on immovable property such as land, houses, shops, and mills, but on goods sold in markets; not however on anything sold in villages. It specifies the amount of bddi to be levied on the sale of all sorts of goods, including slaves (who in the eyes of Islamic law are movable property), and makes it clear that sometimes only one party is liable to pay, sometimes both. It also prescribes the amount of bddi—generally 20%—to be levied on goods from abroad (e.g., from ‘Frenk’ and ‘Dobrovenîdîk’ = Dubrovnik = Ragusa), but there is a clause which states that this will depend on the terms of contracts made with these countries. The text however is a little doubtful and corrupt, so no positive conclusions can be drawn (F. Kraelitz, Kanunnâmâ Sultan Mehmedes des Eroberers, in MOG, Vienna 1921, i, 26, 30 ff.). But it is safe to say that the reference here is not to customs-duty levied on goods coming across the frontier, for the term gümûrk occurs in numerous official documents of the period, and customs-duties seem not to be described as bddi (idem, Osmanîc ve Ílkhânîç Urunlar, in Türkefsprache, Vienna 1922, no. 2, 4). It may therefore be conjectured that when goods entered the Ottoman dominions they paid customs-duty (gümûrûk), and when they were brought to a city and sold, they paid a separate bddi.
BADJA — BADJA

The word is used in the bānīn nāme of Suleymān just as it was during the 15th century; indeed, some paragraphs concerning bādji are taken unaltered from the bānīn nāme of the Conqueror (cf. Kānīn nāme-i Āl-i ʿOṯāmān, Supplement to TOEM, Istanbul 1329, 21 ff., with the bānīn nāme of the Conqueror, 30 ff.), though there are some additional ordinances too. It is clear from these two bānīn nāmes that bādji meant both a specific municipal tax (īḥšāb īsm) and ‘tax’ in general: the latter meaning being seen in such expressions as bādji-i bādār, bādji-i ʿaẓāmān, bādji-i lamgā. It is still in use among the Turkish people of eastern Turkistān in the general sense (cf. F. Grenard, Le Turkestan et le Tibet, Paris 1898, 263, 265. In the dialects of Kāshgar and Yarkand the meaning is ‘customs-duty’ (G. Raquette, English-Turki Dictionary, Lund-Leipzig 1927, 24, 119).

Bibliography: Sources have been shown in the text, in detail, in the text, in full, of a complete study of the work. Osman Nuri, when dealing with the ʿīḥsāb taxes (Meffelle-i Uμār-i Beldiyye, Istanbul 1922, i, 364-70) confines himself to quoting relevant passages from Aḥṣāk pāshāzāde, Neshrī, the bānīn nāme of Suleymān, and another bānīn nāme of unspecified date. (M. Fuad Köprüdö)

BADJA, the birthplace of Firdawsī, a small village in the vicinity of Tūs. The name is not found in any of the Arab geographers, and is mentioned only by ʿArūḏī: Samaḵzőndī (Cāhind Maḵāla, ed. Mirzā Muḥammad ʿAznwī, GMS i, 47, 190).

BADIJA, a town and district of Muslim Spain, modern Beja in S. Portugal, the classical Pax Julia. The Roman origin of Bādja is referred to by the geographer al-Rāzī (q.v.), who speaks of its fine wide streets. Abundant honey was obtained there, and its water was specially suitable for tanning (E. Lévi-Provençal, “La „Description de l’Espagne“ d’Aljmad al-Razi,” in Al-Andalus, XVIII, 1953, 85ff). Bādja is frequently mentioned from the time of the Arab conquest. When Seville fell, its defenders withdrew to Bādja, whence they later returned and gained a temporary advantage (Aḥkār Maḏmūʿa, 16, 18). Bādja became one of the militarised zones (kwaw muqaddama) of Muslim Spain. In 746/747 at Bādja the commander of the Egyptian qādīn, al-ʿĀlī b. al-Muqthī revolted, donning the black dress of the ʿAbbāsidīs and displaying a black banner sent from the East by al-Manṣūr (Aḥkār Maḏmūʿa, 101-102; Ibn al-Kūṭiyya, 32-33). In 744/745 Bādja is said to have been attacked by Norse Vikings (Makkārī, Analedes, i, 223). At Bādja later, local chiefs disputed the authority of the central government (cf. Lévi-Provençal, Histoire de l’Espagne musulmane, ed. Cairo 1944, i, 271, 298), and at another time the ʿAbbāsidīs of Seville (Ibn ʿIdhārī, Bayān, iii, 192-193). The town was probably more important in early times than afterwards. It is not described by Ibn ʿIdhārī (548/1154). Its most famous son was the theologian Abu ʿl-Walid al-Bādī (q.v.). Bādja in Spain is sometimes called Bādjiat al-Zayt (see below).

Bibliography: E. Lévi-Provençal, La péninsule ibérique au Moyen-Age d’après le Kitāb ar-Raʿaw al-Mīṭār, Leiden 1938, 35-46; Arabic text, 36-37. (D. M. Dunlop)

BADJA (ancient Vaga; modern orthography: Béja), important town in Ifrikiya, situated about 100 km. west of Tunis. Its population at the present time is nearly 23,000. Resting against the fertile slopes of the valley of the Medjerda, it constitutes “the most considerable town of the region, which existed in ancient times and has continued to exist down to our time . . . . its strategic position, of supreme importance, on the road from Tunis to Algeria, was constantly emphasised throughout the Muslim period” (P. Brunschwigg, Hafṣides, i, 300).

Capital of the province richest in cereal crops, it was for this reason called the “granary (kūr) of Ifrikiya”, just as it was called, throughout the Middle Ages, Bādjiat al-ʿAmīn (“Bādja of the corn”) to distinguish it from the other towns, in Africa and Spain, which bore the same name (see below).

The celebrated geographer al-Bakrī gives an exact and detailed description of the town which is still valid today, apart from certain changes in place names which took place at a later date. “Bādja”, he says, “is three days’ journey from al-Kayrawān. A large town, encircled by several streams, and built on a high bow-shaped hill named ʿAyn ʿShām (“the spring of the sun”). This spring still feeds the town and bears the same name. The other important monuments which he mentions are: the ramparts, which were later augmented by a second, exterior wall enclosing new quarters of the town; the citadel (still to-day al-ʿAṣābā) “an ancient building, solidly built of great blocks of stone” (a Byzantine fortress, built by Count Paulus at the time of Justinian, as is indicated by a Latin inscription of that period. It was frequently repaired during the Hafṣūs, Turkish and Husaynī periods); and the Great Mosque which, “solidly built, has the city walls for the kibla”. The town also possessed “five baths (hammām), a large number of caravanserais (fundoš), and three open spaces (rīkū) where food markets were held”.

The environs of the city were, he says, “full of magnificent gardens watered by streams”.

At the time of the siege of Carthage by Hasān b. al-Nuʿmān, about 76/695 part of the Byzantine garrison took refuge at Bādja and entrenched itself there. After its capture by the above-mentioned Umayyād general, Bādja subsequently became an important strategic centre for the Arab qādīn. Al-Harawī states that Maʿbād b. al-ʿAbbās b. ʿAbd al-Muṭṭalib, the cousin of the Prophet, died there, and that his tomb is to be found in the meadow (mardī) of the town.

Al-Yākūbī, who visited Ifrikiya in the 3rd/9th century, tells us that “the population of Bādja is descended from the soldiers of the old ʿAbbāsid army and from non-Arab autochthonous elements”.

Al-Kalḵashandī, quoting an ancient source, notes that the tribe of the Banū Saʿd, among whom the Prophet was brought up, had been scattered across many lands, and that in his own time there only remained a small group of them, who lived at Bādja in Ifrikiya alongside the ʿAbbāsid troops.

Under Aghlabid dominion, the city became the important capital of the whole North-Western district of Tunisia. Powerful officials, belonging to the family of the ʿarifs, the Banū Ḥumayy, relations and allies of the amirs, succeeded one another as heads of its government, and strove to preserve it as a rich and lucrative fief; kādis, chosen from among the most famous jurists of the capital, were nominated to this high office; experienced generals assumed command of the militia and the Aghlabid allies. And there is reason to think that the veterans of this
militia, who continued to dwell in this region, gave the name of their tribe, Kuḍā'a, to an important commune (kuttdb) of Bādjā, which retains this name to the present day.

During the Fātimid period, the town was sacked, pillaged and partly burnt by the Berber troops of Abū Ya'qūb [q.v.], "the man with the ass", in 335/946. But it quickly recovered its prosperity, by virtue of its agricultural products. At the time of the Ḥilālī invasion (5th/11th century), it received groups of the Kūḍā‘ tribe, which settled in the surrounding countryside, and the town passed successively from the hands of nomad chiefs to the Zirid princes of Bougie (al-_BIGJAYA). With the advent of the Ḥafsids, the town recovered a measure of its former prosperity and frequently served as a refuge for rebels against government.

During the Turkish period (10th-11th/16th-17th centuries), Bāđja had a garrison of janissaries who left their posterity there. A Hanafl mosque was built inside the town. From the time of the IJusaynids, Bādjā had a garrison of Janissaries who represented the authority of the Beys. Certain monuments were built, notably a citadel 1 km. west of the town, called "Bārdō" after the name of the famous palace of the Beys on the outskirts of Tunis. Bādja was the birthplace of a number of scholars, jurisconsults, poets, and local historians. Reference will only be made here to the al-Kalghāni family, which supplied 9th/15th century Tunisia with seven or eight eminent ḳādis and jurists, and to Muḥammad al-Ṣaghīr b. Yūsuf, who wrote an eye-witness account of the history of the first four Husaynid Beys (from 1705 to 1768 A.D.).

Two other Tunisian centres were also named Bādja: BĀDJĀL AL-ZAYT ("Bādja of the oil"), so called in order to distinguish it from its homonym in the north. It was a town in the district of Rusfa (the ancient Ruspae of the Romans and Byzantines), situated, in the heart of the olive-tree forests of the Tunisian Sahel, on the road from Mahdia to al-Djān, 13 km. east of the latter centre. The commune (ġayyba) in which it was located still bears the name of Wādī Bādja (governorate of Mahdia). It seems that it prospered up to the time of the Ḥilālī invasion, and then declined and completely disappeared during the Ḥafsid period. Its site, however, with its numerous ruins, notably of a vast hydraulic installation (laqiyya), still exists. It is mentioned several times by al-Maliki and Yākūt, who quote passages from Ibn Rashīk in his anthology of the poets of al-Kayrawān.

Bibliography: Maliki, Riyād al-Nūfūs, ii, 79-81 (ms. coll. Abdul-Wahab); Yākūt, Cairo 1323/1906, ii, 25; Safadi, al-Wādī bi l-Walajā, iii (Zaytūn, ms.); Bādja al-Ḳifta ("the ancient"), a hamlet no longer in existence today, but whose ruins are still visible. It was situated near the present-day town of Mannūbā north-west of Tunis. It possessed a mosque, a school (kutdā), a market and a certain number of dwellings. Its chief claim to fame was that it was the birth-place of a great Tunisian mystic (ṣūfī), Abū Sa‘īd Ḵaṭāfa b. Yāhya al-Tamīmī al-Bādji, born in 555/1160, died 582/1185. This Bādji, in 1231, the pupil of Abū Madyan Ṣu‘ayb of Timceleb, was buried in the village of Diyabal al-Manār, and has since become known from Marsa to Carthage as Sayyid Abū Sa‘īd (Sidi Bou Said).

BĀDJĀLĀN. Both surviving branches of this formerly large tribe are now settled in Irāk. The main branch occupies the area of Bīn Kudra and Kurutū, north of Khānahīn. An offshoot, known variously as Bāḏīlān, Bāḏīwān or Bāḏīwān, is to be found in the Shabak [q.v.] area on the left bank of the river Tigris opposite Mawṣil. Although the tribe has always been known as a Kurdish one this is only so in the wide sense that all nomads of the Zagros area, including the Gūrān [q.v.] and the Lurs, are considered by their neighbours to be Kurds. In fact, all Bāḏīlānīs appear to speak a dialect of the (Iranian, but not Kurdish) Gūrānī language—a pointer, failing evidence to the contrary, to their Gūrānī origins.

A great number of Bāḏīlān nomads paid homage to the Ottoman Grand Visier at Mawṣil in 1039/1630 (Nafta, Ta‘vīq, s.a.). For a time the tribe gave its name to a sandbā, Bāḏīwām, between the two rivers Zāb (Ḫādīdī Khalīfa, Dīkūn-numūt, 435). The present Bāḏīwān community may stem from this section. According to their own traditions (Rawlinson, in Journal of the Royal Geographical Society, 1893, ix, 107; Minorsky, in EJ, i, 728, s.v. Lāh) part of the tribe retired from the Mawṣil area in the 14th/15th century to Luristan (Psh-i Kūh), where it became assimilated to the Lakk Kurds. Another group had settled in the plain between Gānān and Kus-kī Shīrūn, the chieftains residing first in Zühāb and, after its decline, in Khānahīn. Early in this 14th/15th century the two main sections of the Bāḏīlān were astride the Turco-Persian frontier, the Dūmmūr in the Zühāb area and the Khānahīn near Bīn Kudra. The Persian sections seem since to have concentrated on the Kurutū area.

AL-BADJALI, AL-ḤASAN b. ‘ALI b. WARSANG, founder of a sect among the Berbers of Morocco, whose adherents are called Badjaliyya. Al-Bakrī states that he appeared there before Abū ‘Abd Allāh al-Shī‘ī [q.v.] came to Ifriqiya (before 280/893). Al-Badjal came from Nafta (Nefta) and found many adherents among the Banū La-
más. His teaching agreed with that of the Rawafid, but he asserted that the Imamate belonged only to the descendants of al-Hassan. So al-Bakri and Ibn Hazm state, in opposition to Ibn Hawkal (ed. de Goeje, 65), who says that he was a Musawl (cf. Ibn Khurradadhbih, 97, 7). Bakri is an Arabic rendering of the Aramaic Bêgh (Be) Garma while Bakmarmak goes back to some Middle Persian form of the district, like Garmakan. The latter word comes from the Gurumu, a nomadic people mentioned in cuneiform inscriptions, the *Gaparmakos* of Ptolemy.

(See M. STRECK*)

**BADJARWÂN,** (1) A town and fortress in Mokân (Adharbaydjan) lying s. of the river Aras (Araxes), between Ardabîl and Bardha (where further references are given). Badjardja was mentioned several times in the accounts of the Muslim conquest. Its capture by al-As̱̄ẖâfât b. Kays al-Kindî seems to have been the signal for the final collapse of resistance throughout the province (Baladhuri, Futâkâ, 326). It was occupied by Saʿîd b. ʿAmr al-Ḥarashi during his campaign against the Khazars in 112/730 (D. M. Dunlop, *History of the Jewish Khazars*, Princeton 1954, 72-74). After the Umayyad period Badjarwan is seldom mentioned. It is still named by Hand Alîh Mustawfi in the 8th/14th century as a stage in the road to the N.W. frontier, though it was then in ruins. (2) A town of Divîr Mûdar in al-Ijazira, near the R. Ballûk between Hisn Maslama and al-Râkû. (See M. Streck, Art. Garamatex in Pauly-Wissowa, s.v.)

**Bibliography:** Le Strange, 105, 175-176, 230-231.

(See D. M. Dunlop*)

**BADJAWR,** tract of mountainous country in the Lîr, Swât, and Čitral agency of the Peshawar division, West Pakistan. It is bounded on the north by Dîr; on the east by Dîr and Swât; on the south-east and south by the Utnâm Kîlî and Mamund territories; and on the west by Afgânistân. It has an area of about 5,000 square miles and is intersected by five valleys—the Čahārmûn, Bâbûkûrâ, Watalî, Rûd, and Sûr Kâmâr. In the absence of any census the population has been estimated at 100,000. Badjawr is the home of the Tarkanî Pathîns who claim to be akin to the Yûsûfuizis. They are divided into four sections: the Ismāʿīlīz, ʿĪsāzî, Salarzâi, and Mamunds. The Salarzâi and Mamunds are also found across the Durand boundary in Afgânistân. Like the tribes of Dîr, they are Sunni Muslims but are unusually susceptible to the influence of their mullahs. The Khan of Nawagai claims to be the hereditary chief of all the Badjawr tribes. The history of this area is almost inextricably interwoven with that of Dîr and Swât. The fort of Badjawr was taken by Bâbur in 1526 (vide S. Beveridge, *Bâbur-nâmes*, 567-73). Akbâr's forces were cut to pieces by the Yûsûfuizis in 1585. In the reign of Awarngâb they constantly attacked the Mughal frontier outposts. They fought against the British in the Ambeyla campaign of 1820/1823 and during the frontier confrontation of 1314-13/1897.

(C. COLLIN-DAVIES)

**BADJÎNA,** (Sp. Pechina), ancient Spanish town which is to-day no more than a small country town. The Rio Andara (Wâdi Badjîna), which descends from the southern watershed of the Sierra Nevada, flows through Badjîna and discharges itself into the sea 60¹/₂ m. (10 km.) lower down, near the watch-tower (*Mâriyyât Badjîna*), the site of the town which, under the sole name of al-Mâriyya (Sp. Almería), became the most active and flourishing Mediterranean port in al-Andalus. The groups of sailors settled between Alicante and Aguilas were in the habit of proceeding in the autumn towards the African coast, where they passed the winter, and on returning in the spring to the Peninsula, with huge cargoes; a number of them settled in the North African ports and founded, *inter alia*, the new Téns, in 262/875. The canton of Pechina was then occupied by the Arabs of the Yemen, who had been charged by 'Abd al-Râhmân II with the task of maintaining a *ribât* to protect the coast against possible attack by the Madjûs [e.g.]; in return, he had granted them possession of the fertile valley of the Andarax. Andalusian sailors returning from Téns came to terms with these Arabs in order to found a sort of maritime republic, and made Badjîna the capital of a small state. A large mosque built by the Arabs in the 10th century and the ramparts erected by the sailors, made it a town which, as a result of the trade of its fleet, which anchored at Almería, rapidly increased in size and prosperity. But after thirty-seven years of semi-independent existence, during which it was threatened by the Arab league at Elvira, it was incorporated in 310/922 in the Umayyad community; it maintained its prosperity during the first half of the 4th/10th century, until 'Abd al-Râhmân III, in 344/955, made Almería the capital of the region and put in hand important town-planning schemes there. During the reign of al-Hâkam II, the importance of Badjîna declined still further, and in the 5th/11th century it was no more than a humble village, while Almería became the capital of one of the kingdoms of the taifas.

(A. HUGI MIRANDA)

**AL-BADJÎ,** Abu 'I-Walîd Sulaymân b. Khalaf, a distinguished theologian and literary figure in 11th-century Spain. Born in 403/1012 of a family from Başalyâwâs (Bádajoz) which had emigrated to Bâdja, modern Beja in S. Portugal (Ibn Bassâm, cited Makkari, *Analectes*, i, 511), he frequently attended the schools at Córdova, gained some success as a poet and in 426/1035 travelled to the East. He was absent from Spain for 13 years, three of which he spent at Mecca, in the service of the hâfiz Abû Dhârr al-Harawi, who had been educated at Harât, Balkh and other places in Khurâsân, and with whom Al-Bâdî now studied.
Mālikī šīkḥ and badīḥ, accompanying him regularly to his home in al-Sarawat, i.e., the mountainous country between al-Tihāma, Najd and al-Yaman. Later al-Badji passed to Baghdād, where for another three years he continued his studies, though so poor that he is said to have been obliged to earn his living as a night-watchman. We hear of him also at Mawsil, where according to one account (Makkārī, i, 507, cf. Ibn Bashkulwī, i, 200, no. 449) for a year he applied himself to the recently-invented kalām (scholastic theology), at Aleppo and Damascus, and in Egypt. He returned to Spain in or about 439/1047 as poor as when he left it, but with greatly extended views. About this time, at the instance of the Spanish jaḥāk, he disputed in the island of Majorca with the fafrīk, living as a night-watchman. We hear of him also at Mawsil, where according to one account (Makkarī, i, 511). His proposals to this end, made in person, were on the whole badly received, except at Sārakasta (Saragossa) on the N.E. frontier, where the strength of the Christian kingdoms was fully appreciated. Al-Muktaḍār b. Ḥūd of Saragossa (reigned 1046-1081) sent for al-Badji, and evidently he remained with al-Muktaḍār for a considerable time, since it was a Saragossa that his works appeared (Ibn Khākān, Kālib, ed. S. al-Harārī, 215). Al-Badji died at Almeria in 474/1081, i.e., in the same year as his patron.

If the main political purpose of his life remained unrealised, al-Badji was a prolific author of books, including a Commentary (ṣaḥr) on the Muwaṭṭa2 of Mālik, which especially in its short form, entitled al-Munkād, enjoyed high estimation. Of his other works there have been printed (1) a Reply (Djānsab) to the so-called Letter of the Monk of France (Risālat al-Badji min Ifrānsa), for which see D. M. Dunlop, A Christian Mission to Muslim Spain in the 11th Century, in Al-Andalus, xvii., 1952, 147. The Reply shows much dialectical ability, and repeatedly refers to kalām. (2) The Epistle on Definitions (Risāla fi ‘l-Hudād), principally in šīkḥ and badīḥ, edited by Djawda Ḥādī in Revista del Instituto Egipcio de Estudios Islamicos en Madrid, (Sakḥfat al-Muḥad al-Miṣrī), Vol. ii, Madrid 1954, Arabic section, 1-37. Bibliography: Brockelmann, i, 410, and S I, 749-745. M. Asín Palacios, Abūkāsir al-Darab, i, Madrid 1927, 200-208. (D. M. Dunlop)

BADJI, an Arab tribe, reckoned along with Khāṭám as a subdivision of Anmār; the nisba is Badji. Badjil was sometimes said to be a woman, but her place in the genealogy is vague (cf. F. Wüstenfeld, Register zu den genealogischen Tabellen, 101-35; also Die Chroniken der Städte Mexka, Leipzig 1856, ii, 134). Some genealogists held that Badjil was a Yemenite tribe; others made Anmār the son of Niṣr b. Ma’add b. ‘Ardān (Ibn Ḥaḍar, Usd al-Ghāba, i, 279, art. ‘Darūr b. ‘Abd Allāh’; Ibn Durayd, ed. Wüstenfeld, 101 f.). The tribe was sometimes taunted with this uncertainty about their ancestry (al-Maṣ‘ūdī, Murūjū, vi, 143). Along with Khāṭám, Tamīm, Bākrah, and ʿAbd al-Ḵays they raided ʿIrāq under ʿAbd al-Muḥtafī (c. 370-379), but suffered severely when he counter-attacked. In Mālikī law, i.e., since the fall of the Umayyad Caliphate the lands in the Sawād (al-Baladhur, Futūḥ, 253, 267), but three years later they were persuaded to give up their lands and to receive instead a stipend. ʿUmar ordered sections of Badjil which were under the protection (ṣuwar) of other tribes to attach themselves to ʿIṣār (Muḥaddalīyā, i., also Usd al-Ghāba, i., l.c.). It is stated that at this time ʿArfdji b. Ḥārūmah b. Bārik, a part of the ʿAzd, though only a bāṭil of Badjil, was its sayyid. Khāydī b. ʿAbd Allāh b. ʿAbd al-Kasrī, who was prominent in the later Umayyad period, belonged to Badjil, though his adversaries questioned this (cf. I. Goldziher, Muhammedanische Studien, i, 205).

BADJIMZA or Baqimza, in the time of the ʿAbbadī Caliphs, was a village north-east of Baghdād, some 8 miles from Baʾkūbā, where the caliph al-Muḳtaṣī bi-Amr Allāh put to flight the troops of the Seldjuk Sultan Muhammad II under Alp Kūsh Kūn-i Ḫar in 549/1154.

Bibliography: Yāḵšt, i, 497, 706; Ibn al-Aṣḥār, xl, 129; Houtsma, Recueil, ii, 237 f. (Ed.)

BADJISRA. This was a small town in ʿIrāq, situated some 10 ʿarbahs to the north-east of Baghdād and a short distance due south of Baʾkūbā on the left bank of the Nahrawān river, which attained the name of Tāmārār on its arrival at Baghdāsara. The town is described by the Arab geographers as being a prosperous and pleasant recreational centre with many date groves and a considerable population, but it was laid waste in the time of Ibn ʿAbd al-Ḥakīm, author of the Mardquda, who died in 739/1338. The name Badjīsra, which is derived from Syriac, means “house of the bridge” i.e. the location of the bridge.

The modern village named “Abū Dāhirra”, however, is not the same town. Apparently, the name of this village is inferred from the ancient nomenclature of Badjīsra. Modern ʿAbd al-Dāhir is one of the larger villages in the Miḳdādīyya (Ṣahrābān) baddī 2 in the Diyalā liwa2 of ʿIrāq. According to the 1947 census, its inhabitants totalled 768 in number.

There are various references to Badjīsra in the histories. It is mentioned by Ibn al-Aṣḥār in the
annals of the years 68/688, 334/945-6, 439/1047, 488/1095 and 496/1102-3. During the last three of these, the town was subjected to plundering. In the annals of the year 597/1201, Ibn al-Sa*! mentions the death of Mihkül, an attendant of the daughter of the ʿAbbāsid caliph Al-Mustan|id, al-Ffruzadiiyya, who was the administrator of the prefecture of Bādįsra. Bādįsra is the birth place of a number of poets and men of letters, and some of them are mentioned by Yākūt.

BADIKAM (Abū l-Husayn), properly Bādkam (an Iranian word which passed into Turkish, meaning the tail of a horse or yak, see Benveniste in JA, 1948, 183), name of a Turkish amīr who was initially a ḡulâm in the service of Mākān and subsequently in that of another Daylamī, Mardawīd. Bādkam had been unable to come to terms with the Iludiārī guards. Ibn Raʾik, who had confiscated his property, started to correspond with Bādkam, encouraging him in his resolve, and recommended him to the Caliph al-Rāḍī as a successor to Ibn Raʾik. Al-Rāḍī adopted Ibn Mūkla’s views and secretly encouraged Bādkam, as can be seen from an account given by the historian al-Šāfi, a confidant of the Caliph and of Bādkam (42-44, trans. i, 89-90), though he nevertheless handed Ibn Mūkla over to Ibn Raʾik. In Dhu l-ʿAyar da 326/September 938, Bādkam, who had marched on the capital on the pretext of coming to ask for the pay for his troops, entered Baghdād, in spite of the efforts of Ibn Raʾik, who had tried to stop him on the Nahr Diyālā by flooding it with the waters of the Nahrawān canal and destroying a bridge. At Baghdād, whilst Ibn Raʾik sought refuge in flight, the Caliph at once appointed Bādkam amīr al-umārā. Bādkam, the amīr al-umārā, had to contend with the Hamdānid of Mawsīl, Ḥasan b. ʿAbd Allāh, who was not fulfilling his financial obligations. At the beginning of the year 327/October-November 938, Bādkam marched against him with the Caliph, and entered Mawsīl after having crushed Hamdānid resistance below the town, but was unable to take Ḥasan, who fled into the Dirāzā, where Bādkam pursued him to no avail. Bādkam’s troops were unremittingly harrassed at Mawsīl. Thereupon, as Ibn Raʾik had taken advantage of these circumstances to make a sudden irruption into Baghdād, Bādkam negotiated with the Hamdānid and likewise with Ibn Raʾik. A treaty was concluded at the end of 938 with the Hamdānid who offered to pay over an initial sum as part of the tribute. Ibn Raʾik agreed to leave Baghdād and to accept as compensation, the government of the Tarāk al-Forūṭ, the Dirāzā, the djund of Kinnarīn and the waṣīm. He left Baghdād on the 28th of January 939 and the Caliph and Bādkam returned to the capital at the beginning of February 939. Bādkam then had to carry the menace from the Būyids which overshadowed Lower ʿIrāq, and this led to a closer though ephemeral understanding between Bādkam and al-Barāʾī. He thus received the governorship of Wāṣīt and carried out a successful operation against the Būyids in Susiana. He then obtained the office of waṣīr, but remained at Wāṣīt, his functions at Baghdād being performed only by a delegate. In 328/940, Bādkam married one
of his daughters. The Buyid had not relinquished his ambitions and had obtained the support of another of his brothers, Hasan (Rukn al-Dawla), master of the Diibal. The latter marched on Wasit and set up his camp on the left bank of the Tigris opposite the town, though he was obliged to withdraw, when the arrival of Badikam and the Caliph was announced. On the other hand, the army sent against the same Hasan in the Diibal by Badikam was defeated.

It was not long, however, before dissension arose between Badikam and al-Baridi, who did not conceal his intention of becoming amir al-umara and who was very careful not to support the expedition sent by Badikam into the Diibal. At the end of 328/August 940, Badikam removed him from the office of wa`ir and decided to carry out an expedition against Wasit. For some time he had been worried by the behaviour of al-Baridi and, in July, he abandoned the plan he had formed of going to fight the Buyid in the Diibal and returned hastily to Baghdad. Then he marched against Wasit and entered the town abandoned by al-Baridi. Badikam remained there until his death. He was there when the Caliph al-Radi died in Rabii' I 329/21 April 941.

Badikam, the Turkish slave, had received his training at the hands of Malkan, to whom he was always very grateful. He understood Arabic, though he hesitated to speak it for fear of making mistakes, and employed an interpreter. He was, however, respected by men of letters, and enjoyed the company of men like al-§ull and the physician Sinan b. Ibrahim al-Lakanl; (7) a gloss on the commentary of Musannifek on al-Tirmidh!; (8) a commentary on a versification of Muhammad's career. Though there is a wealth of material, it is generally held that the earliest and most reliable version is that contained in a letter from €Urwa b. al-Zubayr to the caliph cAbd al-Malik (preserved in al-Jabarf, i, 1284 ff.), though even this

BADJAM — BADR

867

BADJAM, or Badur, Ibrahim b. Muhammad, a Shi`i scholar and author. Born in 1218/1773 in Badkur, a village in the Manufiya province of Egypt ('All Pasha Mubarak, al-Khitat al-Diidayda, Bulak 1306, ix, 2), he studied at al-Azhar, became a very successful teacher there, Rector (shaykh al-Ashkar) in 1263/1846, and died in 1276/1860. The most popular items in his very extensive but wholly derivative literary production are: (1) a Risala fi 'l-Tawbi; (2) a commentary on the K. al-Saman`i al-Tirmidh!, a commentary on the K. al-Shama`i of al-Tirmidh; (3) a gloss on the commentary of Musannifek on the Burda of al-Busti; (4) a gloss on the Fath al-Karib of Muhammad b. al-Kasim al-Ghazzal, a commentary on the Ta'rif or Mu`allas of Abu Shudaila (transl. by E. Sachau, Muhammadisches Recht, Stuttgart and Berlin 1897; cf. C. Snouck Hurgronje, 393 ff.); (5) a commentary on the Taka'd al-Sa`i`id al-Sama`i of his teacher al-Faadil; (10) a commentary on the Ma`lid of al-Sardir; (11) a commentary on al-Tarab i fi `Ilm al-Tawbi by 'Abd al-Rahman b. Is`a al-Murghidi; (12) a gloss on a commentary on the Farid al-Fawa'id fi `Ist`adra al-Layfi al-Samarqandi; (13) a commentary on a versification of the Adjurriyya of Ibn Adjurru.

BADR, or Badr Hunayn, a small town southwest of Medina, a night’s journey from the coast, and at the junction of a road from Medina with the caravan route from Mecca to Syria. It lies in a plain, 5 m. (8 km.) long and 21/4 m. (4 km.) broad, surrounded by steep hills and sand-dunes, and was a market centre.

Here occurred on 17 (or 19 or 21) Ramadaan, 2 A.H. (= 13 or 15 or 17 March, 624) the first great battle of Muhammad’s career. Though there is a wealth of detail in the early sources, it is difficult to give a clear account of the battle and the events which led up to it. It is generally held that the earliest and most reliable version is that contained in a letter from Urwa b. al-Zubayr to the caliph 'Abd al-Malik (preserved in al-Tabari, 1, 1284 ff.), though even this
has some material which seems to be legendary. Muhammad received information that a rich caravan was returning from Syria to Mecca, led by Abū Sufyān b. Ḥarb, chief of the clan of Umayya. He collected a force of slightly over 300 men (about 80 Emigrants, the rest Ansār), and marched to the neighbourhood of Badr in hopes of intercepting the caravan. Abū Sufyān on his side had sent a request to Mecca for a force to protect the caravan while it traversed the region easily accessible from Medina. Since the Meccans are said to have spent over a week on the way from Mecca to Badr, Abū Sufyān must have sent his request some time beforehand, though the sources assert that he only did so after hearing of Muhammad's preparations.

The Meccan force, commanded by Abū Djiāh of the clan of Mağhrūm, consisted of about 950 men from all the clans of Kūraysh. Before they reached Badr they received a message from Abū Sufyān to say that, by forced marches along a route closer to the coast than the usual one, he had eluded the Muslims. Abū Djiāh, however, despite the disapproval of some senior men and the withdrawal of the contingents from the clans of Zuhra and 'Adī decided to go forward to Badr and make a display of strength. He and his supporters doubtless considered that they were so strong that Muḥammad would not venture to attack (cf. Kurʿān viii, 47/49).

Muhammad does not appear to have known of the expedition under Abū Djiāh until the evening before the battle when some of his men captured a Meccan water-carrier at the wells of Badr. The camp of the Meccans was still out of sight behind a hill. This fortuitous encounter may have made it easier for Muhammad to persuade all his followers to fight, since in the circumstances it would have been dishonourable to withdraw. On the following morning Muḥammad moved quickly and seized the wells, filling all with sand except that nearest the enemy, where he stationed his men. The enemy was thus forced to fight for his water supply willy-nilly. All that can be said of the course of the battle is that there appear to have been some single combats followed by a general mêlée. What is certain is that the Meccans suffered a catastrophic defeat. Nearly seventy of them were killed (including Abū Djiāh and a dozen of their leaders) and nearly seventy taken prisoner and later ransomed for considerable sums; only about fifteen Muslims were killed.

This was a disaster for Mecca, but not a crippling one. The loss of many leading men was grave, but perhaps the most serious aspect was the loss of prestige. To recover prestige it was essential that they should punish Muḥammad. For the Muslims it seemed a vindication of their faith, brought about for them by God (cf. Kurʿān vii, 17, 24/43; they believed that He had sent his angels to their assistance vii, 9, 12).

Muhammad spent much time in prayer and received assurances that he would be victorious (vii, 7, 9). The Muslims looked on this as the punishment long foretold for the unbelievers. According to a probable suggestion (R. Bell, The Origin of Islam in its Christian Environment, London 1926, 118 ff.; Introduction to the Qurʿān, Edinburgh 1953, 136-58), the word jurbān applied to Badr means 'deliverance from judgement' (cf. Kurʿān, vii, 29, 41/48). The Muslims were thus confirmed in their faith and led to exaggerate their own importance—an exaggeration which resulted in a spiritual crisis after the reverse at Uḥud (Kurʿān, vii, 65/66; contrast 66/67). Muhammad himself from this time onward was in a much stronger position in Medina. The self-confidence induced in the Muslims by their victory, and the prestige they thus acquired, were factors without which Islam could hardly have developed as it did. Those who had fought at Badr as Muslims—the Badriyyūn—came to be regarded as an aristocracy of merit, and in most versions of the diwān of Umar are said to have constituted the highest class of Muslims.

Muhammad undertook a second expedition to Badr in Shaʿbān or Dhu 'l-Kaʿda 4 A.H. (= Jan. or April 628) in accordance with a promise given to Abū Sufyān as he retired from Uḥud. Both Muḥammad and the Meccans had much larger forces, but there was no fighting, though the Muslims did good trade.

Badr is mentioned by the geographers of Arabia; e.g., Yākūt, i, 524 ff.; al-Bakrī, 141 ff.; al-Mukaddasī, 82 ff.; al-Masʿūdī, 237. The traveller J. L. Burckhardt examined the site with the battle in mind (Rassen in Arabien, 1830, 614-19).

**BADR** (Pīr), SHAḤYKH BADR-AL-DĪN BADR-Ī AL-ʿĀLAM, a sain of the Dīnjaydiyya order, venerated by the people of Bihar and Bengal. In Bengal he enjoys the reputation of sharing with Pānē Pīr of Sonargaon the dominion of the waters. While putting to sea the sailors of Bengal utter the invocation: "Allāh, Nabī, Pānē Pīr, Badr, Badr." Pīr Badr originally belonged to Meerut (in Uttar Pradēsh) where his great grandfather, Shaykh Fakhr al-Dīn Zāhid (d. 704/1304) had established a great mystic centre. His grandfather, Shaykh Shihāb al-Dīn Ḥakīm-ī, was killed by Muḥammad b. Tughluq (725-752/1325-1351) for criticising his religious views. Pīr Badr received his spiritual training at the feet of his father, Fakhr al-Dīn II, and the Suhrawardī saint, Sayyid Djiāl al-Dīn Bukhārī. Shaykh Sharaf al-Dīn Yābūyī invited him to Bihar but he reached there after the former's death in 782/1380. He first married into a Hindu family of Bihar, and later entered into a matrimonial relationship with the ruling house of Dīnpur. During his travels in East Bengal he converted a large number of Hindu sailors to Islam. He also helped in the establishment of Muslim power at Sonargaon. He sojourned for sometime in CitTagong where his tīllā, in the western quarter of Bakhālī Bazar, is regarded as the palladium of the city and is visited by Hindu and Muslim sailors alike. Authority over the seas and rivers is considered a special spiritual attribute of his family. Fakhr al-Dīn Zāhid is reported to have rescued a party from sinking into the river Yamunā. It is said that Pīr Badr reached CitTagong 'floating on a rock'. He died on 27 Ṭadbīb 841/22 December 1440 in Bihār where his mausoleum is known as Chotl Dargah (the mausoleum of Sharaf al-Dīn Yābūyī Manerī being known as Barī Dargāh).
Badr, Abū Bakr al-Abîyûr, Delhi 1891, 129; Ghulâm Mu'ān al-Dîn, Maṭirî al-Widâyâ (Personal collection) ii, 536. (K. A. Nizami)

Badr b. Hasanwayh [see Hasanwayh, Banû].

Badr al-Dawla [see Aruqî].

Badr al-Dîn [see Liu'lu'].

Badr al-Dîn b. Kâdi Samâwannah, eminent Ottoman jurist, Şu'fi and rebel. Badr al-Dîn Mahmûd b. Kâdi Samâwannah was born in 760 AH/3 Dec. 1358 in Samâwannah (which corresponds to the former Greek city of Aşkülû (Ashkelon) near Adrianople). He was the eldest son of the judge Ghasîr Israilî, who was one of the oldest fighters for the faith of his time, and traced his ancestry back to the Saldûks. His mother was Greek, and took the name Melek under the incapable Caliph Mustansîr (427-487/1036-1094). The Saldûks were pressing forward into Syria, in Egypt after the death of the prince of Sinope. After the victory of Sultan Mehmed I near Camurlu (1413), he was dismissed from his post and banished to Iznik under rather humiliating circumstances. There he wrote and taught, and Ak Shams al-Dîn [see Maṭirî al-Widâyâ (Personal collection) who later became famous as Shâykh of the Bayramîyyah—is said to have been one of his pupils for a short time. It was probably there, too, that he became connected (in ways which are not yet clear) with the communist underground movement of a certain Bûrûkîyye Muṣṭafâ, and a certain Torlak Hû Këmâl, which led to the extensive rebellion in 1416, as whose ideological head Badr al-Dîn appears. Whîlîs on the one hand the biography of Badr al-Dîn (which was written by his grandson Khâlîl) asserts his complete innocence in all these events, the official Ottoman historians, on the other hand, accuse him of active participation—even of leadership in the rebellion. At the time when Bûrûkîyye Muṣṭafâ and Torlak Hû Këmâl started their attack in western Asia Minor (where, to begin with, they had considerable success), Badr al-Dîn left Iznik and reached Rumelia with the secret help of the discontented prince of Sinope. After the rebellion of Bûrûkîyye Muṣṭafâ and Torlak Hû Këmâl had been most cruelly suppressed, the revolt in Rumelia also collapsed and Badr al-Dîn was caught by troops of the Sultan and dragged to Serres in Macedonia, where Sultan Mehmed I was fighting the "false Muṣṭafâ" (Dûrûmeş Muṣṭafâ [g.r.]). After a somewhat questionable trial, Badr al-Dîn was publicly hunged as a traitor in Serres on 18 Dec. 1416. The rôle played by Badr al-Dîn in this rising is still by no means clear. It is certain, however, that his ideology was in sympathy with it, and that his ideas did have an enduring influence. There is documentary evidence that there were followers of the Badr al-Dîn movement in Rumelia even under Sulêymân the Magnificent. After the death of their hero, many of them turned to the now politically active Şaфawiyyah, whilst others merged into sundry sects, especially the Bektâşhîyyah. The most famous of Badr al-Dîn's descendants—beside his three sons Ahmîd, Israilî and Muṣṭafâ—was his grandson Khâlîl (the son of Ismaîlî) who was Badr al-Dîn's biographer.

As a writer, Badr al-Dîn was extremely prolific. He wrote close on 50 extensive works, most of them on matters of law. His most important Şu'fi works are the Wûrûdlî and the Nûr al-Kulâb.

H. J. Kissing

Badr al-Djamâle, a Fâtîmid commander-in-chief and vizier. The formerly brilliant Fâtîmid empire was on the verge of downfall under the incapable Caliph Mustansîr (427-487/1036-1094). The Saldûks were pressing forward into Syria, in Egypt...
the Turkish slave-guards were fighting with the negro-corps, a seven years' famine was exhausting the resources of the country; all state authority had disappeared in the general struggle; hunger and disease were carrying off the people, licence and violence were destroying all prosperity and it appeared as if the Fāṭimid kingdom must disappear in a chaos of anarchism. Then, on the call of the Caliph, the Syrian general Badr al-Djamāl took command of the government as well as of the army and with great though brutal vigour brought order into affairs again and indeed a second period of splendour to the Fāṭimid empire.

Badr was an Armenian slave of the Syrian amīr Djamāl al-Dawla Ibn ʿAmmār, whence his name al-Djamāl. He must have been born about the beginning of the 5th/11th century, for at his death in 487/1094 he was over 80 years old. Even before he became vizier he had made a great name for himself in Syria. He was twice appointed Governor of Damascus, but fell into difficulties each time on account of his stringent measures with the pampered troops. He then became commander-in-chief of ʿAkkā and in this capacity had to fight against the troops of Malikshāh. He had an Armenian bodyguard for himself and the soldiers he commanded were also to be relied on. He took them with him on being summoned by the Caliph in 466/1073 to deliver him out of the hands of the despotic Turkish officials. The latter never suspected the reason of Badr’s coming to Egypt, fell into the trap prepared for them and were all murdered in one night. Badr thereby became master of the situation. Now followed his appointment as commander-in-chief of Amīr al-Dhuwwārī (in the popular language Mir-ʿamīr), as chief justice, and vizier. The most popular of these titles was the first; the Djabal al-Djuwwāshī is still a common appellation of the Muṣṭafāmam commanding Cairo on the spur of which Badr built a mosque, a masghād in which according to popular belief at the present day the Sūr Dhuwwāshī lies buried. After quitting the capital he re-established order in the east through to the west of the Delta. Alexandria had to be taken by storm. The task of conquering Upper Egypt was also difficult as the Arab tribes had set themselves up as independent there. In Syria he was not so fortunate. Affairs were mismanaged here, and Damascus fell into the hands of the Sālāḥūdīn about the end of the year 488/1076. The Fāṭimids were never to regain it. In the following year the victorious Salīḥīn general Aṭlūz appeared before Cairo itself, but Badr had time to collect his troops and drive back the Salīḥīn. In spite of repeated attempts in the years 471/1080-9, 478/1085-6, and 482/1089-90, he was not successful in regaining Damascus and Syria, and at his death only a few towns in the South of Syria were still in the possession of the Fāṭimids. His strength in Syria was weakened by unrest constantly breaking out in Egypt, inspired by one of his sons.

Of his activity as a governor we know little, but it is praised on all sides. Under his rule the annual revenue of Egypt from taxation was increased from about 2 to about 3 million dinārs. These large receipts enabled him to put into practice the lessons learned from the Salīḥīn invasion. Cairo was invested by him with its second wall, and the three strong city gates which are admired to this day, the Bāb Zawilla (Zuyayla), the Bāb al-ʿAṣr and the Bāb al-Futūb, were built. In Rabī’ I 487/March-April 1094 Badr’s active and successful career came to its close, after he had arranged that his son al-Afdāl Shāhanshāh [q.v.] should succeed him in all his offices. The Caliph Mustansir, who had then been reigning for 60 years, died a few months later.
scene of a settlement by Khusraw I Anusharwan of captives from northern Syria. Mounds near and in modern Badra represent the old city, which was ruined by floods, pestilence or war.

**BADRKHÂNÎ, THURAYYÂ (1883-1938) and DIJALADAT (1893-1951), sons of Amîr Amlîn ‘All, eldest son of Badr-khân (died 1868), Prince of Bohtan (Dijartat Ibn ‘Umar) of the ‘Afsizân family, who fought against the Turks for the independence of Kurdistan (1836-1845). The two brothers, born at Maštala (Syria) died, the first in Paris and the second, as the result of an accident, in Damascus. Both devoted their lives to the Kurdish national cause, Thurayyâ in the sphere of organisation and political propaganda and Dijaladat mainly in the cultural field.

Thurayyâ, after having obtained the Diploma in Agronomical Engineering at the University of Constantinople, began to lead a turbulent life, in which is mirrored the history of the national struggle of his people. In 1904 he was found guilty of plotting against the security of Turkey and sent to prison. He spent two and a half years in prison and in exile. After the Young Turks’ coup d’état, he returned to Constantinople and started his newspaper “Kurdistan” in Kurdish and Turkish. In 1910, the newspaper was suspended and he was again thrown into prison, and condemned to death for having taken part in the preparation of a military revolt. He was pardoned and in 1916 banished. In 1912, however, he returned to the capital, where he organised a secret Kurdish revolutionary committee. He was condemned to death, and for the third time saw the inside of a prison. He made his escape and finally left Turkey in 1913. During the 1914 war, Thurayyâ recommenced the publication of his newspaper in Cairo, where he also organised a Committee for Kurdish independence. He played a role in the drawing up of the Treaty of Sèvres (1920). As this diplomatic instrument, which envisaged an international Kurdish statute, remained a dead letter, Thurayyâ resumed his revolutionary activities after the signing of the Treaty of Lausanne (1923), and in 1927, together with his supporters, he joined the National Kurdish League Khoybun, which had just been formed, largely as a reaction to the failure of the Treaty of Sèvres. Thurayyâ became its propaganda chief and prepared educational material, publishing “booklets” (spelling-books, readers and books on religion; in all 12 appeared). During the last war, Dijaladat also published the review *Kurdî* (Light).

**BADRKHÂNÎ, under the ‘Abbâsî Caliphate a district south-west of Baghîd, the land south of the Nahîr-Shârat, a branch of the Uruphates canal Nahr l’Isâ [q.v.]. The Shârat separates it from the Katrâbbl district; the southern part of the western half of Baghîd (the so-called town of al-Mansûr) as well as the suburb of Korkh were situated within the bounds of the district of Badrkhânî; the latter formed, like the district of Katrâbbl, a subdivision of the circle of Astân al-’A zaman.”

**BADÜSBAÑIDS (Pâdûsbañids), minor Caspian dynasty, noteworthy for its longevity (451-1006/665-590) as well as for that of its princes, who reigned for 50 years. Its power in Tabaristan (Mazandaran) extended to Rustamdâr, Rûyân, Nûr and Kadîr. Its origins are traced to Gâwâbara who came from Armenia in the time of Yazidîrd III, who appointed him governor. He had two sons, Dâhîya and Badûsbân, established respectively in Gillân and Tabaristan, the former being the eponymous ancestor of the Dâhûwân dynasty (40-144/660-701), and the latter that of the Badûsbañids. The history of this latter dynasty is given in an excellent résumé by Rabîn [see APRASVABHIDES], including a genealogical table with some forty names with numbers indicating their order. There exists, furthermore, a Taragh-i Rûyân (T.R.) by Mawlânâ Awdîyâ Allâh of ’Arnul, written fo. Pakhûr al-Dawla Shâh Gharî b. Ziyâr (died 786/1384) which does not cover the whole of the period of the dynasty as described in Rabîn. On the other hand, it contains abundant details on the internal life of the dynasty, so that these two sources, therefore, admirably complement each other. We learn, for example, that two major revolts took place in Tabaristan against the Arab occupation; one in the time of ’Umar b. al-’All, was the joint work of the isfâbab Shahrwîn Bâwand and Shahrîyâr Bâdûsbañids.
with Wandad Hormizd of the Sukhra clan (T.R., 46); the other broke out at Djalus (Cams) and was savagely repressed (T.R. 52). These risings appear to have been provoked by the burden of excessive taxation.

In some cases, for example the revolt of Mazyar [q.v.], religious movements have served as a pretext. Shī'ism was only imposed as late as the middle of the 9th/10th century by Kayūmartār (no. 36 in Rabino). The resistance opposed by Iranian national feeling to all foreign usurpation is less evident in respect of the Uigūrs. Their reign is portrayed as a period of well-being (T.R., 122). Nevertheless, the destruction caused by the Mongols (T.R., 130) and by Timūr (Rabino) is not passed over in silence.

The protection of the Saljūqids was sought from time to time: Hazārāsp sought that of Toghur, for example (T.R., 103). Khārīzma (T.R., 106, 107), the Ṣaffārīds (T.R., 70) and the Sūmānīds (T.R., 74, 75) are mentioned in various episodes, the latter for the most part in connexion with the ʿAlīd Sayyids. As for the internal struggles, which are purely of local interest, the Bādūsbanīds were sometimes in alliance with their neighbours and sovereigns, the Bāwand, and at other times were against them. After a number of conflicts with the Buwayhīds, a modus vivendi was found which maintained the peace (nos. 13, 14 in Rabino).

The Ismāʿīlīs, heretics (malāḥids), are the object of violent diatribes (T.R., 90), but when needed, their help was sought (T.R., 100, 10). Both the Bāwand (Ṣḥams al-Mulūk) and the Bādūsbanīds (Ṣḥāhrākīn b. Nāmawar) contributed to their final defeat by the Mongols at the siege of Gird-i Kūh (T.R., 110). Other characteristic features are the Iranian habit of wearing the hair long (curled or plaited) and special head-dresses (T.R., 135) as well as non-Muslim personal names: Shīrāzd, Bahman, Rūzāzād, Farīdūn, Gudarz, Pāshang, Iridj, etc. The name Bādūsbaṇ should be connected with Bāwand and Bāḥarab. Note avela-dī dāhban (T.R., 35). There are verses cited in the Tābarī dialect (T.R., 111, 114), Arabic (T.R., 121, 129) and Persian (T.R., 74, 75, 77, 108). The Muslim aspect appears in the names of pious men (T.R., 3, 54, 55, 112, 115) and of religious foundations. As regards geography, there is ample toponymic data. Attention must be drawn to the old name of Māzandarān, farātextdājdā (T.R., 27, 28) (V. Minorsky disputes this).

BADW. I. Pastoral nomads of Arabian blood, speech, and culture are found in the Arabian Peninsula proper and in parts of Iran, Soviet Turkestan, North Africa, and the Sudan. This article is limited to their way of life in their home territory. Unlike primitive hunting and gathering, pastoral nomadism is a sophisticated system of exploiting land incapable of cultivation. Later than agriculture, pastoralism utilizes seven species of domestic animals: the sheep, goat, and ox, domesticated in Neolithic times as part of the herding and sowing complex of Western Asia; the ass, domesticated by early Bronze Age times for transport; and the camel, horse, and water buffalo, introduced during historic times.

Hunting peoples living off gazelle, oryx, ibex, ostrich, bustard, and quail were probably the desert's sole occupants until about 5,000 B.C. As Neolithic cultivators began to settle the edges of the waste, its seasonal wealth of herbage enticed shepherds and goatherds to lead their flocks out a certain distance during the winter and spring. After the camel had been introduced around 1000 B.C., full-time nomads found it possible to live out on the desert throughout most of the year, summering at wells or on the edges of oases and perennial streams. With the riding horse, introduced after 500 B.C., and perhaps as late as the time of Christ, Arabian camel nomads acquired an animal from whose back they could fight each other efficiently, and the golden age of Arabian life on the desert could begin.

The enormous number of unexplored archaeological sites in the Arabian desert, the advance of dessication since the introduction of the camel, and historical references in pre-Islamic literary sources indicate that the Arabian nomads for the most part are descended from farmers, traders, and caravan men who took to pastoralism during the early centuries of this era, as both business and the landscape deteriorated, just as cowboys and pastoralists in the United States, Canada, and Australia are descended from agricultural and urban peoples who took advantage of newly opened territories. The period during which Arabian nomadic life developed and crystallized lay between the time of Jesus and that of Muḥammad.

Four kinds of nomadism are practised in Arabia. In the ʿDībāl-ʿAl-ʿArābī, in Ẓafar, on the Indian Ocean, peoples who speak Semitic languages of the Mahri-Socotran group graze hump-backed cattle on grass provided by the abundant rainfall of the summer monsoon. In cultivated regions of southern ʿĪrāq special families of herdsmen raise water-buffaloes, pasturing them in reaped and fallow fields. These people live in semi-cylindrical houses of poles and matting, which they move about seasonally over short distances. On the desert fringes, and particularly in the neighbourhood of Kuwayt, whole clans and tribes of shepherds mounted on donkeys drive their sheep and goats from pasture to pasture. Out in the middle of the bedouin proper herd their camels, migrating to the areas of recent rainfall in winter and spring and remaining near sources of permanent water in summer.

These four kinds of nomadism are dependent on the different physiological needs and capacities of the animals herded. Humped cattle need green grass and daily water, water-buffalo streams or irrigation ditches to wallow in. While sheep and goats can graze on dried vegetation part of the year, they move slowly and cannot be kept more than a day or two from water. Camels can go as long as seventeen days without water in 100° F. heat, and can drink 30 gallons at a time. Their ability to withstand the rigours of the desert are due not only to their capacity for holding water but also to their ability to preserve it: a camel can tolerate an increase of up to eleven degrees F. over normal body temperature without much water loss through sweating. They also store energy in the form of fat in their humps. The Arabian horse, when it is kept
on the desert, is watered on transported water, and fed grain, being treated with the same solicitude as human beings. Sheep, goats, cattle, water-buffaloes, and camels all produce milk. Goat hair is used for tents, sheep and camel wool for clothing. All these animals are eaten, except horses. The horse provides nothing but the kinds of transport directly concerned with warfare and prestige. As social status combined with independence is the most important of all considerations to a desert Arab, the horse is honoured accordingly.

The most ancient dwellers on the desert are the Śūlabā [q.v.], probably descended from early hunters, and representing a phenotypically homogeneous desert-adapted Mediterranean racial strain. In northern Arabia they dwell among the noble Bedouin, whom they serve as guides, tinkers, and workers in wood. At times they also hunt. Their women provide entertainment. Second in probable antiquity are the shepherd tribes, as for example the Śharārāt and the Muntafik confederations. These are in the most part dependent on the camel nomads because of their relative immobility and hence defencelessness. Individuals of these tribes serve the camel nomads as hired herdsmen. Members of the noble tribes own camels, drive and ride them on migrations, and guard and defend them while grazing. In the heat of summer they sometimes pick dates in oases, or even go pearl-fishing. These tribesmen are also served by blacksmiths, mostly negroid, who come out from the settled places, and by Negro slaves. Shopkeepers from the towns sometimes set up special tents in the Bedouin camps to vend their wares, while travelling agents of large camel-purchasing companies buy up young camels which will be collected upon reaching the desired state of maturity. Much of this business takes place at camel markets like that of Burayday in Najjd. Members of the noble tribes often visit the cities of Saʿūdī Arabia, Jordan, Syria, ʿIrāq, and Kuwayt where some of them maintain town houses. Many have taken to settled life, and some have risen to high offices in the various Arab countries.

The material culture of the Bedouin is designed around mobility. The black tent of goat-hair is loosely woven, to permit circulation of air, yet its fibres swell when wet to keep out the rain; in summer it provides an area of much-needed shade, open on the sides to the breeze; in winter, with sides and rear closed it is warm. Except for special tents used only as dīwāns, or reception halls, it is divided by a curtain into a family section, occupied by women and children, and the guest section in which the head of the household receives his male friends. Kitchen utensils are of metal and wood, but each family usually owns a set of small porcelain coffee cups carefully packed in a compartmented wooden box. Arab clothing, loose and flowing, is warm in winter and cool in summer, as it protects the skin both from the cold and from the hot, dry wind; the man's headcloth, and the woman's headdress and veil, also help to keep dust and sand out of the eyes, nose, and ears. Most of the Bedouin's outfit is purchased, including the cotton cloth for his under-clothing, his tools, and his containers. So is much of his food, including wheat, rice, dates and coffee. Only milk and meat are produced locally.

Like other Semites, the Bedouins lay great stock in genealogies, and consider kinship of paramount importance in human relations. The preferred mating being with the father's brother's daughter, descent is patrilineal. Divorce is easy, polygyny both serial and contemporary. Bedouin women, often unveiled, in many cases married more than once, have more freedom than their sisters of the towns and oases. Beyond the immediate family is a group of kin which usually goes out to pasture together; several such groups will spend the hot season together; this is usually the limit of the kin responsible for mutual vengeance. Beyond this is the tribe, finally the confederation. Among the Bedouin proper, also called Aʿrab, two main lineages are recognised, those descended from Kaḥṭān, who lived before Abraham, and the Aʿrab al-Mustaʿriba, descended from Ishmael, son of Abraham and Hagar, who was daughter of a king of Hidjāz. The Bedouin proper include the ʿAzaʿa confederation, of which the Ruwalā is the best known tribe, the Ǧammār, the Al Murra in and on the borders of the Empty Quarter, the ʿUdmán, and the Banū Khalīd. All of these tribes follow a strict code of chivalry when fighting one another.

Being mobile camel-owners, these aristocrats are concerned chiefly with the use of winter and spring grazing lands, the locations of which vary from year to year with the whim of the rains. In each camp the work is done mostly by dependents — slaves, Śūlabā, hired herdsmen, and blacksmiths, all of whom are considered non-combatants. A Bedouin shaykh entertains lavishly in a large tent where food is always available to his followers and guests. The ritual of coffee drinking is highly formalised and nearly always in progress. Members of other tribes fleeing vengeance seek the protection of his "face". Travellers cross his territory under the protection of his guards. In inter-tribal warfare, which most frequently arises over pasture rights, he will often lead his men into battle in person. Bravery, generosity, and good judgment are the qualities traditional in such a leader, who does not inherit his office directly, but is chosen, often after a sharp contest, from the paramount family. Before trucks, buses, railroads and airplanes took over the desert carrying trade, the Bedouins guided, protected, and raided caravans, including the huge pilgrim processions. The Bedouins are Muslims, characteristically Sunnite. Many (especially in Eastern Arabia) follow the Maliki code, but the Wahhabis universally follow the Ḥanball. The Bedouins generally are said to spend less time and effort in religious devotions than townsmen but the conditions are sometimes reversed. In some of their rituals can be seen a survival of veneration for ancestors.

The political situation of the Bedouins varies from period to period. When the central governments to which the tribal territories are officially assigned are weak, the paramount Shayqhs rule virtually as kings, and even cities have paid them tribute. At times when the central governments are strong, their authority becomes purely local. At the present time Bedouins are found within the political boundaries of Saʿūdī Arabia, Yaman, Aden Protectorate, Maskat, Trucial Oman, Kuwayt, ʿIrāq, Syria, Lebanon, Jordan, Israel, Egypt and the North African states. For the most part these governments endeavour to keep their nomads at home. In some countries this effort has been implemented by programmes to settle some of them on newly irrigated land, and new water-tanks along the Tapline are used by a number of tribes, including the Ruwālā. Part of one tribe, the Dawāsir, whose home in southern Najjd, moved to the Persian Gulf and onto the island of Bahrayn. In 1923 they crossed...
back to the mainland, and settled in al-Khubar and Dammam. During the last three decades some of the Dawasir, for the American Oil Company, have set up in businesses of their own, including construction and transportation.

Today the Bedouins are in a state of transition. Some still concern themselves with camel breeding for the meat, skin, and wool markets; others are truckers, machinists, and skilled operators of oil producing machinery, and are sending their children to school and college. They are showing themselves just as adaptable to the machine age as they were to life on the desert when an earlier opportunity called them.

II. THE HISTORY OF THE ORIGIN OF NOMADISM IN ITS GEOGRAPHICAL ASPECT

(a) Goat and Sheep Nomadism.
(b) The Nomad on Horseback.
(c) Bedouin Nomadism in Arabia.
(d) The Appearance of Camel Nomadism in North Africa.

(a) Goat and Sheep Nomadism.

The expressions “nomad” and “nomadism” lose their scientific practicability, if they are not used in their restricted meaning: “roaming from place to place for pasture” (Concise Oxford Dictionary). Nomadism is unsettled roaming, pasturing herd animals. Roaming gatherers and hunters as well as a population with a shifting agriculture (ladang, miùpa, see Gourou) should not be called nomadic.

If we follow the succession of “agricultural origins” of the Old World in C. O. Sauer’s conception (1952) taken over and elaborated by the authors in two papers (1956, 1957), nomadism in this restricted sense began much later than planting and breeding “household animals”, i.e. dog, pig, and fowl. (Sauer distinguishes between household animals and herd animals).

The still hypothetical sequence of creative centres of domestication and cultivation, according to Sauer’s interpretation, began along the river banks and coasts of moist tropical forest round the Bay of Bengal, where a rather sedentary fishing folk, which in addition hunted and collected plants and mussels, began to breed these “household animals” (dog, pig, fowl) and to plant tubers and fruit shrubs and trees (cf. also E. Hahn, Hettner, Menghin, Werth 1950, 1954, Dittmer, Smolla).

Cultivation of seed plants (“millets”—this is a term including the diverse species of small seed cereals—as well as pulse and oil plants) was then added in the winter-dry forest, which is easily burnt down, and in the wooded steppe, at first in India. These plants supply proteins and oil, making man more independent of animal food, especially of fish.

In this progressive succession of cultures, in which man became “the lord of creation”, the next step seems to have been the breeding of goats and (then) sheep in the mountain areas north-west of India, round the Hindukush. This was probably initiated by a near contact between seed-planters and roving hunters, among whom the wild goat or sheep was a holy animal. A culture thus resulted in which herding was added to seed-planting and hunting. It may be regarded as a primary stage of
farming, as a goat and sheep farming culture ("Kleinvieh-Bauernlust"), if we understand the meaning of farming to be a combination of tilling and herding.

Results of the ethnological expedition of A. Friedrich (Jettmar 1957b) strongly support this hypothesis, especially for the goat. In the remote valleys of the Shin of Gilgit, the markhor, the wild goat with screw-shaped horns, and the ibex are holy animals, "herded by goddesses". The domestic goat, an offspring of the wild goat of the same region, partakes in this holiness. The economy of the Shin consisted in a scanty growing of millet, but an intensive breeding of goats and an important hunting of the markhor and ibex. Jettmar brings several indications for the thesis that the domestication of the goat took place in these regions. The experience of domestication—of this tremendous intervention in the balance of nature—must have always implied a profound religious emotion. Jettmar calls this a religious shock of domestication (cf. E. Hahn).

The growing of the two-rowed barley (Hordeum spontaneum) as the first large seed grain ("Haim-getreide") may have already been developed in that region. Probably in this stage, if not earlier, small-scale irrigation was started.

But only the thesis of the following great step, which largely diversified social and economic modes of living, is more or less archaeologically proved up to now: in the highlands and the mountains of Western Asia, somewhere between Western Iran and Syria, cattle were bred and primitive wheat (emmer, Triticum dicoccum; einkorn, T. monococcum; and possibly spelt, T. spelta) was grown as an addition to the basic goat and sheep farming. It was the foundation of a complete farming culture ("Vollbauernlust"), which later became the basis of early civilisation in Mesopotamia and Egypt.

These four main nuclei of creative cultures which reared animals and plants were based on one another. They may be looked at as only one moving centre, appearing near the Bay of Bengal and progressing finally to the highlands and mountains round Mesopotamia. Each of these four stages sent out waves of dispersion over large parts of the world. In comparison with these creative centres, all other regions seem to have been more or less stagnant areas, where elements of these waves were taken up or transformed or rejected, according to cultural or climatic circumstances.

The first data we can use for inserting this succession into a frame of absolute time are the radiocarbon data for the pre-pottery settlements with complete farming near Kal'at Djarmo in the hills east of Kirkuk, c. 4750 B.C., a settlement without irrigation (Braidwood), and of those of the fortified irrigating settlement of Jericho, in the 7th millennium. W. F. Albright doubts the latter date (oral communication). The emmer grown at Kal'at Djarmo was still nearer to the wild form than to the later cultivated form (Helbaek, Schiemann by letter). This might show that no very long time had passed since the beginning of emmer cultivation. The oldest strata of oasis settlement known in Jericho are said to go back into the early 7th millennium B.C., but we are not yet informed by Kenyon and Zeuner about the domesticated animals (except the goat) and cultivated seed plants there. The Natufian culture of Palestine (Garrod, Bate) is probably older than the oldest strata of Jericho. Like Sauer and Albright (1949, 129), we suppose that seed agriculture, probably growing some species of millet, was already carried out during the Natufian stage (cf. Clark, Nair 1956).

On the other hand we now know with considerable certainty that the 9th millennium B.C. was a very cold period globally (glacial advance of "Salpaußeldane" in North ra Europe, of "Schlern" in the Alps, of "Mankato" in North America as far as the Great Lakes, of the moraines round the piedmont lakes of East Patagonia), in which the snow line was about 800 metres and more lower than at present (Caldenius, Firbas, Deeevey, Gross, Rathiens, Butzer). But from about 9000 to 2500 B.C. temperatures were higher all over the globe than they are now, so that the snow line, timber line and potential cereal line were situated about 400 metres above the present ones (Thermal Maximum, Mittlere Wärmezeit). It seems improbable to me that a herding culture took its origin in the mountains north-west of India in a time of glacial advance or of very heavy glaciation. I suppose that the happened in the period of glacial retreat, perhaps in its first half. This glacial retreat took place throughout the whole period from 8100 to 5500 B.C. Temperatures rose rather quickly, and the timber line and cereal line climbed up to those high elevations mentioned above. But natural oases in the deserts round the mountain chains of Central Asia always became smaller and scarcer, as they were fed by rivers derived from retreating glaciers continually diminishing in size. Towards and during the Thermal Maximum, a sheep breeding culture was able to spread over Tibet, where the climate was much more favourable then. This culture was not purely nomadic (cf. Hermanns, Kussmaul). It probably began to grow the six-rowed barley (Hordeum vulgare, i.e., hexastichum), the wild form of which probably is Hordeum agriocrithon, which has been found round Lhasa and in Eastern Tibet, (Freisleben, Schiemann 1948, 1951)

It seems that the cultivated varieties of six-rowed barley all derive from this form. They spread over China and India; and from India they seem to have taken their way to South Arabia and Abyssinia (which became a secondary centre of variation) and thence to Upper Egypt, where cultivated emmer had entered from Syria and was grown in Upper Egypt beside six-rowed barley in the late 5th millennium B.C. (Caton Thompson and Gardner, Brunton, Libby, Arnold, Kees).

It seems that the route from the Hindukush and Eastern Iran by South Arabia to Africa has been of great importance for the spreading of cultures—especially during the periods of the spreading of early seed planting as well as of goat and sheep farming. There are no wild goats in Arabia and Abyssinia. But the veneration and ritual hunt of the ibex was also spread in these countries. The idolisation of the ibex was common in South Arabia in the last millennium B.C. The ibex god Ta'lab was protector of goats and sheep (Beeston, Höfner). Up to date, ibex hunting has been a ritual act in Hajar ammawt (van der Meulen - von Wissmann 177 f). The ibex seems to have had a similar position in the Badarian and early Naqada cultures of Upper Egypt after 4000 B.C. (Brunton, tables), in the latter beside the bull. We must also mention that Agatharchides (about 130 B.C.; C. Müller, Geogr. Græc. Min., 1, 133 describing the nomadic Troglodytes near the western coast of the Red Sea (known as Blemmyes and Bedja), writes that they call bulls and rams their father, cows and sheep their mother.
The early cultures of goat and sheep farming with millets and of a complete cattle farming with large-seed cereals were more or less restricted to the climates and vegetations from light forest and wooded steppe to semi-desert as well as to the natural and artificial oases. All of these mostly have a light and rich soil, which is easily cultivated (map 1). The wooded steppe is good for both agriculture and pasture. The dry steppe is a rather good pasture. It is arable, but agriculture depending on rainfall is endangered in dry years. The desert steppe or semi desert is too dry for this kind of agriculture. It can be used, however, as a meagre pasture for goats and sheep, but not for cattle. Good pasture is also found in highlands above the cereal line.

In areas of desert steppe where oases do not exist or are scarce, pastoral folk herding sheep and goats, but not cattle, could branch off from the steppe-farming tribes and become independent nomads. However, such nomadic people breeding ghana in the semi-desert must always have lived an impoverished life compared with tribes of moister zones or of regions interspersed with oases. In these latter regions, parts of a tribe may have been agricultural, other parts pastoral ("partial nomadism"). Thus a pure nomadism was carried out by a branch of a steppe-farming or even oasis-farming clan or social unit. (This way of living somewhat resembles South-European transhumance.) W. F. Albright (1946 a, b, 1949, 147, 154, 162 ff., 257) supposes that the Semitic neighbours of the Sumerians were such pastoral tribes, partly nomadic, when the Sumerians, at the outset of civilisation, began to irrigate Lower Mesopotamia. The western Semites (Amorites) pressed on the Babylonians mainly from 2100 to 1900 B.C. These ancient nomads differed from any modern form of society in Arabia, Bedouin, semi-nomad or Slaib (Sulaba). They possessed goats, sheep and donkeys. Hunting and robbing the harvest were important for them. They travelled and attacked on foot. This made a complete crossing of the desert impossible for them, except in spring. They did not dare to move more than a day's journey (30 km.) from a watering place. In summer they had either to depend on oases or other settled areas or to herd in tillable regions of the Fertile Crescent. On the attitude of the Egyptians towards this roaming population and on their frontier control in the East cf. Kees, 64 ff., 106 ff., esp. papyrus Petersburg 1116 A, l. 51 f. "He (the Asiatic) never lives in the same place and his feet are wandering since the time of Horus, he fights and is neither victor, nor is he defeated". The difference between nomads, semi-nomads, partial nomads, steppe farmers and farmers of small oases was much smaller and occupational overlapping was more common than in later periods (see W. F. Albright, 1946, 181 ff., esp. 1949, 239 ff. on the Israelites in the desert, the patriarchs and the 'Apiru or Khabiru). In many of these cases, it is better to speak of pastoralism than of nomadism.

In no part of Asia does there ever seem to have spread any complete cattle nomadism, such as exists in parts of Africa south of the Saharā, except yak nomadism in the highlands above the timber line in Tien-shan and Tibet. Cattle are not fitted for semi-desert grazing. They also find difficulty in grazing in winter in a steppe with a frozen snow cover, as in West Siberia (cf. Potapov, and Hančar, 390).

We have recognised that pastoral life has been an essential part of the farming cultures since their origin. We saw that the earliest domestication of herd animals and pasturing was probably developed in the Hindukush area by seed planters surrounded by mountain hunters of ibex and wild goat (and perhaps sheep), and that this was an invention correlated with deep religious emotion, an invention by which these seed planters became steppe farmers. Because of the pastoral branches of their clans, these steppe farmers must have been of greater mobility and more migratory than the seed planters had been. But only in places, where herdsmen of sheep and goats entirely split off from their kinship or group and gave up agriculture, may we speak of complete nomadism. When an oasis became more extensive and its settlement larger, its population became increasingly sedentary. The new excavations of pre-pottery Jericho show that such irrigating villages were fortified like towns very early, in Jericho perhaps

Map 1. Oasis and steppe regions of the Dry Belt of the Old World, classified according to their thermal conditions.

1-highland desert; 2-desert, semi-desert; 3-forest; 4-oasis, steppe and wooded steppe; 5-steppe with cool summer and cold winter; 6-oasis and steppe with long, hot summer; 7-steppe, tropical, no frost; 8-mountain chain.
in the 7th millennium (Kenyon, Zeuner). This may have been the first germ of what became early civilisation (in the delta oases of Mesopotamia, where large irrigation schemes needed collaboration, centralisation and the formation of states, where mass labour was required as well as division, specialisation and intensification of labour, and where technical inventions sprang up (wheel, cart, plough). As a result of this development, the intensity of contrast between steppe farming and oasis civilisation was continually growing, while the common offspring is displayed by the Magen Mater and bull idols worshipped in both of them.

Meanwhile steppe farming with all its pastoral traits had spread via Asia Minor to south-eastern Europe and to the light oak forests of Central Europe (Danubian culture, since c. 4,000 B.C., according to radiocarbon data). And since the 3rd millennium it began to infiltrate from the Tripolye culture (west of the Dniéper river) into the wooded steppes of Russia and Siberia, which then were occupied by an advanced hunting population (Hančár). All these regions were unfit for oasis economy because of their cool or short summers (map 2).

I think it is a quality of the largely hypothetical sequence of creative centres, which step by step gain and enlarge the domination by man of other organisms, that it corresponds excellently with the succession of cultures presented by several ethnologists, e.g., by Dittmer. It also has the advantage of making parallel inventions largely unnecessary (Sauer).

We cannot treat here the hypothesis of Flor, W. Schmidt, Polihhausen and others, in which the reindeer represents the earliest domesticated herd animal, so that nomadism begins among hunters breeding the dog, in the boreal conifer forest (taiga, muskog) of Eurasia and spreads to the south. Since lately jetta (1952) and others have shown that impulses for reindeer domestication came from horse breeding, which itself was a rather late acquirement (compare below), the number of adherents of this hypothesis became small. The foundation of Hančár’s suggestion that the reindeer was employed as a trailing and riding animal about 5,000 B.C. (547 and table 63) has broken down too. Jettmar (compare below), the number of adherents of horse breeding, which itself was a rather late acquirement, that it corresponds excellently with the succession of cultures presented by several ethnologists, e.g., by Dittmer. It also has the advantage of making parallel inventions largely unnecessary (Sauer).

(b) The Nomad on Horseback.

Among the Equines, the African donkey (Equus subgen. Asinus) and the South-West and Central Asiatic onager (Equus subgen. Hemionus) were early in use as transport animals. Hančar's opinion is that the find of bones of one onager in Kašat Djano (about 4750 B.C.) is important in this connexion. According to Hančar, a subordinate breeding of the horse (Equus subgen. Caballus), which was wild in the steppes and light forests of the North, can be recognised in the early 3rd millennium B.C. in the Tripolye farming culture in the wooded steppe between the Carpathians and the Duieper river.

A decrease of temperature and probably an increase of precipitation (cf. Tostlows and Butzer's different view) since about 2400 B.C. depressed the snow line in Central Asia and thus considerably enlarged the oasis areas of Türan, so that farming and herding as well as oasis civilisation could expand in that region (which before had been a desert of greater aridity). At least for some centuries, this desert seems to have lost its function as a strong barrier (Wissmann 1957). The advanced hunters of the North and the farmers and the oasis civilisation of the South came into contact along an extensive border. It seems that by this meeting an amalgamation took place, and a new vital and vigorous culture was growing, in which, since the early 2nd millennium, the horse, the war-chariot (with its origin probably some re in the South-West Asiatic highlands round Armenia), and Indo-European peoples played an important rôle. During this process, the veneration of the deer, which had had a central position in the religious conceptions and the myths of the northern hunters, was replaced by that of the horse, which was also brought into contact with the old South-west Asiatic chthonic fertility and bull (bucranion) worship (Kussmaul 1953b).

If we take this broad cultural process as a whole, we may say that by it civilisation was often relieved from oasis seclusion, where it had been in danger of stagnating and of becoming barren. Here also, we can distinguish steppe-farming and oasis-farming branches. When the Shang, who belonged to this cultural complex (Kussmaul 1953a), occupied China from Central Asia about 1500 B.C. and became its ruling class, they had been mainly oasis farmers (Eberhard, Franke, Bishop, Wissmann and Kussmaul 1956, 1957). The Aryans however, when destroying the Indus civilisation in about the same period, must have been steppe farmers, but cannot be called nomads.

According to excavations, the breeding of the Bactrian camel as a transport animal seems to have started in Türan in the second half or the last quarter of the 3rd millennium B.C. (Walz, and especially Hančar). This is a few centuries earlier than the time in which we know of horse breeding in this region. Even in Mesopotamia, reliable proofs of horse domestication only begin about 2000 B.C. or shortly before (Boessneck, Hančar).

In the northern wooded steppe and marginal light forest with its rich black soil (chernozem) from Russia to Siberia, agriculture gradually became important beside hunting and herding. In the middle of the 2nd millennium, even western Siberia was inhabited by a comparatively dense farming population (Andronovo culture). In such a region without oases, pure steppe farming with large herds offers good conditions for a social gradation as well as the formation of clans, of a warlike nobility and of dynastic leadership (Kussmaul). This farming in the black soil belt was then penetrating more and more into the open steppe, where inevitably its pastoral and migratory branch was increased and strengthened (Hančar).

However, the first people to find out that fighting on horseback was of great advantage were probably that kind of farming tribes with a strong pastoral branch, which lived in highlands and mountain basins, where the war chariot must have been of comparatively little use. This perhaps took place in Transcaucasia or even in the Carpathians (Kussmaul, Jettmar). Probably, these tribes still remained what we have called steppe-farmers. Hančar considers the northern border of the Tian-shan Mountains and the Altai Mountains as the regions of origin of horse riding (397). But Jettmar 1957 shows clearly that Hančar's main argument in this question broke down (cf. above). Reindeer riding was begun later than horse riding. In most other questions, Hančar's important basic work remains untouched.

The Cody branch of the horse took up which we may call equestrian nomadisation. Once aware of the great superiority of fighting on horseback over the older ways of fighting, especially in war chariots, “North Iranian” tribes, probably between the rivers Volga and Irtysh, the Scythians and their neighbours, the Sakians, gave up steppe-farming life entirely and specialised in the breeding of herd animals, especially horses. Perhaps about 900 or 800 B.C. they became the first horse-riding...
nomads, the first archers on horseback (Hančar, 390 f.). They were the first to break into the neighbouring countries, disseminating panic among sedentary populations. When we use the word nomad, we usually think of this equestrian type. This disastrous transformation overwhelmed not only the open steppe but also the wooded steppe with its dense farming population. It even attracted hunting tribes of the taiga forest to join the new way of life. The distinct social gradation of the steppe farmers now became the base for the appearance of leaders of high political and military ability in assembling hordes of growing size. The poorer farmers and hunters were probably forced to join the "aristocracy" of horse-breeders, so that a horde organisation, unknown before, was brought about which grew by raiding, sacking, killing and enslaving other populations, and by winning over vassals, especially other hordes of horsemen, owing to admiration or fear. The warm climate and the refined oasis civilisation of the South, known to some returned men through their service as mercenaries, as well as the mild climate and open plains of the West, ending in Roumania and Hungary, attracted invasions.

It is improbable that the predecessors of the Scythians in Southern Russia, the Cimmerians, were completely nomadic already. They seem to have been steppe farmers with a strong pastoral branch and with dangerous mounted warrior bands (Kussmaul 1953a, ii 302, Hančar 101). Perhaps the early Medes can be mentioned in this connexion, at the time when they superseded the highland farmers of Irán (cf. von der Osten). Even the Achaemenids did not abandon knighthood ideals, "horse-riding, archery, and love of truth".

Eastward, through the gap of Dzungaria along the foot of the Altai Mountains, nomadisation worked like a chain-reaction of explosions. The "North Iranians", especially the Scythians, were followed by the Wu-sun, who probably lived in Central and Eastern Tiem-shan. We may suppose that in this period herdsmen, hunters and farmers of the open and wooded steppe, surrounding Mongolia, were forced to take up nomadic life. It is possible that the pressure of the Wu-sun against the population of the oasis chain of Kan-su caused the last invasion of a farming people into China, the Zhung, which led to the breakdown of the dynasty of the Western Chou (770 B.C.). The first nomadisation to be traced in Chinese reports is that of the Hsiung-nu from about the 5th century B.C. These were neither Iranians nor "Proto-Turks". According to Ligeti, their language seems to have been isolated. The Yenisei-Ostyaks may have taken over features of the Hsiung-nu language, when both were neighbours. In their habitat between ancient China and the Gobi Desert, the Hsiung-nu had taken over en bloc a considerable group of elements of the culture of the North Iranian nomads. Some of the traits of the life of the Hsiung-nu prove their former dependence on China. Others show their old cultural relations to the non-nomadic primitive tribes of Manchuria (Kussmaul). During centuries of fierce wars, in which the Chinese defended themselves against the Hsiung-nu and built the Great Wall, again the Chinese took over a part of the cultural elements derived from the North Iranians, e.g., iron, cavalry, trousers, the concept of heaven as a tent. There is an old Chinese proverb: Horseback forms state.

Map 3 shows how the spark of nomadisation caught one tribal organisation after the other along the borderland between forest and desert north-east of China during and after the time of the Hsiung-nu empire. Agrarian and urban China, itself in a country of loess and steppe, counterbalanced or endured the pressure or became vassal or partly subdued or even marginally transformed into pasture, all this during long periods of alternate defence and retreat and of regaining ground for agriculture. As the object of this article is a synopsis of the history of the origin of nomadism, we cannot deal with the growth of more or less short lived nomadic realms and empires, which in their tendencies saw a model in the universalistic and cosmological state doctrine of the Chinese Empire. Nor can we deal with those tremendous migrations and invasions into the West, during which the Dry Belt served as a corridor, through which the invaders broke into the countries of old oasis civilisation in South-west Asia or into the beginnings of forest civilisation in mediaeval Central and Western Europe, where they were one cause of the Migration of Nations (Grousset, Spuler).

All these movements destroyed what had been left of steppe farming in the plains of the open and wooded steppe. The hilly and mountainous regions surrounding Mongolia in the north, however, with a pattern of steppe, meadow and forest, became areas of retreat and regeneration of a population which made its living by hunting, by cattle-breeding, and also by farming (cf. Lattimore). The ruins of a defence wall cutting off the north-eastern corner of the steppe of Mongolia near the Gan and Argun rivers (Plaetschke) show that such a farming population must have been quite numerous sometimes. We may trace on map 3 how again and again in such hilly border regions of the forest new nuclei of horde formation sprang up among hunting, herding and farming groups, who led a simple life under hard conditions. In these we find some able man, endowed with the gifts of leadership, organising a heterogeneous horde by raiding, robbing and winning vassals. Sometimes the name of a clan, little known before, became the name of a growing power or even of a vast empire. By some lucky chance, a Secret History of the Mongols has been preserved (Haenisch), which is the story of the life of Čingiz Khan and his clan, and of how he founded the Mongol Empire. It was written by a Mongol in A.D. 1240 as a plain first hand report. In the time of his forefathers, the semi-sedentary clan living in the Kentei Mountains owned but a few horses, cattle and sheep. There was some scanty agriculture. Wild vegetables were collected. Hunting on horseback was important. However, the neighbours in the open steppes outside the mountains were true horse-riding nomads with large flocks and herds. Some had become sated with raiding and addicted to the luxuries of civilisation with which they had become familiar during their raids. From hiding places in the valleys and forests of the Kentei hills, the incipient clan of Čingiz Khan robbed among the rich nomads of the plains. The booty consisted of horses, cattle and sheep, women, children and servants. Thus the clan turned entirely nomadic, growing by the acquisition of new vassals, an association taking its name from the leader's clan, growing in strength according to the looting ability of the leader. Finally, well-known tribes and peoples lost their independence as well as their name and merged with the great "Mongol" unit.

Virtually no region on the margin of the dry belt
of Mongolia, which once had been the cradle of such a fast growth of nomadism and then had been thoroughly nomadised, ever repeated the formation of a new nomadic aggregation.

The empty spaces of the Dry Belt were terribly enlarged by the destructive incursions and migrations of the mounted nomads. Steppe farming was annihilated in Eurasia except in mountainous regions, if we do not include in this term the agriculture of North China and parts of India. Oasis civilisation was disastrously weakened and reduced. It is true that the larger nomadic states contributed to the interchange of materials and ideas across the continent. But this interchange would certainly have been stronger in a peaceful development. Yet we do not know to what extent suffering may be necessary to save from degeneration and decay that which is sound and good in man's mind.

**Bibliography:**

(c) *Bedouin Nomadism in Arabia.*

There are indications that the wild one-humped camel (the wild dromedary) lived in North Africa and the Near East until the 3rd millennium B.C., and that it became extinct later on except in Arabia. We do not know when this process of extermination ended in North Africa.

A cord made of camel hair has been found from the 3rd dynasty in Egypt. An Egyptian relief published by James (1955) shows the dromedary among wild animals. Judging from its style, it belongs to the New Kingdom. The camel was domesticated neither in the valley of the Nile, where the local climate is detrimental for its health, nor in any desert region of North Africa. This question is treated thoroughly by Walz (1951).

Agatharchides (in two versions, cf. C. Müller, *Geogr. Gracc. Minor. i, 179*) and Artemidorus (Strabo xvi, 4, 18) give reports of the Red Sea coast of Arabia which inspire confidence. In these reports they also write that, in the hinterland of the coast of present Northern Hijjāz, there are herds of wild animals, of "cattle," onagers (ΞΟΛΟΥ ΗΜΟΝΟΥ; ἄχθις τος ἄχθις ἡμών καὶ βοῦ), wild camels (καμήλων ἄγριων), deer and gazelles, and also numerous lions, "panthers" and wolves. All these descriptions were probably taken over from one original report, perhaps of Ariston, c. 280 B.C. (cf. Tarn, op. cit. report, later, 14). Musil (1926, 302 ff.) believes that these camels probably were not really wild ones. (He mistakes onagers, "half-asses", for mules, and is right in saying that mules cannot be wild.) Littmann
Map 2. The zones of vegetation and the oases of the Dry Belt of Inner Asia.

Map 3. The spreading of explosive outbursts of horse-riding nomadism with feudal state-building. The previous population had an economy of agriculture, herding and hunting, concentrated in the wooded steppes (cf. map 2). The Roman numerals show the succession of the outbursts. The dates are approximate.
Map 4. The Red Sea and Arabia in Pre-Islamic Periods.

Recent names are given in parentheses. The broken lines are:
1. The incense roads from Žaflr (Dufár) and Kana' via Yaj'rib to Ghana and Damascus and to Gerrha, (2), the roads from the Nile near Koptos to the Red Sea harbours, (3) the "Darb al-Fil" (6th to 7th century A.D.) from Žaflr and Sah'a to Bankh Harb and Karo al-Mankil (and Mecca), (4) the coastal road from Karo al-Mankil to Ayla.
(1940, 3) has demonstrated that the rock-drawings which are found in connexion with Thamúdean (cf. below) graffiti show—besides domesticated animals—camels, horses and dogs—hunted animals in great quantities: gazelles, “wild cattle” (oryx), ibexes, wild boars, hares, ostriches, lions, wolves, hyenas. Only once is a goat shown. No sheep and no domesticated cattle are drawn. The nomads between Mídian and the Hāwrān must have been fervent hunters, but not much interested in sketching their ḍ̣emanam (goats and sheeps). Also Xenophon (Anabasis, i, 5, r ff.) speaks of onagers, wild cattle (oryx), ostriches and bustardus, and he describes the hunting of onagers on horseback.

So perhaps there still were also wild dromedaries in desert Arabia in the 3rd century B.C.

We cannot tell where in Arabia the one-humped camel was first domesticated. Albright supposes that this was done in South Arabia, somewhere round the great southern desert (1938, note 5). Nothing is known about the dromedary as a domesticated herd animal before the 11th century B.C. (Albright, Walz 1951, 1956, against Dussaud 207): Judges, 6-8 says that Mídianids, Amálekites, and the sons of the east made ingressions on camel’s back into Palestine across the Jordan river. This was about in the first half of the 11th century B.C., and, according to Albright and Walz, is the earliest date for a mention of the domesticated dromedary. It is the time when iron was introduced into Palestine. Albright (Arch. 1953, 227, note 31) is of the opinion that the dromedary was effectively domesticated in Arabia between the 16th/15th and the 13th/12th centuries B.C. The spreading of Semites to South Arabia goes probably back to a still earlier time: the reliefs of the Punt expedition of Hātšepsút (about 1455 B.C.) show that the Orientalid sub-race of the Mediterranean races (Mediterraneus sensu stricto—Orientalis—Iranian—Indic—Gondí; cf. von Eckstedt, Biasutti, Coon, Field 1956, Pöch), which must have been a very old race among the North Arabian Semites (Moscati), was already represented then in South Arabia, at least among the reigning class (Dr. Hella Pech, oral comm.). This agrees with the supposition of Contí Rossi (101, 47) that the names of the chiefs of Punt mentioned by Hātšepsút and by Rámses II were Semitic (Parúa—forú; Náhás—nḥ̣ḥ̣āḥ̣ā; cf. Brunner-Traut, 307; Wissmann 1957).

That Punt was located at least partly on the Arabian side of the sea also becomes probable, I think, when we draw conclusions from the somatic features of people of Punt in Egyptian reliefs as early as the 5th dynasty (Sabúrê, cf. Kees, 59). These features are similar to those of the Egyptians (cf. Pöch 1957).

W. F. Albright estimates that, in the desert climate along the interior foot of the highlands of Yaman, civilisation was beginning about the 13th century B.C. He assumes that this was due to an immigration from the north. His dating is partly based on the fact that the excavation in Ḥadjar b. Ḥumayd (cf. below) has shown that 4-5 metres of probably agricultural (irrigational) silt had been deposited before the foundation of that settlement. This foundation took place c. 1000 B.C. While 8 metres of silt were deposited during the existence of the settlement from c. 1000 B.C. to c. 200 A.D., the lower 4-5 metres may represent about half a millennium (R. Le Baron Bowen, 67, 117; Albright 1958).

It is peculiar that camel-riding and horse-riding both seem to have begun to spread in the second half of the 2nd millennium B.C., camel-riding from Arabia, horse-riding probably from the mountains of Transcaucasia. Hanáčar suggests that an increasing demand for sumpter animals for the transport of metals may have been a stimulus to the intensification of horse breeding in Mesopotamia (1937). Also the breeding of the one-humped camel in Arabia must have been accelerated in connexion with a growing demand for transport between South Arabia on one side, the Mediterranean lands and Mesopotamia on the other, a transport of frankincense, myrrh, precious stones and gold from South Arabia, of Indian and East African goods from the South and of cloth, products of civilisation and objets d’art (Segall 1957) and perhaps iron wares from the north. The introduction of waterproof plaster for irrigation works and cisterns in South Arabia, which had spread before in Syria since about 1200 B.C., must have impelled agricultural development “probably not before the 10th century B.C.” (Albright 1958).

While the excavations of N. Glueck in Ezion-Geber (Smithsonian, Inst., Ann. Rep. 1941. Publ. 3652, 1942) prove that the reports of the navigation of Solomon and Hirám to the gold land of ʿOfir refer to historical facts, the story of the queen of Sabaʿ (Shebā), which is told in relation with the ʿOfir expeditions in 1 Kings 9-10, must also have some historical background (cf. Albright 1956, 3). At least it shows that camel caravans were travelling between South Arabia and Palestine in the 10th century B.C. Sabaʿ, ʿOfir and Ḥawīlā are named one after the other as brothers in Genesis 10 (9th or 8th century, cf. Albright, Arch. 1953, 327), beside Ḥaṣarmāwēth, among the sons of Yōkštān, son of ʿEber. I can support the hypothesis that the gold-land of ʿOfir (1 Kings 9-10, 224; 1 Chron. 295; 2 Chron. 84, 98; Job 224, 2814; Psalms 4543; Isaiah 13) was in south-west Arabia on the Red Sea coast: in Ḥaṣār round Dhāhabān (Sprerger, Moritz, Delbrueck 12, Wissmann 1957, 1959; cf. Glaser 357-384, Albright Arch. 1953, 212, note 14). In Somaliland, where some authors put ʿOfir, the outcrop of crystalline rock and of its dikes, the matrix of gold, is much smaller than in Ḥaṣār (cf. Carte Géol. Afr. 1952). On Sabaʿ sending gold cf. 1 Kings 10, Isaiah 60, Ezhech. 274 (but cf. J. Ryckmans 1958).

The most plausible identification of the gold-land of Ḥawīlā of Gen. 24, 104, 105, 214, 1 Sam. 155 in my opinion as well as that of Niebuhr, C. Ritter, Sprunger, Moritz and others, is that with Ḥwālān. This name is known from inscriptions, from al-Ḥamān, and is still used today. North Ḥwālān bordered on ʿOfir. South Ḥwālān adjoined Sabaʿ. That North Ḥwālān was highly renowned in Greece for its rich gold mines, probably at about 400 B.C., is explicitly stated by Agatharchides (C. Müller, Geogr. Graec. Minor., 184 f; Wissmann 1957, esp. 1959).

In the genealogy of Genesis 10, the Southarians are considered as being descendants of both ʿKūb and ʿEber. The descendants of ʿEber and his son Yōkštān were settled as far as “Ṣefar, the mountain towards the East”. Commonly, this Ṣefar is thought to be Ṣafar, the capital of the Ḥimyar in Yaman. But this town was probably founded about 100 B.C. (cf. below), when the Ḥimyar had occupied this region. It lay on a hill in the highlands of south-west Yaman and is not “a mountain towards the east”. Fresnel, C. Ritter, Rödiger, Tkac and others suppose—and I believe they are right—that Ṣefar was Ṣafar (or Dufar), a town and region east of Ḥadramawt and Mahra-Land, which, however, is not known by this name in pre-Islamic inscriptions or literature, but only since the early Arab geographers. It is the best frankincense region of South Arabia. The eastern
mountain promontory and cape of this region is really the last region from which in antiquity ships left the coast to use the monsoon in the direction of India (Schoff, Frisk, Lc. later). It is also the last area of South Arabia towards the East with a settled, non-nomadic population. East of it, the great desert touches the sea as far as Um An (lagarde 61, note; Volters, Zaschr. j. Assy. 22, 223 f. is of the opinion that Sefar of Gen. 10 is to be identified with Safarī in Bahrayn. But this "balad" (Yākūṭ 3, 96, citing Ibn al-Fāḳhī) was neither frontier place nor mountain.)

I think one may conclude that the "Table of Peoples" (Yahwist) means by the "sons of Yokṭān" the agricultural peoples of South Arabia (map 4); and I suppose that in Gen. 25, the camel nomads of central and north-west Arabia were comprehended as the sons of Yishmā'īl, and in Gen. 37, and Judges 8 as Yishmā'īlites. Gen. 25**: "And they (the sons of Yishmā'īl) lived from Hāwla as far as Shūr, which is east of Egypt, on the way to Ashṣūr.* They lived, it seems, in the triangle of desert-steppe between the agricultural countries of South Arabia (Khawālān), Egypt and Assyria (cf. Skinner, Internal Crit. Comment., and Kautzsch-Bertholet).

Certainly, troops mounted on an animal so well adapted to the desert, capable of enduring thirst so well and of travelling long distances so quickly, as is the camel, must have enjoyed great superiority when fighting against war-chariots drawn by horses. Albright says (Stone Age 1946, 120; Arch. 1953, 97): "Arab nomadism is conditioned by the domestication of the camel, which makes it possible for Bedu to live entirely on its herds of camels, drinking their milk, eating camel curds and camel flesh, wandering through regions, where only the camel can subsist, and making rapid journeys of several days, if need be, through waterless desert. The camel eats desert shrubs and bushes, which even sheep and goats will not touch."—Over long distances a riding camel is three times as quick as a horse. It can cover 300 km. in one day. The load of a caravan camel may weigh as much as 200 kg., that of a horse up to 150 kg. Arabia has not only bred races of transport camels and of riding camels of the lowlands but also stocks of mountain camels capable of going on fairly steep paths, as in "Aslr (Tamiisser ii, 31, 47, 197) or in "Awālīk country and Ḩaḍramawt (own experience). When coming from the plains to an "ākaba (pass) of the mountains, the camels of a caravan must be changed near the foot of the "ākaba from one breed to another. In Arabia, only the western slope of the Yaman highlands seems to be too moist for camel breeding. We must consider that, before the time of camel domestication, the donkey (and perhaps the onager) was the only transport animal in Arabia (cf. above). It is peculiar that the Bactrian camel, which had been domesticated in Tūrān about a millennium earlier than the time when the domestication of the camel dromedary must have taken place in Arabia, never became important for riding but only for transport.

It looks as if the domestication of the dromedary went hand in hand with its employment for riding. This cannot be said of any other animal. Since excavations in Arabia did not go down to strata of early periods, our knowledge is based only on historical data. We are not yet able to see the source of the impulse for this domestication. Wälz (1956) opposing Wiesner (1955) insists on the statement that the domestication of the one-humped camel was totally independent of the breeding of the Bactrian camel and the horse. It seems, however, that parallel inventions are rare in prehistory and history (Sauer i.e., 2). The horse was in use in Mesopotamia at least about 2000 B.C.; but troops riding on horseback are not mentioned there before of 1130 (Nebuchadnezer I of Babylonia; Thomson in Pauly-Wissowa, vi, 109 ff.). As the Bactrian camel was bred in southern Tūrān since at least about 2100 B.C., it is improbable that it was not brought to Mesopotamia and further south now and then in those turbulent periods of the early iron and middle millennium B.C. This may have given an impulse for the domestication of the one-humped camel.

A camel's head, part of a pottery jar found in the excavation of Ḥadījar b. Ḥumayd in Bayḥān (ancient Ḥatabān) in South Arabia by W. F. Albright, was approximately dated by him to belong to the 8th (or 9th) century B.C. (Van Beek 1952, 17, Wälz 1956, footnote 34, Albright, letter 1957). The publication of a radiocarbon date for a low stratum of Ḥadījar b. Ḥumayd (Van Beek 1956) shows that Albright's prehistory palaeographical dating of a monogram found during this excavation is not too early but may perhaps be even a century late.

A relief of a dromedary rider from Tell Ḥalāf is from the 9th century (Wälz). The first cuneiform records of camel-riding nomads seem to be "Aramaean Bedouins" fighting against a vassal of Assur Naṣîrpal in 880 B.C. A little later, 854 B.C., "Gindibu the Arab", from an Arabi district, fought against Salmanassar III, leading a troop of thousand camels. The article Al-'Arab (i) by A. Grohmann contains a summary on the Arabi country and the Arabs in the 9th to 7th centuries B.C. from cuneiform data. In this period, Aribi is the northernmost part of Arabia between Syria and Mesopotamia, including the Palmýrene and Waði Sīrān. The Arabs are its nomadic and oasis inhabitants. The central oasis Adummatu is, according to Grohmann and Musil (1927, 331 f.), Dūmāt al-Djandal in the Djawf. The "kings" are chiefs partly of oasis settlements, partly of nomadic tribes. This state of affairs is also meant in Jeremiah 25**: "The kings of Arabia and all the kings of the Arabs who live in the desert." (The first mention of 'Arab in the Bible is in Isaiah in the late 8th cent. B.C.) Bd., Bita, against which Assarḥaddon undertook a long expedition in 676 B.C., is, according to Weidner's latest discoveries, in Eastern Arabia, in the hinterland of Dilmān (Bahrayn), not as Musil (1927, 482 f.) thought, in Waḍi Sīrān (Albright, letter).

It is evident that the caravan roads, especially the "incense road" from Ghazzat on the Mediterranean and from Damascus by Ma'ṣūl (Musil 1926, 243), Daydān (al-'Ula') and Yathrib (al-Madīna) to Rapīt (Naǧīrān), Ma'ṣīn and Sabā (cf. Albright 1953, Wissmann 1957, Segall 1957) played an important political rôle, e.g., when in 732 B.C. queen Samsī of Arībi joined a great coalition including the state of Sabā, the king of Damascus, the important oasis of Ta'yym and tribes near Ta'yym and Daydān against Tiğlāth-Pileṣar III. The first sovereign of Sabā named in cuneiform inscriptions, is a mukarrīb (priest-king), brings tribute to Sargon II in 725 B.C. (cf. Albright, in BASOR 143, 1956, 10; idem, 1958; Wissmann 1957). The tributes received by Assyrian kings in this period from different queens and kings of the northern half of Arabia show that long-distance caravan traffic must have been considerable. Cattle, gold, silver, lead, iron, elephant skins, ivory and cloth were transported (Casel 1954).
It must be emphasised that South Arabia, which was represented by Saba* since at least the 8th century (cf. Albright, in BASOR, 1952, note 26, 1958), was a country with a numerous and farming population and with but little and unimportant nomadism, a country producing aromatic goods, especially frankincense (Exodus 30**, 1 Kings 10, Isaiah 60', Jer. 6'), cf. J. Ryckmans (1958). South Arabia certainly introduced Indian and East African wares to its ports, and it must have already monopolised the traffic on the "incense roads" to the north-west and by central Arabia to the north-east (map 1) in this period to some degree. (On the strength of Saba* in the 8th to 6th centuries, cf. von Wissmann 1957). Perhaps the Chaldaeans lived in 'Umân in those periods and mediated between Saba* and Mesopotamia (and India?), before they occupied Mesopotamia, where Chaldaean kings begin in 625 B.C. (cf. Albright, in BASOR, 1952).

Albright suggests (cf. van Beek 1952) that no time was more opportune for the commercial expansion of Saba* westwards into Ethiopia than about the 10th century B.C. "Egypt, which previously enjoyed exclusive trading rights in Ethiopia and Punt by land and by sea, was unable to maintain its commercial relations with the south after the fall of the New Empire." According to Albright, "boustrophonon" Sabaean inscriptions in the temple 'Awa* or modern Yebâ on the plateau of northern Ethiopia east of Aksûm (Littmann 1913, Nos. 27-32 and D. H. Müller, Epigraph. Denkmäler, Yeba 5) palaeographically belong to the 5th century (letter from W. F. Albright, March 1957, cf. Conti Rossini 1952). An inscription on the base of a rather archaic statue recently found in Maqallâ (Caquot and Drewes) seems to be somewhat earlier. So, even in the new chronologies of A. F. L. Beeston (in BSOAS 1954) and Frenne (1956 b), who emphasise a "rejuvenation" of the early South Arabian chronology, the 5th century B.C. would not be too early. Sabaean colonisation was already firmly established in this region at that time. The probable name of the temple of modern Yebâ, 'Awa*, was also the name of the great oval temple of the state god of Saba* near Mârib. In a remarkable boustrophonon inscription on an incense altar of Maqallâ in Abyssinia (Caquot and Drewes, 30-32), a "mukarrib of Da'mat (place near later Aksûm) and Saba***** dedicates (the altar?) to Almâkah, which was the main state god of South Arabian Saba*. J. Ryckmans suggests that, in a period before the first known Sabaean inscriptions of Mârib and Sîwârât (which probably date, from the 8th century B.C.; Wissmann 1957), the centre of Saba* was in the mountains and highlands of present southern Yaman, round Djabal Ba'dâ and Djabal Hawamîm (-Dhât Ba'dân and Dhât Hawamîn were the most important sun goddesses of Saba*), and that the region of Mârib in the north-east as well as North Abyssinia in the West were both colonised from this area (J. Ryckmans 1958; cf. Albright 1958).

Glaser (387 ff.) and von Wissmann-Höfler suppose that Ka'nân and 'Adam, the best natural ports of South Arabia on the Indian Ocean, are named as Kânâ and 'Èدم in Ezekiel 27** (early 6th cent. B.C.). Ezekiel says: "Hârân and Ka'nân and 'Èdam (Mt) "merchants of Shebâ" or (S): "they were merchants". Mostly all three places are identified in Northern Mesopotamia, where an ancient Hârân is well known (cf. Cooke, Int. Crit. Comment.). Isaiah 37** and 2 Kings 19** mention this northern Hârân along with the Bê'nê 'Èdam: "Gozân, Hârân, Rešel (in Palmyrene) and Bê'nê 'Èden in Tel'âsâr". But al-Ikarî mentions Hârân al-Hârân in South Arabia between North Khâwâlûn and "Bghât Bu'tân", (which name is a mistake for Basyâh; Grohmann ii, 1933, 131). The location is in the Tiha'ma lowlands north of the present northern frontier of Yaman, somewhere near present Abû 'Arsh. Ritter (Arabien i, 189, 199) and Büssing supposed that this is the Hârân mentioned in Ezekiel. The difficulty is that Kudâmâ and Ibn Khurâdshîb do not mention a place of this name on that route, but al-'Ursâsh (Abû 'Arshshâ) instead. I suspect that there is some mistake in al-Idrî's text. But there are different places named HRN in Ancient South Arabian inscriptions: Hirrân near Ka'taba north of 'Aden, Hirrân south-west of Mâ'ûn and Hirrân north of Dhamâr (on the last cf. W. B. Harris, 272 ff.). Perhaps the Septuagint (S) translators changed the text from "merchants of Shebâ" into "they were thy merchants", because they knew the northern, but not the southern Hârân and 'Èden and therefore could not understand the meaning. In connexion with "merchants of Shebâ", one should consider that Saba* (Shebâ) was a state, not a town, and that the three places mentioned may have belonged to this state.

Ezekiel 38*: "Shebâ, Dedân, merchants of Tarshîsh" (Tartessos or Sardinia) shows opposite outposts of Ezekiel's terra cognita. (Dedân is the Daydân of South Arabian inscriptions.)

Considering this important position of South Arabia in this period and its central place in the oldest seafaring area, that of the Indian Ocean, we must keep in view that the North and Central Arabian home of camel nomadism was surrounded by civilised agrarian countries, on all sides where it was not touched by the sea.

The difficulties of crossing the desert with long distances between watering-places could only be mastered after the domestication of the camel. The desert routes of greatest importance for traffic were those between Mesopotamia and Syria. But also the difficulties in crossing Arabia from north to south, and from the Mediterranean coasts to the fertile highlands of South Arabia could more easily be overcome by camel caravans. The springs and wells of the northern part of Arabia became important as resting places of caravans and as commercial and political centres. As the nomads were breeding the camels needed for the caravans, their tribes were interested in peaceful traffic and it was expedient for them to join coalitions among each other and with the oasis town kingdoms on the main routes.

Since Tiglath-Pileasar III (748-725), north-western Arabia, including the northern part of the incense road from Daydân to Gharzat may have become more tightly bound to Assyria, and later to Neo-Babylonia, after each conquest. It seems to be of great importance for the cultural and religious development of the "Arabs", that Nabûna'id (Nabonidus) of Babylonia conquered Tayma* in 550 B.C. and that he reigned there for eight years and made an expedition as far as Yahrib. He built a palace and temple in Tayma* and made this place the centre of an archaistic religion and cult round the Aramaean moon god Shîn, perhaps with the sun disc resting in the crescent as the main symbol of this religion (Musil, 1928, 224 ff., Moortgat, Segall). There should be investigations on the close resemblances between this cult and that of South Arabia and Ethiopia. SYN was the state god of Hadramawt since the earliest inscriptions of this state. (Albright
1952, note 8, brings reasons for an early introduction of this god into Ḥadramawt). Ḥaṣāna of Abyssinia changed the crescent and disc for the cross on his coins when he turned to Christianity (4th cent. A.D.) (Littmann 1913, i, 60).

The exceptional temporary position of Taymā' may have stimulated the other town states of the oases of Arabia Deserta to partake to some degree in the civilisations of the surrounding countries in the north-east, the north-west and the south, while trying to preserve or to re-establish always again a certain amount of independance. Different scripts were used and developed. Even the clansmen of the nomadic tribes knew how to write. Nevertheless, pure camel nomadism was common. Agatharchides and Artemidorus (Diod. in C. Müller, Geogr. Graec. Minor, 184, Strabo xvi, 4, 18) in their accounts on the tribe of the Dbai in the lowlands (Ṭihāma) of 'Arḍr write: “They live merely from their camels. From these they fight, on these they travel. Their food is camel milk and camel meat”.

The scripts of the rock graffiti of the nomads of Arabia Deserta, which are spread from near the Ṣafātīc area south of Damascus and from the Sinai peninsula to the borders of Ṣadjān in South Arabia, form a unit though with strong regional (and probably temporal) variations which have been classified as Thamūdean scripts, although a part of these graffiti have been written by the tribe of Thamūd in its area round Dayān (Littmann 1940, van den Branden, J. Ryckmans 1956). In many respects these scripts are (and remained?) more archaic than the scripts of the settled populations, which were altered by their adaptation for monumental inscriptions (cf. J. Forenne 1955, 44 ff.). Related graffiti are even found in South Arabia especially along the desert margins (cf. Höflner, and Jammé 1955). That all “Thamūdean” inscriptions seem to have been written by nomads shows that the nomadic tribes must have had some awareness of interdependence and a certain spirit of solidarity and that their life was separated and rather independent from the oasis town states.

It is evident that this situation of camel nomadism in Arabia was very different from what we know of horse-riding nomadism in the northern steppes of Eurasia. One main reason for the strong difference certainly is that the long and hard winters of the north do not permit more than one extensive crop and hinder the development of oases, although humidity is greater. Where the sub-tropical desert is dotted with oases of restricted size as in many parts of Arabia north of the line from Wādī Bayṣṣ to Ṣadjān and to the Rubʿ al-Khāli, it seems that a balance of power could result there to some degree between the nomadic tribes on the one hand and the merchant town states on the other, while probably the inhabitants of oases, although often to live in bondage to townsmen or to nomads.

The history of nomadism in Arabia is closely connected with the word ‘Arḍ. In Semitic languages and pre-Islamic times, this word was only used for inhabitants of the Bedouin and oasis regions north of the Rubʿ al-Khāli. It especially meant the camel nomads but also included the oasis dwellers. Even Muhammad used the word ‘Arḍ for Bedouin. Only the Greeks have transmitted this name to the whole peninsula, probably already after the expeditions of Darius (Sylax). Theophrastus (372-287) calls Arabia Ἀρδαύων χερσόνησος (Hist. Plant. ix, ch. 2, § 2). Eratothenes (late 3rd century B.C., Strabo xv, 4, 3) gives its division into Arabia Eudaimōn and Arabia Ἐρέμων (Arabia Felix and Arabia Deserta of the Roman period). But already Euripides mentions “Arabia eudaimōn” in his Bacchae (16-18), and Aristophanes (Aves 144 f.) a “polis eudaimōn on the Erythraean Sea”, both in the late 5th century B.C. The South Arabsians never called themselves ‘Arḍāb.

We have no knowledge about the pre-Islamic history of the nomadic tribes south of the Rubʿ al-Khāli, north and east of Ḥadramawt and west of Ḫumayn. To-day, they are genuine camel nomads possessing some ḵamām, just as those of the North. They still have holy rocks and holy places near wells, where they bury their dead (van der Meulen, own experience, Thesiger). But they do not live in tents. They have tropical clothing and south-Semitic dialects. In mountain regions they use caves for shelter. They do not possess horses. Unlike the northern ḍāw they have stayed outside of known coalitions.

The fate of camel nomadism in Arabia was closely connected with that of caravan trade. So the decline of this trade must have been of great importance for the nomad. This decline slowly set in in the 4th or 3rd century B.C., when the tolls, which had to be paid on the road were constantly increased because of the political division of South Arabia into different states (Pliny xii, 14, 55). It became stronger when, from round 115 B.C., the straits of Bāb al-Mandāb were opened for direct traffic from Egypt to India. The overland incense traffic almost vanished, when this oversea traffic from the Roman Empire to India became important from about 48 B.C. (Strabo, ii, 5, 12, ibid., xvii, 7, 13, Pliny, vi, 23, 104). This must have been a hard blow for the kingdoms of South Arabia and even more for the Bedouins who took part in the overland traffic and sold camels for this.

The name Ḫarrabaitai (‘Arḍāb) was used by the great Abyssinian (Aksūm) king who erected the Monumentum Adultanum (cf. below, section d), of which we know the Greek version, probably before the middle 2nd century A.D. This is in his account of the submission of the Ḫidżād and ‘Aṣr north of the Sabaean and south of the Roman frontiers. Here “Arrabaitai” seems to signify the population of the hinterland of the Kinaidokolpitai who, according to C. Ptolemy, lived on the coast of Ḫidżād and of ‘Aṣr.

‘Arḍāb Bedouins had begun to interfere in the conflicts in South Arabia towards the 2nd cent. A.D. (J. Ryckmans 1951, 215 f., 1956). In the inscription Nāmil 71 to 73, A‘rāb and Khb-m-y-s are mentioned together several times. Perhaps Khb-m-y-s (Khumays ?), probably derived from khums) means the regular army (M. Höflner, letter), while A‘rāb means contingents of northern Bedouins on camels and on horseback. The inscription Maml 71 to 73 belongs to the third century A.D. (king Alḥān Naḥfān; cf. Mordtmann-Mittelwoch 218-220). The inscription “Ryckmans 535”, belonging to the same period, shows that camels and horses were used in the South Arabian armies (G. Ryckmans, in Musdon, 1956, 154 f.; on the chronology of this period, cf. v. Wissmann 1957). It should be investigated if there are earlier convincing indications of camel troops in South Arabia (cf. v. Wissmann-Höflner, 46).

The inscription “Ingrains i” does not point to such conditions. The preliminary translation we used in v. Wissmann-Höflner, 333, was wrong (cf. Drewes).

In 328 A.D., the inscription of al-Namāra, east of
Djâbal Hawrân, in the Syrian desert (RES 483), tells us: “This is the grave of Inama al-Kays (mrâ' Kays) b. 'Amr, the king of al the A'râb, who... and advanced successfully (?).” The siege of Nâjjân, the capital of Shammar” (Lidzbarski). We see that Inama al-Kays calls himself king of all A'râbs, although he is not in possession of Nâjjân on the north-eastern margin of agricultural South Arabia, but perhaps king of most of those Bedouin tribes who live in tents. i.e. A'râb. Nâjjân is at that time a town of “Shammar”, probably Shammar Yuharîsh (cf. Pirenne 1956, Jamme 1957, J. Ryckmans 1957, 22, note, Pirenne 1957, 59, note 4), who assumed the title of “King of Saba” and Dhubay Rayda'n and of Hadramawt and of Yammat” (Dhubay Rayda'n stands for the Hnymyr. Yammat probably is a name of the coastal region south of Hadramawt; Wissmann 1959). This title means that Shammar was or claimed to be king of the entire agricultural country of South Arabia.

In the early 5th century, when great parts of Northern Arabia belonged to the domain of the South Arabian king Abikarib A'sad, who according to tradition undertook a campaign into Persian territory, the title was assumed and now was worded as follows: “King of Saba’ and Dhubay Rayda'n and Hadramawt and Yammat and of their (pluralis majestatis) A'râb in the highlands (Central Arabia) and the Tilâm (lowlands of Hidayh and Asiyat).” Again only inhabitants of Desert Arabia are meant by A'râb (cf. map 4).

The constant wars between Rome and Persia and between Ethiopia and Saba’ and the economic decline of the Mediterranean regions, the rising competition of sea traffic—from which South Arabia had become eliminated—against overland traffic and trade, the decay of feudalised South Arabia and its interminable feudal and religious wars in the 3rd to 6th centuries A.D. gave rise to great insecurity in Arabia (cf. Boekest 1954, Sydney Smith, J. Ryckmans 1956 b). In the regions of steppe climate in the fertile crescent, nomadic tribes intruded into country of rain agriculture. Even oasis areas decayed or were given up entirely, especially in South Arabia along the borders of the desert, in the Hadramawt (cf. v. Wissmann-Höfner, 121; L. Le Baron Bowen), where camel nomadism penetrated from the north by invasions as well as by gradual infiltration. A renowned example is the neglect, bursting and desertification, of the old capital of Saba’, and the total breakdown of this town and its oasis. In Yaman and 'Uman, the strong feudalisation of the highland farmers, the 'Abîbîni, in their fortified castle-like dwellings, led to an extreme distillation of power and even to anarchy, as well as to tribal organisation and to feuds similar to those of the barbarised camel nomads. Gradually the nomadic population became more and more migratory over long distances in Arabia. Such migrations of entire tribes were mainly directed from South to North. In the South a part of the farming population became nomadic, while in the north the wars between Rome and Persia probably attracted such nomads, as could not sell their camels for the declining caravan trade, to serve in camel troops on the side of one of the two opponents. The Arab proverb: “Al-Yaman is the womb (the cradle) of the Arabs, and al-'Irak is their grave”, already suits this period. Nevertheless there have also been migrations in the opposite direction, like that of the Kindites into Hadramawt in the 6th century A.D. which according to al-Hamdânî amounted to more than 30,000 men (Forrer, 134 ff.). With the decline of power of the surrounding states, which were based on agriculture and had a much higher population density, Bedouin influence was rising. Czatkol (1953) demonstrates that, before this period of barbarisation, the social and economic way of living, which we call Bedouin, did not fully obtain the character familiar to us by the descriptions of Doughty, v. Oppenheim and Lawrence. Writing now disappeared among the nomads, but oral tradition flourished.

It would be interesting to know when the combined use, during a qamar, of the camel for the riding over long distances and of the horse for final attack, was employed for the first time, a skillful practice which was still carried out by 'Abd al-'Azîz b. Su'ûd. King Malchus (Malik) II of the Nabataeans (al-Abnâb) sent 1000 horses and 5000 foot for the assistance of Titus in his attack on Jerusalem about 67 A.D. (Hitti, 68). The rock-drawings accompanying the Sâfistic inscriptions in the Hâsa south-east of Damascus (2nd to 4th centuries or longer; cf. Littmann 1940) show that these true Bedouins made their razzias combining horse and camel. We also hear from Ammianus Marcellinus (4th cent. A.D.) that the Blemmyes made their raids in that way (xiv, 4, 3).

In South Arabia, the horse seems to have been always of smaller importance than in the north. Nevertheless we hear that among the presents sent by Yîth'â'amâr of Saba’ to Sabego in 715 B.C. there were horses. The Periphas Mari Erythraei (until 80 A.D.) tells that horses were shipped from Egypt to Mozau (Mauhid); cf. Wissman 1959) by the Greek merchants. Strabo (XVI, 4, 22, 16) when giving a short but good report on the agriculture of South Arabia, says that horses were lacking, and that their functions were carried out by camels. We have but few presentations of horses from South Arabia, which seem to be importations or copies from the north or to belong to late periods. Probably the horse only became of greater importance in South Arabia since Bedouin troops were used, i.e., since at least the 3rd century A.D. The inscription G. Ryckmans 355 (in Muson, 1956, 146 ff) from the late 3rd century A.D. tells us that horses and camels were used in South Arabian armies, and that there were horsemen beside the regular troops.

The Appearance of Camel Nomadism in North Africa.

It is surprising that the state and civilisation of the great river oasis of Egypt blocked for so long a period the spread of camel breeding and camel nomadism. It exercised a strong frontier control and showed an aversion against the Asiatic nomad. There is no specifically Egyptian word for "camel" (Albright 1950; cf. Préaux).

It has been supposed that the Sabaeans introduced the camel into the lowlands of North Ethiopia, when they colonised this country, perhaps some time in the beginning of the last millennium B.C., bringing with them the plough, terracing, and artificial irrigation. We have mentioned above that the colony was firmly established and probably old in the 5th century B.C. Even Conti Rossini supposed such an early introduction of the camel (103, 106). Yet he did not find any proof. There is no mention of the camel in the "Sabaean" inscriptions of Ethiopia (cf. above); but this again does not mean much, as the number of these inscriptions is still small. However, we may not forget that even today the camel has not been introduced into the highlands of Ethiopia, but has only spread in the lowlands and on the lower slopes. Near the harbours of northern Ethiopia, this area is a narrow strip of land, just as in Western Yaman.

There is one piece of information and one linguistic fact from which we may probably conclude that the Sabaeans did not introduce the camel to the African side of the Red Sea: Agatharchides (perhaps about 130 B.C.) gives a good and detailed description of the nomadic Troglydotes behind the African coast of the Red Sea north of Ethiopia (the later Blemmyes or Bediis). He does not mention any breeding of camels but only of cattle and goats (Diodor., cf. C. Müller, Geogr. Graec. Minor, 1, 153). Probably Agatharchides has taken over his story from a much earlier description (cf. von Wissmann 1957).

The linguistic fact is that the name of the camel in the Ge'ez language as well as in all the Semitic languages of Ethiopia is gamal as in the North Semitic languages and in Egypt, while ancient South Arabia merely used the word "\textit{hibil}" for it (Höfner by letter). It is only in one single inscription of the 3rd century A.D. (G. Ryckmans, Nr. 533) and then in the 6th century A.D. (Yusuf Dho Nuweš, G. Ryckmans, Nr. 507) that the word "\textit{gimal}" turns up in South Arabian inscriptions. The first known mention of the camel in the Ethiopic language is in the 4th century A.D. in Littmann, \textit{Aksum} 9 (1913).

We do not hear anything of the presence of the camel from hieroglyphs or from Greek or Roman authors or any sculpture or rock drawing either in Egypt or in any part of the Hellenistic period. There is one exception, however: When Ptolemy II Philadelphus (285-246) repaired the old roads from Koptos to the Nile to the Red Sea (173 km.) and opened a longer road from the same place to his new harbour town Berenike Troglyditič (380 km.) by founding eleven stations, he did this not only for foot passengers but also for merchants travelling on camels (Strabo XVI, 4, 44, XVII, 4, 45, 63, Pliny, h.n. VI, 102, 103; Berenike Troglyditič in 23° 51 in the Bay of Sikkat Bandar al-Kabīr). Strabo says that Koptos became a town belonging to Arabs as well as Egyptians, and that Arabs worked in the mines between Koptos and Myos Hormos. Pliny also mentions Arab tribes in the region of Berenike. Philadelphia had reopened the canal between the Nile and the Red Sea. He founded naval bases along the western coast of the Red Sea (cf. below). It is probable that the caravan camels and their Arab owners were introduced by Philadelphus and were transported by him to Philotera, to Myos Hormos and to Berenikē Troglyditič over sea from the coast of Northern Hijāz (Ritter II, 703). Ptolemy II seems to have put this coast of Northern Hijāz under his influence by establishing friendly relations with Daydān on the incense road, thus being able to divert the incense traffic which until that time had followed the road from Saba' and Ma'ān to Ghazzat on the Mediterranean, from Daydān to a new harbour on the Red Sea (T-sh-y-t ?) and then by boat to Egypt (cf. Tarn, appendix by Sidney Smith; Delbrueck). As Daydān was a colony of the kingdom of Ma'ān, which had developed north of Saba', the sarcophagus inscription of an incense trader of Ma'ān, living in Memphis, probably of 264 B.C. (Albright 1953, note 12), confirms this connection. This trader brought myrrh and other wares to Egypt on his own ships, and he brought byssos clothes to Arabia (Rhodokanakis, Kortenbeutel). As Ptolemy II and his successors were able to transport elephants on large boats on the Red Sea, the latter was easily able to transport camels. The Arabs who were brought to Egypt with their camels probably knew how to write the so-called Thamīdean script of northern Hijāz. Numerous Thamīdean inscriptions have been found in the eastern desert of Egypt, especially along the roads (Littmann 1940, 3, Green, J. Pirenne by letter).

We now may ask again, how the camel was brought to Ethiopia. There are two possibilities, I think. It was introduced either by Ptolemy II or his successors, or by the kings of the Ḥabashat, of Aksum, in about the 2nd century A.D.

Ptolemy II founded the fortified town of Ptolemiār Thērōn on the northernmost part of the Ethiopian coast (cf. the stele of Piḥom in Egypt). One of the stelae found in Adulis south of modern Maṣawwāt by Cosmas Indicopleustes (Winstedt) reported that Ptolemy III Euergetes (246-221) and his father hunted elephants in that region. We do not know when Berenike hē kāta Saba' (Strabo xvi, 4, 10, Berenike Epidirēs of Pliny VI, 29, 170; Conti Rossini against Kortenbeutel) was founded near modern ʿAssab, and when this southern Berenike was replaced by a colony called Arsinōe (Conti Rossini 60 ft., map, Strabo xvi, 4, 14, Pittschmann, Arsinōe, Pauly-Wissowa). We only recognise that the Ptolemies put the whole African coast of the Red Sea more and more under their naval influence and power. Ptolemaic shipping and trade were under strict state control. Before this time, Saba' may have had still influence on the old Ethiopian colony, especially on the coast, in spite of its difficult position in South Arabia between the new strong states of Ma'ān in the North and Katabān in the South, Katabān reaching as far as Aden and the Bab al-Mandab straits. There was a Sabalitikon Stōma south of Ptolemiār Thērōn (Artemidorus according to Strabo), there was a place called Sabat (Šabāt ?) opposite the island of Maṣawwāt (Strabo, Pliny, Cf. Ptolemy), and there was "the wealthy town of Saba'", probably in the bay of modern ʿAssab (Strabo xvi, 4, 8-10, cf. Conti Rossini, Map pl. 16).

On account of the internecine wars in South Arabia, the Ptolemies must have found it rather easy to interfere on the Ethiopian coast. As they
transported elephants in large boats from this coast to Egypt; they may have brought camels to the inhabitants of this coast from Northern Hidjâs. Before about 225 B.C., the Katabâniân harbour of ʿAden was an important place of trans-shipment, where freights came from Egypt and India (cf. von Wissmann 1937). When at that time the new state of Ḥumyar replaced Katabân in ʿAden and ʿAden was destroyed, Potlemaic ships were more and more successful in sailing directly to India. It seems that the kingdom of Aksûm (Ethiopia), which is for the first time mentioned in the Periplus of the Erythraean Sea (about 82-96 A.D.), was a powerful state already at that time and learned much from Graeco-Roman navigation in the Red Sea. Then a king of Aksûm, who probably lived in the mid 2nd century A.D. (Winstedt; Mommsen, Römische Geschichte V, 599; Mordtmann-Mittwoch 6) according to the Monumentum Adultum, which he erected, built a great empire from the frontiers of Egypt to Somalland (cf. Dittenberger, 287-296; Littmann 1913, i, 42 ff.). He conquered the coast of Arabia and its hinterland from Leukê Kômê in Northern Hidjâs as far south as the frontier of the Sabæan kingdom (Wâdî Bayyঀ in southern ʿAsîr; Wissmann Ic., 1955). He mentions that he used a navy for this conquest. His name is not known. The Monumentum shows that Aksûm had become a sea power at that time, perhaps supported by Rome. The Monumentum was written in the Greek language and script. Already in the first century A.D. (Periplus) Aksûm had cultivated the Greek language. So it may also have been the king of the Monumentum Adultum, who introduced the camel to Ethiopia from his colony in Northern Hidjâs. That period must have been a time of quickly rising national consciousness in Ethiopia, in which an official Ethiopian script was probably developed, based on the monumental and cursive Sabæan scripts and influenced by the Greek (left to right, numerals) and the “Thamûdeân” script (cf. J. Ryckmans 1955, Ullendorff, Drewes). In the third century, the South of the Red Sea seems to have been under Ethiopian supremacy, while direct trade between the Roman Empire and India had become reduced (Sir M. Wheeler, Wissmann 1959).

The first African people who became camel breeders after those Arab tribes, which had been probably introduced to Berenêkê Troglydityêkê and Myos Hormos by Potlemy II., seem to have been the Bhrûmyês or Bedjûj (Pauly-Wissowa, “Blemmyes”, by Sethe). According to Strabo xvi, 286, 819, and Ethiopian inscriptions, they lived south-east of Syene between the Nile and the Red Sea. In Strabo’s time they were “not very numerous or warlike” (xvi, i, 53), breeding sheep, goats and cattle. They were no danger for the Empire then. In the following centuries, however, they must have learned camel breeding from their Arab neighbours to such a degree that they became real, and “excellent”, raiding camel nomads. Under Decius (249-251 A.D.), their camel razzias became difficult for the Roman Empire. Twenty years later, they were already completely masters of the roads between the Nile and the Red Sea. The trade from Egypt to India on that route had become totally dependent on the good will of the Blemmyes (cf. Bensch, 264 f.). Under Probus (276-284) the Blemmyes temporarily occupied Koptos and Potleman. Diocletian had to pay tributes to them in 296 on the frontier near Syene. This emperor had called the “Nobatae” (Nobades, i.e. Nubians ?) for help against the Blemmyes and had given them the Dodekaschoinos as a base of settlement (Procopius, Persian War XIX. Pauly-Wissowa, s.v. “Nubai”). In the fourth century A.D., the Blemmyes and the Arab tribes of Egypt with their camels and now also horses became always more dangerous to the Empire by their raids (Ammian. Marcellin. xiv, 4, 3). The Empire had to draw up troops of camel riders against them. At the time of emperor Valens (r. 370), new Arab tribes migrated across the Isthmus of Suez and occupied the northern part of the “Arabian” Desert east of the Nile, probably as far as the latitude of Thebes. They may have reinforced camel nomadism and fighting on camel’s back in the regions round Egypt.

On the rock drawings he discovered in the “Arabian” Desert east of the Nile, H. A. Winkler recognised a “Blemmyyan” group, in age between that of cattle breeders and that of the Islamic era. That this group must be dated in this period seems to be certain (Greek and Coptic letters, Hellenistic influence, typical brands). It mostly shows armed people (with bow, spear, sword and rectangular shield) riding on camels or also on horseback. Here, the camel is the main livestock, shown beside horse, donkey and cattle. Winkler says (1918): “In all the former rock drawings peace prevails. In the pictures of the camel-owners all is war. And war they brought, wherever they went”.

The author of this article is not qualified to describe the development of nomadism in the dry belts of Africa. When taking the rock drawings as a basis, it looks as if there has been an early period of cattle-breeding, not only in the steppes of the Sûdân and East Africa, but also in the regions of the Sahârâ. Even if we admit that the climate may have periodically been a little moister than at present, it may be doubted whether horned cattle were the main livestock in those desert regions, for which they are not well fitted, although it may be that cattle were introduced earlier than sheep and goats. It seems probable to me that, when nomadic life was completely installed, cattle as holy animals were represented on the rocks although they were of secondary importance in the nomadic economy compared with the goats and the sheep. We may remember that the “Thamûdeân” rock drawings in Western Arabia show the hunted animals and the camel, but very little of goats and sheep, although we can be sure that the nomads of those regions then possessed flocks of these animals.

According to Lhote 1953, rock drawings show that in the area of Ghadâmês, Fezzân, Taessíl and Ahaggar, the horse and a war chariot were introduced in an early period, according to Lhote’s hypothesis about 1200 B.C. by “Sea Peoples” from the Aegaean region. Among those war chariot people riding was developed at some time later on without rein and snaffle, just in the way ancient authors describe horse riding of the North African nomads of their own time (Strabo, Polybius, Silius Italicus). In the middle of the 3rd century B.C. riding had fully replaced the use of the war chariot in North African wars. Nomadic razzias were carried out on horseback.

It is curious that we know nothing about the ways the camel was introduced totally dependent on North-West Africa and the Sahârâ. In literature the camel appears for the first time there in Caesar’s De bello Africano (c. lxiii, 4) for the year 46 B.C., when 22 camels were among the booty taken from king Juba. But Juba was a man with wide and varied scientific, especially geographical, interests, and a collector in
the Hellenistic style. It seems probable that he had imported these animals to try out their usefulness in North Africa. Only in Cyrenaica the camel may have been bred in greater numbers in that period. It is shown on coins of the mint of L. Lollius, a commander in Cyrenaica under Pompey. Then there is a hiatus. From the 2nd or perhaps 3rd century, a statuette of a camel rider and a relief showing a hippodrome with a race of chariots drawn by camels were found in the necropolis of Hadrumetum (Sousse, Tunisia). The next indication in literature, however, is for the year 363 A.D. The Roman comes of the province of Africa demands 4000 transport camels from the inhabitants of Leptis Magna on the Syrtre (Ammanin. Marcellin. xxviii, c. 6, 5, xxix, 5, 55). About 400 A.D. there is the report of Synesius that herds of camels and horses then formed the wealth of the inhabitants of Cyrenaica. In the 5th century reports on camel breeding become always more abundant in North Africa, mainly in the regions round the Syrtre.

Most authors, especially Gautier (190 ff.), Gsell and others have concluded from these rather meagre sources that the camel was eventually introduced to North Africa across the Mediterranean Sea. When, however, we consider the position of the Blemmyes in Upper Egypt in the 3rd century A.D. (cf. above), the chain of oases west of Egypt also seems to be a probable route. Besides, we must not forget that any way south of the Libyan Desert remained outside the area of which we have historical reports.

Perhaps future linguistic research as well as excavations may give us help in solving these questions. In the language of the Beja(Blemmyes) the main name of the camel is ḫām (ḫām), in northern Nubia it is ḫam (ham) (Professor Dr. O. Rüssler by letter). The Tibbu call the camel ǧem, and this name seems to have been spread by them far over the eastern part of the Sudan, where Tibbu are told to have introduced the camel (Bensch 171 according to Barth). So in the Mandara Mountains (northern Cameroons) there is called ǧem, the male camel ǧel ǧem (Barth, ii, 534, footnote). Even the Masai call the camel en-tomes (Nandi, tomes). In the Berber languages including that of the Tawārīk, a main designation of the camel is akhām or alem. From akhām the Haussa name rako is derived, and the Nuppe name rakum are certainly derived (Q. Rüssler). All these names do not seem to be derived from Arab names, but there are other names showing such an etymology.

(H. v. Wissmann)

III. Pre-Islamic Arabia

(a) Sources.

(b) History.

(c) Political Relationships.

(d) Moral Outlook.

(e) Religion.

(a) Sources. Our knowledge of the Bedouin in pre-Islamic Arabia is derived mainly from two sources. Firstly, there has been preserved a certain amount of pre-Islamic poetry. Secondly, there are commentaries on this poetry and on old Arab proverbs, composed by Muslim scholars of the second Islamic century and later, and containing much traditional material about events in pre-Islamic times; this
material was also collected by other scholars in special works. The authenticity of pre-Islamic poetry has been denied by modern scholars, notably by D. S. Margoliouth and Taha Husayn, but their theories have not been accepted by the majority of scholars who, while admitting some falsifications, consider that on the whole pre-Islamic poetry has been faithfully transmitted (cf. A. J. Arberry, *The Seven Odes*, London 1957, 228-45). Similarly, the historical traditions, though once regarded by Western scholars as worthless, are now mostly held to have some factual basis and to reflect the conditions of life in the Dakhliyya, even though they are insufficient for a proper history. In certain points this traditional material is confirmed by statements of the Kur'an or inferences from these, and is both confirmed and supplemented by the numerous inscriptions found in Arabia by modern archaeologists.

(b) History. From the dawn of history nomads from the Arabian steppe have been pressing on the surrounding lands of settled civilisation. At some periods the pressure has been greater and the penetration of the settled lands deeper, and the nomads have been said to come in "waves". In pre-Christian times Hebrews, Aramaeans, Arabs and Nabataeans entered Syria and 'Irak, while in the six centuries before the Hidjra there was further pressure from Arabs and Palmyrenes. The nomads would come first of all to raid, but frequently they would themselves settle (e.g., the Tanthkh in 'Irak about 225 A.D.). Close relations between settled nomads and those still in the desert facilitated trade. Only nomads could conduct caravans of merchandise across deserts, and only strong bodies of nomads could guarantee the safe transit of such caravans. Thus in the history of the Byzantine and Sassanian empires the nomads appear in the two roles of raider and trader.

The two empires tried in various ways to defend themselves from the hostile and predatory incursions of nomads. The most effective way was found to be the employment of semi-nomadic rulers on the imperial frontiers to ward off from the settled lands raiding parties from the heart of the steppes. In 'Irak this rôle was played by the Lahmid kings of al-Hira from about 300 A.D. to the end of the dynasty in 602. On the Byzantine frontier the corresponding rôle was played by the Ghassânids, but they were later in attaining importance (it was in 529 that Justinian granted certain titles to the Ghassânid king), and apparently had only a camp-like position. 'Neighbourly protection' (djiwar) or, in the case of the smaller groups and subdivisions, 'sub-tribes' and 'clans', but those terms do not correspond exactly to Arabic terms. There are a number of words in Arabic for such social and political units, but the commonest usage is to refer to a tribe or clan simply as Banî Fudān ("the sons of so-and-so").

The structure of these pre-Islamic tribes has not yet been adequately studied in the light of recent advances in social anthropology. They are presented in Arab tradition as being primarily constituted by kinship in the male line, though there are certain exceptions to this. A person not related to a group by blood (not a sahih or samim) could enjoy some of the privileges of membership, above all protection. He might do so as an 'ally' (khil), a 'protected neighbour' (djar), or a 'client' (masi). The parties to an 'alliance' (hif) were formally equal, but when a single individual lived as an ally among a tribe or clan, he tended to fall into a subordinate or dependent position. 'Neighbourly protection' (djiwar), on the other hand, implied some superiority, at least of a temporary kind, in the person granting it; it could be either temporary or permanent. The status of a 'client' was acquired by a slave on his emancipation. Attached to the tribe were slaves; male Arabs could become slaves through being captured in raids when children; and there were also Abyssinian slaves. A man could be expelled from his tribe for killing a kinsman or for conduct harmful to the tribe, and might wander alone (as a samim) or else attach himself to another tribe as a guest.

There are strong reasons, however, for thinking that the traditional view that the members of the tribe or clan in the strict sense were patrilineally related is not a complete account of the matter, even though some tribes were so constituted. Firstly, there are numerous traces of matriline among certain Arab tribes in Muhammad's time, and some facts which suggest that it was being superseded by patriline. Though it is uncertain how extensive matriline was and what it involved in practice, there is sufficient evidence to cast doubt on the value of the purely patrilineal genealogies found in the works of the later Muslim scholars. It seems possible that, in some cases where matriline prevailed, the later
scholars, finding no patrilineal genealogy for a member of the group, argued that he must have been a halif; perhaps this is how to explain the fact that the head of the clan of Zuhra et Mecca was a halif (al-Akhnas b. Sharif).

Secondly, it has been argued that some of the tribal names were originally the names of groups with a local or political basis, and did not indicate common descent (cf. Nallino, Raccolta di Scritti, iii, 72-79). This has probably happened in some cases, and it is then the later genealogists who have transformed group names into eponymous ancestors; but some of the weaker tribes near Mecca had thus become largely dependent on Kuraysh. Some still weaker ones had banded themselves together and were known as the Ahlabah, probably meaning "mixed multitudes" (the view of Lammens that the Ahlabah were Abyssinian slaves contradicts statements in Ibn Hisham, 245, and Ibn Sa'd, ii, 81 and has little to recommend it; cf. Montgomery Watt, Muhammad at Medina, 81 and M. Hamidullah in Studi Orientalistici in Onore di Giorgio Levi della Vida, i, 434-47).

The affairs of a tribe were usually settled in an assembly or meeting (madjlis) of all the members. All might speak, but most weight attached to the words of men of recognised authority. The leader or chief of the tribe, the sayyid, was appointed by acclamation in the assembly. He usually came from the family considered most honourable, but there was no law of primogeniture. In the harsh conditions of the desert it was essential that the chief should himself be able to lead effectively and a minor could not have done this. The sayyid had certain duties, especially in respect of the relations of the tribe (or clan) to other tribes (or clans). He could make treaties which bound the tribe, and was responsible...
for ransoming prisoners and for seeing that blood-wit was paid. He usually also claimed the right to be present when people were being put to the test in order to establish his ascendancy over a number of other tribes, so that they entered into alliance with him and carried out his orders; but this was resented, and the alliance broke up on the removal of the forceful personality.

(d) Moral Outlook. The life of the Badw was set in natural conditions of great harshness. At most times the means of sustenance were less than sufficient for the population. Adult males were killed, and women and children captured and then held to ransom or sold as slaves. The lex talonis was universally recognised, and served to anent wanton and irresponsible killing, since it was a matter of honour for a tribe to protect or avenge its members and those attached to it. In the older days a life had to be avenged by a life, but in Muhammad's time there was a tendency, which he tried to develop, of substituting for the life the payment of a blood-wit (idya), normally a hundred camels for an adult male.

It was sometimes felt, however, to be unmanly thus to 'substitute milk for blood'.

The qualities admired by the Badw were those required for success in the hard life of the steppe. Loyalty to the kinship-group had a high place, and involved readiness to help one's kinsman against a stranger on any occasion. With this was coupled fortitude or manliness (kamasa), which denoted 'bravery in battle, patience in misfortune, persistence in revenge, protection of the weak and defiance of the strong' (R. A. Nicholson, A Literary History of the Arabs, Cambridge 1930, 79).

The poets played an important rôle in the life of the pre-Islamic Arabs. The ode (kasida) usually contained either majdhib, boastings, that is, praise of one's own tribe for its fortitude and other virtues, or matkhul, revilings (also hidja, satire), that is, disgraice of one's enemies. It was held that human excellence or the lack of it was to a large extent inherited. A hero's deeds showed the heroic qualities of his family, clan and tribe. Great store was thus set on the reputation of the group. The power of the poet to convince his tribe of its own worth and to lower the morale of the enemy was very great. Poets had probably more power in pre-Islamic Arabia than the press in modern times. The Arabs felt there was something supernatural or magical about them.

Although descent counted for so much, it is not clear (as noted above) to what extent this was reckoned patrilineally and to what extent matrilineally. Four types of pre-Islamic marriage are described by al-Buhãrî (67, 37, 1; translated in Montgomery Watt, Muhammad at Medina, 378); two of these, though provision for determining paternity is described by al-Buhãrî, seem to belong to a primarily matrilineal system. The sources, moreover, suggest that al-Buhãrî's account is not exhaustive. Certainly it was common for the woman to live with her kinsmen, and for her husband merely to ‘visit' her for short periods—for example, when their tribes happened to be camped close to one another.

(e) Religion. Pre-Islamic poetry suggests that for the nomadic tribes a quasi-religious dynamic was produced by a belief in the human excellence of the tribal stock. Regard for honour or reputation (hasab) was the driving force in much of their activity. In this sense it may be said that the real religion of the Badw was a tribal humanism. The widespread belief in fate among the Arabs was not so much a religious belief as a factual belief, viz. a belief that the world was so constituted that, as often as not, human efforts to avert disaster would be thwarted by circumstances. Fate was not worshipped as a deity. Apart from this there were a number of cults observed by the Arabs, each centred at a particular shrine (see arts. Al-Lat, Manat, etc.). Some of these were of social importance, since round the shrines was a sacred area (haram), while the institution of the sacred month was administered from the Ka'ba at Mecca. Such sacred times and places, in which blood feuds temporarily ceased, made it possible for many Badw to come together for trade and other purposes. On the whole, however, these cults seem to have little religious importance, properly speaking, in the life of the Badw.

Christianity had spread widely in Arabia when Muhammad began to preach, and some nomadic groups were at least nominally Christian. Judaism was also found, and some of those called 'Jews' in the records were probably Arabs who had adopted Judaism; but, though they had close relations with Badw, none of them appears to have been nomadic.

BAENA [see BAYYANA].

BAEZA [see BAYYASA].
BAGGĀRA — BAGHCE SARAY

BAGH [see BUSTAN].

AL-BAGHAWI, AS-ṢAḤHĀB MUḤAMMAD AL-ḤUSAYN B. 
MAḤMūD B. MUGHAL FIGHT-AprāH (or IBN AL-FARRĀH), 
a doctor of the Shafi‘ school, traditionist, and 
commentator on the Kur‘ān. His tābara was Rukn al-
Dīn and Muh’īy ‘l-Sunnah. He came from the village of 
Bāgh or Bāghshūr near Hārāt (cf. al-Sam‘ānī, 
f. 86a). Al-Farrāh (furrier) comes from his father’s 
occupation. He studied in the Madīnā at the kādot al-
Ḥusayn b. Muḥammad al-Mawr al-Rūdghī, becoming 
his favourite pupil, and heard traditions from a 
number of traditionists. He was noted for piety and 
asceticism, and observed ceremonial purity while 
teaching. Although he wrote on various subjects, 
the work for which he is most famous is his Masāhīb 
al-Sunnah (or al-Dudī). This consists of a collection 
of traditions arranged according to their subject-
matter. In each chapter he first gives traditions 
which are sound (ṣāḥīb) meaning these traditions by 
these traditions from the Shāhīfī school. He says he may 
include none which are spurious (mawdu‘).

The inscriptions are dispensed with, 
but the arrangement according to the degree of 
authority is a sufficient guide to what is accepted. 
Al-Baghawi declares that his purpose was to provide 
material for religious people which would help them 
to live a life pleasing to God. Editions have been 
printed; an English translation was published by 
A. N. Matthews (Calcutta 1809-10), and another, 
with some arrangement of the text, by Maulana 
Fazl-ul Karim with the Arabic and English in 
parallel columns (Calcutta 1958-9). Al-Baghawi’s 
other important works are listed in Brockelman. 
He died in Mawr al-Rūdghī in 516/1122, but Ibn Khallikan 
mentions also 510/1117. Al-Dhababi says he may 
have been eighty years of age, but al-Subki suggests 
that he may have been nearly ninety.

BAGHBUR [see FASGFUR].

BAGHČE SARAY [Turkish: *Garden Palace*], 
i in Russian orthography: BAGHČ-SARAJ, the capital of the 
Krim Tatar state throughout the whole 
(rule of the Giray dynasty 
[6th] from about 1423 to 1783, lies in lat. 44° 45' N. 
and long. 35° 35' E., 32 km. south-west of Simferopol*, 
in a narrow, 7 km. long, gorge of the Čerik Şu 
(“Foul Water”). Bāghče Saray arose between the 
old administrative centre of the Crimea, Eski Yurt, 
in the west, where the Krim Khans were buried 
until the 16th/16th century and the ancient Karaja 
settlement, Çufut Ka‘f (or “fort of the Jews”) in the 
east (in Karaja: Kirk Yer, “40 Places”); it developed 
from an extensive burial ground that the 
majority of the Krim Khans, Menglı Giray [q.v.] 
began in 1503-1504 (909 A.H., according to an
Baghdad is situated on both banks of the Tigris, at 33° 26' 18" Lat. N. and 44° 23' 0" Long. E. respectively. Founded in the 8th century A.D. it continued to be the centre of the 'Abbasid Caliphate till its fall, and the cultural metropolis of the Muslim world for centuries. After 1258 it became a provincial centre and remained under the Ottomans the centre of the Bagdad wilayet. In 1921 it became the capital of modern Iraq.

History.

The name Baghdad is pre-Islamic, related to previous settlements on the site. Arab authors realise this and as usual look for Persian origins (cf. Makdisi, al-Balad, iv, 101; Ibn Rusta, 108). They give different hypothetical explanations, the most common of which is “given by God” or “Gift of God” (or the Idol). (see Khatib, i, 58-9 (Cairo); Yâkût, i, 678-9; Abu 'l-Fida', i, 292; Ibn al-Djawzi, Manâkib, 6; Bakri, i, 169; Ibn al-Fakhr, Mashhad MS. i, 29 b). Modern writers generally tend to favour this Persian derivation (cf. Salmon, Introduction, 23-4; Le Strange, Baghdad, 10-11; Streek, Landschaft, i, 45-50; Herzfeld, Paikuli, 153; W. Budge, By Nile and Tigris, i, 178; JRIA., i, 46-94). Others tend to give the name an Aramaic origin meaning, “the home or enclosure of sheep” (Y. Ghanima and A.-Karmali in Lughat al-'Arab, iv, 27; vi, 748. Note Tabari’s reference to Sîk al-Bâkhr, “the cow market”, on the site of Baghdad (iii, 277). Delitsch favours an Aramaic origin without explaining the meaning (Delitsch, Paradises, 206, 238).

A legal document of the time of Hammurabi (1800 B.C.) mentions the city of Bagdadu (Schorr, Albabylonische Rechtsurkunden No. 197 I. 17.) This indicates that the name was in use before Hammurabi and definitely before any possible Persian influence. Bag and Hu are rendered by the same sign. However a boundary stone from the time of the Kassite King Nazimartush (1341-1316 B.C.) mentions the city Pilari on the bank of “Nah. Sharri” in the district of Bagdadi (De Morgan, Délégation en perse, i, 86-92). This with the mention of Bagdatha several times in the Talmod makes Bag the more acceptable reading (Obermeyer, Landschaft Babylonien, 1929, 147 ff.; Jewish Encyc., Baghdad). Another boundary stone of the reign of the Babylonian king Marduk-apaliddin (1208-1195 B.C.) mentions the city Bagdad (Délégation en Perse, iii, 32-39).

Adad-nirari II (911-891 B.C.) plundered places amongst which was Bagdadu (Synchronistic History, iii L. 12 = K BI, 200). In the 8th century B.C. Bagdad became an Aramaean settlement. Tigtalpîssar III (745-727 B.C.) mentions Bagdudu in connexion with an Aramaean tribe (Delitsch, Paradises, 238).

From this it is only fair to admit that the origins of the name are not clear. The fact that Bag was adopted by the Iranians about the 8th century B.C. to denote “God”, and that it figured in personal names does not change the situation (Reallexikon, i, 341.

Al-Mansûr called his city Madinat al-Salâm (city of peace), in reference to paradise (Kur'ân, vi, 127; x, 26). This was the official name on documents.
coins, weights etc. Variations of the name, esp. Baghdad and appellations such as Madinat al-Manṣūr, Madinat al-Khulafā’ and al-Zawrā’ were used (Ibn al-Fakhrī, f. 296; Yākūt, i, 678; Ibn Rusta, 108). Zawrā’ seems to be an old name as the Fakhri states (Ibn al-Fakhrī, f. 296). Fakhri 143. 5

After careful exploration, he chose the site of Baghdad for military, economic and climatic considerations. It stood on a fertile plain where cultivation was good on both sides of the river. It was in the middle of Mesopotamia, and enjoyed a temperate and healthy climate and was fairly safe from mosquitoes (Ya'qūbī, 235-8; Tabari, ii, 271-5; Yākūt, i, 679-80; Mandābā, 7-8; Muḥammad, Aḥsan al-Taḥāṣim, 119-120; Ibn al-Aḍhīr, v, 426-7; Ibn al-Djawzl, 7; Ya'qūbī, ii, 449; Fakhri, 143-5). Apocryphal stories about its merits and al-Manṣūr’s destiny to build it found circulation later (cf. Ya'qūbī, Buldān, 237; Fakhri, 144; Tabari, v, 234-5; Ibn al-Djawzl, Mandābā, 7-8).

Baghdād was to succeed Babylon, Seleucia and Ctesiphon and to outshine them all. Ya'qūbī (278-891), and Ibn al-Fakhrī (290-903), give early detailed descriptions of Baghdad by quarters, while Suhrawardī (c. 900 A.D.) describes the net of canals in the area. The city with its fortifications and its inner plan looks like a big fortress. There was first a deep ditch, 40 dhīrāt (- 20.27 m.7 wide, surrounding the city, then a quay of bricks, then the first wall 18 dhīrāt (- 9 m.), at the base, followed by a space 56.9 metres in width ( = 100 dhīrāt, see for measures Rayyis, Kharājī) left empty for defensive purposes. Then came the main wall of sun-burnt bricks—34.14 metres high, 50.2 metres wide at the bottom and 14.22 metres at the top—with great towers numbering 28 between each two gates except those between the Kufa and Baṣra gates which numbered 29. On each of the gates a dome was built to overlook the city, with quarters below for the guards. Then came a space 170.70 metres wide where houses were built. Only officers and loyal followers were allowed to build here, and yet each road had two strong gates which could be slammed. Then came a simple third wall enclosing the large inner space where only the caliph’s palace (Bāh al-Dhahab), the great mosque, the dużmads, houses of the sons of the caliph, and two saḥāfas, one for the chief of the guard and the other for the chief of police, were built. To ensure control of the city and to facilitate communications internally and with caravan routes externally, the city was divided into four equal parts divided by two roads running from its equidistant gates. The Khurāsān gate (also called Bāb al-Dawla) was to the N.E., the Baṣra gate to the S.W., the Syria gate to the N.W. and the Kufa gate to the S.E. To get to the inner circle, one had to cross the ditch and to pass five doors, two at the outer wall, two huge doors at the great wall and one door at the inner wall (see Ya'qūbī, Buldān, 238-45; Tabari, ii, 322-3, Ibn al-Djawzl, Mandābā, 9-10; Khatīb, 9-12; Ibn al-Aḍhīr, v, 427-8, 439; Ya'qūbī, ii, 449; Ibn al-Fakhrī, MS, f. 33a).

Ancient imperial traditions are also noticeable in the plan. The seclusion of the caliph from his people, the grandiose plan of the palace and the mosque to show the greatness of the new dawla, the division of the people in separate quarters which could be
locked and guarded at night—all testify to that.

Al-Mansur granted some devoted followers and captains tracts of land by the gates outside the city, and gave his soldiers the outskirts (arbad) to build and granted some of his kinsfolk outlying places (adrâj) (Ya'qubi, ii, 449-50; cf. Ibn Hawkal, i, 240). The glory of the Round City was the Green Dome, 48.36 metres high, towering over the palace with a mounted horseman on top. It fell in 329/941 on a stormy night, probably struck by a thunderbolt (Süli, Ridâ, 229, Ibn al-Djawzi, Muntazam, vi, 317-18; Mandkib, 11; Abu 'l-Mahasin, iii, 270; Khatib, 12). However its walls lasted much longer, and they finally crumbled in 633/1235 A.D. (Ibn al-Fuwati, 303, Sibt Ibn al-Djawzi, Mir'ât al-Zamân, viii, 67). Marble and stones were used in the building of the Bab al-Dhahab, and gold decorated its gate. It continued to be the official residence for about half a century, and though Rashíd neglected it, Ìml makes the distance between each two gates 800-915 (Ya'qubi, ii, table 161). Both traditions are reminiscent of the Shu'ubiyâ controversy. The city was built mainly of sun-burnt bricks.

Ya'qubî reports that the plan was drawn in 141/755 (Ya'qubi, Buldân, 238) but work started on 1 Jumâdâ 145/2 Aug. 762 (Khwarizmi's report in Khatibi 2; cf. Wiet, Ya'qubi, 12, n. 4). Four architects worked on the plan of the city. Hâdiyyâ b. Arât was the architect of the mosque (Tabari (Cairo), vi, 265, 237; Ya'qubî, 245). Al-Mansûr assembled 100,000 workers and craftsmen to work in the construction (Ya'qubî, 238, Tabari, iii, 277). A canal was drawn from Karkhâya canal to the site to provide water for drinking and for building operations (Ya'qubî, 238). It seems that in 485/673 the palace, mosque and dwâns at least were completed and al-Mansûr moved to Baghdad (Tabari, iii, 373, Khatibi, 2). By 149/766 the Round City was completed (Tabari, iii, 333; Khatibi, 2-3).

The 'Round City' of Al-Mansûr is a remarkable example of town planning. It was circular so that the centre was equidistant from the different parts and could be easily controlled or defended. Arab traditions consider this design unique (Ya'qubî, 238; Ibn al-Fâolith, f. 33b; Khatibi, 67; Dhahabi, Dâwash, i, 76). However, the circular plan is not unfamiliar in the Near East. The plan of Uruk is almost circular (V. Christian, Altertumskunde, ii, table 13). Assyrian military camps are circular enclosures. Creswell enumerates eleven cities that were oval or circular, amongst which are Harrân, Agbatana, Hatra and Dârâjdûr. Dârâjdûr bears a remarkable resemblance to the city of Mansûr in its plan (Creswell, Early Muslim Arch, (short), 171-3; Meissner, Babylonien und Assyrien, i, table 161).

It is likely that the architects of the Round city knew of such plans. Ibn al-Fâolith indicates that the choice of the plan was between the square and the circle and that the latter is more perfect (Buldân, MS, f. 33b). It is however more probable that the idea of the circular fort was responsible for the plan. Tabari states "al-Mansûr made four gates for (the city) on the line of military camps" (Tabari (Cairo), vi, 265).

There are different reports on the dimensions of the city of al-Mansûr. A report makes the distance from the Kûfâ gate to the Kûfâ gate 800 dâîrâ (= 405.12 metres) and from the Syrian gate to the Bahra gate 500 dâîrâ (= 303.12 metres). Both reports underestimate the size of the city. A third report given by Rabîh, one of the builders of the city, gives the measurement as one mile between each two gates (or 4000 dâîrâ mursalâ or 1848 metres: D. Rayyis, 278; Khatibi, 8). This estimate is given in Ibn al-Djawzi, Mandkib, 9; Yakût, i, 235; Abu 'l-Mahasin, i, 347; Irblî, Târîh, 54). It is confirmed by the measurement carried by the orders of Mu'tâdî and reported...
by Badr al-Mu'tadiid (Khaṭṭābī, 5; Abū 'l-Mahāsīn, i, 341). This makes the diameter of the city 2352 metres. Ya'qūbī's estimate of the distance between each pair of gates outside the khandaḳ (or 2534.5 metres) becomes probable in this light (Buldān, 238-9).

Various reports are given of al-Manṣūr's expenditure on the city. One report makes the cost 18 million, understood to mean dinārs (Khaṭṭābī, 5; Ibn al-Djāwzī, Manāšīb, 34; Yākūt, i, 683; Irībīlī, Tābrīz, 543). A second puts it at a hundred million dirhams (Abū 'l-Mahāsīn, i, 341). However, the official report based on caliphal archives states that al-Manṣūr spent on the Round City four million, eight hundred and eighty three dirhams (Tabārī, iii, 326; Muḥaddasī, Aḥsan al-Takabīsī, 121; Khaṭṭābī, 5-6; see also Ibn al-Athlīrī, v, 419; Ibn al-Djāwzī, Manāšīb, 34). This is understandable if we take into account the low cost of labour and provisions and the strictness of al-Manṣūr in supervising his accounts.

In 157/773 al-Manṣūr built a palace on the Tigris below the Khūrasān gate, with spacious gardens, and called it al-Khūlīd. The place was free of mosquitoes and noted for the freshness of its air. The name was reminiscent of paradise (Tabārī, iii, 379; Khaṭṭābī, 14; Yākūt, ii, 763; Ibn al-Djāwzī, Manāšīb, 12; Ibn al-Athlīrī, vi, 71; Ibn al-Fākhrī, i, 370).

Strategic considerations, al-Manṣūr's policy of dividing the army, and lack of space soon led the caliph to build a camp for his heir al-Maḥdī on the East side of the Tigris. The central part was the camp of al-Maḥdī (later called Rusāfā after a palace built by al-Rašīdī), where his palace and the mosque were built, surrounded by the houses of officers and followers. The commercial side was soon expressed in the famous sība of Bāb al-Tāk. The military side is shown by a wall and a ditch surrounding the camp of al-Maḥdī. Work started in 151/768 and ended in 157/773. Rusāfā was almost opposite the city of al-Manṣūr (Ya'qūbūlī, Bulūdān, 251-3; Iṣṭakhaṭī, 83-4; Khaṭṭābī, 23-5; Ibn al-Djāwzī, Manāšīb, 12-13; Muḥaddasī, 121; Abū 'l-Mahāsīn, ii, 16; Yākūt, ii, 78).

Baghdād expanded rapidly in buildings, commercial activities, wealth and population. People crowded into east Baghdad, attracted by al-Maḥdī's gifts, and later by the Barmakids who had a special quarter at the Shāmmsāyiyya gate (Ya'qūbūlī, Bulūdān, 251; Aḫkīnī [Būlāk], vi, 78, vi, 8; Ibn Khalīlīkīnīlī [Būlāk], ii, 317). Yaḥyā the Barmakīd built a magnificent palace and gave it the modest name Kār al-Tīn (Aḵkīnī, v, 8). Dafar built a great luxurious palace below eastern Baghdad, which was given later to al-Maḥmūn. At the time of al-Rašīdī, the eastern side extended from the Shāmmsāyiyya gate (opposite the Khaṭrabīlī gate) to Muḥšīram (its southern limit is the modern Maḥmūn bridge) (Ya'qūbūlī, Bulūdān, 253-4).

On the other side al-Amin returned from the Khūlīd palace, where al-Rašīdī resided, to Bāb al-Dhāḥab, renewed it, furnished it to suit a caliph and handed it to him (cf. Ibn al-Djāwzī, Muntahāṣīm, v, 144). Then in 280/893, al-Mu'tadīd rebuilt the palace, enlarged its grounds and added new buildings to it, and built prisons on its grounds (māṭāmīrī). He added a racetrack and surrounded the area with a special wall. It was to be Dār al-Khīlāfīn and remained, with additions, the official residence (Khaṭṭābī, 52; Ibn al-Djāwzī, Muntahāṣīm, vi, 53; Manāšīb, 15; Dafārī, Nīshārī, viii, 15; Abū 'l-Mahāsīn, iii, 85; Irībīlī, 173).

Then he laid the foundations of the Tāǧ palace on the Tigris nearby, but later saw much smoke from the city. He decided to build another palace, two miles to the north-east. He built the magnificent and
lofty al-Thurayya, linked it with an underground passage to the Kasr (al-Hasanl), surrounded it with gardens and a great expanse of water, it from the Mshah canal (see the description of Ibn al-Mu'taiz, Dinawar (Beirut ed. 1913), 138-9). He also ordered, in order to keep the air pure, that no rice and palm trees be cultivated around Baghdad (see Ibn al-Djawi, Munastar, V, 142). The Thurayya lasted in good condition till 497/1092-3 when it was swept by the flood and ruined (Ibn al-Djawi, Manastir, 155; Yakut, i, 808). The ruin of the Round City started now. Al-Mutanabdi ordered the demolition of the City wall; but when a small section was pulled down, the Hashimites complained, as it seemed Abd'alsid glory, so al-Mutanabdi stopped. People however gradually extended their houses at the expense of the wall and this led ultimately to the demolition of the wall and the ruin of the City (Tanukhi, Nighmar, i, 74-5).

Al-Mutanabdi (289-295/901-907) built the Tagd with halls and domes, and a quay on the Tigris. He built a high semi-circular dome on its grounds, so that he could reach its top mounted on a donkey. (Khatib, 48; Irbili, 175, Yakut, i, 80; Ibn al-Djawi, Munastar, v, 144). In 289/901 al-Mutanabdi pulled down the palace prisons and built a Friday mosque (Dami al-Kasr) which became the third Friday mosque, until the time of al-Muktafi. (Ibn al-Djawi, Munastar, vi, 3, Khatib, 62).

Al-Muktadir (295-320/908-932) added new buildings to the Royal palaces and beautified them fabulously; he paid special attention to the zoo (hayr al-awbakh) (cf. Khatib, 48, 53). Khatib's detailed description for the year 305/917-18 is striking. The strong wall surrounding the palaces and the secret passage from the audience hall of al-Muktadir to one of the gates were necessary defensive measures (see Khatib, 55). Among the wonders was dar al-sagghara, a tree of silver, in a large pond with 18 branches and multiple twigs, with silver or gilt birds and sparrows which whistled at times. On both sides of the pond were 15 statues of mounted horsemen which moved in one direction as if chasing each other (54). There was a mercury pond 30 x 20 dhird* with four gilt birds and around it was a fabulous garden. The zoo had all sorts of animals. There was a lion-house with its remarkable arms. Twenty three palaces were counted within the Royal precincts (cf. Khatib, 55-55; Ibn al-Djawi, Munastar, vi, 144).

Baghdad reached its height during this period. The eastern side extended five miles (1 mile = 1848 m.) from Shammiiyya to Dar al-Khilafa in the 4th/10th century (Istakhri, 83). Tayfur (d. 893) reports that al-Muwaqqaf ordered the measurement of Baghdad before 279/892; its area was found to be 43,750 gharb of which 26,250 gharb were in east Baghdad and 17,500 gharb in west Baghdad (Ibn al-Fakih, 144; cf. Ibn Hawkal, l, 243). Another version of Tayfur makes eastern Baghdad at the time of al-Muwaqqaf 26,750 gharb (1 gharb = 1366 sq.m.) and western Baghdad 27,000 gharb; this is more probable, as west Baghdad was still more important then. Another version puts the area at 53,750 gharb, of which 26,750 gharb were east and 27,000 gharb west (Khatib, 74). It is more likely that the last figure represents the period of al-Muktadir when much expansion took place in east Baghdad. In all these reports the length of Baghdad on both sides was almost the same. For the first figure, considering the length of Baghdad as stated by Istakhri and by Tayfur, Baghdad was, in 279/892, about 7½ km. in length and 6½ km. in width, while under al-Muktadir (320/932) it was about 8½ km. in length and 7½ km. in width.

Baghdad's geographical position, its active people (cf. Dhahab, Buchu, 39, Tanukhi, Faradji, ii, 11), the encouragement of the state to trade (cf. Ya'qub, 590) and the prestige of the caliphate, soon made Baghdad the great centre of commerce (see Duri, Tarikh al-Idrak al-Iltisadi, 143-157). Markets became an essential feature of its life, in Rusafa and esp. in Karb. Each trade had its market, and among those were the fruit market, the cloth market, the cotton market, the market of booksellers which had more than a hundred shops, the money-changers' market and the 'attarin market in Karb. Markets for foreign merchants were at Sük Bâb al-Shâm. On the eastern side, there was a variety of markets including Sük al-Tib for flowers, a food market, the goldsmiths' market, the sheep market, a booksellers' market, and a market for Chinese merchandise (Ya'qub, Bulût, 242, 246, 248, 254; Istakhri, 48, Khatib, 22, 65 ff., 36, 69; Ibn al-Djawi, Manastir, 26, 27-8; Ibn Hawkal, 242). Since the time of al-Manṣür a muhkkab was appointed to watch over markets, to prevent cheating and to check on measures and weights (cf. Khatib, 20; Sâbi, Rast'âlî, 114, 141-2; Mawardî, 141-2). The muhkkab also supervised baths and possibly watched over mosques (Khatib, 78). He also prevented subversive activities.

Each market or craft had a chief appointed by the government. In a craft there were the Šamis and the Usâd (cf. Ikhwân al-Šafa, i, 255; cf. Essays of Diähz (ed. Sandûbî, 126). Baghdad exported cotton stuffs and silk textiles esp. kerciefs, aprons, turbans, crystals turned on lathes, glazed-ware, and various oils, potions and electuaries (Hudaib al-Šâm, 174; Mukaddad, 128). Baghdad manufactured shirts of different colours, turbans of thin texture and celebrated towels (Dimashkî, Tîgârna, 62). Its thin white cotton shirts were peerless (Ibn al-Fakih, 254). The sahlašûn (silk stuff), the mulham and 'attâbi stuffs (of silk and cotton) of Baghdad were famous (Hudaib al-Šâm, 38; Nuwayrî, i, 369; Abu 'l-Kâsim, 35; Mukaddad, 352; Ibn Hawkal, 261). Excellent swords were made at Bâb al-Tîr (Arb., 56). It was famous for its leather manufacture and for the manufacture of paper (cf. Ibn al-Fakih, 251).

A great incentive to commerce and industry was the development of the banking system in Baghdad as shown in the activities of the sarrdfs and dijahhâds. The sarrdfs had their own markets esp. in Karb (cf. Diiahjijûrî, 228) and primarily served the people, while dijahhâds served mainly the government and its officials.

Baghdad grew international in population. Its inhabitants were a mixture of different nations, colours and creeds, who came for work, trade, as recruits for the army, slaves, and for other careers. It is noticeable that the populace began to play an important part in its life (see Ibn al-Ahwîr, viii, 85-6; Miskawiyh, i, 74-5; Isfahânî, Ta'rikh (Berlin), 130). On their revolt against the rise in prices in 387/997-98, the sarrdfs sought to protect their interests in the activities of the sarrdfs and dijahhâds. It was difficult to give an estimation of the population of Baghdad. Estimates of mosques and baths are obviously exaggerated (300,000 mosques and 60,000 baths under al-Muwaqqaf, 27,000 baths under al-Muktadir, 17,000 baths under Mu'izz al-Dawla,
Baghdad 899

5,000 under A'ud al-Dawla, 3,000 baths under Baha al-Dawla; Khatib, 74-6; Ibn al-Fakhri, f. 59b; Hilal al-Sabili, MS. 79-30. Baths were counted in 383/993 and found to number 1500. Traditions stress that each bath serves about 200 houses (Ibn al-Fakhri, f. 59b, 60a; Hilal al-Sabili, MS. 29). If the average number is in a house was five, then the population of Baghdad was about one million and a half. Al-Mu'tadid ordered Sinan b. Thabit to examine doctors and to give licences only to those qualified, and the result was that 860 doctors were given licences (Ibn al-Athir, viii, 85; Ibn Abi Usaybi'a i, 221 f., 224, 310; al-Kifiti, 194 f.). If we add doctors serving in government hospitals and those who did not have licences, the number would probably reach a thousand. The number of people who prayed on the last Friday of the month at the mosque of Mansur and that of Rusafa were judged by measuring the area for prayer to be 64,000 (Ibn al-Fakhri, f. 62a; see also Tabari, iii, 1730). The number of bookshops about the end of the 3rd/9th century was calculated to be 30,000 (Ibn al-Djawzi, Manadh, 24). From those figures and the area of Baghdad we can estimate the population of Baghdad in the 4th/10th century to be a million and a half. Hilli, a contemporary, gives this estimate too.

There were aristocratic quarters such as Zahir, Shammasiya, al-Mumuniyya and Darb 'Awn. There were poor quarters like Kafi'at al-Kilab, and Nahr al-Ad-dadi (Abu 'l-Kasim, 36). Houses were of two stories, and those of the common people of one storey. Those of the rich had baths and were usually divided into three quarters surrounded by a wall—the ladies' quarters, the reception rooms, and the servants' quarters. Special attention was paid to gardens (Aghani, ii, 73, iii, 31, ix, 144, v, 38, xvii, 129; Hilal al-Sabili, Rusum, 32). Carpets, divans, curtains and pillows were noted items of furniture (Abu 'l-Kasim, 36). Fans and specially cooled houses and sarabbs were used in summer (see al-Mudawwar, Hadratul-Islam, 117, 30). Inscriptions and drawings of animals and plants or human faces decorated entrances (Ibid., 29; Abu 'l-Kasim, 7, 36). A special feature of the life of Baghdad is the vast number of mosques and baths as indicated.

Baghdad was the great centre of culture. It was the home of Hanafi and Hanbali schools of law. It was the centre of translations, in Bayt al-Hikma and outside, and of some scientific experimentation. Its mosques, especially Djami al-Mansur, were great centres of learning. The large number of bookshops which were sometimes literary salons, indicates the extent of cultural activities. Its poets, historians, and scholars are too numerous to mention. One can refer to the History of Baghdad by Khatib to see the vast number of scholars, in one field, connected with Baghdad. Not only caliphs, but ministers and dignitaries gave every encouragement to learning. The creative period of Islamic culture is associated with Baghdad. Later in this period, public libraries as centres of study and learning were founded, the most famous being the Dar al-Tkil of Abu Nasr Sibn b. Aradghil. When the madrasa appeared, Baghdad took the lead with its Nizamiyya and Mustanfuriyya and influenced the madrasa system both in programme and architecture.

Much attention was paid to hospitals, especially in the 3rd/9th and 4th/10th centuries. Of these, the Bimaristan al-Sayyida (306/918), al-Bimaristan al-Mu'tadidi (306/918) and al-Bimaristan al-A'udhili (372/982) were famous. Ministers and others also founded hospitals. Doctors were at times subject to supervision (see above).

Under al-Rashid there were three bridges in Baghdad (Ya'qubi, ii, 510). The two famous ones were by Bâb Khurans and at Karh (cf. Ya'qubi, ii, 542; Djabshiyar, 254; Tabari, iii, 1232). Al-Rashid built two bridges at Shammasiya, but they were destroyed during the first siege (Ibn al-Djawzi, Manaddib, 20; Ibn al-Fakhri, f. 42a). The three bridges continued to the end of 3rd/9th century (Ibn al-Fakhri, f. 42a). It seems that the northern bridge was destroyed and Isâkhi talks of two bridges only (Ibn al-Djawzi, Manaddib, 20, Isâkhi, 84). In 387/997 Baha al-Dawla built a bridge at Sük al-Thaliha (al-Misr'atul-Kattanin) to become the third bridge. This indicates a shift of emphasis from N. Baghdad to Sük al-Thaliha (Ibn al-Djawzi, Munasa'm, vii, 171; cf. Ibn al-Djawzi, Munasa'm, 20; Khatib, 71-2).

Life in Baghdad was stable until al-Amin. The first siege brought out turbulent elements in the 'amma. Flood and fire also began to play their rôle from the last quarter of the 3rd/9th century. Flood in 270/883 ruined 7,000 houses in Karh. In 299/904 and 328/929 Baghdad suffered considerably from flood (Tabari, iii, 1103; Ibn al-Athir, viii, 371; Abu 'l-Mahasin, iii, 157 and 266). In 373/983 flood swept beyond the Kafa gate and entered the city (Sul, Radd, 278; Khatib, 16). The neglect of canals, especially during the 'Amir al-Umar period (324/935-945), was responsible for floods and for the ruin of the Bada'rar district (Miskawayh, ii, 1, 9; Sul, Radd, 16, 225, 137-8). Consequently, whereas scarcities and plague were rare before 330/942 they were recurrent after that (cf. Ibn al-Athir, vii, 177, 187, 338). The scarcity of 307/919 was a result of monopoly and was quickly overcome. Scarcess occurred in 323/934, 326/937, 329/940 (with plague), 330/941, 331/942 (with plague), 332/943, 337/948 and life became unbearable (Sul, Raddi, 61, 104, 236, 251; Ibn al-Athir, viii, 282, 311; Isfahani, Ta'rikh, 125; Abu 'l-Mahasin, iii, 170-1, 270, 274). In 308/920 and 309/921 Karh suffered considerably from fire (Ibn al-Athir, viii, 89, 95). In 327/934 the fire of Karh swept over the quarters of the 'atfarin (the drug sellers), the ointment sellers, jewelers and others and its traces could be seen years after (Sul, Radd, 68).

The Buwayhid period was rather hard for Baghdad. Muizz al-Dawla (in 335/946) first repaired some canals at Bada'rar and this improved living conditions (Miskawayh, ii, 165). A period of neglect followed and many canals which irrigated west Baghdad were in ruins. A'ud al-Dawla (367-372/977-982) had them cleared up, and rebuilt bridges and locks (Miskawayh, ii, 406; iii, 69; Ibn al-Athir, viii, 518). Then we hear no more of such activities.

Building activities were limited. In 350/961 Muizz al-Dawla built a great palace at the Shammasiya gate with a large Maydan, a quay, and beautiful gardens. For this palace he took the seven iron doors of the Round City and spent about a million dinars (2 million dirhams). However, it was pulled down in 418/1027 (Tanakh, Nishapur, 1, 70; Ibn al-Athir, viii, 397-8; ix, 256). A'ud al-Dawla rebuilt the house of Sabuktakin, chamberlain of Muizz al-Dawla, at upper Mukkarrim, added spacious gardens to it, and brought water to it by canals from Nahr al-Khalis at great expense. It became the Dar al-Imara or official residence of the Buwayhids (Khatib, 58-9; Ibn al-Djawzi, Munasa'm, vii, 77-8; cf. Miskawayh, iii, 124).

Baghdad found Baghdad in bad shape. He ordered that its houses and markets be renewed and spent much money in rebuilding its Friday mosques; he repaired quays by the Tigris, and ordered the cultivation of gardens in ruined places which had no owners. He found the central bridge narrow and decayed and had it renewed and broadened (Ibn al-Athir, vii, 558; Ibn al-Diawzi, Muntazam, vii, 114; Miskawayh, ii, 404-406). In 372/982 he built the 'Adud al-Dawla Hospitals, appointed doctors, supervisors, storekeepers to it, and provided it with plenty of medicines, potions, instruments and furniture. Wakhs were allotted to it for its upkeep (Ibn al-Diawzi, Muntazam, vii, 112-114).

However, Baghdad declined under the Buwayhid rulers (Tanbkh, Nigumur, i, 66 makes it in 345/956 one tenth of its size under al-Mukta'dir). The city of al-Mansur, was neglected and had no life then (Mukaddasi, 120). Most of the quarters of W. Baghdad were in bad shape and had shrunk. The most flourishing section of W. Baghdad was Karakh, where the merchants had their places of business. Thus the western side is now called Karakh (Ibn Hawkal, i, 241-2; Mukaddasi, 120).

The eastern side of the city was now more flourishing, and dignitaries generally resided there (cf. Ibn Hawkal, 240). Here, the brightest spots were the Bab al-Tak where the great market was, the Dar al-Imara at the Shammasiyya gate (near his palace), the other at Bab al-Tak and the Kalwada, Ibn Hawkal saw two bridges, one out of order (I, 241). It seems there were three bridges at the time related to their movement (cf. Ibn al-Diawzi, Tabis Ibars, 392; Kushayri, ibid, 113-4; Ibn al-Diawzi, Muntazam, vii, 77; Tanbkh, Faragji, ii, 105, 107-8). In 348/959, fights between the two groups led to destruction and fire at Bab al-Tak (ibid, viii, 44). Burdjum, a notorious 'Ayyar leader, practically ruled Baghdad for four years 422-445/1030-1053, and spread havoc (Ibid, 75-6). The government was powerless (cf. 49) and they were left to levy taxes and tolls to avoid their terror (ibid, 78). Many people left their quarters and departed for safety (ibid., 142). Their terror continued till the advent of the Saljuk forces in 451/1059 (Abu l-Fida', ii, 187). 

Baghdad suffered much from the turbulence of the 'Amma, from sectarian differences encouraged by the Buwayhids, and from the 'Ayyarun. Our sources talk much of the ignorance of the 'Amma, their readiness to follow any call, their good nature and their lawlessness (cf. Mas'ud, v, 81, 82-3, 85-7; Ghazzali, Fadli, i, 53, Ibn al-Diawzi, Manakh, 31-2; Baghdadi, Firaq, 141). In 279/993 many markets were ruined (Ibn al-Diawzi, Muntazam, vii, 671, Khathib, 53-4, Ibn al-Diawzi, Manakh, 21-2, Ibn al-Athir, ix, 48).

Ibn Hawkal saw two bridges, one out of order (I, 241). It seems there were three bridges at the time of Mu'izz al-Dawla (one at the Shammasiyya gate (near his palace), the other at Bab al-Tak and the third at Suk al-Thalaghah). The first was transferred to Bab al-Tak, making two there, then one went out of order (cf. Ibn al-Diawzi, Manakh, 20).

The 'Ayyarun kept people in constant terror for life and property. They levied tolls on markets and roads or robbed wayfarers and constantly broke into houses at night. They spread havoc by sword and fire and burnt many quarters and markets esp. Bab el-Tak and Suk Yabia (in east Baghdad) and Karakh, as those were the quarters of the wealthy. People had to lock the gates of their streets, and merchants kept vigil at night. Disorder and pillage were organised, and among the titles of their chiefs were al-Muta'addim, al-Khid, and al-Amiri, and they had special ceremonials for inauguration (see Muntazam, vii, 49, 151, 78, Miskawayh, ii, 306, Kushayri, op. cit., 113; Tanbkh, Faragji, ii, 109). However they were divided into Shi'is and Sunnis (Ibn al-Diawzi, Muntazam, vii, 78-9).

The 'Ayyarun kept people in constant terror for life and property. They levied tolls on markets and roads or robbed wayfarers and constantly broke into houses at night. They spread havoc by sword and fire and burnt many quarters and markets esp. Bab el-Tak and Suk Yabia (in east Baghdad) and Karakh, as those were the quarters of the wealthy. People had to lock the gates of their streets, and merchants kept vigil at night. Disorder and pillage were organised, and among the titles of their chiefs were al-Muta'addim, al-Khid, and al-Amiri, and they had special ceremonials for inauguration (see Muntazam, vii, 49, 151, 78, Miskawayh, ii, 306, Kushayri, op. cit., 113; Tanbkh, Faragji, ii, 109). However they were divided into Shi'is and Sunnis (Ibn al-Diawzi, Muntazam, vii, 78-9).

A preacher prayed in 421/1030 "O God! Save the state from the populace and the rabble" (Ibn al-Diawzi, Muntazam, vii, 44). Burdjum, a notorious 'Ayyar leader, practically ruled Baghdad for four years 422-445/1030-1053, and spread havoc (Ibid, 75-6). The government was powerless (cf. 49) and they were left to levy taxes and tolls to avoid their terror (Ibid., 78). Many people left their quarters and departed for safety (Ibid., 142). Their terror continued till the advent of the Saljuk forces (Ibid., 161).

In 447/1055 Tughril Bey entered Baghdad, and the Saljuk forces reversed Buwayhid policy and encouraged the Sunnis (cf. Abu 'l-Mahsin, v, 59). In 450/1058 Baghshir, a rebel, seized Baghdad in the name of the Fatimids (cf. Abu 'l-Fida', ii, 186; Ibn al-Kalani, 87). He was defeated and killed by the Saljuk forces in 451/1059 (Abu 'l-Fida', ii, 187-8). During this period Baghdad assumed a shape which thereafter changed but little. In 448/1056 Tughril Bey enlarged the area of Dar
In East Baghdad, life centered in the quarters around Harfîm Dîr al-Khīlāfâ which occupy about a third of the area enclosed in the walls. Of the large flourishing quarters were Bâb al-`Azâjî with its markets, al-Mûsâ`ûnîyya next to it, Šûk al-Tâhâbî, Nahr al-Mu`âlî`a and Kurayyâ (Yâkût, i, 232, 441, 444, 534, 655, ii, 88, 167, 234, 459, 514, 783, 917, iii, 193-4, 197, 231, 279, 381, 489, iv, 117, 252, 255, 385, 432, 457, 713-4, 786, 814, 845).

Friday mosques increased in Gharbiyya (W. Baghdad) at this period, indicating the semi-independent status of quarters each with a wall and separated by usable land of ruins. Hârbiyya, al-Ḥârîm al-Tâhîrî in the north, Câhâr Sodî with Nasîrîyya, 'Attâbîyyîn and Dîr al-Kazz south-west, Mâhawîl to the west, Kaşr 'Iṣâ to the east, and Kurayyâ and Kârkh in the south are the noted quarters.

Much attention was given to the founding of madrasas (colleges). This movement could be explained initially by the religious revival among Shi'is, and by political and administrative needs; but it was continued as a cultural movement. Ibn DIubayr saw thirty madrasas in east Baghdad (Ibn DIubayr, 229; see also M. DIawad, in Review of the Higher Teachers’ College, Baghdad, vol. v, 110 ff., vol. vi, 86 ff.). Other madrasas were founded after Ibn DIubayr’s visit (cf. Ibn al-Fuwati, 24-5, 53, 128, 308, Ibn al-Athir, x, 212). The most famous were the Niżamiyya founded in 459/1066, the madrasa of Abû Ḥanîfa found in the same year (Ibn al-DIaiwâl, Munâslâm, viii, 245-6, still existing as Kulliyat al-Sharî’i’â) and al-Mustansirîyya, founded by al-Mustanṣîr in 631/1233 and continued till the 17th century. All those madrasas specialised in one of the four schools of law, except the Mustansîrîyya and the Baghîrîyya (founded in 653/1255) which taught the fiqh of the four schools (see Ibn al-Fuwati, 508; Ibn al-DIaiwâl, Munâslâm, viii, 245-6, 246-7; Ibn al-Athir, x, 38; Ibn al-Fuwati 53-4, 58-9; cf. ‘Awwâd in Sumer, i, 1945). There was a maktûb (school) for orphans established by Shams al-Mulûk (son of Niżâm al-Mulûk) (Iṣâfâhânî, Selîm, 124-5). In 606/1209 guest-houses (dâr diwâl) were built in all quarters of Baghdad to serve the poor in the rūmâda (Ibn al-DIaiwâl, 286; other references, ibid., 184; Ibn al-Fuwati, 94).

Baghdad suffered at this period from fire, flood and dissension. In 449/1057 Karkh and Bâb Mubâwwal quarters and most of the markets of Karkh were burnt down. In 451/1059 much of Karkh and old Baghdad was burnt (Ibn al-DIaiwâl, Munâslâm, viii, 81; Ibn al-Athir, x, 3). The quarters and markets near the DIâdî canal and Dâr al-Khîlîfâ and the Nizamiyya market were burnt more than once (Ibn al-Athir, x, 35, 67, 318; Ibn al-DIaiwâl, Munâslâm, viii, 244, ix, 61, 148, 184, x, 35). In 551/1156 fire spread from neighbouring quarters to Shihâna and neighbouring suks (Ibn al-Athir, xi, 143; there were other fires in those quarters in 560/1164, 569/1173, 583/1187, 598/1199, 620, 621; Ibn al-DIaiwâl, Munâslâm, x, 212). The Sâyâdrîn were fairly active in Dâdîjîk days. They pillaged shops and houses and caused insecurity (see between 449/1057 and 557/1162 Ibn al-DIaiwâl, Munâslâm, viii, 139, 234; Ibn al-Athir, x, 204, 383, x, 29, 26, 59, 63).

The troubles of the ‘imâma and their sectarian fights (Ḥanbâl against Shî'is and Sunnis against Shî'is) continued to give rise to much bloodshed and destruction. Ibn al-DIâlîr reports a temporary conciliation in 502/1108 and adds “Evil came from them (i.e., the ‘imâmas’) (x, 395; see also x, 80, 259, 104, 180-109, 112, 117-8). This was short-lived, and quarrels and fights continued and became terrible under al-Mushta’i (Ibn al-Athir, x, 360, xi, 271, 344, xii, 213, 216). In 640/1242 fights took between the Ma’ṣîmîyya and Bâb al-Azadî quarters which involved the Nizamiyya market, and between Mughṭâra and Sûk al-Sulan quarters, and between Kaṭûtta and Kurayya (in W. Baghdad) quarters; many were killed and shops pillaged (Ibn al-Fuwati, 175-7; cf. Ibn Abî ‘l-Ḥadîl, ii, 554). By 653/1255 things had deteriorated considerably. Fights took place between Rusâfâ (Sunnî) and Khudayrîyyîn (Shî’is), and soon people of Bâb al-Brâṣra supported Rusâfâ while Karkh supported the others (Ibn al-Fuwati, 298-9). These quarrels also indicate the spirit of competition between quarters which increased by the lack of government control. When fights renewed between Karkh and Bâb al-Brâṣra, the soldiers sent to stop it, pillaged Karkh and that made the situation worse (ibid., 267-277). The climax came in 654/1256, when someone was killed by the people of Karkh, and the soldiers, sent to keep order, were joined by crowds of the ‘imâma and pillaged Karkh, burnt several places in it, killed many and took away women. Repraisal followed, but the tragedy was not forgotten (ibid., 314-315). The ‘âyârân were very active at this time. They pillaged shops, robbed houses at night and even the Mustansîrîyya was twice robbed (Ibn al-Fuwati, 378, 254, 260, 262).

The government was too weak to keep order. Floods recurred, indicating the weakness of government and the neglect of irrigation. In 641/1243 floods reached the Nizamiyya and its neighbourhood and ruined some quarters. In 646/1248 floods surrounded east Baghdad, destroyed a part of the wall, and reached the quarters of Ḥarîm. It also flooded Rusâfâ and many of its houses fell. West Baghdad was submerged, and most houses fell except part of Bâb al-Brâṣra and Karkh. Houses on the river collapsed. Floods entered Baghdad in 651/1253, and again in 653/1255 when a great number of houses collapsed and cultivation was damaged. The worst flood was in 654/1256 when both sides were surrounded by water and the flood even entered the markets of east Baghdad, Dâr al-Khîlîfâ and the Nizamiyya (Ibn al-Fuwati, 186-7, 267, 229-233, 277. 304, 311-19). Thus nature and man joined hands to eclipse Baghdad.

Two years later, Baghdad was invaded by the Mongols. On 4 Šafar 656/10 Feb. 1258 the Caliph al-Musta’sîm made an unconditional surrender. Its people were put indiscriminately to the sword, for over a week. Large numbers of the country people who flocked to Baghdad before the siege shared its tragic fate. Estimates of the numbers killed vary between 800,000 and two million, the estimate mounting with the lapse of time (Fakhri, 125; Ibn al-Fuwati, 281; DIahâbî, Duwa’il, ii, 121; Ibn Kaṭîfîr, Bidâyâ, xii, 202). The Chinese traveller Ch’ang Te stâtes (1259) that several tens of thousands were killed; his information is otherwise from Mongol sources (Bretschneider, Medieval Researches, i, 128-9). It is thus difficult to give any figure, but it probably exceeded a hundred thousand. Many quarters were ruined by siege, looting or fire, and the mosque of the caliphs, and the shrine of Kaẓîmañ were burnt down (Ibn al-Fuwati, 327-330; Ibn al-‘Irî, 27). Baghdad was however spared from complete devastation, and the jaṣâd extricated from the ‘ulama’ that a just kâfir is better than an unjust imâm probably helped. Before leaving, Hûlegû ordered the restoration of some public buildings. The supervisor of mawri rebuilt the Dîâmî al-Khulafâ and saw to it that schools and the ribâds were reopened (Ibn al-‘Irî, 475; Ibn al-Fuwati, 337). Culture suffered much, but it was not uprooted. Baghdad became a provincial centre in all respects.

Until 740/1340-40 Baghdad remained under the Ilkâhîs and was administered by a governor with a Shîkha and a military garrison (cf. Ibn al-Fuwati, 331). The Mongols registered the population of Baghdad in tens, hundreds, and thousands for the sake of taxation. A poll-tax was imposed on all except the aged and children; it continued to be levied for about two years (Ibn al-Fuwati, 339; cf. DIuwayzn, trans. Boyle, i, 34). Baghdad began to revive gradually, as its administration was chiefly entrusted to Persians; much of this is due to the policy of ‘Aṭâ’ Malik al-DIuwayzn, governor for about 23 years (657/1258-681/1282). Under him, the minaret of Dîâmî al-Khulafâ and the Niżamiyya market
were rebuilt, and the Mustansiriyya was repaired and a new water system added (Ibn al-Fuwati, 371). The mosques of Shaykh Mafrûz and Kâmâriyya were repaired (ibid., 408; Azzawi, Ta'rikh al-'Iraq, i, 267, 206).

Some of the old schools resumed work, especially the Ni'âmîyya and Mustansiriyya, the Bâshiriyya, the Tâtasjiyya and Madrasat al-Ashâb (cf. Ibn Baôtîta, Cairo 1918, i, 140-1; Ibn al-Fuwati, 182, 385, 396; Azzawi, Ta'rikh, i, 318). Djuwayînî's wife founded the 'Imâmatiyaya school for the four schools of law, and a reliqa near it (Ibn al-Fuwati, 377). The Ilîghan Takûdîr (881/1281) sent a message to Baghdâd asking for the return of endowments to schools, and mosques, as under the 'Abbâsîs, probably a pious wish (Karmalî, al-Fawz, 12). The Ilîghâns' policy led to outbreaks against non-Muslims. They patronised Christians, and exempted them from the jîrza. They rebuilt churches and opened schools. This led to an outbreak against them in 665/1265. The Jews rose to prominence under Arghûn (683-690/1284-1291) through Sa'd al-Dawla the Jewish finance minister, who appointed his brother governor of Baghdâd. In 690/1291 Sa'd al-Dawla was killed and the populace in Baghdâd fell on the Jews. Under Ghazzân, non-Muslims suffered through the imposition of the poll-tax and the attitude of the mob, and many adopted Islam (cf. 'Amr Ibn Mâtîf, Kiîdâb al-Madîdâb, 120-122, 125; Ibn al-Fuwati, 354, 465-6; 483; Wâsâfî, ii, 238; Karmalî, op. cit., 14-15, 21; 'Azzawi, i, 349, 513). Uldjaytu stirred up trouble when he vacillated between Shî'ism and Sunnism. The Ilîghâns tried to impose the lâw (paper money) (d.l.), but it was very unpopular in Baghdâd and was finally abolished by Ghazzân in 697/1297 (Ibn al-Fuwati, 477, 492).

During this period we have the accounts of three geographers: Ibn 'Abd al-Hâkkî (c. 700/1300), Ibn Baôtîta (727/1327 and Mustawfi (740/1339).

The author of the Mârdîdîd states that nothing remained of western Baghdâd except isolated quarters, the most populated of which was Karbâ (201). He mentions the Kuroyya quarter, the populous Ramliyya quarter, the Dar al-Kazî market, Dar al-Kazî standing alone where paper was manufactured, and the Bâb Muhabawu quarter which stood as an isolated village (Marâdîdîd (Caio ed.), 146, 201, 507, 773, 1088). He refers to the 'Aqûfî hospital, and indicates that nothing remained of al-Ḫârin al-Tâhirî, Nahr Taîbiq and Ka'fî's quarters, while Tâhî quarter looked like an isolated village (Marâdîdîd, 280, 837, 397, 1403). Of East Baghda'd, the Mârdîdîd states "when the Tartars came, most of it was ruined. They killed its people and few were left. Then people from outside came" (201). He states that the Hâlabî, Kuroyya and Ka'fî's al-Ḫârin were populous quarters (Marâdîdîd, 417, 1088, 1110). Ibn Baôtîta follows very closely after Ibn Djibayr. However he mentions two bridges in Baghdâd and gives new details about the excellent baths in the city (Caio ed. 1908, i, 140-1). He states that mosques and schools were very numerous, but they were in ruins (ibid., i, 140).

Mustawfi's data is significant. His description of the wall of East Baghda'd agrees with that of Ibn Djibayr. It had four gates, and encloses the city in a semi-circle with a circuit of 28,000 paces. Western Baghda'd, he calls Karbâ; it was surrounded by a wall with a circuit of 12,000 paces. He found life easy in Baghdad and people pleasant, but their Arabic was corrupt. He found Shî'is and Hanbalîs dominant in Baghdad, though adherents of other sects were numerous. Madrasas and rîbâjs were numerous, but he noted that Ni'âmîyya was "the greatest of them all" while Mustansiriyya was the most beautiful building, (Nuzha, 40-42). It is possible that the Sitt Zubayda tomb belongs to this period, and the lady concerned could be Zubayda, the granddaughter of the eldest son of Musta'sîm ('Azzawi, i, 406).

In 740/1339 Hasan Buzurg established himself in Baghdad and founded the Dîlîyârîd dynasty which lasted till 813/1400. The Mardîdîd mosque dates from this period. From its inscriptions, we know that Mardjân, a captain of Uways, started building the madrasa with its mosque under Hasan Buzurg and finished the building under Uways in 758/1357. This madrasa was for the Shî'is and Hanafs (text of inscriptions in Alûsî, Masâdîdîd, 45 ff.; Massignon, Mission, ii, 1 ff.). Only the gate of the madrasa—or mosque later—remains now.

Beyond this we hear of flood, siege or troubles which caused much damage and loss.

Baghdad was twice taken by Timûr, first in 795/1392-1393 when the town escaped with little damage, and second in 803/1401 when its population was indiscriminately put to the sword, and many of its public (Abbâsîs) buildings and quarters were ruined. This was the devastating blow to culture in Baghda'd. In 807/1405 Ahmad the Djuwayrîr in 928/1521 returned to Baghdad, restored the walls destroyed by Timûr, and tried to repair some of the buildings and markets, but his time was short.

In 813/1410 Baghdad passed to the Kara Koyunlu Turkomans who held it till 872/1467-8, to be followed by Âk Koyunlu Turkomans. Baghdad sank still deeper under the Turkomans and suffered considerably from misrule. Many of its inhabitants fled the city, and the ruin of the irrigation system accounts for the recurrence of flood with consequent devastation. Under the year 841/1437 Mâkîrî says "Baghdad is ruined, there is no mosque or congregation, and no market. Its canals are mostly dry and it could hardly be called a city" (Mâkîrî, Sulûh, iii, 100. see 'Azzawi, iii, 79 ff.; Karmalî, 61 ff.). In addition, tribalism spread and tribal confederations returned to play their turbulent rôle in the life of the country.

In 914/1507-8 Baghdad came under Shî' Isma'îl Șafawî, and a period of Perso-Ottoman conflict for the possession of Baghdad opened, typified in the Baghdad song "between the Persians and the Rûm, what woe befell us". On Shî' Isma'îl's orders, many Sunni shrines, esp. those of Abû Șâvia and Abî al-Kâdir Șîlî, were ruined, and many of the leading Sunnis were killed. However, he started building a shrine for Mûsâ al-Ka'âmî. He appointed a governor with the title Kâhâbîh al-Kâlûfî (Azzawi, iii, 336-343). Many Persian merchants came to Baghdad and increased commercial activity. After a brief space in which the Kurdish chief Dhu 'l-Faqrîr seized Baghdad and announced his allegiance to Sultân Sulaymân Șînî, in 928/1520. Shî' Șahtâmâşp seized the town again in 936/1520. In 941/1534 Sultân Sulaymân entered Baghdad. He built a dome on the tomb of Abû Șanîa, with the mosque and madrasa, rebuilt the mosque, tekke and tomb of Șîlî and had guest-houses for the poor at both mosques. He also had the shrine and mosque of Kâpîmayn, started by Shî' Isma'îl, completed (Sulaymân-name, 119; Ewlya Șebîlî, iv, 426; Alûsî, Masâdîdîd, 117; 'Azzawi, iv, 28 ff.). He ordered landed property to be surveyed and registered, and organised the administration of the province (Ewlya Șebîlî, iv, 41).
ament, and a Kādi. A garrison was stationed in Baghdad with the janissaries as its backbone. Few buildings were erected during the following period. In 978/1570 Murad Paşa built the Muradiyya mosque in the Maydān quarter. The Gīlānī mosque was rebuilt. Čiğalazâde built a famous inn, a coffee house and a market. He also built Dījamī al-Šaghā or Dījamī al-Khaṭāfān, and rebuilt the Mawlawī tekke, known now as the Aṣfāfiyya mosque (‘Aẓawā’, iv, 116, 128-32; cf. ‘Alī, Masāķīd, 301, 62-4). Hasan Paşa built the towers near Burdj al-Diawish (Ca’ush) and built Burdj al-Sabūm (1687). Mosques received some attention. Deli Husayn Pasha (1644) rebuilt the coffee house and a market. He also built Dījamī, (Gulshan-i Khuldsat al-WazIr, i, 383; ‘Alī, Masāķīd, 301, 62-4). Hasan Paşa built the mosque known after him, also called Dījamī al-WazIr (Gulshan-i Khuldsat al-WazIr, 66; Ewliya Celebi, iv, 419). He also made a rampart and a ditch around Karşeh to protect it from Bedouins.

Europeans begin to visit Baghdad at this period. They speak of it as a meeting place of caravans, and a great centre of commerce for Arabia, Persia and Turkey. Caesar Frederigo (1563) saw many foreign merchants in the city. Sir Anthony Sherley (1590) saw “excellent goods of all sorts and very cheap” (Purchas, viii, 384). It had a bridge of boats tied by a great chain of iron and when boats passed up or down the river, some of the boats of the bridge were removed until the traffic had passed (Ralph Fitch in 1583, Hakluyt, ii, 282-3). Rauwolf (1574) saw streets narrow and houses miserably built.

Many buildings were erected in the shape like the Paşa’s residence and the great bazaar or exchange were good. Its baths were of low quality. The Portuguese traveller Pedro Texeira (1604) estimated houses in east Baghdad at twenty to thirty thousand. There was a mint in Baghdad in which gold, silver and copper coins were struck.

Following the insurrection of Bakr the Subasht, Şah Abābāt conquered Baghdad in 1032/1623. School buildings and Sunri shrines, including the mosques of Gīlānī and Abū Hanifa, suffered destruction. Thousands were killed or sold as slaves and others were tortured (KŪţīb Celebi, Fadḥila, ii, 50; Khuldsat al-Adhr, i, 383; ‘Aẓawā’, iv, 178-182). In this period the Saray (government house) was built by Şafi Kuli Khan, the Persian governor. Baghdad was regained by the Ottomans in 1048/1638 under the personal command of Sultan Murad IV. He had the shrines, especially the tombs of Abū Hanifa and Gīlānī, rebuilt. On his departure, the Bāb al-Tillism was walled up and continued thus until it was blown up by the retreating Turks in 1917. His Grand Vizier put the Kal’a (castle) in good repair.

Further information comes from travellers of this period, like Tavernier (1652), Ewliya Celebi (1654) and Thevenot (1663). The wall around east Baghdad was almost circular in shape. It was 60 dhīrāt in width, with water drawn from the Tigris. At the north-western corner of the wall stood the Kal’a (inner castle), from the Bāb al-Mu’azzam to the Tigris; it was encompassed by a single wall with little towers upon which cannon were planted. Barracks, stores of ammunition and provisions as well as the treasury and the mint were there. The Saray, where the Paşa resided, stood below the castle; it had spacious gardens and fair kiosks. On the other end of the bridge at Karşeh stood a castle called Kūshlar Kal’aṣaf or Birds’ castle, with a gate on the bridge (Ewliya Celebi, iv, 416; Hāddījī Khalīfah, Dīhān-Nūmā, 457-50; Tavernier, 64; Thevenot, Voyage, ii, 211). Ewliya Celebi refers to the numerous mosques of Baghdad and mentions nine important mosques. Of the schools, two were the largest, the Mardjaniyya and Madrasat al-Khulfa‘ (Mustansiriyya). Of the many inns two were good. He mentions eight churches and three synagogues, and gives exaggerated figures for tekkes (700) and hajmims (500). The bridge of boats had 37-40 boats according to the height of the river, and some boats in the middle could be removed either for safety at night, or for river traffic, or as a military precaution.

Belgāhud was governed by 24 pašas between 1048/1638-1116/1704 and there was no room for real improvement. The pašas were semi-autonomous, and the power of the janissaries was great. The power of the tribes rose and gradually became a threat to the life of the city.

Little was done beyond repairs to the city walls or mosques. Kūţīb Hasan Paşa (1642) built three towers near Burgī al-Adżāmi. However, during the 10th to 12th century, the city of Baghdad was almost circular in shape. It was 60 dhīrāt in height and 10-15 dhīrāt broad, with holes for guns. It had large towers at the principal angles, of which four were famous at this period—and smaller towers at short distances from each other. On the large towers brass cannons were planted. The wall was completed on the river side for proper defence (the map of Naḥī_modifier in 1657, drawn for Sultan Sulaymān in 1537 already shows this wall. A Sousa, Atlas of Baghdād, 12). There were 118 towers in the wall on the land side and 45 on the river side (Hāddījī Khalīfah, Dīhān-Nūmā, 457 ff.; Ker Porter (1819) reports 117 towers of which 17 were large (Travels, 265); cf. Buckingham, Travels, 372).

The wall had three gates on the land side, (as the Tillism gate was walled up): Bāb al-Imām al-‘Arām in the north at 700 dhīrāt from the Tigris, Karṣakul Kapu (Bāb Kalwānq) or the dark gate in the south at 50 dhīrāt from the Tigris, and Aḵ Kapu (al-Bāb al-Wāṣfnā) or the white gate in the east. The fourth gate was at the bridge. Ewliya Celebi measured the length of the wall and found it 28,000 paces in slow walking or seven miles (1 mile = 4,000 paces), while Hāddījī Khalīfah makes its length 12,000 dhīrāt or two miles (Niebuhr and Olivier consider the length of East Baghdād two miles). Wellsted thought the circuit of the walls 7 miles. Felix Jones, who surveyed Baghdād in 1853, gives the circuit of the walls of East Baghdād including the river face as 10,000 yards or about 6 miles (Olivier, Voyage, ii, 379-80; Wellsted, Travels, i, 255; Felix Jones, 318; cf. Rousseau, 5 and Tavernier, 84).
Kamariyya mosque. Khāṣṣāki Muḥammad (1657) built the Khiṣṣa'iki mosque at Ra’s al-Karya. Šīlbdär Ḥusayn Paša (1671) rebuilt the Fadl mosque which became known as Džamih. Šīlbdär Ḥusayn Paša and surrounded the shrine of Ūmar Šuhra'awrd by a wall and brought water to it by a canal. Ābd al-Raẓmān Paša (1674) repaired the Džami' Šhaykh Ma'rūf and completed the dam started by his predecessor to protect A'zāmīyya from flood. Kaplān Muṣṭāfa (1676) rebuilt Džamih al-Šaykh al-Khaffāfī which became al-Kaplānīyya and nιyya. Ūmar Paša (1687) repaired the mosque of Abū Ḥanīfa and allotted new vakfās to it. Ibrāhīm Paša (1681) renewed Džamih Suyyid Sulṭān 'Ali, and Džami' al-Sarāyī. Īsmāʿīl Paša (1698) rebuilt Džamih al-Khaffāfī (Azsāwī, iv, 27, 64, 109, 116, 143, Gučkčioni-ı Khulafā, 102, 103, 105, 106, Alûd, Masādjjī, 37, 57-8). Ahmad Bugănāk (1678) built the famous Khiṣṣa Banī Sa'd, while Šīlbdär Ħusayn Paša built a new bazaar near the Mustaniṣiyā. The beginning of the 18th century saw the eyālet of Baghdad terribly disorganised, the janissaries masters of the city, the Arab tribes holding the surrounding country, and peace or security for trade non-existent. The appointment of Hasan Paša in 1704, followed by his son Ahmad, inaugurated a new period for Baghdad. They introduced the Mamlik (Kölemen) to check the janissaries and laid the foundation for Mamlik supremacy which lasted till 1831. The janissaries and Arab tribes were controlled, order was restored and the Persian threat averted. Hasan Paša rebuilt the Sarāy Mosque (Džadid Hasan Paša). He abolished taxes on firewood and on foodstuffs, and relieved quarters from exacting duties. He also built the Sulaymaniyya school and renewed the bridge. He organised an army of about 20,000 and in case of need it could be raised to 12,500.

Security made Baghdad a great commercial centre. An eye-witness wrote in 1774, "this is the grand mart for the produce of India and Persia, Constantinople, Aleppo and Damascus; in short it is the grand oriental depository" (Gaţester, i, 1243). Dissension and weak leadership among the Mamluks led to a period of troubles, of tribal chaos, and the Persian conquest of Baṣra. It ended when Sulaymān Paša the Great became governor (1193/1779) and combined Baghdad, Šāhhrizur and Baṣra. The tribes were checked, peace was restored and Mamlik power revived (Ta'rikh-i Dżewdet, ii, 145, 157, 158; Sûf, Ta'rikh al-Mamlik, 19 ff., 54 ff., S. Fā'ik, Ta'rikh al-Mamlik, f. 16-7). Sulaymān Paša repaired the walls of east Baghdad, and built a wall around Karṣ and surrounded it with a ditch. He rebuilt the Sarāy. He also built the Sulaymāniyya school and renewed the Kaplaniyya, Faţl and Khulafā' mosques. In addition, he built the Sûk al-Sarrādīn. His kahya started building the Ahmadiyya mosque (Džami' al-Maydān) to be completed by the kahya's brother (Uğmān b. Saνad, (abridg. ed.), 70-73, 76-7). His last year (1802) saw a plague in Baghdad.

He also built the Suk al-Sarrādīn. His kahya started building the Ahmadiyya mosque (Džami' al-Maydān) to be completed by the kahya's brother (Uğmān b. Saνad, (abridg. ed.), 70-73, 76-7). His last year (1802) saw a plague in Baghdad. In the palace there were houses, with teachers and instructors for exacting duties. They are given a literary education and training in the use of arms, the art of chivalry and sports, and finally some palace education, to create an élite for government (Sulaymān Fā'ik, Ta'rikh al-Mamlik; Dżewdet al-Wuzarda, 8). A governing class was formed, trained, energetic, and compact. But their weakness came from jealousies and intrigues. Sulaymān Paša subdued the tribes and assured order and security, and encouraged trade.

Āli Paša followed in 1715/1726 and Umar Paša in 1777/1764 (Ta'rikh-i Dżewdet, i, 339-40). In 1776 the establishment of a British residency in Baghdad was sanctioned by Bombay (Gaţester, i, 1225). In 1786/1772 a terrible plague befell Baghdad and lasted six months; thousands perished, others migrated, and commercial activities came to a standstill (Gaţester, i, 534).

The administrative system of Baghdad was copied on a small scale from that of Constantinople. The Paša held supreme military and administrative power. As the head of the administration was the kahya or kahya, who was also a minister. He was assisted by the defterdar, who was director of finances, and by the divān enfendisi or chief of the chancellor. There was the commander of the palace guards and the ağab of the janissaries.

The administrative system of Baghdad was copied on a small scale from that of Constantinople. The Paša held supreme military and administrative power. As the head of the administration was the kahya, who was also a minister. He was assisted by the defterdar, who was director of finances, and by the divān enfendisi or chief of the chancellor. There was the commander of the palace guards and the ağab of the janissaries.

The Paša called the divān which included the kahya, the defterdar, the bāsh, the commander and other important personnages, to discuss important issues. In the palace there were houses, with teachers and instructors (lilād) to educate the Mamluks (Dżewdet, ii, 287, iii, 204, Uğmān b. Saνad, 31-2, 56, 39; Rousseau, 25 ff.). The Mamluk army was of 12,500 and in case of need it could be raised to 12,500 and in case of need it could be raised to
30,000 by local levies and contingents from other parts of the wilaya (S. Fāhル, 611). Some notice that the walls were constructed and repaired at many different times, the old portions being the best (Buckingham, Travels (1827), 332; see Felix Jones, Memoir, 309). The enclosed area within the walls (east) according to Felix Jones' measurement was 591 acres (cf. Dr. Ives, Journey, London 1778, 20; Rousseau, Description, 5). The wall on the river seems to have been neglected and houses were built on the bank (Olivier, Voyage (1804), ii, 379). A large part of the city within the walls, particularly in the eastern side, was not occupied. The section near the river was well populated but even there gardens abounded so that it appeared like a city arising from amid a grove of palms (Niebuhr, ii, 239; Buckingham, 373; Wellsted, Travels (1840), i, 255). The Saray was spacious, enclosing beautiful gardens, and was richly furnished (Rousseau, 6; Ker Porter, 263).

The western side Karkh, was like a suburb with numerous gardens. It was defenceless at first, (Rousseau, 5; Ives, 28), until Sulaymân Pasha the Great built its wall. It had four gates—Bâb al-Kâzîm (N.), Bâb al-Shaykh Muárruf (W.), Bâb al-Hillâ (S-W.), and Bâb al-Krainât (S.). The walls were 52 feet. A yard long, enclosing an area of 246 acres (F. Jones, 309). (Ker Porter (1818) found it well furnished with shops along numerous and extensive streets (Ker Porter, ii, 255; al-Munshî al-Baghdâdî, Ribla, 31). Moreover it was not so populated as the eastern side, and generally inhabited by the common people (Niebuhr, ii, 244; Rousseau, 4). The bridge of boats was 6 ft. wide and people use it or use "guffas" to cross the river (Ker Porter, ii, 255; Niebuhr, ii, 243; al-Munshî al-Baghdâdî, 243).

The population gradually increased in this period. Rousseau (c. 1800) estimates it at 4,500, Olivier at 8,000, while the inhabitants put the figure at 100,000 (Rousseau, 8; Olivier, ii, 385; Buckingham (1816) made the estimate 80,000 (Travels, ii, 380). Ker Porter (1818) puts the figure at 100,000 (Travels, 262). Al-Munshî al-Baghdâdî, however, views in saying that there were 100,000 houses in Baghdad of which 1,500 were Jewish and 800 were Christian (Ribla, 24). By 1830 the estimate is brought to 120,000-150,000 (Frazer, i, 224-5 and Wellsted). There was a mixture of races and creeds. The official class was Turkish (or Mamluk), the merchants primarily Arab, and there were Persians, Kurds and some Indians (Buckingham, 387; Niebuhr, ii, 250; Ker Porter, ii, 265; Wellsted, i, 251). There were numerous bazaars in Baghdad especially near the bridge, and the grand ones were vaulted with bricks, while the others were covered with palm trees. There were many maâns, 24 hammâms, five great madrasas, and twenty large mosques and many small ones (Buckingham, 387; Ives, 275; al-Munshî al-Baghdâdî, 31; Niebuhr, ii, 230; Wellsted, i, 257; Olivier, ii, 382).

The streets were narrow, and some had gates closed at night for protection. Houses were high, with few windows on the streets. The interior consists of ranges of rooms opening into a square interior court usually with a garden. Sarâdsîs were used to avoid heat in summer, while open terraces were convenient for the late afternoon. In summer people slept on the roof (cf. Buckingham, 380). Baghdad had some industries especially tannery and the fabrication of cotton, silk and woollen textiles (Rousseau, 9-10).

From 1831 to the end of the Ottoman period, Baghdad was directly under Constantinople. Some governors tried to introduce reforms. Mehmed Rashid Pasha (1879) was the first to try to improve economic conditions. He formed a company to buy two ships for transport between Baghdad and Basra, the success of which led to the corresponding British project. Nâmîk Paşa (1853) founded the damir-khadîma which could repair ships (Chiha, 34, 38-9; Gazeteer, i, 1340, 1365-6, 1372). Midhat Paşa (1860-1872) introduced the modern wilâyêt system. The wilâyêt had a maârîzîn, or assistant, a mudir for foreign affairs, and a mebmân or secretary. The wilâyêt was divided into seven sandjaks headed by mulaşqarîs, Baghdad being one of them (Gazeteer, i, 1442, 1447-8). He abolished some obnoxious taxes—the tisâsîb (octroi duty) on all produce brought to the city walls for sale, the fâlsîbîya, a tax on river crafts, bâkuns halab, or 20% on fuel, and rûs 'bâkîr, a tax on irrigation wheels for cultivation, and replaced it by a 'âghtî on agricultural produce (Gazeteer, i, 1442). In 1870 Midhat founded a tramway linking Baghdad with Kâşîmâyân, and it continued for 70 years ('All Ḥaydar Midhat, Life, 51). He established (1869) the first to appear in 'Irâk as the official organ of the provincial government; it continued until March 1917 as a weekly paper ('Azzâwî, vii, 243; Ali Haydar Midhat, The Life of Midhat Pasha, London 1903, 47 ff.; Târîx, Arabic Press, i, 78; Handbook of Mesopotamia, i, 81).

With the exception of a few French Missionary schools, there were no modern schools in Baghdad. Between 1869-1871, Midhat established modern schools, a technical school, a junior (Rûkûdû) and a secondary (Fâdî) military schools, and a junior and secondary (Mudîrû) school in 1890 (Zâwa', vii, 21; Sânîmî-i Bagdadî (1900), 454; Chiha, 100-102). Midhat pulled down the city walls as a step towards its modernisation. He completed the Saray building started by Nâmîk Paşa (Chiha, 66).

The education movement started by Midhat continued after him. The first junior girls' school was opened in 1869 (Sânîmî, 138-39) and four primary schools were opened in 1890, and a primary teachers' school in 1900 (Sânîmî-i Ma'ârîzî, Istanbul 1900; S. Faydl, Ni'dîl, 129-30). In August 1910 Nazim Pasha constructed a bund surrounding east Baghdad to protect it from floods ('Azzâwî, vii, 165). In 1910 Nâzîm Pasha constructed a bund surrounding east Baghdad to protect it from floods ('Azzâwî, vii, 200-1). He was the last energetic wâlk.

Administration was headed by the wâlk assisted by a council, about half of which consisted of elected members, and the rest were appointed (ex-officio). About two of the elected members were non-Muslims. The wâlk was assisted by a kâ'em maâkâm (Zâwa', No. 1340; Sânîmî 1292 A.H.). Among important offices were the Ma'ârîzî council, the Tapû directorate, the registration office, and the civil
The Baghdad bazaars were covered, or uncovered like Sūk al-Qhāl. At the eastern bridgehead was the chief place for trade in the bazaars of the Sarksy, Maydān, Shordjā, and the cloth bazaar rebuilt by Dāwūd Pasha. Some bazaars had crafts with their own guilds and usually the bazaar was named after it, such as Sūk al-Ṣāfāfīr (coppersmiths) Sūk al-Sarrājdīn (saddlery), Sūk al-Ṣaghār (silver smiths), Sūk al-Khāfāfīn (shoemakers) etc. (Ewliya Čelebi, iv, 22; M.G.T.B., i, 22-3).

There were two important streets, one from the North Gate to near the bridge, and the other from the South Gate to the end of the main bazaar. In 1915 the North Gate was connected with the South Gate by a road, now known as Raghdī street (Handbook, 1, 377; Sānān (1318 A.H.), 599-600).

In 1922 Nāmık Paşa tried to repair some of the streets (Sānān (1318 A.H.), 60). In 1307/1889 Sirrif Paşa transferred the Maydān to an open square with a garden (see Sānān (1321), 76).

In 1285/1869 Midḥāt formed a municipal council by election and orders were issued to clear the streets. In 1879 municipalities were formed and orders were issued for achieving cleanliness and drainage (Zawrd, 231, No. 878, No. 817, No. 1774, Lughat al-'Arab, iii, 17; Sānān (1300), 135).

Lighting with kerosene lamps was adopted and given to a contractor, but in fact only streets with notable residents were lit (Zawrd, 490, no. 837) (see further Baladiyya.)

At the beginning of the 20th century the city of Baghdad covered an area of about four sq. m. The remains of the city wall on the East side demolished by Midḥāt formed with the river a rough parallelogram about 2 miles long with an average width of over a mile. About a third of this area was empty or occupied by graveyards or ruins, and towards the south much space was covered by date groves.

Karkh began further upstream than East Baghdad but it was much smaller in length and depth (Handbook, ii, 276). In 1882 there were 16,303 houses, 600 inns, 21 baths, 46 large mosques (djāmāʾ) and 36 small mosques (masdjād), 34 children’s madhk, and 21 religious schools, 184 coffee-shops, and 5,244 shops (Sānān (1300), 136). In 1884 the figure were: 16,426 houses, 205 inns, 39 baths, 93 djāmāʾ, and 42 masdjād and 36 children’s madhk (Sānān (1302), 335).

In 1903 Baghdad had 4,000 shops, 285 coffee-shops, 125 orchards, 145 djāmāʾ, 6 primary schools, 8 schools for non-Muslims and 20 convents (tekke), 12 bookshops, one public library, 20 madhk for boys, 8 churches, 9 tanneries, one soap factory, 129 workshops for weaving, 22 textile factories (Sānān (1321), 179). By 1909 houses reached 90,000 in number. There were 3 private printing presses, 6 churches and 6 synagogues (Sānān (1324), 223).

Sūkri al-Aṣbūl described 44 mosques in East Baghdad and 28 in Karkh (Ālūs, Masdjād; Masignon, Mission, ii, 63-5).

The temperature in Baghdad ranged from 114° to 121° F. in summer, and from about 20° to 31° F. in winter, but it sometimes rose to 123° F. in summer and fell to 20° F. in winter.

Baghdād produced some distinguished poets during the Ottoman period, like Fuḍūl (g.e.), Dhiḥīnī (g.e.), Alqāṣir and ʿAbd al-Bāsil al-Umāri; historians like Murtaḍā, Ghrābāt and M. Shukri Ālūs; jurists like ʿAbd Allah Sūwāydi and Abu ʿl-Thānā al-Ālūs (see Ālūs, al-Misk al-Abdār, Baghdad 1930).

Modern Baghdad has changed considerably, especially since the thirties. It has expanded to link...
up with A'zamiyya and Kāzimayn to the north, with the eastern bund to the east, with the al-Māţār al-Madāni and with nearby suburbs like Maţār and Maţmūn cities. There are 76 quarters in Karkh and Rusāfā, 8 in A'zamiyya, 4 in Karradh Šahrकییa and 6 in Kāzimayn (Sousa, Atlas Baghdad, 21-5). The population of the Baghdad municipality in 1947 was 466,73; it had mounted to 735,000 by 1957.

Traditional styles of building gave way to houses, built on western lines, in areas beyond the old city, while the old sections are being gradually transformed. The bridge of boats is gone, and four permanent bridges have been constructed.

The process of modernisation, both material and social, is too rapid to be recorded here.

(R. M. Savory)

al-Baghätz (also called al-Baghätz-i, al-Baghdad), 498/1105. His father took him to Khurāsān where he soon after died. He was learned in literature as well as in law, principles, arithmetic, law of inheritance and theology. He left Nāḩīpur because of rioting by Turkmen and went to Isfara’in where he soon after died. He was learned in literature as well as in law, and his preparation both of drugs, and of charms and amulets. To see a mule in a dream was interpreted as a sign of a voyage, or of longevity, degeneracy, sterility, etc.

In addition to the other meanings collected by the Arabic dictionaries and Dozy, it is worth noting that the word baghla (pl. baghdālā) denoted in Egypt female slaves born of unions between Qurānī and another race (see al-Djahiz, Bighdāl, 66).

Bibliography: In addition to the usual works on zoology (in this category the dictionary of Damir is a fundamental work), pharmocopoeia, oniromancy, etc. (see for example the bibliography of the article ‘Am‘āk), which give a certain amount of information, particular attention is drawn to the fact that mules, doubtless because of their curious origin, prompted Djahiz to write a special study, al-Kauš fi l-Bighdāl (ed. Ch. Pellat, Cairo 1375/1955), which is a sort of supplement to the K. al-Hayawān, and in which the author quotes chiefly anecdotes and verses illustrating the character and usefulness of these animals.

Baghätz (also Baghätz, or Baghätz-i) [see Al-Baghätz, Al-Baghätz-i, Al-Khatib, Al-Khatib al-Baghdad].

Baghla, mule (pl. baghdālā, fem. baghdāla; but some think that baghla denotes the hybrid without distinction of sex, and that baghdāla is a singulative form which applies both to the male and female); the same word denotes both the hinny, the offspring of a stallion and a she-ass (cf. however kawdar in al-Mas‘ūdī, ii, 406; contra: al-Dīhāsī, Bighdāl 120; al-Damirī, s.v.; cf. al-Dīhāsī, Tarbī, ed. Pellat, index, s.v.), and the mule, the offspring of a he-ass and a mare, the morphological characteristics of the two varieties being midway between those of the he-ass and those of the stallion, with however a tendency to be influenced by the mother’s side. Kārin (Korah; see al-Damirī) or Tāhrūrah (see al-Tabarī/Bal‘amī, trans. Zoitenberg, i, 101) was the first to bring about this cross-breeding, but the Kārin (xvi, 8) naturally attributed the creation of the mule to God. Muhammad himself possessed mules (notably Duldul, which lived up to the time of Mu‘āwiyah), so that although the bahadīs forbidding the consumption of the flesh of the mule (like that of the ass) may be authentic, those concerning the interdict on the mating of asses and mares have less chance of being so; at all events, it was not observed, and the mule industry did not suffer by reason of it. The postal service used these animals, and eminent men and women of noble birth did not disdain to ride on them, in spite of their stubbornness and obstinacy, because their even gait and surefootedness made them valued mounts.

Men of an inquiring mind have been especially interested in this hybrid and its sterility; the Arab zoologists, however, thought that the mule was by nature fertile, but that it could not retain the male (lā ta’lak), or that it was too small-boned to give birth without losing its life; in order to prevent accidents of this sort it was sometimes “sewn up” (makhiṣa). But al-Damirī relates that in 444/1052 a she-mule gave birth to a black silly and a white mule.

The size of its head and penis, its longevity (due to continence), its sterility, its obstinacy and other characteristic traits of the mule are proverbial, and the words baghla and baghdāla enter into a large number of everyday expressions (for an account of the she-mule of Abū Dulāma, which became proverbial by reason of its defects, see M. Ben Cheneb, Abū Dolāmā, Algiers 1922; al-Dīhāsī, Bighdāl, 100 ff.). Certain parts of the body of the mule, notably its teeth, hair, hooves, and blood, were used in the preparation both of drugs, and of charms and amulets. To see a mule in a dream was interpreted as a sign of a voyage, or of longevity, degeneracy, sterility, etc.

In addition to the other meanings collected by the Arabic dictionaries and Dozy, it is worth noting that the word baghla (pl. baghdālā) denoted in Egypt female slaves born of unions between Qurānī and another race (see al-Dīhāsī, Bighdāl, 66).

Bibliography: In addition to the usual works on zoology (in this category the dictionary of Damir is a fundamental work), pharmocopoeia, oniromancy, etc. (see for example the bibliography of the article ‘Am‘āk), which give a certain amount of information, particular attention is drawn to the fact that mules, doubtless because of their curious origin, prompted Djahiz to write a special study, al-Kauš fi l-Bighdāl (ed. Ch. Pellat, Cairo 1375/1955), which is a sort of supplement to the K. al-Hayawān, and in which the author quotes chiefly anecdotes and verses illustrating the character and usefulness of these animals.

Baghätz (also Baghätz, or Baghätz-i) [see Al-Baghätz, Al-Baghätz-i, Al-Khatib, Al-Khatib al-Baghdad].

Baghätz, the ancient Pagrae, guarded the Syrian end of the Bayān pass on the road from Antioch to Alexandretta across the Amanus, and was thus a place of transit and a strategic position of importance. This region, which had been laid waste at the time of the first wars between the Arabs and the Byzantines, was furnished with colonists by Maslama; this initiated a recovery, and Hisgām built a small fort there; it was naturally included in the fact of its defects, see M. Ben Cheneb, Abū Dolāmā, Algiers 1922; al-Dīhāsī, Bighdāl, 100 ff.). Certain parts of the body of the mule, notably its teeth, hair, hooves, and blood, were used in the preparation both of drugs, and of charms and amulets. To see a mule in a dream was interpreted as a sign of a voyage, or of longevity, degeneracy, sterility, etc.
Crusaders. About the middle of the 6th/12th century it was captured by the Templars, but in 1188 was seized for a short time by Ṣalḥ al-Dīn, in 1191 was taken by the Armeno-Cilician Levant, and was only surrendered by the latter to the Templars in 1216. The Templars evacuated the town in 1268 following the capture of Antioch by the Mamlūk Sultan Baybars. From then onwards Baghrās protected the frontier of the Mamlūk state against the Armeno-Cilician kingdom, as long as the latter continued to exist, and formed a special military command depending on the province of Aleppo. Baghrās is still mentioned incidentally in the operations conducted by the Mamlūk sultans for the protection of their northern frontier up to the time of the Ottoman conquest, after which it fell into ruins. Only a small village exists there to-day. The fortress, which has never been the object of a proper archaeological investigation, was of average importance, and seems to have been the work of the Byzantines and Mamlūks rather than of the Templars or Armenians.

**Bagirmi,** name in the 19th century of a negro Muslim State, situated on the right bank of the Shari, S.E. of Lake Chad. In Barth's time (1852) the capital was Massenya. There were a certain number of tributary regions within its orbit, lying between 16° and 18° N. and 15° and 18° E. This historical name is no longer in official use to-day; only a district of Massenya exists, of other tributary regions having been either attached to the district of Bousso or to that of Melfi.

The regions which once bore the name Bagirmi form a vast plain at an elevation of 1000 ft., sloping gently away towards Lake Chad. The level expanse of alluvial soil is only broken by barren dunes and in the East, in the canton of Bakkare, by isolated regions having been either attached to the district of Bousso or to that of Melfi. The population is made up of very diverse elements: negroes (Bagirmese, Bornouese, Sara, Massa), Arabs (Yessié, Dekakiré, Ouled Moussa), Fulani and Bororo-Fulani as far as the Ati and Musoro districts. The semi-nomadic Arabs move between their villages, where in the rainy season they cultivate the ground, and the banks of the Shari, to which they resort at the end of the dry season.

With the exception of the Massa, cattle herders) live by crop raising, food gathering and fishing. The nomadic Fulani migrate as far as the Logone and Lake Chad, the Bororo Fulani as far as the Ati and Musoro districts. The Sedentary negroes (with the exception of the Massa, cattle herders) live by crop raising, food gathering and fishing. The nomadic Fulani migrate as far as the Logone and Lake Chad, the Bororo Fulani as far as the Ati and Musoro districts. The semi-nomadic Arabs move between their villages, where in the rainy season they cultivate the ground, and the banks of the Shari, to which they resort at the end of the dry season.

With the exception of the Massa and the Sara, who have remained animists, these peoples were converted to Islam three hundred and fifty years ago under the influence of Fulani missionaries and Hausa merchants. Islam, however, has only made a somewhat superficial impression.

The state of Bagirmi, founded in the 16th century, at the outset enjoyed considerable prosperity; then, at the beginning of the 19th century, as the result of wars with the Wadai, it began to decline. In 1870 the Sultan of the Wadai took Massenya and expelled the Sultan Abū Sektīne. The latter's successor, Gouaroung, threatened by Rabah (see Bornu), placed himself under the protection of France (1897), which resulted firstly for the Bagirmi in the terrible reprisals of Rabah, then, when the latter had been defeated and killed at Kousseri (22 April 1900), in the final pacification under French administration. The Sultan was retained for outward appearances, but his authority limited to the Massenya canton. Massenya, the capital, was an important town in Barth's time, enclosed by walls 7 miles in circumference. It was partly destroyed in 1870 and then abandoned at the time of Rabah's invasion. It was rebuilt once more 20 km. (121/2 m.) to the S.E. It is, however, no more than a large village with a population of 1,700 inhabitants. Indeed the whole district lies remote from the main currents of trade. Only a small proportion of the local produce—ground-nuts, butter, skins—is taken to the markets at Bongor, Bokoro and Fort Lamy.

**Bāḥ,** one of a number of terms in the Arabic language denoting coitus. Fīṯāḥ, in the main, uses the term wāṭi’. In principle, bāḥ is bāḥām (as well as sexual indulgences of a minor character) if the partners are not married to each other, or united by the bond of ownership (master and slave-concubine); if this is not the case, the penal law intervenes to punish zināʾ—most commonly by death (see ḥadd, zināʾ, muḥšan), at least in theory. On the other hand, according to a celebrated hadīth, wāṭiʾ performed in a legal manner is an "alms" in the eyes of God. Fīṯāḥ considers most practices permissible for the married couple, with perhaps a restriction regarding wāṭiʾ fi ḍuburika. Bāḥ is, in principle, permitted at all times, except in certain circumstances of a ritual character (by day
during the month of Ramadān, or when one is in ṣaḥām during the baddhī (q.v.). On the other hand, a well-known text of the Kur'ān says: ‘Your wives are a tilth for you, so go to your tilth as you will’ (ii, 231), and the Kur'ānic prohibition (ii, 230) of intimate relations during the menstrual period is not enforced by penalties, at least not in this world. Fīkh does not forbid the sight of the partner’s nakedness, but on the other hand, according to tradition, the Prophet in the matter of wuṭūd behaved with the greatest modesty, both in this respect and in others. As regards the legality of contraceptive practices, see the article ‘Azl. Fīkh does not place any interdict on relations with a partner who has not reached the age of puberty provided that the act is physically possible. The schools are not in agreement on the question whether the wife can demand the performance of the conjugal duty: in the Mālikī school, the forsaken wife has the right to claim a divorce. On the other hand, the husband can always require his wife to be at his service, because wuṭūd constitutes the very essence of nikāh (q.v.); fīkh is here in agreement with etymology (nikāh—marriage, and coitus).

(G. H. BOUSQUET)

BAHĀ’ ALLĀH. — Founder of the new religion which took the name of Bahā’ī from his own name (literally, ‘Glory, Splendour, of God’). In Persian it is known commonly as Amr-i Bahā’ī, ‘Bahā’ī Cause’, or Amr Allāh, ‘Cause of God’; the adjective amrī is used of publications, matters and facts pertaining to the Cause, e.g., nashriyyāt-i amrī ‘religious publications’, etc. Bahā’ī is generally called by his disciples Dīmāl-i Mubārak, ‘The Blessed Beauty’ and Dīmāl-i Kūdam, ‘The Ancient Beauty’. His name was originally Mirzâ Husayn ʿAll Nūr (from Nūr, in Māzandarān, the place of origin of his family). He was born at Tehran on 2 Muharram 1233/12 November 1817 of a noble family which had given several ministers to the Persian court. According to the Bahā’ī tradition, and to what he himself declares in his writings, he never attended any school. His was a profoundly religious personality, and he relates in one of his works (lawḥ-i Raḥi) how, right from infancy, he was moved to religious thinking after a performance of puppets which, after the show with all its ostentation was over and they had been redisposed in their box, suggested to him the thought of the fallibility and the vanity of human power. After the declaration of the Mission of the Bāb (q.v.) in 1260/1844, he was one of his first disciples, and shared the fate of the Bābis. Bahā’ Allāh never knew the Bāb personally and, to judge by a phrase in the Kitāb al-Shaykh, 122, he had never even read the Bayān, which he knew by heart. In 1852, after the attempt on Nāṣīr al-Dīn Shāh, he was arrested and thrown into the prison at Tehran known as Siyāh Čal (‘the black hole’), where he stayed from August of that year until 22 January 1853. In his work Kitāb al-Shaykh (‘book of the Shaykh’, known also as Lawḥ-i İbn-i Dīd (‘Epistle of the Son of the Wolf’) he narrates the story of his journey, fettered, from Niyaḵwarān to Tehran, and his interesting mystical experience in the prison in the long nights he passed without sleep on account of the heavy chains which fastened his neck, hands and feet. It seemed to him, he tells us, that he heard a voice which cried to him, ‘Truly, We shall succour Thee, by the means of Thee Thyself and Thy pen. Be not afraid . . . Thou art in security. Soon God will raise up the treasures of the earth, namely those men who shall succour Thee for love of Thee and Thy name, by which God shall bring to life the hearts of the Sages’. At other times it seemed to him that a great river was running from the top of his head to his chest ‘like a powerful river pouring itself out on the earth from the summit of a lofty mountain’. The Bahā’īs consider this experience as the first beginnings of the prophetic mission of their founder. Banished with all his family to ʿIrāq after all his possessions had been confiscated, he dwelt at Baghdaḍ, where his spiritual influence over the Bābis continued to increase, whereas that of his half-brother Mīrzâ Yāḥyā—known by the name of ʿSubh-i Āzal, which the Bāb had given him (v.s.v. bāb)—was on the decline. From 1854 to 1856 Bahā’ī Allāh took himself to Kurdistan, where he lived as a nomadic dervish on the outskirts of Sulaymāniyya. When he returned to Baghdaḍ, his growing influence, and the numerous visitors he received even from Persia, caused the Persian consul to request his immediate exile to Constantinople. A short while before his departure on 21 April 1853, in the garden of Naqīḇ Pāghā near Baghdaḍ—called by the Bahā’īs bičh-i ṭaḏdūn—Bahā’ī Allāh declared himself, to a select number of his followers, to be He Whom God Shall Manifest (mūʾin yuṣṭirah ʿilāh) as predicted by the Bāb. The exiles arrived at Constantinople in August, and after some months were sent to Edirne, where they arrived in December. At Edirne Bahā’ī Allāh openly declared his prophetic mission, sending letters (known, like all Bahā’ī Allāh’s letters, by the name of lawḥ, pl. alawḥ, ‘tablets’) to various sovereigns, inviting them to support his Cause. At this time the great majority of Bābis came out in his favour. The dissensions with the minority, who followed ʿSubh-i Āzal, gave rise to some incidents, which impelled the Ottoman government to banish those who henceforth called themselves Bahā’īs to Acre (ʿAkkā), and the others to Cyprus. In August 1868 Bahā’ī Allāh and his family arrived at ʿAkkā. A stricter imprisonment in the fortress lasted until 1877, after which Bahā’ī Allāh was authorised to transfer himself to a country house which he had rented at Mazra’ā. From 1288/1871 to 1290/1874 Bahā’ī Allāh was engaged on writing the fundamental book of his religion, Kitāb-i Aḥdāt, the “Most Holy Book”. About 1880 he was allowed to transfer to the neighbourhood of Bahdjī, not far from ʿAkkā, where he died, after an illness lasting some days, on 29 May 1892. In 1890 he had received at Bahdjī Professor E. G. Browne, the only European who met him personally and on whom Bahā’ī Allāh made a deep impression. For the doctrine of Bahā’ī Allāh see BAHĀ’.

Bahá’l Alláh — Bahá’l al-Dín Zuhrayr

Stuttgart 1916; Ma’dmú’í-a’i Malú’í-a’i Alvá’d-i Mu’á’dk-i Hádrat-i Bahá’l Alláh, Cairo 1338/1920 (containing important short works of Bahá’l Alláh); Kútháb al-Sháhíyá, Cairo 1338/1920; Kútháb Bahá’l Alláh ía’ l’-Súlimán Náyír al-Dín Sháh, Cairo 1330/1912; Súú-rí’í Malú’í, n.p., n.d.; Ad’úy-í Hádrat-i Mahbúb, Cairo 1339/1921 (various prayers written by Bahá’l Alláh, including the Obligatory Prayers). English anthologies: Shoghi Effendi (tr.), Gleanings from the writings of Hádú’úb’l-Akhrád, New York 1931 (prayers and meditations); Selected Writings of Bahá’í’l’Alláh, Wilmette 1943 (containing the translation of numerous minor works of Bahá’l Alláh and ‘Abd al-Bahá’).—On his life to 1853: Nabil Zarándíyá, Ta’ríhí-n Nábí, Eng. trans. by Shoghi Effendi, The Dawn-Breakers: History of the early days of the Bahá’í Revelation, New York 1932; for the following years, Shoghi Effendi, God passes by, Wilmette 1945. The death of Bahá’í Alláh is described in Nabil Zarándíyá, Ta’ríhí-n Shú’úíd-i Hádrat-i Bahá’l Alláh, Cairo 1342/1924 (with a Má’dmá’íi of the same author on the Bahá’í history; containing also Bahá’í Alláh’s testament, Kútháb ‘át’hí). (A. BAUSANI)

BAHÁ’í AL-DÁWLA [see BUWAYHÍD].

BAHÁ’í AL-DIN AL-’AMÍL [see AL-’AMÍL].

BAHÁ’í AL-DIN ZAKARIYYÁ, commonly known as Bahá’í al-Bakki, a saint of the Suhrwardí order, was born at Kót Karor (near Múlátan) in 578/1182-3, according to Firíghtá. He was one of the most distinguished mádlá of Shaykh Shiháb al-Dín Suhrwardí [q.v.] and is the founder of the Suhrwardí order in India. After completing his study of the Qur’án according to its seven methods of recitation at Kót Karor, he visited the great centers of Muslim learning in Khrúsán, at Búkhárá and Medina, and in Palestine—in order to complete his study of the traditional sciences. While in Medina he learnt hadíth with an eminent traditionalist, Shaykh Kamál al-Dín Yámní, and spent several years in religious devotions at the mausoleum of the Prophet. After visiting the grave of the Bahá’í saints in Palestine, he reached Búkhárá and became a disciple of Shaykh Shiháb al-Dín Suhrwardí. At this time he was, as his master said, ‘dry wood ready to catch fire’, and so after seventeen days’ instruction, the latter appointed him his successor and ordered him to set up a Suhrwardí kdnakdh in Múlátan. He lived and worked in Múlátan for more than a century and his kdnakdh—a magnificent building where separate accommodation was provided for all inmates and visitors—developed into a great centre of mystic discipline in medieval India. He died in Múlátan on 7 Šá’dar 666/21 December 1262.

Shaykh Bahá’í al-Dín’s order flourished most vigorously in Sind and the Panjúbí, though he had attracted some disciples from Hártá, Hamádán and Búkhárá. As a mystic teacher he was known for his nafs-i gtrá (intuitive intelligence) which helped him in apprehending and controlling the minds of his disciples. He differed from contemporary Cidír mystics in several matters: (i) He did not allow all sorts of people to throng round him. The Dáwá’íkhs and Kalandars seldom obtained access to him. “I have nothing to do with the generality of the public”, he is reported to have remarked. (ii) He lived in an aristocratic way and had granaries and treasures in his kdnakdh. (iii) He did not observe continuous fasts but ate and drank in the normal manner. (iv) While among the Cidírs the custom of samín-bás prevailed, he never permitted anybody to bow before him. (v) He believed in keeping close contact with the rulers and the bureaucracy. (vi) He did not believe in mystic songs (samá’).

Bahá’í al-Dín exercised great influence on mediaeval politics. He helped Itútumísh (607-633/1210-1235) in establishing his hold over Múlátan and accepted from him the honorific title of Shaykh al-Islám. In 644/1246 when the Mongols besieged Múlátan and the ruler of Hártá joined them, the Shaykh offered 100,000 dinár to the invaders and persuaded them to raise the siege.

The Shaykh lies buried in Múlátan in an imposing tomb, surmounted by a hemispherical dome and decorated with fine enamelled tiles.

Bibliography: No Suhrwardí accounts of Shaykh Bahá’í al-Dín Zakariyyá were available even in the early 16th century when Shaykh Dámmálí brought into his Síyár al-Áfíf, Delhi 1331 A.H. all he could get from the Cidír sources. For original sees, Húsain Sídí, Fáwú’d al-Fu’d, Newal Kísré 1302 A.H., 5, 6, 10, 29 ff.; Hamíd Kándár, Khayr al-Mádídís (ed. K. A. Nízhání), Aliyará 1356, 131, 137, 283; Mír Kúrd, Síyár al-Ásíyíyá, Delhi 1302 A.H., 77, 91, 158; Sayý b. Muhammád, Ta’ríhí-náma-i Hárdá, Calcutta 1943, 159-58; Dámmá, Náfáhdt al-áms, Newal Kísré 1915, 452. See also, ‘Abd al-Ááqí al-Múhádíh, Ahdáb al-Kdýyád, Delhi 1309, 26-7; M. Gáwshí, Guzáír ábrár (As. Mállán, Gazetteer of the Múlátan District, Lahore 1902, 339 f. (K. A. Nízhání).

BAHÁ’í AL-DIN ZUKARÍYÁ, ABU ‘L-FAÐL b. MUHAMMAD B. ‘ALI AL-MUHALLAHÍ AL-AZDI (generally known by the name of al-Bahá’í Zúhrayr), celebrated Arab poet of the Ayyúbíd period, born 5 Dhu’l-Hidjád 581/February 1186 in Mecca. Whilst still very young, he went to Egypt, where at Éús (Upper Egypt) he studied the Korán and letters, finally settling at Cairo towards 625/1227. Al-Bahá’í Zúhrayr was in charge of the service of al-Ááqí al-Múhádíh, son of the sultan al-Kámíl, and in 629/1232 accompanied him on an expedition to Syria and Upper Mesopotamia. In 637/1239, whilst returning to Egypt after his father’s death, al-Sálíb was betrayed by his troops at Nábuls and handed over to his cousin al-Nášír Dáwdú, who imprisoned him. The poet remained faithful to his master in adversity and spent sometime at Nábuls. When al-Sálíb ascended the throne of Egypt, he appointed him wásr and showered honours upon him. In 646/1248, he is to be found at al-Manšúra at the side of his sovereign, who was fighting against the seventh Crusade (St. Louis). As the result of a misunderstanding, the poet fell into disgrace and, in the seventh of his master, went to Syria, where he addressed his best panegyrics to the sovereign of Damascus, al-Nášír Yúsuf, but without success. He returned to Cairo a disappointed man; there he experienced solitude and poverty, and died in 656/ 1258.

His Dáwá’ín, preserved in Paris (MS 3173 of the B.N.) and elsewhere, and edited in Cairo (1314), is known. Palmer produced a fine edition with an English translation. In this Dáwá’ín he is shown as being a poet very often sincere and a true musician in verse. His choice of words, of form, manner and metre, the effects of rhythm and harmony,
everything shows a very mature taste. Without rejecting the poetics of his time or his rhetoric with its numerous figures, the poet in him sacrificially allows a glimpse of the rhetorician.

**Bahaʾ al-Hakīm** (see Bahaʾ al-Dīn Zakariyya’).

**Bahaʾduʾr.** A word common to the Altai languages, equally well represented in Turkish, Mongol and Tungus dialects. Its adjectival meaning is "courageous, brave," but it is universally used as a substantive with the meaning "hero." It also frequently occurs as a surname and an honorific title.

The Chinese transcription 莫訥 mo-ko-to suggests a trisyllabic *baya'tur* which, transcribed Bayanto, was in use also among the Proto-BulgarS in the 9th century. An Uyghur runic ms. which could originate in the 9th or 10th centuries has bātu and it is this bisyllabic form which is general in Turkish dialects. e.g. Osmanī bātur, Kazakh, Bashkir bātir, Özbek bātir, Tuvin māddir, Chuvash pătăr, etc. Some Turkish dialects have the trisyllabic form, e.g., Coman bayatur, but it is possible to see in them borrowings from Mongol. Beside the form already mentioned, Özbek has also bātudīr.

The word is attested in the earliest Mongol documents (13th century), always in the trisyllabic form, though the Chinese sources of the Mongol epoch usually transcribe 海都 pa-tu for bātūr.

Classical Mongol has bayatur, and variants exist probably in all the dialects. e.g. Kalmuck bātur, modern literary Khalkha bātur, Mongol Bātur. Among Tungus forms one could mention Manchu bāturi, Evenki bahatr, Even bigtir and buktir.

It is impossible to state the directions in which borrowings were made, but it seems probable that either the Turkish or the Mongol trisyllabic forms were original, and that the Tungus forms are, originally, Mongol loan-words. Inter-borrowings within the same group must have been frequent.

Bahaʾduʾr is, clearly, a word of civilization. It travelled far into the north and can be met in various Samoyed and Finno-Ugrian languages, in Siberia as well as in Europe, e.g. Ostiak matur, Hungarian bātőr (11th century). These, and some of the Slavonic forms, e.g. Russian bogatir, are borrowings from Turkish or Mongol. Persian bahādūr, borrowed from Mongol, had a wide-spread use as a title or a surname among Muslim dynasties. As it was also used by the Great Mughals, it penetrated into Anglo-Indian, in the sense of a "haughty or pompous person," exercising his brief authority with a strong sense of his own importance" (Yule, Hobson-Jobson).

The word found its way into Western European sources. Roger, Canon of Vārad, writing in 1244, gives Bokcher as the name of one of the Mongol generals taking part in the campaign against Hun-gary. The Portuguese ambassador to Timūr, Claviro (1406), has Bahadur.

**Bahadur Khān** (see Fārūq).

**Bahadur Shāh** (see Nizām Shāh).

**Bahadur Shāh I.** Muhammad Muʿāẓẓām was the second son of the Emperor Awrangzīb ʿAlamgīr by his second wife Rāhmāt al-Nisāʾ? Nawāb Bāīt, daughter of Rādhī Rādū, of Rādīawī in Kashmir. She was also the mother of Prince Muḥammad Sulṭān, who died in prison, 1670/1676, and Bād r al-Nisāʾ Bega (1647-1707), who was a ʿAlītī. She died in 1649. Muʿāẓẓām was born at Bānghāpur in the Deccan on 29 Shau全面发展 1045/14 October 1643.

His full titles were: Abā Naṣr Sayyid Kutb al-Dīn Muhammad Shāh ʿĀlam Bahādūr Shāh Bādshāh.

From the time of his elder brother's defection to ʿĀlam Shudārī in 1686-1688 he was the prospective heir apparent, and was regarded as such on Muhammad Sulṭān's death in 1686/1687 in Shābān 1687/October 1675 he received the title of ʿĀlam.

From 1663 he was actively employed by his father in the Deccan and against the Kingdom of Bidjāpūr. In 1641/1683-4 he led an army through the Konkan to Goa, then being besieged by the Maratha Rādū Shambhādī. But having fallen out with the Portuguese, he found his supplies cut off and made a disastrous retreat. He was then employed against Bījāpūr and the Kūṭ Shāhī dynasty of Golconda. Awrangzīb, already suspicious of Prince Muʿāẓẓām's lack of rancour against his rebel son Akbar, interpreted an attempted mediation between his father and Abu l-Ḥasan of Golconda as a plot against himself. Muʿāẓẓām, now known as Shāh ʿĀlam, was arrested with his sons on 4 March 1687. At first treated with great rigour, the Prince found the severity of his treatment gradually relaxed, until in April 1695 he was released and appointed Shubādar of Agra. In 1699 he became governor of Kābul province which he held at the time of his father's death, his eldest sons holding Tarṭhā and Mālūn.

On receiving the news of his father's death on 18 Dhu l-Ḥijja 1126, 23 March 1707, Prince Muhammad Muʿāẓẓām moved with great speed. He proclaimed himself by the title of Bahādūr Shāh when near Lahore, offered to honour his father's will by leaving his brother Aʿẓam Shāh the Deccan provinces, and arrived near Agra on June 12. On 18 Rabīʿ I 1126/16 June 1707, Aʿẓam Shāh and his son Bāṣīr Bākht were killed in a great battle near Jajau and Bahādūr Shāh was master of the empire. Kām Bahāsh, the youngest son of Awrangzīb, was defeated and killed near Haydarābād, Deccan, on 3 Dhu l-ʿIʿadā 1127/13 January 1709.

The short reign of Bahādūr Shāh was occupied by three problems, the Marathas, the Rādīpūts and the Sikhs. On the advice of Dhu l-Ḥikār Kān, Shāhī, the grandson of Shīhwālī, was released and sent back to Māhārāshtra with a Mughal mānaqāb of 7000. His arrival there provoked a civil war between his supporters and those of Tār Bāl, the regent widow of his uncle Rādīā Rām.

In the cold weather of 1707-8 Bahādūr Shāh regulated the succession of Amber and reduced the Rādīpūt Rādū of Jodhpūr to submission. But while campaigning against Kām Bahāsh the revolt flared up again. On his return in 1710 the emperor found himself confronted with a Sikh rebellion and had to make a compromise settlement with the Rādīpūts. The last Sikh gūrā, Govind Singh, was a supporter of Bahādūr Shāh, but was murdered in the Deccan in 1708. The Sikh revolt in the north was then...
revived by a man known as Banda who killed Wazir Khan, seized Sirhind and terrorised the east Pandjab. Bahadur Shah stormed Lohagarh and defeated but did not capture Banda in 1710-11. The last few months of his life were spent in Lahore where he died on 20 Muhaarram 1124/27 February 1712. The throne was immediately disputed between his four sons, Mu’izz al-Din Qabābār Shāh, ‘Alī Shāh, Rafī’ al-Shāh and Dāhān Shāh, the first of whom was successful.

Irvine describes Bahadur Shah as “although not a great sovereign . . . a fairly successful one”. He was courteous, learned, pious, brave, capable and equable in temper. He was generous and found it difficult to refuse a request, a trait which earned him the nickname of bi-khabar or heedless one. Not much is known of Bahadur Shāh’s family life, but the names of three wives have survived: Mihr al-Nisa Begum, Aziz al-Nisa Khanum and Nur al-Nisa Begum.

BAHĀDŪR SHĀH I, the last Mughal Emperor of India. He reigned as titular sovereign from 1253/1837 to 1274/1857. He was in fact, a pensionary of the East India Company, his actual authority being restricted to the limits of the Red Fort or Kāāl’s-mū’alla of Delhi, Mughal authority, by virtue of which the British held Bengal from 1765, was never formally disowned by them, but the Charter Act of 1833 asserted British sovereignty over British held territories in India. On May 11, 1857, Delhi was seized by mutinous troops from Meerut who compelled the unwilling Bahadur Shāh, then nearly 82, to accept nominal leadership of the revolt. After four months of unenthusiastic headship he retired to Humāyūn’s Tomb on the assault of Delhi by the British in September. With his favourite wife Zinat Mahāl and their son Mirzā Dīwān Bakhsh he surrendered to Lieton. Hodson on a promise of his life. After much indignity and a trial of doubtful legality he was exiled by the British Government to Rangoon in Burma, where he died on 13 Dīumādā 1 1729/7 November 1862. Descendants of his are still to be found there.

Bahadur Shāh was born on 27 Shabrān 1189/24 October 1775. He was the second son of Akbar Shāh II (1221-1253/1806-1837) and Lāl Bālī. He was eleventh in direct succession from the emperor Babur. In 1827 he described as “the most respectable, the most accomplished of the Princes” by Charles Metcalfe, then Resident of Delhi. He had a tall spare figure, a dark complexion with strongly marked aquiline features. Like his grandfather Shāh ‘Alam, he was a poet of some note, using the pen-name of Zafar. The poet Dhawk was his literary preceptor and Shāhīb attended his Court. His plaintive ghazals were long current in Delhi. He was also a calligrapher and musician of merit, and showed taste in repairing buildings and laying out gardens. His full title was Abu ‘l-Muṣaffar Sirāj al-Dīn Muhammad Bahadur Shāh.

BAHĀDŪR SHĀH GUDJĀRATI, sultan of Gudjārāt, 1528-1529. Second son of Muṣaffar Shāh II (917/1511-932/1526). Bahadur Shāh, on bad terms with his elder brother Sikandar, left Gudjārāt in 931/1525 and, travelling via Čitor and Mewāt to the court of Ibrahim Lodī was present, as an onlooker, at the battle of Panipāt between the sultan of Dīlī and the Mughal Bābur. Hearing of the death of his father and the accession of Sikandar, Bahadur Shāh hastened towards Gudjārāt to be greeted at Čitor with the news of the assassination of Sikandar by Khwāsh Kādam, Ĭmād al-Mulku. Rapidly gaining support from the Gudjārātī Muslim nobles, Bahadur Shāh assumed the insignia of the sultanate at Anhalwāra-Patan on 26th Ramadān, 932/6th July 1526.

Bahadur Shāh was the last vigorous sultan of independent Gudjārāt. In 935/1528 he attacked Burhān Niẓām Shāh of Ahmadnagar in alliance with Muhammad II of Khānbaḏ and ‘Alā al-Dīn Ǐmād al-Mulk of Berār occupying Ahmadnagar in 936/1529. The Niẓām Shāh appears to have accepted the overlordship of Gudjārāt until 938-9/1532 at least, but statements in the Arabic and Persian histories that he read the Bāsīb and struck coins in the name of the Gudjārātī sultan have not found corroboraton in the discovery of such coins.

In 937/1531 Bahadur Shāh attacked Mālwa, occupying Māndā. In 938/1532-3 he captured the Rājdūp strongholds of Ujjain, Bhīsā and Rāfshān together with their chief Sīhālī. In Ramadān 941/March 1535 Gudjārāt forces, at the second attempt, captured Čitor.

Meanwhile however, in the autumn of 941/1534 war had broken out between Bahadur Shāh and the Mughal Humāyūn; Bahadur Shāh had given refuge to the Lodi Afghans and to Muhammad Zamān Mirzā son-in-law to Bābūr, who had escaped from confinement by Humāyūn in the fort of Bayānā. Defeated by the Mughals at Mandasār and Māndā, and with much of his treasure captured by Humāyūn at the fall of Čāmpānīr in Safar 942/August 1535, Bahadur Shāh turned to the Portuguese for help.

In 937/1537, the Portuguese under Nuno de Cunha, governor of Goa, had been defeated in their attempt to capture Dīw. In Dīumādā 941/
December 1534, however, in return for a promise to aid Bahadur Shah against the Mughals, the Portuguese obtained Bassein in 942/1535. The right to build a fort at Diw where Bahadur Shah himself had taken refuge. The nominal Portuguese assistance to the Gudjarat sultan did not prevent Humayûn from capturing Bahadur Shah's capital of Ahmadabad. Humayûn's withdrawal from Gudjarat in 942/1536 to face the threat from Bābur led to the transfer of the capital of Gudjarat to Ahmadabad. The nominal Portuguese assistance was not enough to secure Bahadur Shah's cooperation in the Great Vizier Humayûn's war against the Mughals, as it was under his rule that the Sultan Walid thought they would be able to do as they pleased with him. His subsequent vigour, and his firmness in resisting certain of their demands, gave the lie to this accusation. The favour which he showed to the Mewlî! and Khalwatt orders soon brought him into conflict with the orthodox religious party, which also objected to his approval of tobacco and coffee and his tolerance of the devotions, music and dancing. His fall, however, was due not to his efforts but to other causes. In Dārum, I 1061/April-May 1651, in the course of a dispute which arose out of a question of jurisdiction involving the British Consul and the Kâdî of Izmir, Bahâ' Efendi placed the British ambassador in Istanbul under house arrest. For this breach of diplomatic usage he was dismissed and exiled to Midli. He remained, however, at Gelibolu and Lampsaca, and was reinstated in Kam. 1062/Aug. 1653; he continued in office until his death, of a quinsy, on 13 Šafar 1064/3 Jan. 1654. He was buried in Fâtih.

Bahâ' was known both as a poet and as a scholar, and left a number of treatises and fetwas. His best-known ruling was that in which he pronounced smoking lawful, thus ending an old prohibition. He was a heavy smoker, and his contemporary Hadjdjî Khalîfâ remarks of him that had it not been for this indulgence he might have become one of the most eminent scholars of the country. Bahâ'îs' authorisation of smoking, however, was due, according to Hâdîjî Khalîfâ, not to his own addiction but to a concern for what was best suited to the condition of the people, and to a belief in the legal principle that the basic rule of law is licitness (ibâha ašliyya).

**BAHÀ’Í MEHMET EFENDI**

Ottoman jurist and theologian. Born in Istanbul in 1004/1595-6, he was the son of 'Abbâl Allah Efendi, a Kâdî-'asker of Rumelia, and the grandson of the historian and of which was founded by Baha’ Allah. The foremost authority on the Baha’i religion, and its disseminator in Europe and America, was 'Abbâb Efendi. He became the eldest son of the founder and was a better known among the Bahà’ís as 'Abbâl Bahà (Servant of Bahà). Born on 23 May 1844 at Tehran, he accompanied his father on his journeys and in his exile, and at his death was recognised by the Bahà’ís as the authorised exponent and interpreter of his father's writings. He wrote extensively, most notably the Centre of the Covenant and “Model of Bahà’í Life”. In accordance with Bahà’ Allâh’s will (Ku’dâ), this will, however, was contested by ‘Abbâl Bahà’s brother Muhammad ‘Alî, who set up a rival group within the Bahà’î organisation and contrived to compromise his brother with the Ottoman authorities, who were hostile to the Bahà’ís. He was released from prison in 1908 under the amnesty granted by
the new Ottoman Government of the Young Turks, and in 1910 began his three great missionary journeys. The first was to Egypt (1910), the second to Europe (Paris and London, 1911), and the third to America and Europe (1912-13). From New York he made his way across the entire United States in eight months to Los Angeles and San Francisco, stopping in the main towns and preaching in evangelical churches, synagogues, masonic halls, etc. In September 1912 he returned to Europe, and from England went again to Paris, then to Germany, Austria and Hungary. Finally at the end of 1913 he returned from Paris to Palestine. The first Bahá’í group in America had formed as early as 1894, and on 10 December 1898 the first American Bahá’í pilgrims arrived at Acre. ‘Abdu’l-Bahá’s journey, one of the objects of which had been to counter the propaganda of his brother’s supporters, also notably strengthened the community of American adherents. In addition to this he formed Bahá’í groups in the European countries he passed through. In 1920 the British Government appointed him Knight of the Order of the British Empire. He died on 28 November at Haifa and was buried beside the Báb, in the great mausoleum which was completed in 1957. In his will he had appointed Shoghi Effendi (Shawki Effendi) Rabbání, the oldest of his grandsons, (the eldest son of his eldest daughter) as “Guardian of the Cause of God” (Wali-yi Amr Alláh). Shoghi Effendi, who died on 3 Nov., was born at Haifa in the last years of the last century. He studied at Oxford and in 1936 married the American Mary Maxwell, who took the name Rúhíyyé Khánum. From 1923 onwards he lived in Haifa in Israel, the world administrative centre of the Faith. The Bahá’í religion, while it claims to be “scientific” and opposed to dogma, has more clearly defined theological, philosophical, and social doctrines and forms of worship than some Orientalists have thought. I give them briefly below on the basis of the sources cited in the bibliography.

Religious doctrines. 1. God. A completely transcendent and unknowable entity. “Every road to Him is barred”. The Bahá’ís are opposed to mystic pantheism. Mystics have only given form to their own imaginations. “Even the loftiest souls and the purest hearts, however high they may fly in the realms of science and mysticism, can never pass beyond that which has been created inside themselves” (majá al-‘ashâ fi an-fushshâ inân-fushshâm) (Lawh-i Salâm). 2. Creation. The unknowable essence of God makes itself manifest and creates that which is not God. The Bahá’í idea of the beginning of things falls between that of creation and that of emanation. We could speak of eternal creation, seeing that the Bahá’í texts tend to keep the term khalfr (creation), but at the same time maintain that since the attribute of khalfd (creator) is co-eternal with God, there has never been a time when the world did not exist. Thus the world is eternal (Lawh-i Hikmat). 3. A special form of the manifestation of God is that which features in the Prophets. (The Bahá’í technical term is masphir-i idhâyya, divine manifestations, rather than rusûd or anbiyây. Thus the concept of khalfr (creation in the full sense of the word) is not accepted. In this connexion the letter of Bahá’í Allâh to Nasir al-Dîn Shâh (Lawh-i Sultan) is particularly interesting, as is the Kitáb al-Shâhâ, in which he describes his own mystic experience in the prison of Siyâh Câl at Tehran. The Prophet has two differing conditions: he is a man, but also a very clear mirror in which God is reflected. Thus in a certain sense it is not wrong to call him God, by way of abbreviation. The status of such a being as could be called “prophetic” is radically different from that of man; it falls between man’s status and that of God. According to Bahá’í doctrine no man, however perfect he may become, will be able to attain prophetic status (or better, that of “manifestation”), just as no animal, perfect as it may be of its kind, can aspire to human status. The manifestation of God through the Prophets never ceases. The manifestations of the Divine are successive. The first prophet is Adam, then come the traditional prophets of Judaism, Christianity and Islam. Zoroaster also is considered a true prophet, though the Buddha and Confucius are seen rather as great masters of the spiritual life. After Muhammad come the Báb (considered by the Bahá’ís as a true independent manifestation of God whose specific mission lasted only nine years), and Bahá’ Allâh. The Bahá’ís allow that other prophets better adapted to advanced stages of human progress may come after him, but “not before a thousand years” (Ahdâs). The prophetic periods are grouped together in larger cycles; with the Báb the cycle begun by Adam ends and the Bahá’í cycle begins. The latter is destined, according to doctrine, to last at least 500,000 years. It is thus inexact to consider the Bahá’í religion as syncretistic. Although it accepts all the prophetic religions as essentially true, it claims that it is the one best adapted to the present time, and that it includes in itself all its predecessors.

4. Man. Bahá’í psychology is somewhat complex. ‘Abdu’l-Bahá’s (Mufdídat) distinguishes five types of “spirit”: animal spirit, vegetable spirit, human spirit, the spirit of faith, and the Holy Spirit. The spirit of faith is given by God, and alone confers true “eternal life” on the human spirit (we are thus a long way from a purely philosophical conception of the immortality of the soul). “Faith” is essential to Bahá’í spiritual life. The text of the first verse of the Ahdâs runs as follows: “The first commandment of God to his servants is knowledge of the Dawn of His revelation, and the Dayspring of His Decree (i.e., of the Prophet), who is his appointed Representative in the created world (p. ‘ilâm al-amr wa-hi, mahlk). He who has attained this knowledge has attained all good. He who knows it not is of the world of error, even though he performs all (good) works". Faith in God (which, God being by definition unknowable, can only be faith in His manifestation, the Prophet) confers immortality on the believer, who continues in the worlds beyond his eternal journey towards the unknowable Essence of God (excessive interest in these worlds on the part of Bahá’ís is discouraged; they are explicitly forbidden to take part in spiritualist meetings). Paradise and Hell are symbols, the first of which stands for the true believer’s journey towards God, and the second the fruitless path towards annihilation of him who knowingly rejects the Faith and performs evil works. In the context of this progressive view of the world beyond Bahá’ís are allowed, and advised, to pray for the dead. Equally, the idea of reincarnation in this world is firmly rejected.

On the phenomenon of evolution, which in any case Bahá’í doctrine accepts the theory of evolution, not, however, as pronounced by Darwin, but rather in the traditional mystic sense already present in the maqâmât of Mawlânà Diâlî al-Dîn Rûmî (q.v.). “Man was always man throughout his evolution”, even though.
he may have passed through a series of stages of development.

Moral and social principles. The Baha'Is accept the ancient formula attributed to 'Ali: “All private matters belong to the human sphere, all concerns of society to the divine”. Hence the great emphasis in Bahá'í doctrine on the improvement of society, a task which is the charge of the Bahá'í world administration (see below).

The moral and social tenets of the Bahá'ís are classified by 'Abdu'l-Bahá under the following twelve headings: 1. Unity of the human race. 2. Need for an independent search for Truth. 3. Essential unity of all religions. 4. Need for religion to promote unity. 5. Need for science and religion to be in harmony. 6. Equal rights and duties for the two sexes. 7. Opposition to all kinds of prejudice: national, religious, political, economic, etc. 8. Attainment of world peace. 9. Obligation to provide universal education, accessible to all. 10. Solution on a religious basis of the social problem, with the abolition of the extremes of excessive wealth and degrading poverty. 11. Use of an auxiliary international language. 12. Constitution of an International Tribunal.

The controlling bodies of the Bahá'í community are of two kinds, administrative and instructional, the first being made up of elected councils and the second of persons and associations appointed from above. The two types come together at the summit of organization in the person of the Guardian (Wá'íl-yi Amr Alláh). The administrative bodies are as follows:

1. The local spiritual assembly (Bašt-i 'Adí-i Mi'ham). These are formed wherever there are at least nine Bahá'ís. They are of nine members elected by universal suffrage.

2. The Hands of the Cause. These are appointed by the Guardian. They are of nine members, elected by universal suffrage. Elections are held each year during the period from 21 April to 2 May (Ridwán festival). At the present time there are local assemblies in more than 200 countries throughout the world. Where there is a sufficient number of local assemblies a “Convention” of 19 members elected by universal suffrage elects a national spiritual assembly (Bašt-i 'Adí-i Mi'ham or Marhali) also of nine members, not necessarily from among its own members but from all adherents of the faith. There are at the present time more than twenty of these. 3. When sufficient national assemblies have been formed their members will elect a universal spiritual assembly (not necessarily from among themselves but from all adherents) to which the Bahá'ís will be able to look for ultimate guidance.

The Baha'i religion has no public ritual, nor any sacraments or private rites of a sacred character. The only religious duties of the Bahá'ís are: 1. To assemble every 19 days on the first day of each Bábí month (the Báb's calendar was adhered to by Bahá'í Alláh) for a communal celebration, called by the Western Bahá'ís the “19th day's Feast”, and by the Persians gisbadát-i rúh-i násádahum. It consists of readings of prayers and sacred texts (and even of passages from the Bible, the Qur'án, and the ancient formula attributed to Abdu'l-Bahá), from 2 to 21 March, the Bahá'í New Year's Day. The fast is of Islamic type, requiring abstention from all food and drink, etc., from dawn till sunset. 2. To fast 19 days, i.e., the entire Bábí month of 'Aštár, from 2 to 21 March, the Bahá'í New Year's Day. The fast is of Islamic type, requiring abstention from all food and drink, etc., from dawn till sunset. 3. To practise complete abstinence from all alcoholic drink. 4. To pray three times a day, morning noon, and evening, according to short, set formulae. The obligatory prayers (written in Arabic by Bahá'í Alláh) may be recited in any language. Some are preceded by ablutions, which are much simpler than Islamic ablutions, consisting only of washing the face and hands and reciting two very short prayers.

Apart from this the Ádás lays down precise rules for the division of inheritances (a portion of which falls to the teachers), levies a tax of 19 per cent on revenues, and prescribes numerous other rules and penal, civil and religious laws, which are followed in part only by the eastern Bahá'ís. Marriage is monogamous: although the Ádás allows bigamy, the provision was cancelled by 'Abdu'l-Bahá ("Model of Bahá'í Life"). Divorce is allowed, but discouraged.

The controlling bodies of the Bahá'í community are of two kinds, administrative and instructional, the first being made up of elected councils and the second of persons and associations appointed from above. The two types come together at the summit of organization in the person of the Guardian (Wá'íl-yi Amr Alláh). The administrative bodies are as follows:

1. The local spiritual assembly (Bašt-i 'Adí-i Mi'ham). These are formed wherever there are at least nine Bahá'ís. They are of nine members elected by universal suffrage. Elections are held each year during the period from 21 April to 2 May (Ridwán festival). At the present time there are local assemblies in more than 200 countries throughout the world. Where there is a sufficient number of local assemblies a “Convention” of 19 members elected by universal suffrage elects a national spiritual assembly (Bašt-i 'Adí-i Mi'ham or Marhali) also of nine members, not necessarily from among its own members but from all adherents of the faith. There are at the present time more than twenty of these. 3. When sufficient national assemblies have been formed their members will elect a universal spiritual assembly (not necessarily from among themselves but from all adherents) to which the Bahá'ís will be able to look for ultimate guidance.
prototype of the ideal world government of the future, which will eventually arise after a long process of peaceful evolution. The Bahá'ís do not accept the separation of Church and State, but maintain that in the absence of priests and sacraments the Bahá'í fusion of religion and administration will take on a different character from that of the traditional theocracies. Every Bahá'í is thus formally forbidden to belong to a political party or to secret societies and obedience to due authority is obligatory. The Bahá'í religion having a strong pacifist trend, members of the Bahá'í community are advised to avoid military service, at least in lands where conscientious objection is recognised by law. We could also speak of a strong trend towards vegetarianism, based on the absence of priests and sacraments the Bahá'í is thus formally forbidden to belong to a political party or to secret societies, and we have no exact information on the present number of Bahá'ís. As the number of Bahá'ís exceeds three thousand.

Of the works of Shoghi Effendi, who writes in English as well as in Arabic or Persian, the most important in English is God passes by, Wilmette 1945. Noteworthy for its rich and elegant Perso-Arabic style is the Lâwâh-e Kârn, Bombay n.d., a letter sent to the eastern Bahá'ís on the occasion of the first centenary of the foundation of the Faith (1944).

On Bahá'í doctrine: J. E. Esselmont, Bahá'í Texts and the New Era, London 1923 (with several other enlarged editions, the last printed at Wilmette in 1946); R. Jochel, Die Glaubenslehren der Bahá'í-Republik, Darmstadt 1957 (cyclostyled), containing a very large bibliography of eastern and occidental works; Abu 'l-Fadl 'Alī Gulpaygân (or Abu 'l-Fadl Diárfâhčâni) has produced interesting and stimulating controversial work in Arabic and Persian. We may cite from his writings: al-Hujâj al-Bahá'íyya, Cairo 1343/1925 (English trans. by 'Ali Kuli Khân, The Bahá'í proofs); Majmú'a-yi Rasâ'il, Cairo 1339/1920.

The Mâ'du'da-yi 'Amânâni, Tehran 1914 (Bahá'í era/1947, (6 vols.), is a vast anthology of the Founders' doctrinal writings.

Miscellaneous statistics and information on the life of Bahá'í communities throughout the world are given in biennial publications sumptuously edited in America, The Bahá'í World (12 volumes published up to the present time, from 1925 to 1957).

BAHÁR (see KAYL).

BAHÁR, Muh. Ta'kî (1885-22 April 1951), Persian poet and politician, born at Mashhad of a family originating from Kashán. In 1904, on the
death of his father, the poet Şabūrī, Muṣaffar al-Dīn Shāh conferred upon him the lakab borne by his father: Malāk al-Sha'arānī, Asād-Allāh-i Radānī-i Māshhād. From 1906 Bahār joined the camp of the Liberals (abhrād) and his first works appeared in al-Hāl-i Maltūm, published in India; moreover he very soon started his own review Nām Bahār (1909), which quickly became famous, firstly at Māshhād and then in Tehran, where he established himself permanently after a short exile in Constantinople (1915-6). Upon his return, he founded a club (andrūman) bearing the name Dānimāghada, with the review of the same name. He was several times a deputy in the Majlis, but retired from political life after the coup d'état of 25 February 1921 and devoted himself to the study of the old poets. After teaching the science of style at the Teachers' Training College and then at the University, he retired to political life and was Minister for National Education in an ephemeral cabinet (1946); he was also elected President of the national section of the Stockholm Peace Movement.

He is considered in Persia to be the greatest poet of his time. He is extolled for the charm of his intellect, his brilliant qualities as a conversationalist and for his gift of impromptu oratory. He succeeded in reviving Persian poetry, dormant since the Mongols, and in discovering the masters of the Šaffārī and Sāmānī periods. He knew only his mother-tongue, but that he knew to perfection.

The work left by Bahār is rich and varied (his last works were published in the review Yazgūd between 1946 and 1951). It is greatly to be regretted, however, that his work on prosody, Tāsawwur-i Nāma, was not completed and that his diwān, written in his own fine calligraphy, has only been printed in part. His main work deals with style and was published in 3 volumes from 1942 to 1948. He also composed risālas on Firdawsi, Manī and al-Jabari; mañšūmas (Bahār kiṣāba, kārnāma-i sandān); translations from Pahlavi and a novel. In addition, he wrote a brief history of the political parties, of which the first volume alone has been published. Finally he collaborated in publishing linguistic works and manuals (dastār-i šāhān-i fārsī, 2 vols.) as well as in the edition of certain books, (Ta'rikh-i Sīstān, Muḍjāmal al-Tawārīkh wa 'l-Ḳisās, etc.).

Bibliography: Notice by M. 'Ali Māzhīrī giving a résumé of his lecture on Bahār; 'Abd-Allāh Afghānī, Naḥīr-i fārsī-i mūṣārī, 1320; Sir E. Denison Ross, La Prose persane, la poésie persane, 1933, Soc. des Ét. Iran.; T. Rypka, Dējīny Peršī, .... literature, Prague 1956, index. (B. Nikitīne)

BAHĀR—ĐĀNESH [see INAYAT ALLĀH KĀNOJ].

BAHĀRĪ, name of a Turkish tribe in Persia. In particular, the name refers to the ruling family of the Karā-Ḵoyūnlī federation of Turkmen tribes (also called Bahārī). It is most probable that the name ("those of Bahār") is connected with the village of Bahār (Ibn al-Athlr, x, 290: W. kān, read Vāhār) situated at 13 kms. north of Hamadān. According to Ḩamd Allāh Mustawfi, Nūshā, 107 (Eng. transl. 106) the castle of Bahār served as residence to Sulaymān-šāh b. Parçam Īwāl, who later became one of the three chief ministers of the caliph al-Mustawfi. He was executed by the Mongols of Hülegū kān (2 Safar 656/Feb. 6 1258), cf. Dānhān, (Annex), iii, 290. See especially the excursus in the famous Bahārī-shāh's connection with one of the basic Oghuz tribes: Īvā (or Iwā), see Mahmūd Kāḏḏgārī, Dīwān Lūghat al-Turk, i, 56. The reasons of Sulaymān-šāh's expatriation from his principality of Bahār to Baghdād are unknown, but there are definite indications that even before the arrival of the Mongols the Īvā had spread northwards towards Erbil and Marāgha. The Khwārazm-šāh Dīlāl al-Dīn had to repress their depredations on the roads leading to Tāribz (winter 623/1226), see Ibn al-Athār, ii, 302; Nasawī, 262. The presence of an Īwāl is mentioned even in Khāṣīr (627/1230). These stages lead us to the region where the Karā-Ḵoyūnlī federation of tribes was formed. Even the emblem on some Karā-Ḵoyūnlī coins reminds one of the tribal ṣamghā of the Īvā. On the other hand the connexion of the Karā-Ḵoyūnlī rulers with Hama-dān is confirmed by the survival of their epigons in those parts. For a long time the region of Hamadān was called Kalam-ram-i ʿAlī Shahar, after the name of the important Karā-Ḵoyūnlī amīr.

At present splinters of the Bahārī tribe are scattered throughout southern Persia, see Sykes, Ten thousand miles, 81, 302.

BAHĀWALPŪR, a town in West Pakistan with a population of 60,000, situated near the left bank of the river Sutlej, at a distance of about 500 miles north of Karachi, with which it is connected by means of a railway. It has a museum, a library and several educational institutions, and is the administrative, commercial and educational centre of the region in which it lies.

Formerly, it was the capital of the Bahāwālpūr state, which was founded by the Dāḏāpota family of Sind. The town itself was founded by the second ruler of the dynasty, Muhammad Bahāwāl Khan, in 1748. The ruling dynasty has sometimes been called ʿAbbasīyā after a certain local ancestor ʿAbbas; the name has nothing to do with the ʿAbbasids of Baghdād or Egypt. The ruling family became independent of the Afghan kings towards the end of the 18th century, and made a treaty with the British in 1838. The state had an area of 15,918 square miles and stretched for about 300 miles along the left bank of the Sutlej, the Punjab and the Indus, extending into the desert for a mean distance of 40 miles. The chief crops were then, as now, wheat, rice, cotton and millet, which were entirely dependent on irrigation from the boundary rivers. According to the census report of 1941, the total population of the state was 1,341,209, and the majority of the people were Muslims — Djas, Radjāpūts and Balucfs. The state of Bahāwālpūr ceased to exist as a separate political entity in 1955, when it was incorporated in West Pakistan.

BAHĀDĪL b. ʿĪsā b. WĀLĪ b. KUNAFA, belonged to the clan of the Banū Ḥarīta b. Dīnāb, which was also called al-Bayt or the aristocracy of Kalb. A Christian like the great majority of his tribe, his chief claim to fame is that he was the father of
Maysun, mother of Yazid I. His nomad clan lived to the south of the ancient Palmyra, whither the Umayyads reunited after the congress of Djibla and the battle of Marj Râhi. Bahdal was thus the founder of the great prosperity of the Kalbites while the Umayyad dynasty lasted, though he did not himself take an active part in politics. As one of his sons was accused of being a Christian under the caliphate of Yazid I, Bahdal must have died a Christian, probably before the battle of Siffin, in which one of his sons commanded the Kuda a, in which one of his sons commanded the Kud a of Damascus, and at an advanced age. His sons succeeded him and became the first members of the state; in consequence the partisans of the Umayyads were called Bahdaliyya. His grandson Hassân, guardian of the sons of Yazid I, after the death of 'Abdwiya II even dared to cherish the project of succeeding him. The undue preponderance of the Bahdalites and the Kalbites contributed largely to the division of the Arabs into two parties, that of Kays and that of Yemen, after the battle of Marj Râhi.

BAHDÎNAN, Bâdînân, the Kurdish territory to the north and north-east of the Mawsil plain. From the latter years of the 'Abbâsî Caliphate, circa 600/1200, until the middle of the 13th/14th century the area was a principality ruled from 'Amâdiyya (q.v.), Kurdish Âmidî. It included 'Akra (Kurd. ôjid), Shish and the Zab river to the east and Dahuk, and occasionally Zakhir, to the west. The principalities of Bôttân and Hâkûr bounded it in the north, and that of Sorân in the south.

The eponymous Baha' al-Dîn family came originally from Shams al-Dînân (Kurd. Shammânîn, q.v.). Sharaf al-Dîn Bilîc, Sharaf-nâma, i, 106 ff., relates the history of the principalities for two centuries from the time of the Timûrid Shâhrûkh to 1005/1596. The Amir Hasan, under the aegis of Shâh Ismâ'il Şafawnî, extended his rule to Dahûk and the Sindî area north of Zakhir. His son Sultan Husayn was confirmed in authority by Sultan Sulaymân the Magnificent. Husayn's son Kubad was deposed and killed by a Mizûrî tribal force, but his son Saydî Khân regained power with Turkish help. At the beginning of the 12th/17th century the ruler of Ar-dalan, under Shâh 'Abbâs, placed a governor in Amâdiyya for a short time. There is then little record of the state for another century. Under Ottoman suzerainty the family appears to have reached its zenith with the reign of Bahrân Pasha the Great, 1138/1726-67. Bahram's son Ismâ'il Pasha, 1181-1213/1767-97, had to cope with his rebellious brothers, who established themselves at various times in Zakhir and 'Akra. Murâd Khân, son of Ismâ'il, was driven from Amâdiyya by his cousin Kubâd, with the help of the Bûbân pasha of Sulaymânîyaa. Once again the Mizûrî tribe rose to bring about the downfall of a Kubad in 1219/1804 and 'Adîl Pasha, son of Ismâ'il, was confirmed in power by the Djalali pasha of Mawsil. He was succeeded in 1223/1808 by his brother Zayyân. In 1249/1833 Muhammad Pasha Kûrûa, the "Blind Pasha" of Rawandiz, captured 'Akra and Amâdiyya, deposing the ruler 'Abd Pasha, and proceeded to take Zakhir.

Although his sway only lasted a few years the Bahdânân family never fully recovered its power and in 1254/1838 the area was finally incorporated in the sandâq of Mawsil.

The name Bahdânân is still applied to the area occupied by the following great Kurdish tribes: Barwarî, Dâfûk, Gullî, Mizzûrî, Raykânî, Silawvânî, Sindî, and Zêbârî.

(D. N. MacKenzie)

Bâhila. A settled and semi-settled tribe in ancient Arabia. The centre of their territory, Sûd Bâhila (Saud? — "corrected" in Hamdânî by an uninformed copyist into Sawâd), extended on both sides of the direct route (described by Philby in The Heart of Arabia, vol. ii) from Riyadh to Mecca. It is sufficiently well defined by the localities al-Kuwayt, Dîjâlân = Juzaila, al-Hufâyra = Hufaira and the mountains al-Katîd = al-Djîfîd and (Ibn) Shamâmî = Idhnaín Shamal. The clan Dîjâwa (Dîwâwa) lived further westward at the western foot of the Thâhlan = Dhalan and in the south-east corner of the later Himâ Darîya near the Ghanî, another group further to the south in the oasis of Bîsha. To this group may have belonged the Banû Umâma, guardians of the sanctuary of Dhu 't-Khalasa near the neighboring Tabâla. An old verse (Âmir b. al-Tufayl, Suppl. 16.2) runs: "... I will ... not visit the fair, even though Jasr and Bâhîlah journey thereto to sell their wares" (Jasr also in the oasis of Bîsha). What kind of wares? Pottery? — clay was rare in Arabia.

The genealogy of the tribe is somewhat complicated: Bâhila is the mother of political leaders of the Malkî b. Âsur and, through nakhâl-al-mdâl with the other son, Ma'n by name, the mother of two of the latter's foster-mother of ten other sons. These other sons stem from two different mothers. Such artifacts are familiar to the genealogists. Here only their accumulation is remarkable. This accumulation points indeed to the local separation of the groups of the Bâhila and also to a certain political unity between the two greatest of their clans, the Kutayba and the Wa'il. The connexion with Âsur makes of the Bâhila, who are also called, moreover, Bâhila b. Âsur, brothers of the Ghanî. As we have seen above, they were in fact neighbours, of the Ghanî. Unfortunately, the period when the sobriquet Ibnâ Darbân for both these tribes originated is not certain. The Bâhila stood partly under the protection of the Kilab and partly under that of the Ka'b branch of the Âmir b. Sha'sâ'a. Only one warrior from amongst them is known, al-Muntaşhir, and this one because A'zâhâ Bâhila (no. 4) made an elegy over him. We know of another episode from al-Nâžim al-Dîjâlî, no. ix. Both instances lie shortly before the rise of Islam. Two documents of the Prophet have been handed down to Ibn Sa'd, i. 5, 33, the first for the Bâhîlites in Bîsha, the second for a chieftain of the Wa'il.

The history of the tribe becomes clear for the first time under Islam. Their exodus from Arabia was directed predominantly towards Syria (even the Bâhila in Khurâsân came there mainly with troops from Syria) and, for the rest, towards Bâjrâ. Bâhila (and Ghanî) tribesmen had a substantial share in the war of revenge fought by the Kays against the Kalb after the battle of Marj Râhi (cf. Wellhausen, Das arabisches Reich und sein Sturz, 126). The Bâhila also developed an abundance of talents of
all kinds. The most important are the philologist al-AsmacI and the general Kutayba b. Muslim. A second exodus of the Bahila from Arabia is to be distinguished from that of the muhaddisun — an exodus which brought a part of those who had remained behind in Arabia to the lower Euphrates, firstly towards al-Hufayr a short distance before Baṣra; from there they penetrated into the sandy tract of al-Ṭaff, which was situated over against the Batāḥal, and after the Zi'f had settled in (the Batāḥal) in 837, they began to infiltrate into the Batāḥal. In 872 the Bahila there suffered punishment from troops which were on the march to meet the Zandj. The result was that the Bahila took the side of the Zandj. Nothing more is known about them.

Hamdānī (p. 164) is the last who mentions the Bahila in their native territory; yet this passage is hardly earlier than the parallel passage about Sūd (Saud) Bahila (ibid., 147 ff.), the original source of which is set by de Goeje in about the year 250/864. Before that time there occurred the over-running of central Arabia by the NUMAYR. Only vague traces of a change of dwellings the Bahila in central Arabia are found in the literature.

**Bibliography:** Aḥzāb Bāhila, in *The Djeém of al-Aḥzāb*, ed. R. BAHİRÁ, the name of a Christian Monk. Ibn Sa'd and Ibn Hishám offer two parallel traditions, confirmed by al-Tabari (i, 1125 ff.), according to which Muhammad, when either nine or twelve years old, whilst accompanying the Mekkans' caravan to Syria, in the company of Abū Bakr or Abū Talib, found himself in the presence of a Christian monk or hermit, who is said to have revealed the young man's prophetic destiny, either by finding on him the stigmata of prophecy, or by the miraculous movement of a cloud, or the violence of the Rum (al-fabari, third tradition, ed. J. Sourdel-Thomine, Damascus 1924, 14, i. 17). Whilst Bahirá is a witness and a guarantor in the Kur'anic passages quoted above; it is said to be born dead then both partake of it. He will reward them for their attributing [these things to him] for He is wise and knowing.

**Bibliography:** The commentaries on the Kur'anic passages quoted above; Lisán al-Arab, v. 105 ff.; Freitag, Einleitung i. d. Studium d. arabischen Sprache, 238 ff.; Wellhausen, Reste arabischer Heidentumstr., 112 ff.; Rasmussen, Additaments, 66 of the Arab. text, 60 trans. (A. J. Wensinck)

contemporaries, perverse Jews (ʿAbd al-Mastṭ), ed. A. Tien, 77-8, cf. ZDMG, xii, 699-708). The Apocalypse of Bahira, which dates in Syriac and Arabic, the textual history of which still remains to be established, and the chronology of which is disputed (cf. G. Levi della Vida and J. Bignami-Odier, op. cit. 132-3 and 139-48, M.-T. d’Alverny and G. Vajda, in-Andalusi, i, 1951, i, 118, 130 ffl.). But even before the Crusades, the main theme of the false prophet inspired by a “wise man” was known in the West, as is attested by the work in verse, directed to the monk in the centre of a pamphlet, which assembles the indications of the ancient Danielesques apocalypse of the Pseudo-Methodius (Kmosko, in Byzantion, 1931, 273-296), and cleverly combines them with the Christian arguments on the apocalyptic origin of the Qurʾān and with the various aspects of the doctrine of the Mahdi (Graf, Gesch. der Arab. Christ. Lit., Studi e Testi, Roma, 1933, 147-9). This work met with success in the Christian circles of the Orient, and up till the period of the Crusades, which even resulted in its being translated into Latin (Levi della Vida and Bignami-Odier, op. cit. 132-3 and 139-48, M.-T. d’Alverny and G. Vajda, in-Andalusi, i, 1951, i, 118, 130 ff.). But even before the Crusades, the main theme of the false prophet inspired by a “wise man” was known in the West, as is attested by the work in verse, directed against Islam, under the name of Historia Machu- meti, attributed to Hildebert (Guy Cambier, Embricon de Mayence (1010-1077) est-il l’auteur de la Vida Machumettii?, Patr. Lat., cxxii, 1343-1366, Latomus, 3, Brussels 1957 and U. Monnereit of Villard, Lo Studio dell’Islam in Europa nel xii e xiii secolo, Studi e Testi, ito, 110-34-5).

Baihlul (Amīr), the name of three notable Kurdish figures, according to M. E. Zakī (Masqūkhi, 1:42), 1. A member of the Sulaymaniyya family, amīr of the Mayyafarikin branch, son of Alwand Bey b. Shawkh Ahmad. He was for a long period in the service of Iskandar Pasha, the wali of Diyarbakr. Subsequently, he was for a time in command of the fortress al-Iskandariyya (between al-Hilla and Baghdād), and after that the sultan Yazw Selim entrusted to him the stronghold of Mayyafārīkhīn. A man of great personal bravery, he perished in a fight with Shahshuwar Bey. 2. Son of Amir Djamshīd, chief of the Dunbul, governor of Tabaristan and Daghāsiyān. A contemporary of Shawkh Ḥaydar Şafawi, and one of his most loyal supporters, he fell in the battle between Ḥaydar and Shawkh Ḥaydar Kūyulan in 880/1475-6. 3. A Banū Dunbul chief named Djamshīd b. Ismaiyl b. Bahral-Pasha who was the Turkish governor at Bayazīd up to 1326/1812. He was dismissed in that year, and died four years later. Wagner (ii, 297 ff.) devotes several pages to him in a commendatory vein.

Bahadur Lodi (see Delhi Sultanate).

Bahmani (see Taʿlabkī). A line of eighteen Muslim sultans who ruled, or claimed to rule, in the Deccan from 748/1347-1527, after a group of Muslim nobles led by Ismāʿīl Muḥḥ had successfully rebelled against the sultan of Dihīl, Muḥammad b. Tughluq. The more vigorous Hasan Gangu supplanted Ismāʿīl and was proclaimed Sulṭān ʿAlāʾ al-Dīn Ḥasan Bahman Shāh. (On the latter’s origin see Major W. Haig, Some Notes on the Bahmani Dynasty, ASB LXXIII, Pt. 1 (Extra No.) 1904, 495; Proceedings of Indian History Congress, 1938, 304-8; H. K. Sherwani, Gangu Bahmani, in Journal of Indian History, xx, Pt. 1, April 1941, 95 ff.).

Table of the Bahmani sultans.

(a) Sulṭāns with their capital at Aḥsanubād-Gulbarga:

(Coins and inscriptions suggest the last named roi favinant may have lingered in exile claiming the throne until 943/1536-7. See E. E. Speight, Coins of the Bahmani Kings of the Deccan, in IC, ix, 1935, 168 ff.; and Inscriptions of Bidādūr, Mem. Arch. Sur. of India, No. 40).

During most of its history the Bahmani Kingdom was limited to the table-land of the Deccan. Geographically, the Vindhyā range may be said to be the northern edge of Southern India with the Nerbādā river flowing almost parallel to it. But the country south of this quasi-barrier may be divided into three distinctive parts: (i) Malāw, with its general slope towards the West; (ii) the Deccan table-land proper which, along with Berār, forms the pivot of the lavaic crescent where the ancient undisturbed rock begins to extend over the centre of the peninsula; and (iii) what is called “South India” which extends from the northern edge of the Mysore plateau and the line of the Tungabhadra southwards. The lavaic uplands end abruptly in the Western Ghāts which
have always tended to form a natural limit to the ambitions of the rulers of the Deccan table-land. Although the Bahmanis early managed to reach the sea at Dabul and Cowl they could never rule the coastal plain beyond the Ghâts effectively, and the south-western extremity of this lâvica country, Goa, had to be conquered and reconquered a number of times. While the table-land has a sheer fall of nearly 4,000 feet in the West, it has a very gentle slope eastward, and it takes more than 300 miles to reach the same level as the eastern coast line. It may be mentioned here that the importance of Golconda, which played such an important part during the later medieval period of Deccan history, and with it, of Ḥjaydarābâd, lies in the fact that Golconda and a part of Greater Ḥjaydarābâd stand on the last prominent spurs of the table-land before the undulating plain begins. The effective southern limit of the Bahmani kingdom was the river Tungabhâdra, the natural geographical limit of the Deccan, but it should be remembered that the Krîshna—Tungabhâdra Doab was always a bone of contention between the Bahmanis and their southern neighbours, the Râyas of Vidyâyanagar in much the same way as it had been a bone of contention between the Western Calukyas and Rashtrakutas, and between the Yâdavas and Housalas in ancient times.

The Bahmani sultans continually struggled to extend the area of their military and revenue paramountcy and this involved them in war against the sultanas of Malwâ and Gudjârât in the north and Vidyâyanagar in the south and in efforts, complicated by the intervention of Vidyâyanagar and the Hindu chiefs of Orissa, to assert their suzerainty in Telângâna, south and east of the Godavâri. In the north, a successful war between Shâhâb-al-Dîn Ahmad I and Hushâng Shâh of Malwâ over Kherla in 832/1428 followed in 834/1430-31 by an unsuccessful war against Gudjârât in alliance with the Radjâ of Jalâlâwar ended in stalemate. In 866/1451-2, Maḥmûd Khâldî of Malwâ, in alliance with the Gadjapati Radjâ of Orissa, Kapîlendra, succeeded in occupying Bidâr itself; the Bahmanis were saved by the intervention of Maḥmûd Shâh Bêgâda of Gudjârat. War again occurred in 872/1468 over Mahûr and Elîchpûr, but although Khêrla was temporarily occupied by the Bahmani forces, a peace, which proved to be lasting, restored the status quo ante, between Malwâ and the Bahmanis.

In the south, conflict over the fertile Krîshna-Tungabhâdra Doab with Vidyâyanagar was endemic. War occurred in 750/1349, 755/1354, 767/1365, 800/1398, 808/1406, 823/1420, 825/1422, 847/1443 and 880/1481 with varying fortunes, and the Doab region remaining a no-man’s-land between the two powers, until after the accession of the Vidyâyanagar ruler, Krîshna Deva Râya in 915/1509, when the region was virtually incorporated into the Vidyâyanagar dominions.

In the west, despite Bahmani claims to Dabul and Cowl, the Bahmanis were unable to control the coastal region west of the Ghâts and were impotent to prevent continuing depredations by the Radjâs of Khêrla and Sangameshwar, until the waṣîr, Maḥmûd Gâwân, succeeded in occupying Sangameshwar and Goa in 875/1471 and 876/1472.

In the east, the Bahmanis raided Telângâna successfully in the reign of Muḥammad I and again in 820/1417 and 827/1424 when Warangal was captured, and a Bahmani governor established, but the local Hindu chiefs could usually rely upon help from Orissa. The Orissan general Hamvîrâ captured Warangal in 864/1460, but succession troubles in Orissa enabled the Bahmanis in campaigns between 858/1457-8 and 885/1480, to extend their hegemony, though briefly, to the Bay of Bengal. Telângâna was then divided into two provinces centring on Warangal and Rajahmundry.

While ‘Alâ’ al-Dîn Ḥasan Bahman Shâh was the founder of the dynasty it was Muḥammad I who organised it. The central Government was divided into three main departments dealing with civil, military and judicial matters respectively. The civil department was centered in the waṣīlî sulṭanât or Prime minister who was assisted by waṣîrs or ministers and daḥîrs or secretaries. In the same way the judiciary consisted of the kâdîs or judges and the muṭellîs or interpreters of law, while peace and security of the cities was kept by the kîstâwîl or Commissioner of Police and muḥâbasî or the censor of public morals. On the military side the Commander-in-Chief had a number of subordinate officers at headquarters such as the officer at the head of bârârdîrân who mobilised irregular forces in times of emergency, the baḥshî or the paymaster, the officer in charge of the bâbîs bârdî or the body-guard of the sulṭân, a well-equipped and well-drilled force of 4,000 soldiers, and the officer in charge of 200 yakhas-djâwânsân or sîlîdârdâr who handled the sulṭân’s personal arms.

The whole kingdom was divided into four aṭrâf or provinces and each aṭrâf or province was placed under a ṣârafâ or governor. The ṣârafâ was originally responsible both for the civil and the military administration of the province and the bîlîsâdârs or commanders of the forts were placed under him. The four provinces of the kingdom centered round Daulatbâd, Berâr, Ahsânabad—Gulbarga and Muḥammadâbad—Bidâr (which included the small part of Telângâna which was under the Bahmanis in the beginning). Out of these the province of Gulbarga, which was centred round the capital of the state, was naturally regarded as the most important and its ṣârafâ was generally one who enjoyed the fullest confidence of the ruler.

The century which followed the establishment of the dynasty saw a great expansion of the kingdom which finally extended from sea to sea, and Maḥmûd Gâwân, who was now waṣîr, set to work not only on the redivision of the kingdom but also on the reform of the whole provincial administration. Firstly he redivided the kingdom into eight in place of four aṭrâf. Berâr was divided into two charges, namely Gâwîl and Mahûr, part of the area surrounding Junnâr was removed from Daulatbâd province and formed into a separate ṣârafâ, Radjâmmandâr was created a province distinct from the rest of Telângâna and Bîlджîpûr was carved out of the old province of Gulbarga. The power of the ṣârafâ was also greatly curtailed. A ṣârafâ was previously supreme in both civil and military affairs of his province and could not only appoint bîlîsâdârs but also increase or decrease the number of soldiers on permanent duty according to his will and thus spend or save as much money as he liked out of the dijaðîr set aside for military expenses. Maḥmûd Gâwân curtailed the power of the ṣârafâ considerably. It was decreed that in any province a bîlîsâdar would be appointed by the central government and a ṣârafâ was entitled to have only one fort under his direct command. Moreover every person who was responsible for the payment of salaries of soldiers was made accountable for the money he drew...
from the *dāḡār* or *mansâb* as the case may be.

Another method by which the sultan was brought in direct relationship with the work of the provinces was to set under his direct control a large tract of land set aside in every province as the royal demesne. Orders were also issued for a systematic measurement of land, fixing of boundaries all over the state and a general enquiry about the record of rights and assessment of revenue.

All these schemes however, proved to be still-born when Mahmud Gawan was murdered. Another attempt in the same direction was made twenty years later in 901/1495-96 by the minister Kasim Band, the progenitor of the Barid-shahis of Bijâr [q.v.]. Under these reforms the smaller *mansâbdârs* were ordered to enrol themselves in the royal bodyguard and were henceforth called *sârâbdârs* or *bawalâdârs*. This was only a half-hearted measure and affected only the small *dâḡârdârs* and *mansâbdârs* while the great nobles were left untouched. The great power and authority which the *târafârdârs* were left to enjoy after the nullification of earlier reforms was one of the causes of the disintegration of the Kingdom and its resolution into five succession states, namely Bidjâpur, Ahymadnagar, Golconda, Berâr and Bijâr [q.v.].

The large influx of Persians and others from overseas created a peculiar political problem in the Deccan, for it divided the Muslim population of the State into two contending groups, viz. the *dakhnâs* or the older colonists and the *dâ Ağâs* (sometimes called the *gârib al-diyyâr*) or the new settlers. Their struggles were largely responsible for the downfall of the Bahmani Kingdom.

(H. K. Sherwani)

**Monuments.** *Ālî* al-Dîn Ḥasân Bahman Shah's new kingdom at Gulbarga was open to attack from all sides, by the Râjdâs of Vîdjâyanagara, Telangana and Orissa, by the Gôndhas, and by the rival sultans of Khândesh, Mâlwâ and Gujârât; the first buildings of the new régime are consequently entirely military, surrounding the kingdom: to the north, Ečîpuru, Gâwîlgaft, Narmâl (Bahmani inscriptions, T. W. Haig, *EIM* 1907-8, 11) in Berâr, also Mâhâr; on the west, Parenda, Naldrug, Panhâl and Gulbarga itself; in the centre, Bijâr, Golkhânâ and Warangal; on the south-west, Mûdgal and Râyûtir. Many of these were existing Hichâs; often Gôndha, fortifications hastily occupied and modified; some were rebuilt later by Ahmâd Shâh Wâlî al-Bahmanî after his transformation of Bijâr [q.v.] fort, and during the reign of Muḥammad III in consequence of Mahmûd Gawan's policies. (References in Fèrîshâ, *passim*).

Gulbarga. The fortifications are well preserved, with double walls 16 m. thick, surrounded by moat up to 35 m. wide; well provided with bastions—many with barbettes added later for the use of artillery—and hornworks, large and compound crenellations, machicolations and barbizons. The one major structure standing intact within the walls is the *Dîmînî* Maṣjîd, built 769/1367 by a hereditary Persian architect, Râfî' b. Shâms b. Mansûr al-Kâshâfî (inser. *Haig, EIM* 1907-8, 2), of a type unknown elsewhere in India, with open but completely roofed over forming a pillared hall whose only illumination comes from the open side aisles and the clerestory of the central dome. The side aisles are characterised by their very wide span with unusually low impost, an arch pattern used elsewhere in Gulbarga. Two mosques of nearly the same period at Delhi [q.v.] are partially covered; but this type was not imitated, presumably since the *îltâsân* and *minbar* were obstructed from the view of most of the congregation. The other Bahmani monuments at Gulbarga are the two groups of tombs. The first, near the south gate of the fort, includes those of *Ālî* al-Dîn (739/1338), Muḥammad I, to whom the Shâh Bâdar Maṣjîd, an unpretentious building in the contemporary Tughlakian style of Delhi, is attributed (727/1327), and Muḥammad II (799/1397); the first two of these show the battering walls and weak semicircular dome of the Delhi Tughlakian style; that of Muḥammad II shows a similar dome, stilted below the haunch, to that of the *Dîmînî* Maṣjîd. To the east of the city is the *Gâft Gunbâb*, including the tombs of Muṣṭâhid and Dâdî c. 785/1380, Ghiyâth al-Dîn (c. 799/1397) and Fîrûz (c. 823/1420); some of these are two adjacent domed chambers on a single plinth. That of Ghiyâth al-Dîn shows some Hindû influence in the *mîhrâb*, and that of Fîrûz in the carved polished black stone exterior pilasters, the dripstones and brackets; the interior of the latter is quasi-Persian in its paint and plaster decoration similar to the contemporary Saiyîd and Lodî tombs at Delhi. Of other buildings, the *dârâgâh* of Banda Nawâz (Ranâdâ-i Biswarg), c. 816/1413, shows the characteristic wide arch with low impost.

Bijâr. The Bahmani tombs at Ašţûr, 1¼ miles east of the town, are on a larger scale, with loftier and sometimes more bulbous domes, than those at Gulbarga. None of these has battered walls, and none is double. The finest, that of Ahmâd Shâh Wâlî (d. 839/1436), shows the characteristic later Bahmani arch, stilted above the haunch, and is of great importance on account of its superb calligraphic decoration which includes two *şâfidârs* of the saint Ni'mat Allâh al-Kîrmanî [q.v.]. That of *Ālî* al-Dîn II (862/1458) shows striking encaustic tile-work and, unusually, some arches struck from four centres. That of Muḥammad, 924/1518, has its walls decorated with arched niches one above the other, more characteristic of post-Bahmani architecture. The *Dîmînî* Maṣjîd, called also Solah Khamba (=*sixteen pillar*) *masjîd* and *Zandât masjîd* (827/1423-4), of the reign of Ahmâd I but erected during Prince Muḥammad's vicegerency before the transfer of the capital — the earliest Muslim building at Bidâr — and the royal palaces (Tâshkî Mâbâl, etc.; cf. Saiyîd *Ālî* Tâbkîbâbâ, *Burhdn-i Mâtâr*, Persian MSS. Soc. ed., 70-1), and the *madrasa* of Maḥmûd Gawan, all works executed under the Bahmans, are, in view of their subsequent redecoration and rebuilding by the Bârdîs [q.v.], described under Bidâr [q.v.]. The *Când minâd* at Dâwlatbâd [q.v.] dates from the time of *Ālî* al-Dîn, and it may be observed that the earliest *Adil Shâhî* building at Bidâpur [q.v.], Asen Beg's *masjîd* (978/1572-3) bears an inscription indicating Maḥmûd Shâh Bahman as ruler — presumably still acknowledged as paramount in spite of Yûsúf's recent independence.
The walls of Bidar fort are Bahmani; those of the town date from the Band Shahis.

BAHMANYAR, ABU 'L-ḤASAN BAHMANYAR B. AL-MARZUBAN, a famous pupil of Avicenna, died in 458/1067. Avicenna's K. al-Mubahathāl mainly consists of philosophical questions raised by Bahmanyar and answered by the master. Since he was a Zoroastrian, Bahmanyar's acquaintance with Arabic was imperfect. His Māṣa' al-Ṭabit'a and K. fī-Mardāb were published in Leipzig in 1851 (and in Cairo in 1329 A.H.). His comprehensive interpretation of Avicenna's philosophy called K. al-Taḥṣīl (or al-Taḥṣīlād) and consisting of logic, metaphysics and physics plus cosmology, was also published in Cairo in 1329 A.H. An extract (fasi) also exists (see Brockelmann, SI, 828) from his K. fi-Mardāb. See also F. Rahman, K. al-Majātsil (or Baytash), Kaynas (or Kubays), al-Asamm, al-Maghrib, al-Djamalī at the end of the 5th/11th century. Ibn Baṭṭūta describes it as a great city surrounded by numerous gardens. Khālíl Zāhīr still speaks of it as a large town, but it is already suggestive to note that Ibn al-Dīlān, who knew the province, passes the town over in silence. Henceforth it was never anything more than an insignificant township, which, in the 19th century was included in the province of Bani Suf (Suwayf), before belonging to that of Minya. The sands had covered it: about the year 1890, debris of all kinds, granite columns, fragments of capitals, of sculpture, pottery and bricks could be seen lying on the ground there; it is now no more than a confused heap of ruins, according to a recently published guide-book.

This lamentable situation may well be the result of the progressive deforestation of the region. Under the Fātimids and the Ayyūbids, the forests, classed as domain, were exploited by a State administration to furnish wood for naval construction: Maḏrīzī is here relying on an account by Ibn Māmātī, but adds: "This has all completely disappeared and one no longer hears anyone speak of this organisation, as private persons have had the trees cut down." The town's prosperity was above all based on its own woven products. All kinds of cloths were manufactured there, from the most precious fabrics, such as silks figured with gold, down to the most ordinary wares: curtains, tent coverings, ships' sails. Fabrics of great size were woven there in wool, linen and cotton, with pictures in fast colours, portraying all kinds of beasts, "from the insect to the elephant". According to Idrīsī, fabrics originating from Bahnasa bore the name of the town and it is a fact that in the Museum of Muslim Art in Cairo there is preserved a piece of multi-coloured wool, with pictures of small hares framing a human head on which the name of Bahnasa can be read. Ibn Baṭṭūta still praises its excellent woolen cloth in the middle of the 8th/14th century.

Bibliography: Besides references given in this article, see also Nizānī Sāmākandī, Čahār Makāla (ed. Kazvīnī, 252, and Ibn Abī ʿUṣayyīfa, ʿUṣayn al-Anbāʾ) (F. Rahman), of Coptic origin. The Virgin and the Child Jesus are supposed to have stayed there during the Flight from Egypt. Certain Muslim exegetes have found a verse of the Kūran (xxiii, 52), to corroborate this tradition, which is of Christian origin.

At the time of the Arab invasion, it was a fortified place with thick walls; the Greek garrison seem to have exhibited great courage in its defence, which was long remembered, since their resistance inspired a popular romance, the Conquest of Bahnasa.

At first the capital of a pagarchy (kūra), the place enjoyed an astonishing prosperity in the Middle Ages. Bahnasa gave its name to a province at the time of the administrative reorganisation carried out at the behest of the Fātimids near Baḍr al-Djamaalī at the end of the 5th/11th century. Ibn Baṭṭūta describes it as a great city surrounded by numerous gardens. Khālíl Zāhīr still speaks of it as a large town, but it is already suggestive to note that Ibn al-Dīlān, who knew the province, passes the town over in silence. Henceforth it was never anything more than an insignificant township, which, in the 19th century was included in the province of Bani Suf (Suwayf), before belonging to that of Minya. The sands had covered it: about the year 1890, debris of all kinds, granite columns, fragments of capitals, of sculpture, pottery and bricks could be seen lying on the ground there; it is now no more than a confused heap of ruins, according to a recently published guide-book.

This lamentable situation may well be the result of the progressive deforestation of the region. Under the Fātimids and the Ayyūbids, the forests, classed as domain, were exploited by a State administration to furnish wood for naval construction: Maḏrīzī is here relying on an account by Ibn Māmātī, but adds: "This has all completely disappeared and one no longer hears anyone speak of this organisation, as private persons have had the trees cut down." The town’s prosperity was above all based on its own woven products. BAHR (Ar.), sea and also large perennial river. — The articles which follow treat of the principal seas known to the Arabs, but it is convenient to note here that in Islamic cosmology, on the basis of a conception generally related on the authority of Kaṣb al-Aḥbār [q.v.], the mountain Kaṭf [q.v.], which encircles the terrestrial sphere, is itself surrounded by seven concentric intercommunicating seas; these seas bear respectively the following names: Maṣ (or Baytash), Raynas (or Kubays), al-Asamm, al-Sakin, al-Mughallīb (or al-Murīlīm), al-Muʿannīs (or Marmās) and finally al-Bākī. But it is probable that these names correspond to geographical realities;
in fact Niţas (and its variant form) is an orthographic corruption of Buntus (= Ṣīnāt = the [Atlantic] Ocean); for the other names, a tentative identification will be found in P. Anastase-Marie de St. Eille, Nuţaş al-Lugha al-‘Arabiyya, Cairo 1938, 83-4, and al ‘âlâti, Tarič (ed. Pellat), s.v. Buntus.

Bibliography: Kazwini, Cosmog., 104; Kisa, Kitaş al-Abya, Leiden 1922-3, 9; see also the bibliography to the article Ḳaf.

AL-BAHR AL-ĄBYAD [see BAHR AL-RUM].

BAHR ADRIYAS, name of the Adriatic in Arabic geographical works. (Ed.) AL-BAHR AL-ĄSWAD [see BAHR BUNTUS, KARA DENIZ].

BAHR AL-BANAT i.e., “the Maidens’ Sea”, a name given by the Arabs to the Archipelago off the west coast of the Persian Gulf. Idrisî calls it Bahr al-Khihr.

Bibliography: Ritter, Erdkunde, xii, 390, 589ff.

BAHR BUNTUS, the Pontus Euxinus, or Black Sea, for which BAHR Nîtas (Niţas) is a stereotyped error (same ductus of letters with different pointing and vocalisation). From the names of adjacent peoples or cities it was also called Bahr al-Khazar or Sea of the Khazars (Ibn Khurramadhibih, 105, perhaps by confusion with the Caspian, Bahr al-Khazar, [q.v.]), Bahr al-Rûs (Sea of the Russians), Bahr al-Burgah or Bahr al-Burghaz (Sea of the Bulgars), Bahr Tarâbabzunda (Sea of Trebizond), Bahr Niţas al-Armanli (the Armenian Pontus), Bahr al-Kustantîniyya (Sea of Constantipole) and Daryá-yi Gurziyân or Sea of the Georgians (only in Ḳudud al-‘Alam). The name al-Bahr al-Ąswad (Black Sea) appears only in later times.

According to Mas’udî (Tanbih, 66-67), writing in 345/956, it extends from Lazika (Greek Lazikâ) in the E. to Constantinople, a distance of 1300 miles, with a breadth of 300 miles. It is connected with the lake or sea of Mâuyûts (Sea of Azov, [see BAHR MÂUYUTUS]). Among the rivers which flow into it are the Ţanâis (Don) and the Danube. From Bahr Buntus issues Khalid al-Kustantîniyya (Strait of Constantinople), i.e., Bosporus, Sea of Marmora and Dardanelles, which issues in Bahr al-Rûs or Sea of the Greeks (Mediterranean). The length of the strait is 350 miles. In a parallel account written earlier (Mûrûdî, i, 260-262) Mas’udî gives the length of Bahr Buntus as 1100 miles and the course of the Don as about 300 ʾarasâs. The same general account is found in Ibn Rusta, 85-86 (about 909/910). It was thought by some, e.g., Ibn Khurramadhibih (105) that Bahr Buntus issued from Bahr al-Khazar (Caspian). Mas’udî denies this (Mûrûdî, i, 273), saying simply that the two seas are connected (Tanbih, 67). According to Mûrûdî, ii, 18 ff., the route from Bahr Buntus to Bahr al-Khazar was via Khalid Niţas (Strait of Kertch), the Don and the Volga, using the Don-Volga portage, i.e., the route called elsewhere the ‘Khazarian Way’. Mas’udî himself, who shows much greater interest in Bahr Buntus than geographers of the Balkhi-Istakhri school, speculated on a direct connexion between the Black Sea and the Atlantic. This view was later held by al-Birûnî (Kazwini, ʾAdîd’ib, 104).

The position of the Bahr Fâris has given it great but varying importance. Its history is very imperfectly known. A number of local chronicles are still in MS. and the story of the competition of the alternative trade routes through the Red Sea and across Central Asia has yet to be studied. Only the salient facts are given here; for further details see the articles on individual ports. Commerce was flourishing before the Arab conquest and Persians were already engaged in trade with China. The identification of the “Po ssu” of Chinese records with Persians has been questioned, as the name can also refer to a Malayan people. It is, however, established by a reference (Chow Ts’ang Sâw, viii, 29) to a Po ssu embassy of 1034/722, which brought lions as gifts; the lion is not found in Malaya. The revolt of Huang Ch’ao and his sack of Canton (264-8/828) dislocated the trade. Voyages from Persia to China appear to have ceased in the 4th/10th century. There is no indisputable evidence that Chinese ships came to the Bahr Fâris before the Ming voyages of the early 9th/15th century. In early Muslim times the chief port was Siraf, near Ṭâhirî. It declined under the 7th/13th century, for a time gave its name to the sea (Bahr Sûdûk). For Ottoman times, see KARA DENIZ.

(D. M. DUNLOP)

BAHR FÂRIS, the Persian Gulf, in which Mas’udî includes the Gulf of ‘Umân; Ḳâtsakhîrî and Ibn Ḫawal apply the name to the whole Indian Ocean (Bahr al-Hindi). The name Ḳudud al-‘Alam or Gulf of ‘Umân and the Persian Sea. Mas’udî gives its width at the narrowest place as 150 -carousel; the Strait of Hormuz is actually some 29 miles across. In the Muslim geographers the modern al-Abâsî was called Bahrayn, the name Uwâl being given to one of the islands now called Bahrayn. Hindarkhî was Abrûn, Kıshm was Lîft, Djafta Bani Kâwûn, or Barkûn, and Shâykh Shu’ayb was Lâwân, Lân or Lâr.

Mas’udî relates that one ʿAbd al-Mâshît, aged 350, told Khalîd b. al-Wâld that he had seen al-Nâdîq covered by the sea, and ships sailing to the mouth of the Euphrates below al-Ḥira. Mas’udî evidently believed the geographical fact if not the story. Most scholars have assumed that silt brought down by the rivers has been gradually filling up the Bahr Fâris. The history of ‘Abâbâdân seems to support this. Mukaddasî and the Ḳudud al-‘Alam speak of it as on the coast, Nâşir-i Khwârawz as 2 leagues from the sea at low tide, and Ibn Batîṭa as 3 miles from the sea; it is now over 30. It has, however, been claimed (G. M. Lees and N. Falcon, The Geological History of the Mesopotamian Plains, GJ, 1952) that, though the level of the land has risen locally and though rivers have changed their courses, (see DURA, PURAT, KÂRM), the area between the Arabian massif and the Persian mountains is one of tectonic subsidence, mitigated but-not counteracted by the deposit of silt. The Tigris and Euphrates leave most of their silt in the marshes above al-Ḳurna and the Bahr Fâris is materially affected only by the silt carried by the Kârûn. There is no geological evidence that the head of the Bahr Fâris has been N.W. of its present position since the Pliocene Age: it is even possible that it has been further to the S.E. in historical times. (See also correspondence in GJ, 1954).

The position of the Bahr Fâris has given it great but varying importance. Its history is very imperfectly known. A number of local chronicles are still in MS. and the story of the competition of the alternative trade routes through the Red Sea and across Central Asia has yet to be studied. Only the salient facts are given here; for further details see the articles on individual ports. Commerce was flourishing before the Arab conquest and Persians were already engaged in trade with China. The identification of the “Po ssu” of Chinese records with Persians has been questioned, as the name can also refer to a Malayan people. It is, however, established by a reference (Chow Ts’ang Sâw, viii, 29) to a Po ssu embassy of 1034-4722, which brought lions as gifts; the lion is not found in Malaya. The revolt of Huang Ch’ao and his sack of Canton (264-8/828) dislocated the trade. Voyages from Persia to China appear to have ceased in the 4th/10th century. There is no indisputable evidence that Chinese ships came to the Bahr Fâris before the Ming voyages of the early 9th/15th century. In early Muslim times the chief port was Siraf, near Ṭâhirî. It declined under the 7th/13th century, for a time gave its name to the sea (Bahr Sûdûk). For Ottoman times, see KARA DENIZ.

(D. M. DUNLOP)
later Buyids and hegemony passed to the Arab Banū Kaysar of Kays (originally Klš, Kis), afterwards subject to the Salghurid Atabegs of Pars. In 626/1229 the capital was moved from the mainland to the island of Djirun. Thus, as the commercial importance of ʿIrāq declined, the trading centre of the Bahr Fāris was displaced to the south. The importance of Hormuz, which was visited by Odoric of Pordenone and Marco Polo, among many others, was well known in mediaeval Europe. About 893/1488-9 it was visited by Coviňhâ, the agent of King of Portugal, who was collecting information about the trade routes of Asia. It is not known whether his report reached Lisbon (see Bahr Al-Kulzum). The Portuguese were more successful in the Bar Fāris than in the Red Sea, partly because it was nearer to their base in India, and partly because neither Persia nor the Ottoman empire controlled its coasts effectively. Even Başra was often semi-independent under Muntakfī shaykhs. Albuquerque received the submission of Hormuz in 913/1507, but the disaffection of his captains forced him to withdraw. He established effective control in 921/1515 when he murdered the powerful saʿir, Raʾs ʿHamid, and built a strong fort. The Portuguese intermittently held Başrayn and intervened in the affairs of Başra. After the Ottoman capture of Bağdad (941/1534) Turkish influence began to be felt in al-Absā, especially at al-Kaft. ʿAbbās I encouraged potential rivals to the Portuguese, and English and Dutch factories were founded during his reign. In 931/1525 he granted the English the permanent treaty the dominant personality on the coast was Zayd b. Khalīfah, the Banū Yās Shaykh of Abū Zābī; commercially the most prosperous port became Dubayy, belonging to the cognate Al Bū Falas. The other states were ʿAdīnīm, Umm al-Kuwayn, and after 1285/1868 ʿAtar. Kalbā and Fūjayrā on the coast of the Gulf of ʿUmān were for a short time recognised as having separate status; the former was incorporated in al-Šārīkā in 1951. In recent years the presence, or suspected presence of oil on land or under the sea bed has given significance to frontiers which have rarely been defined with precision.

Bibliography: The bibliography of the Bahr Fāris is very large and cannot be given in detail. To the Muslim geographers summarised by le Strange and Schwartz, Iran, should be added the Haddīyat al-ʿAlām. On sources for the mediaeval history of the Bahr Fāris, W Hin, Quellenstudien zur Geschichte der Timuriden, in ZDMG, 1936, 361-3, 379-81; J. Aubin, Les Princes d’Ormuz au XVth siècle, in JA, 1953, with many further references; and some extracts from the Maḏāba’-al-Ansāb of Muhammad Shabānkārī. The principal European travellers are mentioned in A. T. Wilson, The Persian Gulf, Oxford 1928, which summarises, rather inaccurately, the modern history of the region. For trade and navigation, G. Ferrand, L’éditement parisiens dans les textes nautiques arabes, JA, 1924; Instructions nautiques et routiers arabes et portugais; Hadi Hasan, History of Persian Navigation; G. F. Hourani, Arab Seafaring. The chief Portuguese sources are Barros, Castanheda, Correa, Barbosa, the letters of Albuquerque, the Commentario of Albuquerque the younger, Tome Pines, and (written in Spanish) Teixeira and Faria y Souza. On the Dutch, H. Terpstra, De Opkomst der Westerzeerwarten van de Oost-Indische Compagnie; H. Dunlop, Bronnen tot de Geschiedenis der Oostindische Compagnie in Persië. On pearlting and modern sailing conditions, A. Villiers, Sons of Sinbad. For general description in modern times, S. B. Miles, Countries and Tribes of the Persian Gulf, and Wilson, op. cit. On the first English traders, Sir W. Foster, England’s Quest of Eastern Trade, and much source material in The English Trade, in India. On the period of British power two valuable sources which have been somewhat neglected are Selections from the Records of the Bombay Government, New Series, no. xxiv, and the Annual Report on the Administration of the Persian Gulf Political Residency and Muscat Political Agency; the published reports cover the years 1874/5-1904/5. Subsequent reports were not made available to the public. For laws and treaties, C. U. Alchison, A Collection of Treaties, Engagements and Sanads relating to India and neighbouring countries, vol. xii, 137-186; Persian Gazette, vol. 1 no. 1, supp. no. 1, Oct., 1953. Some further geographical books in the Bibl. of Aš-
The Bahr al-Ghazal then became an object of European imperial expansion. Two expeditions from the Congo Free State entered Dár Faṛṭṭī in 1894 and the chief of the Farūṭī tribe accepted Congolese protection. Thereupon the Mahdist governor of Dár Für, Mahmūd Abīnd, sent al-Khāṭīm Mūsā to expel the Europeans, who had however already withdrawn since the Franco-Congolese agreement of August 1894 brought the Bahr al-Ghazāl within the French sphere of expansion. A French expedition under J.-B. Marchand crossed the region and reached the White Nile at Fashoda in July 1898, whence they withdrew in December in consequence of the Anglo-Egyptian reconquest of the Sudan. An Anglo-French agreement (21 March 1899) marked the relinquishment of French claims to the Bahr al-Ghazāl, the Congo-Nile watershed being the dividing-line between the two spheres of influence. The frontier was defined finally in 1924.

The re-establishment of administration began with the arrival of an expedition under W. S. Sparkes at Masgra at-Rik in December 1900. The following years saw the opening of communications as the sadd was cleared and roads made. Patrols for exploration and pacification were sent out and government posts established. Roman Catholic missionary activity began in the western Bahr al-Ghazāl in 1903; the Anglicans started work in the eastern areas in 1905. The missions laid the foundations of an educational system, which has been increasingly subject to governmental control since 1925. Sporadic tribal troubles occurred for many years, otherwise the recent history of the Bahr al-Ghazāl has been uneventful.

Bibliography: See R. L. Hill, A Bibliography of the Anglo-Egyptian Sudan, London, for material to 1937, and A Biographical-Dictionary of the Anglo-Egyptian Sudan, Oxford, for short notices of leading personalities. There are numerous articles, especially on tribes, in Sudan Notes and Records, Khartoum, 1928—. Annual

BAHR AL-HIND is the usual name amongst the Arabs for the Indian Ocean, which is also called Bahr al-Zandj from its W. shores or—the part for the whole—Bahr al-Ḫabash. The expression Bahr Fāris also sometimes includes the whole ocean.

According to Ibn Rusta, 87, its E. shores begin at Tīz Mūrnā, i.e. H. S. H. al-Ḫina. Ibn I♂-Fidād, Taḥbīm, transl. ii, 27 = text, 22, gives Bahr al-Sīn as its E boundary, al-Hind as the N. and al-Yaman as the W., while the S. is unknown.

The various parts of the ocean bear special names derived from various lands and islands. If we neglect the N. arms, Bahr al-Kulzum and Bahr Fāris in the narrower sense, which are dealt with in separate articles, we have first Bahr al-Yaman stretching along the S. coast of Arabia with the Khūrīn Murīn (Kuria Muria) islands and Sūḳūṭrā. On the African coast we have, beginning at the strait of Bāb al-Mandab, first the land of Barbār, i.e. Somaliland to the harbour of Marka, then the land of the Zandj [see BAHR AL-ZANDJ] with the towns of Barawā, Malīnā, Mūnbāsā and the island of Zanzibār, i.e. roughly Kenya and Tanganyika Territory as far as the island of Kānalū. Sufālā is joined tc Kānbalū, and finally at an uncertain distance is al-Wākgwā (Madagascar).

If one sets out from Bahr Fāris at Tīz Mūrnā, one comes to the coast of al-Sind with the delta of the Indus (Mīhrān) and the commercial town of al-Daybul. On the shores of Bahr Lārwā (i.e. the sea of Lār or Gudjarāt on the W. coast of India) lie the towns of Kānbāš (Cambay), Sūhārā, Saymōr and Sindābūra (Goa). The archipelago of al-Dībādj (the Laccadives and Maldives) separates Bahr Lārwā from Bahr Harkand (Bay of Bengal with the waters to the S.). 'Harkand' has been explained to show. This idea is supported by Idrīsī, according to whom the name is Indian (Jaubert, Introduction, p. 36). But trade relations seem to have recovered to some extent, and became active again under the Mongols, as Ibn Bāḍān’s account of his voyage shows.

The notion of the Arabs of the 10th century concerning Bahr al-Hind became more and more vague as one goes to the E. and S., and the interpretation of their statements more uncertain. In many cases they have merely followed their Greek predecessors. They have in addition utilised the accounts of their own voyages. Details from different sources were never properly assimilated to form a uniform picture. Sometimes Bahr al-Hind appears to pass into the ‘Sea of Darkness’, in which mariners driven out of their course are said to be tossed about for ever. Sometimes it is believed that it joins the ‘Black Sea’ or ‘Sea of Pitch’ (al-Bahr al-Zifti) on the N. of Asia. Sometimes again E. Asia and S. Africa appear to be connected, as the use of the name al-Wākgwā [q.v.] for Japan (or Sumatra, cf. Ḫudūd al-Ālam, 228) as well as for Madagascar shows. This idea is supported by Idrīsī, according to whom the Zabadj islands are opposite to the land of the Kandj.

The voyages of the Persians and Arabs, who availed themselves of the monsoons, had as their starting-place the Persian Gulf. Šrāf and Sūhrā are important harbours there. The most important commercial centres appear to have been the land of the Zandj, to which merchants sailed even from al-Zabadj—Madagascar was ultimately colonised from the Malay islands—and al-Zabadj itself, which had relations with China. The commerce of the Muslims with China came to a standstill in 2648/298 after the sack of Canton in the course of a rebellion (Abū Zayd al-Ḫasān al-Ḫrāfī in G. Ferrand, Voyage du marchand arabe Sulaymān, 75 ff.; cf. Masūdī, Murūdī, i, 302-308). But trade relations seem to have recovered to some extent, and became active again under the Mongols, as Ibn Bāḍān’s account of his voyage shows.

Ṣhrāyīr, Ḫudūd al-Hind, (ed. van der Lith, with French transl. by M. Devic, Leiden, 1883-1886); Kāzwīnī, ed. Wünschfeld, 1, 106-123; Reinaud, Introduction, p. 34; J. Sauvaget, Relation de la Chine et de l'Inde, 34), while Šhāhī is S. Malacca. Voyagers sailing to China must have kept somewhat further N., for they touched at the islands of Lāŋkīvīlūs or Landjābīlūs (the Nicobars) to the N. of which are placed the Andamān islands, and from there reached Kālāh Bār (Kedah) on the Malay peninsula. The strait of Malacca is therefore called Bahr Kalah (Kalāh Bār), while Bahr Šhāhī, when it is distinguished from it, appears to be the sea adjoining it on the S. We have now reached the land of the Maharāḏī, the centre of which is the land of al-Ẓabadj. This name originally denoted Central and S. Sumatra, where Sūbuza (Ferrand’s reading) = Palengbang is to be sought for, then its use was extended to include Java (Diāba) and in its political application it includes a series of smaller islands and the coast of Malacca. Beyond these islands is Bahr Kardandj or Kardanjī, the Gulf of Siam, which is continued on the coast of Khūrīn (Kührīn = Cambodia) in Bahr Siān (Champa), the sea of Annan and the waters adjoining it on the S. Passing the island of Šundurfült (Hai-nan), we reach the Bahr Šankhāy (China Sea), where Khānūfū (Hang-Chu, Canton) is the great emporium for the trade with the West. The knowledge of the Arabs concerning al-Škilā, al-Sīlā (Korea) and the Wākgwā islands (?Japan) was vague and limited.

The last port on the Malabar coast is Kūlam Mall (Quillon), the outermost of its islands is Sarandāb (Ceylon). The route to the E. Indies appears to have lain straight across Bahr Harkand to the island of al-Rāmīn which is washed by the waters of Bahr Harkand and the Bahr Šhāhī. Al-Rāmīn (al-Rāml, al-Rāmīn = al-Lārmār), whence the sea there is called Bahr Lārmār is Sumatra, to be more accurate N. W. Sumatra (cf. J. I♂-Fidā, Taḥbīm, transl. ii, 27-30). The sea adjoining it on the S. is that of al-Ṣuljar and Sīla (Korea) and the Wākgwā islands (?Japan), which had relations with China. The commerce of the Muslims with China came to a standstill in 2648/298 after the sack of Canton in the course of a rebellion (Abū Zayd al-Ḫasān al-Ḫrāfī in G. Ferrand, Voyage du marchand arabe Sulaymān, 75 ff.; cf. Masūdī, Murūdī, i, 302-308). But trade relations seem to have recovered to some extent, and became active again under the Mongols, as Ibn Bāḍān’s account of his voyage shows.
The ranges of the Great Balkhān and Little Balkhān E. of Krasnovodsk, though not very high, are a conspicuous feature on the landward side. A modern estimate of the length of the Caspian is 760 miles. Al-Masʿūdī gives 800 miles in length, in breadth 600 miles or more (al-Tānīth, 60), but the latter figure is greatly exaggerated. Al-Masʿūdī is well aware of the fact that Bahr al-Khazar is unconnected with Bahr Māyyūtis (Sea of Azov) and Bahr Nītis (Black Sea) (Murādī, 1, 273-4).

For a long time the Khazars served as middlemen between the peoples of the North and the inhabitants of the lands of Islam. There is plenty of evidence of mercantile activity in both directions, for which the water-way was the Atīl (Volga) and Bahr al-Khazar itself. Eventually Russian warships began to make the descent of the Atīl through Khazar territory to the Caspian, and the presence of these marauders is a feature of the history of this part of the world for a considerable period from before A.D. 900. The Mongol invasions brought about the rise of new Muslim dynasties N. as well as S. of the Caspian. It is long since the Russian advance put an end to the power of the Khānates of the steppe, and at present Russia controls more of the coastline of the sea than did the Khazars at the zenith of their power.

north as Suez, but generally unloaded their goods at
Aden, Djidda or, in the 11th/12th century, at Moukhā. It was the caravan trade with Djidda that
gave Mecca its commercial importance in the 9th/10th century. Much merchandise, however, was
merely transshipped to smaller vessels; according to Abū Zayd the local craft used for this at Djidda
were known as Kulzum ships. Arab navigators thus had wide experience of the Bahr al-Kulzum and their
nautical treatises show sound practical knowledge; Ferrand considered the relevant sailing directions
in Ibn Mājīd’s Kitāb al-famā′id to be unsurpassed, except for their errors of latitude, by any European
directions for sailing ships for the area. The Muslim
geographers give the length of the Bahr al-Kulzum as 30 days’ sail, or as from 1400 to 1500 mil; this figure is
fairly accurate, but their estimate of the maximum
breadth, 700 mil, is more than three times too

The whole area within the strait of Bāb al-Mandab was thought to have once been a fertile country,
until a certain king cut a channel through which the
ocean could flow and destroy his enemy’s territory.
Another legend connected with the Bahr al-Kulzum is
that there is a magnetic mountain south of Kulzum, because of which local ships had to be constructed
without any iron parts. This is perhaps a fanciful
explanation of the fact that the local craft of the
Bah sak-Kulzum and the western part of the Indian
Ocean used to be made of planks, sewn, not nailed,
together; this practice is now confined to small craft
in the more remote places. The Bahr al-Kulzum was
also believed to contain an island inhabited by al-
Djassāsā, “the spy”, a creature which collected in-
formation for al-Djadidal. The sea in which Pharaoh
and his army were drowned was assumed to have
been some part of the Bahr al-Kulzum. According to
Yākūt the incident took place at Kulzum, according
to others, including Kāfkašandl, at Birkat al-
Gharandāl, on the coast between Kulzum and al-Ṭūr,
known as Surandala or Arandara to mediaeval
Christian pilgrims.

In spite of difficulties to navigation, the lack of
good harbours and the aridity of the littoral, the
position of the Bahr al-Kulzum and the Nile valley and the Mediterranean
was at one time facilitated by a canal, sometimes
called the Pharaonic, or Trajan’s canal, known to
the Arabs as Khilīj Amr al-Mumīnīn, which
entered the sea at Kulzum. Part of this canal, the
Wādī Ṭumlālāt, had once been a natural branch of the Nile extending to Lake Timṣāš; as the level of the
land rose it became useless for navigation. It
was cleared several times in antiquity and again by ʿAmr b. al-Ṭūr, who used it to send corn ships to
Ṭūr, then the port of Madīna, in the time of ʿUmar b. al-Khaṭṭāb. The Khalifā is said to have
refused to let ʿAmr dig a canal from Lake Timṣāš to
the Mediterranean lest it should enable Byzantine
ships to enter the Bahr al-Kulzum ʿAmr’s canal was
navigable only when the Nile was high; it was again
cleared in the time of al-Mahdī, but fell into disuse
soon after, though water sometimes flowed along it when there was an exceptional flood.

The trade of the Bahr al-Kulzum benefited from the
increased power of Egypt under the Fatīmids and the
concerning the decline of ʿIrāk. The Crusades,
stimulated the demand for oriental products in
Europe, and this transit trade became a factor of
great importance to Egyptian prosperity. In 578-9/1182-3 Renaud de Châtillon conveyed prefabricated
ships from the Mediterranean coast to Ayyālā where
they were assembled and launched to harry this
commerce. The Franks attacked ayyūba (g.v.) but
were defeated at sea by Ḥusām al-Dīn Luʾluʾ and
those who contrived to land in the Hijāz were
annihilated. According to Abū Shāma, Ṣalāḥ al-Dīn
ordered that no prisoner should be allowed to
survive, so that there should be no one who could
give information about the passage of the Bahr al-
Kulzum. Later, attempts were made in Europe to
ruin this trade by an embargo, but in spite of Papal
injunctions, it was never applied effectively. In the
early 8th/14th century Guillaume Adam advocated
that a Christian naval force should occupy Ṣuḵṭra
g.v. and blockade the entrance to the Bahr al-
Kulzum. About 893/1488 Pero da Covilhā, who
sailed from al-Ṭūr to Aden and later visited Mecca and al-Madīna, collected information about the trade
route for the King of Portugal; he was himself
detained in Ḡaṣṣa and it is not known whether
his report ever reached Lisbon. Having reached India
by sea in 903/1498, the Portuguese attempted
forcibly to divert the entire transit trade of the Bahr
al-Kulzum and the Persian Gulf to the Cape route
for their own profit. In the ensuing war against first the Egyptians and then the Ottoman Turks they
secured naval supremacy in the Indian Ocean. In
919/1513 Albuquerque, who hoped to join the Abys-
sinians in an attack on Mecca, unsuccessfully besieged
Aden and then entered the Bahr al-Kulzum. His
fleet was becalmed at Ḳamarān and suffered very
heavy casualties. His successor had the same
experience and, although in 947/1541 D. Estevão da
Gama sailed within sight of Suez and landed a small
force at Maṣaqawa’ (Massawa) to assist the Abys-
sinians in an attack on Mecca, usually sailed in disguise on native ships. Early in the
11th/16th century English (1025/1616) ships began to trade at Mukhā; they did
not often sail further north. Though Mukhā g.v. attained temporary importance as an outlet for the
coffee of al-Yamān (see ʿArab al-Gharbiyya) and Arabian
travellers, mostly missionaries going to Abyssinia,
usually sailed in disguise on native ships. Early in

The deepest part of its bottom is 2000 feet below sea level. An isthmus (likeki "taught") running out from its east shore separates the southern, quite shallow part from the northern basin. While on the East and West shores the mountains rise up from the shore to a height of over 3000 feet, in the north, at the mouth of the Jordan the land is low-lying, and in the south, where on the east shore of the sabhā, Pentapolis (Genesis xiv and xix) is to be sought, it only rises slowly into al-Gha'em and al-'Araba. The composition of its water, so extraordinarily rich in salt, is unsuited to organic life and is even an impediment to navigation. On only a few places on the shore, inhabited oases of almost tropical character have survived.

Geology. The Dead Sea fills the deepest part of the Great Syrian system of depressions which was formed at the close of the Tertiary period. In the periods of alternate drought and rain of the diluvial epoch, the great floods filled the greater part of the Jordan valley and a part of the 'Araba with an inland sea; this was never connected with the Red Sea. There being no exit to this basin the water, which, to begin with, flowed partly from springs rich in minerals, came in course of time, by evaporation to contain a high percentage of salt of peculiar composition. In the dry period of historic times the sea has dwindled into the area it at present occupies. In the last century a gradual rising of the level of the sea has been definitely ascertained. Tectonic disturbances have affected the surrounding district down to the present day. It is one of the most recent of these that the origin of the southern basin is due.

The procuring of asphalt from the Dead Sea, as in antiquity (cf. the name lacs "asphalt") seems to have been an important business in the middle ages, also. The asphalt was used as a protection against insects in vineyards. It was also used for many medicinal purposes. To the waters of the sea itself, healing powers were also ascribed.

The rich products of the oasis of Zogrā (near the modern ghuwar al-Sáhiya) were borne across the Dead Sea. The Frankish Crusaders also sailed on it.

BAHR AL-MAGHRIB [see BAHR AL-RUM].

BAHR MĀYUTĪS OR BAHAYRA MAZĪTII, the Classical Lake Maeotis, modern Sea of Azov. Other forms of the name are Māwīṭī (Māwīṭ). Bahar Māyutīs is constantly mentioned with Bahar Nītās, i.e., Bahr Buntus, [q.v.], to which it is joined by Khalīdī Nītās (Strait of Kertch).

According to Masʿūdī (Tanbāʿ, 66), Bahaya
Māyūṭis is 300 miles long and 100 miles broad. These dimensions, which are considerably exaggerated by Mas'ūdī, also states that it lies at the extremity of the inhabited world towards the N. in the vicinity of Tūlīya (Thule). The opinion which places Thule N. of the Sea of Azov is shared by Ibn al-Fāḍīl (8), according to whom one of the four principal seas (cf. article Bahr al-rūm, 4th paragraph) is that which lies 'between Rome and Khwarizm (as far as) the island of Tūlīya. No ship was ever placed upon it'. (Ibn al-Fāḍīl reckons al-Bahr al-Khazar or Caspian separately.)

Elsewhere Mas'ūdī says that the river Tānāis (Tanaïs, Don), which takes it rise in a great lake (unnamed) situated in the N., flows into Bahr Māyūṭis after a course of about 300 farsākhās through cultivated countries (Mūrūjī, i, 261). The great lake in the N., with which Bahr Māyūṭis is evidently confused, had already been mentioned by al-Kindī, his pupil al-Sarakhshī and others (Mūrūjī, i, 275).

It came to be identified with Bahr al-Warāŋk, properly the Baltic. Hence in a Syriac map of about 1150 A.D. the Sea of Azov is called 'Warang Sea' (A. Mingana, cited Hūdūd al-'Alam, 182; cf. 'Ali Kūnā al-Abbādīr, i, 100).

Mas'ūdī, who shows more interest in Bahr Māyūṭis and Bahr Nīṭas than geographers of the school of al-Balkhī (cf. supra p. 79), maintains that properly they form a single sea. He is concerned also to refute on the testimony of travelling merchants those who say that Bahr al-Khazar, i.e., the Caspian, communicates directly with Bahr Māyūṭis (Mūrūjī, i, 273). There is only the river route, via the Strait of Kerich, the Don and the At (Volga), using the Don-Volga portage, i.e., the so-called ‘Khazarian Way’ (cf. Murūjī, ii, 18 ff.).

His own account of Bahr Māyūṭis is by no means free from error, cf. above. He also appears to think that its waters are of greater extent and depth than those of Bahr Nīṭas or Black Sea (Mūrūjī, i, 273), which is the reverse of the case. Confusion is also introduced by the fact that Mas'ūdī occasionally speaks of Bahr Māyūṭis as Bahr al-Khazar (e.g., Tābīkī, 138), following popular usage.

In later times Bahr Māyūṭis was called Bahr Aẓāk, in Ottoman Turkish Aşak Denizi.

(D. M. Dunlop)

AL-BAHR AL-MUḤĪT, i.e. ‘the Encircling Sea’, also called Bahr Uṣūlānūs al-Muḥīṭ, or simply Uṣūlānūs, the circumambient Ocean of the Greeks (‘Okeanos’). By some it was named al-Bahr al-Aḥḍār, ‘the Green Sea’. It was regarded as enclosing the habitable world on all sides, or at least on three sides, W., N. and E. (Mas'ūdī, Tābīkī, 26), since the S. boundary of the inhabited world was the equator. According to Kāb al-Abbār (q.v.) reported by Kāzwinī (Cosmography, ed. Wüstefeld, i, 104), seven seas encircled the earth, of which the last enclosed all the others.

There was general agreement that the principal seas were directly connected with al-Bahr al-Muḥīt, with few exceptions, notably the Caspian (Bahr al-Khazar), but not the Black Sea (Bahr Būṭūs or more usually Nīṭas, [q.v.]), which was supposed to be an arm or ‘gulf’ of al-Bahr al-Muḥīt, like Bahr al-Maḡrīb, Bahr al-rūm, Bahr Warānk (Botan), Bahr al-Zanjī, Bahr Fāris, Bahr al-Hūnd and Bahr al-Ṣīn (the last four corresponding to the Indian Ocean and part of the Pacific). In general, these arms or ‘gulfs’ were thought of as forming an Eastern and Western system (Yāḵūt, Buldān, i, 504), meeting or at least approaching each other at the isthmus of Suez. There was some doubt as to whether the ‘gulfs’ were supplied from al-Bahr al-Muḥīt (the prevailing opinion), or vice versa, given that nearly all the rivers of the world flowed into it.

But while in theory al-Bahr al-Muḥīt was the circumambient Ocean, it frequently signifies simply the Atlantic. From another point of view, the Atlantic adjacent to Spain and N. Africa formed part of Bahr al-Maḡrīb (Kāzwinī, Cosmography, i, 123). In the sense of the Atlantic al-Bahr al-Muḥīt is synonymous with al-Bahr al-Muẓūm or Bahr al-Ṣūlmā or al-Zulūmāt (Sea of Darkness), applied to the N. Atlantic as descriptive of its bad weather and dangerous character (Jaubert, Géog. d’Edrīsī, ii, 352-356, cf. Dimashqī, ed. Mehren, 124). Conceivable among the islands of al-Bahr al-Muḥīt, apart from Thule (usually taken to be the Shetlands), which the Arabs knew from translations of Prolemy, were the Fortunate Islands (Canaries) and Britain (Barthāniyya, with variants). A persistent tradition, which seems to go back to a Classical source, gives the British Isles as 12 in number (Nallino, Al-Battānī, text, 26; cf. Mas'ūdī, Tābīkī, 68).

The Arabic authors agree that al-Bahr al-Muḥīt is impassable for ships (e.g. al-Kindī, cited Yāḵūt, Buldān, i, 500, speaking comparatively of the Atlantic Ocean, cf. Mas'ūdī, Mūrūjī, i, 275; Battānī, loc. cit.; Yāḵūt, Buldān, i, 504; Ibn Khādūn, Berbères, T.I. Paris 1925, 187-8). Perhaps this assertion is to be taken as applying in principle to the mythical circumambient Ocean. It is in any case certain that Muslim ships sailed in Atlantic waters. After a descent of the Norsemen on Spain in 229/844 the Atlantic coast was patrolled by Umayyad squadrons, perhaps as far as the Bay of Biscay. In 355/966 the coast of Spain, at Lisbon and Ḵaṣr Abī Dānīs (Alcacer do Sal), was attacked by Danish Vikings, who were met and defeated at Silves by the Umayyad fleet. In 387/997 the fleet brought the infantry of al-Muṣūr [q.v.] from the Atlantic port of Ḵaṣr Abī Dānīs already mentioned to Burtakāl (Oporto) by sea. (For these events, see Lévi-Provençal, Hist. Esp. Mus., i, Cairo 1944, 137, 218, 224, 393, 444.)

In these instances coastal operations are presumably intended. Therea re also some indications of ocean voyages in the Atlantic. Apart from the reported journey of Yaḥyā al-Ḡazālī to the court of the ‘king of the Norsemen’ after A.D. 848—variously localised in Jutland or Ireland—(refs. in Brockelmann, GAL., Sup. i 148; also H. Munis, Contribution à l’étude des invasions des Normands en Espagne, Bulletin de la Société Royale d’Etudes Historiques, Egypte, Vol. ii, fasc. 1, 1950), we read also of Khāshkhāsh of Cordova, who embarked in ships upon al-Bahr al-Muḥīt and returned with rich booty (Mas'ūdī, Mūrūjī, i, 258, cf. Lévi-Provençal, Hist. Esp. Mus. iii, 342, n.), and of the Adventurers (al-muqarrirūn—so read) of Lisbon, who sailed for many days W. and S. into the Atlantic and after whom a street was named in their native town (Jaubert, Géog. d’Edrīsī, ii, 26-7, cf. i, 200). An account of whaling in the neighbourhood of Ireland (Kāzwinī, Cosmography, ii, 388, quoting the 11th century Spanish geographer al-‘Uḍhrī) may also be mentioned here.

(D. M. Dunlop)
the Muslim conquests extended, these names were applied to the whole Mediterranean, for which Bahr al-Rûm is still in use. The Mediterranean was also called al-Bahr al-Shâmî, or al-Bahr al-Shâm, ‘the Sea of Syria’, and al-Bahr al-Maghrib, ‘the Sea of the West’.

The sea thus variously named, began, according to Arabic geographers, considerably to the W. of the Strait of Gibraltar (al-Zukák) and was a gulf of the Western Ocean (al-Bahr al-Mubţî al-Maghribî). Legend had it that Bahr al-Rûm was originally formed in what had hitherto been dry land, after the Strait had been cut, by the Banû Dalûka, descendants of a Queen Dalûka who was supposed to have ruled Egypt after the Pharaoh of the Exodus (al-Masûdî, Murûdî, ii, 398), in order to interpose a barrier between themselves and the king of the Greeks (al-Kazwînî, ‘Aḍîd’îb, 123), or the Strait was cut and al-Bahr al-Rûm joined to al-Bahr al-Mubţî by Alexander the Great at the request of the original Spaniards (Ishbânînî), who wished to be separated from the Berbers (al-Nuwayrî, Nîkâyât al-‘Arab, i, 231-232). A detailed account of the fabulous bridge which Alexander built on this occasion, with diagrams, is actually given by al-Dînâshdî (Cosmographie, ed. Mehren, 137).

Descriptions of Bahr al-Rûm regularly begin in the W. and proceed E., usually along the S. shore from Salâm or even Tangia (Tanger) and Sâbta (Ceuta) to Tarabûlus (Tripoli) and Alexandria, then past the mouths of the Nile, N. along the Syrian coast to Antâkiya (Antioch) and its harbour al-Suwaydîyâ, on to al-Thughîr (the Frontiers), then continuing W.-wards along the coast of Bilâd al-Rûm (Asia Minor) to Constantinople, al-Ârâ’l-Sâhîrîn (‘the Little Land’, i.e., mainland Greece), Bâdhûnûs (the Peloponnese), Kallauriya (Calabria), al-Ankuawarda (Lombardy), Ifrânjia (France), and S. again towards al-Andalus (Spain) (e.g., Ibn Hâwîlî ed. Kramers, 100-1). It is understood that a man could in theory at least make the circuit of Bahr al-Rûm till he reached a point in Spain opposite to where he started from, and that the countries lying to the S. of the sea are Muslim, while those to the N. are Christian. The dimensions of Bahr al-Rûm are variously given. Al-Masûdî (cf. L6vi-Provencal, ‘Introduction’, in the ‘World’s Knowledge’), in effect the whole of the Mediterranea, divided Bahr al-Rûm into five seas. The dimensions of the Mediterranean, the Caspian, the Black Sea, and the Indian Ocean, called by Mufcaddâsî, 14, Al-Masûdî, c. 935, in the 7th/8th century (Abu ’l-Fida’, Tabûsîn, Introduct., cglxvii).

Bahr al-Rûm is always regarded as one of the earth’s principal seas. Al-Mu’âsadâsî says that he knows only two, a Western, i.e., the Mediterranean, and an Eastern, i.e., the Indian Ocean, called by him al-Bahr al-Sini, ‘the Chinese Sea’. He mentions that to these al-Bâlîkîî added al-Bahr al-Mubţî, ‘the Circumambient Ocean’, and al-Dijâhânî a fourth and fifth, viz., Bahr al-Khazar, ‘the Sea of the Khazars’ (Caspian) and Khalîdî al-Kustânînîyâ, ‘Gulf of Constantinople’, i.e., the approaches to the Black Sea. Al-Mu’âsaddaî points out that the Kur’ân (Sûra lv, 39 ff.): ‘He has left unconnected the two seas which meet. Between them is a barrier which they do not transgress etc.’ As al-Mu’âsaddaî, 16, puts it, the ‘barrier’ is the isthmus between al-Fârâmâ (Pelusium) and al-Kûzûm (Clyma, mod. Suez), and it divides Bahr al-Rûm from al-Bahr al-Sini. He mentions that some interpreted another Kur’ân text (Sûra xxvi, 26): ‘If the trees in the world were pens, and the sea were filled thereafter by seven seas etc.’ with reference to the five already mentioned plus al-Mu’âfîbû, ‘the Inverted (Lake)’ (Dead Sea) and al-Khwarîzmiyya, ‘the Khywarîzmiyya (Lake)’ (Aral Sea). Another more reasonable list of the ‘Seven Seas’ is: Green Sea or Eastern Ocean, Western Ocean, Great Sea or Indian Ocean, Mediterranean, Caspian, Black Sea and Aral Sea (‘Hûdâd al-‘Alâm, 51-3). Al-Masûdî in one place places al-Dijâhânî in giving five: Indian Ocean, Mediterranean, Caspian, Black Sea and Circumambient Ocean (‘Tanbîh, 50-241) and elsewhere says that most people reckon four (Murûdî, i, 271), Black Sea and Caspian presumably counting as one, but cf. Ibn al-Fâkhî, 4-8. However many the seas were taken to be, the general view was that the Kur’ânic ‘meeting of the two seas’ (maghîma’l-bahrûn) was at the isthmus of Suez, though some thought in this connection of al-Zukák (Strait of Gibraltar).

The different parts of Bahr al-Rûm had special names, e.g., Bahr Tirân, ‘the Tyrrenian Sea’ (al-Râdî); Dînn al-Bânâdîkîyyînî, ‘the Gulf of the Venetians’ (Ibn Hâwîlî) or al-Khâlîdî al-‘Abâdî, ‘the Venetian Gulf’ (al-Ibrîsî), in effect the whole of the Adriatic; Khalîdî al-Kustânînîyâ, the Gulf of Constantinople, the approaches to the Black Sea. The Black Sea itself was Nîtûs, a stereotyped mistake for Buntûs (Pontus), which perhaps survived in some MSS. The Sea of Azov was Mâyûtûs (Maeotis). It was correctly realised that the two last-named seas were connected with each other and Bahr al-Rûm, but uncertainty and error attended the attempts made to explain the relative positions of the Black Sea and the Caspian (Bahr al-Khazar). Ibn al-Fâkhî (cf. L6vi-Provencal, ‘The geographical names of Bahr al-Rûm’ and Al-Fâkhî, 7, 299) gives the boundaries between the Caspian Sea and the Black Sea and the Baltic (Bahr al-Wâranû, ‘Sea of the Warangians’) or the Arctic Ocean, of which the Arabs could scarcely have had direct information. The tendency to regard the seas last mentioned as connected with Bahr al-Rûm is illustrated in the maps of Ibn Hâwîlî.

Various islands of Bahr al-Rûm came to be known at an early date. Kubrus (Cyprus) and Arwâd (Aradus), the little island off the Syrian coast, were the first to be occupied, under Mu’âwiya, and before his death (60/680) Rhodes, Crete and Cyprus. Al-Î斯塔khri, 70, earlier had mentioned the same three, with the addition of a fourth, Diabâl al-Kâlîlî (cf. Ya’kût, i, 392), identified by Reinaud (Marâsad al-‘Itîlîî, ed. Juynboll, v, 27) with Fraxinetum, now Gerde-Freinet on the French mainland E. of Marseilles, from which between circa 894 and 972 the Arabs raided as far as Switzerland (cf. Lévi-Provençal, Hist. Esp. Mus., chapter 5). This identification is confirmed by Ibn Hâwîlî ed. Kramers, 304, who mentions the place as being ‘in the territories of France, in the hands of fighters for
the faith (bi-nawdhi Ifrandj_a bi-aydi al-mudidhidin]. It appears on Ibn Hawkal's map as an island (al-waylā bi-barq, i.e. a large island, cf. also Murūdī, i, 99). For Bahr al-Rum, see also the map of Genoa also shown as an island.

Other islands in the sea are mentioned by al-Kazwini (‘Adīd-jab, 124-125). The best description which we have of them is in the text and maps of al-Idrisī (see Bibliography).

Features of Bahr al-Rum which attracted attention were the comparative absence of tides and the recession of the coast, both noted by al-Mas'ūdī (al-Tanbih, 70, 132), the latter phenomenon at Ephesus (unconfirmed). Al-Mas'ūdī notices the volcanic activity of Mt. Etna (Dīalab al-Burkān, Ṭūmara Sīkilkilyya, Murūdī, ii, 26; al-Tanbih, 59). He also tells us that Harūn al-Rashīd wished to join Bahr al-Rum to Bahr Kūlzūm (Red Sea), but was dissuaded from the attempt by Yahyā b. Khālid the Barmecide, who represented that if he did so, the Greeks would pass through and interfere with the pilgrimage to Mecca (Murūdī, iv, 98-99).

Though at first the Greeks retained command of the sea even after their defeats on land, this was soon lost to them by a series of Muslim naval successes following which the Battle of the Masts (Ḍaḥāt al-Šawwār) is the most famous (fought off the Lycian coast in 34/655). It appears that former Byzantine naval installations in Syria and Egypt, and trained personnel, were now employed against them, to secure the command of the E. Mediterranean for the Arabs. This they for the most part retained throughout the Umayyad and early ʿAbbāsid period, during which Constantinople was attacked repeatedly. There appears to have been some resurgence of Greek naval power in Harūn's Caliphate (cf. ibn Ṣawrān), when the Byzantine warships which brought Muslim prisoners for ransom to al-ʿĀlima, Lamu (Cicilia) in 188/805 made a considerable impression (al-Mas'ūdī, al-Tanbih, 189). In 311 or 312/923 or 924 a Muslim fleet with units from al-Baṣra and Syria sailed from Ṭarsūs under an admiral (mustawalli al-ghawr fil-bahr) and operated successfully in the N. waters of al-Bahr al-Rum, reaching Venetian territory and making contact with a detachment of Bulgars, some of whom returned with them to Ṭarsūs (al-Mas'ūdī, Murūdī, ii, 16-17; Ibn al-ʿĀthīr, s. anno 312). Yet later under al-Muqtadīr (Caliph 295/908-320/932) Greek ships regularly made extensive raids on the coast of Syria, and it was in his Caliphate that the command of the E. Mediterranean was lost (Ibn Ḥawkal, ed. De Goeje, 128-37; ed. Kramers, 190-205 with the maps facing pp. 8 and 66, as well as that on p. 193; Muḥaddasīs 14-19; Ṣawrān, i, 504-5; Kazwini, ‘Adīd-jab al-Mahdijāb, 123-7; Nuwairī, Nihayat al-Arāb, i, 231-236; Idrīsī, transl. Jaubert, i, 5-6; ii, 1-13, 16-19, 35-48, 68-135, 226-304, etc. (by far the fullest account, but less useful for the early period); for Idrīsī's maps, K. Miller, Mappae Arabicae, Stuttgart 1926 and later; Anonymous Chronicle of Sicily in Amari, Biblioteca Arabo-Sicula, text 165-176; transl. 70-74; P. K. Hitti, History of the Arabs, ed. 6, Princeton 1956, index.

(D. M. DowLO)

In the Ottoman Empire the Mediterranean was known as Ak-deniz, the Black Sea, whence the Persian Bahri Saifid and Dārāyī Saifid and, probably the colloquial Greek θάλασσα Θάλασσα. In Ottoman usage it included—and seems at times to have been restricted to—the Aegean sea, the islands of which were called Djecaer-i Bahr-i Saifid. The name, which appears to have no Greek, Byzantine, or Islamic precedents, is of uncertain origin. It may have arisen in contrast to Kar-daniz, the Black Sea, on the other side of Istanbul. A full cartographic treatment of the Mediterranean Sea will be found in the famous Atlas presented in 930/1523 to Sültan Sulaymān by Pirī Re'is [q.v.]. There are also descriptions in the travels of Ewliya Celebi (Seyyidatnâme, i, 40 ff. and vii, passim), in the maritime history of Hādīqī Khatīfī (Twāfat al-Kibar, 3 ff., English trans. by J. Mitchell, 3 ff.), and in his Dżehānnâme 76. [ED.

BAHR AL-ULÜM ("Ocean of the Sciences"), honorific title of ABB al-ṢAYYĀB ABD AL-ʿALĪ MUHAMMAD b. NIẒĀM AL-DĪN MUḤAMMAD b. KUṬB AL-DĪN AL-ANŠĀRĪ AL-LAŃKAWI, a highly distinguished Indian savant of the 15th century. He was a pupil of the famous Khwaḍīja Ṣabl Allān Anṣārī Harawī, whose descendant Shaykh Ṣubḥ al-Dīn (ʿAbd al-ʿAlī's tenth ancestor) came from Harat to India, and now lies buried at Barnāwā (between Muḥrār and Delhi). The next generation settled in Sihāl, a town near Lucknow. Under Awarangīzb, the family shifted to "Farangi Maḥālāt". Lucknow, (for which see Rahman A., Tadhkira Airtā, i, 231-236, 168; cf. al-Nadawī), ʿAbd al-ʿAlī's grandfather Mullā Kūtb al-Dīn (d. 1191/1780) and his father Mullā Niẓām al-Dīn (d. 1167/1754); Azād, who met him in Lucknow in 1148/1736 praises him highly, see Subḥat al-Mardawī, Bombay 1303, 94) were noted men of learning, and were the real founders of the fame of the family in India—a family in which learning had flourished for centuries, from generation to generation. Born in Farangi Maḥālāt in 1144/1731-32, ʿAbd al-ʿAlī studied with his father, and completed the usual course of Islamic studies with him at the age of seventeen. After the death of Sicily, where the Fāṭimids were now in possession (al-Dhahabī, Duwal al-Islām, s. anno). Thereafter the Muslim threat to Italy subsided.

Bahr al-Rum was never a Muslim lake, since even at the heyday of their power the Arabs never controlled its northern shores. From the time of Charlemagne onwards there is evidence of Christian maritime enterprise. This gradually increased in importance as the centuries passed, in spite of the decline of Byzantium and the renewed Muslim advance, when the Ottoman Turks in the 10th/16th century came to control the coast of Bahr al-Rum, by them usually called the White Sea (Ak Deniz), from the Peloponnesse to Algeria.

(D. M. DowLO)
his father he continued his studies with Mulla Kamāl al-Dīn al-Sihālahī al-Fatḥpūrī (d. 1773/1776), a pupil of his father. He started his career as teacher and author in Lucknow, but because of a Sunni-Shī ḍī dispute, he moved first to Shāh-dīlahnpūr, where he stayed for twenty years, then to Rāmpūr (cf. Nadīm al-Qāhīrī, Abhār al-Ṣanādīd, Lucknow 1918, i, 600, 596), where he stayed for four years, later to Būhār (in Bārdwān, Bengāl), and finally to Madrās, at the invitation of the Nawwāb of Kamātāk (Nawwāb Wālādāg Mūḥāmmād Allā Khān=d. 1280/1765), originally of Gopāmā, near Lucknow. He went to Madrās accompanied by six hundred scholars (ridgāj al-ʿUlūm). The Tālādāg showed him high regard, and showered favours on him and his companions, built a large madrasa for him, and gave stipends to his companions and pupils who collected there from near and far. The Nawwāb’s successors continued to show him the same favour till the end of the rule of Wālādāg and the establishment of British rule in Madrās, and even then the monthly provisions and gifts continued to be offered him, as also to the other teachers and students of his madrasa. He never returned to Lucknow, and died in Madrās on 12 Rājab 1225/13 August 1810, and was buried close to the Mosque of the Wālādāgāh in that city. (For his children see Alātāf al-Rāhmand, Āhāwāl 64 f. and for his distinguished pupils, Ḥadāʾikh, loc. cit.). It was the Wālādāg who gave him the title of Bahr al-ʿUlūm as (usually stated, but cf. Alātāf al-Rahmand, Āhāwāl, 65, where it is stated that Shāh Wālā Mūḥāmmād allā ḥa (g.v.) gave him the title, also the title of Malik al-ʿUlām). The former is better known in North India, the latter in South India. Apart from teaching him, his father had initiated him into esoteric sciences also (Alātāf al-Rahmand). He belonged to the mystic school of Ibn al-ʿArabī and had complete faith in the truth of the Shaykh’s expositions as given in the Fusūs and the Futūḥāt. In fact his Fungūs in the light of the Shaykh’s above two above two works (see the Mūlla’s Arabic introduction to the Shāhk). He also wrote a Commentary on a section of the Fusūs (viz. al-Fusūs al-Nāši, Brockelmann S I 793). Even on his death-bed he stated he was realizing the truth of the Shaykh’s doctrines (Aghsān).

He is praised for his courage, generosity, self-denial and ascetic character. He spent most of his long life in teaching and writing, and wielded a profound influence on his contemporaries in India, whom he excelled in versatility of erudition and critical acumen. “The like of him was not to be seen in India of the later times” (Nūshā). His fields of specialised study were fiṭḥ and ṣuṣal on the one hand, and the philosophical sciences on the other. He wrote many works in Arabic—unusually good classical Arabic, and in Persian. As a rule they are, according to the fashion of his time, commentaries, glosses and super-glosses on most of the usual text books.

Some of his other more important works are given below:

c) Principles of Jurisprudence (Usūl al-Fikāh).

Fawūdī al-Rahmand (Shāhk of the Musallam al-Thūbāt of Muḥibb Allāh Bihārī, d. 1219/1707). Lucknow 1872, 363; Risāla al-Ārkān al-ʿArūs ‘a fiṭḥ (Brockelmann S II 652); Tanwīr al-Ṣanār Shāhk al-Mansūr (in Persian) (Brockelmann SII 264); Tabhīr-i ‘Abd al-Mahdī al-Mahdī (a Supplement to his father’s Commentary on Ibn Humām’s Tabhīr iṣ ‘Uṣūl al-Dīn (Zubayd Ahmad 385, JASB vii, 695); Shāhk Fikh ‘Abd al-Rahmand (Allīn ‘Allī, 123).

d) Ḥadāʾikh. Risāla ṭaṣābīḥ al-Ḥadāʾikh (Zubayd Ahmad, 385).

BAHR AL-ZANDJ. By the Bahr al-Zandj the Arabs mean the W. part of the Indian Ocean, Bahr al-Hind (g.v.) which washes the E. coast of Africa from the Gulf of Aden i.e., the Ḥalīdī al-Barbārī to Sufāla and Madagascar, which was as far as the scanty knowledge of the Arabs extended. The name is derived from the adjoining coast, which is called the Khalīj al-Barbārī to Zfīyya (or Ṣfīyya) Ḥalīj and Cosmas Iōnupelus of Ṣfīyya (or Ṣfīyya), but Herodotus mentioning in his inscription of the Sānādī Nāris Ḥanḍafīr Ḥalīj (Pāshūlī, I, Berlin, 1924, 119) is now not accepted (cf. W. B. Henning in Studies presented to Vladimir}
The name Bahrain or Vahram (from the Avestan Verethragna), was that of five emperors of the Sasanid dynasty (the 4th, 5th, 6th, 12th, and 14th). Very little is known about the reign of Vahram I (273-276 A.D.), son of the great Shapur II, who was a feeble prince, like his uncle and elder brother who had preceded him on the throne. In his great literary production he treats of theological as well as profane themes. Apparently original works are: Muwahib al-Kuddis fi Manadib Ibn al-'Aydarus (cf. Serjeant, Materials, 586; on this teacher of his see art. 'AYDARUS, No. 2); Hilayat al-Banadi wa 'l-Basirin fimda yawdhu ila yasbi min Amer al-Din; 'Ibad al-Durar fi 'l-Ma'ani bi 'l-Kudsi b, 'l-Jabbli' (ibid.); Il-hul al-Kawl bi 'l-Takhtu wa 'l-Tahsit; al-Tahsiri al-Ahmadiyya fi 'l-Sira al-Nabawiyya; Tarbit al-Suluk Islah Mulak (cf. Brockelmann, I, 444); al-'Urwa al-Wuthqa hadsa (Walik), with comm. al-Hadiqa al-Wakba (Brockelmann, II, 555). Abridgments: al-Ashril al-Nabawiyya < al-Akhbar al-Nawawiyya, i.e., Hilayat al-Abrir (Brockelmann, I, 397); Dakhkral al-Thawir < K. al-Israkh al-Karim (?); Mulq al-Azmad < al-Imad al-Akrim al-Samad of al-Aduwalli (Brockelmann, S. II, 27); he also abridged al-'Askari's K. al-Awali (Brockelmann, S. I, 194), al-Sakhawi's al-Mamadi al-Basana (Brockelmann II, 32) and the Mundhirit's al-Tarikh < 'l-Tarkib (Brockelmann, I, 629). Commentaries: al-'Ahdal al-Maddiya, on al-Yahi'is famous hadsa (Brockelmann, I, 228); Tuhayfat al-Akhbar wa Turjalt al-Akhbar on al-Hariri's Muhtal al-Ifrad (Brockelmann, I, 350); Nasr al-Atam q Brain Lamiyyet el-Ahdam (Sarkis, 533; in reality an abridgment of al-Safadi's comm.); on Ibn Malik's Lamiyyet al-Af'al (ibid., cf. Brockelmann, I, 300; S. I, 526). In minor risalitas he treated of arithmetic, astronomy and medicine. Specimens of his poetry are given by al-'Aydari and al-Sakka'f (v. infra).

BAHRAM (derived, via the Pahlawi nahr 'in, from the Avestan vehragna), the name of the Zoroastrian god of victory (cf. Benveniste and Renou, Vrtra et Veragna, chap. 1, particularly 6 and 31); from his name is derived that of one of the principal sacred fires of Iran, Vahrarn (more recently Vahram (ibid., 72); he presides over the 20th day of the solar month which bears his name and which has kept it in the Persian calendar recorded by al-Biruni (ibid., 83); al-Biruni, Cronol. 53). This name Bahrain or Vahram was that of five rulers of the Sassanian dynasty (the 4th, 5th, 6th, 12th, and 14th). Very little is known about the reign of Vahram I (273-276 A.D.); he gave the Zoroastrian clergy full powers against Mānī, who was executed, and died in 276 A.D. A bas-relief of Shāpūr depicts the investiture of Vahram (A. Christensen, L'Instr. sous les Sassanides, 226-7). Under his son and successor, Vahram II (276-93 A.D.), war again broke out between Rome and Iran; the sudden death of the emperor Carus, who had reached Ctesiphon, compelled the Romans to retreat; nevertheless Vahram ceded to them Armenia and Mesopotamia in order to obtain peace (283 A.D.) and free his hands to suppress the revolt of his brother who, as governor (khwānsād) of Khurāsān, had ambitions of carving out a great kingdom for himself; Vahram II appears on several bas-reliefs (Christensen, op. cit., 228 f.). His son and successor, Vahram III, was defeated by his great-uncle, during the four months of his reign (293 A.D.), Vahram IV was killed in Aden and found favour with its governor, the Amr Marājān. After the death of his patron in 327/328 A.D. he went to India and obtained the patronage of the sultan of Gujrat Mūsaffār Shāh, but he soon had to leave the court and died in Ajmadābād, perhaps in 'negro'.

Minorsky = BSOAS., Vol. XIV, 1952, Part 3, 515). The name itself has been explained as from Persian zandju (Zoroastrian Pahlawi, Zangik, Zang, Zangi = 'black' or 'nachro'), but perhaps it is of local origin. Nowadays it is applied to the island of Zanzibar and to a tributary of the Zambesi which bears the name of Zangue. The Arab notices of the coast and sea of the Zandj are more than scanty and partly contradictory. The sea was feared and avoided. Only the Arab travellers Mas'tudi and Ibn Bahri, sailed across it, but they tell us more about the land and its people than about the sea itself. Whales and whaling are sometimes mentioned, and it is remarkable that the word used for whale (wadi, wadd) resembles the form of the name in the languages of N. Europe (Sulaymān the Merchant, Arabic text edited by Langles, 4, 138-141, in Reinaud, Relation des voyages faits par les Arabes et les Persiens etc., Paris 1845, transl. G. Ferrand, Voyage du marchand arabe Sulayman, Paris 1922, 30, 132-133; cf. Mas'tudi, Muraddi, i, 234, 334). It is clear that the Arabs imagined the coast to run in quite a different direction from what it actually does. W. Tomaschek gave reconstructions of their cartographical notions in his Die topographischen Kapitel des indischen Szeispiegels Moḥīd (Vienna 1869).

Notices from the Arab geographers of the sea and land of the Zandj were collected by L. Marcel Devic (Le Pays des Zandis, Paris 1883). See also Ḥuwād al-ʿĀlam, 471 ff., and T. A. Shumovsky, Tr. neissoniye Lotisi Akhmad ibn Mādshīda, arabskogo Lomstana Vasko da Gamma, Moscow 1957. Navigation on this part of the Indian Ocean is regulated by the periodic monsoons, whence the ancient relations between S. Arabia and N.-W. India and the E. African coast. For further information see the articles Bahor al-hind and Zandj. (C. H. Becker-[D. M. Dunlop])

Bahr al-zulumât [see al-bahr al-mushif].

Bahrā (nība Bahrān), a tribe of the Kudā' group, sometimes reckoned a part of Djudhān, which emigrated northwards to the Euphrates and then to the plain of Hīmā. Like their Euphrates neighbours Tagihāb and Tanūkh, they became Christian but were converted after Tagihāb, probably about 380. A deputation came to Muḥammad at Medina in 9/630 and became Muslims; but the tribe as a whole remained hostile and attached to Byzantium. In 8/629 Bahrā' had been among Heraclius' Arab allies who confronted Muḥammad's Mu'ta expedition; in 15/635 they were summoned to help the people of Dumat al-Jandal when Khlīd b. al-Walid approached; and they were in the Byzantine military coalition of 13/634, along with Kalb, Salīb, Tanūkh, Lakhm, Djudhān and Ghassān. However, they were forced to become Muslims when Syria was conquered.

Bibliography: Hamdān, 132; Mufaddaliyyād, 417, 427; Tabari, i, 1611, 2060, 2081, 2114, 2122; Piellhausen, Sīrāzīn, iv, treaty no. 115; Wādīdī (Weißenauer), 325, 311; Ibn Khaibān, no. 46; R. Duussaud, Topographie historique de la Syrie, Paris 1927, 146. (C. E. Bosworth)

Bahrān [see al-bahrān].

Bahrāk, Dīmāl al-Dīn Muḥammad b. ʿUmar b. Muḥārab b. ʿAbbālān b. ʿAli al-Ḥīmīyār al-Ḥadramī al-Shafīʾi, S. Arabīān scholar and šīfi b. 869/1465 in Sayyūn, d. 930/1524 in India. After studies in Aden and Ṣabīr he was kādi of Shībār for some time, then settled in Aden and found favour with its governor, the Amr Marājān. After the death of his patron in 927/1521 he went to India
thrones; the feudal lords regained the initiative of which they had been deprived by Shapur II; under Vahram IV, Armenia was partitioned between Rome and Iran which kept the larger portion. Vahram V (420-38 A.D.), surnamed Gür ("the onager") on account of his vigour, after spending his youth in the care of al-Munshīr I, the Laḫmīd king of the Arabs of Hīrā, had to regain the throne, with the aid of this king, from the nobles who had put his elder brother to death and proclaimed ruler a prince from a side branch of the family; he made himself popular by his benevolence to all, his tax remissions his bravery, his love-affairs and his hunting exploits (commemorated by poets and illuminators of manuscripts); he left the great dignitaries a large measure of initiative in the direction of affairs (notably to Mihr-Narsa); he himself led an expedition against the barzarians of the Marw district; because of persecution, many Christians took refuge on Byzantine soil; this caused a short war, unfavourable to Iran, as the result of which freedom of worship was granted to Christians in Iran, by treaty (422 A.D.); it is not known whether Vahram V died a natural death, or as a result of a hunting accident.

In addition to these five kings, a usurper named Vahram Čūbin, who claimed to be descended from the Arsacid kings, became in 569 A.D. the leader of a formidable insurrection, during the reign of Hormīz IV, who was a distinguished prince, tolerant in matters of religion, but had set the feudal lords against him self because he firmly maintained his rights against them; Čūbin, who had gained military successes against the peoples north and east of Iran, but had been dismissed after his defeat by the Byzantines, rebelled, and seized power after the assassination of the king; the latter's son, supported by the Byzantines, the Armenians and a section of the Persians, broke the long resistance of Vahram, who took refuge among the Turks and was killed soon afterwards; his powerful personality ensured the perpetuation of his name: a popular romance, in the Pahlawi language, related his exploits, before the historians and poets of the Islamic period (see A. Christensen, Romanes Bahram Tschibten, Et Rekonstruktionsversuch, Copenhagen 1907). Several other personalities have borne this name (Christensen, Sassanides, index, s.v. Vahram).

**Bibliography:** Christensen's book supersedes earlier works, which he uses and quotes in the notes. For a history of Bahram Gür in verse, see Firdawsi, Le Livre des Rois, trans. J. Mohl, 1878, v, 442-856; vi, 1-64; Najmī, Al-Haṣf Pasargān, trans. C. E. Wilson, London 1924; on Bahram Čūbin, see Firdawsi, op. cit., vi, 460-568, vi, 1190. **BAHRĀM**, Christian. Armenian general who served the Fāṭimid[s in Egypt and was murdered by the sword from 529-31/1135-7 to the caliph al-Hāfīz (525-44/1130-49).

The circumstances and date of his entry into Fāṭimid service are unknown. Many Armenians, in the 5th/11th century, went to Egypt, taking advantage of the fact that the waqirate was on several occasions held by men of Armenian origin such as Bahram al-Dīmālī (466-87/1074-94), his son al-ʿAḍal (487-515/1094-1122), the latter's son (525-6/1130-1) and ʿYānis (526/1131-2). Perhaps these circumstances brought Bahram to Egypt. According to tradition, he came from a region where an important Armenian colony had been established, Tell Bāghir north-east of Aleppo. A nobleman of the Tell family, he was driven from there by a revolution and had to leave the country. It seems that he came from a noble Armenian family which claimed to trace its descent to the Pahlavuni, and was the brother of the Armenian catholics of Egypt, Gregory, who arrived in Egypt and was consecrated there in 1077 or 1078. At all events, Bahram followed a military career, and became commander of an Armenian corps, and then governor of the western province of the Delta (al-Gharbiyya).

As a result of the rivalry between the Caliph's two sons Haydara and Ḥasan, and the seizure of power by the latter in the capacity of waṣīr, a military revolt broke out, and Ḥasan, unable to deal with it, summoned Bahram to his aid. When Bahram arrived with his Armenian troops, Ḥasan had already been assassinated. The Caliph entrusted the waqirate to Bahram, although he was a Christian (Djiμmādī II 529/March 1135), and the curious situation then obtained of a Christian, who was waṣīr of the sword and absolute master in Egypt, bearing the titles of Sayf al-Islām and Tādā al-Dawla. The pro-Armenian policy of Bahram, who encouraged the immigration of his compatriots and secured their installation in important posts, provoked a popular reaction and a military revolt led by the governor of al-Gharbiyya, Riḍwān. Bahram, abandoned by the Muslim troops in his army, had to leave Cairo (Djiμmādī I 531/February 1137), and marched towards Kūs where his brother Vasāk was governor. Vasāk, however, had been assassinated by the populace, and Bahram, after exacting a bloody revenge for murder of his brother, left Kūs. Riḍwān, who had been appointed waṣīr, sent an army against him, but, by an arrangement to which the Caliph was doubtless not a stranger, Bahram was allowed to retire to a monastery near Iḵrāmīm where he remained until 533/1139. As the Caliph was displeased with Riḍwān, he recalled Bahram, who was by then a sick man, to Cairo, and installed him in his palace; he consulted him frequently, but did not give him the title of waṣīr. Riḍwān was then deposed.

Bahram died in the palace on 24 Rabīʿ I 535/7 December 1140, mourned by the Caliph al-Hāfīz, who followed his funeral cortège as far as the Monastery of the Ditch, outside Cairo, where he was buried.

BAHRAM SHAH b. Tughrud SHAH, the Sultán of Ghazna, was raised to the throne of Ghazna by the Atabeg Mulayyad al-Din Rayhán in succession to his father on the latter's death in 655/1155 but soon afterwards had to make way for his elder brother Arslán Shah [q.v.]. The two brothers thereupon fought with one another with varying success till the death of Bahram Shah in 575/1174-5.

BAHRAM SHÁH, AL-MALIK AL-AMDJAD, b. Farrúkh Sháh b. Sháhsháh Sháh Ayyubí, grand-nephew of Saláh al-Dín, was appointed by the latter to succeed his father at Baíbak when the latter died in 580/1182 (Imad al-Dín al-Ishâhání, al-Bark al-Shámi, Bodl. MS. Marsh 424, 946, followed by Abu Sháma, Rawdatayn, Cairo, 35; and kept Baíbak when the Ayyubid territories were divided up after the death of Saláh al-Dín. From then on he seems always to have been a faithful vassal of the Ayyubid ruling at Damascus (Ibn Wásíl, Músarratí, years 599, 603, 606, 618, 623). At the end of his life, however, he was forced to fight against those who wished to found up the ambitions of the Malik al-Ázíz Ulláman of Báníyás, son of al-Malik al-Ádí; al-Nâşir Dá'd of Damascus defended himself against him, but when al-Malik al-Kámil and al-Malik al-Ashraf settled their differences in order to seize Damascus from Dá'd, Bahramsháh was assassinated; after ten months of blockade, al-Ashraf annexed Baíbak, and Bahramsháh went to Damascus (606/1208); the following year he was assassinated by a slave who bore a grudge against him (Ibn Wásíl, years 625-627; Sibt Ibn al-Dhawi, Mir'ád al-Zamán, ed. Jowett, 441).

Among his contemporaries, Bahramsháh was famous less as a prince than as the most eminent man of letters among the Ayyúbíds; he had a small court of scholars, and himself composed a diván of poetry, which has been preserved but not published (J. Rikabi, La poésie profane sous les Ayyúbíds, 222 and n. 3).

AL-BAHRAYN, "the Two Seas", a cosmographical and cosmological concept appearing five times in the Kur'án (once in the nominative, xxix, 12).

The two seas are described as being one sweet and one salt and bitter (xxv, 12; xxv, 53). Fresh meat and ornaments are taken from the two seas, and on them boats are seen (xxxv, 12). Tabarí (Tafsír, xxv, 55) says the fresh and sweet denote the waters of rivers and of rain, the salt and bitter the waters of the sea.

The two seas are divided by a barrier, called a barázah (xxv, 55), on the one side is a barázah (xxvii, 61). Muslim scholars provide several explanations for this concept, among which is the view that there is a sea in heaven and a sea on earth separated by a barzakh (xxv, 53). Others

BAHRAM — AL-BAHRAYN.
have the two seas meeting at Būb al-Mandah [q.v.],
at the connexion between the Sea of Jordan and the
Red Sea, or at the Straits of Gibraltar [e.g., Kurītbūl].
As Wensinck points out in "al-Khādir" in EI I,
"A far fetched explanation is that the union of the
two seas means the meeting of Mūsā and al-Khādir,
the two seas of wisdom'.

After the capture of Constantinople, Mehemmed II
assumed the title Sulṭān al-bahrāyin wa 'l-bāṭān
"Sulṭān of the two lands and the two seas", and
this was among the titles used by succeeding
Ottoman rulers.

**AL-BAHRAYN** (officially written Bahrain) is a
British protected state in the Persian Gulf consisting of
an archipelago of the same name lying between the
peninsula of Kātār and the mainland of Saudi
Arabia, as well as another group of islands, of which
Hūwar is the largest, just off the west coast of Kātār.
The Ruler of al-Bahrayn and the Ruler of Kātār
disagree regarding the status of a small area sur-
rounding al-Zubārā in north-western Kātār.

The variety of explanations, none of them convi-
cing, of the name al-Bahrāyin in the Arabic sources
indicates that its origin remains unknown. In pre-Islamic and early Islamic times the name applied to
the mainland of Western Arabia, embracing the
oases of al-Κaṭf and Ḥadjar (now al-Ḥasā) [97v.]; later it was restricted to the archipelago offshore
[cf. History below].

The largest island (Uwāl or Awāl in the older
Arabic sources; now called al-Bahrāyn) is about 30
miles long and 12 miles at its greatest breadth. The
capital, al-Manāma, on the northeastern coast,
is connected by a causeway 1 ½ miles long with the
town and island of al-Muḥarrāk to the northeast. Other
islands are Sītra, from which an oil loading wharf
extends to deep water; al-Nabīl Shālīb; Umm al-
Ṣiḥbān; Dūdā, once a quarry and now a peniten-
tiary; and Umm Naṣān (also called al-Nasān). The
climate is hot and humid, though rainfall
averages only about 7 cm. a year. A number of
flowing springs (kawdkib) also bubbles up through the salt water of the
imbayd. Alfalfa, and vegetables are the principal crops, and some
sheep are kept for milk.

Geologically the island of al-Bahrāyn is an elongat-
ed anticlinal dome of sedimentary rocks. The centre
of the island has a basin, 12 miles by 4, out of which
the hill of al-Dukhkhan rises to a height of about
450 feet. Oil is produced here by the Bahrain Petro-
leum Co. (Bapco), owned by American interests. Pro-
duction since 1937/1948 has averaged approxi-
mately 50,000 barrels a day, but the Bapco refinery
processes over 200,000 barreld a day, most of which
is crude oil shipped by submarine pipeline from Saudi
Arabia. Bapco's offices and residences for foreign
staff are at al-'Awāl.

Oil has replaced pearlimg as the principal industry
of al-Bahrāyn. About 500 pearling boats worked
out of al-Bahrāyn annually before the slump in
pearl prices in 1934/1929 caused by the world-wide
economic depression and the increasing use of Ja-
panese cultured pearls. Now only a handful of boats
are engaged in pearlimg, though fishing still affords
a livelihood to many people, with most fish caught in
tidal weirs. Boat building and repair and sail and
net making remain minor industries, along with the
manufacture of pottery, whitewash, and plaster.

A free port was opened in 1977/1958 to increase the
entrepôt trade fostered by a 5% ad valorem cus-
toms rate for all but luxury items. An excellent
natural harbour was created in 1975/1955 when a
channel was dredged from the deep water of Ḥwār
al-Kulay`a to the open sea. The airport on al-Mu-
ḥarrāk is served by scheduled international flights
and is the headquarters of Gulf Aviation Co., in
which the Government has an interest, and which
flies to many points in the Persian Gulf.

The population of al-Bahrāyn in 1396/1956 was
109,650, with 61% in the towns of al-Manāma
(39,648), al-Muḥarrāk, and al-Ḥidd. There are Per-
sonian, Indian, and Pakistani communities, as well as
over 2,000 Europeans and Americans. Muslims com-
prise 98% of the population, about half being Shi`is
(mostly Dā`īrli Twilvers, with some Shāykhis) and
the remainder, including the ruling family, Sunnis
(mainly Mālikīs, with some Ḥanbalīs). The Sunnis
are concentrated in the largest towns, and the Shi`is
in the agricultural villages. The Shi`is here, as in
al-Κaṭf and al-Ḥasā in Saudi Arabia, are called
Bahārī (sing. Bahārī). To avoid confusion, Sunni
residents of al-Bahrāyn ordinarily now use the nisba
Bahraini for themselves. The Shi`is appear to be
descendants of early inhabitants of the area, and
there seems to be no justification for the hypothesis
that they are of Persian origin. A good number of
the Sunnis of al-Bahrāyn are Arabs or the descen-
dants of Arabs once resident on the Persian coast;
such are known as Huwālā.

**History**

For nearly a century investigators have sought the
secrets of the early history of al-Bahrāyn in the
burial mounds scattered to the number of perhaps
100,000 over the northern half of the main island.
In 1296/1879 Capt. E. Durand opened one of the
largest tumuli and several smaller ones; others were
later probed into by Mr. and Mrs. T. Bent, F. Pri-
deaux, and F. Cornwall. E. Mackay excavated and
reported on a series of different types of tumuli.
Several mounds, one of which was probably a temple
complex, have been studied by members of a Danish
archaeological expedition which began work in
1973/1953 under P. Glob and T. Bibby. The early
excavators supposed that the tombs were of Phoe-
nician origin, but this theory is no longer generally
accepted. Materials found in the mounds, as well
as those found by the Danish party in other sites
such as near the ruined Portuguese fort of Kalat
'Adjādī and at Būrbār, include bronze and iron ob-
jects, seal stones, alabaster vessels, ivory fragments,
and bitumen-lined clay coffins. Similar tumuli occur
in central Naqrij and along the Arabian coast, where
a large one at Dīwān, north of al-Κaṭf, excavated in
1973/1954 by F. Vidal, has been dated c. A.D.
1100. The multitude of mounds spread over such
an area indicates the persistence of mound building
over a long period of time. Many of the mounds are
certainly much older than Dīwān.

Various scholars follow H. Rawlinson (JRAS
1880) in identifying al-Bahrāyn with Dilmun of

the Mesopotamian cuneiform records, but this identification has not been established with certainty; e.g., S. Kramer (BASOR 1944) considers southwestern Iran the most probable location of Dilmun.

Greek and Latin sources give meagre information on the ancient mainland coast of al-Bahrayn, where the port of Gerrha lay, the exact site of which remains undetermined. The few South Arabian inscriptions discovered so far contribute little to the history of the region before Islam.

Arab tradition speaks of some of the Lost Arabs in al-Bahrayn. Among the early historical tribes was al-Azd of Kahtân, many of whose members moved on to Oman; other members joined the confederation of Tanūkh, said to have been formed in al-Bahrayn. Among later emigrants were adherents of 'Admânî tribes such as Tamîl, Bakr, and Taghlib, the last two of which were receptive to Christianity. At the time of the Prophet, 'Abd al-Kays [q.v.] of 'Adnân had become the dominant element in the population.

The Šâsânîs, beginning with Ardâshîr I, intervened in al-Bahrayn, which was subject to a Persian marzân when the Prophet sent al-'Alî b. al-Hasrârî eastwards to secure the land. When the riṣâla broke out and a descendant of the Lakhmids in al-Bahrayn rejected the Caliphate, many of 'Abd al-Kays under al-Djrâd, a converted Christian, did not desert Islam, and al-'Alî defeated the rebels at Djùwâhâ in al-Ţâsâ. Muslim forces crossed over to the island of Dârîn opposite al-Kâtîf and possibly to Uwâl as well.

In the 1st/7th century the Khwârîdî under Nâdîd b. 'Amîr and Abû Fuâdîyq [q.v.] maintained a bastion of their power in al-Bahrayn, Christianity and Judaism had not yet died out completely; the Nestorians were still active enough to hold a synod at Dârîn in A.D. 676. 'Abbâsîd rule was introduced during the next century, but the Arabic sources fail to tell much about its extent or effectiveness.

'Alî b. Muhammad, the inaugurator of the revolt of the Zangî [q.v.], a man who may have stemmed from 'Abd al-Kays, embarked on his career of turbulence in al-Bahrayn before moving on to 'Irâq. In 281/894-5 Muhammad b. Nûr, the 'Abbâsîd Governor of al-Bahrayn, led an expedition against the Ibâdî Imamate of Oman.

The Kârmaţîn [q.v.] found devoted followers among both townpeople and Bedouins in al-Bahrayn. In 317/930 the Black Stone was brought from Mecca to al-Bahrayn, where it was kept for two decades. A victory by al-Muntâfîk in 378/987-8 revealed the weakness of the Kârmaţîn, but they were still in control when Nasîr-i Khusrâw visited al-Bahrayn 65 years later. In 450/1057-8 Abu 'I-Bahlûl al-Awâmîn Ibn al-Zâdîlîdî of 'Abd al-Kays defied them by reestablishing orthodox Islam on Uwâl in the name of the 'Abbâsîd Caliph. The tribe of 'Amîr Rabî'a of 'Ukkâyî [q.v.] guarded the islands for the Kârmaţîn, suffered defeat in a naval battle at Kâskûs, an island off al-Kâtîf. Within the next few years the final downfall of the Kârmaţîn came at the hands of a new dynasty indigenous to al-Hasâ, the 'Uyunîs [q.v.] of 'Abd al-Kays, aided by the Sağîlûqîs of 'Irâq.

Although no definite date can be set for the transfer of the name al-Bahrayn from the mainland to the nearby archipelago, from this point on it may be convenient to restrict the history of al-Bahrayn to the islands bearing this name today.

In the early period of the 'Uyunîs, who at times kept their capital at al-Kâtîf, the islands of al-Bahrayn came under their authority. When the unruliness of 'Amîr Rabî'a undermined the 'Uyunî power, al-Bahrayn became tributary to the Kaysârîs of Djarîzat Kays [q.v.] in the eastern Persian Gulf. In 633/1235 al-Bahrayn and al-Kâtîf were occupied by the forces of Abû Bakr b. Sa'id, the Sağîlûqîs Atâbog of Fars, but in 651/1253 al-Bahrayn regained independence under the 'Uyunîs [q.v.], a clan of 'Amîr Rabî'a.

The Tibbîs, merchant princes of Djarîzat Kays, brought al-Bahrayn back within the orbit of their island, but their supremacy soon faded with the rise of New Hormuz farther east. About 730/1330 Tahamtan II of Hormuz annexed both Djarîzat Kays and al-Bahrayn, and some 15 years later Turângshâh of Hormuz came to al-Bahrayn in person. The first mention of al-Manáma, the present capital, occurs at this time.

In the mid-9th/15th century 'Amîr Rabî'a produced a new dynasty, the Djarîzat [q.v.], the foremost of whom, Advâd b. Žâml, incorporated al-Bahrayn in his domains and promoted the ascendancy of the Mâlikt element over the Shî. The splendid reign of this Bedouîn prince carried the fame of al-Bahrayn as far afield as Egypt and Portugal.

The Portuguese reached al-Bahrayn from the Indian Ocean as early as 920/1514, but did not seize it until a few years later, when in alliance with Hormuz they overthrew Advâd's uncle Mukrîm. Their fitful rule of about 80 years placed much reliance on Persian Sunnîs as local governors. In the mid-10th/16th century the Ottomans challenged Portuguese hegemony in the Persian Gulf, but their admirals, better corsairs than administrators, won no permanent foothold in al-Bahrayn.

In 1011/1602 the Persians under Šâh 'Abbâs I took al-Bahrayn, which they retained, with certain interruptions, for over 150 years. Persian sovereignty was not always accompanied by strong Persian influence, as the instruments of policy were often chiefs of the Huwala or other Arabs settled on the Persian coast, such as Djarîrâz of Tâhîrî and Nasîr and Nasîr Āl Maḏâkhûr of Bûshâhr in the 12th/18th century.

In 1197/1783 Ahmad b. Khalîfâ of Banû 'Utbî (al-'Utbîb), Arabs who had migrated from Nagîd to Kuwait and thence to al-Zubârâ in 谔arâ, drove Nasîr Āl Maḏâkhûr from al-Bahrayn and inaugurated the rule of the House of Khalîfâ, which has endured to the present. The energetic merchants of al-Bahrayn, with their valuable pearl resources contested the primacy recently won by Muscat in the transit trade of the Persian Gulf, thus provoking attacks by the Ibâdî rulers of Muscat during the next 45 years. The first attack, in 1216/1801, brought Āl Sa'ûd of Nagîd to the defence of Āl Khalîfâ, but political domination by Āl Sa'ûd was not prolonged and the Mâlikt privileges of the Sunnîs of al-Bahrayn yielded little to the Haubahism of Muhammad b. 'Abd al-Wahhâb.

Āl Khalîfâ in 1235/1820 concluded with the British Government the first of a series of treaties which by 1335/1914 placed al-Bahrayn fully under British protection, giving the British control of foreign affairs and exclusive rights in the development of natural resources. The growth of British influence has been the subject of repeated Persian protests for more than a century, and the Iranian Government still presses a vigorous claim to sovereignty over al-Bahrayn. Although the Ottomans occupied the Arab-
ian coast and Katar in the second half of the 13th/19th century and thus encircled al-Bahrayn until the First World War. In the presence of the British prevented them from absorbing the islands.

After an absence of over a millennium, formal Christianity returned to al-Bahrayn in 1310/1893 when missionaries of the American Dutch Reformed Church founded a station. In 1354/1935 to 1378/1958 al-Bahrayn was the principal British naval base in the Gulf, and in 1365/1946 the seat of the British Political Residency in the Gulf. The importance of the Bahriyya regiment lies in its existence. A short time after Aybak, one of the last one of them died in 707/1307. The name Bahriyya, already applied to various garrisons of the Syrian army, was given to this regiment because he stationed his members and the thinning of their ranks. A split tore their ranks which threatened their common name in Mamluk sources for that period, the fact that its formation had ultimately led to the

(De Rentez and W. E. Mulligan)

AL-BAHIYRIYYA, a Mamluk regiment in Egypt. Most of the Ayyubid sultans had mam-likâns in their service, but it was only Sultân al-Sâliḥ Naṣîr al-Dīn Ayyûb (637-47/1240-9) who recruited them in very great numbers. He seized the opportunity of the influx in the Muslim markets of Turkish slaves from the Kipčak steppes and neighboring areas who were uprooted from their homelands by the Mongol advance and created from amongst them a regiment of picked bodyguards numbering between 800 and 1000 horsemen. He called this regiment al-Bahriyya because he stationed its members on the island of al-Rawla on the Nile river (Bahr al-Nil).

The Bahriyya displayed at a very early date all the positive and negative characteristics of a mamlik military society, viz. exceptional military ability and valour and unity against outsiders on the one hand, and internal dissension on the other. It was they who won the battles of al-Mansūra (647/1250) and ʿAyn Džlît (658/1260), but six years before the last-named battle a split tore their ranks which threatened their very existence. A short time after Abyak, one of their number, became sultan they tried to dethrone him, but failed. As a result their leader, Ağāk, was killed and some 700 of them had to escape from Egypt and entered the service of various Ayyubîd rulers in Syria and of the Saljūq ruler of Asia Minor.

After the death of Abyak group after group of the exiled Bahriyya returned to Egypt, but they never regained their early position because of the ageing of their members and the thinning of their ranks. The last one of them died in 707/1307. The name Bahriyya, however, persisted up to the 9th/15th century, for it was applied to various garrisons of the Syrian fortresses, the reason being that the original Bahriyya performed garrison duties, especially in the reign of the Sultan Kâfûn.

The importance of the Bahriyya regiment lies in the fact that its formation had ultimately led to the creation of the Mamlûk sultanate. It is wrong, however, to call the earlier form of Mamlûk rule (648/1250-784/1382), in which the Kipčak element was predominant, by the name of "the Bahri period". The common name in Mamlik sources for that period...
is Dawlat al-Turk, to distinguish it from the Circassian period (784-922/1382-1517) which they call Dawlat al-Djarkas (see D. Ayalon, *Le regiment Bahriya dans l'Armée Mamelouke*, in REI 1952, 133-41).

(D. Ayalon)

**BAHRYYA, a group of oases in the Lybian desert.** The Bahriyya is the most northerly of the Lybian desert. The Wâhât Bahriyya (also singular), i.e., the northern oases, are distinguished from the Wâhât Khîlîyya, the southern oases, i.e., the Dâkhla (q.v.) and Khâurga (q.v.). Between these two groups lie the little oases of Farâfra (included in the Dâkhla by some), or al-Farâfîra, called al-Farârûn by al-Bakrî and al-Ya’lûkûbî. The three large oases are also distinguished as inner, middle and outer; the inner is the Bahriyya which is also called the small. It is sometimes also called the Bahmiyya as it used to be visited by the people of Bahnaasâ, Bahnasâ al-Šâ’d and Bahnasâ al-Wâhât are distinguished as early as al-Bakrî (Mughrib, 14). According to Boinet Bey’s *Dictionnaire Geographique*, the Bahriyya is a district of the province of Minia. It contains about 6,000 inhabitants, and consists of four townships: al-Bâwît (I), al-Šârî, Mandîsha, and al-Zabû, the Bahriyya, like the other oases, has the reputation of being exceedingly fertile and in the middle ages its dates and raisins were famous. Cereals, rice, sugar-cane and especially indigo were also cultivated there, and alum and green vitriol found, though the latter is not specially mentioned as being found in the Bahriyya, since all the notices of this sort refer to all the oases together. The fertility of the oasis is due to hot springs containing various chemicals.

Only scanty information is available for the history of the Bahriyya. In the year 332/943-4 the oases are said to have been under the rule of a Berber prince ‘Abd al-Malik b. Marwân and to have been independent. Under the Fatimids we hear of an Egyptian governor Abû Šâlib. In the time of al-Mâqrîzî and al-Kâlîkhsâhî, that is, under the Mamluks, they were not governed directly by the state but by feudal tenants. At all periods the oases have suffered from the predatory raids of Arab and Berber nomads while the more southern ones (perhaps also the Bahmiyya?) were sometimes the object of forays by the Kings of Nubia. It is only in modern times that they have been in closer relationship to the Egyptian government. In the seventies they were visited by Schweinfurth and since then European travellers have often gone there.

In earlier times the oases must have been very much more important than they are now, as witness the remains of several ancient temples, built by the Romans, and of a church of the 6th century A.D. The Coptic Church appears to have been in a flourishing condition till a late period. We hear of solemn processions with the body of one of the disciples which was carried through the streets in a shrine (tâbût) by a team of oxen. No doubt St. Bartholomew is meant (al-Bakrî, 14 should no doubt thus be emended,) or perhaps also St. George or both.

**BAHRYYA, I. The navy of the Arabs until the time of the Fatimids** [see Supplement].

II. The navy of the Mamlûks. The Mamlûk sultanate came into being during a long time after Christian Europe had established its uncontested naval supremacy in the Mediterranean. Throughout that sultanate’s existence this supremacy had been much strengthened. Under such circumstances there was little chance for Mamlûk sea power to demonstrate its existence. Mamlûk naval activities occupy a prominent place in the sources, mainly in connexion with Sulţân al-Zâhir Baybars’ ill-fated expedition to Cyprus in 669/1270, with Sulţân Barsbây’s expeditions to the same island and to Rhodes in the years 827-829/1424-6, 847/1443, and with the expeditions against the Portuguese in 913/1507 and 921/1515. Otherwise such activities are mentioned only on very rare occasions. Thus it is impossible in the present state of our knowledge to write the history and describe the structure and functioning of whatever navies the Mamlûks possessed. Source references to some technical aspects of Mamlûk naval power will be given in the bibliography.

The deficiency of Mamlûk sources in technical information on the navy is, however, largely compensated for by the insight they give us into the socio-psychological factors which dictated the Mamlûk’s attitude towards the navy. As these factors have by no means been limited to Mamlûk society alone, their examination might be of benefit to the general history of Islam in the Middle Ages.

The two following and closely connected subjects will be briefly discussed here: (a) the attitude of the Mamlûks towards the navy and its consequences; (b) their policy towards their ports and coastal fortifications.

(a) As might be expected from a military society of horsemen the attitude of the Mamlûks towards the sea was extremely negative. Even Baybars I was no exception to this rule, in spite of his unusual grasp of wide strategic problems and in spite of the fact that he cared for the navy more than any other Mamlûk sultan and that in his days Mamlûk sea power had reached its peak. After the disaster which his flotilla suffered in 1270 off the coast of Limasol, he wrote a letter to the king of Cyprus in which he stressed the superiority of a victory on land won by horsemen over a victory on the sea won by oarsmen, and then he succinctly defined the essential difference between the might of Islam and the maritime powers of Christian Europe as follows: “Your horses are ships, while our ships are horses” (unctum bhyulukum al-marakhir us naḥnu marakhunâ al-bâhûyl) (Sulîkh, i, 594, note 3). Not less illuminating was his reaction immediately on receiving the tidings about that disaster. He thanked God for the light punishment He allowed the evil eye to inflict upon him after having won so many victories. For all he had to sacrifice in order to save his land army from the evil eye was a certain number of ships and their crews, which were composed of fellahin and of common people (al-falâdîn wa ‘l-sawâm) (Khiyâl, ii, 104, ii, 24-29; Sulîkh, i, 594, ii, 2-3; al-Nahj al-Sâdîd, in *Patrologia Orientalis*, xii, 542, ii, 2-5). There can hardly be any doubt that elements of higher social status than the two above-mentioned ones served in the navy as well,
but in all probability they did not include the Mam-
lûks, who occupied the highest rung in the social
ladder. When Baybars' flotilla was wrecked off
Limasol, the Franks succeeded in capturing the whole
naval command of the Mamlûk sultanate,
including the captains (rayyis) of all the three
Egyptian ports: Alexandria, Damietta and Rosetta.
A very long list of the prisoners' names had been
preserved in Ibn Șâhîddâ's famous bio-
ography of Baybars (Bahrîyya, Sing, 1557, chron-
icle of the year 673 A.H. cf. the Turkish trans-
lation by Şerefüddin Yaltkaya, Istanbul 1941, 46,
where however the list of names is omitted). This
list does not contain a single name of a Mamlûk.
Of all the prisoners not even one was considered
important enough to be honoured with a bio-
ography. Nor is that all: Mamlûk historical liter-
ature contains many thousands of biographies,
none of which is dedicated to a naval commander.
Al-Maṣrî's statement that the designation ʿustûlî
(“man of the navy”) was considered an insult in the
Ayyûbîd period after Saladin's reign (Khhâṣî, ii,
197, 1. 2-2) is true for the Mamlûk period as well.
The scarcity of wood and metals also greatly con-
tributed to the weakness of Mamlûk sea power.
The “forests” of Egypt, always covering only a
small area, practically disappeared under Mamlûk
rule as a result of neglect. In north-western Syria
and in the vicinity of Beirut there were small forests
which supplied wood for shipbuilding. From about
the middle of the 9th/13th century the Mamlûks
imported great quantities of timber from Ildjun in
south-eastern Anatolia, which they carried in their
own ships under the protection of heavy escorts
of Mamlûk soldiers. The contemporary sources hard-
yly mention imports of timber from Europe, which
must however, have been considerable.

The only source of iron-ore in the whole Mamlûk
sultanate was a small mine located near Beirut, the
output of which was mainly absorbed by the local
shipyard. Other metals were not to be found at all
within the sultanate’s boundaries.

Yet in spite of the great handicap caused to ship-
building by the scarcity of the necessary raw
materials, this factor was only of secondary importance
compared with the Mamlûks’ aversion to the sea.
As a matter of fact a permanent Mamlûk navy
did not exist at all. Whenever a flotilla was construc-
ted, it was only to exact reprisals for a very
damaging and humiliating act of aggression by the
Frankish corsairs. When a new flotilla was
built, the older one had already ceased to exist
for a very long time. Under such circumstances
it was impossible to maintain a naval personnel wor-
thy of its name. No wonder, therefore, that the
Franks attacked the coasts of Islam at will and got
away unscathed. The attacks usually caught the
Muslims unawares, and when they did sound the
alarm it was, in most cases, a false one.

With the advance of the years Mamlûk sea power
became even more insignificant, not only because of
the general decline of the realm, but also — and
mainly— because of the increasing employment of
firearms in sea warfare. In the Mediterranean the
pressure of the Franks on the Muslim shores was
greatly intensified. In the Indian Ocean small squad-
rons of a new type of ocean-going Portuguese ships
armed with superior artillery easily annihilated the
Mamlûk warships sent against them, and thus paved
the way for European domination of the sea routes
to India and the Far East for many centuries.

(b) The steadily deteriorating naval power of
Islam drove the Muslims after many hesitations
to the destruction of the Syro-Palestinian ports
and coastal fortifications. As a result of the Crusades,
the Muslims came slowly to realise that this was
their only alternative. The destruction was started
by the Ayyûbîds, but was mainly accomplished by
the Mamlûks. The turning-point was the battle of
Haṭṭîn (583/1187) and the events which followed it
in the next few years. These proved to the Muslims
that however decisive their victory over the Franks
might be on land, the Franks could always easily
turn the tables upon them by means of their naval
supremacy. ʿAskalân, destroyed by the personal order of
Saladin in 587/1191, was the first victim of that
policy, which was followed up after that with un-
swerving determination.

When the Mamlûks rose to power, they wiped
out one after the other the fortifications of the Syro-
Palestinian coast, and destroyed many of its ports
from about the middle of the 13th century and up
to the year 722/1322, in which Ayâs near Alexandret-
ta had been conquered. Of the numerous coastal
fortresses (kîlîs, sing. ʿalâs) none was left. A few
towers (burûḍî, sing. burûḍ) were constructed on the
ruins of some of them, mainly in order to keep watch
on the sea and resist the first onslaught of a possible
Frankish attack.

In addition, the Mamlûks tried to strengthen their
coastal defences by settling near the coast Kurds,
Khwarizmians, Turcomans, Oirats, etc., who
sought refuge in the sultanate and were called Wâ-
fiḍîyya. This attempt, however, failed, generally
speaking, for the Wâfiḍîyya soon assimilated with the
local population and disappeared as a separate
entity. Only the Turcomans are mentioned for quite
a long period as guardians of the coast.

The port-towns of the Syro-Palestinian coast
decayed very greatly. Some of them entirely dis-
appeared, others became small fishing ports and only
very few recovered fairly quickly.

The most thoroughly destroyed and the most
desolate part of the coast was the section stretching
from the south of Sidon and up to al-ʿAṣfâlān, i.e.,
roughly speaking the shores of Palestine. ʿAskalân,
Arshîf, Caesarea and ʿAṭṭâlîh, remained in ruins up to
recent times. The revival of Haifa started many
years after Mamlûk reign, whereas Jaffa and Acre
were only insignificant hamlets under Mamlûk and
early Ottoman rule. The nearness of that part of
the coast to Jerusalem and the flatness and com-
parative wideness of the plain adjoining it—which
make it an ideal area for landing troops from the
sea—were undoubtedly the main reasons for its
thorough destruction.

The only towns which recovered from the blow
fairly quickly were Beirut and Tripoli, but their
defences were far weaker than those which they
had had in the past. Thanks to the historian ʿAlîh b.
Yahyâ, we know much more about Beirut’s
system of defence than about that of any other
Syro-Palestinian port. The picture revealed of the
weakness of that system is very depressing indeed
(Ṭâʾrîḥ Bâyrûl, 28-42, 45, 67-9, 90-4, 100-112, 134,
168, etc.).

The Egyptian coast, on the other hand, was left
almost intact. In the first half of the 13th century
Tinnis was permanently destroyed, but Damietta was
very soon rebuilt after having been destroyed. The
reason for the preservation of the Egyptian ports
and coastal fortifications were: first, that Egypt was
invaded by the Crusaders only for very short periods;
second, that trade with the outside world was vital
for the country’s existence (economic considerations undoubtedly played a decisive rôle in the revival of Beirut and Tripoli as well); third, all the picked units of the Mamlûk army were concentrated in Egypt (or more precisely in Cairo). They could easily be rushed from the capital to any point on the Egyptian coast.

From the above it should not be concluded that the Mamlûks devoted much of their attention to the Egyptian coast. Alexandria and the other Egyptian ports were garrisoned by third-rate troops, including Egyptians from the hinterland, who could easily be rushed from the capital to any point on the Egyptian coast. From the mountain region of Syria and Palestine, the Mamlûks devoted much of their attention to the Franks in the last years of the reign of Mulk zur’u’s (died 1250). The first Ottoman sea-battle occurred in 819/1416, against the Venetians, the Ottoman Kaptan Pasha being Câlî Bey, sandîqâb bey of Gallipoli. In this battle, which took place between the island of Euboea, an important Venetian base, was taken in 815/1470, and the Ionian islands in the last years of the reign of Mulk zur’u’s, the Venetian admiral Pietro Loredano was wounded in the eye. The following year peace was made, through the mediation of the Byzantine emperor.

After this the Ottoman navy steadily progressed. First it brought under its influence some off-shore islands in the Aegean that had been colonised by the Genoese, and later, in 860/1456, it took the harbour of Enez and the islands of Imbros, Thasos, Samothrace, and Lemnos, and in 865/1458 Lesbos. Shortly after this date there began the series of hard-fought battles with Venice. The island of Euboea, an important Venetian base, was taken in 815/1470, and the Ionian islands in the last years of the reign of Mej’uddi in 1515. The Ottoman empire was already making its naval strength felt when Khâyr al-Dîn (‘Barbarossa’), the Bey of Algiers, entered its service. His skill brought it to the highest degree of maritime power, and with the battle of Preveza (4 Dîrâm, 1, a September 1538) it won the mastery of the Mediterranean. Defeat at Lepanto (970/1571) cost the Ottoman empire its fleet, but thanks to the odiaîkî system (whereby a given region was responsible for supplying an arsenal with
one particular ship-building commodity; e.g., the island of Thasos had to provide pine-wood for the ship-yards of Lemnos: see I. H. Uzunçarşılı, Osmanlı devletinin merkez ve bahrıye teşkilâtı Ankara 1948, especially footnote to p. 449), a new fleet was created in so short a time as five months, and with the help of this the Venetians were compelled to make peace and sign a — for them — inglorious treaty.

Towards the end of the 16th century, the Ottoman fleet was weakened by the haphazard appointment of men with no naval experience to the kaplan-paşâhie, the command of the naval forces. From the beginning of the 17th century the Venetian fleet replaced its oar-driven galleys by sailing galleons, while the Ottoman navy persisted in the use of oars. Parity for this reason and partly because the ship's crews were pressed men with no interest in seafaring, it had so little success that the islands of Tenedos and Lemnos fell into enemy hands.

Eventually, in 1682, during the grand vizierate of Kara Mustafa Paşa of Merziyon (1676-83), the principle was accepted that sailing galleons should form the basis of the fleet (a principle that had long been applied by the navy of Algiers, an Ottoman dependency). Thus a balance was achieved with the Venetians in the Mediterranean, and in 1686-1695 the island of Chios was recovered from them. A fleet was destroyed in Navarino Bay in 1243/1827.

In 1244/1828 a naval academy was opened on Heybeliada. The Ottoman navy was opened in the reign of Selim III (1789-1807) great importance was attached to it, in consequence of the importance attached to it, of military engineering founded. In the reign of Selim III (1789-1807) great importance was attached to the discipline of the arsenal. The crews of galleons were called bałyomarı, and included ayılabîts (temporary sailors), marınaars (who were prisoners of war), gašbıars (who attended to the sails), san'aškarı (craftsmen: painters, carpenters, blacksmiths, caulkers), and suđaglıgıs (gunsers).

Next in rank to the Kaptaın Paşa in the Istanbul arsenal came the tersânî-kelâhıdadı and the tersânî eminı, and after them officers of the second and third rank. The accountant of the arsenal had the title of Dùnîb efendi. Till the introduction of sail, the tersânî-kelâhıdadı ranked as Vice Admiral and occupied himself with the disciple of the arsenal. The tersânî eminı was trained at the Bâb-i ʿAli and had control of supplies, income, and expenditure for the fleet and arsenal. This office was abolished in 1830 and its duties were entrusted to the Kaptaın Paşa.

In 1841 new ranks were instituted for both army and navy. In 1851 the Navy Ministry (bahrıyye nezareti) was created, with the charge of the financial and administrative functions formerly exercised by the tersânî eminı. The title of Kaptaın-i deryâ was abolished and a fleet command council was set up. In June 1776 the title of Kaptaın-i deryâ was restored. Finally, in 1881, the offices of minister and commander-in-chief of the navy were combined in one man, of the rank of muşabbir. This arrangement continued till the end of the Ottoman empire.

In 1922, after the establishment of the government of the Grand National Assembly in Ankara, the Navy Ministry (bahrıyye ve kaleı) was formed. In 1927, when this ministry was abolished, naval affairs were made the responsibility of the Ministry of National Defence, and have since been administered by a department headed by a permanent under-secretary (müsteşar).

BAHSAL, ASLAM B. SAHÎL AL-MAJSHÎ AL-RÂZÂZÎ, author of a History of Wâsitî. Nothing is known of his life except the names of some of his authorities, among them Wâbî b. Bâkîyya (155-239/772-853), supposedly his maternal grandfather (but cf. al-Khâşîbî al-Bâhûtî, Târîkh Bâghdâdî, xi, 484).—(J. H. UZUNÇARSLÎ)

The History of Wâsitî has come down to us in an incomplete manuscript in Cairo (Taymûr, ta‘rîkh no. 1483) which had an interesting history and possesses considerable association value. It is the oldest preserved history intended to serve as an aid for hadîth scholars in evaluating the reliability of transmitters. Starting with a rather brief discussion of the early history of Wâsit and its environs, it deals with the religious scholars who had some connexion with Wâsit and were also linked to the author by an uninterrupted chain of transmitters. The biographies are arranged chronologically according to generations of scholars (here bârn, for the more common jababa “class”). They contain little personal information but restrict themselves as a rule to the name of the scholar, his authorities and students, and one (and, occasionally, more than one) of the traditions he transmitted. The work represents, if not the beginnings, at least an early simple stage of what was soon to become one of the most elaborate types of historico-biographical literature in Islam.

Bibliography: Yâkoûfî, Ibrâhîm, ii, 256; Dhehîbî, Misâ‘în, Cairo 1325, 9; Bâsîlî, Wâsîlî, Ibn Hâjîr, Lisîn, i, 388, cf. also his Mu‘jam al-Mu‘jaras, MS. Cairo, muṣfî al-bâdîth no. 82, 102; Brockelmann, S I, 210; F. Rosenthal, A History of Muslim Historiography, Leiden 1952, 83, 144 f., 406. (F. ROSENTHAL)

BAJH, infinitive of the Arabic root bâ-j-h; from its original meaning, “to rake, to dig, to turn over soil (in order to search for something),” there later developed its meaning of “to look for, examine, consider,” in the intellectual and speculative sense. Bakhtha became in this respect almost a synonym of nasâra, and, in fact, the two terms bakhth and nasar are often found in association (e.g., Mas‘îdî, Muruqî, vi, 368; ahl al-bâ‘îth wa-l-nasar, “specialists in philosophic inquiry and controversy”). A Khât al-Mukhtâr formed part of the corpus of writings attributed to Di‘bîr b. Hayyân, who dates from the 3rd/9th century (cf. Brockelmann, SI, 249). Since that time, bakhth, with its plural abîbat, appears in the titles of numerous works precisely in the sense of “study, examination, inquiry” (also in the form mahbîth, pl. mabîbit, which denotes not only the object of the inquiry but the inquiry itself) and in this strengthened form it is often used in modern Arabic, in the technical and scientific sense of “study”: e.g., Mabîbit ârabiyya of Bîyiбр Fârî, Cairo 1939. (F. GABRIELI)

BAHRAŞÎR [see AL-MAD‘ÎN].

AL-BAHUTÎ. SHA‘ÎKH MANŞÛR B. YÛNUŞ AL-BAHUTÎ, frequently referred to by the name of Al-Bahûtî al-Mudîrî, is usually considered as one of the most eminent doctors of Hanbalism in the first half of the 11th/17th century and also as the last major representative of this school in Egypt. A native of the village of Bahût in the Mudîrîyya Gharbiyya, al-Bahûtî belonged to a family which gave several other “ulamâ”, who enjoyed a certain notoriety, to Hanbalism. The following are cited among the best known of his teachers: Muhammad al-Mardawî (died 926/1520), also an Egyptian Hanballî, and the traditionalist and lawyer Abî al-Rahmân al-Bahûtî (Mukhtâsr, 104), who was reputed to be well versed in the four major schools of Fiqh. Mansûr al-Bahûtî also counted a Shâfi‘î among his teachers, Abî Allâh al-Danâwshârî, Little is known of his life, except that he devoted himself in Cairo to teaching Fiqh and that he gave numerous legal opinions (fatâwa). His biographers praise his devotion and his charitable disposition. His teaching appears to have enjoyed great success; numerous students came to him for their training, in fact not only from Egypt, but from Syria and Palestine as well. Among his chief disciples two members of his own family are cited, Muhammad al-Bahûtî and Muhammad b. Abî‘l-Surûr al-Bahûtî, and the Syrian Abî Bakr b. Ibrâhîm al-Shâhî. He died in Cairo in Rabi‘ II/105 July 1641, apparently at a very advanced age, and was buried in the tura of the Mudjâwurîn.

Mansûr al-Bahûtî’s work, which is still used today in Egypt for teaching Hanbalism, is devoid of any great originality on the part of the author. It stands, in the history of Hanbalism, as a prolongation of the work of Mûsâ al-Œdîjâwî (died 968/1560) (cf. Brockelmann, II, 325 and S II, 447) and that of Shâyi‘î Tâqi al-Dîn al-Futûhî, better known under the name of Ibn al-Nâdi‘îr (died about 980/1572) (cf. Brockelmann, S ii, 447). The Palestinian al-Œdîjâwî, who was muṣîfî in Damascus where he taught at the ‘Umâriyya and at the Mosque of the Umayyads, had composed a resumé of the Mukhtâsr of Muwafaq al-Dîn b. Khûdâmî (died 650/1252) under the title of al-Mukhtâsr, and a manual of Law, the Ihchâ, which has become a classic in Hanbalism of the late period. Muhammad al-Bahûtî wrote a commentary on the works of the title al-Rauq al-Murîh bi-Šârîf Zîd-d al-Mustanî‘î (Cairo 1352, 2 vols.). He also left a commentary on the Ihchâ (published in Cairo in three volumes). Shâyi‘î Tâqi al-Dîn al-Futûhî, who received his training in Cairo, had combined the Mâfîkhâr of Muwafaq b. Khûdâmî and the Tanbih of Hasan al-Mardawî (died 910/1504-5; Mukhtâsr, 77-78), in a single manual entitled al-Muntadhâ, which speedily achieved considerable success. We are also indebted to Mansûr al-Bahûtî for a šarîf on the Munathâh (Cairo 3 vol.) and for a khariya, gloss on the same text.

He also wrote a commentary on the Mu‘radât of Muhammad b. ‘Alî al-Mâkdisî (died 820/14217; Mukhtâsr, 65), a long poem in which the points of doctrine peculiar to Hanbalism are expounded. This commentary was published at Cairo, by the Salafiyya press, in 1343/1924 (and the actual text was again reprinted by the same publishers the following year, with brief notes taken from al-Bahûtî’s commentary). Lastly, a commentary on the Mu‘mîdî is attributed to him (cf. RAAD, xii, 631).

Laoust, Le Précis de droit d’Ibn Qudâmî, Beirut 1950, liii, and (H. LAOUSS)

BAHW, an Arabic word primarily designating an empty and spacious place extending between two objects which confine it, has acquired, in the architecture of the Western Muslim World,
somewhat varied meanings, which are, however, related to the initial meaning of the word.

To this primary sense of the term, the *Lisan al-ʿArab* adds the following apparently derivative meaning: *bahw* is a tent or pavilion chamber situated beyond the rest, which suggests the idea of a pavilion differing from that which it precedes both in situation and by its spaciousness and height.

One of the first examples of the use of the word which enables us to determine its meaning, is to be found in the description of the great mosque of Al-Kayrawan by Al-Bakri. He speaks of the *Kubbat bāb al-bahw*, which de Slane translates: “Cupola of the door of the pavilion”. We have no difficulty in identifying this cupola as the one which rises before the hypostyle chamber, in the middle of the narthex gallery opening on to the courtyard; it would, however, seem more appropriate to translate: “Cupola of the door of the central nave” and to recognise in *bahw* the term designating the axial nave leading to the *mihrah*, which differs clearly from the others by its spaciousness, its being closed by the largest door and preceded by the cupola.

The arrangement of the naves at right angles to the wall of the *kibla* and the adoption of a main nave occupying the centre, an arrangement which we are amply justified in considering as being inspired by pagan and Christian basilicas, is mainly encountered in the West, which explains why *bahw* almost exclusively belongs to the vocabulary of Western Muslim Architecture. Attested in Al-Kayrawan in the 5th/11th century, the term is still used at Tunis to designate the central nave of the great mosque. The name *Bāb al-bahw* given to the door preceding this nave is a most likely corruption of the original term.

In Spain, the term *bahw* seems to be less strictly used. It is to be found in the description given by Al-Makkarl of the Umayyad palace built by ʿAbd al-Raḥmān III at Madīnat al-Zāhirā. The main building of the palace comprised 5 naves extending lengthways. The central nave, larger than the other four, was closed by a door called *bāb al-bahw*. The throne of the sovereign was situated at the end of this nave and there he gave audience. There it was that Al-Ḥakam II received King Oundo IV and caused him to be seated before him. However, the adjoining naves, also comprised in the ceremonial chamber, seem to have been to some extent confused with the central nave and are also at times referred to by the term *bahw*.

This confusion is emphasised by Ibn Bagkkuwāl, quoted by Al-Makkarl in relation to the great mosque of Cordova. Ibn Bagkkuwāl applies the word *bahw* to the 19 naves of the great mosque as an exception, being careful to add that they are normally called *balāb*, which is in fact the term most usually applied to the naves of a mosque. Al-Makkarl, describing the mosque of Ucles, refers to the central nave by the expression al-*balāb* al-*aṣāṣ*.

The sense of a nave extending lengthways and playing a role of ceremonial chamber, as suggested by the description of the Umayyad palace, explains the use of *bahw* to indicate an audience chamber. There were two such chambers in the palace of Cordova to which Ibn Al-Khaṭīb applies this term. According to al-Tidjānī, at Gabēs, in the castle built by Ibn Makki, an audience chamber was provided with a *bahw* where the master of the palace was seated. We naturally identify this place of honour with the *mawṣ*, the central alcove, of Mesopotamian origin, which is to be encountered in the houses of Fustāṭ of the Tālibān period and which was likewise known to Eastern Barbary from the 4th/10th century. This deep recess, the place of honour, set into the back wall of a large chamber, still exists in Tunisian and Algerian houses: in Tunisia it bears the name *ḥbl*, in Algeria, however, the name *bahw* seems to be not unknown.

**BAIKAL,** in eastern Turkish (folk-etymology) *Bai kül*, ‘the rich lake’; in Mongolian *Dalai nor*, ‘the ocean lake’; the deepest lake (1741 m.), and the largest mountain lake in the world, between 51°39′ and 55°46′ north, and 105°44′ and 110°40′ east, surrounded by high mountain ranges, 635 km. long, and varying from 15 to 79 km wide, with an area of 31,500 sq. km. Flowing into it are the Selenga and the Barguzin and the upper Angara, and flowing out is the Angara at Yenisey. The Lake Baikal railway (307 km. long, with 40 tunnels) — a branch of the Trans-Siberian railway — was completed round the southern part of it (between the Angara exit and the Selenga delta) in autumn 1904.

It appears that Lake Baikal was not known to Muslim geographers in Mongol times. It is mentioned only by Rashīd al-Dīn, *Diwan* al-Tamūrīkh (ed. Berezin iii 180) (Trud Vost. otd. Imp. Arkeol. Ob-va XIII). Here, the people living on its shores are called Bārūt (+ is the Mongol plural ending), and the region around it Barūfūn (Tūkūm), which is recalled by the river Barguzin. The lake became known in Russia in the first half of the 17th century, and in western Europe shortly afterwards.

**BAILO** [see BÁLYÓS].

**AL-BA'ITH,** nickname of a satirical poet of Baṣra named Khidāsh b. Bīṣr al-Mudqāshī. Though held to be the greatest orator of the Tamīr, Ibn Sallām places him in the second class of the great Islamic poets. The critics, however, consider that his relative obscurity was only due to the renown of Djarīr; al-Ba’ith’s activity is in fact associated with that of the two rivals Djarīr and al-Farazdāk: for many years he exchanged invectives with the former, but was obliged to call the latter to his assistance, who, moreover, does not always treat him gently (he also refers to him by the nickname Ibn *hamsī* al-tidjānī “son of the woman with the red perineum”, an allusion to his mother’s humble origin; she was a slave from Sūdūstān). Yahūt places his death in 134/752, but as he adds: “during the Caliphate of al-Walīd b. ʿAbd al-Malik” (who reigned from 88 to 98/705-15), this date cannot be given credence.

**Bibliography:** Dābīt, *Bayān* and *Hayāwān*, index; Ibn Kūṭyāba, *Zahhār*, ed. Shakkīr, 472-5; Nakhdī Djarīr wa l-Farazdāk, passim; Dinēsil of Djarīr and Farazdāk, passim; Ibn Sallām,
\textbf{BA\textsuperscript{2}KAR, wa-FAN\textsuperscript{2}.} The Sufic terms \textit{fan\textsuperscript{2}} (passing-away, effacement) and \textit{bak\textsuperscript{2}} (subistence, survival), refer to the stages of the development of the mystic in the path of gnosis. These categories, partly antithetical and partly complementary, are more or less equivalents of such other pairs as \textit{sawr} (intoxication) and \textit{saww} (sobriety), \textit{gham\textsuperscript{2}} or \textit{wah\textsuperscript{2}} (unity) and \textit{tafr\textsuperscript{2}} or \textit{bas\textsuperscript{2}} (separation, plurality), and \textit{naf\textsuperscript{2}} (negation) and \textit{sq\textsuperscript{2}} (affirmation).

The doctrine has been developed especially since the execution, in Baghdad in A.D. 922, of al-Hallad\textsuperscript{2} who declared “I am God”, when the Sufis turned to the task of a more sober description of the mystic experience in an effort to exonerate al-Hallad\textsuperscript{2} from the un-Islamic idea of identifying the human ego with God and to demonstrate that Sufism was not only truly Islamic but is the true Islam. Even though some Sufis, in their moment of ecstasy, have not been able to guard against utterances similar to that of al-Hallad\textsuperscript{2}, especially in their poetry, they have usually categorically denied both the incarnation of God in man and the total mergerence of the individual and finite human ego in God. Two allied definitions have been offered of \textit{fan\textsuperscript{2}}: (1) the passing-away from the consciousness of the mystic of all things, including himself, and even the absence of the consciousness of this passing-away and its replacement by the perfect attributes of the consciousness of this passing-away and its replacement by the perfect attributes which He is manifested, however imperfectly. The Sufis generally regard this state of \textit{fan\textsuperscript{2}} as being more perfect than that of mere \textit{ba\textsuperscript{2}} and this is the most helpful account in any Western language is in R. A. Nicholson’s \textit{The Mystics of Islam}, London 1914, especially the last chapter.

According to al-Hudjwiri, the author of the doctrine was Abū Sa\textsuperscript{2}d al-Kharrās, but it was further developed by Dinayd and others no doubt under the criticism of the orthodoxy. A radical, forceful and lucid statement was developed, as a criticism of Ibn al-’Arabi, by the 17th century Indian Shaykh Ahmad Sirhindī whose Persian Makhtūdī have not been studied at all in the West.

\textbf{BA\textsuperscript{2}KAR.} In medieval Arabic literature, the term is not confined to the prevalent meaning of \textit{cattle} (bos), in contrast to more recent usage and to the application of corresponding forms in other Semitic languages. Arab authors distinguish between the domestic kind, \textit{bak\textsuperscript{2}r ah\textsuperscript{2}lī} (= cattle), and the wild kind, \textit{bak\textsuperscript{2}r wâ\textsuperscript{2}hī}, the latter being variously identified, either with the \textit{māh} (Oryx beatrix; Nuwayerl, ix, 322) or the \textit{āyā\textsuperscript{2}} (esp.); so according to the description in Ka\textit{s\textsuperscript{2}}̄wîn) or with a group of animals (referred to by Lane, 234, as \textit{bovine antelopes}) which comprises, according to Damrî, in addition to these two species, also the \textit{yāh\textsuperscript{2}m̄r} (roodeer) and the \textit{ṭay\textsuperscript{2}yl} (bubale antelope). The distinctive epithet, however, is not always added, so that \textit{bak\textsuperscript{2}r} alone (or its nom. unit. \textit{bak\textsuperscript{2}ra}) may also stand for several wild animals. This applies, for instance, to ancient Arabic poetry (see, e.g., Dżāhīz, v, 218\textsuperscript{2}) and its commentaries, to the respective data in the dictionaries (Ibn Sida treats \textit{bak\textsuperscript{2}r} in the \textit{Ku\textsuperscript{2}d̄ al-Wa\textsuperscript{2}f\textsuperscript{2}̄d}) and even to zoological writings (e.g., Dżāhīz, ii, 1999; iv, 3993). In works on the solution of dreams, where \textit{bak\textsuperscript{2}r} holds an important place, it is difficult to determine the exact meaning in every case. Different traditions seem to have been intermingled also in pharmacological works. Here, the horns of \textit{bak\textsuperscript{2}r} are frequently mentioned, while some Arab authors describe the \textit{bak\textsuperscript{2}r ah\textsuperscript{2}lī} as a harmless animal. In the Kur\textsuperscript{2}ān, where the term mainly occurs in biblical tales, the meaning is always cattle or cow. In addition, the term is found in ancient proverbs and in the \textit{hadī\textsuperscript{2}h}.

\textbf{BA\textsuperscript{2}KAR, 1D} [see \textit{BA\textsuperscript{2}KAR, wa-FAN\textsuperscript{2}}].

\textbf{BAKARGANDJ} (Backergunge), formerly a district in East Pakistan with headquarters at Bâr\textsuperscript{2}\textsuperscript{2}s\textsuperscript{2}l, (now itself a district comprising Bâkargandj), lying between 21° 54’ N and 91° 2’ E; Area: 4,092 sq. m., of which 51 sq. m. are covered with water. The
population in 1951 was 3,642,185, of whom 2,897,769 were Muslims. The area was known as Bâkla (Isfahan) and constituted a sârkhâ in Mughal times prior to its occupation by Âghâ Bâkra, a prominent person at the Mughal Court at Dacca, owing allegiance to the Nawâb of Murâshidâbâd, and a land-owner of Buzurgmumîlîpâr, in 1125/1714 when he successfully suppressed a revolt of the local Hindu landlords. He took as his headquarters a flourishing market-town which he named Bâkargânj (mârt of Bâkâr) 15 miles to the south-east of Bârkâl. On his death in 1167/1753 the entire estate passed on to Râja Ballabh Rây of Bikrâmpur, a divan [q.v.] of the Naib Naizim of Dacca. The area was also famous for its fruit orchards. In 1238/1828-9 flourishing market-town which he named Bâkargânj, later known as Bâkhra, was described by A. Musil in 1908, and, although the name is frequently deformed in the Arabic texts (especially into al-*Asr), is also famous for its form of Bengali, known as Musalmani, with a pronunciation still remains unexplained.

Bibliography: Mukaddasî 319; al-Fâkih 278 (Hamadhanî 318; Ibn Rusta 171; al-Ya'âkubî âirol (= Bâga III, V, VII twice); Yâkût, i, 458 (= Chier edition 1906: ii, 28), ii, 145, iv, 398 (= Bar de Meynard, Dict. de la Perse 74 f.); Muhammad Hasan Khân, Mirât al-Bulûdî, i, 150; 'Arfî, Lâbâb, i, 68, ii, 156; Le Strange, 357.

AL-BAHKARZî, ABU'L-HASAN (OR ABU'L-KÂSIM) 'Ali b. Hasan b. 'Ali b. Abî 'l-Tâwyîr, Arab poet and anthologist, a native of Bâkhra. After receiving a good education in his father's house, he studied in particular Shâfi'i fikr and, at Nisâbûr, attended the lectures of al-Djuywâni ('Abd Allâh b. Yûsûf [q.v.], where he made the acquaintance of al-Kundurî [q.v.]; the latter, when he became wâli, took him to Baghdâd as a secretary; previously, he had for some time been an official at Bâsha. Subsequently, he was admitted to the chancellery, and later returned to his native place, where he was killed by a sabre stroke in Dhu 'l-Ka'da 467/June-July 1075.

The most famous work of al-Bâhkârzî is a letter of solace addressed to his benefactor al-Kundurî, on the subject of his castration. His diwan is lost, and only a few muhaffîlî have been published as an appendix to his Dumaayat al-Kâsr wa 'U'srâl Ahl al-'Apr (Alleppe 1349/1930); the latter work is an anthology which is a continuation of the Yalîma f al-Thâ'âlibî [q.v.] and comprises seven sections: Bedouin poets and poets of the Hidjâz; Syria, Dîyârbakr, Âshârâyân, Djazrât and Maghrib; 'Irâk; Râyî and Djiblân; Durjdân, Astarâbâd, Dhihîstân, Kômîs, Khûrâzîm, Transoxiana; Khûrâzîm, Kuhîstân, Sidjîstân, Ghaznâî; adab authors. Among another selection of his poems, entitled al-Ahsân, is preserved in MS. in London. His poetry, which was but little appreciated at Baghdâd despite the flattering opinions of the contemporaries on the whole mediocre and artificial.

Bibliography: Introd. of the Dumaayat; Samâ'ânî, Anshâh, 57b; Yâkût, s.n. Bâkhra; idem, Iradjî, v, 121-28 = Muhaddisî, xiii, 33-48; Ibn Khallikân, Cairo 1899, ii, 58-9; Browne, ii, 355 ff.; Brockelmann, S I, 466; 'All Âl Tâhir, La Poésie arabe en Irak et en Perse sous les Seljoukides, Sorbonne thesis 1954 (unpublished), index.

(D. S. Markoliovitch)

AL-BAHKRA, ancient site of Palmyra, well known in the Umayyad period. Al-Walid II is known to have stayed there on several occasions and died there in 126/744. The Arab sources describe the military camp (fustûd) which the Persians are said to have erected there in former times and the inner castle (kasr) where the Companion al-Nu'mân b. Bâshir lived and in which the Caliph, besieged by the rebels, took refuge. The site has been identified with the ruins of al-Bâhhâra, standing 25 km. to the south of Palmyra, visited and described by M. S. Musil in 1908, and, although the name is frequently deformed in the Arabic texts (especially into al-
Bahra\' or al-Naghr\'a), the reading al-Bakhra\' is not open to doubt since it is "guaranteed by the etymological speculations of the chroniclers, who derive it from the root bakhara\" (H. Lammens). The traces of a vast walled enclosure, furnished with towers 159 m. by 105 m., are accompanied to the north and the south by remains of dwellings around numerous wells, bearing testimony to the fact that from Roman times here was to be found, if not an "ancient castle of the times\" as H. Lammens maintained, at least a "fortified watering place\" (A. Poidebard) on the Bosra-Palmyra desert road, which subsequently became an Umayyad palace. It was not long before the site was abandoned and those mediaeval authors who still indicate the existence of a fortress (k\'shn) of al-Bakhra\', are no longer able to place it exactly.

(J. SOURDEL-ThOMINE)

BAKSHISH, a word figuring from Mongol times (13th century) in Iranian and Turkish literature, particularly in historical literature. Like the Ughuric original, it begins by denoting the Buddhist priest or monk (= Thibetan: Lama). During the time when the Ilkh\(g (q.v.) were favourably disposed to, or gallawers of, Buddhism, the number and influence of the bakshish in Iran was considerable.

In Iran, central Asia, India and the Crimea — after the suppression of Buddhism in Iran (in 1295) — bakshish denotes only a scribe who wrote Turkish and Mongol records (which were kept to begin with in Ughur script = generally bijukh). In the 16th century doctors (surgeons) were called by that name. Where lamas exist, i.e., among the Kalmucks, Mongols, and Mandjurs, the name bakshish retained its original meaning of 'Buddhist priest' up to the 20th century. Amongst the Turkomans — and in the 15th and 16th centuries also amongst the Anatolian Turks — the name bakshish came to mean a wandering minstrel; in Kirghiz it came to mean conjurer (Shaman), as also in the dialect forms baksi and baksha.

The etymology of the word bakshish is disputed: it used to be almost generally accepted (e.g., by W. Barthold and E. Blochet) as deriving from the Sanskrit word bh\(kh\(a\(, but this view has been opposed by P. Pelliot and others, who would derive it "almost certainly" from the Chinese po-cho (po-cho 'wise', 'well read').

Bibliography: Cf. excursus in Rash\(d\( al-Din, Histoire des Mongols de la Perse, edited by M. F. Quatrem\(e\(re, 3 (1905) 258-332); in IA II (1944-45), 233-38 (with bibliography); B. Spuler, Die Mongolen in Iran 1, Berlin 1955, 184, 547 (with a bibliography concerning the etymology); W. Radloff, Proben der Volksliteratur der türkischen Stämme Südsüdasiens, vol. iii/text, 46 ff.; R. Karutz, Unter Kirgisien und Turkmenen, Berlin, no date (19287).

**BAKHTAWAR KHAN**, a favourite eunuch, confidant and personal attendant of Awrangzîb [q.v.] who entered his service in 1665/1664 while the latter was still a prince. In 1680/1669 he was appointed Dâ'dîgî Khwâsudiân. He died after a short illness at Ahmadnagar on 15 Ribâ'î I, 1669/1665 after faithfully serving Awrangzîb for 30 years. His death was personally mourned by the Emperor who led the funeral prayers and carried the bier for some time 1085/1674 with the task of ensuring, through legal rules, that the royal astrologers would not prepare horoscopes and almanacs any more.

Towards the end of the Mir'ât al-Álâm (1078/ 1667), a general history rich in biographical material, the writer, who is none other than Bakhtawar Khan, gives a detailed account of his achievements. He claims the authorship of the following: (i) *Câr Á'îmî* or *Á'îm-i Bakht* (1068/1657), containing an account of the four battles fought by Awrangzîb which won him the throne (Browne, Supp. 145); (ii) *Riyâd al-Álsmiyâ* (1090/1679), lives of Muslim saints and notables in four *čamans* (Rieu iii, 985a; *Áshîyâna* 1: 320 No. 115; Browne Supp. 278 (Corpus 120); (iii) Selections from: *Hadhâka* of Sana'â, *Manbîl al-Áyâr* of Á'îrât, *Mahuwâl* of Rûmî and *Tâ̄rîhk-i Álî*. His bayâd, which contains select verses of eminent poets with their biographies and extracts from the writings and compilations of celebrated divines and mystics, is preserved in the Archaeological Museum of the Delhi Fort. He is also the author of *Tâ̄rîhk- Hindi*, a history of India from Bâbûr to Awrangzîb (Princeton 468, Storey 517). A book of Fâtâwâ, a compendium of Hanâfi law and a literary *pot-pouri*, called *Hamadân-i Bakht*, were compiled for him by different authors. Among the works of public utility founded and erected by him, he mentions the township of Bakhtawârpûra, a number of mosques, caravanserais, including that of Bakhtawarnârgâr, on the way to Faridâbâd, some bridges and cubicles for students. He also laid out gardens, one in Lahore near the Shâlimâr and the other in Agharâbâd, three miles from Shâhdijâhânâbâd (Delhi).

**BAKHTIGÂN**, the largest salt lake in the province of Fârs, Iran. It is located ca. 50 km. east of Shîrâz at an altitude of ca. 1550 m. The size of the lake varies with the seasons, but at the greatest it is ca. 100 km. N-S, and 30 km. E-W. The water is very salty and the lake is exceedingly shallow. The lake is the basin of the Kurr or Bandi Amir River.

In mediaeval Arabic geographical literature we find scant mention of Lake Bakhtigân. Ibn Khûrâdadbihî, 53, refers to it as Lake Dîshânîn, Ištâkhîrî, 122, gives a variant Bâyikân, and an alternate name Badfîz, while Ibn Hâwkal (ed. Kramers), 277, has al-Bakhtîkân. The five lakes (bâhâyâtâ) of Fârs province are listed by Ibn Istakhîrî, Ibn Hâwkal and Mu'âddasî, 446, as follows: 1. Bakhtîkân, belonging to the district of Ištâkhîr; 2. Dâshî Arzan in the district of Sâbûr; 3. Tawwaz in the Sâbûr district at Kâzârân; 4. Djânkân near Shîrâz, Lake Mûr in Ibn Hâwkal; 5. Barnâhîyâ (Mukh.: Bâshîfûya, Ibn Hâwkal has al-Basfariyâna) in the Ištâkhîr district.

At the present Lake Bakhtigân is called Nirzî. The other lakes have been identified by Herzfeld as: 2. Lake of Dâshî Arjan; 3. The Lake of Fârâbîn or Shîrîn or Kâzârân; 4. The Lake of Shîrâz or Mâhîrî. The name Bâshîfûya is probably the name of part of Lake Bakhtigân and perhaps identical with Badfîz. This lake has always had several connections by narrow arms of water, and the northern part was called Bâyikân or Dîshânîn, while the south was properly Bakhtigân or Nirzî. The lake has been surveyed by Capt. H. L. Wells. (A. S. BAZMEE ANSARI)

**BAKHTISHÔ** [see bâsîfûya?].

**BAKHTIYAR**, prince, son, heir apparent (344/ 955) and successor (356/967) of Mu'âzz al-Dawla in 'Irâq, with the lâkab of Ízz al-Dawla. He appears to have had little talent for government, which, unlike his father, he entrusted to wâžûs (chosen without any great discernment) so as to be free to amuse himself, though he still impeded the conduct of affairs by his impetuous verbal or active inter-vention. At the beginning of his reign he continued his father's policy of hostility to the Hamândîd Abû Taghîlî of Mâwîlî and to the autonomous chieftain
of the Battha, ʿImran b. ʿShāhīn. Furthermore, confronted with the new problem of Fāṭimid expansion in Syria, he drew close to the ʿārāmīṣa, who now sought to counter it. Bakhtiyar, however, was incapable of maintaining discipline among his troops, a prerequisite for the stability of the regime. Quarrels between the Daylamites and Turks became embittered and ended in an open breach between Bakhtiyar and the latter, which was further complicated by popular struggles in Baghdad between Sunnīs and Shīʿīs, in which the ʿayydrūn (s.v.) intervened. He was then obliged to appeal to his cousin in Fars, ʿAḍud al-Dawla, who noting the incapacity of the prince whom he had saved, conceived the idea of taking his place and was only temporarily prevented from doing so by the opposition of his father, ṫukan al-Dawla, head of the Būyid family; upon the latter’s death, he was able to revive his plan and Bakhtiyar, who had ranged against him, was defeated and slain (366-7/967-8); the account of their struggles has been given in the article ʿAḍud al-Dawla. During the course of the struggle, the Caliph al-Muʿtādī was replaced by al-Ṭāḥā, a protegé of the Turks, for which reason he did not support Bakhtiyar in earnest.

*Bibliography:* cf. the articles BUWAYHIDS and ʿAḍud al-Dawla. The chief source is naturally Minawawī, Taḍāmūs al-ʿImām, which is based on the lost History of Hīlāl al-Šābī; among the secondary chronicles, special mention must be made of Yāḥyā of Antioch, *Patrol. Or. XXIII*, especially 354 f. An exceptional place, furthermore, is also occupied in our documentation by what has been preserved of the letters of al-Šābī (Abū Ishāk), partial ed. Şabkī Arslan, Caliphal point of view) and of ʿAbd al-ʿAzīz b. Yūsuf, analysed by C. Cahen in *Studi Orientalistici… Levi della Vida*, i, 83-98 (point of view of ʿAḍud al-Dawla); cf. also that of Ibn ʿAbbād, ed. ʿAbd al-Walḥāb ʿAzām and Shawkī Dayf, 1947, i, no. 7. (Cahen)

**BAKHTIYAR KHALDJ** [see MUIJAMAD BAGHTIYAR KHALDIJ].

**BAKHTIYAR-NAMA** [see MUHAMMAD BAGHTIYAR-NAMA].

Bakhtiyar-Nāmā, also known as the History of the Ten Viziers, Muslim imitation of the Indian history of Sīndbād or of the seven viziers [see Sīndbād]. Like its prototype, the book consists of a story in the framework of which other tales are inserted, which are here closely connected with the basic story. The subject is brief; the son of King Aẓādbakht is abandoned on the road, shortly after his birth, by his parents, who are fleeing; found and brought up by brigands, in the end he is taken prisoner by the king’s soldiers. The King, who likes him, takes him into his service under the name of Bakhtiyar. When finally he has raised him to a high position, the King’s viziers who are jealous, take advantage of an accident to slander him before the King; whereupon Bakhtiyar and the queen are thrown into prison. To save herself, the queen explains that Bakhtiyar wanted to seduce her. For ten days each of the ten viziers in turn tries to persuade the King to have Bakhtiyar executed; the latter, however, is constantly able to gain respite from execution by means of a story appropriate to his situation. As finally it is to take place on the eleventh day, the leader of the brigands who had reared Bakhtiyar, appears and informs the King that Bakhtiyar is his son. Thereupon the viziers are executed and Bakhtiyar becomes king in his father’s place, who abdicates in his favour.

Originally the work was composed in Persian. Nöldeke (see Bibliography), in the course of examining the various versions and their chronology, which had already been established by R. Basset, published and translated extracts from the oldest known Persian version (MS. dated 695/1296)—composed in a masterly and resounding style, the author of which asserts that he composed the work for a prince of Samarkand, not so far identified, but who lived, according to Nöldeke, during the second half of the 6th/12th century. The later versions, Arabic (one of which is inscribed in the One Thousand and One Nights) and Persian, more simplified in style, differ in the order of the stories and the narrative details. With these can be placed the Uygur version (ms. of 838/1435) and the Persian version in verse by Panāhī (9th/15th century; see Bibliography: Bertels). The Malay version and the Persian version in verse by Katkhuḍa Marzubān (1210/1795; Ėṭē, Cat. Persian MSS. India Office, no. 1726) are more recent. The purpose of the stories, taken as a whole, is to demonstrate the disadvantages and dangers of hasty decisions. Magical factors and the supernatural make virtually no appearance. The prose is generally free from excesses and prolixity.

*Bibliography:* Chauvin, *Bibliographie*, viii, 13-17 (editions and translations) viii, 78-95 résumés of the stories); A. Jaubert, *Notice et extrait de la version turque du Bahkhtyār Nāmā, d’après le ms. en caractères ouïgours* (IA 1872); Ėṭē, *Cat. Persan MSS. India Office*, no. 1726 are more recent. For ten days each of the ten viziers in turn tries to persuade the King to have Bakhtiyar executed; the latter, however, is constantly able to gain respite from execution by means of a story appropriate to his situation. As finally it is to take place on the eleventh day, the leader of the brigands who had reared Bakhtiyar, appears and informs the King that Bakhtiyar is his son. Thereupon the viziers are executed and Bakhtiyar becomes king in his father’s place, who abdicates in his favour.

Originally the work was composed in Persian. Nöldeke (see Bibliography), in the course of examining the various versions and their chronology, which had already been established by R. Basset, published and translated extracts from the oldest known Persian version (MS. dated 695/1296)—composed in a masterly and resounding style, the author of which asserts that he composed the work for a prince of Samarkand, not so far identified, but who lived, according to Nöldeke, during the second half of the 6th/12th century. The later versions, Arabic (one of which is inscribed in the One Thousand and One Nights) and Persian, more simplified in style, differ in the order of the stories and the narrative details. With these can be placed the Uygur version (ms. of 838/1435) and the Persian version in verse by Panāhī (9th/15th century; see Bibliography: Bertels). The Malay version and the Persian version in verse by Katkhuḍa Marzubān (1210/1795; Ėṭē, Cat. Persian MSS. India Office, no. 1726) are more recent. The purpose of the stories, taken as a whole, is to demonstrate the disadvantages and dangers of hasty decisions. Magical factors and the supernatural make virtually no appearance. The prose is generally free from excesses and prolixity.
Being a gregarious people, they live "on the country," trekking long distances twice a year in search of grass, and hence they are called also the grass-folk. The wealthy khan's or chieftains have their own residences in town. They possess also summer resorts where they live during the hot season. Although destitute of any bookish education, they maintain their mirads or clerks. Nevertheless, they have recently awakened to the great importance of education, and are now sending their sons to Europe for an academic education; this tendency seems to be growing.

The Bakhtiyarí woman is unenlightened and goes about freely within the tribal area. As a khan's wife, she will attend to certain tribal cases during the khan's absence, and her findings and decisions are lawful and binding.

The tribe's women weave their tents and also hülms, while their characteristic foot-gear, called gülwa, is made by the tribesmen. Each tribal subdivision has its own so-called "healing man," who administers some herbs and in certain cases has recourse to incantations.

The Bakhtiyarís have their own customs relating to birth, marriage, and death; divorce is practically unknown to them. They have their own particular poems, love songs and dirges, and also interesting games and a great variety of delightful folk-stories.

(V. MELKONIAN)

BAKÎ, MAHMUD 'ABD AL- Turkish poet. Born in Istanbul of modest family (933/1526). His father Mehmed was a mürdâdik at the Fatih mosque. After working as an apprentice to a saddler, Baki began his regular studies in a madrasa where he had long cherished. The new sultan Mehemmed III of Anadolu and later of Rumeli, and then was retired to Istanbul after a period of office as fcddi asker of Istanbul, appointed him again of Rumeli, recognising without becoming Shaykh al-Islam, his skilful use of onomatopoeic effect achieve a fascinating musicality which caused him to be recognised, by both his contemporaries and successors as the greatest ghasal writer of Turkish literature. In his hand the Turkish of Istanbul found its best expression in classical poetry. His great popularity and influence never diminished, and his pure and fluent style paved the way for Yahya and Nedim. In his prose works Baki avoided fashionable precious and ornate language, producing some of the best specimens of natural, unadorned, well-balanced style.

(V. M. MELKONIAN)

BAKÎ B. MAKHLAD, 'ABD 'ABD AL-RAHMÂN, celebrated traditionist and exegete of Cordova, probably of Christian origin, born in 201/817, died in 276/889. Like many Spanish Muslims, he visited the principal cities of the Ottoman Empire before he was entrusted, by the Sultan al-Mustâsîr, of his time. The aging poet, whose ambition grew at the chance of reaching his goal, the highest office of his profession, took part in embittered court intrigues.

The Grand Veizir Khâdim Hasan Paşa strongly recommended Baki for the office of Shaykh al-Islâm, but the Sultan preferred his own tutor Khodja Sa'd al-Dîn. Baki's death in 956 was widely mourned and he was given a State funeral, the Shaykh al-Islâm leading the funeral prayer.

Serious, dignified and with a keen sense of justice in his professional career, Baki was, in his private life, a man of the world, gay, a bon vivant, sociable, extremely witty, fond of jokes, repartee and the exchange of satire, even with friends. These characteristics made him many enemies and rivals, but also secured many powerful friends and protectors, thus smoothing the way to rapid progress in his career.

Apart from a few treatises, mostly on religious matters, Baki's main work consists of his divân. Unlike most poets of the classical period he wrote no mathnâws. The easy and happy life of the upper classes of the 10th century Istanbul, the colourful landscape, the gay and picturesque scenes of the pleasure resorts in and around the Capital are vividly reflected in Baki's poems. In his ghasals, minutely tooled with the care of a jeweller, he turns constantly to a favourite theme of divân poets: In this dream-like and swiftly changing world all is ephemeral: The beauties of nature, youth, happiness, high estate are all doomed to perish. So, love, drink, and be merry while you can. "Forgo not this opportunity, for the pleasures of this world are as fleeting as the season of roses". Unlike Fu'dûl, Baki's temperament was not inclined towards religious enthusiasm and his lyrics do not lend themselves to mystical interpretation, although he often makes use of Şûfi terminology. Baki is the unequalled master of form. His perfect versification, meticulous choice of words, skilful use of onomatopoeic effect achieve a fascinating musicality which caused him to be recognised, by both his contemporaries and successors as the greatest ghasal writer of Turkish literature. In his hand the Turkish of Istanbul found its best expression in classical poetry. His great popularity and influence never diminished, and his pure and fluent style paved the way for Yahya and Nedim. In his prose works Baki avoided fashionable precious and ornate language, producing some of the best specimens of natural, unadorned, well-balanced style.

(FAHİR İZ)
(some count him however as a Shafi'i and he is regarded as having doctrines the Zahirîs introduced into Spain) and opposition to akhlaq, that he so found himself recalled with hostility by the Mâlikî jurists?; he was even nearly condemned to death on a charge of heresy, and owed his escape solely to the intercession of the amir Muhammad I (238-73/852-86), who allowed him freely to dispense his edictic teaching. His chief works, all of which are lost, are a commentary on the Kur'an, which Ibn Hazm considered superior to that of al-Tabari, and a msûnad in which the traditions were classified according to their subject under the names, themselves arranged in alphabetical order, of the Companions who had handed them down. Bâkî, whose biography was written by the prince 'Abd Allâh al-Zâhid, enjoyed at the end of his life a reputation for piety bordering on holiness, and Ibn Hazm considered him in the sphere of the Traditions, the equal of al-Bukhârî and al-Tabari.

Khwâja Bâkî Bîllâh, Abu 'l-Mu'ayyid Ra'fî al-Dîn, also called 'Abd al-Bâkî or Muhammađ Bâkî b. 'Abd al-Salâm Uwaysî Nakshbandî, was born at Kâbul on 5 Dhu l-Hijjah 977/26 Dec. 1563 and died at Delhi on Saturday, 25 Dhu'mâdî II 1017/2 July, 1603. He received his early education from Sâdîk Balâhî, in whose company he went to Samarkand to pursue his studies further. It was during his stay there that he cultivated a taste for ta'awwûf. On the invitation of some of his friends, who held high posts in India, he left for that country, but instead of entering the Imperial army, as intended, he began to search for mystics and sufis. After a short sojourn in India he returned to Mâ Warâ' al-Nahr to receive formal initiation into the Nakshbandî order from Khwâja Muhammađ Amkângî, a great sufi of his times. Back in India again in 1008/1599 he decided to settle down at the south-east end of the town, at a short distance from the Prophet's tomb, outside the town-wall, now demolished, through which a gate-way, Bâb al-Bâkî, gave admittance to the cemetery (see the map of Madina in Caetani, Annales, ii, 173). The first to be buried in al-Bâkî, from among the muhâjadîn, was 'Ummân b. Ma'âfîn (a Companion of the Prophet) who died in 5/626-7. The bramble-growth was cleared and the place consecrated to be the future graveyard of the Muslims who died at al-Madinah. The Prophet's daughters, his son 'Abd al-Mâlik and his wives (ummâhâdîn al-mâminîn) and his descendants, with the exception of al-Husayn are also buried here. The burial-place of Fâ'tima al-Zohra' [q.v.] is, however, disputed. Among the other notables buried here are 'Ummân b. 'Affân, Malik b. Anas [q.v.], his teacher Nâfî', 'Alî, Hâlîma al-Sâ'diyya (the Prophet's wet-nurse) and al-'Abbâs, an uncle of the Prophet. It gradually became an honour to be granted a last resting-place here among the akl al-bayt [q.v.] the Imãms and Saints. The graves of the famous dead had grand cupolas and domes built over them; the domes of Hâsân b. 'Alî and al-'Abbâs for example, rose to a considerable height, as Ibn Dîbahy tells us. When Burckhardt visited the place after the invasion of the Wahhâbîs, he found it one of the most wretched cemeteries of the East. Like the grave of Nâsir al-Dîn al-Hâfiz, the first mosque in Islam was built there, and the present mosque is a Median suburb, al-Bâkî is one of the sacred places which the pilgrims to al-Madinah consider it an act of piety to visit.

During the life-time of the Prophet al-Bâkî was a very small place; the graves of 'Ummân b. 'Affân and Hâlîma al-Sâ'diyya not being within its precincts. 'Ummân b. 'Affân was buried originally in Hâshî, Kawkab, which was included in al-Bâkî by the Umayyads much later. Even the enclosure where some of those killed during the Umayyad occupation of al-Madinah were buried fell outside its present...
boundaries. The domes and mausolea destroyed by the early Wahhabis in 1221/1806 were restored by ʿAbd al-Ḥamīd II (r. 1806–1813). This action of the Saʿūd monarch gave rise to a serious agitation in India, and a deputation was sent to Mecca to lodge a strong protest. The king, however, did not yield and the graves are still without any tombs; they have insignificant head-stones without any inscriptions or epitaphs. Rutter, who saw it in 1926, shortly after the second Wahhabi occupation, compares it with the ruins of a town affected by an earthquake. In 1954 cemented pathways were laid, by the orders of King Saʿūd b. ʿAbd al-ʿAzīz, all over the cemetery for the use and convenience of visitors.

(A. J. Wensinck-[A. S. BAZMEE ANSARI])

**BAKŠI** [BAKHSHI] KULI AĞHĪ, better known under the Russian form of the name, Bakhshi, and his literary pseudonym Kudsi, Aḏḡarbayjānī historian, poet and philosopher, son of Mirzâ Mamed Khân, ruler of Baku, driven from his throne by his brother Muḥammad Kuft Khân. He was born on 10 June 1794 in the village of Emir-Ḥajdīn in the Khumāt of Bakū, and died in 1847 at Kuba. After a thorough education in Persian and Arabic, in 1820 Bakhšīkhānī was appointed officer interpreter at Tiflis in the headquarters of General Ermolov, Commander in Chief of the Russian armies in the Caucasus. There he learned Russian, through which language he became well acquainted with western literature. Shortly afterwards, he undertook a long journey which led him to Shīrāz, Armenia, Daghstān, Georgia, Turkey and Persia. During the Russo-Turkish and Russo-Persian wars, Bakhšīkhānī, who was a convinced advocate of rapprochement with Russia, was a staff officer at General Paskievich’s headquarters. In 1833 he made a second journey, visiting the Northern Caucasus, Russia, the Baltic States and Poland. From 1834 onwards he devoted himself to literature and published a large number of works in Aḏḡar, Persian and Arabic. His most important work is: Gūlīstān-i İrem (1841) which traces the history of Daghstān and Shīrāz from ancient times down to the treaty of Gulistān. A Russian translation of this valuable work was published in 1906 by the Association for the Study of Aḏḡarbayjān in Bakū, with a preface by S. Slomev and a biography of the author by M. G. Balkhārī; the Aḏḡar text appeared in 1951 at Baku (Edition of the Academy of Sciences of the Aḏḡarbayjān SSR).

His other works are: Riyāḍ al-Kudsi (in Aḏḡar), abridged biography of the principal Saints of Islam; Kūnūn-i-Kudsi, Persian grammar; Kūŷ al-Gharšād (in Persian), containing a description of the discovery of America; Taḥkīk-i-ʾAbd al-ʿAzīz (in Persian), treatise on Ethics and Moral Philosophy according to Arab, Greek and European authors; Aṣrār al-Malakāt (in Persian and Arabic), treatise on astronomy, published at Tiflis; Naṣḥatnamā (in Persian), collection of moral precepts.

Finally several poems in Arabic, Aḏḡar and Persian, some of which have been published in the newspaper Feyyāzat of Bakū (no. 28 of 1907), as well as a translation of Křlov’s fables into Aḏḡar.

(A. BENVIGEN)

**AL-BAKILLANĪ** (i.e. the greengrocer), the kāfiʿ Abū Bakr Muḥammad b. al-Ṭavyīb b. Muḥammad b. Daʿfīr b. al-Kāsim, in most of the sources Ibn al-Bakillānī, but in popular usage (and Ibn Khalikān) simply al-Bakillānī, Aḏḡārī theologian and Mālikī jurisprudent, said to have been a major factor in the systematising and popularising of Aḏḡārī-ism.

The date of his birth is unknown. He died on 23 Dhūl-Qaʾda 403/5 June 1013. Born in Baṣra, he seems to have spent most of his adult life in Baḥdād. Visits to Shīrāz and the Byzantine court are mentioned, and for a time he exercised the office of kāfiʿ outside the capital. He studied ʿāṣāf al-dīn under disciples of al-Aḏḡārī and is said to have attracted many to his own lectures. Various anecdotes are related to illustrate his skill in disputatio. Kāfiʿ, writer, disputant, lecturer—these headings sum up his life as we know it from our rather inadequate sources.

A list of his works (to which the editors add three titles) is given by the kāfiʿ ʿĪyād. Six of these fifty-two works are known to be extant. The Ḥikāyāt al-Kur’dān, printed several times, is regarded as a classic work on the subject. The Tamḥīd is the earliest example we have of a complete manual of theological polemic. The Inṣāf contains two parts: a version of the Sunnite creed with brief explanations, and a detailed discussion of the incorporation of the Kur’dān, the Ḥikāyat, the vision of God, and intercession (gofāʾīs). The Minākshī (incomplete) is a defence of the Sunnite position and the Imāmate (Caliphate). The Inṣīqār (incomplete) is chiefly concerned with textual integrity of the Kur’dān. The theme of the Bayūn (incomplete) is the apological miracle which vindicates the claim to prophethood.

Study of these works does not enable us to define precisely the author's contribution to the development of Aḏḡārī ʿalām. For we do not know enough about the work of his contemporaries and predecessors, e.g. Ibn Fūrūk, Abū Ḥāshim al-İsfārānī, and al-Aḏḡārī himself. Thus it is now clear that much of what once might have been attributed to al-Bakillānī already existed in al-Aḏḡārī's Khalâl al-
al-Bakrāʾ, Ibn Taymiyya called al-Bakrālī “the best of the Ashʿarī muhaddithun, unrivalled by any predecessor or successor” (Shāhārūdī, iii, 169), but this praise is not disinterested. Ibn Khaldūn’s assertions (Muhadditha, iii, 40), and the affirmations of Macdonald (Development of Muslim Theology etc., 200-201), seem to be unwarranted, since al-Bakrālī certainly did not introduce the doctrines of atomism and accidents. There is evidence of some originality in his discussion of the apologetic miracle. But the main virtues of his works appear to be those proper to careful and industrious compilation. His metaphysic is not profound, but he was clearly aware of the cardinal apologetic importance of such questions as the validity of tradition and the possibility of the apologetic miracle. Undoubtedly he did much to propagate Ashʿarism, and he is mentioned fairly frequently by later writers.

(R. J. McCarthy)

al-Bākīr (a.) the Splitter, i.e. the Investigator, a name of the Imām Muḥammad b. ʿAll [i.e. Bākīr].

bakkāʾ, pl. bakkāʾun, bukkāʾ, “weepers”, ascetics who during their devotional exercises shed many tears. Older Islamic asceticism and mysticism are characterised by a strong consciousness of sin, by austere penance, humility, contrition and mourning. Laughter was denounced. An outward sign of this attitude is the act of weeping. The Kūrān (Sūra xvii, 109: “and they fall down on their chins, weeping”, and Sūra xix, 58: “when the signs of the Merciful were recited before them, they fell down, prostrating themselves, weeping”), and then, above all, the ḍāhīd acknowledge and comment the shedding of tears during devotional exercises. The Prophet Muḥammad is said to have wept audibly at times in the course of the ritual prayers. A similar behaviour is reported of the first Caliphs Abū Bakr and ʿUmar. Of weeping ascetics or those who at least commended the practice of weeping, a long list might be compiled from the Ḥiyāt al-Awliyāʾ of Abū Nuʿaym. To this class belonged such well-known names as Ḥasan al-Baṣṣīf, Ibn Sīrīn, Mālik b. Ḍūnāz, Abū ʿl-Dārādāʾ (who even wrote a special work called Kādīʾ al-Rīḥāʾ wa l-Buḵāʾ), Ḥabīb al-Naḥḥāʾ, Abū Sulaymān al-Dārānī, Ḥaḍī al-ʿAbdānī, Abū ʿl-Walīd b. Zayd, Sufyān al-Thawrī, Ḥabīb al-Mīṣrī, ʿAbd b. Muḥād al-Rāzī etc. Yet there were but few who in fact bore the by-name of al-buḵāʾ or were at least designated as weepers, amongst them being ʿAbdāl-Buḵāʾ (in Ǧaṣrā; Ḥiyāya 2,347), Abū Saʿīd Ṭāfīr b. Muḥammad al-Buḵāʾ (Ḥiyāya 7,369), Muʿṭarīl b. Ṭarfī, Muḥammad b. Sīḥa, Abū ʿl-Malīk b. Ṭabīʿ, Abū Sinān Dīrās b. Murāza (these four in Ḥiyāya 3,347 and 5,385), Sayyār al-Nabūjjī (designated as ḥādī; Ḥiyāya 10,166), Ḥaytham al-Buḵāʾ, Saffān b. Muḥīr (Dībīḫ, Buḵkāʾ, 5), Ḥishām b. Ḥassān (Wensinck, Some Semitic Rites of Mourning, 85 f.), ʿAbd al-Buḵāʾ (Ṣulamī, Ṭabākāt, 87). Famous for their weeping are also Ṣāḥīḥ al-Murūj, Ghālīb al-Dateṣāmī, Ḥāfīz al-Ḍaḥṣāmī, Khāmil, Muḥammad b. Wāṣlī. These buḵāʾun did not, however, represent a special “class”, as R. A. Nicholson (F.E.E. 2, 100), A. J. Wensinck (Some Semitic Rites, 66), L. Masséne (Essai, 167), H. Lammens (L’Islam, 152), Ch. Pellat (Le milieu basrien et la formation de Gāḥīs, 94) and R. Dozy (Suppl., s.v. buḵāʾ) seem to suppose. Buḵāʾ continued rather to be an appellative term applicable to all those who wept copiously, and given to an individual only occasionally as a by-name; it is comparable to some degree with the term ḥamād found in Ḥiyāya 5,69 as a designation for one who in joy and sorrow sings the praise of God. Therefore mention is also made of buḵāʾun amongst the ancient Israelites ( Ibn Kūṭayba, ʿUyān al-ʿAḫẖār, 2,284; Ḥiyāya, 5,164). Muḥammad b. Wāṣlī, himself a great weeper, deemed it absurd to call himself buḵāʾ (Ḥiyāya, 2,347).

Abū ʿl-Dārādāʾ gives three reasons for his weeping: fear of the fate that awaits us directly after death, the impossibility of striving further towards one’s own salvation, and the uncertainty as to the verdict that will be made on the Day of Judgement (Dībīḫ, Bayān, 3,151; var. Ibn Kūṭayba, ʿUyān, 2,359). Yaḥṣūb b. Maysara enumerates in general seven reasons for weeping: joy, sorrow, anguish, pain, hypocrisy, gratitude to and fear of God (Ḥiyāya, 5,235). Abū Saʿīd al-Khāzāz enumerates seven reasons, all of them subordinate, however, to three kinds of weeping: away from God, towards God, and with God (Ṣārāḏī, al-Lūmāʾ fi l-Taṣawwuf, ed. Nicholson, 229).

In the centre of the weeping of the buḵāʾun are the fear of God (ḥāghayl Allāh), the Day of Judgement, doubt as to the verdict of God, the tortures of Hell. Often there is weeping over one’s own sins, over specific personal weaknesses, over the wasted bygone years or the irrevocable past during the period of probation on earth; it can also arise from compassion for others, for those who err in their religion and for the dead who are no longer able to better their fate, or it arises from yearning for one’s abode in Heaven, for God, and so on. They often wept in the expectation — and here too the ḍāhīd, in a certain measure, could be adduced as an authority — of God’s indulgence and kindness, of His protection on the Day of Judgement, of safeguard from Hell, of remission of one’s own or even of other people’s sins, of the attainment of Paradise, and of reward. Just as the beggar who can weep has a greater chance of success ( Kādīʾ al-Rīḥāʾ wa l-Buḵāʾ), Ibn Ḥadād, Die Mundarten von Khunsdr, etc., cix), so too the spiritual beggar, through weeping, hopes to arouse the compassion of God and thus, perhaps, to undergo...
here and now some part of his future punishment. “Between Hell and Paradise”, one text has it (Hilīya, 7, 149), “there lies a vast desert that only the bakkārūn can traverse”.

Prayer (including ritual prayer), thinking of God, reciting Kurān and hadith, sermons, edifying stories, pious discourses, meditative contemplation — these constitute the occasions for weeping. We learn that the pious Muslim would pass the night and weep until morning in solitary meditation over one or the other of those passages of the Kurān that deal mainly with the punishment of the sinner.

At times there is weeping in prayers of supplication, often at the Ka’ba, clinging to the kiswah or before the Black Stone, frequently too in burial grounds at the sight of the tombs. Kurān-readers (burrā’), reciters of the hadith preachers and narrators of edifying stories (bussādī, sing. bāsī), during their performance give free course to their tears, and often incite their audience to weep, or they just make them shed tears. One bāsī is said to have asked his audience, before each discourse: “Lend me your tears!” (Hilīya, 5, 112). Special gatherings (mahkādir, sing. mahādir) were held, in which there was much weeping, followed by a meal (Hilīya, 2, 347). Two pious Muslims, encountering each other, might enter into a discourse about religion and shed tears over it. Muḥammad b. Sūkra and Dārā b. Murra are said to have met regularly each Friday for this purpose (Hilīya, 5, 4 and 5, 91). Badī‘, Shumayt and Khamas came together on one occasion in the house belonging to one of them and said: “Let us weep today over the cool water (that we shall be lacking on the Day of Judgement)” (Hilīya, 6, 213). The long lament of a weeper (with the characteristic wāyīkh) can be found in Hilīya, 4, 255-266, the mucūm sharīf of a supposed Israelite in “Uyām, 2, 284, and a religious discussion between three weepers in Hilīya, 10, 163.

The most incredible stories are reported concerning the amount of tears that a weeper was able to shed: one of them wept at times for three days and nights on end, others cried until their beards or their cushions were soaked, others again drenched entire sacks of sand with their tears. The tears of one weeper were hearded by angels; another, after weeping, sat in such a puddle that he was thought to have carried out his ablutions there. One of them, pouring out tears on the ground, caused grass to sprout; another wept on purpose into a dram (sarrāb). In some weepers the flow of tears furrowed deep lines in their cheeks, others had their eyelashes and eyelids fall off, others again had their ribs deformed, and their eyes became weak-sighted or blind. Cases of fainting and even of death are mentioned.

The ability to weep was held to be a special privilege (fatūla) and a sign of true religious fervour and divine grace. “Not every seeker can weep” (‘Abd Allāh Anṣārī Harawi, RAūdū, Tehran 1315, 51). Ābū Bakr, at the sight of some Yemenites who were weeping at a recital of the Kurān, called out: “Thus were we too, until our hearts were hardened” (Džāibīs, Bayām, 3, 153). Āmir b. ‘Abd Kays once struck himself in despair on the eyes and exclaimed: “Dry, paralysed, never to be wet again!” (Bukhālā, 5). Dārānī, the inability to weep is a sign of abandonment by God (Sulaml, Tābādāl-āl-Sśliyha, Cairo 1933, 82). Yūsuf b. Ḥusayn al-Rāzī saw in the fact that he no longer wept during the reading of the Kurān a sign that his countrymen might perhaps be right to call him a ṭilīh (Hilīya, 10, 240). On the other hand, Ṣāḥib al-Bunārī regards the gift of weeping as a sign that God grants his prayers (Hilīya, 2, 323). Muḥammad is said to have asked God to grant him “two raining eyes that weep a flood of tears” (Hilīya, 2, 296 f., and 2, 280; Wensinck, Some Semitic Rites, 89). In this connexion, the hadith al-tabāḥī: “Weep or at least attempt to weep (or: at least pretend to do so)” enjoys general acceptance.

Among the ascetics four objections or, at least reservations have been raised against the practice of weeping, or at least to its performance as an action. Secondly, it could be considered as relieving the load of grief and an unburdening of the heart and as such was rejected. In this connexion Ṣufyān b. ‘Uyayna is said to have developed the technique of holding back the tears in his eyes by raising his head and thus, he said, retaining his sorrow longer within him (Hilīya, 9, 327). Thirdly, weeping was something outward and could therefore be simulated. The false tears of Joseph’s brothers (Surā 12,16) are mentioned as an example of this danger. Reference was also made to the supposed hadith: “The believer weeps in his heart, the hypocrite in his skull”. Since weeping is an outward manifestation, it never receives in the Sūf manuals a chapter to itself, but is treated only in passing in the chapters on sadness (ṣawān), contrition (ḥawām) and the like. The 27th chapter of ‘Abū’l-Muḥsin’s Muḥādharnāma (dar ṣifāt-i girkātan) is a special case, which does not necessarily belong here. Fourthly, many later Ṣūfīs have held it to be a sign of weakness to let themselves be overpowered by their feelings to the point of weeping.

This is not the place for a full account of the weeping of the Sūfis in the same at and at the tombs of saints, the shedding of tears amongst pilgrims at the sight of Mecca, in ‘Arafa and at the tomb of the Prophet in Medina, the weeping of the Sūfīs over their Imāms or at their tombs, the weeping of the tauswālūn (those addicted to repentance) or of the Khawāridjī, etc. But it may be indicated here that the weeping of the bakkārūn is one of the most evident links that bind together the pious asceticism of the Muslims with that of the Christians. From the early-Christian gratis lacrimarum, through the Coptic and Syrian monks and the Monks of Ephesus, Isaac of Nineveh, etc.), a direct line runs to the Islamic bakkārūn — an instance of the well-known bifurcate development: a common root in early Christianity, with, thereafter, one branch in Western Christendom (Augustine, Cassian, etc.), and the other in the East. The eastern current divides thereafter into three branches: one represents the Eastern Christian continuation through Thomas of Marga down to Barbe- braeus, etc., the other is the Jewish offshoot (Wensinck) and the third constitutes the weeping in Islamic asceticism. Islam has, it is true, overladen and indeed absorbed within itself other oriental forms of weeping (cf. the “weeping of the Magians” over Siyāwush, in Narsākāhī’s Ta’rihib-i Būhkārā, ed. Scheler, 21; the weeping over Tammuz?). Nonetheless, the Muslims themselves were well aware that their pious weeping had its origin in the Jewish-Christian sphere and illustrated it with such examples as the tears of Adam, Noah (Nūh: etymology nāḥa), Jacob, David, Solomon, John the Baptist, Jesus and numerous monks. The hadith al-tabāḥī might even go back to an utterance of Isaac of Nineveh (translated by Wensinck, 235): “If thou art no mourner in thy heart, let at least thy face be clad with mourning”. The bakkārūn mentioned by Ibn Hīšām, Sīra, ed.

BAKKÂL, etymologically "retailer of vegetables", this word has become the equivalent of the present English "grocer" taken in its widest sense. With the latter significance it has passed into Persian and Turkish, and, from Turkish, into the Balkan languages. In its etymological meaning, the word was known in the Spanish Arabic of Valencia in the 7th/13th century, glossed by olerum venditor. But in the dialect of Granada (end of the 9th/15th century), it corresponded to the Castilian regatón (= regatier), "retailer of foodstuffs in general", which was also rendered by hâddâr.

At the beginning of the 20th century, the bakîl of the Moroccan towns was essentially a retailer of fats: oil, preserved butter, meat preserved in fat; he sold, in addition, honey, soft soap, olives in lemon juice, tea sugar and candles.

It is doubtful whether this extension of the word bakîl is of long standing. Nearly everywhere, before the 20th century, the grocer (sansu lato) was named either after the basic foodstuff which he sold (with or without vegetables), or after certain methods of his trade.

Algerians had its sakikîri "sugar-seller"; Tunis its 'sarfîr [q.v.], literally "perfume-seller". As regards the Cairo of the first half of the 10th century, E. W. Lane only knew the sâyîd "seller of oil, butter, cheese, honey, etc.". In Syria, the usual term was sakînî 'seller of preserved butter'. Elsewhere, the grocer of the towns (sensu lato) was often considered as being the "shopkeeper", the fundamental "seller". At Granada, bakîl and hâddâr were equivalent to sâbîh "market-seller"; and the feminine sâbîhîn had as its Arabic synonym hâddâra and as its Castilian equivalent: kausera "seller of beans". In earlier days, in Constantinople and Tunis, the sâbîh used to sell oil, preserved butter, honey, dates, pickled olives, etc.

Considered as being the "shopkeeper" par excellence, the grocer also received the name of hâuwînî (with variants) among the rural populations of Algeria and Constantinople. The East, sporadically, used the terms dákîhînî and dukhîngî (Mystic Treatises by Isaac of Nineveh (ibid. xi, (1936), 54 ff.; F. MEIER).

In Arabic-speaking Spain had mu'âlîdî, lit. "treating, developing", with the sense of "retailer of fruit and vegetables". Dozy's translation, in his Supplement, should be corrected on this point.

The retailer of vegetables is called, according to the country, hâddâr, hûdrî or hâmîdrî. Spices are, in general, sold by the 'sarfîr, in addition to perfumes ('îfîr) and drugs; his trade comprises also small items of stationery, haberdashery and hardware.

For various reasons, the calling of grocer is often followed by people having the same ethnic origin. In the towns of Morocco (except at Tetuan, until recently), the bakîl is almost exclusively a Berber (pl. jûlhûk) of Sûs, of the Ammeln tribe. In Algeria, the people of the Mzaû enjoy the same de facto monopoly. In the East, the modern bakîl is often a Greek.

BÂKKÂR, (A.) Sappan wood, an Indian dye-wood obtained from the Caesalpinia Sappan L. Al-Dinawari remarks that the word frequently occurs in ancient Arabic poetry, although the tree concerned (in Lewin's ed read hâddâr instead of hâddâr according to later quotations) is not found in Arabia. It is a native of India and the country of the Zandji. Its stem and branches are red being used, in decoction, as a dye.

The word is said to derive from Sanskrit pattaunga and probably entered Arabic through the Persian. Its foreign origin was recognised by the Arab philologists who based their view on the assertion that the paradigm concerned was not otherwise attested in the language. As an Arabic equivalent they generally indicate 'andâm which, however, rather denotes the dragon's-blood, a red gum exuding from certain trees. The wrong identification can be attributed to the fact that both bakkâm and 'andâm were used as a red dye.

Muslim pharmacologists indicate several medicinal applications of the sappan wood. It brings about the cicatrisation of wounds, desiccates ulcers and stops bleeding. Its juice makes the skin tender and embellishes its colour. The root yields a poison which works quickly.

BAKKÂR, a fortified island in the river Indus lying between the towns of Sukkur and Rohri. Its importance was noted by Ibn Bâşîqî who visited it during the reign of Muhammed b. Tughîk. In 1522, Shâh Beg, the founder of the Arghun dynasty, made
it his capital. When, in 1540, his son, Shâh Husayn, refused to grant an asylum to the fugitive emperor Humâyûn the latter unsuccessfully attempted to capture this island fortress. In 1574, in the time of Akbar, it was annexed to the Mughal empire. The best and fullest account of the Mughal conquest of Sind is to be found in Ta'rikh-i Ma'sûmî of Mir Muhammad Ma'sûm, an inhabitant of Bakîr. In 1736 Bakîr was captured by the Kâhlora rulers of Sind. It later fell into the hands first of the Afghans and then of the rular of Khayyurp. It was occupied by the British in 1839 and became their chief arsenal in Sind during the First Afghan War (1839-42). From 1865 to 1876 it was used as a jail.

**BAKÎR, BAKKAR.** Arabic-speaking nomads of the Sûdân, occupying territories from Lake Chad to the White Nile between 9° and 13° N. Their livelihood is the herding of cattle (bakar), whence their name. The dry season is spent in the southern river-lands. With the rains, they move northwards to the seasonal grasslands. Grain sown on this journey is harvested on the return. Bakkara origins are obscure; the genealogies reflect existing groupings rather than give evidence of descent. They are probably connected with the Djibaya, with whom they brought into Nubia from Egypt in the 14th century. From the Nile, nomadic groups apparently made their way by the 17th century to the lands between Waddâl and Lake Chad. Fusion with other elements from North Africa may account for the tradition of a Hilîl origin among some Bakkara. Penetrating southwards into regions unsuitable for camel-breeding, they turned to cattle. Groups pushing eastwards, to the south of the cultivated areas of Waddâl, Dâr Fur and Kordofan, (which were under Islamised dynasties) formed an Arab wedge between these sultanates and the pagan tribes who retreated southwards. The Bakkara were uneasy vassals of these sultanates to whom they paid tribute, migrating on occasion beyond the power of their overlords. Slave-raids on the southern pagans and consequent intermittent war have affected the physical type of the Bakkara. During the 18th and 19th centuries, the powerful Rizayká Bakkara were under the suzerainty of Dâr Fur. Their quarrel with the Sudanese slave-trader, al-Zubayr Rahma Mansur, led to the Egyptian conquest of Dâr Fur in 1874. The Bakkara assisted Muhammad Ahmad al-Mahdi [q.v.] to overthrow Egyptian rule but proved refractory to the Mahdist administration. The Khalifa 'Abd Allah b. Muhammad [q.v.], himself a Bakkârî of the Ta'isha tribe, used the Bakkara as troops and selected from them his chief assistants. In 1888-9 he compelled the Bakkara of Dâr Fur to migrate to Omdurman and its vicinity, both to support his regime and to assume. It was refused, and an army from the nearest loyal province, Diyarbakr, marched on Baghdad to restore legitimacy and order. It was then in the hands of some of the loyalist forces which were the last to return, after which Bakr decided, with cynical treachery, to invite Shâh 'Abbâs of Persia to re-occupy Irâk, thus compelling Hâfiz Ahmad, of Diyarbakr, with great reluctance, to confirm him as Pasha of the province, since he alone could now prevent a shameful cession of Ottoman territory. The loyalist forces withdrew, those of Persia approached the city. Bakr refused to open the gates, and after negotiations full of callous duplicity the Shâh reduced it by siege. This was ended by the treacherous surrender of the city by the Sâ bâsît's own son. Baghdad was sacked, hundreds massacred and Bakr put to a terrible death; Irâk remained under Persian rule until its reconquest by Sultan Murâd in 1048/1638.

**Bibliography:** S. H. Longrigg, Four Centuries of Modern Iraq (1923), 51-7, and authorities quoted by him (p. 51 footnote): especially Murta'ah Naqizzâda, Gushân-i Khulâfa (Longrigg, 327).

**BAKîR B. WÂ'L, BAKR B. WÂIL,** ancient Arabic group of tribes in Central, East, and (later) Northern Arabia. The Bakr belonged to the same people—later known as Rabîʿa—as the 'Abd al-Kays [q.v.]. Their place in the tribal genealogy is three grades lower than that of these. The Taʿlabá (b. Ṭâlabá) are to be re-
BAKR B. WÂIL 963

garded as the core of the Bakr. Joshua Stylites (§ 57) mentions them under the year 503 as being the leading tribe of the northern Arabian Kinda Empire, and shortly afterwards they appear in a South Arabian inscription (Ryckmans 510, Le Mouton 1953). In the genealogy of Bakr, the Thâlaba are on a level with the tribes of 'Idlî and Hanîfî b. Lughaym, with the Yâshkur b. Bakr three grades above them. The Thâlaba were themselves subdivided into the Banî Shaybân, Dhûhlî, Taymîllâh (Taymîllâhî), and Kaysî. The Bakr tribes lived in the area of al-Yâmâma. At that time, this embraced al-'Ird = Wâdî Hanîfâ, and its tributaries Luhâ (Shaib Ha on the maps), Nisâb, and al-Sulâyy, the district of al-Khârdjî to the south, and the district of al-Witr with its tributaries north of the watershed. Al-Ḥadîr, the capital of al-Yâmâma (near al-Riyâḍ of today) was originally in the hands of the Hanîfâ. Later on, members of other Bakr tribes settled there too. The second largest town, Diâwî (Diâwî al-Yâmâma, later al-Khârdjîma), south-east of al-Ḥadîr, was also largely inhabited by the Hanîfâ, who likewise owned the oases Kurârn and Malham on the far side of the watershed. Colonies of the Hanîfâ could be found further to the north-west in the regions of al-Wâshîm and al-Sudâyâr. The Dhûhlî b. Thâlaba lived, in (Karyat Banîl) Sadûs, named after one of their sub-tribes, on a wâdî which runs into the Witr, the Kays b. Thâlaba among other places, in Manîfâ, to the south of Riyâḍ. There is also evidence of villages of the Yâshkur, 'Idlî and Shaybân. Diâwî and al-Ḥadîr were sites of an ancient culture, which is linked with the vanished tribes of Tasmî and Dîdîs in later legends. Pâityles (obelisks) could still be seen in Ḥadîr in early Islamic times, but in 1245 these had been destroyed during the raid by a member of the southern Arabian dynasty of Hassân (al-A'shâ, no. 13, 16-21).

Date palms were cultivated in all oases, but in the 'Ird valley and in al-Khârdjî grain was grown. In good years corn was sent to Mecca, but in bad years it was not even sufficient for local consumption (Mutâlammîs, ed. Völlers, no. 5, 8; al-A'shâ, no. 19, 24; ed. Gn. Hanîfâ, no. 1953). In the above-cited book. The Bakr villages were rather close together, there were sometimes feuds between them during which the palm groves were burned down (al-A'shâ, no. 15, 56-57; 38, 9-11; Yâkût, s.v. al-Mubarraka, (below Sadûs). Some Bakr escaped these conditions by leaving and becoming mercenaries ( Aws b. Ḥagîjîr, ed. Geyer, no. 14; Mutâlammîs, ed. Lyall, no. 170), many took up the nomadic life—which was later on embraced by considerable parts of their tribes.

It is possible that this movement was started by the appearance of the Kinda in the second half of the 5th century (amend art. ʿAbd al-Kays, line 13: from 6th to 5th century). We have no definite information about the routes which the nomadic Bakr followed at that time, although later sources (Ryckmans 510; Mufaddalîyyâ, 430, 13) indicate that they went to the west (and east?) of al-Yâmâma. During this period there was a long feud between the Bakr and their brother tribe, the Taghîb, which only came to an end in the middle of the 6th century, in a peace concluded under the patronage of Mecca, in Diçu l-Madâjas, outside the Haram (al-Kârizî b. Hâlîzâ, ed. Arnold, 66). The Yawm Kulâb 1 (a battle between two heirs of the Kinda empire, in about 530, at Thâlaba, S.W. of Duwâdâmî) is rightly regarded as an episode in

that feud. Shortly afterwards, the Taghîb—whose zone of migration was then from Sâdîr in the upper Sirr, to Naftû near the Persian Gulf (Mufaddalîyyâ, 430, 13; Hârîfî, Mu.îsî, 79)—left central Arabia, and settled in the steppes on the near side of the lower Euphrates. These, where they were overwhelmed by the Bakr, which followed them, but they stopped before Čaţa Falâj. Place names mentioned then and afterwards by the poets seem to show that the routes taken by the nomadic Bakr in the following decades ran from north to south. The area which was later vacated by the Taghîb and Bakr on the near side of the Tuwayk bend was probably before 530 inter-}

spersed with Tamîl, whose home was along both sides of the Taarrt. After 530, they spread over the Tuwayk to eastern Arabia. Since the nomadic routes of both groups crossed, peace had somehow to be maintained, and there is in the next decades in fact little mention of fights between the Bakr and the Tamîl.

A number of outstanding Shaykh families emerged in the period in which the changing relationships between the Bakr and the Taghîb, the Tamîl, and the kings of the Kinda and of al-Hira, demanded leaders of political experience. The hero of E. Brâûnlîch's Bestâm ibn Qais (Leipzig 1923) is a member of one of these families, the Dîçu l-Dhîdûs. Connexions with al-Hira were responsible for an early development of poetry, especially amongst the Kays b. Thâlaba, as witness the works of al-Murâkkîsh (the legend concerning him appears for the first time in Tarâfa, Six Poets, no. 13, 14-19, an imitation by a later poet of al-Hira; N. B. the 'younger Murâkkîsh' never existed, as is evident from al-Parâzad, Nine Poets, 200, 15, to mention only one witness), those of Amr b. Kâmûfa (q.v.), who never journeyed to Byzantium with Imrâb b. Kays, those of Tarâfa, and those of al-A'shâ, who lived on into the 7th century. Poetry also flourished among the Yâshkur, whose home was the city of Bâlîlîa, belonging to the region of the middle Euphrates.

The nomadic Bakr entered a new period when the Taghîb vacated the steppes on the lower Euphrates, migrating up the river, afterwards living in the area of al-Ḥadîr, where, possibly, Kulhûm had killed the king of al-Hira, Amr b. Hind in 569-70. About 580, a poet says (Muf., no. 41, 1): 'And Bakr—all 'Irâk's broad plain is theirs : but if so they will, a shield comes to guard their homes from lofty Yamama's dales'. Some ten years later, the Tamîl, and especially the Yarbûb, began to press forward, in order to pitch their tents in al-Ḥarn during the spring. This gave rise to mutual raids, some of which, taking place between 605 and 615 have been described by Brâûnlîch (in the above-mentioned book). A great deal is known concerning the tribes of the nomadic Bakr at this period, and also something about the area they covered. The tribes concerned were the Shaybân, 'Idlî, Kays, and Taymîllâh b. Thâlaba. The 'Idlî went as far as what later became the Kufan pilgrim route in the west, and as far as Tukây, in the east; the Shaybân pitched their tents to the north and south of the line al-Kârima (near the Bay of Kuwayt)—Ra's al-'Ayn = al-Busayya (?)—Salâmân, and the Kays b. Thâlaba south-east of these, between al-Musannah (Yâkût, erroneously al-Muhabînna) and Ra's al-'Ayn (al-A'shâ, no. 14, 20, 29). The Taymîllâh, Kays, and 'Idlî formed the confederation of Lahazim, in order not to be overwhelmed by the Shaybân. It is not exactly known where the northern Bakr wintered, but the Kays b. Thâlaba appear...
to have alternated—at least in the eighties—between al-Yamama and the north (al-'A'sha, no. 32, an early poem, especially v. 48). The Shaybān occasionally went as far as the oases of Bahrayn in eastern Arabia, whilst the 'Idjl appear to have remained in the north. During the summer, the tribes congregated where water could be found on this side of the Ta'if between 'Ayn Sayd and Abū Ghar. It is in this area that the famous battle of Dhu Kar, in which the Dhuhl b. Shaybān repelled the advance guard of the Persian knights of Hāmzār (q.v.) was fought around the year 605 (al-'A'sha, no. 40). In spite of this, the Bakr soon came under Persian influence again. At the same time, the hostility between Bakr and Tamīm in the north spread to Central Arabia, where the prince of Djiaw, Hawdha b. 'All, of the Banū Ḥanifa, a vassal of the Persians, was hard pressed by the Tamīm. The prince of Djiaw was quite different: the case of the former Ghazū (see al-Aṣnam, no. 39, 47, later poets, unless one counts al-Aṣnam), the caliph Thumama b. Musaylima, was hard pressed by the Tamīm. Their last remarkable personality was the general and statesman Ma'n b. Zā'da (q.v.), of the Dhuhl b. Shaybān.

Whilst the Bakr disappeared early from the steppes of Basra, they remained for a longer time near Kūfā. The 'Idjl retained their nomadic area, and later extended it towards the northeast; the Shaybān, however, migrated towards the north-east, as far as the waters of al-Laṣaf, not far from Kūfā, and later moved largely to the area of Mosul, in the north, where they settled along both banks of the Tigris. Three verses that have strayed into the irdās of 'Amr b. Kāmi'a (no. 16) describe the homesickness of a girl on this trek into foreign lands, to the Sātdāmā (possibly the Djabal Makūb, opposite the town); and reports of Abū Mīkhnafl (Tabari, ii) concerning the noble leader of the Khārbitītīs, Shubāb b. Yazd (of the Dhuhl b. Shaybān; killed in 629) describe between Bedouin life and urban civilisation at that time. The Bakr spread thence to the north as far as Diyar Bakr (a late name) and Adharbājdijān.

The Shaybān developed once again into a large nomad tribe. In spring and summer, they pitched their tents between the Upper and the Lower Zāb, in winter they moved as far as the area below Kūfā. During the 9th century, they carried out frequent raids into the plain of Mosul, which resulted in a campaign against them in 893, led by the caliph al-Mu'taḍid. In the 11th century, they advanced into the cultivated land of Irāk, but disappeared at the beginning of the next century. The name Rabi'a began to supplant the tribal names Bakr and 'Abd al-Šays in Basra and in Kūrāsān, and the names Bakr and Taghlib in the eastern Dijāra = Diyar Rabi'a. This also happened in Arabia. The royal family of Āl Su'ūd traces its family tree back to the Rabi'a.

earliest biography devoted to him is to be found in al-Dhahabi, Misa, Cairo 1325, 1, 53. Al-Dhahabi indignantly describes al-Bakri as a liar and inventor of untrue stories, whose books were available at the booksellers (and, presumably, enjoyed good sales). Considering the additional facts that a MS. of one of his works (Vatican Borg. no. 125) is dated in the end of the thirteenth century are quoted in the Verzeichniss biographie of al-Bakri in the Biographie des Arab. Hss. (or Berlin, no. 9624), al-Bakri would seem to have lived in the latter half of the thirteenth century. While this conclusion must remain highly speculative for the time being, there exist no cogent reasons for doubting the historicity of al-Bakri’s elusive personality. If the occasional epithet of “Basran Preacher” can be relied upon, he was active in Iraq.

It is by no means certain that all the works attributed to al-Bakri go back to one and the same author. For instance, the biography of Muhammad quotes actual books and authors, while the other works are vague and confused in their references to sources and prefer fictitious names in the rare cases where transmitters are mentioned. Furthermore, it apparently was not yet known to al-Dhahabi, and a reference to it was added by Ibn Hadjar. Lisân, i, 202, in the biography he copied from al-Dhahabi. The relationship of the various works or recensions to each other has not yet been investigated, and in order to reach safe conclusions, it will be necessary to study all the numerous MSS. preserved in widely dispersed libraries.

**Bibliography:** Knowledge of al-Bakri in the West begins with L. Marracci, cf. C. A. Nallino, Raccolta di scritti, ii, 115. Cf., further, R. Pare, Die legendäre Maghātī-Literatur, Tübingen 1930, 155-58; Brockelmann, i, 445; S I, 616 (basic but disfigured by many mistakes). (Oct. 1722) to Istanbul and reached it on 17 Sha'bân/24 May 1723. Four years later he returned to Jerusalem. After making the pilgrimage to Mecca in 1148/1735 which he had planned as early as 1129/1721 but had given up on account of a quarrel with his uncle, he went to Istanbul for the second time in 1148/1735. Four years later he returned by ship, via Alexandria and Cairo. In the following year, in connexion with a second pilgrimage, he went to Diyar Bakr where he stayed eight months. After spending another eleven months in Nablus, he again returned to Jerusalem in Shawlân ii/24 May 1740. He died on 18 Râbi'â I 1152/8 April 1749 in Cairo when on his third pilgrimage. His numerous mystic treatises, prayers and poems which are given by Brockelmann (see infra, cf. also al-Ihliyâm al-Ihdiyya wa'Mawârid al-Bakhîyya, see Vollers, Katalog der islam. u. hebr. Handschriften in der Universitätsbibliothek zu Leipzig no. 850 f. and al-Wâstîyya al-Djâdidât lil-Sâlihîn Tar`kh al-Khawâsînîyya, ibid. iv; E. Littmann, A List of Arabic MSS. in Princeton University Library, no. 351 b.) are all still unprinted except a Madjîdî Salâwât wa`l-Awrâd (Cairo 1308). He also wrote an account of his first journey from Damascus to Jerusalem in 1122/1711 entitled al-Khmrâ al-Hastîyya fi 'l-Ri`ba al-Kudîyya (Abiwardî, Verzeichnis der Handschriften, no. 6149). A journey to Damascus and his stay there were described in his al-Mudâma al-Shâmiyya fi 'l-Madhâma al-Shâmiyya (ibid. 6148).

(C. BROCKELMANN)

BAKRÎYYA, a Dervish order which, according to d’Ohsson, took its name from Abû Bakr Walfâ, who died in Aleppo in 902/1496 or 909/1503-4. According to Rûn, Marabouls et Khouan, 271, they are a branch of the Shâhdîyâ (pet).

BAKRÎYYA, a collective noun denoting all those who claim descent from Abû Bakr. In Egypt, the head of this family, the Shâkh al-Bakrî, has, since 1811, been the nabi of the descendants of the Prophet: (shâkhî), and, since 1906, the shâkh al-mahdiyyâh, that is to say, the shâkh of all the religious orders. See Pârû, iv, 42 ff.; L. Massignon, Annuaire du monde musulman*, 1934, 274.

BAKÔ, lat. pactum, hell. máxítov. In the Hellenistic world used both for a compact of mutual obligations and its connected payments. The Arabs designated with this expression what they regarded a tribute yielded by Christian Nubia. This country, because of its geographical situation and the bellicosity of its inhabitants, withstood the first impetus of the Muslim conquest, and after hard fighting under `Amr b. al-`As (20 or 21/642-3), who ultimately had to recall his troops, his successor, `Abd Allah b. Sa`îd b. Abî Sarh, `Uthmân’s governor over Egypt, made a treaty with Nubia (31/652) on a bilateral basis, falling outside the normal sulh treaties known by the jurists. The two contracting parties agreed on bestowing free passage through their respective countries, while the right to take up fixed abode was to be prohibited. The Nubians bound themselves to repatriate fugitive coloni, slaves, and poll-tax paying dhimmis. Besides they agreed to defray the costs of the maintenance of a mosque to be built in Dunkûla (Dongola). Moreover they were to deliver annually 360 slaves, originally at least their own prisoners of war, and the custom developed that they paid a further 40 head for the Arab officials taking care of the transaction. The Muslims, on the other hand, were obliged to yield a corresponding amount of wheat and other cereals, and textiles. The Muslim jurists of a later time could not fit this into the frame of the system, and a tradition—or at least an interpretation of an existing one—sprang up that the Muslim quota originated from the restitution of the 40 slaves, after having been exchanged for wine and other supplies, as appears from the exposition of Ibn `Abd al-Hakâm (Futûh Misr, ed. C. C. Torrey, 189). The political state is otherwise called a hûdma, true. Malik b. Anas thought it a juridical sulh, but a majority of his colleagues knew that it was only a treaty of non-aggression, and that the Musulmân were not bound not to defend Nubia against any third party. The treaty was confirmed by subsequent rulers; al-Tabarî makes special mention of `Umar II (Annales, v, 2593). Later the Nubians seem not to have paid their part very punctually, probably because of lack of prisoners of war, with the consequence that they had to replace the wanting number with their own countrymen. The animals for zoological gardens and for medical experiments which are included in the quota in later times may have made up for such deficiencies. Under al-Mahdi and al-Mu’tasîm we hear of readjustments; under the latter, when Nubia was on the verge of breaking the contract, it was found out that the tribute of the Nubians fell below what was paid by the Arabs. That the latter could not muster the force for altering this radically is seen from the fact that a lenient course was followed, allowing the Nubians to pay the stipulated quota every third year only. On the other hand, the request to have the garrison in al-`Aṣr on Nubian territory withdrawn was not granted. That was the place where the quotas were handed over. It was only under Baybars al-Bundûkîdar (674/1276) that Nubia was subjugated for good, and part of it came fully under Muslim rule, while native petty princes managed a more or less free position. After that time Islamisation went on rapidly, and no doubt the term bašt fell into desuetude, having lost its meaning under the altered circumstances.

(F. LENKKEGAARD)

BAKÛ, a town and district on the W. shore of the Caspian Sea, on the peninsula of Aspheron (Abâh- râk). The name is currently said to be from Persîan bakhshâb, ‘wind-beaten’, which is appropriate to the local conditions, but this derivation is not certain. The form Bâkû appears already in the 4th/10th century (Hudud al-Âlam). Another early, authentic pronunciation is Bakûyâ (Abû Dulaf, al-Bâkûwî). Other forms (Bakû, Bâkûh) are found in the Arabic geographers.

The early history of Bâkû is obscure, though the locality seems to be mentioned in antiquity (cf. J. Marquart, Erinnâr, 97). It is perhaps to be identified with the Gangara or Gaetara of Ptolemy (Geographia, ed. C. Müller, i, ii, 292). Bâkû is not apparently mentioned in accounts of the early Muslim conquests, nor by Ibn Khurrahâd al-bihî (3rd/9th century), but thereafter it comes fairly into view
and is known by name to the 10th century Muslim geographers, being mentioned by Abū Dulaf in his Risāla al-Thānīyya (cf. V. Minorsky in Oriens, v, 1914, 423). Abū Ḥasan Abū l-Balad, who has to have reached Baku by 967, as he calls it, from the S. and found there a spring of petroleum, the lease (badīla) of which was 1000 dirhams a day, with another well adjacent producing white petroleum, which flowed unceasingly day and night and whose lease (damān) was also 1000 dirhams. These details are repeated in several much later accounts, notably those of Yākūt, i, 477, and al-Kawākib, Abū l-Balad, 389. About the same time, Abū Dulaf, al-Masʻūdī several times mentions Baku. He gives an account of a Russian raid on the Caspian littoral circa 301/913-914, in the course of which the invaders reached "the naphtha (or petroleum) coast in the country of Shirvān, which is known as Baku" (Murūd, ii, 21). Al-Masʻūdī also speaks of Baku as a place from which ships went back and forward from Dīl (Dīlkan), Daylam, etc. on the Caspian, if not also from Atīl (q.v.), the Khazar capital on the Volga (ibid., 25). In the Tamž, a later work (written in 345/956) he again speaks of Baku, its "white naphtha" and its volcanoes (fatḥm) (BGA., vii, 60).

The Ḥudād al-ʻAlam (written in 372/982 but making use of earlier sources) knows of Baku as a small town, lying on the coast near the mountains. All the petroleum in the Daylamān country came from there (Ḥudād al-ʻAlam, 145, cf. 411: the Daylamites used it for a kind of flame thrower). In another passage (ibid., 77) the waters of the Kur and Aras rivers are said to "flow between Mūkān and Baku to join the Khazar sea (Caspian)" where regions rather than cities are perhaps intended. Since it lay N. of the Aras, Baku was usually reckoned as in Shirvān, but according to al-Mukaddasī, 376, in 375/986, who appears to be the first to mention its excellent harbour, Baku was distinct from Shirvān and both were included in Arrān, to which al-Mukaddasī gives a much greater extension than most Muslim writers (ibid., 51, 374). Al-Īṣāqī (cf. Cairo Second Risāla) (circa 340/951) mentions Baku and already knows of its troleum (190).

The best description of mediaeval Baku is by a native of the place, ʻAbd al-Raḥīm Baku’i, who wrote in 806/1402, shortly after the campaigns of Tīmūr in this quarter. The town was built of stone, actually on rocks, close to the sea, which at the time of writing had carried away part of the walls and reached the vicinity of the principal mosque. The air was good, but there was shortage of water. Since in consequence the district was infertile, provisions had to be brought from Shirvān and Mūkān, though there were gardens situated at a distance from the town, producing figs, grapes and pomegranates, to which the inhabitants went in summer. There were two well-built fortresses in the town, of which the larger, on the seaward side, had resisted the attacks of the Tatars, although the other, which was very high, had been partially destroyed during the sieges. Day and night, in winter, high winds blew, sometimes so strongly as to sweep men and animals into the sea. At Baku there were petroleum wells from which daily more than 200 mule-loads were drawn. A by-product in the form of a hard yellow substance was used as fuel in private houses and baths. At a jārāq from the town there was a perennial source of fire, said to be a sulphur-mine, near which was a village inhabited by Christians, who made and sold lime. There were also salt-mines, the produce of which was exported to other countries. Nearby was an island to which people went to hunt sharks. The skins when suitably prepared were filled with petroleum, after which they were loaded on ships to be taken to the different countries. There was also a considerable trade in silk. In some years a great fire was seen emerging from the sea, visible for a day's journey. The inhabitants were Sunni Muslims.

Politically, Baku at most times appears to have been subject to the Shirvān Shāhs. The last dynasty of Shirvān Shāhs came to an end only in 957/1550, when the Safawī Shāh Tāhrār occupied Shirvān. After vicissitudes in the course of which it belonged for a short time (1583-1606) to the Ottoman Turks, Baku finally became a Russian possession in 1806. Bibliography: V. Minorsky, Abū Dulaf Mis'ar b. al-Muḥāfīl's Travels in Iran (containing the Arabic text and translation of his Second Risāla), Cairo 1955, 35, cf. 72; al-Bakuwī, Talḥīs al-ʻĀkār wa-ʻAdīsī al-Makāl al-Ḵakhār, transl. D. Guignes, Notices et extraits, ii, 509-510; Le Strange, 1801.

(D. M. Dunlop)

Baku under Russian domination, was at first very slow to develop. In 1807 the town had only 5,000 inhabitants, grouped in the old citadel. The naphtha deposits, the exploitation of which was a monopoly of the former masters of Baku, became Crown property and the first drilling took place in 1842 on the Apsheron peninsula. In 1872 exploitation became free and the deposits were sold by auction. This period marks the beginning of the town's rapid growth. This development was favoured by the building in 1877-78 of the pipe-line connecting Baku with the oil fields of the Apsheron peninsula. In 1883 the town was connected by railway with Transcaucasia and the interior of Russia. Finally in 1907 the pipe-line was completed linking Baku with Batum on the Black Sea. In 1859 Baku had only still only 13,000 inhabitants, but in 1879 the "oil rush" brought the number up to 112,000. On the eve of the Revolution, Baku, which provided 95% of all Russia's oil, had already a population of 300,000.

During the Revolution, Baku achieved the status of capital of independent ʻAḏharbayjān (31 July 1918 to 28 April 1920). Taken by the Red Army on 28 April 1920, it was henceforth the capital of the ʻAḏharbayjān Soviet Socialist Republic. Under the Soviet régime, the town continued to grow. In 1939 it was the fifth town of the Soviet Union with 809,300 inhabitants, but in 1979 the "oil rush" brought the number up to 112,000. On the eve of the Revolution, Baku, which provided 95% of all Russia's oil, had already a population of 300,000.

Baku is also an important University centre, the seat of the State University and of the ʻAḏharbayjān Academy of Sciences.

(A. Bennigsen)

BA'KUBA, more correctly (but not now currently) Ba'kūbā, from the Aramaic Baya'qūbā, or Jacob's House, a town situated 40 miles N.E. of Baghdād (40° 37' E, 33° 45' N), on the site of a very ancient pre-Islamic settlement, was in Caliphate times described as on the west bank of the Nahrawān-Diyālā (q.v.) main canal. It formed an important station on the Baghdād-Khurāsān trunk road, and served as chief town of the Upper Nahrawān district. Under ʻAbbāsid rule the place was highly prosperous, its date and fruit gardens famous, and the surrounding country fertile and populous, with scores of villages. Modern Ba'kūba is an Irākī provincial town with an Arab mixed Sunni and Şī'ī population of some
8,000. It is the headquarters of the liwa of Diyala with dependent fradds of Mandali, Khalis, Khanlpin, and Ba'koba itself; the last-named ba'la contains the important nakhayas of Rīmān and Makdādiyya (formerly Shahrubān). The town is prosperous, partly transformed by modern buildings, streets and services, and good communications; the Baghdad-Irbil line of ʻIrāq Railways here crosses the Diyala by a high-level bridge.

BAKUSAYA, a town and lesser administrative district under the 'Abbasids. With four others it formed part of the rich and populous circle (astān) east of Tigris, that of Bāţiyan Khusrav, in which the town of Bandāndān (now vanished without trace) was a principal headquarters. Bākusaya is usually grouped with the adjacent district of Bādarsaya (q.v.) (the modern Badra) by the Arab geographers, and like it enjoyed good water from the hills which mark the present Persian frontier. A modern village, within Persia, known as Baksaiyyeh, a few miles S.E. of Badra, almost certainly marks the site of Bākusaya. The latter name strongly suggests the Syriac Bā-Kussaya, and would indicate the home or district of the Kussaye, the Greek κοσσάθια of the Babylonian inscriptions. The domicile of these people was entirely in the Zagros range, and this identification is tempting. Nothing remarkable is recorded regarding the town or its inhabitants, in which (as in modern Badra) Lurish or other Iranian strains doubtless prevailed. The district is malarial, but in modern times produces a race of famous weight-lifting porters.

(M. Streck (H. Longrigg))

BA'L, an old Semitic or even Proto-Semitic word with the central meaning of “master, owner” and has been widely used in the sense of “local god” (fertiliser of the soil) and “husband” (in a society predominantly masculine). In the last century attention was vigorously drawn to the importance of this last meaning by W. R. Smith, Kinship and Marriage in early Arabia, Cambridge 1885 (2nd. ed. London 1903); but his thesis that the term itself had been borrowed by the Arabs from the Northern Semites could not be substantiated. The various meanings of the word have continued to exist in Classical Arabic with, however, a very variable vitality according to sense, period and area.

1.—In the sense of “master (of)”, ba'li was ousted in Arabic by various synonyms, so that, unlike the Hebrew ba'ali, it does not make an appearance in numerous compounds. It has survived better in the sense of “husband, spouse (of)”, thanks most probably to the use made of it in the Kur'ānic passages (ii, 228; xi, 72; xxiv, 31 twice) in the singular and in the plural (bu'ala; subsequently Classical Arabic usually uses bu'ali or bi'dil). The meaning “master” was still strongly felt: ba'li “my spouse”, in x, 72, renders the Biblical adōnî (in the mouth of Sarah, Genesis, xviii, 12; Targum Onkelos: ribōnî). For the feminine, Classical Arabic has the forms ba'lâ or ba'lat. Several verbal forms developed from this nominal meaning.

a.—The Kur'ān, xxxvvi, 125 (story of Elijah; cf. I Kings xviii, and the art. Ilyād) has contributed still more definitely to perpetuating the memory in Islam of Ba'la as a pagan deity, in spite of all the confusion and reticence of the commentators. This meaning of the word, it is true, could not hope to enjoy much success in Muslim thought as such; it is to be encountered incidentally in the medieval authors in connexion with the etymology of Ba'al-bakk (q.v.) with fictitious details concerning an ancient idol at this place. What is more remarkable is the unconscious survival of the idea of the god Baali in the two following cases:

a) The verb ba'ilu and the adjective ba'li, “(to be) lost in astonishment”, that is to say originally, as Nöldeke has shown (ZDMG, 1886, xi, 174), “(to be) possessed by Ba'lat”.

b) The terms ba'lî and ba'li to convey the idea of unwatered tillage; in a verse attributed to 'Abd Allāh b. Rawāhā, a Companion of the Prophet, (L.A., xiii, 60), we read: hānīlā lā ubālī nahlā ba'līn, wa lā sākyin .... In an expression of this kind, ba'li may retain something of the original meaning, not understood by the author of the Sūra: that of the god (male) fertilising the land (female) by rain or sub-soil water. The contrast between watered land (with terms from the same root as sīky) “dwelling or field of Baal” is well attested in the Targum and the Talmud (Jastrow, Dict. of the Talmud, b 4' and sh b y; W. R. Smith, Lectures on the Religion of the Semites, London 1927, see Index; G. Dalman, Arbeit und Sitte in Palästina, Göttingen 1932, ii, 32-33).

In Classical Arabic of the early centuries of the Hijjra, however, the term ba'li is to be encountered on several occasions meaning on its own —and not in a compound expression open to several interpretations—“unwatered cultivated land”—. In the works on jurisprudence, it is to be found with this meaning, mainly in relation to the prescribed tithe (sakīl, jindāba) on agricultural produce. Muslim Law, both Şafī and Sunnī, does in fact reduce this impost to a half tithe or a twentieth where the crop is dependent on artificial irrigation requiring some exertion; in contrast, the zakāl is actually a tenth when the produce of a ba'li is involved. In this connexion, the term appears in various recorded hadiths from the Munāṣṣa of Mālik (2nd/8th century) onwards (see Bādji, Munāṣṣa, ii, 157-158), repeated in the 3rd/9th century in works on fiqh, such as the Şāfi'ī K. al-Umm (ii, 32) and the Mālikī Mudawwana of Sahān (ii, 99, 108). In an almost identical form, these hadiths are to be found in Abū Dāwwūd (Sunan, no. 1596-1598) and in the early specialists on fiscal and land law (3rd/9th-10th centuries): Yāḥyā b. Adam (K. al-Kharāji, Cairo ed. 1347 AH., no. 364-395, where an illuminating variant, no. 381, has “that which Ba'la has watered”, thus reproduced in Baladhuri, Futūh, 70); Abū 'Ubayd b. Sallām (K. al-Ammāl, Cairo ed. 1355 AH., no. 1410-1412),
Kudam b. Dja'far (K. al-Kharāḍjī, part 7, ch. VII, apud De Goeje, Glossaire to Baladhuri, Futūḥ, 14; the Madīth al-'Ulama of al-Dharmizī on that point is merely a résumé of this work). Likewise in the Fāṭimid ḏīb already established in Ifrīqiyah (4th/10th century): kāḍil al-Nu'mān, Daʿūdīm al-Īṣlām, Cairo ed. 1951, i, 316; and naturally also in many later books.

These texts evoke, as regards the use of baʾi, the two ensuing comments: a) the word seems to be linked with Madīne and perhaps also Yemenite traditions, but appears to be unknown to the oldest īrākī traditions (probably because īrāk is primarily a land of irrigation); Ḥanafism, of īrāk origin, does not normally employ the word, though on this point it states the same rule as the other madāhiḥ.

b) The badīḥīs containing this term insert it in an enumeration in which the baʾi appears to be distinct from lands watered by spring water, rain or surface drainage. Among the commentators and lexicographers, some nevertheless maintain that baʾi applies to all unwatered cultivated lands; others, influenced by the letter of the badīḥīs and perhaps by dialectal usages, offer a series of rather more restrictive interpretations revolving round the idea of an unwatered land under dry cultivation: for some, it only applies to cases where plants obtain water through their roots beneath the surface alone (detailed argument in L.A., loc. cit.; see also W. R. Smith, Lectures ..., 98-99 and Løkkegaard, Islamic Taxation, Copenhagen 1950, 121).

Among words possessing the same or an adjacent meaning which frequently replace or accompany baʾi in the enumeration mentioned above, particular attention should be paid to the term āthīḥārī (for example in the Ṣāḥī of al-Buḥārī, K. al-Zakāt, chap. 55), which it would be difficult to refrain from explaining by the name of the deity āṭhāṭar (= Astarte, Ishtar): a male stellar god in the Arabian and South Arabian pantheon, āṭhāṭar exercised an influence on the fertility of the land and was at times qualified by the name baʾal (Lagrange, Études sur les religions sémitiques, Paris 1903, 133-136; Nielsen, Handbuch der altara., Alieniumkunde, Copenhagen 1927, i, ed. Banqueri, Madrid 1802, 367; G. Ryckmans, in L'Acad. Lincei 1948, 85-100; R. G. Rockymans, in Atti Accad. Lincei 1948, 367; idem, Les religions arabs préislamiques, 2nd. ed. Louvain 1951, i, 41 and passim; Jamme, in Le Muséon, 1947, 94-150; idem, Hist. des Religions [1956], iv, 264-5). The assimilation ūth > ūthī is attested in Classical Arabic and the semantic parallelism with baʾil here is striking.

The occurrence of baʾi, still with the same meaning, must also be noted in some versions of the stipulations which the Prophet is stated to have imposed as a land code in the year 9 AH, either on the basis of Dūmat al-Djindāl (through their leader Ukaydir b. ʿAbd al-Malik), or on the neighbouring Kalbit tribes (through their leader Ḥāritha b. ʿAta); see Caetani, Annales, ii, 1, 259-269 (event discussed by Musil, Arabia Deserta, New York 1927, appendix VII, and by W. M. Watt, Muhammad al Medina, Oxford 1956, 362-3).

It is again to be met with, in connexion with the land tax (ḫarāḍjī), in the great treatises on public law of the 5th/11th century: al-Āḥād al-Sultaṇīyya by the Ḥanbalī Abū Yaʿlā (Cairo ed. 1938, 151) and by the Shāfiʿī Mawardi (trans. Fagnan, Algiers 1915, 314). In calculating this tax, they recommend that account be taken of the source of the water: this envisages four categories of cultivated land, among which the baʾi is very closely defined, approximately as above, in contrast to land irrigated or adequately watered by rainfall.

The geographer al-Mukaddasi, in the 4th/10th century, uses the term on three occasions (BG, i, 197, 574), dealing with agricultural production near Ramla, Alexandria and in Sind, always in the phrase ʿalaʾ-ʾabatu; this, however, does not suffice as a proof of the use of the term outside Syria-Palestine, the author's country of birth. In this geographical area where, "in spite of the the illusion of an abundance of water, dry cultivation constitutes the basis of traditional agricultural exploitation" (J. Weulersse, Paysans de Syrie, Paris 1946, 144), at the present day we find: arbaʾi contrasted as in former times with ṣabī (G. Dalman, op. cit., 30; already mentioned by E. Meier in ZDMG, 1863, xvii, 507).

Here is a special case of the use of this term in medieval Egypt: in Cairo under the Mamluks, perhaps already under the Fāṭimids, a park near the Khalīḍi, which subsequently became a public promenade, was called busṭān al-baʾi, then ard al-baʾi; see Mākri, Ḫāṭarat Būlāk ed. 1270 AH., ii, 129, who takes baʾi here expressly in the geographical sense.

The Muslims of Spain, "exactly like the Spanish peasants of today ... made a distinction between secano (Ar. baʾi) land and regadío (Ar. ṣabī) land, the former being especially reserved for cereal cultivation" (J. Levi-Provencal, Hist. Esp. mus., Paris 1953, iii, 270). The famous agronomist of Seville Ibn al-ʿAwwām (6th/12th) confirms this distinction (K. al-Fūlāba, ed. Banqueri, Madrid 1802, i, 5). It appeared in contracts, especially those of plantation leases or mughārāsa: the notorious formula of Ibn Salmān for example, K. al-ʿīd al-Munāṣṣam, Cairo ed. 1302 AH., ii, 21-22, in the 6th/14th century, has the two adjectival forms baʾī and ṣabī(a)ī.

These two forms do in fact appear to have had a tendency in modern times to become nouns, perhaps in certain regions because of the model provided by ʿathīḥārī. Baʾī has been noted alongside ʿathīḥārī in the dialects spoken in Southern Arabia: Landberg, Glossaire Dalinois, Leiden 1920, i, 156, where ʿathīḥārī must almost certainly be emended to ʿathīḥ(i)ārī. At a first glance it is not always easy to determine whether baʾī is at present used as an adjective or a noun in the East and in North Africa. It is frequently attached—more so than its opposite sakwī—to the name of a vegetable or a fruit: in such a case it stresses the good quality. At Fez, the feminine baṭīyya is applied to a succulent fig, whereas baʾī describes a man, avaricious, dry and hard as the land bearing the same name (information by L. Brunot).

As in the case of so many other elements of the vocabulary of spoken Arabic, it is to be regretted that we are far from knowing with sufficient exactitude the areas in which the words baʾi and baʾī, unknown to extensive Arabic speaking districts, are in fact used. The precise distribution of these words would be informative from various points of view.

BAʾL (Persian "height, high") I. — Since 1262/1846 the term for a grade in the former Ottoman Civil Service, to which the Secretary of State (mustaqāhār) and other senior officials belonged; he was addressed in correspondence as ʿutūsfāl ʾefendīm ḥadaretli (Further details in the article by M. Cavid Baysun in IA, ii, 262 ff.).

Bibliography: in M. C. Baysun (see above).
II. — Originally the name of a ḫaḍḍ in the ṭulayṭ and ṣanāǧ of Ankara (Central Anatolia) with the village of Karall (Kara 'All, now written Karail) as its centre. It is now the name of the new chief town of the ḫaḍḍ, 39° 35' N. Latit.

The name of the ḫaḍḍ is principally Yürük and refugees (muhāđir) from the Caucasus and the Balkans.

**Bâlâ-Ghâṭ** ("above the ghâṭs or passes"), a name given to several elevated tracts in central and southern India. It was usually applied to the highlands above the passes through the Western Ghâṭs. On the east side of the Indian peninsula it was the term used to distinguish the Carnatic plateau from the Carnatic Pâlūghâṭ or lowlands. In Berar it was the name of the upland country above the Adijana pass, the most northerly part of the table-land of the Deccan. It was also applied to the hilly country of western Hadarâbâd. In 1867, the name was given to a newly formed district of the Central Provinces. Today it forms a district of Madhya-Pradesh (area: 3,614 square miles; population (1951) 693,370).

**Bibliography:** Imperial Gazetteer of India; C. E. Low, Balaghat District (1907).

**Bâlâ Ḥisâr**, a general term applied, in Pakistan and Afgânistân, to citadels built on archaeological mounds and often commanding a panoramic view of the settlement, whether town, city, or village, around. Among the most famous are the fort at Peshawar (Pakistan) and that in Kabul, the capital of Afgânistân.

The fort at Peshawar, lying on the northern outskirts of the present city and covering an area of 44,000 sq. yds., with double thick walls and strong bastions, is of considerable antiquity. It was first built on the present site in 925/1519 by Bâbur during his incursions into India through the Khyber Pass. It served as a halting-place for the Mughul Emperors on their way to and from Kabul, where another fort of the same name already existed. Soon after its construction by Bâbur the fort was destroyed by the neighbouring wild Afgân tribes, who considered it a threat to their age-long freedom. It was, however, rebuilt by Humâyûn in 966/1553 under the supervision of Pahlâwas 'Omar, the Superintendent of Lands, and Sikandar Khân Uzbek was appointed as its commander. It was, the same year, attacked by the Dalazk Afgâns but they were repulsed by Sikandar Khân. In 994/1586, during the reign of Akbar, it was the scene of a great fire which consumed a huge quantity of merchandise. It remained in the possession of the Mughâls till 1679-1688 when it was captured by the Afgâns under Ayaal Khân, but they were soon expelled by the Imperial forces and the fort was regarrisoned.

It was captured by Nadir Shâh Afgâr [q.v.] in 1152/1738 but on his death in 1160/1747 the Sîd-dîr, under Ahmad Shâh Durrân [q.v.], became its master. His son Timur Shâh made the fort his place of residence. When the Sikhs captured Peshawar in 1840/1824 the fort was dismantled and the rubble was sold. Harf Singh Narwa, the Sikh general, realising its strategic importance rebuilt it in 1834 with cob and mud and named it Sumârgah. In 1846 the British occupied Peshawar and constructed a stronghold in its place. It is now garrisoned by Pakistani troops.

(A. S. Bârmâr-Ábâr)
a treaty we know of from al-Baladhuri, and it later became part of the Umayyad "gund" of Damascus, then passed into 'Abbadid control until the Fātimid caliph al-Mu'tizz installed a governor in 361/972. Temporarily occupied by the Byzantine emperor John Tzimiskēs in 363/974, and by the prince of Aleppo, Śāliḥ b. Mirdās, in 416/1025, it fell into the hands of the Sulayhids Ṣutuḥ and his sons in 468/1075, and during the domestic struggles of the Burid period belonged in turn to the governors Gunushatkīn, Būrī and his son Muḥammad, then finally to the celebrated Onor, from whom Zenkl seized it for a time and entrusted it to Ayyūb, the future father of Šalāh al-Dīn. Nūr al-Dīn succeeded in reconquering it in 549/1154, and had to rebuild its walls after the devastation caused by the terrible earthquake of 565/1170. Šalāh al-Dīn in his turn seized the fortress from his old master's successors, in 570/1174, and gave it in fee successively to various members of his court or family, notably to his grand-nephew al-Malik al-Amidjad Bahrām-shāh, who held it from 578/1182 until 627/1230, in which year it was seized from him by al-Malik al-'Aṣghāf Muṣā, the master of Damascus. After various Ayyūbid ha had again contended for its possession, it was conquered by the Mamluks after the Mūzzafarid period, in 658/1260. Then, under the Manūlkūs, it became the chief town of an area in the third northern border district of the province of Damascus, and its governor, whose authority did not extend over the entire Bika', was in a position of direct dependence on the na`īb of Syria, who himself confirmed his appointment. The town seems to have become less important from that time onward, and the main Manūlīk mail routes, Damascus-Ḥimṣ and Damascus-Tripoli, thenceforward passed it by in favour of the Kalamān route, as the commercial roads of the modern era were also later to do. In 922/1516 it passed under Ottoman control, together with the whole of Syria, and remained in the hands of petty rulers, notably of the Harūfī family, until the Porte set up a regular administration in 1850.

The struggles for its possession in the Būrid, Zengid and Ayyūbid periods, when to hold the town seems to have been the pre-requisite for control of southern Syria, explain why Arab building there consisted chiefly in continually improving a system of defences set up mainly to fill the original gap at the south-west corner, between the pades of the two ancient temples. Of the four periods of work which have been distinguished, the second is characterised by a shifting of the fortified entrance from the west side to the south, and can be dated either in the reign of Muḥammad b. Būrī, who effectively defended Ba‘labakk, or in that of Zenkl, who according to inscriptions and written documents took measures to improve the state of the citadel. In the reign of Bahrām-shāh new towers reinforced the new facade. Lastly the time of Ka‘alānūn was marked by work in a more advanced style, in particular the massive tower at the south-east corner of the small temple and the barbican round the old south gate.

Inscriptions, studied in conjunction with the archeological remains, allow us to date with certainty various features of an ensemble which must be considered among the most interesting relics of Arab military architecture of mediaeval Syria. From the same period date also the small mosque at Ra‘s al-‘Ayn and notably the large mosque in the town, built not far from the citadel with materials from an older building, and characterised by its prayer hall with its four naves and its imposing minaret. Both mosques are inscribed with texts from Mamlūk decrees. Other monuments which have now disappeared, madrasas, ribāts, hospices, convents and hadith schools, are mentioned in earlier descriptions of the town.

J. Sourdét-Thommé

AL-BALĀDHURI, AHMAD B. YARĪĀ B. DIĀHIR B. DAWŪN, one of the greatest Arabic historians of the 3rd/9th century. Little is known of his life. Neither the year of his birth nor that of his death is directly attested. From the dates of his teachers, it is evident that he cannot have been born later than the beginning of the second decade of the 9th century A.D.; for the date of his death, Muslim authors suggest, as the latest and most likely date, ca. 892 A.D. As he is said to have been a translator from the Persian, Persian origin has been arbitrarily assumed for him, but already his grandfather was a secretary in the service of al-Khaḍīf in Egypt Djiāshiyārī, fol. 162a). He probably was born, and certainly spent most of his life, in Bağhdād and its environs. His studies led him to Damascus, Emesa, and Antiōch, and in Irāq he studied, among others, with such famous historians as al-Madīnī, Ibn Sa‘d, and Mus‘āb al-Zubayrī. He was a boon companion of al-Mutawakkil; his influence at the court appears to have continued under al-Musta‘in, but his fortunes declined sharply under al-Mu‘tāmid. The statement that he was a tutor of the poet, Ibn al-Mu‘tazz, appears to be the result of a confusion of our historian with the grammarian, Thā‘lab, and the story that he died mentally deranged through inadvertent use of ba‘labakk (Semecarpus Anacardium L., marking-nut), a drug believed beneficial for one's mind and memory, is meant to refer not to him but to his grandfather, but even so, it constitutes a puzzle for which no satisfactory explanation is offered by the sources.

The two great historical works that have survived have won general acclaim for al-Baladhurī’s reliability and critical spirit.

1. His History of the Muslim Conquests (Futūḥ al-Buldān) is the short version of a more comprehensive work on the same subject. The work begins with the wars of Muhammad, followed by accounts of the riddā, the conquests of Syria, the Īgāzīrā, Armenia,
Egypt, and the Maghrib, and lastly, the occupation of 'Iraq and Persia. Remarks of importance for the history of culture and social conditions are interwoven with the historical narrative; for instance, al-Baladhuri discusses the change from Greek and Persian to Arabic as the official language in government offices, the quarrel with Byzantium concerning the use of Muslim religious formulas at the head of letters originating in Egypt, questions of taxation, the use of signet-rings, coinage and currency, and the history of the Arabic script. The works, one of the most valuable sources for the history of the Arab conquests, was edited by M. J. de Goeje, *Liber exspanisorim regionum*, Leiden 1863-66, and reprinted repeatedly later on. English translation by P. K. Hitti and F. C. Murgotten, *The Origins of the Islamic State*, New York 1916 and 1924; German translation (continued to p. 239 of de Goeje's edition) by O. Rescher, Leipzig 1917-23.

2. His *Ansab al-'Ashraf*, a very large work which was never completed, is genealogically arranged and begins with the life of the Prophet and the biographies of his kinsmen. The *Abbasids* follow the *'Alids*. The *Abd Shams*, among whom the Umayyads claim a disproportionate amount of space, follow the Banu Hashim. Next, the rest of the Khawarij and other divisions of the Muhallabites are dealt with. The *Kays*, in particular the *Thakif*, occupy the closing portion of the work; the last biography of any size is that devoted to al-Hadjjaj. Though a genealogical work in outward form, the *Ansab* are really *takabāl* in the style of Ibn Sa'd, arranged genealogically. This method of arrangement is not rigidly adhered to; for the most important events of the reigns of individual rulers are always added to the corresponding chapters. The *Ansab* thus are one of the most valuable sources for the history of the Khawarij. A portion of the work was discovered in an anonymous MS. and identified and edited by W. Ahlwardt, *Anonyme arabische Chronik*, Bd. XI, Leipzig 1853. A complete MS. of the work was discovered by C. H. Becker in Istanbul, MS. 'Ashar Etfendi 1579-98 (table of contents by M. Hamidullah, in *Bull. d'Et. Or.*, vi, 1894, 197-211). Of the edition of the work sponsored by the Hebrew University in Jerusalem, Vol. ivB (ed. M. Schlossinger, 1938-40) and Vol. v (ed. S. D. Goltein, 1936, with an important introduction) have been published. O. Pinto and G. Levi della Vida have translated *Il Califfo Ma'dinayn I*, Rome 1938. Cf. also F. Gabrieli, *Le Rivolta* di al-Baladhuri, Rome 1938. Additional references can be found in the late works of M. de Goeje and the editions of al-Baladhuri sponsored by the Hebrew University in Jerusalem, Vol. ivB.

3. In 1247 the office of Commissioner of the Ottoman conquest of Constantinople, was abolished; some of its functions, relating to the care of public buildings, were transferred to the newly established Directorate of Buildings in the Domain (*Emniye-i Khāsia*), (Lutfi, ii, 105; Mecidiye-i Umur-i Belediyye, 1901, i, 980 and 1935, quoting the decree in the official gazette, *Taḥsīm-i Wāḥid* vii, 1247, no. 2).

The next phase began in the year 1271/1854, when two changes were initiated. The first of these was the creation of a new *Şehremnuri* for Istanbul. Despite the name, this bore little resemblance to the earlier institution; it was rather an adaptation of the French *préfecture de la ville* and was chiefly concerned with the supervision of the markets, the control of prices, etc. The prefect was to be assisted by a City...
Council (Şekir Medjd) drawn from the guilds and merchants. The İhtisdb Nezdreti was abolished and its duties handed over to the prefecture. This change in nomenclature seems to have had little immediate effect, and complaints were made about official neglect of municipal problems. A few months later, therefore, another decision was taken by the High Council of Reform (Meqlis-i 'Ali-i-Tanzimli), to establish a municipal commission (İhtisam-i Şekir Komisyyonu). A leading spirit in the commission was Antoine Allion, a member of a rich French banking family that had settled in Turkey at the time of the French Revolution. The other members were drawn chiefly from the local Greek, Armenian and Jewish communities, together with some Muslim Turks, including the İshemsâqşî Mehemmed Şâli Efendi, one of the first graduates of Sultan Mahmad's medical school. The Commission was instructed to report on European municipal organisation, rules and procedures, and to make recommendations to the Sublime Porte.

A number of factors had combined to induce the Ottoman government to take these steps. European financial and commercial interests in Istanbul had been growing steadily, and a new quarter was developing in Galata and Beyoglu (Pera), with buildings, apartment houses, shops, and hotels, in European style, and with increasing numbers of horse-drawn carriages of various kinds (see ARAKA). All this created a demand, which was put forward by the European residents, with the support of the Europeanised elements among the local population, for proper roads and pavements, street-cleaning and street-lighting, sewers and water-pipes. The presence in Istanbul of large allied contingents from the West during the Crimean War gave a new impetus and a new urgency to these demands, and in the new phase of reform that began in 1854 some attention was given to the problems of municipal organisation and services in the capital. A good example of the attitude of the Turkish reformers to these questions will be found in an article, published in the newspaper Tasev-i Eýkar, by the poet and publicist Ibrahim Shinâş (q.v.) on the lighting and cleaning of the streets of Istanbul (repr. in Abû 'I-diýâ [Ebugziya] Tewlîk, Numâne-i Edebiyat-i 'Othmânîyye, [1st ed. Istanbul 1296/1878], 3rd ed. Istanbul 1306, 227-235.

The record of the proceedings of the High Council of Reform on these matters reflect clearly the various preoccupations of the Ottoman government. The creation of a city prefecture, under the recently created Ministry of Commerce, was in part an attempt to meet a real need by installing the relevant European apparatus. There was also the usual desire to impress Western observers.

The Commission sat for four years, and reported to the High Council of Reform. Its chief recommendations were for the construction of pavements, sewers, and water-pipes, regular street-cleaning, street-lighting, the widening of the streets where possible, the organisation of separate municipal finances, the imposition of a tax for municipal purposes, and the appointment of the commission to apply municipal laws and regulations (mâdbata of 27 Safar 1274/9 Oct. 1857, in Medî. Um. Bel. 1, 1402-3). In 1274/1857 the High Council decided to accept these recommendations, but to limit their application for the time being to an experimental municipality, to be established in Beyoglu and Galata. This district, though the first to be organised, was officially named the sixth district (ailândî dâ'ire), possibly, as 'Othmân Nûrî suggests (Medî. Um. Bel. 1, 1415, n. 93), because the sixth arrondissement of Paris was believed to be the most advanced of that city. The reasons for this step are set forth in a mabâda of 21 Rabî' I 1274/9 Oct. 1857 (Medî. Um. Bel. 1, 1416-8). Municipal services and improvements were badly needed, and should be provided; the cost should not fall upon the state treasury, but should be met by a special levy from the townspeople who would benefit. It would be excessive and impracticable to apply the new system to the whole of Istanbul at once, and it was therefore decided to make a start with the sixth district, consisting of Beyoglu and Galata, where there were numerous properties and fine buildings, and where the inhabitants were acquainted with the practice of other countries and were willing to accept the expense of municipal institutions. When the merits of these institutions had been demonstrated by this example and had been generally understood and recognised, a suitable occasion would be found to apply them generally. The mabâda refers explicitly to the large number of foreign establishments and the preponderance of foreign residents in the district.

The constitution and functions of the municipality of the sixth district, also known as the model district (numâne dâ'ire) were laid down in an trâde of 24 Shawwâl 1274/7 July 1858. The Municipal Council was to consist of a Chairman and twelve members, all appointed by Imperial trâde, the Chairman indefinitely, the others for three years. The Council would elect two of its members as vice-Chairmen and one as treasurer. All were to be unpaid. The permanent officials were to be an assistant to the Chairman, a Secretary-General, two interpreter-secretaries, a civil engineer, and an architect. All these were to be appointed by the Council and receive salaries.

The terms of reference of the Council were defined generally as "all that concerns cleanliness and public amenities (nedâset ve müskel-i ummîyye)", and more specifically as roads and streets, sewers, pavements, street-lamps, sweeping and watering the streets, widening and straightening the streets, water-supply, gas inspection and condemnation of ruinous and dangerous buildings, inspection and control of food supplies, control of prices, inspection of weights and measures, supervision of public places such as theatres, markets, hotels and restaurants, schools, dance-halls, coffee houses, taverns, etc. The Commission was further given the power to assess, impose, and collect rates and taxes, and raise loans, within limits laid down, and also to expropriate property in certain circumstances. The Chairman was to submit his budget to the Commission for discussion and inspection, and then to the Sublime Porte for ratification, without which it would not be valid.

From this it will be seen that the measures of 1271/1854-5, while accepting the principle of the discharge of certain new responsibilities in relation to the town, hardly represent an approach to the European conception of municipal institutions. There is still no recognition of the city as a corporate person. for such an idea remained alien to Islamic conceptions of law and government; nor was there any suggestion of election or representation. What was created was a new kind of administrative agency, appointed by and responsible to the sovereign power, but with specified and limited tasks and with a measure of budgetary autonomy. Such special commissions were by no means new in Ottoman administration (see EMIN). The novelty lay in the kind of function entrusted to it.
The municipal commission of the model sixth district seems to have done good work. Among other achievements, it made a land survey of the district, laid out two municipal parks, opened two hospitals, and introduced many improvements for the health, security and convenience of the residents. All of which did not prevent the official historiographer Lutfi Efendi from condemning it in the most scathing terms (cited by 'Og‘hän Nâbi in Şekerlih, 1279). The movement towards the introduction and extension of Western-style municipal services continued, however. In 1285/1868 a municipal code of regulations (belediyye nizâmînamesi) was issued, the intention of which was to extend the commission system to the rest of the 14 districts of Istanbul. Each was to have a municipal committee of 6-12 members, who would choose one of their selves as Chairman. A general assembly for all Istanbul (Diemîşyet-i ‘Umâmîyesi) of 56 members was to be formed, consisting of 3 delegates from each district, as well as a Council of the Prefecture (Meldî-i Emânât) of six persons, appointed and paid by the Imperial government. These two bodies were to function under the Prefect (Şehremnî), who was to remain a permanent official. The elaborate provisions of this code seem to have remained a dead letter until 1293-4/1876-7 when, under the impetus of the constitutional movement, new codes were issued for the capital and for provincial towns. The Istanbul code of 1293/1876 was in effect a rearrangement of the earlier one, with a few changes, the most important of which were the increase in number of districts from 14 to 20, and the change in the property qualification of members from a tax payment of 5,000 piastres to an annual tax payment of 250 piastres. Perhaps the most significant innovation in the new code was less in its provisions than in the fact that it was promulgated, not by the Sublime Porte, but by the short-lived Ottoman parliament. However, the wars and crises that followed caused it to be as ineffectual as its predecessors. (An exception was the Princes Islands, where a seventh district was constituted: Sa‘id Pasha, Kâdirî, Istanbul 1281, i, 5; Medî, Um. Bel. i, 1457). Finally, in 1296/1879, a new and more realistic version was published, which in time was put into operation. This divided the city into ten municipal districts. The elaborate apparatus of councils and committees provided by the earlier codes was abolished. What was left was an appointed Council of Prefecture to assist the Prefect, and a government-appointed director (müdîr) for each of the 10 districts. This system remained in force until the revolution of 1324/1908.

In the provinces the policies of the reformers were much the same. The earlier authority of the aşîyan and the Şehir hâkûbasî [qq.v.] had been abolished. The mukhtar system, introduced by Mahmûd II, was introduced into the urban districts of most of the large towns, and the wîlâyêt law of 1281/1864 laid down regulations for their election (chapters iv and v). In the wîlâyêt law of 1287/1870, provision was made for the establishment of municipal councils in provincial cities, along the same general lines as in the code for Istanbul. There is no evidence that anything much was done about this. Some attempt, however, seems to have been made to implement parts of the provincial municipal code (wîlâyêt belediyye hânûmu) of 1294/1877. According to the law, every town was to have a municipal council, consisting of 6 to 12 members, according to the population. They were to sit for four years, with elections every two years to choose half the members.

The doctor, engineer, and veterinary surgeon of the region were ex officio advisory members. Membership was restricted to those paying 100 piastres a year in tax. One of the members of the Council became mayor (belediyye reisi), not by election but by government appointment. The budget and estimates were to be approved by a municipal assembly (Diemîşyet-i Belediyye) meeting twice yearly for this purpose. This assembly was responsible to the General Council of the province (Medî-i ‘Umâmî-i Wîlâyêt) (Medî, Um. Bel. i, 1664 ff.).

After the Young Turk Revolution a new attempt was made to introduce democratic municipal institutions. The law of 1293/1876, with some amendments, was restored, and a serious attempt made to put it into effect. The experiment was not very successful. The personnel of the district committees, though enthusiastic, were inexperienced, and there was little co-operation between districts for common purposes. In 1328/1912 a new law finally abolished this system. In its place a single Istanbul municipality, called Şehremnâmet, was established, with nine district branch offices (Şau‘be), each directed by a government official. The Prefect was assisted by a 54 man general assembly, to which 6 delegates were elected from each of the nine districts. In this as in so many other respects, the new régime was returning to a more centralised system of government. Despite many difficulties, some important progress was made by the Young Turks in improving the amenities of Istanbul. A new drainage system was planned and constructed, improvements were in policing and fire-prevention, and the famous packs of dogs that had for long infested the Turkish capital were finally removed.

The first municipal measure of the republican government was a law of 16 Febr. 1924, setting up a prefecture (Şehremnâmet) in Ankara (Kauwânîn Meşêmû‘asîî ii, 218). The first prefect was Ali Haydar, and he was assisted by a general assembly of 24 members. The constitution followed broadly that of Istanbul, but with some changes, the general purport of which was to restrict the autonomy of the municipality in financial and security matters and place it more strictly under the control of the Ministry of the Interior.

On 3 April 1930, a new law of municipalities was passed (Reşmi Gazete 1471, 1250: OM, 1930, 551). The old names of Şehremnêmet and Şehremini, abolished, and replaced by Belediye and Belediye reisi, usually translated mayor. Under Sultan 'Abd al-Hamîd, the offices of Prefect and Governor of Istanbul had in fact been exercised by the same person. The Young Turks, by a law of 1325/1909, had formally separated the prefecture from the government. The new law laid down that in Istanbul, though not elsewhere, the office of mayor should be combined with that of Vâli, the vilâyêt and belediye administrations, however, remaining separate. Under the law, municipalities, like villages, have corporate legal identity and legally defined boundaries. The 165 articles of the law provided a systematic code of rules for the election and functioning of municipal bodies, and with some modifications remained in force to the present day. Under these rules, municipalities are administered by a Mayor, a Permanent Commission, and a Municipal Council. The Mayor is elected by the Council, which itself is elected directly by universal suffrage for a term of four years. Towns with from 2,000 to 20,000 inhabitants are called kasaba, those with more than 20,000 are called şehir. The size of the
Council depends on the number of inhabitants, the minimum being 12 members, for fewer than 3,000 inhabitants. The Council meets three times a year, at the beginning of February, April and November. At other times it is replaced by a permanent commission (daimi encumen) consisting of three of its own members reinforced by the permanent officials of the municipality. The functions of the municipality include public health (hospitals, dispensaries, preventive medicine, sanitary and food inspections, etc.), public services (trams, buses, gas, electricity), town planning and engineering (roads and bridges within the town, public parks and gaz dens, street-lighting and cleaning, sewage, water-supply, etc.); in times of shortage, it is also entrusted with the distribution of commodities in short supply. It has its own enforcement agency (sahla). The municipality imposes taxes and has its own budget; its permanent staff, however, are civil servants.

Bibliography: the richest collection of material for the history of municipal institutions in Turkey will be found in "Olgmân Nürî (= Osman Ergin), Mezgelle-i Umur-i Belediyeye, 5 vols., Istanbul 1330-1338; the first volume contains an elaborately documented history of municipal institutions in Islam and in Turkey, the second reproduces the texts of Ottoman Laws and edicts on municipal matters, the remaining three deal with specific topics such as municipal contracts and privileges, health, public works, etc. For a brief general introduction to the subject by the same author, see Osman Ergin, "Turhiyede Şehrîcüsûn Tarhi İnkılapî, Istanbul 1336. The texts of laws relating to municipal matters will be found in the General and provincial yearbooks (sândâmî) of the Ottoman Empire, the last of which appeared in 1328/1912. On the municipal laws of the republic see La Vie Juridique des Peuples, vii, Turquie, Paris 1939, 57 ff.; Albert Gorvine, An Outline of Turkish Provincial and Local Government, Ankara 1936. (B. Lewis)

(2) Arab East.

Town councils of the earlier period of reform, such as the mûfîs Dimashq which Ibrahim Pasha established during the Egyptian occupation of Syria, 1832-40 (A. J. Rustum, al-Mufrsídî al-Malâhiyya al-Misritiya: Bayân bi-Wâlahî Shâm Beirut 1940-43), and a council appointed by Nûr al-Dîn Pasha, a reforming mûfîsî, at Sawâkîn in 1854 (J. Hamilton, Sinai, 1857), were unrelated to any legislative policy and were short-lived. The Ottoman municipal legislation of 1281-94/1864-77 was applied throughout the Arabic-speaking provinces of the Empire except in certain frontier regions and in Egypt where municipal development was following a different course. The new municipalities flourished where the wilâ'î of the province was sympathetic to the tanâmîlî and languished where he was not. Thus, under the guidance of Ahmad Midhat Pasha, Baghdad in 1869-72 and Damascus in 1878-80 experienced an intensive if brief period of urban development involving the demolition of city walls, re-arrangement of streets and construction of covered markets and other public buildings. Participation of public-spirited local notables furthered urban reform. Mosul under its seigniorial families had a continuous municipal history since 1869. Sectarianism hindered the smooth working of several municipalities in the communes (nâhiya) of the autonomous sandjâk of Mt. Lebanon, and in Jerusalem where the complicated religious situation demanded that the chairman of the municipal council should be a Muslim. A weakness in all Ottoman provincial municipalities was the ineffectiveness of the municipal police (bezîdîyye lãwghâlî, Ar. ġurtal al-balâdiyya).

In spite of its shortcomings, which the consuls of the Powers were quick to report in their despatches, the Ottoman municipal organisation showed a remarkable ability to survive the disintegration of the Empire after the world war of 1914-18 when the withdrawal of Ottoman rule left a vacuum in local government in the Arab lands. To preserve continuity during the transitional period, the British in 'Irâq, Palestine and Transjordan, and the French in Syria and Lebanon, continued to administer the Ottoman municipal code for several years until they introduced changes which reflected the influence of the Mandatory Powers. In 1922 a mûfîsî was appointed for Baghdad which was not the case in the other municipalities. The chairmen of the municipalities of Damascus, Beirut, Baghdad and Amman are styled amin al-dîjma to emphasise their particular importance in relation to the seat of the government; elsewhere the original designation, ra'îs al-balâdiyya, is retained. In the capitals the chairman is appointed by the council of ministers. In other municipalities he is chosen either by the municipal council or by the minister of the interior who usually has a department (mâlsâka, mûdîrîyya) in his ministry which supervises municipal affairs. In Egypt and the Sudan special ministries of town and rural affairs have been created.
Egypt developed its own local government tradition. Owing to the presence of the European consuls and a European merchant community, Alexandria possessed the beginnings of municipal government as early as about 1835 when a consultative majlis al-tanzim (conseil de l'ornano in Levantine parlance) was formed. This was followed in 1869 by a municipality having an appointed president and a partly elected council. The Khedive Ismail and his successors withheld municipal privileges from Cairo until 1940, though municipal commissions with restricted powers had long existed in the Egyptian provinces.

An ordinance of 1901 empowered the governor-general of the Sudan to establish municipal councils, but this measure was not implemented. In 1921 a consultative council was founded in the neighbouring towns of Khartoum, Omdurman and Khartoum North, with regional committees in each town. The formation in 1942 of the first municipal council at Port Sudan was followed in other towns. In 1945 the three regional committees at the capital were replaced by municipal councils, and a bill containing provision for further decentralisation became law in 1951.

In Arabia municipalities were established by the Ottoman Government in Madina, Jedda, Ta'if and Yanbu about 1870. In Mecca the maintenance of the simple public services was divided between the Ayn al-Zubayda water board (ta'mirat komisyonu) and a general-purposes council. These institutions had no roots in the Hijaz and disappeared in the war of 1915-19. In 1926 the Saudi Government issued an administrative instruction providing for elected municipal councils of notables and merchants in Mecca, Madina and Jedda, with technical management boards in each of these towns composed of the director of the municipality and his heads of department.

A municipal authority was in existence in Aden by 1855, and an Aden local authority was established in 1900, though the elective element was not admitted to the Fortress until 1947. In 1953 the Fortress township authority was reconstituted as the Aden municipality with an appointed president and an official majority on the council, but with a broadened electoral basis and control over its own budget. Bahrayn municipalities have each a muddar responsible to the ra'is al-baladiyya appointed by the Ruler, a partly-elected council, and a permanent director (mu'darwin, sibrisyari). Kuwait municipality is managed by a muddar responsible to the ra'is al-baladiyya, a member of the ruling family. The Arabic-speaking communities of Mu'assawa and Ḥarar have taken only a small part in town management. By decree of 1893, rescinded in 1901, the Italian Government instituted a municipal board at Mu'assawa with an insignificant representation of appointed natives and a narrowly limited competence. Two measures passed by the Ethiopian Government: Administrative Decree no. 1 of 1942, extended by Municipalities Proclamation no. 74 of 1945, provided for elected town councils.

Municipalities in the Arab East do not usually exercise direct control over electricity and water supply, and rarely over urban transport, undertakings which are operated either by concessionary companies, now mostly in process of nationalisation, or by boards under the authority of the central government, or without municipal representation. Municipal councillors are chosen by direct suffrage of the electors, not by inferior councils in towns wards as in two-tier systems of municipal representation. Municipalities vary in the degree of publicity in which they pursue their activities. Those in the more politically advanced centres, such as Damascus, Beirut, Bagdad, Cairo and Alexandria, disclose their budgets and explain their policies; others are less communicative. The press is excluded from council meetings, and the somewhat negative attitude of the citizens to local, in comparison with national, affairs results in relatively small polls at council elections, though the inhabitants of Palestine under British mandate, denied an active part in national affairs, frequently vented their feelings in municipal politics. Municipalities also differ in the strictness with which they enforce building restrictions and traffic control, and in the importance which they attach to welfare and public amenities. Only in Egypt have women the right to be municipal electors and to be elected on municipal councils; women municipal employees are everywhere few.

In no state is there a nation-wide local government service with its own traditions existing parallel with the national civil service. Local government is considered as a regional branch of the central government, having no juridical or real financial independence. Yet the growing wealth and technical complexity of the larger municipalities, as well as their record of administrative maturity and good government, have in practice increased their civic autonomy.

In Tunisia the first baladiyya appeared in the reign of Muhammed Bey, who set up by a decree of 30 August 1858 a municipal Council to administer the affairs of the town of Tunis, composed of a president, a secretary and twelve members chosen from among the foremost people in the land, a third of whom gave up their seats each year. The chief responsibilities of this council were to do with public moneys, roads, the acquisition for the public benefit of land needed for widening roads, and the issuing of building permits. The council received its administrative authority, which was only vaguely defined, from the sovereign. The constitution of the Tunisian municipal council was altered after the setting up of the French protectorate, by a decree of the bey dated 31 October 1883. Two years later a decree of 1 April 1885 promulgated a municipal charter for the whole of Tunisia, and was soon followed by another decree (10 June 1885) which determined that all municipal councillors in Tunis were to be appointed by the government, listed the matters the municipal councils were competent to deal with, and organised the administration of the country through these bodies. Two subsequent reforms have been made, one by a decree of 10 August 1898 which relaxed the rule whereby consent had to be granted for all deliberations by the municipal councils, and the other by a decree of 15 September 1945, which provided for an elected municipal council in Tunis, composed of an equal number of Tunisians and Frenchmen.

But the institution as a whole was profoundly modified by the bey's decree of 20 December 1952, which defined the commune: a collective body under public law, with civil status and financially autonomous, responsible for the conduct of municipal affairs. The deliberating body of the commune is the municipal council, elected for six years by direct suffrage by two electoral bodies, who appoint the Tunisian and the French councillors respectively. Half the members vacate their seats every three years. Of 64 communes in all, 39 appoint an equal number of Frenchmen and Tunisians to their municipal councils, the others appointing a majority of Tunisians, or Tunisians alone. The elections are held on a general basis of universal suffrage, with the proviso that Tunisian women, unlike Frenchwomen, do not have the right to vote. The municipal council holds four ordinary sessions annually. Its competence is restricted and does not extend to all the business of the commune. There is still administrative supervision centrally and locally, which is exercised by the Ministry of the Interior, and by the governors respectively. The system of municipalities was reformed in 1953 by the dahir of 18 September, which abolished the special organisations at Fez and Casablanca. The number of communes was raised from 94 to 977. The municipal councils are now elected directly in one ballot from a list of candidates, for three years, the electors being Tunisians of both sexes aged twenty and over. The minimum age for candidates is 25. Frenchmen can no longer be members of the municipal councils, but the law provides that Frenchmen and foreigners who have the right to vote may be appointed by the Tunisian government, which will fix the number of such persons for each commune.

Administrative supervision is exercised by the Minister of the Interior, and by the governors centrally and locally. Two other important innovations must be mentioned: the president and deputies are now elected by the council. But the president of the commune of Tunis is still appointed by decree of the Prime Minister, the president of the council, on the nomination of the Minister of the Interior. On the other hand the municipal councils now deal with all the business of the commune.

(3) NORTH AFRICA — (ii) MOROCCO

Before 1912 there were no municipalities nor municipal life in Morocco in the sense these words have had in some European countries since the Middle Ages, a sense inherited from Roman tradition. The towns had no finances of their own; the expense of public services was met in large measure by the revenue of religious foundations or ḥuḍās, and building or improvements were dependent on the good will of the prince, who would levy the required sums on the public treasury. Nor were there any representative assemblies of citizens; the governor or ʿāmil held his power directly from the sultan, and the muḥāfas was not "the merchants' provost", as is often stated, as they did not elect him. A Muslim governor would take the advice of prominent people in his area, but was not bound to do so.

The first modern body set up by the French Protectorate was that of Fez (al-muḍājiṣ al-baladī), instituted by the dahir of 2 September 1912. It comprised a council of fifteen members with right of vote, seven officials appointed on special grounds and eight other prominent men elected for two years. This organisation survived until the municipal charter of 1917.

A dahir of 1 April 1913 set up "municipal commissions in the ports of the Sharifian empire". It was recapitulated and clarified by the dahir of 8 April 1917. Nineteen towns were given the status of municipalities (1,521,476 inhabitants according to the census of 1911-12). The dahir determines the municipal authorities: the pasha or governor, still appointed by the central authority, and under the direction of a senior municipal services official, then from 1947 of an urban affairs delegate; and a municipal commission with right of discussion only, appointed and not elected, and made up of one French, one Moroccan section (one Muslim, one Jewish). The municipalities provide services under the direction of the Head of municipal services: administrative, public works, sanitary and fiscal. They have budgets drawn from their own resources (direct and indirect taxes, revenues from land and excise, a share in the profits from services given).

Casablanca, like Fez, was given a special organisation, but only in 1922. The municipal commission, though still appointed, now had power to vote, and the French section now elected a French vice-president with special powers.

The system of municipalities was reformed in 1953 by the dahir of 18 September, which abolished the special organisations at Fez and Casablanca. The
main change it introduces is to set up elected, not appointed, municipal commissions, still of Moroccans and Frenchmen equally. The commission manages the affairs of the city, though approval of its decisions by the central supervising authority is required.

The administrative provisions of this statute have been given effect, but not those relating to elections. This was prevented by the political crisis of 1953. The old appointed commissions remained, and were dissolved when Morocco became independent.

The government of independent Morocco has made no change in the legislation on municipalities. Only French control and the commissions have gone, naturally enough. A new representative system is being prepared. It will relate not only to the towns, but envisages the setting up throughout the country of rural communes which would replace the old tribes or divisions of tribes, and would be run by elected councils. At the time of writing this law has not yet been promulgated. It seems to be inspired in large measure by the dahir of 6 July 1951, which set up elected "djamā'as" with power of vote, usually within the framework of the tribe or tribal division.

In Algeria, the municipal organisation reproduces, in the towns and villages, the system in force in France. The old "mixed councils" administered by officials appointed by the government and subordinate to the sub-prefects have everywhere been replaced by "communes with full powers".

(4) PERSIA

In the 19th and early 20th century the chief city official after the governor was the beglerbegi; under him were the dārāgha and balintar; and over the quarters in the larger cities was a hadkhudā. In the bazaar the craft guilds enjoyed a considerable degree of autonomy in internal affairs. The streets of the city were narrow, mostly unpaved, muddy in winter, dusty in summer, and unlit at night. There was, however, little demand for municipal reform and even after the grant of the constitution in 1906 little attention was paid to the establishment of municipalities on modern lines. A Municipal Law was passed on 20 Rabī' II 1325/2 June 1907 but remained largely in abeyance owing to the fact that inadequate financial provisions had been made for municipal development. In 1919 during the premiership of Sayyid Diya'd al-Dīn Tabātabā'i a commission was set up to evolve a scheme for a municipality for Tehran on modern lines but proved abortive (J. M. Balfour, Recent Happenings in Persia, London 1922, 240). In 1922 Dr. Ryan, an American, was engaged as municipal adviser to Tehran; he died in 1923 and was not replaced (A. C. Millsbaugh, The American Task in Persia, New York and London 1925, 21, 212). During the reign of Rīdā Shāh (1925-41) considerable development took place in municipal affairs, and by 1927-8 there were some 134 municipalities in existence. By the Municipal Law of 1330 P./1950 the head of the municipality (ra'is-i sīdār-i baladīyya) was designated by the Ministry of the Interior. He was responsible for the execution of projects for municipal development and municipal administration; his duties included the supervision of weights and measures, control of the guilds, and the regulation of food supplies, prices and rents. The law also provided for an elected municipal council of 6-12 members. Its term of office was two years; its duties were to supervise the activities of the municipality, approve the municipal budget, and propose through the head of the municipality to the Ministry of the Interior the levy of municipal dues. Much progress was made in the field of town planning under Rīdā Shāh but the high degree of centralisation and the close control of the Ministry of the Interior over municipal affairs meant that the local communities had little real responsibility for or control over municipal affairs. In 1328 P./1949 new legislation increased the size of the municipal council so that it was composed of 6-30 members and extended its term of office to four years. Its main functions were unchanged but its powers were somewhat increased. The head of the municipality was appointed by the Ministry of the Interior from among three candidates submitted by the council; he was dismissed in the event of the municipal council passing a vote of no confidence in him. The increase in the power of the municipal council was, however, offset by the fact that in the event of a disagreement between the governor-general and the municipal council the former could have recourse to the Ministry of the Interior whose decision in such a case was final. Subsequently modifications were made in the position of the municipality and the municipal council by Administrative Orders (idvān-i hādā) dated 11 Abān 1331 P./1952 and 21 Khurāsa 1332 P./1953 issued during the premiership of Dr. Muṣaddīk, and the Law of 11 Tir 1334 P./1955. In some respects the position of the municipal council was strengthened, but its freedom of action was limited by the fact that its dissolution could in certain circumstances be demanded by the Ministry of the Interior; in the event of there being no municipal council the Ministry of the Interior could appoint the council's successor. Under the Second Seven-Year Plan Law, approved in March 1956, Persia was divided into three areas for municipal development, for each of which a firm of consultants was allotted responsibility (F. C. Mason, Iran, Economic and Commercial Conditions in Iran, August 1957, HMSO 1957, 74-5). The baladīyya became known during the reign of Rīdā Shāh as the shahrārd and the ra'is-i baladīyya as the shahrādār (A. K. S. Lambton)

(5) INDIA

The indigenous village communities of India controlled by village councils or pandāyas represented a form of local self-government, but they had practically ceased to function during the anarchy accompanying the decline of the Mughal empire. Albuquerque, the Governor of the Portuguese possessions in India between 1509 and 1515, had retained the existing village communities in his administration of Goa. In 1674 Gerald Angier had also made use of the ancient pandāyas in Bombay. To a certain extent the pandāyas system had survived in the territories of the Maratha Peshwa and traces were discernible elsewhere. This led Mountstuart Elphinstone in Bombay and Thomas Munro in Madras to advocate the preservation of these village councils where possible. Their representations however were little attended to and the institutions of local self-government introduced by the British in the middle of the nineteenth century were of a foreign type. Until the introduction of the Montagu-Chelmsford reforms in 1919 they resembled the French rather than the British system, for the district officer of British India like, the French prefect of a department, rigorously controlled the provincial authorities,
There was far too much official interference and British administrators aimed more at efficient local government under official control than any genuine system of local self-government under popular control.

The development of municipal institutions under British rule began in the three Presidency towns of Madras, Bombay and Calcutta. As early as 1687, by order of the Court of Directors of the East India Company, a municipal corporation and mayor’s court were established in Madras. Similar bodies were set up in Calcutta and Bombay in 1726. These courts however were intended to exercise judicial rather than administrative functions. By the Charter Act of 1793 the governor-general was authorised to appoint justices of the peace for the municipal administration of the Presidency towns. In addition to their judicial duties they were to appoint watchmen and scavengers and levy a sanitary rate for this purpose. This worked with a certain amount of success in Bombay but not in Calcutta or Madras. The justices of the peace were government nominees and it was not until 1872 that the ratepayers of the Presidency towns were allowed to elect their own representatives.

Between 1842 and 1863 a series of regulations extended municipal institutions to other towns. After the 1861 Councils’ Act municipal government was remodelled by the local legislatures. The need for associating Indians in local self-government was laid down by a resolution of Lord Mayo’s government. The governor-generalship of Lord Ripon (1880-84) witnessed a great extension of local self-government which it was hoped would be a means of political education for Indians. At the same time rural boards, similar to the municipal boards, extended the system to the rural areas. It was not until the introduction of dyarchy under the Montagu-Chelmsford reforms that local bodies were handed over to popular control and elected ministers became responsible for the administration of local self-government.

(6) MALAYA and SINGAPORE

The municipalities in Malaya, as in other parts of the British Commonwealth, are adapted from the local government system of England. The first appearance of such institutions in the area took place in the Straits Settlements of Malacca, Penang and Singapore. In 1827 the genesis of municipal institutions in the Straits Settlements was introduced in the form of a Local Committee concerned with the management of roads and drainage in Penang. This was soon followed by similar Committees in Singapore and Malacca. In 1856 the Government of India (East India Co.) enacted a law for the establishment of Municipal Commissions of the three ‘stations’ of Singapore, Malacca and the Prince of Wales Island (Penang). In 1858 the meetings were held twice monthly and were open to the public. The Municipal Commissions of the station of the Prince of Wales Island (Penang) became the Municipal Commission of George Town in 1888. By the turn of the century there were three Municipal Commissions for the town of Singapore, George Town in Penang and the town and fort of Malacca. Each Commission had a full time president appointed by the governor and a number of official members and non-official members who were chosen in the early stages by electoral procedure. This procedure was later restricted to only half the commissioners leaving the other half to be nominated by the governor. By 1913 when the Municipal Ordinance of the Straits Settlements was enacted electoral procedure was completely abandoned and all the commissioners were nominated to represent local opinion, business associations and religious or racial groups. The system of nomination continued until after the Second World War when the electoral procedure was re-introduced first in Singapore (1949) and later in Penang and Malacca. At this stage only two thirds of the commissioners were elected by general adult suffrage. By 1957 the Municipal Commissions became City Councils (Madjilis Bandar Ra‘aya) in Singapore and George Town which had become cities with fully elected councillors who in their turn elected their president who is styled ‘mayor’ (dato* bandar).

The Municipal Ordinance of the Straits Settlements stipulated that a member of a Municipal Commission must be able to speak and read English since it was the language officially recognised. This stipulation together with the system of nominating commissioners tended to reduce public interest in the affairs of the Council. After 1957 the Chinese, Tamil and Malay languages were recognised as official languages together with English for the purposes of the Sintapore Council meetings. In Malacca and Penang Malay, the national language of the Federation of Malaya, was also recognised with English. This helped to break the barriers between the public and the Council and it opened the door to the non-English educated members of the community to stand for election with accompanying tendencies towards radicalism.

The Municipalities of Singapore, George Town and the town and fort of Malacca have always exercised all functions expected of a local authority. In addition to this they were allowed to own undertakings for the supply of water, gas and electricity.

With the spread of British administration into the Malay States and the peninsula another type of local government emerged. This was called the Town Board. It was first established in the Federated Malay States of Perak, Negri Sembilan and Pahang. The non-federated Malay States adopted similar institutions with local modifications in nomenclature and powers. It must be noted that the Town Boards were less of a local government and more of a central government functioning locally. They were totally dependent upon the authority of the State and all their employees were officers of the State. Unlike the Municipal Commission they were not legally independent of the central government but agents of it. The president and the members were appointed by the central authority for an indefinite period and not for four years as was the case with the Municipal Commission. Again at variance with the Municipal Commissions Town Boards extended their authorities beyond the boundaries of the towns to the neighbouring villages.

The first attempt at the creation of municipalities
in the true sense within the Malay States came after the establishment of the Federation of Malaya in 1948. The Municipal Ordinance of the Straits Settlements was enacted for the whole Federation which by now comprised the nine Malay States together with the Settlements of Penang and Malacca. Singapore was left out of the Federation. In the same year the Town Board of Kuala Lumpur, the Federal capital, was transformed into a municipality. It retained its former responsibilities including those of the administration of the outlying villages around it. A distinction however was made between an inner municipal area and an outer municipal area. The former referring to the town proper and the latter to the villages around it. From then onwards changes began to take place. Town Boards became Town Councils (Majlis Bandaran). Electoral Procedure was introduced. Greater authority was vested in these Councils and great interest in local affairs became apparent. In fact local elections in Malaya have become equal in importance to their counterparts in other highly developed countries in the sense that they have become a testing ground for the opposing national political parties.

At present Municipalities (Berbandaran) in the Federation of Malaya are still in a state of transition. The Municipal Ordinance is not fully implemented all over the Federation. (Apart from George Town City Council and the Municipalities of Kuala Lumpur and Malacca 27 of the larger towns in the Federation have elected Town Councils, 12 of which are financially autonomous and the others are moving in the same direction.) It is expected that the Ordinance will be amended to give greater scope for local variations retaining however the basic essentials of a modern municipality.

(M. A. Zaki Badawi)

(7) Indonesia

We do not know much about political life or the kind of government in the ancient pre-Islamic cities and towns of Indonesia, either in such royal centres as the capitals of old Mataram or later Majapahit, or in commercial urban centres like Tuban, Gresik or Palembang.

There is no evidence, up to now, that there ever was any form of really local government or autonomy vested in locally-rooted public institutions. When, from the 7th/13th century onwards, Islam gradually penetrated almost the whole of Sumatra and Java and in many other regions of the archipelago, this lack of local public institutions in the towns and cities (neither big nor numerous) continued. Both European and non-European sources of the 16th and 17th centuries tell us that the inhabitants of cities or urban emporia were ruled by servants of the sultans or princes and that their towns never were considered to be a juridical entity. Neither in remote past nor in more recent times did the indigenous towns of Indonesia have any creative influence on the development of law as did the towns and cities of Western Europe, through their law-giving authorities or special municipal courts.

In towns that came to be ruled by the Dutch East Indian Company or were founded by this chartered body (as Batavia) some urban institutions of 17th century Western type were created, of which the weeshamer (council for the affairs of orphans) perhaps may be mentioned because it has survived the Company itself. It reappears in the general legislation of the 19th and 20th century on the civil law of Europeans and non-Indonesian inhabitants of the archipelago.

When after the downfall of the Company and after the end of the British interregnum these islands became a part of the new kingdom of the Netherlands (1816) a highly centralised and exclusively official system of government was introduced. This system remained unaltered until the end of the 19th century, when under the influence of prominent colonial specialists some ideas of "decentralisation" began to carry the day. Though in 1894 and in following years several bills were conceived—which did not pass the parliament—it was not before 1903 that the so-called "Indische decentralisatiewet" (Act for decentralisation) was promulgated.

This act had a double aim: first, to pave the way for the creation of local and regional public councils; secondly to procure the financial means to be used by these councils. (The regional councils will not be dealt with here). So this act did not aim at reforms in the great diversity of Indonesian rural and truly indigenous institutions: in that field everything continued to be founded on customary law ('adat) and special legal regulations made for it. This new chapter of the legislation prescribed (inter alia) how to set up urban municipalities.

Large cities, like Batavia (now Jakarta, Djakarta), Surabaya, Semarang, Bandung and many other places of urban character as well, were westernised in many respects. The great majority of Europeans and Chinese, and several other non-Indonesian groups lived there; even the Indonesian inhabitants often were of different origin, 'adat and language. Western business and industrial activity had its headquarters there. In these great half-western, half-eastern agglomerations the usual problems that are to be found in big cities everywhere were encountered. They
could be better served and solved by municipal authorities and services than by the general civil service officials of the central government. Further legislative measures, issued by the governor-general in 1905, carried out what the fundamental act aimed at, and Batavia became a municipality. In its initial phase the members of its municipal council were appointed by the govern-general and not elected.

Since 1925 every male citizen of an urban municipality in Java who had attained his majority, had a yearly income of at least 300 guilders, and could read and write in Dutch, Malay or any vernacular, was given the vote. In the outer provinces other rules might be in force. These new urban municipalities were made corporate bodies. The rather limited activities of urban municipalities comprised such items as roads, streets, parks, sewage-systems, fire-service, public utility works, public health service and so on. Municipal regulations could be made. In 1916 a new ordinance enabled the government to appoint burgomasters (burgemeesters) for those cities or towns that were deemed to need such an official (as in the Netherlands, the burgomaster was to be appointed by the central government). Their salaries were paid by the central government; a percentage of it was to be reimbursed by the municipal treasury. As these urban municipalities were considered western-type enclaves in the territory of 'ddat law it seemed convenient, at least during the first two decades of their existence, to appoint only European burgomasters. The werkouders (aldermen) were chosen by the council from among its own members. They formed under the chairmanship of the burgomaster the executive committee of the council. Only in the last decade before the second world war did the government start appointing Indonesians as burgomaster.

In the present Republic of Indonesia the principle of decentralisation as well as that of autonomy and local government is maintained in article 131 of its provisional constitution. New legislative measures however to give practical effect to this principle are not yet in force. For Java at least, an act of 1948 (nr. 23) promulgated by the former republic of Indonesia (vulgo: the Jogya-republic) has systematised the autonomous parts of the territory in three ranks: 1) provinces; 2) kabupaten or regencies and big cities; 3) small urban municipalities and rural units. As a consequence of article 142 of the above-mentioned provisional constitution (undang-undang dasar Republik Indonesia, promulgated 17 August 1950) all earlier regulations not explicitly abolished or altered are to be considered as decrees or regulations of the republic. So the essentials of the pre-war legislation as to urban municipalities are still in force, although the burgomasters are now officially called walikota, and the municipal council has influence on the appointment of these magistrates while the members of the councils are to be elected by all inhabitants of both sexes who have passed their 18th birthday or married at an earlier date. (The special and temporary situation in Jakarta where the 24 members of the council are appointed by the government, need not be discussed here).

BALĀGHĀ (a.), Abstract noun, from balāg, effective, eloquent (from balāgha “to attain something”), meaning therefore eloquence. It presupposes fasāh, purity and euphony of language, but goes beyond it in requiring, according to some of the early definitions, the knowledge of the proper connexion and separation of the phrase, clarity, and appropriateness to the occasion. Even though those definitions are not infrequently attributed to foreign nations such as the Persians, Greeks or Indians, the demand for skill in improvisation and the recurring references to the khadh (or orator) in connexion with the discussion of the concept make it abundantly clear that it originated in the Arabian milieu. The transfer of the concept to the written word and hence to literary criticism and, beyond this, its widening to denote a three-pronged science are the essential facts in the rather complicated history of the term.

Grammar and lexicology, the primary concerns of the early critic, became in the course of the nineteenth century, when stylistic perfection had been accepted as a desideratum in official pronouncements, integral parts of the education of the kāthi. The period appreciated systematisation not excluding the analysis of aesthetic experience. Acquaintance with the conceptual apparatus of Greek thought assisted in the articulation of critical insights even though the impulse toward a theory of balāgha, or aesthetic effectiveness on the verbal level, seems to have been germane to the Arab tradition which was then stimulated by an increased interest in structure and development of poetry and by the need to rationalise the aesthetic implications of the theological postulate of the uniqueness (isddā`ā) of the Kurʾān. The motivation for the first work exclusively devoted to certain formal characteristics of artistic expression, the Kitāb al-Badīʿ of Ibn al-Muʿtāz (written in 887/88; ed. I. Kratchkovsky, London 1935), was the justification of the ‘new’ or ‘modern’ tazz (written in 887/88; q.e.), of which the second half of the ninth century had witnessed the victorious surge. This justification Ibn al-Muʿtāz sought to accomplish by means of the proof that the figures of speech whose generous employment appears to have been the most prominent (and hence the most frequently criticised) feature of the modernistic style in the eyes of the public, were without exception traceable in the Holy Book as well as in classical literature. The reason why Ibn al-Muʿtāz divided the eighteen figures of which he furnishes examples into the two categories of badīʿ (five kinds) and maḥāsīn (thirteen) still eludes us. We know, however, that the second part of his work (which deals with the maḥāsīn) was added by the author after the first had encountered a certain amount of criticism. (W. Caskel, in OLZ, 1938, 146-47, sees the rationale for the distinction in the fact that it was only in the employment of the badīʿ figures that ‘modern’ poetry differed from the classical tradition.)

The use of the notion of the ‘rhetorical figure’ in the interpretation of the Kurʾān antedates the work
of Ibn al-Mu'tazz; the method is fully developed in Ibn Kayyim al-Jawzi's (d. 1324) *Talkhis al-Muharrar* (ed. A. Saqr, Cairo 1933); this fact may help us to understand why the doctrine of tropes and figures was the earliest aspect of *Balagha* to attract systematic investigation.

Kudama b. Dia'tar's (d. 927) *Nabu al-Sirr* is inspired by another tendency; Kudama searches for an objective standard in the evaluation of poetry. Rhetorical figures are only one of the elements with which the poet and his critic have to deal. Like many of his Arab and Greek predecessors Kudama was led, especially in his discussion of the defects of poetry, into problems that to our mind come within the purview of grammar and logic. The orderly fashion in which he coordinates the several viewpoints may have contributed to the three-fold structuring of the *'im al-balagha* at which the scholastic age of Muslim critical thought was to arrive. Not much later than Kudama one Ishâk b. Isha'bân b. Wadh, a *kîthâb*, wrote (in or after 335/946-7) the *Kitâb al-Burqân fi wa'dyâb al-bayân* (identical with the *Kitâb Nabu al-nâhâr* that had been attributed variously to Kudama and to Abû 'Abdallâh Muhammad b. Ayyûb al-Ghâfiqân, d. 1282; it awaits publication; it is known only through an arabic abridgment by 'Abd al-Kâdir al-Hamawi, RAAD, 1949, 73-81; cf. the discussion of the problem by S. Bonebakker in the introduction to his edition of *Nabu al-Sirr*, Leiden 1956, 15-20). Ishâk continues the discussion of 'the various ways of expressing things which Dâhîz, *Kitâb al-bayân wa'l-tabyin*, had initiated; he criticises the limitations of his predecessors and, from our point of view, indicates one of the directions in which the final systematisation of *Balagha* was to occur. This system slowly takes shape in works like the *Kitâb al-sinâ'atayn* of Abû Hilâl al-'Afsarî (d. 1005).

The struggle between the Ancients and the Moderns which dominates literary life from the middle of the ninth to the close of the eleventh century kept the interest in stylistic analysis alive. Toward the end of this period, 'Abd al-Kâhir al-Djurjânî (d. 1078) refined to a degree never reached by any Arab (or Persian) critic before or after him the comprehension of the psychological roots of the aesthetic effect. In his *Asrâr al-Balaghâ* (ed. H. Ritter, Istanbul 1954) his principal concern is with simile, metaphor and analogy—later to become the domain of the *'im al-balagha*. Djurjânî succeeded in explaining (the logical and) psychological foundations of the aesthetics implicit in the aspirations especially of the later phases of Arabic (and Persian and Turkish) poetry. His is the merit of having been the first to investigate the 'fantastic aetiology', the very life of Persian poetry in particular (although its technical designation, *hüsna al-lla'il*, is found only more than a century later in Sakkâki). Djurjânî's other important work, *Dalâ'îl al-figâs*, unquestionably spurred the rise of the *'im al-ma'ânî* as an integral part of rhetoric.

After Djurjânî the scholars hold the field. In the third part of his encyclopaedia of the sciences, *Miftâh al-wuslah*, Sakkâki (d. 1226 or 1229), gives the *'im al-balagha* the organisation which it was to retain to the present. In his treatment it comprises three branches: the *'im al-ma'ânî*, 'notions', dealing with the different kinds of sentence and their use; the *'im al-balagha*, 'modes of expression', with the art of expressing oneself eloquently and without ambiguity—both are concerned with the relation of thought to expression and with the different ways to express the 'same' idea which the poet or writer has at his disposal; one must never forget that the *'im al-balagha* as all Arab literary theory such as a Kunstlehre, an *ars dicendi*, and not an aesthetics in Plato's or our own sense, i.e., a Schönheitslehre. (At this point a distinct analogy may be drawn to Muslim treatment of political theory which, conspicuous exceptions such as Mawdûd's (d. 1058) *'Albâh al-sulâmîyya* notwithstanding, is concerned with the conduct of the ruler and his administrators rather than with the nature of kingship and administration.) The third branch is the *'im al-badi* which deals with the embellishment of speech and defines a large number of tropes classifying them in general to our mind in the model in *Syriac* diavolos, *ma'ânî*, and légeos, *lafî*.

A tendency to proliferation of the figures identified is unmistakable. Where Sakkâki (and his commentators al-Kawwâl, better known as *Musa Dimaghâ* (d. 1338), and al-Tâfzârî (d. 1389), whose works *Talkhis al-Mi'âlîlah*, and *Muhkhasar al-Talkhis*, have come to supersede Sakkâki's as the standard textbooks of rhetoric list thirty *ma'ânî* figures (some subdivided further) and seven *lafî*, Ibn Kayyim al-Jâzûyyî (d. 1350), *Kitâb al-Fau'dîd* has eighty-four *ma'ânî* alone.

The *Mu'adjâm fi ma'âsir aghâr al-'Adjam* of the Persian Shams-al-Kays (l. 1204-30) is the first and a fairly successful attempt to apply Sakkâki's system to a literature other than Arabic.

A contemporary of Sakkâki's commentators, Šâfi al-Dîn al-Hillî (d. 1349), inaugurated the fashion of the so-called *badî'yya*, a poem composed to illustrate the various figures of speech. The genre whose most celebrated representative is perhaps the *'Badî'yya* of Ibn Hîdîgî al-Hamawî (d. 1454) has been cultivated down to quite modern times. It is difficult to find the Hellenising strain in the theory of *Balagha* its proper place in this presentation; for with the significant exception of Kudama (cf. Bonebakker, *op. cit.*, 46-48) it has always remained on the edge of the developmental sequence. Both the *Poetics* and the *Rhetoric* of Aristotle found translators; the translation of the *Poetics* by the Nestorian, *Abû Bûgrâ Mâkî b. Yûnus* (d. 484) has found three editors (Margoliouth, Oxford 1887; Tkatsh, Vienna 1928-32; 'Abd al-Rahmân Badawî, Cairo 1953), that of the *Rhetoric* has remained unpublished. Concern for these works has been confined to the *fâ'âsîYa*, Avicenna included an abridgement of the *Rhetoric* in the section on logic of his *Ši'āl* (ed. S. Sâlim, Cairo 1954) and Averroes summarised the *Poetics* (edd. F. Lâsînîo, Pisa 1872; 'Abd al-Rahmân Badawî, Cairo 1953). But the literary background that served as the vantage-point for Aristotle's ideas remained alien to the mediaeval Muslim. Respect for the protophilosopher rather than a desire to influence Arab literature or the reduction to theory of its techniques and aspirations motivated such occasional studies as were accorded those much misunderstood works.

What Averroes observed with regard to Greek epic narrative in metrical form (in connexion with the *Poetics* xxii), that "all this is peculiar to them (i.e., the Greeks) and nothing like it is to be found among ourselves", could fairly be extended to the tradition of Greek literature and its theory as a whole—even though a good many motifs, conventions and definitions of tropes did find their way (in contrast to the other Greek bequests) apparently not through the mediation of the Syriac tradition) into Arabic literature and theory.

(A. Schaefer-[G. E. von Grunebaum])

Balak, Nūr al-Dawla Balak b. Bahram b. Artuk, one of the first Artuksids, known chiefly as a tough warrior. He appears in history in 489/1096 as commander of Saruḏ on the Middle Euphrates. This locality being taken from him by the Crusaders in the following year, and his uncle Ilghāzī having been appointed governor of Īrāk by Sulṭān Muḥammad, he accompanied him, and is found in the following years struggling vainly for the little towns of ʿĀnā and Hadījā, against Arabs, or protecting the Baghdad-Iturids' road from the Turks and Turkmans. After Ilghāzī's disgrace in 498/1105 he returned to Diyar Bārak, the headquarters of the family, as did his uncle, and in 1110 accompanied him on an expedition in Syria in which Sukmān al-Ḵūṭṭī of Akhlat also took part. On Ilghāzī and Sukmān's quarrelling he was carried off a prisoner by the latter. He was soon set free on the death of the latter and his ally Gavras, the Byzantine duke, and called on Joscelin for assistance. He defeated Joscelin, but was killed by an arrow during the siege (518/1124).

After his death Khartpert soon passed into the control of his cousin Ībrāhīm al-Ḫan-Ḵayfā, whose son married Balak's daughter and only heiress. Balak is hardly known except for his martial exploits. The most one can add is that he lessened the effect of his predicaments on enemy lands by making forced transplantations of peasants, who brought the conquered lands back to productivity again. He was still basically a Turkomān chief, but endowed with a striking personality which made him in his last days one of the first champions of the Muslim revival against the Crusaders.

Bibliography: The sources are the same as those for the general history of Syria and Mesopotamia in the period in question, and more particularly for Īrāk Ibn al-Ṭahlī, for Upper Mesopotamia the same writer and Ibn al-Azraḳ (unpublished), for Syria Ibn al-Kalānsī and Ibn Ābī Ṭayyīf (in Ibn al-Furūtā, unpublished); apart from these, the Francish historians of the Crusades, particularly for Irak Ibn al-Athir, for Upper Mesopotamia the same writer and Ibn al-Kalamsī and Ibn al-Azraḳ (unpublished), for Syria Ibn al-Kalansī and Ibn Ābī Ṭayyīf (in Ibn al-Furūtā, unpublished); apart from these, the Francish historians of the Crusades, Ordarcy Vitalis (éd. le Prévost), the Armenian Matthew of Edessa and the Michael the Syrian (éd. trans. Chabot). Among modern works see the histories of the Crusades, esp. Grousset, i; C. Cahen, Syrie du Nord à l'époque des Croisades, 1940 (with study of sources), and by the same scholar, Diyar Bahr au temps des premiers Iraniades, in JA, 1935. See also J. Sauvaget, La tombe de l'Artouheid Balak in Arti Islamica v-2, 1938, and the article Artuksids. (C. Cahen)

Balak b. Sāfūn. [see ʿĀnak b. ʿānak]

Balaklava, in the Tatar language Balaklava (with the folk-etymological meaning of "fishery", "fishing-place"), a small port in the Crimea, on a deep inlet of the Black Sea. Balaklava, which is not visible from the open sea, lies 16 km. south of Sevastopol'.

The town was known to the Greek geographers (Strabo, etc.) under the name of Palashon on the sea-inlet Ἱωμηθῶν λιμήν and was inhabited by Taurians, who used it also as a place of refuge. It came later under Roman and Byzantine rule and during the 9th-13th centuries acted as the centre of a modest exchange-trade with the Russians. The Genoese settled here in about 1360 and founded a Roman Catholic bishopric; the entire southern shore of the Crimea as far as Kaffa (Feodosiya) was made over to them by Byzantium in 1380. The town, at that time, bore the name of Cembalo (probably from Symbolon) and was strongly fortified; remnants of the walls were still to be seen in the 19th century. An attempt of the Greek inhabitants, in 1433-1434, to rid themselves of Genoese rule miscarried.

Balaklava fell in 1475 under the onslaught of the Crimean Tatars and remained so until 1753, forming the southern limit of their lands over against the territories under direct Ottoman rule (cf. Muḥammad Riḍā, ed. Kazem-Beg, q2: with reference to a date c. 1540). The town, during this period, was only of commercial importance. The Tatars, who had gradually settled in the town, left it after its subjection to Russia (1753) and were replaced by Greeks from the Aegean Islands who, from 1768-1774, had joined the Russians. These people
formed a battalion of their own from 1795 to 1859. A
engagement was fought near Balaklava on 25
October 1854, during the Crimean War. Today
Balaklava is a small market-town occupied with
fishing and vine-growing.

raphical references).

BALSAM b. BAL'AM b. Beor of the Hebrew Bible. The Kor'an does not mention him, unless perhaps in an allusion in vii. 175 [174], 176 [175]. The commentator and historians keep the main elements of the Biblical story in their acc-
counts of him (Num xx, 8) and following the Jewish Aggada which likewise has given other features of his portrait, make him responsible for the formation of the Israelites with the daughters of Moab and Midian (Numbers xxvi, 6) and the opinion of al-Ma
kub al-Naysaburi. In this year he was at Ashtarabid (Ibn al-A'lhir,
vii, 96), and is thereafter mentioned repeatedly (Ibn al-A'lhir, vii, 196, 207, al-Mukaddasi, 377), till he was
replaced by the younger Djayhali in 340/957-958
Istakhri (276) mentions his houses at Marw, and a
gate in Bukhara was named after him, Báb al-
Shaykh al-Djalal (ibid., 307), the same apparently
as that in later times was called 'Shaykh Djalal'. The sources agree as to his capacity, and he
was a patron of men of learning. He is said by
Sam'ani (fol. 262 verso) to have considered the poet
Rüdagi without a peer among the Arabs and Persians. He died, according to Sam'ani (fol. 300 r.), in the night of 10 Safar 329/14 November 940.

(2) ABU 'AMIN MUHAMMAD B. MUHAMMAD AL-
BALSAM, son of the foregoing, was appointed wa'asir to
'Ibn-al-Malik I b. Núb (343-350/954-961) towards the end of his reign through the influence of the hādīb Alptagln (Gardizi, Zayn al-Alqhir, ed. M. Nā'imī, E.
G. Browne Memorial Series, 1928, 42). He did not
inherit his father's practical ability. Mukaddasi (338)
calls him Amirak Bal'am, with the diminutive, and
mentions that he was twice wa'asir to 'Abd al-Malik's successor al-Manṣūr I b. Núb (350-356/961-976), from whom he received instructions in 352/965 (cf. Rieu,
Catalogue of the Persian MSS. in the British Museum, i, 69) to compose the translation of Tabari which has made him famous. This is one of the earliest prose
works in modern Persian and inaugurates the long
and brilliant series of Persian historical works.

Bal'am did not attempt to bring the history
down to his own time. He omits the 'sīnādis (chains of
authorities) and alternative versions of the same
event characteristic of Tabari, presenting a con-
tinuous account derived from these. The same method
was followed by later Arabic historians such as Ibn
al-A'lhir (cf. G. Weil, Geschichte der Caliphen, iii,
X ff.). The result is a work substantially shorter than
the original (4 volumes in Zotenberg's French
translation and one volume in the Lucknow edition,
as against the 15 volumes of the Leiden Tabari). Yet
Bal'am's History is not simply an abbreviation of
Tabari. Occasionally he gives substantial additional
information, as in the case of a series of episodes in
the fighting between the Arabs and Khazars from
1047/961 onwards (text in B. Dorn, Nachrichten
über die Chasaren, see Bibliography), the source of
which appears to be the Kiāb al-Futūh of Ibn A'īsham al-Kufi (cf. Akdes Nimet Kurat, Aba Mu-
hammad Ahmad bin A'īsham al-Kufi'oñ kīāb al-
sūlah, Ankhara Üniv. Dil ve Tarh-coğ. Fak. Der-
gisi, 1949, 255-282; D. M. Dunlop, History of the
Jewish Khazars, 58). Most surviving MSS. of Bal'am
represent a later redaction, the approximate date of
which is indicated by a short appendix, giving a
curt account of the 'Abbasid Caliphs down to the
death of al-Musta'ir and accession of al-

984
BALAKLAVA — BAL'AMI
According to B. Spuler (The Evolution of Persian Historiography), the translation of the passage into Persian under the Samanids served no mere cultural purpose, but was intended to show the Persians that the destiny of their nation was linked with orthodox Islam.

Bal'ami died, according to Gardizi (ed. M. Nāsim, 45), in Djamād II, 363 (February 27th-March 27th, 974). The much later date for his death indicated by 'Ubāb (Tārīḥ al-Yaminī, ed. Cairo, A.H. 1286, i, 170), which says that he was appointed by Nūh II b. Mānsūr for a short time after the fall of Buhārā in Rabī 1/382 May 992, seems less likely.

(D. M. Dunlop)

BĀL‘ANBAR. [See TAMIM].

BALANDJAR, an important Khazar town, lying on a river of the same name, N. of the pass of Darband, i.e., Bāb al-Abwāb [q.v.], at the E. extremity of the Caucasus. Its site is probably to be identified with the ruins of Endere near Andreyeva. Balandjar appears to have been originally the group-name of its inhabitants (cf. Tābarī, i, 694-96, and 'Barandjar' below). According to Mas'ūdī (al-Tanbih, 62), Balandjar was the Khazar capital before Atil [q.v.] on the Volga, but in the accounts which we have there is no evidence that this was so. Balandjar was the subject of repeated attacks by the Arabs in the first Arab-Khazar war, and in 32/652 underwent a full-scale siege, which ended disastrously for the assailants. It was again besieged by the Arabs under Dīrādh b. 'Abd Allāh al-Hakami in 104/722-723, and this time was captured. Most of the inhabitants are said to have emigrated. It is readily understandable that many of them moved N. Two hundred years after this the traveller Ibn Faḍlān (310/922) came across thousands of 'Barandjar' among the Volga Bulgars. According to the figures given by Ibn al-Aṯīr (sub anno 104) for the amount of the booty distributed after the siege—300 dinārs per horseman in an army of 30,000—Balandjar at the time of its fall must have been a place of great wealth. From this point its importance appears to have declined, and after the close of the second Arab-Khazar war in 119/737 it is scarcely mentioned.

(D. M. Dunlop)

BALANSIYA (VALENCIA), a town in Spain, the third in size as regards population, which exceeds 500,000, lying on the east of the Peninsula, 3 miles from the Mediterranean and from its port, el Grao. It is connected with Madrid by two railway lines, one via Alaceta, 306 m. (490 km.) in length, the other via Cuenca, 251 m. (402 km.) in length, and by road (218 m. = 350 km.); the distance as the crow flies is however only 188 miles. Valencia is the capital of the province of the same name and the diocese of an archbishop. Its situation is a striking one, in the centre of the fertile Huerta de Valencia, which is watered by the Turia or Guadalaviar (Ar. Wādī ʾI-ʾAbayd, the ‘White River’) and is the site of part of the lake of Albufera [see BUKHAYRA]. Unlike Cordova or Toledo, the old capital of Valencia has seen its importance grow with the years and it remains the capital of the Spanish Levante, the Shark al-Andalus of the Muslim period. It is still known officially as Valencia del Cid in memory of the part played in its history by the celebrated Castilian hero.

Valencia was founded by the Romans in 138 B.C. After the death of the rebel Viriathus, the consul D. Junius Brutus established a colony there of veterans who had remained faithful to Rome. The inhabitants later took the side of Sertorius and in 75 B.C. Pompey partially destroyed the town which began to return to prosperity under Augustus. It was taken by the Visigoths in 413 and became Muslim in 714, when Tārīf [q.v.] established himself there and at Saguntum, Jativa and Denia.

In the political history of Umayyad Spain, Valencia seems only to have been a place of minor importance. The country of which it was the capital soon became arabised by the settlement of Ḥāṣṣa colonies: the capital of Spanish Levante thus was one of the most active centres of Arab culture throughout the whole period of the Muslim occupation; on the other hand in the mountains along the Valencian littoral there were little islands of people of Berber origin. Valencia at this time was the capital of a province or hāra, as we know from the eastern writer al-Muḳaddāsī and the Spaniard al-Raḍī (see Yāḳūt, s.v.) and the residence of a governor (audīl) appointed by the caliph of Cordova. It is only from the 9th/10th century, with the break up of the caliphate, that, becoming the capital of an independent Muslim state and very soon one of the principal objectives of the Christian reconquista, Valencia began to occupy a more and more important place in the Spanish and Arabic chronicles of the mediaeval history of Spain that have come down to us.

The Muslim kingdom of Valencia was founded in 401/1010-11 by two enfranchised ʿAmyrids, Mubārak and Muṣaffar, previously in charge of the irrigation system of the district who declared themselves independent and shared the power. After a very short reign Mubārak died and Muṣaffar was driven from Valencia; the inhabitants of this town then chose another "Slav" [cf. ʿAmyrids] to rule them, called Lahlū, who placed himself under the suzerainty of the Christian count of Barcelona. The principality of Valencia soon passed into the hands of a grandson of al-Ḥānsūr Ibn Abī ʿAmyr [q.v.], ʿAbd al-ʿAzzī b. ʿAbd al-ʿRāmīn who, like his grandfather, assumed the lakab of al-Ḥānsūr; he had previously been a refugee at the court of the Tughilid Muṣaffar b. Yāḥyā at Saragossa. The reign of ʿAbd al-ʿAzzī, which lasted till his death in 452/ 1061 brought an era of peace and prosperity to Valencia. He recognised the authority of the caliph of Cordova, al-Kāsim b. ʿAbbās, who gave him the right to bear the titles al-Muʿtamin and Dhu ʾl-Sabikatayn, and kept on good terms with the caliph of Cordova. It is only from the 5th/6th century, with the break up of the caliphate, that, becoming the capital of an independent Muslim state and very soon one of the principal objectives of the Christian reconquista, Valencia began to occupy a more and more important place in the Spanish and Arabic chronicles of the mediaeval history of Spain that have come down to us.

The Muslim kingdom of Valencia was founded in 401/1010-11 by two enfranchised ʿAmyrids, Mubārak and Muṣaffar, previously in charge of the irrigation system of the district who declared themselves independent and shared the power. After a very short reign Mubārak died and Muṣaffar was driven from Valencia; the inhabitants of this town then chose another "Slav" [cf. ʿAmyrids] to rule them, called Lahlū, who placed himself under the suzerainty of the Christian count of Barcelona. The principality of Valencia soon passed into the hands of a grandson of al-Ḥānsūr Ibn Abī ʿAmyr [q.v.], ʿAbd al-ʿAzzī b. ʿAbd al-ʿRāmīn who, like his grandfather, assumed the lakab of al-Ḥānsūr; he had previously been a refugee at the court of the Tughilid Muṣaffar b. Yāḥyā at Saragossa. The reign of ʿAbd al-ʿAzzī, which lasted till his death in 452/ 1061 brought an era of peace and prosperity to Valencia. He recognised the authority of the caliph of Cordova, al-Kāsim b. ʿAbbās, who gave him the right to bear the titles al-Muʿtamin and Dhu ʾl-Sabikatayn, and kept on good terms with the Christian kingdoms of Spain. His son ʿAbd al-Mallik succeeded him and took the title al-Muṣaffar. He was still a youth at his accession and the vizier Ibn ʿAbd al-ʿAzzī acted as regent. Very soon afterwards, Ferdinand I of Castile and Leon attacked Valencia and almost captured the town, after
inflicting a severe defeat on the Valencians who made a sortie to attempt to drive off the besiegers. ʿAbd al-Malik sought the assistance of the king of Toledo al-Maʿmun b. Dhu ’l-Nun [q.v.] but the latter came to Valencia and soon dethroned the young king (457/1065). The principality of Valencia then was incorporated in the kingdom of Toledo and al-Maʿmun left the vizier Abū Bāk r b. ʿAbd al-ʿAzīz there to govern it. When al-Maʿmun died in 457/1065 he was succeeded by his son Yahyā al-ʿKādīr, whose great incapacity soon became apparent. Valencia then gradually recovered its independence; al-ʿKādīr sought the help of Alfonso VI, king of Castile, to bring the town under his authority again but he ended by having to surrender his own capital to him in 478/ 1085. For the course of events and part played in them by the great Castilian hero Rodrigo Díaz de Vivar, the Cid of history and legend, cf. the article on his life and times.

On their arrival in Spain, the Almoravids tried to regain the kingdom of Valencia for Islām but their efforts against the Cid were fruitless. When he died in 492/1099 his widow Ximena was still able to offer some resistance to the attacks of the Almoravids, led by Māzdāll. But in the end she abandoned Valencia after first of all setting fire on it and the Muslims entered it on 15 Radjab 495/ May 1102.

Governors appointed by the Almoravids succeeded one another at Valencia until the middle of the 6th/12th century when the town gradually began to resume its independence in the troubled period which preceded the coming of the Almohads into Spain, and it linked its fortunes with those of Murcia whose series of ephemeral rulers it recognised. In 542/1147, Ibn Mardinān was proclaimed king of Valencia but four years later his subjects rebelled against him. Under the nominal suzerainty of the Almohads, Valencia continued in the hands of local princes until it finally fell into Christian hands, two years after Cordova, when James I of Aragon took it on 28 Sept. 1238.

When he died in 492/1099 his widow Ximena was still able to offer some resistance to the attacks of the Almoravids, led by Māzdāll. But in the end she abandoned Valencia after first of all setting fire on it and the Muslims entered it on 15 Radjab 495/ May 1102.

Governors appointed by the Almoravids succeeded one another at Valencia until the middle of the 6th/12th century when the town gradually began to resume its independence in the troubled period which preceded the coming of the Almohads into Spain, and it linked its fortunes with those of Murcia whose series of ephemeral rulers it recognised. In 542/1147, Ibn Mardinān was proclaimed king of Valencia but four years later his subjects rebelled against him. Under the nominal suzerainty of the Almohads, Valencia continued in the hands of local princes until it finally fell into Christian hands, two years after Cordova, when James I of Aragon took it on 28 Sept. 1238.

Bibliography: al-Azīz there to govern it. When al-Maʿmun died in 457/1065 he was succeeded by his son Yahyā al-ʿKādīr, whose great incapacity soon became apparent. Valencia then gradually recovered its independence; al-ʿKādīr sought the help of Alfonso VI, king of Castile, to bring the town under his authority again but he ended by having to surrender his own capital to him in 478/ 1085. For the course of events and part played in them by the great Castilian hero Rodrigo Díaz de Vivar, the Cid of history and legend, cf. the article on his life and times.

On their arrival in Spain, the Almoravids tried to regain the kingdom of Valencia for Islām but their efforts against the Cid were fruitless. When he died in 492/1099 his widow Ximena was still able to offer some resistance to the attacks of the Almoravids, led by Māzdāll. But in the end she abandoned Valencia after first of all setting fire on it and the Muslims entered it on 15 Radjab 495/ May 1102.

**BALASÂGHUN** or Balasakhon, a town in the valley of the Çu, in what is now Kirghizia. The medieval geographers give only vague indications as to its position. Barthold, *Olelî o poyysëde s Srednyiya Assiya*, St. Petersburg 1897, 39, suggests its identity with Aq-Pëshin in the region of Frunze. A. N. Bernshtam, *Cuyshkaya dolina in Materiâli i issledovaniya arkeologii S.S.S.R.*, No. 14 (1950), 47-55, agrees with Barthold and gives a description of the site. The town was a Soghdian foundation and in Kâshghâr's time, i.e., in the second half of the 11th century, the Soghdian language still survived alongside Turkish. According to Kâshghârî Balasaghun was also known as Kuz-Ordu or Kuz-Ulûgh. The former name is also found in the Chinese account of the Kara-Khitay, and a variant of Kuz-Ulûgh — Kuz-Balîgh or Ghuz-Balîgh, *balîgh* like *sîdâgh* meaning "town" — was according to Djûwaynî still current in the 7th/13th century.

According to a story in the *Siyasat-nâmâ* (ed. Schefer, 169) a religious war was planned about 1301/942-3 against the "infield Turks" who had conquered Balasaghun. These must have been the Kara-Khânîds immediately prior to their conversion to Islam. Balasaghun afterwards became the headquarters of the first Kara-Khânîd invasion of Mâwarî al-Nahr under Bughra Khân b. Mûsâ (d. 382/992). Shortly after 416/1025-6 the ruler of Balasaghun, Toghan Khân, brother of the Kara-Khânîd ruler of Mâwarî al-Nahr, 'All Tegin, was driven out of his territory by other members of the dynasty ruling in Kâshghâr (Bayhaqi, ed. Morley, 98 and 653, ed. Ghânî and Fâyyâd, 91 and 526). Balasaghun seems afterwards to have belonged to the same ruler as Kâshghâr. The poet Yûsuf Khâş-Hâdjîb, author of the *Kudadgî Buît*, the oldest poem in the Turki language, was born in Balasaghun (462/1070-7; the Bughra Khân to whom it is dedicated must be Bughra Khân Hûrnûn, who ruled over Kâshghâr, Khotan and Balasaghun, first with his brother Toghîr Khân and then, for 29 years till 496/1102-3, alone.

About 1130 Balasaghun was conquered by the Kara-Khitay [q.v.] and the ruler of the town, who had appealed to their leader (the Gûr-Khân) for help against the Kâshghâr and Karîlgîh nomads, was deposed. The real seat of the Kârâ-Khitay still remained the territory on the Çu while native princes ruled as vassals of the Gûr-Khân in Mâwarî al-Nahr and Kâshghâr as well as in the districts of Semirechye north of the Ili.

When the army of the Gûr-Khân was defeated by Muhammad Khwarazm-Shâh in Rabî’ I 607/ August-September 1210, on the Talas, the inhabitants of Balasaghun, expecting the speedy arrival of the victor, refused the defeated army admittance to the town. After a 16 days' siege it was taken by the Kara-Khitay and plundered for three days, during which time, according to Djûwaynî, "47,000 of the chief notables were counted among the slain."

Balasaghun is seldom mentioned during the Mongol period. Barthold's assumption that it was taken without resistance by Cîngir-Khân's general Diebe in 1215, in the course of his operations against Kûtlûg, the Naysan ruler of Kara-Khitay, is based on a misreading of its name. *Ghuz-Balîgh* or *gho balîgh* "good town". In the account of Timur's campaigns Balasaghun is never mentioned; like all the towns on the Çu, Ili and Talas it must have been destroyed during the endless wars and struggles for the throne in the 8th/14th century. Muhammad Baydar, writing about the middle of the 10th/16th century, knew about Balasaghun only from books; of the town itself no trace was then to be found.

**BALAT** (Ar.), a town with a number of varied meanings due to its dual etymology, Latin or Greek as the case may be. Deriving from *palatium* it means "palace" (Mas‘ûdi, *al-Tânîh*, 167; Ibn al-‘Adîm, *Zûbûda*, ed. Dahan, i, 142 and 145; Mu’kaddasî, 147, and Ibn Hawkâl*, 195, mentioning the Dâr al-Balât at Constantinople; cf. M. Canard, *Extraits des sources arabes*, ap. A. A. Vasiliev, *Bysance et les Arabes*, ii/4, Brussels 1950, 412, 423 and n. 2). Deriving from *kathedrâl* (through the intermediary of Aramaic), it has two principal meanings corresponding to those of the Greek term, denoting "a paved way", an old Roman road for example (see Ibn al-‘Adîm, *Zûbûda*, i, 144), "flagging" or, in the form of the noun of unity *balâta*, a "flag-stone" of any kind of material serving to pave the ground or to bear a memorial or memorial inscription (see for example, Mugîrî al-Dîn al-Ulâyînî, *al-Ins al-Djâlîlî*, Cairo ed. 1253 AH., 372), whence the meaning of "stele", or "portico" or "colonnaded gallery", more especially the "nave" of a mosque (see for example Ibn Djûbayr, *Rîhîla*, ed. de Goeje, 190).

The word Balât occurs in various rural and urban toponyms, both in the Muslim West (see infra) and East, where it is especially frequent in Syria-Palastina. The following are the main occurrences: the town of al-Balât in Northern Syria, which was adjacent to a Roman highway (M. Canard, *Histoire des Hamdanides*, i, Algiers 1951, 218), — the al-Balât quarter of Aleppo, the name of which recalled the old monumental thoroughfare (J. Sauvaget), — the former village of Bayt al-Balât in the Ḥûda of Damascus, — the village of Balatça or Bulatî in Palestine (the name of which could also derive from the Latin *platanus*), — the Bûb al-Balât in Jerusalem (cf. J. Sauvaget, *Les peres choisies*, Belrut 1933, 99 n. 1), — the paved square of al-Balât in Medina, — the quarter of Balat in Istanbul [q.v.], — the village of Balat, adjacent to the ruins of ancient Milet in Asia Minor and corresponding to the Saldjukid town of Palatia (see Fauly-Wissowa, under *Miletos*).

**BALât**, now a small village on the site of the ancient Miletos in Caria. The word Balât derives from "Balatça", the name used for this locality at least from the first years of the 13th century. Balât
came under the control of the Beys of Menteshe (q.v.) towards the close of this century and, because of its favourable situation near the mouth of the river Mianandros (Büyük Menderes), served them as a point of departure for their raids into the Aegean Sea and, later, as a commercial centre of some importance. The Venetians had a church and a consulate there by 1355. Balatlı flourished at this time on the traffic in such commodities as saffron, sesame, wax, alum from Kütahya, slaves from the islands of the Archipelago, etc. The Ottoman sultan Bayezid I confirmed to the Venetians their privileges at Balatlı, when, in the winter of 791-2/1389-90, he took over the coast-lands of Menteshe. Timur Beg, after his defeat of the Ottomans at Ankara in 804/1402, set on the throne Ilyas, a member of the local dynasty. This prince was forced, however, to become a vassal of Sultan Meşmed I in 818/1415 and by 829/1425-6 Menteshe had been absorbed once more, and this time definitively, into the Ottoman state. Balatlı, during the course of the 15th century, began to sink into a long and slow decline, due in no small measure to its fever-ridden climate and to the gradual silting of the river estuary. None the less, the active, although no doubt diminishing commerce was still associated with Balatlı, when Ewliya Celebi passed through this region in 1671-72. Balatlı, now assigned to the kaza of Söke in the province of Aydın, lies today approximately 9 km. from the sea and had in 1945 a population of about 700 people.

**Balat**. In Spain, of the various meanings of the word *balat*, the most general seems to be "pavement"; it was thus used to denote the Roman roads of the Peninsula, as the vocabulary attribute to Raimundo Martín. The now ruined town of Albalat, on the border of Roman gondo, adjoining a ford across the Tagus, near the Almaraz bridge, must take its name from one of these roads. The battlefield of Tours and Poitiers, called Balat al-Shuhada (q.v.) after the Roman road, would seem to confirm this meaning. But it is extremely doubtful whether such a concrete meaning applied to the whole *bilm* which, according to al-Idrisi, comprised a large part of present-day Spanish Estramadura, with Alange, Medellín, Trujillo and Caceres, in addition to the Balatlı already mentioned. On the other hand, the numerous Spanish place-names, Albalat, Albalato and their derivatives and diminutives, Albadalejo, Albalatillo, could better be explained by *al-balad, or *balard* "place, terrain or locality"; thus, Albalat de la Ribera, near the river Júcar, Albalat dels Sorells, near Valencia, and Albalat dels Tarongers, in the Sagunto region, do not seem to have any connexion with Roman roads, and seem only to be names of hamlets or villages; the numerous Albalates which exist in the provinces of Teruel, Huesca, Guadalajara, Ciudad-Real, Toledo and the Ajarafe of Seville, must be interpreted in the same way. The derivation from *platea* or *palatium*, applicable to place-names in Jerusalem, Syria and Medina, is not found in al-Andalus.

In addition to the *bilm* of al-Balat in Muslim Spain, there was another *bilm* in the Portuguese zone, al-Balata, situated in the Faqṣ Balatlıa, a huge plain between Lisbon and Santarem; this *bilm* contained, apart from these two towns, the town of Cintra, and its territory corresponded to present-day Ribatejo. The name given to it by al-Idrisi coincides with that of Vallada, a small town in the commune of Azambuja; el-Campo de Vallada, a translation of Faṣṣ Balatlıa, is also quoted, although its extent is less than that attributed to it by al-Idrisi; its etymological derivation from *plata* or *vallata* appears to be neither well-founded nor acceptable.

**Bibliography:** Idrisi, text 175-6, translation: 211, 225-6; Yâlût, i, 709; E. Saavedra, *La Geografía de España del Edrisi*, 52-3; David Lopes, *Estudo dos nomes geográficos do territorio mululmano, que depois foi português*, 47.

(A. Huici Miranda)
Arab and especially European, has mainly been to explain the term Balāt al-Shuhadāʾ and to determine the exact site of the battle. Balāt [q.v.] is borrowed from the Graeco-Latin and appears to render both plateia: “wide paved road, paved public square,” and palatium: “palace”. It has been rendered, as regards the Battle of Poitiers, by “pavement” and by “highway”.

In conclusion, it is perhaps of interest to note that al-Tabarî (d. 310/923), is absolutely silent on the Battle of Poitiers (there is nothing in his Ta’rikh al-Umam wa‘l-Mulâk Annâles, sub anno 114, or in the two or three preceding or following years); likewise Ibn al-Kūtîyya (died 367/977), in his Iṣṭīḥā al-Andalus.

Balātunus, medieval name of a Syrian fortress now in ruins and called Kāl’at al-Muhanna, which was built on one of the first spurs of the Djabal Anšariya, and, with the castle of Sāḥyūn, commanded the plain of al-Lādhiqiyah and guarded the road from the Orontes to Djabala, “its port” according to al-Dimashqī.

According to the Arabic sources, it is supposed to have been begun by the clan of the Banu ‘l-Abmar, then continued by the Byzantines who inhabited possession of it and, in the time of Basil II, based the protection of the coastal region, in which they had taken up their quarters, partly upon it. It again passed under Arab control, but after the First Crusade, was to fall into the hands of Roger of Antioch, who bestowed it on the lord of Sābne as a fief, and it remained in the hands of the Franks from 1122/1128 to 1248/1252. In this latter date, Ṣalāḥ al-Dīn made himself master of it and in the ayyubid period it became temporarily part of the Kingdom of Aleppo of al-Malik al-Zahir. After the Mongol invasion which had encouraged the efforts of a local family to establish their independence, it was obliged to surrender to Baybars in 697/1298 and became in the Mamlūk period the centre of one of the six districts of the miṣyāḥ of Tripoli.

It is not known when it fell into ruins and relinquished its ancient name (derived from the Latin Platanus) for the present term, which for a long time prevented its identification.

Balāwāt. This is a small village lying some 16 miles south-east of Mawšil on the Dayr Mūr Bihām-Kara Kosb road. It is mentioned by Yāḳūt under “Balābāḥij”, which he describes as follows: “It is a village situated east of Mawšil in the province of Nineveh and can be reached by a short journey
from Mawṣīl. It is frequented by caravans and there exists in it a Khan for travellers. It lies between Ṭīgš and the Ṣabīr rivers. Balāwāt is one of the villages in the Ḥamdānīya mākiya in the Mawṣīl Līwā of ʿIrāk. The majority of its inhabitants are of the Ṣhābak faith (cf. Ahmad Ḥāmid al-Ṣarrāf, al-Shaḥaḥ, 10). Balāwāt’s only claim to fame is the existence of a historical mound some few steps from it. This mound is known as “Tell Balāwāt”, and is one of the Assyrian historical sites excavated in the 19th century; Hormuzd Rassām, of Mawṣīl, discovered there in 1878 the bronze gates of the palace of the Assyrian king Shalmanessar III (859-824 B.C.). These gates were taken to the British Museum, London. The inscriptions and scenery contained thereon illustrate the first third of the reign of this king, and also clarify some of the conditions prevailing in the 9th century B.C. From some of the Assyrian texts, it appears that the ancient name of Tell Balāwāt was Imguur-Enlīt.

BALAWHAR [see BILAWHAR WA YUDASAF].

AL-BALAWĪ, ʿABD MUḤ. ʿABD ALLĀH B. MUḤ. AL-MADĪNĪ, Egyptian historian; the dates of his birth and death are not known, but we can reasonably assume that he lived in the 4th/9th century. He belonged to the Arab tribe BALAJ, a branch of the Kudās, who were scattered in different parts of the Ḥidjāz, Syria and Egypt.

The earliest biographical notice is that given in the Fihrist, which names several books. All of them are lost, but Al-Balawi’s Sirat ʿAbd al-Dāyā b. ʿAbd Allāh b. Muḥ. al-Madīnī was discovered in about 1935 by the late Muḥ. Kurd ʿAlī. It seems more likely that both of them depended mostly upon the same main source, which was the official documents preserved in the first chancery office (Diwan al-Inqāḥ) founded in Egypt by Ahmad Ibn Tulūn (see the Sirat of Al-Balawi, 100-1, 111, 122, 224, 228-9).

The Sirat of Al-Balawi is an invaluable source for many reasons. One of the oldest Muslim historical works written in Egypt, it sheds new light on the history of institutions, such as the ḥārdjī, the police, justice, espionage, the post, etc. It also contains a number of official documents relating to that period.

BALBAN [see DELHI SULTANATE].

BALDJ B. BISHR ʿĪYĀD AL-KUḤAYRĪ, an Arab military leader, of a brave but haughty disposition, commanded the Syrian cavalry in the army sent against the Berbers in 1227/747 by the Caliph Ḥaḍīḥ, b. ʿAbd al-Malik, under the leadership of ʿUqayb b. Ṣuqaym, Baldj’s uncle. After their arrival in Ibrīkiya (in Rāmaḍān 123/20 July-18 August 741), the violence and arrogance Baldj and his Syrians earned them the bitter hostility of the African Arabs, especially the Anṣār, who had fled westwards in a body after the battle fought in the Ḥarā in 65/683. So it was that when near Tillmsān the Syrian army was united with the African army (together amounting to some 60,000 men), they all but came to blows through the arrogance of the Syrians and a quarrel which arose between Baldj and the commander of the African contingent from Ḥabīb b. Ṣuqaym, Baldj’s uncle. After the arrival in Ibrīkiya (in Rāmaḍān 123/20 July-18 August 741), the violence and arrogance Baldj and his Syrians earned them the bitter hostility of the African Arabs, especially the Anṣār, who had fled westwards in a body after the battle fought in the Ḥarā in 65/683. So it was that when near Tillmsān the Syrian army was united with the African army (together amounting to some 60,000 men), they all but came to blows through the arrogance of the Syrians and a quarrel which arose between Baldj and the commander of the African contingent from Ḥabīb, who was well-versed in Berber fighting methods, but whose counsel was arrogantly rejected
by Baldj, and entrusted it to two Syrian officers, a measure which still further increased the resentment of the Africans. As a result, the Arabs suffered a complete defeat at Bakduara (or Nabduara on the Sebū to the North of Fās, comp. Fournel, Les Berbers, i, 294, rem. 2). Baldj himself, by his over-confidence and the impetuosity of his attack, which resulted in his becoming separated in the action from his foot-soldiers, was the real cause of the disaster (in Dhu l-'Hijja 124/1347 October 14 November 741). At the head of some 7,000 horsemen, he fought his way through to Ceuta, where he withstood a protracted siege by the Berbers, until the day when the governor of Cordova, Abd al-Malik b. Katan [g.v.], an Anšārī, brought him over to Spain with his Syrians to use him against the Berbers who were in revolt there. Precautions, moreover, were taken on both sides: Baldj undertook to leave Spain as soon as the Berber revolt had been repressed; he was to give hostages as a guarantee. On his part, the governor Abd al-Malik promised the Syrians that when the time came for them to depart, they would be taken back to North Africa all together and not in separate groups, which would make them extremely vulnerable; and that, furthermore, they would be landed at a point on the coast of the Maghrib, where the hinterland was effectively under Arab control. The intervention of Baldj and his horsemen was decisive; the Berber rebels had formed themselves into three columns. Baldj counteracted swiftly and scattered the first group in the direction of Medina-Sidonia. The second band was dispersed in the Cordova region. The third and most numerous column, engaged in laying siege to Toledo, was severely defeated at the battle of Wad Salit (the arroyo of Guzaleta, a small tributary of the left bank of the Tagus). Thenceforth, the governor Abd al-Malik's only desire was to send his too burdensome auxiliaries back to Africa. But he did not adhere to his word, and tried to interpret the stipulations of the agreement contracted with him in the manner least favourable to the Syrians. When he sought to re-embark them for Ceuta the enraged governor of Narbonne, who mortally wounded Baldj with his own hand.

BÅLHARA (see HARITH B. KÂ'AB).

BÅLI, one of the Muslim trading states in southern Ethiopia. It lay to the east of Lake Awasa and the Ganale Doria, and extended to the Webi Shabelle near longitude 40 E., with a narrow piece stretching north of the Webi Shabelle to the edge of the Danakil lowlands, the railway marking approximately the northern boundary. The first mention of Bålī seems to be in the epinikia in honour of 'Amda Šyon king of Ethiopia, 1312-42 (I. Guidi, Rend Lin, 1839, nos. vii and ix) where Bålī is described as part of the king's dominions. In the middle of the 14th century al-'Umarī described Bålī as being 20 days' journey in length and six days in breadth, under a king who was tributary to the king of Ethiopia and possessed an army of 40,000 horsemen. A century later al-Maqrizi repeats al-
Umari’s account, including the statement that the people of Bah’ were Hanafis. Till about 1542 the state remained tributary to Ethiopia, when ‘Abbas the ruler made himself independent of Gallawdewos king of Ethiopia.

**Bibliography:** Umari, Masdik al-Abîdîr, tr. Gaudreay-Demobnbynes, 1927, 2, 18; Makrizi, ed. Rücker, Leyden 1790, p. 15; Perruchon, Les Chroniques de Zar’a Yâqoub et de Bah’eda Mâryâm, Paris 1893; Conselma, Le Chronique de Gallawdewos, Paris 1859. (G. W. B. Huntingford)

**Bali [see also Baliabarda]**

**Baliabarda.** Turkish name for Patrai, Patras (fourth largest town on the Greek mainland and the largest on the Morean peninsula), situated on the gulf of the same west of the entrance to the Gulf of Corinth (Turkish Kordos, [q.v.]), capital of the Nomos Achaea, seat of a bishop. It had about 85,000 inhabitants in 1951. The name Baliabarda comes from Παλαιαί Πάτρας, or rather Παλαιά Πάτρα (Pâtra is even today the colloquial name for the town), i.e., Old Pâtra(i), apparently because from the 14th century onwards New Pâtra(i) denoted the fortress under whose protection the old settlement was. Nikiphoros Gregorios (IV.9.4) describes it explicitly as φρούριον το των Νέων Πάτρων ἐπικεχλημένον. The adjective would not, therefore seem to have been added to distinguish Old Pâtra(i) from Νέα Πάτρας, a place near Lâmia (Turkish Zitun, conquered by the Ottomans in 1393, which was itself more usually known as Patratzik (Πατράτζικ, from the Turkish Badradjik) although today, as in antiquity, it is once again known as Hypatia. In the west, Old Pâtra(i) is known as Pâtras (from ζης Πάτρας compare the Italian Patrasso). In addition data concerning its pre-Ottoman history can be found in the works of A. Bon, E. Gerland, Wm. Miller, D. A. Zakythinos, cf. bibliography at the end of the article. Only the following facts need be mentioned here: at the division of the Byzantine Empire in 1204, the town became the seat of the Latin duchy of Achaea, and also the seat of an archbishop. In 1408, it became Venetian. On 1 July 1428, the town was taken by surprise (cf. Sfakianoglou ‘Ou’râsso) and captured—by Palaeologue princes who were quarrelling amongst themselves. On 20 March 1429, the despot Constantine repeated the attack on the town. During the course of this attack, the population turned away from the Latin archbishop Pandolfo Malatesta, and their notables swore an oath of allegiance to the Greek despot on June 5th in the Church of St. Andrew. The fortress continued to hold out, and did not surrender to the Greeks until May 1430 (Zakythinos, i, 206 ff.). At the time, Sultan Murad II objected to the taking of Pâtra, asking the Greeks to refrain from occupying it, as the inhabitants desired to pay their tribute to him. Sphrantzis, the first governor of Pâtra (later a historian), negotiated with the Porte, and eventually succeeded in obtaining the Sultan’s consent (Sphrantzis, 152-3). It was, apparently, not until 17 years later that Murad II made an attempt to gain Pâtra for himself. According to Dukas (ed. Vas. Grecu [Bucharest 1958], 278,14), he advanced in the winter of 1446/7 “as far as Pâtra and Klarenta” (the Kyllini of today), on which occasion he may have succeeded in taking the open town by a surprise attack, but it is hardly likely that he also overcame the almost impregnable fortress under whose protection the town was laid waste at the time, and some 60,000 people were led off into slavery. When the despot Constantine became Emperor of Byzantium in 1448, his brother Thomas took possession of north-western Morea, that is to say, of the whole of Achaia, including Pâtra and Klarenta, where he may well have held court (cf. Zakythinos, i, 242). Mehmed II, the Conqueror, went in person to Pâtra, in summer 1458, arriving from Mouchli (cf. E. Darkó in the Praktikó of the Academy of Athens, vi, Athens 1931, 22-29). He found it deserted and derelict. The inhabitants had fled to Venetian possessions on the Morean peninsula. This time, the fortress surrendered after a short resistance (cf. Kritoboulos, in the edition of C. Müller, FHGræc, V, Paris 1870, 123, also F. Babinger, Mehmed der Erbberger und seine Zeit, Munich 1953, 176 ff. (French edition 1954, Italian edition 1957)). The sultan considered Pâtra a suitable place for his commerce with the West, and he therefore invited the population to return, granting special privileges and tax reductions (cf. Kritoboulos, in the above mentioned book, 123; and Zakythinos (see above), i, 258). Later, early in 1459, there were Greek attempts to regain the town, but these failed (cf. Chalkokondyles, ed. I. Bekker, 457 f.). Pâtra remained, now as Baliabarda, an Ottoman possession for more than 350 years, without, however, regaining the great position it had once held in the times of the Roman Emperors, when there was a flourishing trade with Italy. Baliabarda became a Turkish provincial town and administrative centre, but was without any commercial significance. Attempts made by Venice to regain the town repeatedly failed. In summer 1464, Iacopo Barbarigo, Provveditore of Morea, made an ill-fated attempt on the town, which was successfully repulsed by Turâkhan-oghlu ‘Umar-Beg (cf. s.v. and also Hammer-Purgstall, ii, 84 ff.). In September 1522, however, the imperial admiral Andrea Doria captured the practically unprotected Pâtra without fighting, but the re-occupation was only temporary (cf. J. W. Zinkeisen, Geschichte des Osmanischen Reiches, ii, 734 f.). In 1685, the Venetian general landed in Pâtra (with an army which largely consisted of German mercenaries) in order to drive the Turks from Morea. On 24 July 1687, it was threatened—but not captured—by Palaeologue princes who were by the Ottomans and partly blown up by them) fell into the hands of F. Morosini’s troops, after a heated battle (cf. Zinkeisen, v, 132); but this reoccupation, again, did not lead to any permanent re-establishment of Venetian rule in Morea. In the middle of April 1770, the town was taken by surprise by a horde of Greeks, who were shortly afterwards either killed or taken as slaves by the Albanians and Turks. At that time, Baliabarda once again went up in flames, and only a few families saved themselves and their possessions, fleeing to the Ionian islands (cf. Zinkeisen, v, 931). The first big Greek rebellion against Turkish rule in Pâtra started on 6 April 1821. On this occasion, the architect of Pâtra (since 1806) Germanos (1771-1826) led the battle for liberation. On 15 April 1822, the Ottomans stormed the town for the last time under the leadership of Yusuf Mukhîb Paşa (from Serres), who razed the town to the ground. French troops came to the assistance of the Greeks and took possession of Pâtra in 1828, being relieved by the Bavarians in 1833. Since then, the town has been rebuilt in a regular checkerboard plan and has once again developed into a flourishing port, linked more recently with Athens (cf. Aris) by the Peloponnese railway (1920). Until the middle of the 18th century, whilst Baliabarda was under Ottoman rule, it had only once been described by a western traveller, viz.
Master Thomas Dallam (1599-1600), see Early Voyages and Travels in the Levant, ed. by J. Theod. Bent (London 1893; Hakluyt Society, vol. lxxxvii), 86. The first such description dates from 1740, when Richard Pococke (A Description of the East, ii/2, London 1745, 176 f.) mentions it as an unhealthy town in a swampy plain, seat of a Greek archbishop, with 12 parish churches, each with 50 Christian families. Some 20 Jewish families and roughly 250 Turkish ones, "who are not the best sort of people". At that time there were an English Consul General, a French Vice-Consul (the Consulate was in Modon), and a Venetian and a Dutch Consul in Pátrai. The description of the town by Dr. Richard Chandler (Travels in Greece, Oxford 1776) is much the same. The description by the Ottoman globe-trotter Ewliya Celebi (Seyyehetnâme, vii, Istanbul 1928, 288-292), who was there in 1080/1669, is much more extensive. He noted a mosque near the market (carşî), donated by Mehemmed II, and one of Bâyazîd II in the citadel (iç ka'â), also the mosque of the Kyaya (Kethkudâ Dî), and not far from this, the mosque of Sheykh-Efendi, that of İbrahim Câevû, and finally the mosque at the Dâbbâgh-khane (i.e., tannery). Furthermore there were at that time three smaller houses of prayer (masdjid), four Dervish monasteries (that of Sheykh-Efendi amongst them), and three baths (hamam), Ewliya Celebi mentions places of pilgrimage near Baliabadra, amongst these the one of Şâfî Şâltû Baba [i.e., "Sveti Nikola"], and the one of "Jovani-Baba"—doubtless old Christian places of pilgrimage. In his description, Ewliya Celebi calls Baliabadra "ballu (ball!) Baliabadra", i.e., "Baliabadra rich in honey"; compare "ballu Badra" ("Anonymous Giese", 141 f.). Hâdîdît Khâlîfâ (Rumeli und Bosna, translated by J. v. Hammer, Vienna 1812, 124 f.) gives only a few details concerning the port and administration in Baliabadra.

The fever-ridden, swampy plains to the north, east and south-east of the town (cf. R. Pococke), in the above mentioned book, ii/2, 176, have long since been dried up. Commerce is largely concerned with currants, oil, and wine, as well as silk (which was already cultivated in Ottoman times, as is also described by Pococke), and this has made Pátrai into a flourishing trading centre. According to Ludwig Steub, Bilder aus Griechenland, Leipzig 1885, 230, in 1822, Pátrai consisted solely of the ruins of five mosques, fallen down churches, derelict houses, and only a few repaired and inhabited dwellings. Gerland, Neue Quellen zur Geschichte des lateinischen Erzbistums Patras, Leipzig 1903; Emile de Borchgrave, Croquis d'Oriens: Patras et l'Achaie, Brussels 1908; Wm. Müller, The Latins in the Levant, London 1908, passim, especially 299 ff.; 363 ff.; 378 ff.; 414 ff.; Wm. Müller, Essays on the Latin Orient, Cambridge 1921, passim, especially 40 ff., 53 f., 100 ff., 418 ff.; D. A. Zakythinos, Le Despotat Grec de Morée, I/II, Paris 1932/1953; Ant. Bon, Le Péloponnèse Byzantin jusqu'en 1204, Paris 1953, concerning frequent descriptions of the town in the 10th century, cf. S. H. Weber, Voyages and Travels in the Near East made during the XIX century, Princeton 1952, 245, Patras. L. Steub, see above, gives a vivid picture of Pátrai and its inhabitants in the year 1846 on 209-249.

(B. Babinger)

Bâlîgh (a), major, of full age; bulâgh, puberty, majority; opp. şâhîr, minor, sabî, boy, şûghr, minority. Majority in Islamic law is, generally speaking, determined by physical maturity in either sex (the Şâhfî's explicitly lay down a minimum limit of nine years); should physical maturity not manifest itself, majority is presumed at a certain age: fifteen years according to the Hanafis, Şâhfî's and Hanbalis, eighteen years according to the Mâlikis (various other opinions are ascribed to the old authorities). Within these limits, the declaration of the person concerned that he or she has reached puberty, is accepted. Majority is one of the conditions of full legal capacity; the minor is subject to a legal disability (badr) and to the guardianship of his father or other legal guardian (cf. WILAYA). The major who is of sound mind (şâhid), is muqallal, i.e., obliged to fulfill the religious duties, and therefore also responsible in criminal law. But majority (together with soundness of mind) does not by itself produce contractual capacity, the capacity to dispose of one's own property; in order to have this effect, it must be accompanied by rwâd, discretion or responsibility in acting. The father or other legal guardian must not only encourage the minor to fulfill his religious duties regularly, but test his rwâd when he approaches puberty, and hand over his property to him only when he shows that he possesses it (cf. Kur'ân iv, 6). The other schools of religious law do not lay down a time limit for this, but the Hanafis fix the age at which his property must be handed over to him in any case, at 25 years, an obvious adoption of the legitima acta of Roman law. The Mâlikis, in the case of a woman, make this kind of capacity dependent, in addition to majority and rwâd, either on the consummation of marriage, or on a formal act of emancipation by the father or other legal guardian, or on becoming an "old spinster" (şâmis); a somewhat similar opinion is also held by some Šâhfîs. Islamic law envisages a gradual transition from the status of minor to that of major, as exemplified by the mumayyis, the "discerning minor", and the murâšíb, the "minor on the point of reaching puberty".

Bâlîk, Turko-Mongol word for "town" = or "castle" (also written Bâlîk and Bâlîği); appears frequently in compound names of towns, such as Bâlbâlik ("Five Towns", at the present day in ruins at Guden in Chinese Turkestan), Khânîbâlik (the "Khân's Town"), Turko-Mongol name for Pekin, (also frequently used by European tellers in the middle ages in forms like (Cambalu), Ilîbâlik (on the River Ili, the modern Iliysk) etc. As the town of Bâgbâlik is mentioned as early as the Orkhan inscriptions (2nd/8th century), Bâlik, in the meaning of town, is one of the oldest of Türkî words, as is the word Bâlik ("fish"); which is similarly pronounced and is common to all Türkî dialects.

Bibliography: R. Rahmeti Arat, IA (s.v.), (W. Barthold)

Bâlikesrî, Bâlikserî, a town of north-western Asia Minor, in the region known in ancient times as Myisia. The name Bâlikesrî derives from the Greek "Παλαιόκαστρον", Al-'Umârî, in his Masâlîk al-
Absär, refers to this locality as “Aklra” (= “‘Oxupa”, a name current in the period of the Comneni). The Roman Hadrianus is believed to have been situated in this same district. Bâlikespî was one of the chief towns in the emirate of Karâsu [q.v.], which came into being when the Turks wrested this area from the Byzantines in the years around 699-700.

Tobûta, who travelled through Asia Minor c. 730-1/1330, judged Bâlikespî to be a beautiful and well-populated place. The amirate of Karâsu was soon absorbed into the Ottoman rule, a process which began in about 715-6/1315 and appears to have been gradually completed during the reign of Orkhan Ghäzî. Karâsu, under Ottoman rule, long remained a sandik in the eydel of Anadolu, until in the reign of Mahmûd II it was attached to the wâlîyet of Khuwädëngîr. It is now a separate province with Bâlikespî as its administrative centre. Bâlikespî, situated at the foot of the YÎlan-dagh (“mount of the serpent”), confronts a fertile plain noted for its production of cereals, vegetables and fruit. Its population was estimated in 1945 to be a little less than 34,000.

With regard to Apollonius of Tyana, there are considerable contradictions in the various sources, and the tradition about the şâhîb al-îlâmîdî, as he is usually called (beside al-hâkim), even to a certain degree, influenced the reports concerning Apollonius of Perge. Our oldest source, Ya’ûbî, i, 165 rightly relates that Apollonius lived under the reign of Domitian (81-96), and the same is related by Ibn Abî Usâyiña, i, 73, and Barhaebraeus, i, 265. But the same Ya’ûbî speaks on p. 134 of “Bâlînüs al-nâjdîr who is called the orphan, and he is the şâhîb al-îlâmîdî, etc.” The confusion lies not only in the use of the epithets of both Apollonius for one and the same person, but also in the addition “the orphan”: in the preface of the Sirr al-Khalika (see below), Bâlînüs calls himself “an orphan inhabiting Tyana” (cf. Kraus, op. cit., 273 n. 3). In the Dhakkhat al-Iskandarî, Aristotle tells Alexander that he had received the book from Apollonius of Tyana in J. Ruska, Tabula Smaragdina, 1926, 72. Here Apollonius appears as a contemporary of Philip and his son Alexander, and so he does in al-Bal’mi’s Persian version of Tâbarî (cf. Zotenbery’s French translation, i, 110 f.; the whole passage is missing in the Arabic Tâbarî) and in Nisâmî’s Ishandar-nâmâ (cf. W. Bacher, Nisâmî’s Leben und Werke, 1871, 67 ff. and Persian text, 28; W. Hertz, Gesammelte Abhandlungen, 1905, 45). This anachronism with regard to Apollonius the talisman-maker has, in its turn, influenced Ibn al-Khîlî’s dating of Apollonius of Perge; his article about the latter begins (p. 61): “Apollonius the carpenter, mathematician of ancient time, much earlier than Euclid; he wrote the book Conica.” And in his article on Euclid, 63, Euclid, a carpenter of Tyre, explains and accomplishes for an unnamed Greek king two books of Apollonius on irregular polyeders (this is in fact the subject of Euclid’s Elements). On 65 he speaks, on the contrary, of a commentary on Euclid’s 8th book by an ancient (baðisîm) Greek man named Bâls (the variant readings show with almost absolute certainty that he speaks of Apollonius). Now, Apollonius of Perge lived about 80-100 years after Euclid. (Kapp, op. cit., 161-168 does not even point out this confusion!). In Hûnayn b. Išhâk’s Addâ al-Falâsîf, an Apollonius appears in two places: in part i ch. 5 the saying engraved on his seal is reported, and of part ii the whole ch. 17 is dedicated to his apophthegms. None of these dicta is characteristic of either of the two Apollonius; but Abû Sulaymân al-Mantîkî points to Apollonius of Tyana, when he, in the first paragraph of ii, 17 (“The pen is the most powerful sorcerer”) substitutes “tâlîsmân” for “sorcerer”.

Also the six sermones in the Turba Philosophorum
attributed by Steinschneider (Europ. Übers. aus dem Arab., II, SBAk. Wien, 1905, 67 ff.) and Ruska (T. Ph., 1937, 23 ff.) to Apollonius of Tyana are no more characteristic of him than do the other alchemic sermons of their respective orators.

Of the Arabic books connected with the name of Apollonius of Tyana the following are preserved in this language either in full or partly in or quotations of some length:

1. K. al-'Ual or Sirr al-Khalika, parts of which were edited and translated by Silvestre de Sacy ( Notices et Extraits, iv, an. 7 (1798-99), 108 ff.) and J. Ruska (Tab. Sm., 124-163). The latter also proved that the famous alchemist text known as Tabula Smaragdina has its original place at the end of this book; and P. Kraus, op. cit., 303 has shown that the whole book is to be a commentary of that text. About the Latin translation by Hugo Sanctallensis, cf. Ruska, 177 ff. The analysis of the book by Kraus, 270-303 led to its dating in the time of the Caliph al-Ma'mun and shew its close relation to the Syriac Book of Treasures by Job of Edessa (ca. 817 A.D.), dem Arab., attributed by Steinschneider (Europ. Übers., II, SBAk. Wien, 1905, 67 ff.) and the Arabic books are published or analysed in the Lapidario del rey D. Alfonso X, reproduced and partly edited by J. F. Montanà, 1881, are translations of Arabic books attributed to Apollonius; cf. the full list in Sarton, ii, 857. Here belong: 1. Abola (never deciphered, cf. G. O. S. Darby, in Ostr. i, 1936, 251 ff.), 4. Yluz, 5. Belyenus and Ylus, 6. Flinius and Hermuz (Hermes). A comparison of these names with the forms of the name of Apollonius in Arabic at the beginning of this article will furnish sufficient evidence.

The Greek Apotelesmata Apollonii Tyanensis, simultaneously edited by F. P. Nau, Philologia, Syriaca, I, 1907, 1363 ff., and F. Boll, Codices astrologorum Graecorum, vii, 1908, 175 ff. contains passages of which the Latin translation from the Arabic can be traced in Brit. Mus. MS. Royal 12 C XVIII (Cardomy, 73), and even an English translation in Sloane 3826. For another Latin (Vatican) MS. cf. Cardomy, Ie. Similar texts also translated from Arabic, in Sloane 3848. The name of the disciple of Apollonius to whom the Greek text is dedicated has been identified with that of the author of a text edited in Syriac and Arabic by G. Levi della Vida, La Dottrina e i Dodici Legati di Stomathalassa, Atti Acc. Naz. Linc., Cl. Sci. mor. stor. fil., vii/lII, fasc. 8, Rome 1951.

Another pupil of Apollonius is the famous Arteius (not Arlesius, as in Brockelmann, S I, 429, nor Arteius, as in the additions in vol. iii, 1208), the author of Claus sapientiae, the Arabic original of which, Misfak al-Ihsana, has been discovered by Levi della Vida, and described in Speculum, xiii, 1938, 80-85; cf. Kraus, 298 ff.

BALIS, former town in northern Syria, which was both a port on the Western bank of the Euphrates and an important stage, 100 km. from Aleppo and at the entrance to the Dżaira, of the road from Antioch and the Mediterranean leading, via al-Rakka, to Bagdad and 'Irāk. The commercial and agricultural prosperity of the town was doubtless due to its situation at a point of intersection of river and land highways, and in a warm valley where the irrigation possibilities favoured the development of husbandry.

Known in antiquity under the Aramaic and Greek names of BYT BLS and Barbalissos, indicated both in the Table de Ptolémée and the Notitia Dignitatum and, after the administrative division of the province of Syria which took place towards the middle of the 11th century A.D., belonging to the Augusta Euphratensis, it played the rôle of a
frontier town which was to continue in the Byzantine period, when it was several times pillaged by the Persians. It suffered particular damage during the campaign of Khusraw II Anughirwan and was rebuilt by the efforts of Justinian. Previously, the hagiographers had made it the site of the martyrdom of Bacchus, a famous saint of the area, whose relics are said to be preserved there.

Occupied by the Arabs as the result of a treaty concluded with Abd al-Ubayda after the capture of Aleppo and abandoned at that time by certain elements of the population, in the Umayyad period Balis formed part of the ājund of Kinnasrin and was subsequently, under al-Raṣḥīd, attached to the territory of the ʿAwāṣim [q.v.]. It continued to retain its strategic importance for a long time in the vicinity of the Byzantine territories. The famous general Mamlama b. ʿAbd al-Malik took an interest in it to the extent of having a canal excavated and improving the production of the land. He established himself there and it was to remain the property of his descendants. In 245/859 the town suffered from an earthquake which affected the whole of Northern Syria; subsequently it shared the fate of the cities of the area, escaping from Caliphal control and entering the orbit of the Tūlūnīs, then that of the Ḥamdānīs, until the Sājdūqīs, in their turn, extended their authority to the region. Its economic decline, according to Ibn Hawkal, who, however, still mentions rich grain harvests, dates apparently from the end of the reign of the Ḥamdānī Sayf al-Dawla; but the brief information given by the geographers should not make us forget the signs of prosperity, borne out by archaeological remains, right into the Ayyūbīd period. At the time of the Crusades, it was subject especially to indecisive incursions by the Franks, after which it continued to pass from hand to hand of various Muslim masters, among whom can be cited at the end the Ayyūbīd al-Malik al-Ẓāhir Ghāzī and al-Malik ʿAḍīl Bakr (who seems to have held it at least from 607/1210-11, the date inscribed on the minaret which he had erected). At this time various indications seem to show that the population of Balis, where several mashhads were venerated in connexion with the memory of ʿAli and al-Ḥusayn, was mainly Shīʿī. Subsequently the destruction wrought by the Mongol invasion destroyed the locality, which did not even appear in the administrative organisation of Mamlūk Syria.

At the present day the ruins of Balis lie five km. from the small modern village of Meskene on a plateau overlooking the valley of the Euphrates which flows at quite a distance from the site. The fortified enclosure can still be identified, with its monumental doors, the remains of a brick praetorium doubtless dating back to the times of Justinian and the site of the great mosque, indicated by the beautiful octagonal brick minaret, erected on a rectangular base and bearing four series of ornamental inscriptions. The numerous mounds where abundant potsherds are to be found, have never been systematically excavated, but trial soundings carried out about 1925 revealed interesting sculptured plaster decorations with inscriptions dated 464/1072 and 469/1076-77.

BALISH, Belesh, Span. Velez, a toponymic of Berber origin encountered on the coast of the Rif and at various places in the Iberian peninsula with the spellings بليش بلش and بلش. Al-Bakri mentions the port of Balish after those of Bādis and Būkuya, opposite Peñon de Vélez de la Gomera, on the Rif coast. Another Balīh, unidentified, is to be found beside the Guadalquivir after leaving Cordova in the direction of Tudmir and Murcia. Al-Idrīsī gives the name Balīh to the Mar Menor of Murcia, a large lake formed by the waters brought down by various swift streams, situated 57 miles from Alicante and which is navigable by shipping. The Vélez, which the same author includes in the șeblm of Bādīdāna (Pechina), with Almeria, Berja and Purchena, is Vélez-Rubio, 105 km. from Almeria and 42 from Lorca, in the valley of the Guadalentín, a tributary of the Sangronera. A prehistoric cemetery, rock paintings and numerous coins, art objects and Roman inscriptions have been found amongst the ruins of its fortifications. It formed part of the abara of Tudmir and revolted with Ibn Hāfsūn [q.v.] against the amīr ʿAbd Allāh, being subsequently subdued by ʿAbd al-Rahmān III in 313/925. When the Infante, the future Alfonso X the Wise, took Lorca, it marked the frontier of the Kingdom of Granada. It was captured by Alfonso Yáñez Fajardo in 1437, but again passed into the hands of the rulers of Granada in 851/1447, and the Naṣrī ruler al-Zaghall Abū ʿAbd Allāh Muhammad XII resided there; it was finally taken by Ferdinand III in 893/1488, who, at the beginning of the 10th/16th century, ceded his overlordship to Pedro Fajardo, the first Marquis of both the towns of Vélez, el-Rubio and el-Blanco. Situated 5½ km. from Vélez-Rubio is Vélez-Blanco, a town of some 10,000 inhabitants, belonging to the same marquisate of the Vélez; on the ruins of the Roman citadel and the Moorish alcazaba rising on the hill above the two towns of Vélez, Pedro Fajardo erected a magnificent castle of imposing proportions and elaborateness, the shell of which is still preserved.

Another Vélez is that of Benaudalla (Ibn ʿAbd Allāh, J. HELL-[CH. PEYRAT]), in the province of Granada (ward of Motril), on the left bank of the Guadalfeo river, on the side of a small hill called el-Castillo, and possessing some 5,000 inhabitants.

Finally in the province of Málaga, 34 km. from the capital and three km. from the sea, on the left bank of the river Vélez or Benamargosa, is the town of Vélez-Málaga, with some 30,000 inhabitants. Very little is known to us, however, of its history in the Muslim period. Alfonso el Batallador, in his expedition through Andalusia in 519/1126, after reaching Granada and crossing the Sierra Nevada, advanced up to Vélez-Málaga, without being able to take it.

Then in 283/896, the amīr ʿAbd Allāh was besieging one of these Vélez—it is not known which—one of a number of infantrymen and cavalrymen of the regular Umayyad army, attracted by the inducement of better pay held out to them by Ibn ʿHafsūn, went over to the rebel's service. Dozy, who refers to this event without citing his source, confuses Bildi (now Vilches) with Belesh (Vélez), and situates it at Vélez-Rubio. The toponymic has passed to Latin America and is to be found at various places in Colombia, Uruguay and the Argentine; it is also a fairly common surname in Spain.

BALIYYA (Ar. pl. baldyā', a name given, in the pre-Islamic era, to the camel (more rarely the mare) which it was the custom to tether at the grave of its master, its head turned to the rear and covered with a saddle-cloth (see al-Dāḥirī, Tārīkh, ed. Pellet, index), and to allow to die of starvation; in some cases, the victim was burnt and, in other cases, stuffed with thumām (Ibn Abi) l-Hadīd, Sharh Nahj al-Balīgha, iv, 436). Muslim tradition sees in this practice prove that the Arabs of the dijīhiyya believed in the resurrection, because the animal thus sacrificed was thought to serve as a mount for its master at the resurrection, while those who rose from the dead without a baliba, and were therefore of inferior status, went on foot. According to another tradition, however, the same term also denoted a cow, a camel or a ewe which was hung on the grave of the deceased and allowed to die of hunger; in this way, it appears, the primitive symbol of belief in the resurrection seems to have become a funereal sacrifice, which paved the way for the funeral feast (wadadma).

AL-BALKĀ', name given by the Arab authors either to the whole of the Transjordanian territory corresponding approximately to the ancient countries of Ammon, Moab and even Gilead, or to the middle part of it, having, depending on the period, Amman, [q.v.], Husbān or al-Ṣalt as its chief town. Although a certain lack of precision still persists to-day in the use of the term, its geographical meaning is usually restricted to the limestone plateau (average altitude from 700 to 800 m.), comprised between the Wādi i-Zarkā (or Jabbok) in the North and the Wādi i-Mudjib (or Armon) in the South. This is a region of tabular relief on the desert side, but the ground is considerably broken along the subsidence zone of the Dead Sea and the Jordan (peak of Nabi Usha' (1,096 m.) near al-Ṣalt in the North, Mount Nebo (835 m.) in the vicinity of Mādābā), where the erosive action of rain has promoted the escarping of especially deep ravines; as a whole it is an arid plain, but at the bottom of depressions and on the plains it affords possibilities of cultivation, which explain the praise bestowed on its fertility and the abundance of its villages in bygone times.

In the Hellenistic period the provincial divisions were Peraea, on the Western fringe, with Gadara (near al-Ṣalt) as its metropolis, the territory of Philadelphia (ʿAmmān), a town attached to the Decapolis, and the northern end of the Nabatean kingdom. Under Trajan, in 106 AD., the new province of Arabia extended over it, taking in Nabataea, which had also extended northwards to Bostra. On the other hand in the Byzantine period, the Arnon acted as the boundary between the province of Arabia, which then included the bishoprics of Philadelphia, Esbus (Husbān) and Mādābā, and the new Palestina Tertia, created in the Southern part of the country.

This region, conquered by Yazid b. Abi Sufyān
shortly after the fall of Damascus and the peaceful surrender of 'Amman, retained its former prosperity under the Umayyads, and numerous caliphal and princely residences were situated there (al-Muḥaddith, al-Zita, al-Kaṣṭal, Umm al-Walid, for example, without counting the castles scattered further towards the East such as ʿUsayr ʿAmrāl, al-Ḳharānī, Kašr al-Ḥallabāt or Kašr al-Ṭiḥāb). At this period the term al-Balka had a wide connotation, still attached later by Yaḥyā, and the reports of the chroniclers also included in it towns of the ʿAgūlūn like Arbad (Irībid), where Yazīd II died (al-Tabarī, ii, 1464), or of the Maʿāb like al-Muʿta [q.v.]; the corresponding administrative district was provided with its own ʿāmil and was in direct dependence on the ǧund of Damascus before experiencing a variety of fortunes throughout the Middle Ages. The testimony of al-Yaḵbū, who distinguishes two sections, the Ghawr (main town: Jericho) and the Ẓahir (main town: ʿAmmān), in this “canton of the colony of Damascus”, may in fact be contrasted with that of al-Muṣkaddasī, a century later, for whom al-Balka was dependent on the territory of Fīlasīn; likewise, in the Ayyūbid period, Abu ʿl-Ḥasāʾid connects it with the Ṣharāt, whilst al-Haḍrawī deals separately with this country and the Balad Maʿāb. Finally, during the period of Mamlūk domination, the district of al-Balka (main town: Ḥusba) belonged in principle to the southern march of the province of Damascus, though sometimes it was recognised as possessing a second ʿdmūya, that of ʿal-Ṣaṭ, and it appears to have depended temporarily, in entirety or in part, on the misr of al-Ḥak.

The favourite etymology of the Arab geographers, who link the name of al-Balka, in which, however, the feminine of the adjective ʿalāb “variegated” can be perceived, with that of an eponymous hero, a descendant of the Ban ʿAmmān b. Lūṭ, evokes the Ammonites of Biblical tradition and the memories of Lot, localised in a region where the “town of the Giants” of the Kurʿān, v, 25/22, (identified with ʿAmmān) and the Cave of the Ṭābūk al-ʿAbl (q.v.) were also placed.

BALKAN, the Balkan peninsula. The word Balkan means mountain or mountain range and, in the form of Balkanh, rugged zone in Turkish. The etymology of the word is now linked with Balk, mud, and the diminutive suffix, an in Turkish (according to H. Eren). There is a mountain called Balkhan in Turkmenistan. The word Balkan was used first by the Ottomans in Rumeli in its general meaning of mountain, as in Koğja-Balkan, Çatal-Balkan, and Üzinkus-Balka (the Carpathians). But specifically it was applied to the Haemus range of the ancient and mediaeval geographers, who thought that it separated the barbaric north from the civilised south. When considered as a historical and cultural entity the Balkans can be given different boundaries in the north. The Romans built their main defence line on the Danube with the exception between Trajan's Danube and Constanza in the Dobrudja. The boundary of the Byzantine empire in the north reached as far as the Danube and the Drava rivers (under Justinian I and Basil II). Finally by the treaty of 848/1444 the Ottomans and the Hungarians agreed reciprocally not to cross over the Danube, and up to the 17th century this river remained as the northern boundary of the Ottoman province of Rumel, which included the whole peninsula south to this river. Both the Roman and Ottoman empires tried also to establish their control over the flat country on both sides of the Danube. Its lower part always became a passage for the Turco-Mongol peoples who invaded the Balkans one after another from the 5th up to the 13th century A.D., namely the Hunns, Avars, Bulgars, Pečeneks, Kumans and Tatār-Kipcaks. The Avar invasions are thought responsible for the penetration and settlement of the Slavs in the Balkans in the 6th century. Then the native Vlachs and Albanians had to retire to the mountains and lived there a pastoral life for many centuries to follow. Toward 680 A.D. the Bulgars, a Turkish people from north of the Black Sea, settled on the lower Danube and, as a military aristocracy ruling over the Slavs, they created the first powerful state to rival the Byzantine empire in the Balkans. Their conversion to Christianity (864) had far-reaching consequences for the history of the peninsula because the Byzantine church and the Byzantine concept of the state gave definitive shape not only to Bulgarian Czardom but also through it to the states that emerged subsequently in the Balkans (see F. Dölger, Byzans und europäische Staatenwelt, 261-283).

The first Muslim geographers who spoke of the Balkans are contemporary with these important developments. Ibn Khurradāḏibī, whose information, like that of others, was derived from the reports of the three observers of the the end of the 3rd/9th and the middle of the 4th/10th centuries (see Z. V. Togan, Balkan, in I. A. D). said that the country west of the Byzantine themes of Taifa, Trakya, and Moldavia was the bilād al-Sabāṭība and that in the north the ard Burdjan (Bulgars). In the Ḥudūd al-ʿĀlam the Danube is called Rūd-i Bulghari and the Balkan range Kūh-i Bulghari.

It seems that Islam first appeared in the Balkans with the Anatolian saint Sarl-Saltuk [q.v.], in 682/1284. After the invasions of the Anatolian Turks of the Ghāri principalities in Western Anatolia in the first half of the 8th/14th century, the Ottomans finally settled firmly on the European shores of the Dardanelles in 755/1354. Even in the first period of the Ottoman expansion distinction must be made between the activities of the ghāzi leaders who made continuous warfare in the ʿUḏ, the frontiers, and the Ottoman central government which was also concerned with the welfare of its subjects.

Perhaps the most important factor of the Ottoman conquest was the strong immigration movement into the Balkans from Anatolia in the 14th century which turcised Thrace and Eastern Bulgaria (see Studia Islamica, ii, 103-129). At that time the small Ottoman state was regarded rather as a useful adjunct in the complicated struggle among the small Balkan states, but, growing in power, the Ottoman sultan soon became the suzerain of his former allies. When later these attempts to form a common front or called on Western Christendom for help, they were disappointed (Cermanon 773/1371,
Kossova 791/1389). Bayezid I inaugurated a new policy by establishing direct control over the vassal countries. He had the ambition of establishing a unified empire in the Balkans. He conquered the whole of Bulgaria, Macedonia and Thessaly between 1393 and 1396, and attempted to seize Constantinople, the traditional capital. The victory of Timur over Bayezid (804/1402) had important consequences for the Balkans. Abandoning most of their Anatolian possessions, the Ottomans then considered the Balkans as their real homelands, and, Adrianople (Edirne) became the real capital city of the sultans from then on. A fresh exodus of the Anatolian Turks on the Balkans followed Timur's invasion. The successors of Bayezid I abandoned his imperial policy and Serbia and Byzantium enjoyed some freedom of action until Sultan Mehemmed II conquered Constantinople (857/1453), and resumed the policy of unification with energy and success. In 864/1459 Serbia, in 865/1460 Morea and in 867/1463 Bosnia came under direct Ottoman rule. But these Ottoman successes were due to more important factors than the military ones.

In the struggle against the Ottoman conquest and centralisation policy, the feudalised princes and local lords in the Balkans had turned their eyes to the West, with a readiness to make concessions not only from their territories but also on religious matters. Thus in the first half of the 15th century, while Hungary was establishing its suzerainty over Bosnia, Serbia and Wallachia, Venice had seized the most important points on the Albanian coasts, in the Aegean Sea and the Morea, and, after taking Salonica, she coveted Constantinople. Representing Catholicism and seeking political and economic domination, the Western powers and their feudal sympathisers in Byzantium and the Balkans were regarded with hostility by the masses at large and by the Orthodox clergy. The Ottomans profited from the alienation of the common people from their Western or native lords. They assumed the role of protector of the Orthodox church and tried to drive Catholicism out of the Balkans. Even before the installation of Gennadius as oecumenical Patriarch in Constantinople in 1454, the Orthodox priests were recognised of being a Muslim state and more careful in the application of the laws. Thus it was no wonder that the Christian peasantry remained indifferent to the fate of their lords in their struggle against the Ottomans and until the 11th/17th century no serious rebellion is recorded among the Balkan peasants. It must also be noted that the Ottomans followed a conservative policy towards the previous social classes in the Balkans by adapting their status to the Ottoman system. The pre-Ottoman upper aristocracy, who mostly possessed promoa, were included by the Ottomans in the timar system, and, later, taken into the sultan's court to become high officials. The members of the lower aristocracy, especially voimkhs (in Turkish voynufr), who previously were the backbone of the empire of Stephen Dushan, were reorganised in bılıaks in greater part of the Balkans by the Ottomans and formed a section of the Ottoman army up to the 16th century, when they lost their usefulness and were made simple re'dyâ. Other military groups, nomad Eflabs, and Martolos were incorporated into the Ottoman forces in the provinces (see my Faith Devri, i, Ankara 1954, 145-184). Even the re'dyâ had access to the ruling class through the Divshirme institution. In the classification of the re'dyâ (q.v.)—that is, the peasants, Muslim Christians, a system similar to the pre-Ottoman system seems to have been followed and the Byzantine parotokoi, who were divided into sevogarate and bòldion as well as the ledh, appear to have survived under the Ottomans with different names, and several Byzantine taxes actually continued in the Ottoman taxation system as rusum-i 'urfyya or ied-i kadima. These taxes were assigned to the Milat-holders and to the Ottoman timar system which was the foundation-stone of the empire in the first period acquired its final form in the Balkans. In conclusion we can speak of a continuity of Balkan history in its basic forms under the Ottomans. It was true that national cultures lost their former centres of development, but the peasantry and the church remained in existence and became the foundations of the national states in the 19th century.

During the 10th/16th century the Balkan peninsula enjoyed one of the rare periods of peace and prosperity in its history; everywhere new lands were brought under cultivation, the population increased (5 million about 1535), cities developed, as we can observe in the regular Ottoman land and population surveys, defters, preserved in the Turkish archives (see Ikhisat Fuhullesi Memuas, Istanbul, no. 4, 11, 15). After Greek, Turkish became a common language of civilisation in the Balkans.

As Sir T. W. Arnold has already emphasised (The Preaching of Islam, London [1st ed. 1896] 3rd. ed. 1935, 145 ff.) conversions to Islam in the Balkans were not in general the result of a state policy or the use of force. However, three periods in this respect should be distinguished. Up to Bayezid II's time the Ottoman state followed a very liberal policy in the matter of religion. In this period voluntary conversions took place among the nobility incorporated in the Ottoman 'askhari (q.v.) class especially among the Bogomils in Bosnia. After Bayezid II, the Ottoman state became more conscious of being a Muslim state and more careful in the application of the ghurtca. From the 11th/17th century onwards, to begin with as a result of the activities of the Franciscan missions in the Balkans, which were supported by the Hapsburgs and the Venetians.
for political purposes, the Ottomans had recourse to certain coercive measures against the Christians in Serbia, Albania and Danubian Bulgaria. This brought about some mass conversions in these countries. In 1690 the Patriarch of Peć took refuge in southern Hungary with 37,000 Serbian families. Large-scale conversions took place among the Albanians during the subsequent centuries [see ARNAWUT]. The third important islamised area is found on the Rhodope region where Bulgarian-speaking Muslims are called Pomaks (q.v.).

**BALKAR**

**BALKAR**, a Muslim people of the Central Caucasus, whose origins are the subject of contradictory hypotheses. For some the Balkar are descendants of Bulghar driven back towards the mountains in the 11th-13th century; according to others, their ancestors were the Khazar pushed back towards the upper Terek in the 11th century; finally, others see in the Balkar Ibero-Caucasians or indeed Turkicised Finns. The Balkar traditions say that their ancestors, once living on the steppes of the Kuban, were driven back towards the mountains by the Cerkes tribes (Adighes), whence in turn they drove away and partially absorbed the Ossets.

Prior to 1946, the habitat of the Balkar, on the northern slopes of the main range of the Caucasus, included the high valleys of the tributaries of the Terek lying between the Elbruz to the West and the Ossete country to the East. The Balkar people (numbering 33,307 in 1926, of whom only 2% were urban dwellers, 42,666 in 1939), are divided into 5 tribes.

In the 16th century the Balkar were subdued by the Kabard and thenceforth adopted the forms of material civilisation of their sovereigns, copying their feudal structure, which persisted practically intact until the Russian conquest. It had five classes: 1. the princes, taawbi (analogous to the pasha of the Adighes); 2. the nobles, uden (worn among the Adighes); 3. the free peasants, karakash (il'ikabashaw among the Abaza); 4. the serfs liable to corvee duties, targar (og among the Kabard); and 5. the slaves, kazakh (unmaet among the Kabard).

Sunnī Islam of the Hanafi rite was introduced among the Balkar in the end of the 18th century by the Crimean Tatars and the Nogai of the Kuban, but pre-Islamic survivals (Christian and animist) still persisted at the beginning of the 20th century. Russian penetration of the high valleys of the tributaries of the Terek, begun at the end of the 18th century, was completed in 1827 by the conquest of the Balkar country, but was not followed, as in the case of the Adighes, by rural colonisation; the Russian authorities preferred to favour the setting up of villages of Kumlik, Ossets and mountain Jews in the midst of the Balkar country.

**Soviet Balkaria.** — The Soviet régime, temporarily proclaimed in December 1918, was finally established in March 1920. By a decree of the All-Union Central Executive Committee dated 21 January 1921, the Balkar okrug was attached to the Soviet Socialist Republic of Mountain-dwellers (Gorskaya ASSR). On 1 September 1921, the Balkar country, joined to the Kabarda, became the Autonomus Kabardino-Balkar Region of the RSFSR, and on 5 December 1936 became the Kabardino-Balkar Autonomous SSR. Balkaria was briefly occupied by the German armies during the second world war, was suppressed as an administrative formation by decree of the Presidium of the Supreme Soviet of the USSR of 25 June 1946, and the Balkar people was deported to Central Asia. A part of it (the valley of the Balkan) was attached to the Georgian SSR and the remainder to the Kabardinian Autonomous SSR. A new decree of the Supreme Soviet of the USSR of 9 January 1957 re-established the Kabardino-Balkar Autonomous SSR and authorized the deported Balkars to return to their country. The Balkar language is a dialect of Karaçai which belongs to the Kipčak group of Turkish languages. It has been strongly influenced by Ossetic and the neighbouring Ibero-Caucasian languages: Kabard, Čečen and Abaza.

Balkar-Karaçai, previously not a written language, was endowed in 1920 with a slightly modified Arabic alphabet (ξ = ʟ, ɬ = oppins), replaced in 1925 by the Latin alphabet; the first works were published in Balkar-Karaçai in the following year: a collection of poetry by 'Umar 'Aliev and a Chrestomathy (Bilim) by Askhat Bidjiev. Also in 1926 the first newspaper, Karakhal, of the Kabardino-Balkar Autonomous Region made its appearance at Nal'ik, with alternate pages in Balkar and Karakhal.

In 1931 the first daily, Tawlu-Djarak, in Balkar-Karaçai was published at Mikoian-Shakhar, the administrative centre of the Karaçai Autonomous Region (now Klukhori). Finally in 1938 the Latin alphabet was replaced by the Cyrillic alphabet.

(A. Bennigsen)

**BAKAYN** [see KAYN].

**BAKHK**, an important city in ancient and mediaeval times, now a village, located in what is today northern Afghanistan, ca. 67° E. Long. (Greenw.) and 30° 45' N. lat. It was located on the Balkh river, now dry.
Ancient Bactria was the name of a province of the Achaemenid Empire as well as its chief city. In the Old Persian inscriptions of Darius, we find the form Bāxtrā, in the Avesta Bāxtū, and in Greek Bakttra. Perhaps the original form was *Bāxtrū, from the name of the river (cf. Markwart, *Catalogue*, 34). Balkh after the conquests of Alexander the Great was a centre of the Greco-Bactrians, then of the Kushans and Hephthalites. In pre-Islamic times the city was a Buddhist centre with a famous cloister, the Nawbahār, the head of which, Barmakī (p.v.), seems to have exercised political control over the city. Balkh was also famous in Zoroastrian tradition and there must have been five temples there before Islam. The city, at least from the time of Alexander the Great, was protected by great walls. The various traditions on the founding of Balkh, as found in Arabic and Persian sources, are discussed by Scheler and Schwarz (refs. below), where it is apparent that the Arabs knew of the antiquity of the city.

In 32/653 the Arab commander al-Abnafer b. Kayn (p.v.) raided Balkh and obtained tribute (Balkhur, 408). The area was not conquered until the war between 'Ali and Mu'āwiya was decided in favour of the latter. In 43/663-4 Balkh was recaptured by Kayn b. al-Hayyān or 'Abd al-Rahmān b. Samura (cf. J. Marquart, *Erinnerungen*, Berlin 1901, 69). On this expedition, or the first one of al-Abnafer, the Nawbahār shrine is said to have been destroyed by the Arabs (Le Strange, 422). During part of this period a local prince, called Nēţak Tarkhān, occupied Balkh and caused much trouble to the Arabs (cf. Markwart, *Wehret und Arang*, 41-2). Unfortunately, the events and chronology of this area under the early Umayyads are confused in the Arabic sources. There were frequent revolts against Arab rule and it is not until the time of Kuṭayba b. Muslim (d. 66/275) that Balkh could be considered subdued. The city seems to have suffered considerably from warfare, and there are indications in Ta'bari that the city was in ruins about 705 A.D. (Schwarz, 436). The Arabs did not reside in Balkh but maintained a garrison at Barūkān, two faraqs from Balkh until the governor of Khurāsān Asad b. 'Abd Allāh al-Kasīrī moved the garrison to Balkh rebuilding the city in 107/725. In 1157/336 Asad transferred the capital of Khurasan from Marw to Balkh with the result that Balkh prospered. Ābū Muslim had to capture and recapture Balkh from the Syrian troops of the garrison loyal to the Umayyads who were helped by local troops, but his lieutenant Ābū Dā'ud al-Bakrī finally secured Balkh and Ṭūkhāristān for the Ābāsids.

Under the Ābāsids the governors of Khurāsān became practically independent, and in Balkh the descendants of the princes of Khūṭṭāl held sway (cf. Erkhard, 301). One of them, Dā'ud b. 'Abbas al-Bānīgūrī, succeeded his father as governor of Balkh, and was driven from his capital by Ya'qūb b. Layth in 256/870. In 287/900 'Amr b. Layth was defeated and captured near Balkh by 'Isā b. Ahmad, and Balkh passed under Sāmānūd rule. It is Balkh in the 4th/10th century which is described by the geographers in Arabic as umm al-bilād: "the mother of lands". The later Sāmānūd governors of Balkh such as Fālāḥ, Altāf, and Subuktakān were virtually independent. During the rule of Ṣāmūd al-Ghaznavī 387/1217-1230, Balkh was captured once by Ilāk Khaṇ in 397/1006, but Ābūl Mū'mīn immediately recaptured it. Although Balkh was in the centre of the arena of warfare between the Saljuqs and the Ghaznavīs, and was threatened with capture by the former after their victory at Dāndānān in 431/1040, it was not until 451/1059 that they definitely occupied the city. The city changed rulers several times during Saljuq rule and at the end of Sāmūd's reign it fell into the hands of the Ghuz Turks, and was destroyed by them in 550/1155. The Karā Khiṭāy rulers then included Balkh in their domains from about 560-1/1165 A.D. In 594/1198 Bāhā' al-Dīn Sām of Bānīyān occupied Balkh for the Shāhīs and in 603/1206 Muḥammad b. Farazmāghī captured it. Shortly thereafter, in 617/1220, although Balkh surrendered to Čingiz Khaṇ, the city was destroyed and its inhabitants massacred. It took long to recover from this blow, for Ibn Batūta in the early 8th/14th century describes the ruins of the city.

Balkh regained some of its past splendour under the Timūrids, and some of the masterpieces of Timūrid architecture were erected in Balkh. The citadel of Balkh which had been razed by Timūr was rebuilt by this son Shāh Rukh in 810/1407. The end of Balkh as a great centre, however, was forecast by the discovery (ca. 1480 A.D.) of the "so-called" grave of Allāh in the vicinity of Balkh. In 886/1481 a shrine was erected at the site ca. 20 km. to the east. By the 19th century around this shrine had developed the present city of Mazar-i Sharif. On 26 May 1347 Cingiz Khan, the city was destroyed and its inhabitants massacred. It took long to recover from this blow, for Ibn Batūta in the early 8th/14th century describes the ruins of the area.

The importance of Balkh came in great measure from its geographical position on a fertile plain, the meeting place of trade routes from India, China, Turkistan, and Iran. It was natural that a great centre should exist between the Oxus River and the Hindu Kush Mountains. At the present time the ruins of Balkh occupy a large area, and the site of so much promise actually has been very disappointing to archeologists. At the present day the village of Balkh has only a few thousand inhabitants. The visible monuments of Balkh include the ruins of extensive walls (ca. 10 km. perimeter) enclosing the modern village, and two shrines on the square of the present village. One is the Green Mosque in Timūrid style, and probably built at the end of the 16th century A.D. by an Ozbek Khaṇ, 'Abd al-Mu'mīn. Facing it is the tomb-shrine of Khūṭṭāl Ābū Naṣr Parsa, a Sūfī of the 16th century. A nearby madrasa, erected by Sa'īd Subḥān Kūlī Khaṇ (d. 1702), has only one arch left. In the northeast section inside the walls, there are the ruins of the shrine of Khūṭṭāl 'Abkābī Wall from the late Timūrid period. In summer the area of Balkh is very hot and dusty, and in the winter the area is almost a swamp.

Bibliography: The information of the Arabic geographers is gathered by P. Schwarz, *Bemerkungen zu den arabischen Nachrichten über Balkh*, in Oriental Studies in Honour of C. E. Pavry,
BALKHAN, two mountain ranges east of the Caspian Sea, which enclose the dried-out river-bed of the Ozboi (cf. Amu Darya). To the north of this river lies the Great Balkhan, a high plateau of limestone, difficult of access, with steep slopes; the highest elevation is at the Dünne Ashkal, about 1880 metres. The Little Balkhan, south of the Ozboi and cut with numerous ravines, attains (in the west) a height of no more than 800 metres. These mountains, where according to Muckaddan, 85, 1. e. f., wild horses and cattle lived, were searched for iron by the surrounding peoples. The area became, in about 420-2/1029-31, a place of retreat for Turkmen tribes coming from Khurasan (cf. Ibn al-Asfih, ed. Tornberg, ix, 207). During the following centuries the region was thickly settled with Turkmen and lost more and more its economic importance. Its development began in the 17th and the first half of the 18th century. The name "Balchas" occurs with a Mongol name of Balkhash. They did in fact dominate in these regions in the 17th and the first half of the 18th century. The name "Balkhas" occurs with a reproduction of the lake, very exact for the period, on a map by the Swedish non-commissioned officer J. G. Renat, who spent seventeen years in the country of the Kalmuks, from 1716 to 1733. Comp. carte de la Dsongarte dressée par le soudan Renat pendant sa captivité chez les Kalmouks de 1717 à 1733, ed. Russ. Imp. Geog. Society, St. Petersburg 1851.

The appearance of the neighbourhood of Balkhash is extremely desolate and arid and until the October Revolution the lake had never played a rôle of any economic importance. Its development began in 1936 with the building of a large industrial city, Balkhash, on the bay of Bertis on the Northern shore of the lake. (W. Barthold-[A. Bemigsen])

AL-BALKH, Abu'l-Kasim ("Abd Allah b. Ahmad b. Mahmod"); also known as Abu'l-Kasim al-Kab' al-Balkhi, the Mu'tazilite. Born at Al-Balkh, he lived for a long time at Baghdād, where he was the disciple of the Mu'tazilite Abu'l-Husayn al-Khayyat. He founded a school at Nasāf, converted to Islam a number of the Khorāsān tribes, and died at Balkh at the beginning of Sha'ban 319/August 931. Among his disciples were Ibn Shihāb (Abu'l-Tayyib Ibrāhīm b. Muḥammad), who died after 350/962, and al-Abāb (Abu'l-Husayn). Among his works are mentioned the Kād al-Ma'ūlād and the K. Mahāsin Khurāsān, in which he speaks of Ibn al-Rawandi.

He defended the optimistic Mu'tazilite thesis which states that God cannot abandon the better for that which is less good. Man, he says, can and must do that which is better, whereas God cannot, because there is nothing superior to Him to oblige Him to do better than that which He has done. In agreement with the Mu'tazila, he did not recognize in God attributes distinct from His essence. He held that non-existence capable of existing is a well-determined thing outside existence, namely a simple essence. He considered the atom as an inextensive and devoid of qualities of its own; the qualities of the body derive from the aggregate of the atoms, which are therefore not essential but accidental. He distinguished between sensation and impression: man, he says, perceives by his reason the sensible objects which affect his different senses; but the senses by themselves can perceive nothing; they are the routes by which organic impressions reach the reason. The voluntary act, he says, presupposes hesitation and decision, which are characteristic of Man, an imperfect being, whereas in God such an act is totally absent. —The imāmāt, he says, must return to the Kuraybih, but if a conspiracy is suspected, a non-Kuraybih can be elected imāmA.

AL-BALKHI, Abū Zayd Abū Ahmad b. Saḥl, a famous scholar known today principally for his geographical work, was born at Ṣamāṭiyān, a village near Balkh in Khurāsān, about 236/850. He died upwards of 80 years old in Dhu 'l-Ka‘āba 322/October 934. His father was a schoolmaster from Sijistān. As a young man, wishing to study the doctrine of the Imāmīyya sect to which he belonged, al-Balkhī travelled on foot to Irāk with the pilgrim caravan. He remained there for eight years, becoming a pupil of the celebrated al-Kindī and visiting the neighbouring lands. In later life he refused to cross the Djayhān (Oxus) to go from Balkh to Buhkhārā, when invited by the amir of the latter place.

During the years which al-Balkhī spent in Irāk his studies included philosophy, astrology and astronomy, medicine and natural science (Yākūt, Irshād, i, 145-6). For a time he was torn between his earlier sectarian religious allegiance and the tenets of judicial astrology then much in vogue, but he finally became strictly orthodox in his opinions, and pursued the study of the religious sciences side by side with 'philosophy'. He is cited as an almost unique example of one who was equally expert in both, and he is named by Shahrastānī (Mī‘āl, ed. Cureton, 348) among the philosophers of Islam. He himself relates that he lost his patron, the general Husayn b. Abū al-Marwān al-Rūḍī, through the publication of one of his books and Abū Ali al-Djayhānī, also his patron, the wa‘iz of the Sāmānīd Naṣr b. Abū Ahmad, through the publication of another, though the general was a Karmatī (Khitaj, ed. Bulak, i, 115). His work is cited also by Maqritī (Khitaj, ed. Bālīk, i, 155). It has been suggested that al-Balkhī's influence in geography may have been due to his teacher al-Kindī, for whom a translation of Ptolemy's treatise on the subject was specially made (Fihrist, 268), and another of whose pupils, Ḍār al-Ṭayyib al-Sarakhī, wrote a Kūdāb al-Masālik wa ‘l-Mamālik (Tanbih, 67), apparently the first of several geographical works in Islam with that title. Though Maqritī observes that al-Balkhī did not travel widely, he admits that he was an expert, especially for his own province, mentioning in particular his familiarity with the diwānīs (i.e., registers of taxes) of Khurāsān (ibid., 307). This is consistent with what we read elsewhere of al-Balkhī having acted as a secretary (kātib) to one of the Sāmānīds (Irshād, i, 147). His work is cited also by Maqritī (Khitaj, ed. Bulak, i, 115).

BALJADJI: a name given to men composing various companies of palace guards under the Otto-
man régime down to the beginning of the nineteenth century. The term was used alternatively with the equivalent Persian tabârdar, both words meaning, literally ‘axe-man’, and hence ‘woodcutter’, ‘pioneer’, ‘halberdier’.

It would appear that originally the balâdji, whose corps was recruited from the ʿAdîjînî Oghlanîs [q.v.], were employed in connexion with the army in the felling of trees, the levelling of roads, and the filling of swamps, but that even before the conquest of Constantinople some of them were posted as guards to the imperial palace at Adrianople. Thereafter, with the foundation at Istanbul in turn of the ‘Old’ and ‘New’ Sarays, Galata Saray, and the saray of İbrahim Paşa, other companies of balâdji were formed for each. The men of all these companies except that of the New, later called the Topkapı Saray, were admitted, after a certain length of service, to the edîş of the Janissaries, whereas those of the Topkapı Saray enjoyed the privilege of entry into the Șâiph and Șîâhâdar bâltûks [q.v.] of the standing cavalry. The men of this privileged company were known as zûlitîyâ balâdji-an—that is to say “binkered” balâdji—for the curious reason that, since one of their duties was to carry the wood required for heating the imperial harem into that forbidden precinct, on the occasions of their performing this duty, in order to prevent their inadvertently catching sight of the ladies of the establishment, they were “binkered” made of cloth or gold lace hanging down on either side of their faces from their tall pointed caps (the Persian sul signifying ‘a lock of hair’), as well as special jackets furnished with exceptionally wide upright collars.

Upon the closure in 1675 of the sarays of Galata and İbrahim Paşa, their balâdji companies were abolished. By this time also recruitment by derekâr had all but ceased. The remaining companies were mostly recruited therefore from free-born Anatolian Muslims, though the relatives of palace servants were also sometimes admitted into them. The zûlitîyâ Balâdji-an were suppressed by Mustafa III but revived by ʿAbd al-Ḥamîd I, and remained in being until the palace service as a whole was reorganised by Mahmûd II. They were commanded by a kâyya (kêdêkûa) responsible to the sultan’s principal page, the Șîâhâdar Âğha.

Twelve balas of the Zûlitîyâ Balâdji-an, distinguished by their literacy, had various special duties. Thus they would bring out, and stand behind, the sultan’s throne at his accession and upon bâyârmas [q.v.]; guard the Prophet’s Standard (sandqâği-shîrî) and read the Kûrân beneath it on campaign; take charge of the belongings of the harem ladies every year when the sultan and the sultan removed to one of the summer kêkîks; and—from the seventeenth century—present officiants of the Sultan Âğham mosque with sherbet, rose-water and incense at the yearly celebration of the Prophet’s Birthday (Mewlûd). Each of the chief officers of the palace, moreover, had one or more Zûlitîyâ Balâdji-an in attendance upon him; and two important offices in the palace service were filled by balas of the corps: that of the head cook of the Kush-khânî (the imperial kitchen) and his second in command.

The Balâdji-an of the Old Saray, which from the late fifteenth century was the residence of the sultans’ mothers, were responsible down to the seventeenth century to the Kapî Âğham [q.v.] and thereafter to the Kîšar Âğhasî [q.v.], to whom those who could acquire enough learning in the Bayâzîd me-

dresses might act as confidential secretaries or as clerks for the ʿawāfî of the Holy Cities, whereas other senior members of this corps might serve the Wâlide Sultan and other princesses as chief coffee-makers (bahevedji-başî). A number of Grand Viziers were former balâdji-an, of whom perhaps the best known are Balâtâdji Meḥmed Paşa, who defeated Peter the Great on the Pruth in 1711, and Newshehriî İbrahim Paşa, the last minister of Âğmed III.

BALTISTÂN, known to Muslim writers as Tibbon-i kuhrud or Little Tibet, lying between 34° and 36° N and 75° and 77° E between Gilgit and Ladâkh, extends some 150 miles on either bank of the Indus, covering an area of 8,522 sq. miles. A mountainous country, it has some of the highest peaks in the world: Godwin Austen (K 2), 28,250 ft., conquered in 1953; Gasherbrum, 26,470 ft., conquered in 1958, and Haramosh, 24,000 ft. Skârdû the chief town, was electrified in 1951. It has an airstrip, a modern hospital and a number of schools. A new bâsitân has recently been built.

The Balâs were converted to Islam in the 8th/9th century partly by Sayyid ʿAll Hamadânî of Sînarâg (Kâshmir) and partly by his khalîfâ, Sayyid Muḥammad Nûr Bakhsh. They are polygamous and of the Shiʿîe persuasion. Their neighbours, the Hunzâs, are followers of the Âğhâ Khân. The language used by the Balâs is a mixture of Ladâkhî and Tibetan but has a sprinkling of Arabic and Persian words, indicative of the influence of Islam.

The old rulers of Baltistan are known as Râdjîs or Gâlpô, the most famous being ʿAll Shîr Khân who flourished in the 10th/11th century and also built a fort at Skârdû. His expeditions to neighbouring regions still form the theme of many a native folk-song. In the early 12th/13th century another Gâlpô, ʿAll Mir, chief of Skârdû, invaded and conquered the home-land of the Balâs. The last of the Gâlpôs, Ahmad Shâh, lost his independence to the Dogra general, Zörâwar Singh in 1840, when Baltistan was annexed to the Kâshmir State, then ruled by âlî Mir, chief of Skârdû, and thereupon the Pakîstân Government to take over control of the area. Since then it is being administered by the Chief Adviser, Kâshmir and Baltistan. It has made general progress; almost the entire area now has a net of pony tracks. Skârdû is linked with Rawalpindi by air. An airmail service has also been introduced between Baltistan and Pakîstân.

Improved educational, medical and other facilities have been provided raising the standard of living of the people. Large amounts have also been sanctioned for the economic development (especially the construction of roads) of the area. Bibliography: Imp. Gaz. of India (new ed.) vi 261–5; R. C. BALČISTAN (BALČIŞTAN), land of the Balč.  

A. Geography and History. The exact boundaries of Balčistān are undetermined. In general it occupies the S.E. part of the Iranian plateau from the Kirmān desert east of Bām and the Bāshāgīrd Mts. to the western borders of Sind and the Pāndjāb. This arid and mountainous country with a predominantly nomadic population is divided between Irau and Pakistan. At present Balč are also found in Sind and the Pāngjāb, in Sīstān and a few nomads in the USSR near Marw (see above).

The rivers of Balčistān are small and unimportant. One may consider the country a plateau with the rugged Sulaymān range in the East and several mountain ranges in the West, the most spectacular peak of which is the volcano Kūh-i Tātān (1,550 ft.). The town of Irāngāhār (formerly Fahrādīj) is the capital of Persian Balčistān with Kālāt the most important centre in the East. The seaports, such as Gāh, Tī, Pāmīr and Gwādār, formerly active, now have lost their importance.

The population of the area, including Brahūs, is uncertain, hardly more than two million today. Although the Balč are the majority of the population, with the Brahūs the largest minority, there are also Džāts and other Indian elements on the eastern coast, and negroid people in the port towns especially in Persian Balčistān. The Balč are divided into two groups separated from each other by the Brahūs in the Kālāt area which accounts for the two major dialects.

The earliest mention of the area, called Maka, is in the Old Persian cuneiform inscription of Darius at Behistūn and Persepolis. Other names occur in classical sources, but very little is known of the country in pre-Islamic times. It is probable that Iranian speakers were late in coming to Balčistān and the southern and eastern parts of Balčistān were predominantly non-Iranian until well after the Islamic conquests. The Balč probably entered Makrān (i.e., western Balčistān) from Kirmān about the time of the Saljuq invasion of Kirmān.

Kirmān was conquered by the Muslims in 23/644 in the caliphate of Umar. In the mountains of Kirmān they met Kufs or Kūš and Balūs or Balč who were marauding nomads. At this time the Zuṭṭ or Ŀīāš were in Makrān, which was not conquered by the Arabs. In the time of Muʾāwiya, ca. 44/664, the towns of Makrān were occupied and war was waged with the Māds of the coast, while raids extended as far as Sind. In the time of al-Ḥaḍīddi b. Yūsuf (86/705) in the inter-Arab struggles the ʿAlāʾ Arab faction was driven into Sind to be followed in 89/707 by Muḥ. b. Kāsīm with an Arab army. It is difficult to identify the places he captured but Muslim rule was extended by him through Balčistān to Sind. It is probable that the Arabs maintained their influence only on the coast, but we have very little information about the entire area throughout the ʿAbbāsid caliphate. Muḥammad of Gāzīn maintained authority over Kuschār (the Kālāt plateau) acc. to the Ṭubālā-r-i Nāṣirī.

The Balč and the Kūc tribes during the Umayyad and ʿAbbāsid caliphates raided from Kirmān, spreading into Sīstān and Kirmān. According to Yākūt the Balč were decimated by ʿAḍud al-Dawla the Būyid (338-372/949-982). They continued their depredations until Muḥammad of Gāzīn sent his son Masʿūd against them, who defeated them near Khabīs. Shortly after this time the eastward movement of the Balč began, for they left Kirmān and went into Makrān. It is possible that the strong centralised government of the Saljuqs made raiding unprofitable for the Balč who consequently moved eastward. Two centuries later the Balč are found in Sind. In the Kālāt highlands the Brabōi confederacy, including some Balč and Afghan tribes, kept the main body of Balč from inundating the area, and the Balč then moved into Sind and the Pāndjāb. No permanent kingdom was established but each tribe was under its own chief and inter-tribal fighting was common.

The first tribes of which any records have survived are the Rinds under Mir Čakur and the Dōdās under Mir Sohrāb who appeared at the court of Shāh Husayn Langāh at Mūltān, who ruled from 874-908/1467-1502. The tradition is that Mir Čakur and his Rinds came from Sībi and took service with Shāh Husayn. Other Balč followed and, according to ballads, there was war between the Rinds and the Dōdās. In these legends the memory of the migration of the Balč to India is preserved.

The Dōdās and Hōts, another Balč tribe, spread up the Indus valley and Bābar met them as far north as Bherā and Kusāḥ in 1519. The towns of Dīra Ismaʾīl Khān and Dīra Ghuṭ Khān were founded by the sons of Sohrāb Dōdā in the time of Shēr Shāh, who confirmed their possession of the lands of the lower Indus valley. According to tradition these Balč aided Humayūn in his reconquest of Dīlū and were in the good graces of the Mughal rulers.

The only history we have of Balčistān in the later period concerns the Brabōi confederation. The Brabōi confederation began to expand in the 17th century under the Kāmbarānī chiefs. At the end of the century one of these rulers, Mir ʿAbd Allāh extended his power west throughout Makrān and south to the sea. Nādir Shāh of Persia regarded the Brabōi Khāns with favour, for after his Indian conquests he awarded them lands in Sind taken from the Indian Khāns.

Ahmad Shīr Durrād established his authority over Makrān, and the Brabōi Khān recognised him as his suzerain. This Brabōi, Nasır Khān, extended his rule over Las-Bīla including Karākūl. He organised
the Brahils into the two main groups of Sarawdn and Lishlshw. Each tribe had to supply the Khan with troops at the Khan's request but were otherwise free from taxes.

Nasir Khan became so powerful that he defined his suzerain Ahmad Shah who defeated him in 1727/1738 and besieged him in Kalat. Peace was made on condition that Nasir Khan retain his independence free from taxes with his suzerain Ahmad Shah who defeated him in 1727/1738 and was succeeded by his son Mahmud Khan who was unable to retain the extensive dominions of his father. Western Makran was lost and some Baluchi tribesmen took Karak. Mahmud died in 1821 and was succeeded by his son Mihrab Khan. The latter mixed in Afghan affairs which brought him in conflict with the British. In 1838 a force under Gen. Wiltshire was sent against Kalat which was stormed and Mihrab Khan was killed. After much confusion and disorders which followed his death, the years until 1876 when Capt. Sandeman brought about a treaty which recognised Kalat as a protected state in the Turco-Persian Empire. The establishment of Quetta as a military centre and the building of a railroad in Balochistan in the 1880's kept the country pacified.

The boundary between Kalat and Persia was laid down in 1872 and revised in 1895-6, but for the most part the Baluchi tribes disregarded the frontier.

Much less is known of Persian Balochistan. Although the Baluchi tribes owed allegiance to the Safavids and Qajars in fact they were independent. Raiding parties of Baloch terrorized the settlements of Kirmahn and Khurasan until the 1930's. The Nahrri tribe today is perhaps the most important in Persian Balochistan and Sistian, but it is difficult to obtain information about the various tribes, who perhaps know very little themselves about their history and present status.

There are many ballads and stories on Baloch history, many apocryphal, though some, telling of eponymous ancestors, may contain actual history.

Bibliography: For travellers' accounts, see the literature in A. Gabriel, Die Erforschung Persiens, Vienna 1932, 137-140, 175, and passim. On ethnography, cf. M. Longworth Dames, The Baloch Race, London 1904, and Mockler, The Origin of the Baloch, in JRAI, 1895. History is poor; for the early periods the sources are only scattered notices in the standard Arabic histories and geographies; for later history see Elliot and Dowson, The History of India, London, 1867-77, esp. vols. 1, 2 and 5; H. Raverty, Tabakat-i Naseri, transl. and notes, London 1881; Thornton, Life of Sir R. Sandeman, London 1895. (R. N. Frye)

B. Language. — § 1. Linguistic history.

Within the main division of Iranian languages, based on the treatment of the simple Ido-(European) palatalts k and g into a Western, Persic, and an Eastern group, Bal(di) belongs to the latter, cf. ask 'gazelle': N(ew) P(ersian) dhu; san- 'to know': NP dnn-; buRz 'high': NP buland. The Baluch are thought to have migrated from their present habitat from the shores of the Caspian Sea. One therefore looks for orientation on the ancestor of Bal to the two of the known Middle Iranian languages which are nearest to that area, viz. M(iddle) P(ersian) (belonging to the Western group) and F(arthian) (belonging to the Eastern group), whose meeting point lay to the South of the Central Caspian region.

Bal ranges with F not only in the treatment of the simple IE palatals (cf. also the special development of IE *h in d*h in Iron 'iron': P 23Hw: MP 33Hw), but also, e.g., of O(ld) Ir(anian) j (fan- 'to strike': P jn-: MP jm-), d- (pad 'foot', gidan 'tent': P d'd, ud'w: MP p'Y, wYn), r- (sird 'heart': P yrzd: MP ykl), sc- (pas-tara 'later': P ps: MP ps), dy- (pits other': P bkg: MP dvey), and wkl- (w(h)ad 'sweet, happy': P wks: MP xvd); it agrees with MP e.g., in the development of Ofr. y (fiid 'separate': MP yyd: P yyd; see now W. B. Henning, Mitteliranisch (Handbuch des Orientalistik), 89 ff., note Khwarizmian la- < fra-, ibid., 114.)
§ 2. Dialects.

Bal. dialects are divisible geographically and linguistically into two great groups: Western and Eastern, separated from each other by a strip of territory inhabited by Brahui-speakers, extending from Quetta in the North to Las Bela in the South.

A) Western. The Western dialects (also called 'Southern' or 'Makrani') are spoken principally in the Makrān, their territory extending from Biyābān north of Cape Jāsk in Persian Balūcīstān (abt. long. 57°) eastwards to Ras Malān in the Sind (abt. long. 66°), thence northwards to the Afghan frontier, and thence along this frontier westwards into Kirmān. The map in the LSI, x, 327 (v. bibl.) shows a territory where there live mixed Balūchī and other language speakers, extending from the north-west corner of the Makrān along the Persian-Afghan frontier northwards into Russian Turkestan, in the province of Marw. Details of these Marw Balūchīs remained obscure until 1927-28, when I. I. Zarubin first investigated their language. They number about 10,000 (mainly in the regions of Volotan, Bārām 'Allī, and Kubyshev.)

B) Eastern. The Eastern dialects (also called 'Northern') are spoken by tribes in an area extending from Karafī northwards through the Sulayman mountains approx. to Dera Ismā'īl Khan. This dialect has been strongly influenced by the Brahui language. They number about 10,000, especially Gladstone, Dames, and Mayer. Add to the LSI list:

B) Eastern.

I. The purest E. dialects are spoken in an area stretching from Quetta through Loralai to include Dera Gāhī Khan and south to include Marri and Bugtī territory, into the Upper Sind Frontier.

II. The Karakān dialect, north of Dera Gāhī Khan up to Dera Ismā'īl Khan. This dialect has been strongly influenced by the Brahuis, as a technical term, through the numerous German loanwords (principally Sindhi and Labakā).

III. The dialects of Sind, south of Jacobabad. These are much more mixed with and influenced by the Sindhi than the others; typical of them is the Kāččāli-Bollī, spoken by about 100,000 in a district north of Karakān. In it all θ becomes ɔ, ɔ: becomes ə, ə: cerebralisation is a general rule, voiced stops are usually aspirated, and final vowels are affixed to words ending in a consonant.

The E dialects have been much better studied than the W, and reference to the bibliography must suffice here for them.

Bibliography: G. A. Grierson, Linguistic Survey of India, Vol x, 327 ff. The bibl. given on p. 335 is complete up to 1921. See, on E dialects, especially Gladstone, Dames, and Mayer.

BALYEMEZ, the name given to a large calibre gun. The term is encountered in Ottoman chronicles and other works and is still to be found occasionally in relatively late sources (down to the 19th century). Balyemez cannon were first introduced into the Ottoman army in the time of Sultan Murad II. Mehmed II the Conqueror, who undertook regular large-scale military operations, made great use of such guns. He caused the Transylvanian Urban, a noted cannon-founder, to construct a special siege gun of the Balyemez type, for the purpose of breaching the walls of Constantinople. The technique of gun-casting became available to the Ottomans through Western and, above all, German specialists. The production of a Balyemez gun was described in some detail by Kritobulos, the Greek panegyrist of Mehmed II. Since guns were at that time employed only in siege warfare, the Turks, as a rule, used to cast them on the spot; there is but seldom any reference to the transport of guns already cast. The name Balyemez ("that eats no honey") is in all probability a jesting and popular transformation of the German "Faule Metze" (the famous cannon of the year 1411 which, together with the "Faule Grite", altered the entire course of war, as it stood at that time). The word came to the Ottomans, as a technical term, through the numerous German gun-
founders in the Turkish service. It passed also, from the Turkish, into various languages of south-east Europe. The nickname Balyemez, occasionally given to Ottoman army commanders, is a secondary derivation from the name of the gun.

**Bibliography:** H. J. Kissling, *Balyemez*, in *ZDMG*, 101 (1951), 333–340, where further bibliographical references will be found [see also *Marud* and *Top*]. (H. J. Kissling)

**Balyos,** Balyoz (originally Baylōs), the Turkish name for the Venetian ambassador to the Sublime Porte—in Italian, *baio* (Venetian ambassadors at Byzantium had borne this name since 1082; other *basili* were at Tyre and Lajazzo/Payas near Alexandria). The Venetians, immediately after the conquest of Constantinople, sent off as *baio* Bartolomeo Marcello, who on 18 April 1454 made with the Porte a commercial treaty which renewed the agreement already existing with the Ottomans since 1408. Under this new treaty Venice had the right to maintain at the Sublime Porte a bailo with his seat in Pera and with the power to issue passes for Venetian merchants and to exercise in relation to those merchants certain legal functions. The representatives of Venice sat in Constantinople, except in time of war, until the fall of the Republic in 1797; their tenure of office lasted, during the 17th and 18th centuries, in principle for three years. There were moreover special ambassadors to the Porte who also bore the name of *baio*. The *basili* played, in the 16th and 17th centuries, an important rôle politically; several amongst them, in times of tension or of war, were thrown into prison (as a rule in Yedikule). The reports (*relazioni*) which they submitted to the Signoria bear witness to their perspicacity. These reports have been published in two series: (i) E. Alberi, *Relazioni degli Ambasciatori Veneti al Senato*, ser. iii: Turchia, 3 vols., Florence 1840–1855; and (ii) N. Barozzi and G. Berchet, *Le Relazioni degli Stati Europei lette al Senato dagli Ambasciatori Veneti nel secolo decimosesto*, ser. V: Turchia, Venice 1866, 1872.

**List of the Baili:** Cf. (i) Barozzi and Berchet, op. cit., i, 9 ff.; and (ii) B. Spuler, *Die europäische Diplomatie in Konstantinopel*, Pt. iv, in *Jahrbiicher für Geschichte Osteuropas*, i (1936), 289–247 (with additional references).

With the generalised meaning of European diplomatic or consular agent, the word is also encountered in some Arabic dialects and in Swahili.

**Bibliography:** W. Andreas, *Staatskunst und Diplomatie der Venezianer im Spiegel ihrer Gesandtenberichte*, Leipzig 1943; H. Kretschnay, *Geschichte von Venedig*, 3 vols., Vienna 1905–1934; G. N. Curzon, *The History of Persia from the Beginning of the XIXth Century to the Year 1875*, 1201/1795: in order to celebrate his success the Kâdîr erected a pyramid there consisting of the skulls of 600 of his adversary’s followers (R. G. Watson, *A History of Persia*). In those days the citadel, which was in the centre of the town, contained part of the bazaars. The houses were of sun-dried brick. There were a number of baths, the best known being in the street or lane of the willows (*zāhleh al-bīldi*).

In 1131/1719 Mahmūd, the Qazī or leader, captured Bam, but abandoned it some months later owing to a revolt in Kandahār. In 1134/1721 he captured the town again and it remained in Afghan hands until their power was shattered by Nādir [q.v.] in 1142/1739–39. It was, indeed, in order to guard against possible future attack from the east that Nādir greatly strengthened the defences of the town.

It was at Bam that Aghā Muhammad Khān captured the gallant Lutf ‘All Khān, the last of the short-lived Zand dynasty, in 1256/1840–1 Bam came into prominence again, when Aghā Khān Mahallatī occupied it during his revolt. In the old town, which is now almost entirely in ruins, the only building of interest, apart from the striking citadel, is the shrine of the Imam Zayd which in-...
junction of the two navigable stretches of the river, at the end of the Dakar-Niger railway, served by an important aerodrome. Formerly a trading post on the routes between the Sahel and the Southern region, and between the Sudan and Senegal, Bamako occupies a central position in French West Africa which is the reason for its flourishing state: the population of the town, numbering 800 in 1883, had risen to 37,000 in 1945, and today (1958) has reached 100,000 (of whom 4,000 are Europeans). It owes its importance to its administrative and political rôle.

Bamako was founded by a Bama hunter and named by his Niaré successor, who came from Kaarta, Bama-ko = "after Bama" (the etymology "river of the crocodiles" is incorrect). The size of the original village increased as there came to it first fishermen, and then men from Draa (the Drâvé) and Touat (the Touré) who brought with them Islam; the town thus comprised four quarters: Niarela, Tourelé, Bobo, and Dravéla, the basis of the present city.

In a short time Bamako, a bridgehead on the Niger, became a French political objective; after the war of 1870, a move was made in its direction, and it was occupied in 1883 by Col. Borgnis-Desbordes. From then on, as a base for French operations in the Sudan, its population was constantly swelled by groups of Senegalese and Sudanese. In 1904, the railway reached the town, which became in 1907 the chief-town of Upper Senegal and Niger: a large administrative, military and medical (Institutes of Leprosy and Tropical Ophthalmology) centre grew up, and the town also tended to become a university (Federal School of Public Works) and cultural (French Institute of Black Africa) centre.

Bamako is an Islamic city, but its Islam is afro-cultural, lax, and often tainted with animist survivals. Far from being a centre of religious expansion, the city has always been under the influence of the ancient Muslim towns in the region and of families of Moorish marabouts. The Kâdiriyas and the Tidjâniyas have long been established there; at first in the majority, the Kâdiriyas were supplanted by the Umariyyas; between the two wars, Hamallism, in a more sober form, developed there; at the present time there has come into being a reformist group which proposes to purify the local form of Islam. It is possible to foresee Bamako, following its present bent, seeking to assume a leading rôle in an Islamic revival. In conclusion, it should be noted that Bamako has a small Christian community and is the seat of an archbishop.

The town, originally built of mud, does not possess any ancient historical monuments.

Bibliography: Scanty. Information should be sought in official publications and in historical works on the Sudan. (M. Chailley)

BAMBARA [see Mande and Sudan].

BÂMIYân, in the Arabic sources frequently called Bamiyan, a town in the Hindu-Kush north of the main range in a mountain valley lying 8,480 feet above sea level, through which one of the most important roads between the lands of the Oxus watershed and the Indus leads; the town is therefore naturally important as a commercial centre and was important in the middle ages as a fortress also. Although the valley, that of the Kunduz river, really belongs to the Oxus watershed and is separated from Kabul by high mountain passes, e.g., the Shibar and Unmai, its political association has often shifted from north to south. In recent centuries Bamiyân has tended to belong to Kabul and Ghazna rather than to the Oxus territories, and the pass of Akribatt, to the north-west of Bamiyân, has marked the boundary between Kabulistan and Afghan Turkistan.

The early history of Bamiyân is obscure. Rare coins of the Kushâns have been reported there but no monuments or other remains of that period have been discovered (J. Hackin, in JA 1935, 287 ff.). The Chinese sources, of which the earliest are scarcely earlier than the 6th century A.D., century, usually transcribe the name Fan-yen-na or Far-yanh (see J. Marquet, Erdmenger, 21 ff.; and P. Pelliot's note in J. Hackin, Les Antiquités Bouddhiques de Bâmiyân, Paris 1928, 75). According to Marquet the "Older Middle Iranian" form was Bâmiyân. The valley and town at this date are described by the Chinese pilgrim Huan-Cuang who found there a great centre of Buddhism with more than ten monasteries and over a thousand monks. He noticed that the language, coinage, script and religious beliefs current differed but little from those of Turkistan. The royal town was on the cliff above the valley, south-west of the great Buddha figures. These two colossal figures, which have for centuries excited the wonder of travellers, both Arab (cf. especially Yâkût, i, 481) and European, have recently been described in detail, together with many of the associated caves and fresco paintings.

Their age is still uncertain but the weight of evidence indicates that the early work, including the two great figures, dates from the latter half of the 6th or early 7th century A.D., and that the excavation and painting of caves continued well into the 8th. During this period Bamiyân appears to have been ruled by a dynasty, perhaps of Hepthalite origin, but certainly subject to the prince (Yaôghû) of the Western Turks. This dynasty was still ruling in the first quarter of the 2nd/8th century and still professed Buddhism (cf. E. Chavannes, Documents sur les Tou-kieu [Turcs] occidentaux, St. Petersburg, 1903, 291-2, and Hackin, loc. cit. 1928, 83).

The prince of Bamiyân bore the title Shîr or Shâr which Yaôghû (Buddân 289) erroneously translates "lion"; the word means "king" and is to be derived from the old Persian khshathriya (Marquet, loc. cit.,). Islam was first adopted by these princes in the time of the Abbâsids, according to Yaôkûbî's geography (loc. cit.) in the reign of al-Mansûr, according to the same author's history (ed. Houtsma, ii, 479) in that of al-Mahdî. The relations of this dynasty to the lands south and north of the Hindu-Kush are not quite clear. According to Yaôkûbî Bamiyân belonged to Tukhûristân, i.e., the lands of the Oxus territory, which is probably confirmed by Tâbarî's statement (ii, 1630.1) that about 119/737 a foreigner from Bamiyân ruled in Khûttal (north of the Oxus); on the other hand Išâkhîrî (277) says that the district (tamâl) of Bamiyân on the lands south of the Hindu-Kush with the towns of Parwân, Kâbul, and Ghâzna. Under the later Abbâsids the members of the dynasty of Bamiyân, like many Central Asian princes, held influential positions at the court of Baghchâd; Tâbarî (iii, 1335) tells us that a Shâr of Bamiyân was appointed governor of Yaman in 229/844. There was still a large Buddha temple in Bamiyân in which there were also idols in the 3rd/9th century. This temple was destroyed by the Sañfârîd Yaôkûb and the idols brought to Baghchâd in 251/862 (cf. the comparison of Tâbarî, iii, 1851 and Fihrist, 346, by Barthold in Oriental Stud. (Nidelke-Festschrift), i, 187).

The native dynasties seem to have been finally
BAMIYAN—BANAKAT
overcome by the Ghaznavids. A branch of the house of the Ghurids ruled in Bamiyan for half a century (550-669/1114-1212). Bamiyan was then the capital of a kingdom which controlled some districts north of the Oxus, and stretched to the north-east as far as the borders of Kâshghar. Like the other lands of the Ghurids, this kingdom also was incorporated in the kingdom of Muhammad Shâh of Khwarizm in the beginning of the 7th/13th century; Bamiyan was granted with Gha'na and other lands to Djalâl al-Dîn the eldest son of the Khwarizmghân (Nasâ'î, ed. Houdas, text 25, transl. 441). Soon afterwards followed the destruction of the town by the Mongols (618/1221). Mütügen, a grandson of Cîngiz Khân, fell at the siege of the town; in revenge for his death the conqueror razed the town to the ground and exterminated its inhabitants; the place received the name of Mo-balik (evil town) or, according to Râshd al-Dîn, Mo-kurghân (evil fortress) and was still uninhabited 40 years later in the time of the historian Djuwayni. For the past few centuries Bâmiyân has always been combined with Gha'na and Kâbul; like these towns it belonged, down to the 14th/18th century, to the empire of the Mughals, and afterwards to the newly formed Afghan kingdom of which it is still a part.

At present Bâmiyân is a district town connected by motorable roads with both Kâbul and Kunduz. The population of the valley belongs mainly to the Hazâra stock, but there are also villages of Tadjiks. The inhabitants speak two languages, Persianian and Pashtû (Afgân), but the former is the more widely spoken. The modern settlement lies immediately beneath the cliff with the great images. About two miles south-east lies the ruined fortress of Gulgula, situated on a prominence on the south of the valley. This has been generally recognised as the town built on a hill which Cîngiz Khân destroyed, and is probably also the strong fortress referred to by Yakût and Ya'kubî. Whether it is also the site of Huan-Cuâng's royal town is not clear, as the pilgrim states that it lay on the cliffs south-west of the images. No remains have been reported in this direction.

BAMPUR, a district and small town in the VIIIth ustân of Persia (corresponding approximately to the province of Kîrmân and Persian Balûcîstân). For administrative purposes, Bampûr and its district come under Irânghîbî (formerly Fârâbî), situated 23 kilometres to the east. Bampûr, which has a population of 5,000, is chiefly remarkable for its citadel which crowns an eminence 100 feet in height. The inhabitants, who are Sunnîs and all Balûcî-speaking, are mostly engaged in agricultural and pastoral pursuits. The surrounding district, which is well supplied with water, is very fertile and produces corn and dates.

After the assassination of Nâdir Shâh in 1160/1747, Nafr Khân, the Governor of Balûcîstân, transferred his allegiance to Ahmad Shâh Durrânî [q.v.], of Afghanistan, but later became independent. Persian authority over Bampûr was not restored until 1183/1767.

BÂN (A. and P.), the ben-nut tree ( _Moringa apera Gaertn._). Dioscorides knew of its existence in Arabia and other neighbouring countries. Galen, speaking of a remedy obtained from the tree, says that it was imported from the Arabs. Abû Ḥanîfa reports that the fruit, called _sâh_ (sah), was a commodity greatly in demand which was bought and paid for in advance even before being ripe. The wood, because of its lightness, was used for tent-poles. On account of the high and slender growth of the _bân_ and the softness of its wood, Arab poets used the word as a simile for a tender woman of tall stature.

The fruit, known to the Greeks as _bakxinos _μορφίας κατά τον Ρωμαίον για τάς ἐνυγνειαστικά τα χάριτα, was put to various medicinal uses. Especially the fine oil, extracted from the seeds, was applied against several skin diseases. The juice of the fruit, mixed with vinegar and water, was given to horses as a remedy for cardialgia. In addition to its application in medicine, the oil of the _bân_ was much used in the manufacture of perfumes.

being either slain or else carried off to serve as assault troops in further sieges; there is no mention that its buildings were destroyed (Eliuayni, i, 70-74; Mtkh)*änd, ed. Jaubert, 140).

It is clear that, during the following centuries, Banakat fell into decline, for in 794/1392 it was “rebuilt” by Timur and named, after his own son, “Shahrulikhvva” (Sharaf al-Din ‘Ali Yazdi, Zafar-

The place is mentioned in the period from the 13th to the 17th century as a strong fortress, but later it sank once more into decay. Ruins (now bearing the name “Sharkiyva”) are still to be seen and were examined for the first time in 1876 by a Russian expedition.

**BANAKITI**, (for the vocalisation, see the preceding article), FAKHR AL-DIN ABU SULAYMAN DAWUD b. Abi‘-Fadl Muhammad, Persian poet and historian (d. 730/1330). According to his own account, he was made malik al-shur‘a*, or “king of poets”, in 701/1301-2 by the Mongol ruler of Persia, Shahrul Khvva. He wrote at least one poem of his historical work, entitled Rawdat al-burda fi Tawdrikh al-Akhbar wa l-Ansab, was written in 717/1317-8, under the Ilkhán Abu Sa‘id; the preface is dated 25 Shawwá 717/31 Dec. 1317. Apart from a few very brief remarks on the events of recent years, it is a résumé of the Djam‘i al-Tawdrikh of Rashíd al-Din, the arrangement of the subject matter being different. According to E. G. Browne (iii, 101), the range of the second half of the work affords evidence not only of a wider conception of history (probably under the influence of Rashíd al-Din), but also of a spirit of real tolerance towards non-Muslim peoples and of a real knowledge of these peoples, doubtless promoted by the position which the author held at the court of the Ilkhans. Blochet, “Introduction à l'Histoire des Mongols ...”, Grib. Mem. Series, xii, 98) seems to assert that the Chinese sources of the Djam‘i al-

The poem consists of 58 verses, and in its general features conforms to the usual pattern of the pre-Islamic Arabian ode. Numerous commentaries have been written on it. It was first published by Lette at Leiden in 1740, and subsequently by Freytag with a Latin translation (Halle 1823), and by Th. Nödeke in his Delectus Veterum Carminum Arabiscorum, Berlin 1890, 110 ff. R. Basset edited it with a French translation and two commentaries, Algiers 1910. An English translation will be found in R. A. Nicholson’s Translations of Eastern Poetry and Prose, Cambridge 1922. There is also an Italian translation by G. Gabrieli in Florence 1901, and a German translation by O. Rescher (Istanbul 1910).

The poem of Ka‘b inspired another famous hymn in praise of the Prophet, viz., the kasidat al-burda (“Mantle Ode”) of al-Busti* [q.v.].

**BANBALČNA**, Pampeluna, Span. Pamplona, a town in the north of Spain, chief-town of the province of Navarre, with a present population of about 80,000. No Arab geographer has left us an accurate description of Pampeluna in the late Middle Ages. The Raad al-Mi‘yár, which devotes most space to it, depicts the town as the capital of the land of the Basques (Vascones, Ar. Baskunak [q.v.]), a group of mountain tribes established on the southern slopes and at the western end of the Pyrenees, not far from the Atlantic Ocean. Their territory bounded, in the West, the land called al-Alaba wa l-Kid* [q.v.], i.e., of Alava and the Castles (the original Castille); in the East, it reached the mountainous regions inhabited by the Gascons (Ar. Glaqhiyin) and the people of Gercy or Cerdagne. Pampeluna was taken by the governor Qubba b. al-Hadidjá in 121/739; it rebelled against Cordova and, in 161/779, was taken by the Franks in the course of Charlemagne’s expedition. It passed under the sway of the Franco-Gascons for a number of
years and, from about 825 A.D. onwards, became the capital of an independent principality with Inigo II in close connexion with the powerful Mosá b. Mosá, who was his maternal uncle and at the same time his brother-in-law and father-in-law. In 927/984, ‘Abd al-Rahmán II led the Umayyad forces as far as Pampeluna, which was sacked. In 1343/859, bands of Scandinavian pirates, the Norsemen, penetrated as far as Pampeluna and took prisoner the king Garcia Iliguez. ‘Abd al-Rahmán III succeeded in taking possession of the town for a time in 1329/924, in the course of his campaign against Navarre, and demolished it. Other attempts by Muslim armies against Pampeluna were made in 1322/924 and during the dictatorship of the two ‘Amírídádárás al-Mansúr [q.v.] and al-Mu’azzafar [q.v.].

(E. Lévi-Provençal-[A. Huici Miranda])

BAND ("bend"), a Persian word denoting an area which is used to bind, attach, close or limit, both literally and figuratively (e.g. sadness, preoccupation); it has also passed into Arabic and Turkish. In Persian, it has various meanings when used in compounds (e.g., band-i anqútí, the phalanx; band-i pd, ankle-bone; dar-band, defile, inlet; dast-band, bracelet; ru-band, head-veil; band-i shahryárd, the name of a musical air). It denotes in particular dams (e.g., band-i dáb) built for irrigation purposes: for instance, the Band-i Kayásr, built across the river Kárn at Shustár by order of the Sásáníd king Sháhárd I (3rd century A.D.), several arches of which were carried away by floods about 1880; on the other side of Shustár, on the way from Ahváz, the Band-i Gárgar (the Masjurán of the Arab geographers), on a lateral drain of the Kárn, which was excavated during the Sásáníd period (Band-i Míyán ["middle dam"], constructed during the same period and several times restored, notably at the beginning of the 10th century by a son of Fath ‘All Shá’íhd [hence its other name: Band-i Múhammad ‘All Mirzá]; some 40 kms. downstream from Shustár, near Band-i Kír ["bitumen dam"], are the ruins of a great dam of the same period (on these dams, see EI, s.v. Káryn, 825-826, and Guide Bleu, Moyen-Orient, 1956, 718-721). In addition to these, the Band-i Amlár (or Band-i ‘AdúlI) on the Kurr (formerly the Cyrus; Barbier de Meynard, Dictionnaire de la Perse, 477, n. 2), about 80 km. north of Shíráz, was constructed in the 4th/10th century at the order of the amir ‘Aş lud al-Dawla of the Búyíd dynasty; on the same river were built the Band-i Hámádúr and the Band-i Kásárir ["the fuller’s dam"], which were restored by Fákhár al-Dawla Cawlí, atabak of Fars under the Adud al-Dawla of the Buyid dynasty; on the same river was built the Band-i Kásárir ("the fuller’s dam"), which were restored by Fákhár al-Dawla Cawlí, atabak of Fars under the Saljúqs (on these three dams, cf. the interesting passage in Ibn al-Balbíl, Fárs-níma, Gibb. Mem. Series, 151-152). Near Káshán, in a mountain gorge, is situated the Band-i Kúhrád, built under the Safavids (Band Alláh Mustawfl, Núsha, 721; de Sercey, La Perse en 1839, 230). In Turkey, nine dams contribute to Istanbul’s water supply: on the heights overlooking Búyúkdere (on the European side of the Bosphorus), north of Başheçkёy, the bend of Mámúd (Mahmut bendı), built in 1732, and the bend of the mother of Selim III (Valide bendı), 1796; some five km. further away, in the neighbourhood of the forest of Belgrad, four other bends from which water flows, as required, into the Bâsh Hâvuz (Baş Havus) or cistern of Pyrgos, and thence towards the city via two aqueducts—the most notable being the Búyúk bend ("great dam") built in the 6th/12th century by Andronicus I and restored by several sultans, and the Paşâderesi bendı, the work of the same Byzantine Emperor (details of these dams: Guide bleu: Turquie, 1958, 171-2).

(B. Huici Miranda)

BÁNDÁ, town in Uttar Pradesh (India), situated in Lat. 25° 28’ N and Long. 80° 20’ E; headquarters of the district of the same name. Pop. (1951) 30,347. The town, otherwise unimportant, attracted notice during the Sepoy Revolt of 1857 when its last ruler, Nawáb ‘All Bahádúr II, put up a hard fight against the British. The town, however, finally surrendered in April 1858. A mere village till the end of the 18th/19th century, it began rapidly to expand when Shamshír Bahádúr, said to be a natural son of the Péghwá Bádj Ráo I (1130-53/1726-40), by one of his concubines who had adopted Islam, made it the chief town of his estate conferred on him by the Péghwá, Shamshír Bahádúr, who fought on the side of the Marathas in the Third Battle of Panipat (1761), was seriously wounded and subsequently died at Bharatpúr. His son, ‘All Bahádúr I, subjugated many places in Bundhelkhand, with the help of the Sindhí of Gwalior. He was succeeded by his son, Dhu ‘l-Fákhr Bahádúr, who entered into an agreement with the British in 1827/1828 and was awarded the title of Nawáb and confirmed into his dídhr of Bándá. An ill-built town, it has a very large number of places of worship, both Muslim and Hindu. The congregational mosque, the largest in the town, was built by the last Nawáb. ‘All Bahádúr II. A patron of learning, he has been praised by the Indian poet in Urdu and Persian, Mírza Ghalib. The islands, however, played an important part in the history of the struggle between Islam and Christendom, as the nutmeg trees which are grown there attracted the Portuguese. They arrived in 1511 in Malacca whence they sailed to the Banda Islands a year later, thus transplanting the Iberian war, which had ended a few years earlier, to South and South-East Asia. The Dutch appeared on the scene in 1599. From 1619 to 1942 the islands were under Dutch control, from 1942 to 1945 occupied by the Japanese.

(B. C. Berg)

BANDA NAWÁZ, SAYYID MUHAMMAD [see SAYYID MUHAMMAD].
**BANDAR** (Bender), a Persian word which has passed into Turkish, denoting a seaport or port on a large river; it has passed into the Arabic of Syria (Barthélémy) and Egypt in the sense of marketplace, place of commerce, banking exchange (Bochtor, Volters) and even workshop (Cuche). *Şah-bandar*, in Persian, means customs officer, collector of taxes; in Turkish, it means consul and, formerly, a merchants' syndic. In compounds, it occurs in Persian geographical nomenclature: on the Caspian Sea (southern shore), Bandar-Pahlavi (formerly Enzel); Bandar-Gaz, the safest harbour in the region; some 50 kms. to the north, Bandar-Şah, the terminus of the Trans-Iranian railway—the other terminus being Bandar-Şahpur, on the Persian Gulf; other ports on the shores of the Gulf are: Bandar-Daylam, Bandar-Rig, Bandar-Būghir ([see *Būghir*]), Bandar-Majām, Bandar-Linga, Bandar-ʿAbbās (see following article).

**BANDAR ʿABBĀS,** a Persian port situated in the VIIIth, usṭān (which comprises part of Fārs and Khorāsān). The town, which is on the coast of the mainland 16 km. north-west of the island of Hormuz (q.v.), stands on bare, sandy ground rising gradually to the north; it has a frontage of 2 km. along the shore. The position of Bandar ʿAbbās at the entrance to the Persian Gulf and the fact that it is the terminal point of trade-routes from Yazd and Kirmān to the north and Lār, Ṣahrāz and Isfahān to the north west has made it a place of some strategic and commercial importance. Owing to the shallowness of the sea, large vessels cannot berth alongside the quay or jetty and have to anchor some distance offshore and load or discharge their cargo by means of lighters.

There are grounds for believing that the town is situated on or near the site of the small fishing village of Ṣahrāz (see ʿĪṣākhr, 67) or Ṣahrāzvā (see the Hudūd al-ʿĀlam, 124 and 375). When the neighbouring island of Djarūn (or Djarrūn) ceased to be so called and was given instead the name of Hormuz at the beginning of the 8th/14th century, the former name was transferred to Ṣahrāz. When Hormuz developed into a great commercial centre, the importance of Djarūn as the point of transhipment for goods in transit between the island and the mainland gradually increased. Early in the 10th/16th century the Portuguese established themselves on Hormuz and subsequently also on the adjacent stretch of mainland, and Djarūn, or Gamru, as it then came to be called, thus passed into Portuguese hands. In 1615 the Persians recovered Gamru from the Portuguese and seven years later, with the naval aid of the English East India Company, they also drove the Portuguese out of Hormuz. In gratitude for its services, ʿĪṣākhr ʿAbbās I allowed the Company to set up a factory in Gamru (or Gombroon, as the English usually called it) and not only exempted it from customs dues there, but also gave it the right to receive half the customs dues. An additional reason for the granting of these privileges was the ʿĪṣākhr's desire that the town should become the chief port in his realm: it was in token of this desire that he named the port Bandar ʿAbbās after himself. The ʿĪṣākhr's hopes were soon realised; with the advent not only of the English East India Company, but also of the Dutch East India Company and the French, the port became the most important in Persia. When Chardin was there in 1674, he stated that the town contained between 1,400 and 1,500 houses; he also remarked upon the bad climate and its deadly effect upon the European residents (*Voyages*, Paris 1811, viii, 508, 511-512).

The overthrow of the Safavid monarchy by the Ghulāzī Afghāns in 1722, followed by the Russian and Turkish invasions and numerous internal revolts, paralysed the trade of the country and brought stagnation to Bandar ʿAbbās. The expulsion of the Afghāns led to a temporary revival of prosperity, but this was soon nullified by ʿĀdīr's exorbitant tax-collectors. Furthermore, his creation of a naval base at Būghir ʿAbbās (q.v.) dealt another blow at the supremacy of Bandar ʿAbbās, and it was not long before the former port became the leading one of the country. When Plaisted was at Bandar ʿAbbās in 1750, he found that nine out of every ten houses were deserted (*Journal from Calcutta . . . to Aleppo in the Year MDCCCL*, London 1758, ii, 11). A few years later the Dutch and English East India Companies abandoned Bandar ʿAbbās, thus causing it to decline still further. In 1793 the town, together with a coastal strip 150 km. in length, was leased to the Sultan of ʿUmān, in whose hands and those of his descendants it remained until its reversion to Persian control in 1868.

In recent times Bandar ʿAbbās has recovered something of its former prosperity, thanks to the construction of motor roads from Kirmān and Yazd and also from Ṣahrāz. The modern town has a population of some 11,500 (this total undergoes quite considerable seasonal fluctuations). Living conditions have improved with the provision of a piped water supply from ʿĪṣān, 16 km. to the north-west. The main thoroughfare, the Khīyābān Ṣaḥīḥ ʿAbbās-ī Kabīr, runs through the town approximately parallel with the shore, at a distance of some 200 m.; the governmental and most of the municipal buildings are in the central part of this avenue. The chief mosques are the Masjīd-i Djami ([for the Shiʿa]) and the Masjīd-i Galla-Dān (for the Sunnis). Modern industry is represented by a fish-canning plant.

**BANDAR PAHLAWI,** principal port (bandar) of Iran on the Caspian Sea, situated at 37° 28' N and 49° 27' E. Formerly called Enzel, the town was
renamed in honour of the Pahlawi dynasty by its founder Riāa Shah who came to the throne in 1926. Bandar Pahlawi itself lies on a tongue of land to the west of an inlet between the Caspian Sea and a freshwater lake called Murdab. To the east of the west of an inlet between the Caspian Sea and Bandar Pahlawi itself lies on a tongue of land to the west of an inlet between the Caspian Sea and a freshwater lake called Murdab. To the east of the

In the early 19th century there were only a few hundred houses at the site, in the first decade of this century about 9,000 people, and the present population is given at 48,500. Persian, Gilaki (a local dialect) and some Turkish are spoken. The inhabitants are Shi'a. There are no monuments of any interest or real antiquity in either Bandar Pahlawi or neighbouring Ghāziyān.

During the second quarter of this century the inlet mentioned above has been developed into a shallow, but sheltered, harbour. In the period March 1951-March 1952 some 298 ships entered or left the port. Between 1930 and 1940 there was considerable transit traffic of goods and passengers from Bandar Pahlawi through the USSR and to Europe, but in recent years nearly all the trade has been directly with Russia.

Owing to its proximity to Russia the port town has been the scene of international incidents. In 1722 Russian troops landed on the south side of the Murdab and again in 1804 another force landed at Enzeli. In March 1920 Soviet troops, following a British force retreating from Baku, landed at Enzeli and later gave support to the establishment of a short lived Soviet Republic of Gilān. During the Anglo-Soviet occupation of Iran Bandar Pahlavi sheltered a Soviet garrison from 1941 until May 1946.

**Bibliography:** Ritter, Erdkunde, viii, 652 ff.; Mas'ūd Khayān, Diogrāfiyā-i Muwāṣṣal-i Iran, Tehran 1932, ii, 276-7; Rāhanāmā-i Iran, Dā'ira-i Diogrāfiyā-i Sulād-i Arāsh, Tehran 1951, part 3, 50; Annual Account of Trade between Iran and Foreign Countries. **Bandirma,** a port on the Sea of Marmara, near the site of the ancient city of Paphrad. The mediaeval Greek name for the town was Panormos. Villehardouin mentions a castle called “Palermo”, which the Latin Crusaders fortified in 1204. It was used thereafter as a base for their operations against the Greeks in north-west Asia Minor. Under Ottoman rule Bandirma was included in the sandjak of Karass. According to the evidence of travellers who visited the town in the 16th-17th centuries, most of its inhabitants seem to have been not of Turkish, but of Greek or Armenian descent. Much of Bandirma was burnt down in 1874. It now forms part of the province of Bursa and is an active commercial centre, exporting the varied products of the hinterland—cereals, sheep and cattle, boracite, sesame, etc. The population of Bandirma in 1950 stood at a little less than 19,000.

**Bandjamasin,** town on the southern coast of Kalimantan (Borneo, Indonesia), at Lat. 3° 18' S. and Long. 114° 35' E. It has been known from the 14th century onwards as a centre of inter-island trade and capital of a small principality. It was the capital of a residency in the Dutch period (1859-1942) and the centre of the Japanese occupation. The population of approximately 300,000 is Muslim, though the influence of the Javanese civilisation is considerable, especially among the members of the nobility.

(C. C. Berg)
BANGALA, a geographical term, derived from the word Bang, originally denoting a non-Aryan people of this name and later applied to their homeland in the southern and eastern parts of Bengal, now in East Pakistan. Abu 'l-Fadl, in his Ḩāfiʿī al-Ahsāʾī, remarks "The original name of Bengal was Bang. Its former rulers raised mounds measuring ten yards in height and twenty in breadth throughout the province called Al (Sanskrit—Āḷ). From this suffix the name Bengal took its rise and currency". But both the words, Bang and Bangāla (or sometimes Dhahgalā) were used in Sanskrit records. It is generally supposed that Bangāla was a smaller division, limited to the southern districts of East Bengal, while Bang was a wider unit. This distinction is purely hypothetical. Among the early Muslim historians, Minhādī al-Sirājī, in his Taḥdīḥ-i Naṣīrī, uses Bang, and Diya al-Dīn Barānī, in his Taʿrīkh-i Firuzshāhī, employs Diyār-i Bangāla, or ʿArāṣa-i Bangāla, for the same region of East Bengal—a geographical division which maintained its integrity till about the middle of 14th century A.D.

Shamsī Sirājī ʿAbī, in his Taʿrīkh-i Firuzshāhī, gives to Shams al-Dīn Ilyās the title of Shāh-i Bangāla (the king of Bangāla), and Shāh-i Bangāliyān (plural of Bangāli) meaning the king over the whole group of people of Bengal. As Ilyās Shāh united for the first time both the kingdoms of eastern and western Bengal under him, he well deserved the titles, given by ʿAbī, and it is after him that Bangāla came to denote a wider geographical region, comprising the whole Gangetic Delta; and this is the sense in all subsequent writings, Persian chronicles, Chinese travel accounts, and European works. But the Hindus began to use the older term Gawḍā for this whole region.

From the middle of 16th century A.D., the city of Bangāla is mentioned in some of the European accounts, and also marked in their maps. But no local tradition or record speaks of such a city. Its position in the old maps is never identical, nor do the descriptions of different authorities tally with one another. Probably the important ports, or the country, visited by the Europeans, were variously called the city of Bangāla by different authorities. The mint "Gawr-Bangāla", occurring in the coins of the Mughal emperor Akbar, may refer to the city, or the country of Gawḍā in Bangāla (or ʿArāṣ Bangāla), more probably the latter.

The kingdom of Bangāla grew out of the original Muslim conquest of Lakhnawtī (north-west Bengal) to which were added Satgāon (part of south-west Bengal) and Sonārāgon (east Bengal). Ilyās Shāh integrated these three regions into an independent Muslim Sultanate in A.D. 1352. His descendents ruled, with occasional revolutions, till A.D. 1484, when they were supplanted by their Abyssinian rulers. The city of Bangāla by different authorities. It has the distinction of being the solitary State south of the Tungabhādra ruled by a Muslim chief in this case belonging to the Shīʿī persuasion. In 1352 it had an area of 275 sq. m. and a population of 44,631. The State lay between latitudes 15° 3' and 15° 29' N. and longitudes 77° 59' E. and 78° 22' E.

Banganaṇpaḷḷi has had a chequered history. The ruling family claims descent from a minister of Shāh 'Abbās II of Persia on the paternal, and from a minister of the Emperor ʿAlāʾīdīr on the maternal, side. The ancestor of the family, Mīr Ṭahir ʿAll, migrated from Persia to Bīḍājpūr. A number of family quarrels arose there resulting in his murder. His widow and four sons sought refuge with the Mughal āʿlāʾīdīr of Aroct. One of these sons married the grand-daughter of the āʿlāʾīdīr of Banganaṇpaḷḷi, and thus came in contact with what was to be the home of the family.

Banganaṇpaḷḷi itself changed hands a number of times. In 1643 it became subject to Bīḍājpūr along with a large part of the Vijayanagar territory; but soon the Bīḍājpūr hegemony gave place to Mughal rule and the rule of the Aṣaf Dīāhs. The āʿlāʾīdīr of Aroct, Husayn ʿAll, paid allegiance to Ḥaydar ʿAll of Mysore and fought many a battle under his banner. But when Tipū Sulṭān succeeded his father he resumed the āʿlāʾīdīr on a mere pretext. On Husayn's death his widow took refuge with the Nīẓām of Ḥaydarābād, and one of the representatives of the family is said to have defeated Tipū's āʿlāʾīdīr in 1790 and taken possession of the town. The āʿlāʾīdīr came under British supremacy by the Treaty of Seringapatam in 1800. It remained under the Madras Presidency till 1839 when it was taken over directly by the Government of India.

By the sanad of 1862 the British Government guaranteed succession according to Muslim Law in case a ruler died childless. In 1867 the hereditary title of Nawāb was conferred on the āʿlāʾīdīr. In 1897, on the occasion of the Silver Jubilee of Queen Victoria's reign, the Nawāb was addressed as 'Your Highness'. The last ruling Nawāb, Mīr ʿAffīdī ʿAll Khān, died soon after the merger, and the title now devolves on his eldest son Mīr Ghulām ʿAll Khān.

BANGIRA, island in Indonesia near the East coast of southern Sumatra, between Lat. 1° 34' S. and at Long. 106° E. It owes its fame to its tin mines and tin trade which attracted foreign merchants from early times. The economically weaker part of the population is Indonesian and Muslim of the normal Indonesian type. The most important part of the population consists of Chinese immigrants.

BANHA, a town in the Nile Delta, situated on the Damietta branch, one of the main stations on the railway between Cairo and Alexandria and
45 kilometres north of Cairo. In mediaeval times, it formed part of al-Sharkiyya province and is today the chief town of al-Kalyubiyya province, with some thirty thousand inhabitants. The Arabic name is a transcription of Coptic Panahê.

The locality occupies a place in the traditional history of the diplomatic relations between the Prophet and the enigmatic Mukawṣîs, the so-called sovereign of Egypt. Among the presents which the latter sent to Muhammad, honey from Banhâ is mentioned, and it is the recollection of just this detail which its nickname Banhâ al-‘asal, "Banhâ of the honey", is supposed to evoke. The story may also well be an embellished explanation of an actual fact, for one of the earliest geographers, al-Ya‘kûbî, states plainly that the village of Banhâ produces famous honey. Yâkût, in turn, extols the quality of this honey, which was one of the glories of Egypt. The description given by al-Idrîsî seems to allow of the following translation: "Banhâ al-‘asal forms an extensive domain, its lands planted with trees and producing much fruit; the cultivated fields succeed one another without a break; opposite, on the Western bank of the Nile, stands the main centre, which has given it its name". Banhâ does not appear to have played a rôle in history. At the end of the last century, "it was exporting considerable quantities of the commodity to which it owed its name, as well as oranges and mandarins, which were highly esteemed".

**BANÎ SUWAYF** (Béni Suf, Beni Sœuf) a town in Egypt, on the west bank of the Nile, 75 m. (120 km.) south of Cairo. According to al-Sâkhûwî (902/1497) the old name of the town was Binum-suwây, from which popular etymology derived the form Banî Suwayf (the مهنسة of Ibn Dîfîân, al-Tuḫûr al-Saniyya, 172, and the منصفة of Ibn Dukmâk, Islîsîr, v, 10, ought probably to be read منصفة). In still more ancient times the capital of this district was Heracleopolis Magna, 10 m. (16 km.) west of Banî Sufî, which only attained importance under Muhammad al-‘Alî.

From the time of the division of Egypt into provinces (mu‘âdîrîyâ), Benî Sufî became the chief town of the second province of Upper Egypt, comprising three districts (markâs), and gave its name to this province. The town, numbering to-day 70,000 inhabitants, is an agricultural centre of considerable importance, with a certain amount of commercial and industrial activity. Situated on the railway and the main road which follow the Nile, it is linked by a track to the Coptic monasteries on the Red Sea. The mašîh of the Shaykha Hûrîyya, situated in the oldest mosque, Dîmâsî al-Bahr, is venerated locally.

**BANKA** (plur. banâ‘îâ), an Arabic word which has been subject to considerable semantic evolution. In early Arabic, its meaning is disputed by the lexicographers (cf. Ibn Sîda, Muḥammad, iv, 84-85; TA, s.v.). The primitive meaning seems to have been "any piece inserted (rušâ) to widen a tunic (hamîs) or a leather bucket (dalî‘ electrical") in the case of the hamîs, according to some authorities, banka were "snippets" of material, in the form of very elongated triangles, inserted vertically below the armholes, along the lateral seams of the garment, to give greater fullness. According to others, they were pieces inserted on both sides of the fore-part of the collar (fawîq) to take the buttons and button-holes. As equivalents, the dictionaries give libâna, dîrîqî and ḏâr-ḥâm; banka (and its variant bounka), like the two latter words, may be of Persian origin.

In the Arab West, banîka is at times employed for a kind of man’s tunic, though more frequently it is applied to an element of women’s hair-covering. Spanish has retained albanega "a hair-net for gathering and covering the hair" and the Arabic of Tetuan still uses the word with a very similar meaning. At Algiers, it is a kind of square head-dress, provided with a back flap, which women use to cover their heads to protect themselves against the cold when leaving the hammâm (= bounka).

In its final development, the word, in the towns of Morocco, has come to mean "a small cell, a closet serving as an office for a ‘minister’, in the old maḥzen [q.v.]; a dark padded cell (in a prison for the insane); a small room or lumen-room (in a flat). According to oral tradition, the bounka was originally a silk scarf in which all ministers coming to the Council carried their documents.

For the semantic evolution, compare with that of the French “poinç” and also (ministerial) portfolio and cabinet.

**Bibliography:** For the Moroccan ministerial bounkas, cf. Aubin, *Le Maroc d’aujourd’hui* (= 1903), chap. XI. (G. S. Colin)

**BÂNIYÂS** (or Bâluniyâs), the ancient Balanea, which also bore the name of Leucas; attempts have several times been made to identify it with an “Apollonia which never existed on this site” (R. Dussaud). It is today a small township on the Syrian coast situated some fifty kms. to the south of Latakia. This ancient Phoenician settlement, which became a Greek city minting its own coinage and, later, the seat of a bishopric, was incorporated in the dioclese of Hims at the time of the Arab conquest. It was, however, especially at the time of the Crusades, that its small harbour, protected by a fortress and dominated by the mighty castle of Markâb [q.v.] on its rocky spur, was for a long period a scene of activity. Occupied by the Franks in 1098, but abandoned after 1109, the position of which was strengthened by the taking of Markâb in 1122, was one of the important fiefs of the principality of Antioch, at the extremity of the county of Tripoli and, after it was entrusted together with Markâb to the Hospitals in 1572, remained one of the last centres of resistance to the Muslim conquest. The attacks to which it was subjected, especially by Śalâh al-Dîn, until its conquest by Kâlû ‘în in 684/1285, so completely ruined it that during the Mamlûk period it entirely lost its administrative role to the advantage of Markâb, and its site and gardens alone retained the attention of the Arab geographers.

The present town does not even possess archaeological remains evocative of its ancient prosperity.

(J. Sourdel-Thomine)

**Bāniyās**, the ancient Paneas, owed its name to the presence in the vicinity of a sanctuary of Pan, established in a grotto and sanctifying one of the main sources of the Jordan. The present place, situated 24 km. north-west of al-ʿAyna, on the road running along the southern frontier of the Syrian Republic, occupies a pleasant site, with plentiful water and rich vegetation, in a smiling valley of Mt. Hermon. Its neighbourhood, moreover, has always been praised by Arab writers for its fertility, and especially for its lemons, cotton and rice cultivation.

The town, though doubtless possessing an older history, is only mentioned since the Hellenistic period. It was established by Herod the Great and especially by his son Philip, who bestowed on it the name of Caesarea in honour of Augustus. It was then called Caesarea Philippi (to distinguish it from Caesarea in Palestine), then Caesarea Paneas. Later on the second part of the name survived alone. In the 4th century A.D. it became the seat of a bishopric, dependent on the province of Phoenicia, and the Arab conquest, when it is known to have served the army of Heraclius as a base before the battle of the Yarmūk, made it the chief town of the district of al-Ḥdawān. Somewhat later al-Muqaddasī emphasized the prosperity of the township and the surrounding villages, into which inhabitants of the Ḥdawān had emigrated. At this period, the Crusades, however, when the position of Bāniyās, lying at no great distance from Byblos, between Damascus and the Kingdom of Jerusalem, acquired strategic importance, its history became more eventful and its successive masters applied themselves to fortifying the castle of al-Ṣubayya, whose ruins still dominate the town today.

Ceded in 520/1126 by Tughtakin, Atabek of Damascus, to Bahrām, sultan of the Iskandils, who were then active in Syria, it was handed over to the Franks in 524/1129, following the death of Bahrām and the violent action undertaken at Damascus against the followers of the sect. Recovered by force of arms by Būrī in 527/1132 and delivered up to Zanjī, it was then besieged by the Franks who, with the help of the Damascenes, reincorporated it in their possessions in 534/1140. Nūr al-Dīn, after being repulsed twice in succession, Baldwin III and his army coming to the assistance of the threatened garrison on each occasion, finally made himself master of Bāniyās and its citadel in 559/1164 and his adversaries, in spite of their efforts, never succeeded in setting foot there again.

Bāniyās then played the role of a frontier stronghold between the countries of Islam and the territory of the Franks who, in Ibn Dhūbiyar’s time (580/1184), peacefully shared the exploitation of the surrounding plain with the Muslims. It was presented by Sālāḥ al-Dīn to his son al-Āḍal and then passed into the hands of various Ayyubid princes, who improved its defences, as is still born out by several extant inscriptions. Baybars, in his turn, was able to carry out the restoration of a fortress, the continued importance of which is emphasized by the Mamlūk authors, who even make it the residence of an amir, independent of the governor of the place.

At this period, Bāniyās was the chief town of a wilāya forming part of the niyya of Aḍājn, in the south of the province of Damascus. It was, however, soon to decline to its present state of a small town.
After the fall of the kingdom of Bosnia (in 1463) the Hungarians acquired the area of Jajce. It is probable that Banjaluka was built at that time (it is mentioned for the first time in 1494) to serve as a fortress for the newly built Jajce-Banates. Immediately after the fall of Jajce, Banjaluka was conquered by the Turks (in 1527 or 1528). Under Turkish rule Banjaluka gained in importance, especially after the residence of the governor of the sanjak of Bosnia was moved from Sarajevo to Banjaluka in the middle of the 16th century. The quick rise of the town was largely due to the merits of the first governors who resided in Banjaluka, in particular Ferhād Sokolović, a cousin of the Grand Vizier Mehmed Paša Sokolović (Sokollu). Ferhād Sokolović was governor of Bosnia from 1574, and became Beglerbeg of the newly formed Pashalik of Bosnia in 1580. Banjaluka remained the seat of the Beglerbeg of Bosnia until it was moved to Sarajevo in 1638.

In 1661, when Ewliya Celebi visited Banjaluka, it was a flourishing town with two fortresses, 45 mahallas, 45 mosques, and several madrasas and baths, with 300 shops and a Bezistan. The town itself (which numbered 3,700 houses) was then the seat of the representative (kā'īm-mahām) of the Vizier of Bosnia.

Banjaluka was conquered for a short time in 1688 by the Austrians under the Margrave of Baden, and they burnt down some parts of the town in their retreat. During the 17th-18th century, Banjaluka was besieged by the Prince of Hildburghausen, but was relieved by the Bosnian Vizier ʿAli Paša Hekimoğlu as the result of the victory of August 4th. This war was described by ʿOmar Efendi of Novi (Babinger, 276-277). Since then, Banjaluka has developed more or less unhindered, although it could not regain its former greatness until the end of Turkish rule. There were 32 mahallas and 1,126 houses liable to taxes in Banjaluka in 1851. From then on it was the capital of one of the six Bosnian sandjak (districts).

At the time of the Austrian occupation of Bosnia (1878), Banjaluka capitulated (without offering resistance) as early as 31st July. Nevertheless, there was a battle with the Bosnian Muslims on 14th August. The town remained under Austrian rule until 1918, when it became part of Yugoslavia.

**BANKING [see DIJAMBEH and SAVRAFI]**

**BANKJUR,** the Western suburb of the city of Patna, the ‘Azimabād of the Muslim historians, situated in 25°37' N. and 85°8' E. on the right bank of the Ganges. The great landmark of Bankur is the brick-built beehive-shaped silo or grain storehouse constructed by Warren Hastings after a terrible famine of 1769-70. In Oriental circles the town is famous for its fine collection of Arabic and Persian manuscripts, some of which are extremely rare. The Bankjur library, called in the Trust Deeds “The Patna Oriental Public Library”, and also known as the “Khudā Bahksh Library”, contains many valuable books on Islamic literature. The founder, Mawlānā Khudā Bahksh, (d. 1908) an advocate by profession, was a native of Chaprā (Bihar) who dedicated his entire life to the collection of rare manuscripts from such ancient centres of culture as Cairo, Damascus, Beirut and places in Arabia, Egypt and Persia. It was Lord Curzon, Governor-General of India (1899-1905) who commissioned Sir Edward Denison Ross to reorganise the Library and to prepare a systematic catalogue. So far 31 volumes, describing some 4,000 MSS. out of a total number of over 6,000, have been published, as a result of sustained and patient collaboration between Sir Edward Denison Ross, ʿAbd al-Muḥtadī, ʿAṣīm al-Dīn Ahmad, ʿAbd al-Ḥāmid and Masʿūd ʿAlām Nadwi.

**BANNA’ [see BINA’], AHMAD B. MUHAMMAD [see AL-DININ ĪRĀF]**

**BANNA’; Ėsān, founder and Director-General of al-Ikhwān al-Muslimūn, was born in the year 1906, the son of Ahmad b. ʿAbd al-Raḥmān b. Muḥammad al-Banānā’ al-Sāʿīṭī. In addition to carrying on his trade of watch-maker, his father was a keen student of the traditional Islamic sciences and the editor of the Masāʾid of Ibn Ḥanbal.**

Paternal influence was of the greatest significance in shaping the formative years of Ėsān al-Banānā’ and his early education followed the ancient pattern of that of the sons of the ‘ulāmā’—the memorising of the Qurʾān and the study of ḥadīth, fiqh and lugha. In addition to his conservative religious upbringing he appears to have possessed an innate spiritual bent, for at an early age he became drawn towards Śūfism and was initiated into the Ḥaṣāfiyya order when he was fourteen years of age.

After a period at the Junior Teachers’ School at Damanhūr he entered the Dār al-ʿUlumm in Cairo, at that time an independent teachers’ training College. Even at Damanhūr his precocious capacity for organisation and impulse towards active proselytising had shown themselves in his founding of al-Djam’īyya al-Ḥaṣāfiyya al-Ḵhāṭīrīyya. At the Dār al-ʿUlumm he developed further his thesis that the sicknesses of Islamic society could only be cured by a return to the regenerative springs of the Qurʾān, ḥadīth and sira. Together with a group of fellow-students he began to spread the Islamic mission by preaching in the mosques and meeting-places of Cairo.

On completing his course of training in 1927 he was posted to Ismāʾīliyya as a government schoolteacher and in the following year founded the Muslim Brotherhood. He remained at Ismāʾīliyya until 1933, preaching, lecturing, pamphleteering and perfecting the organisational structure of his movement on the cell principle. During this period he travelled indefatigably up and down the Canal Zone and offshore of the Ismāʾīliyya headquarters sprang up between Port Saʿīd and Suez.

Following upon his transfer to a teaching post in Cairo, Ėsān al-Banānā’ entered upon a period of intense activity and the movement rapidly gained ground throughout Egypt. Subsequent to 1936, when he espoused the cause of the Palestine Arabs, he became increasingly involved in the political arena, lobbying successive prime ministers with pleas for action and reform. The years of the Second World War saw a hardening of the attitude of the government towards Hasan al-Banānā’. Under both Sirrī Pāsha and al-Nukrāshī he was arrested for
brief periods and the activities of the Brotherhood severely curtailed. In the immediately post-war period tension between them and the government increased, culminating in their suppression following the murder of al-Nufum in December 1948. A few months later, in February 1949, Hasan al-Banna was himself assassinated.

(J. M. B. Jones)

Banna, Kamâl el-Dîn Shîr 'Ali Banna!, Harawi, Persian poet, the son of a mason (banna?) of Harât, hence his choice of the pseudonym "Banna!". He spent his youth in the entourage of the famous poet and Maecenas of the period 'All-Shîr Nawâyi (q.v.), but fell into disgrace on account of his bitter jests, and had to take refuge at the court of the Aq Koyunlu (q.v.) prince Sultan Ya'qub (884-916/1479-1500), at Tabriz. After a reconciliation with 'All-Shîr, he returned to Harât, but he had to leave his company once more in order to go to Samarkand, to the court of the Timurid prince Sultan ‘All (902-952/1497-1546), son of Sultan Ahmad (823-896/1418-1491), son of Sultan Abû Sa’îd (855-873/1451-1468), who ruled over Transoxiana. He composed in his favour a hasida in the dialect of Marw, with the title of Majdîm al-Kâryâb. He was also the court poet of Sultan Muhammed, who ruled over this region between 899 and 900 (1494-5). In 906/1500-1, when Abu l-Fath Muhammad Shaybânî Khân (q.v.) (Shaybak Khân: Shâhî Deg Özbek) occupied Samarkand, he remained for a time in prison and later became the official poet of his court and chief military judge (kâfi ‘askar), and at the same time one of the favourites of his son Muhammed Timûr. After the death of Shaybânî Khân on 30 Shabân 916/2 December 1510, he returned to Harât, his native town, but he was slain during the massacre at Kârâbi, perpetrated in 918/1513 by Nadîm el-Dîn Yâr Ahmad Isfahânî, known as Nadîm-i Timûrûn, on the orders of Shâh Ismâ’îl the Safawî. Bannâ!’ tried his hand at all types of poetry. He wrote at first under the pseudonym Hâfîz, and in addition to his divan, still unpublished (in which he constantly tried to imitate Hâfîz), he has left two epics: 1) Shâbânî-nâma, on his patron’s campaigns; 2) Bûgî-i Iram or Bahram-û Bihrid, a poem several times incorrectly attributed to the great Sôr poet Sanâ?” (as a result of the word Bannâ!’ being corrupted to Sanâ”) and published in a collection with the works Afzal al-Tîghâr Dâhir al-Shurûr wa l-‘A‘ûrîh and the Taftizm of Nawâ!, at Taqhtak in 1336/1918. He was also a musician, a composer, the author of two small works on music and a fine calligraphist.

Banna, also al-Banna!, name of a family of Jewish converts to Islam of Fês (Fas), which from the 12th/13th century has produced a number of eminent religious scholars and still belongs, together with a few other families of Jewish extraction, to the aristocracy of Islamic learning in Fês. Its most important members are:

(1) Abû ‘Abd Allâh Muhammîd b. ‘Abd al-Salâm b. Hâmîdîn (d. 1166/1750). He is considered the last great representative of the older school of Fês in which he occupies a key position, uniting in his person the main traditions of Mâlikî scholarship in the Maghrib (cf. J. Berque, in Revue historique de droit français et étranger, 1949, 88), combining with them the Mâlikî traditions of the East where he also studied, and forming a great number of disciples. His Fakhras (q.v.) is an important source on the legal studies in Fês in his time. His commentary on the al-hizb al-kabîr of al-Shâhîlî (q.v.) testifies to the lasting connection of his family with the Shâhîlî tarika. His main work is a commentary on the K. al-Ikhwan (q.v.) of al-Kalâf, on the military expeditions of the Prophet and of the first three Caliphs. His son Abû al-Karîm composed a biography of him.

(2) Abû ‘Abd Allâh Muhammîd b. Hasân b. Mas’ûd (d. 1194/1780). He wrote a gloss (completed in 1175/1759-60) on al-Zurîkî’s (q.v.) work on the Muhkassar of Khâlîl b. Isbâhî, a commentary on the Muhkassar al-Manîfî of al-Sanûsî (q.v.), a commentary on the Sullam of al-Âthîrî (q.v.), often printed, and a reputed Fakhras.

Bibliography: Muhammîd Abû al-‘Hâyy al-Kâtîlî, Fihris al-Fâhrîsî, i, 163 f.

(5) Muhammîd, called Fir’awûn (d. 1261-2/1845-6), author of a K. al-Wâhîbî which was printed several times, also with the commentary of Abû al-Salâm b. Muhammîd al-Hawârî (d. 1328/1910).

Bibliography: Berque, in Revue historique de droit français et étranger, 1949, 102; Sarkîs, i, 590.

(6) For other members of the family Bannânî, see Ben Cheneb and Lévi-Provençal, Essais de répertoire chronologique des éditions de Fês, in R. Afr., 1921 and 1922 (index by H. Pérès and A Semperé, in Bull. Études Arabes, no. 32, 1947, s.v. Bannânî); Sarkîs, Mu‘âlam al-Ma‘âbîdî, i, 589-597; Muhammîd b.
Muhammad Makhlûf, Shadjarat al-Nûr, i, 431; ʿAbd al-Ḥâfs al-Fâṣ, Riyâḍ al-Djanna, ii, 20 ff., 100 f.

(7) Not to the family Bannâni belong ʿAbd al-Rahmân b. ʿAbd Allâh al-Bannânî (d. 1198/1784), who derives his niche from a village in the neighbourhood of Monastir (Muhammad b. Muhammad Makhlûf, Shadjarat al-Nûr, i, 342; Sarkis, i, 591; Brockelmann, II, liv, 109, S II, 105), and Abu ʿl-Kâsim ʿIrâshâm al-Warrâk (earlier than 900/1495), whose niche is uncertain (Brockelmann, S I, 585).

**BANû, town and headquarters of the district** of the same name in West Pakistan, situated in 33° 0′ N. and 70° 36′ E. Population in 1951 was 27,516 for the town and 307,393 (district).

The present town was founded by Lt. Edwards Herberts in 1848 on a strategic site and named Edwardesâbâd. The name, however, did not become popular and soon fell into disuse, giving place to Bannû, the old name of the valley derived from the Banûwâds, an Afghan tribe of mixed descent. The valley, strewn with ruins of great antiquity, was, according to local tradition, overrun by the armies of Mâhmûd of Ghâzna, who razed all Hindu strongholds to the ground. A century later the valley was peopled by the surrounding hill-tribes, the Banûuds, the Marwats and the Nîzâs. For two centuries thereafter it remained under the loose sway of the Mughals. It was conquered in 1738 by Nâdir Shâh Afsâr and subsequently over-run by Abîmâd Shâh Durrâk. In 1823, the Sikh ruler of Lahore, Randjît Singh, occupied the valley to be constantly harried by the Afghans. It was, however, formally ceded to the Sikhs in 1838. After the first Sikh War (1845-49), the valley came under the British influence. In 1847-48, Lieut. Edwards, as a representative of the Sikh Durbar of Lahore, marched on the valley along with a large army under Gen. van Cortlandt. In 1849 with the annexation of the Panjâb, Bannû passed on to the British. Contrary to expectations, it remained absolutely peaceful during the military uprising of 1857.

The valley has yielded finds of great archaeological value, among them being coins with Greek or pseudo-Greek legends. The Akra mound near the town is reputed to be of great antiquity.

After its construction in 1848 the Bannû fort was named Dallîgâh, after Maharadja Dalîpsingh, a grandson of Randjît Singh. As usual a town soon grew up around the fort. It is now the centre of considerable trade. The town is expanding fast and large sums have been recently sanctioned by the Government for the economic development of the area.

**BANMÔ or BANTEN [see DJAWA].**

**BANû ŸISRAEL, “the Children of Israel”.**

1. This designation of the Jewish people occurs in the Kurân about forty times. The terms Yâhâd, Jews, and its derivatives as well as Nasâra, Christians, appear only in the Medinese period, although they had been widely used in pre-Islamic poetry and certainly were familiar to every Arab townsman (Joseph Horovitz, Kanzlische Untersuchungen, 144 ff. and 153 ff.). On the other hand, Banû Isrâîl never occurs in authentic pre-Islamic poetry (ibid., 91). It would therefore seem to follow that the exclusive use of this term during the Meccan period has something to do with the Prophet’s original knowledge of, and attitude towards, the monotheistic religions preceding him.

In most of the Meccan verses, the Banû Isrâîl appear in connexion with Moses and the stories which are paralleled in the Biblical book of Exodus or its aggrandic amplifications; they are, in chronological order according to Noeldeke-Schwally: xx, 47, 80, 94 (dissensions among the Banû Isrâîl, see below); xlv, 30; xxvi, 17, 22, 59; xvii, 2, 103; x, 53; xxxii, 23-24; x, 90; vii, 105, 134, 137, 138. This explains also the form of the name: “the Children of Israel”, as in the book of Exodus, and not “Israel”, as was common usage in Jewish literature in the period preceding Muhammad (with few exceptions; see Tarîb 3(1932), 413, n. 15a).

However the Banû Isrâîl were more than the “people of Moses” (vii, 147, 158; xxxviii, 76). In Sura xvii, which bears the name of Banû Isrâîl (but also al-Isrâ’il), 4-5, the First and the Second Temple is described as the fulfilment of a heavenly decree included in the “Book” (perhaps an allusion to Leviticus 26 and Deuteronomy 28), while lii, 59 makes Jesus appear among the Banû Isrâîl.

Finally, there are a number of Meccan passages which clearly indicate that the Banû Isrâîl were also understood to denote persons living in Muhammad’s own time. Doubtful is xlv, 10: “If a witness from the Banû Isrâîl testified about (a message) similar to this [Revelation (Muhammad’s or another part of the Book) and believed]—a verse generally regarded by Muslim tradition as alluding to the Jewish convert ʿAbd Allâh b. Salâm (see the sources collected in Tabari’s commentary, vol. 26, 6-9). For as the word “(a message) similar shows, the reference is probably to “the book of Moses” (xlv, 12), as indeed Tabari himself thought possible, although he rejected that interpretation.

However xxvi, 197 “Is it not a proof for them (the Meccans) that the scholars (or: knowledgeable men) of the Banû Isrâîl know it (the content of Muhammad’s message)?” hardly makes sense without the assumption that the persons referred to were known to his hearers; the more so as the following verses, xxvi, 198-9, allude to missionary activities of non-Arabs. Likewise xvii, 101 “Ask the Banû Isrâîl” is to be compared with such passages as x, 94 “If you (M.) are in doubt concerning what We sent down to you, ask those who read the Book before you,” cf. xxi, 7; xvi, 43; xxv, 59; ii, 211 (xlviii, 45 is no proof to the contrary, as in xxi, 7 and xvi, 34 the Meccans are addressed).

In any case, the Banû Isrâîl must be regarded as contemporary with Muhammad in those Meccan verses in which reference is made to their dissensions, which will be settled either by the Kurân xlvii, 76, or on the day of resurrection, xxxii, 23-5; xlv, 16-17; x, 93. This use of the term is even more evident in al-Madîna, where the Banû Isrâîl are admonished to believe in Muhammad’s message and warned of the consequences of their disbelief (ii, 49 f.), or where they are censured for their behaviour, obviously actually observed (ii, 83-85: they fight one another, but ransom those that were taken captives).
In order to establish which group of contemporary monotheists were meant by Banū Isrā'īl, one has to bear in mind that already in the Meccan Sura xlix, 59 (seebelow) Jews appear among the Banū Isrā'īl, and this does so rather frequently in Medinese passages 3, 49; 5, 72-74, 78; 11x, 6. In 11x, 14 it is said explicitly that one group of the Banū Isrā'īl believed in him and another did not. Cf. also 110, where God protects him against the Banū Isrā'īl.

However, when in v, 12-13 the Banū Isrā'īl are opposed to “those that say we are Christians”, v, 14; or are censured in v, 70 that say with “Those that say the Messiah, son of Maryam, is God”, v, 72, it seems indeed that the Kur'ān, where addressing Muham-mad’s contemporaries as Banū Isrā'īl, meant Jews. To this interpretation point also the references to the dietary laws in iii, 93 and the quotation from the Mishna (Sanhedrin 4, 3), which is introduced as an injunction imposed by God on the Banū Isrā'īl. The Muslim commentators indeed explained the Kur’ānic diatribes against the Banū Isrā'īl as directed against the Jews of al-Madīna, with whom Muhammad had so many dealings.

From this use of the name Banū Isrā'īl it does not follow that the word or the ideas connected with it had come to Muhammad from Jews. On the other hand, the form of the word (‘Isrā’īl, not ‘Yisrā’îli) does not prove that it is derived from Syriac, for the Hebrew spelling with Y and S was merely traditional, while the pronunciation of initial Y as s was as common among Jews as among some other Aramaic-speaking peoples.

In any case, it is most likely that the term Banū Isrā'īl became known to Muhammad together with the general ideas on revelation and prophecy centering around it: there was only one true religion and the idea that these two had their common origin in the religious teachings of the ancient Banū Isrā'īl, the numerous stories about them and the belief that the various religions should rightly be one, are too specific to have come from this source. As only the term Banū Isrā'īl or other general designations for the earlier book religions occur during the whole of his Meccan period, it seems most probable that this use of the term is to be traced to a monotheistic tradition which emphasised the common rather than the dividing aspects of the monotheistic religions.

2. In the hadith, Banū Isrā'īl denotes both the old Israelites, e.g., when ‘Umar is compared to a king of the Banū Isrā'īl (Hezekiah), Ibn Sa’d iii, 1, 257, l. 2 ff., or when David’s Araonah (Samuel ii, 24, 21) is referred to, Ibn Sa’d iv, 1, 13, l. 23, and also the Jews and Christians in general, e.g., in the chapter “What was said about the Banū Isrā'īl” in Bukhārī (60) Anbiyā’, 50. Although, by chance, only Jews are mentioned there separately, Christians are referred to in connection to a story about a rāḥū, which normally denotes a monk. A story about Dhūrayd, “who was a monk among the Banū Isrā'īl” is reported by Abu’l-Layth al-Samarqandî in his Tânhîh al-ghâafilîn 260.

The question why the ancient Banū Isrā'īl, the chosen people, Sūra ii, 2, 47, 122; xlv, 32; xlv, 16, should have disappeared, considerably occupied the mind of the Muslims. Their answers to this question echoed of course their own tribulations, such as deviations in the fields of theology and religious law (“the Banū Isrā'īl” perished, because they practised dā‘y [see Åqāh al-Râ‘y], or public morals “because their women indulged in wigs” (Bukhārī 50) Anbiyā’, 54) or “in high heels” (Fâ’ilî, ii, 366, quoted by Doyx, Suppl. ii, 391 a).

For the Muslims regarded those Banū Isrā'īl as their brothers, as in the famous hadith Farkhād-Hudhayfa: “What excellent brothers are the Banū Isrā'īl to you: They (experienced) the bitterness and you the sweetness,” quoted e.g., by Abû Nu‘aym, ibn Hâlij Lāsilîysâ’î, 50, l. 5. The saying obviously refers to “the burden and the chains”, i.e., the many religious obligations which were incumbent on the Banū Isrā’īl (both Jews and Christians according to Sûra vii, 157), cf. Ibn Kuttayba, Mukhtalaf al-Hadîth 142, ult.

In a hadith quoted by Sahil al-Tustari in his Ta’ṣīr al-Kur’ān, 57, the Muslims even identify themselves with the Banū Isrā’īl: “We are the Banū Isrā’īl, we, the sons of Nadr b. Khânâ. We do not follow our mother (who was the wife of both Khânâ and his father Khûrayma, see Ibn Hishâm 1-2) nor our fathers (i.e., Nadr, Khânâ, Khûrayma); with ‘we’ the Arabs are meant.”

However, as in the Kur’ān, Banū Isrā’īl denotes in the hadith also contemporary Jews and Christians and is thus synonymous with An- al-Kûdâb and similar expressions. Cf. the very often quoted saying of Muhammad: “hadithhū ‘an Banî Isrâ’îl wâlî hara’dî “‘Relate traditions which come from the Banû Isrā’îl without scruples”, cf. Concordance et Indices de la Tradition Musulmane, i, 445 b, s.v. íyâ‘, and Wensinck, Handbuch, 231a; al-Shâfi‘î, Risâla, Cairo 1310, 101 (1312, 105).

Again, as in the Kur’ān, when used of contemporaries, Banû Isrâ’īl mostly means Jews. Cf. the characteristic story about the wigs of the women of the Banû Isrâ’îl which is given in Bukhārī (50) Anbiyā’, 54, the first time (ed. Krehl ii 376) with a general reference to the Banû Isrâ’îl but a second time (Krehl ii 380, l. 10) in a detailed story about the Caliph Mu’âwîya, who, while visiting al-Madīna, was disgusted to find the women there wearing wigs (a habit which they might have adopted from their Jewish neighbours). “I have nobody seen doing this”, the old Caliph said, “except the Jews”. Thus the familiar picture of the Habr min abhâr Banî Isrâ’îl (e.g., Abû Nu‘aym, ibn Hâlij ii, 372, l. 22 = Ibn Kuttayba, ‘Uyân i-1-Abbâr ii, 359, l. 13) is to be understood as describing a rabbi; and when Magîd al-Dîn Ibîr al-Anûsî, Nihâyû, s.v. íyâ‘ i 136 refers to “the rabbis, abhâr, of the Banû Isrâ’îl, after Moses “who compiled the Mishnâ (al-mathnâ)” he means of course Jews.
It is from this usage of Бану Israeli that the word Israeli, Israelite, was derived as a more polite designation for a Jew than Yahudi. We find this term already in full use in the third/ninth century, e.g. Mas'^udl. Tanbih 79, 7 (the Israelites in 'Irak); 113, 3 (Israelite translators of the Bible); 219, 9 (Israelites divided into three sects), cf. also ibid., 105, 7; 112, 18; alongside with Yahud 113, 9; 184, 14. Similarly, Muslim scholars and men of letters refer in this way to their Jewish colleagues, e.g., Ishâkh al-Isra'ili, the famous doctor and author (M. Steinschneider, Arab. Lit. d. Juden, Frankfurt 1908, 38-45); Jewish converts to Islam also, such as the poet Ibn Sahl al-Isra'ili of Seville (Brockelmann S. I, 483) were styled thus.

A later, scientifically minded, age tried to distinguish with more precision between Banu Israeli and Yahad. Al-Kâkshândi xviii, 253, quoting 'Imâd al-Din (i.e. Abu'l-Fidâ'), states that Banu Israeli are the ancient Jews by race, while the term Yahad includes also the many converts to Judaism from Arab, Rûm and other stocks. This statement is not without foundation in the usage of ancient sources. Thus Ibn Sa'd, viii, 85, l. 27 says with regard to Sâfiyya, the Jewish wife of Muhammad, that she was from the Banu Isra'ili i.e., from pure Jewish stock, a descendant of the high priest Aaron.

As is natural, to an ancient people such as the Banu Isra'ili things were ascribed which originally had nothing to do with them. Thus a Maghribi handbook on agriculture advises against doing farmwork on certain days, because they were the days of punishment (ridâq, cf. Sûra 7, 162) inflicted on the Banu Isra'ili, see J. M. Millâs-Vallierona, in Andalus 19 (1954), 132.

The most important aspect of the image of the Banu Isra'ili in Muslim literature is the piety attributed to them. "The pietists (hâdd, mula'ab'dân) of the Banu Isra'ili" is a common expression, e.g., 'Abd al-Kâdir Djjâli, Qumâyra ii 62, 'Abu Nu'aym, Hilal al-Awilyâ'ii 373, l. 4 ff. Of a man who devoted himself to worship and asceticism it was said that he was like the Banu Isra'ili, Sâkhâwi (d. 902/1497), al-Dâwi al-Lâmi' ii, 146, 20-22. Many of the stories about the pious men of the Banu Isra'ili—quite a number of which have found their way into Al Layla wa-Layla—can be traced in the Talmud and the Midrashim, such as the beautiful parable about the pious Häyy of the Banu Isra'ili in Ibn 'Asâkhr's Ta'rîh Dimashq, vii, 23, which is an almost literal rendering of Babylonian. Talmud, Ta'nîh 23. Cf. Isrâ'îlyyâr, where also an attempt is made to explain, why piety was connected with Banu Isra'ili.

Bibliography:—in the article. See also S. D. Goitein, The Banu Isra'ili and their Controversies, a study on the Koran in Hebrew, Tarbiz iii, (1932), 410-422; J. Horovitz, Enc. Jud. 8, 506 ff. and the literature noted there. (S. D. Goitein)

BANû, an ancient town (East Pandjab, India) situated in 30° 34' N. and 76° 47' E., 9 miles from Ambâla and 20 miles from Sirhind. The old Sanskrit name was Vahnyûr which became, during the course of centuries, Banlyûr and finally Banûr. The ruins extend right up to Chât [q.v.] (another ancient town, now in ruins) 4 miles away. It was first mentioned by Bâbur when it was, and still continues to be, famous for its white jasmine flowers and the otto distilled from them.

Another ancient name of Banûr, according to tradition, was Pushpâ Nagâr or Pushpâwâli (lit. city of flowers) but it bears no resemblance to its present name. During the rule of the Sayyid dynasty (817-1541-51) the town seems to have gained in importance and even just before the establishment of Pakistan (1947) was probably inhabited by people who, like the sayyids of Bilgrâm, trace their descent to Abû 'l-Farah of Wâsi't, said to have migrated to India after Hâülüq's sack of Baghûd (665/1268). The tomb of Malik Sulaymân Kâhh, father of the Sayyid ruler Khâdir Kâhn (817-24/1414-29) existed till 1947 when the local Muslims migrated en masse to Pakistan. Sayyid 'Abd al-Banûr, [q.v.] (d. Madina, 1053/1643) one of the leading khâlîfât of Ahmad Sîrîndî [q.v.] was a native of this town. It was overrun early in the 12th/18th century by the Sikh adventurer Banda Bahârî, and passed into the possession of the Singhpûriyâ Sikhs. It was occupied in 1777/1763 by Ålā Singh, the chief of Patiala and remained in the possession of his descendants till 1956 when the State was eventually merged into the new province of East Pandjab. It was defended by two forts, Mudgal and Sikh, which are still extant as ruins.

Bibliography:—Memos of Baber, trans. Leyden and Erskine, 301; Imp. Gaz. of India, 1909, vi, 414; 'Alâmdâr Husâyn Wâsîtî, Hadîkî-i Wâsîtîyya (MS. Rampur State Library); Abu'î-Abdâr (transl. H. Blochmann), i, 393-4. (A. S. Bazme Ansari)

AL-BANûR, Mu'izz al-Dîn Abû 'Abd Allâh 'Adam b. s. Ismâ'îl, one of the premier khâlîfât of Ahmad Sirhindî [q.v.], was a native of Banûr [q.v.]. He claimed descent from Imam Musa al-Kâzîm [q.v.], but it was disputed on the ground that his grandmother belonged to the Mashwâni tribe of the Afghâns and he too lived and dressed after the fashion of the Afghâns. His nasâb was again questioned when in 1052/1642 he was in Lahore accompanied by 10,000 of his disciples, mostly Afghâns, by 'Abîlânî Sâ'd Allâh Khân Chinyûti, the chief Minister of Shâhjâhân, and by 'Abî al-Hâkim al-Siyûlikî [q.v.], who had been deputed by the Emperor to ascertain from the saint the reason of his visit to Lahore in the company of such a large force. Not satisfied with the explanation of the Shaykh, the emperor ordered him to quit Lahore, go back to Banûr and proceed on pilgrimage to Mecca and Madînâ.

During the early years of his life he served in the Intelligence branch of the Imperial army but gave up service after some years having felt a strong urge to take up a life of piety and spirituality. He first became a disciple of Hâdidî Khâhid Rûgâhî, Buhûtîpûrî and on his advice later contracted his beya with Ahmad Sirîndî. During the transition period he visited a number of places including Multân, Ambâla, Pânpat, Shâhâbâd, Sirhind, Lahore and Sâmâna in search of derwishes and mystics.

There are conflicting statements in the Nikât al-Asrâr, a collection of his mafi'lât, and the Manâbîh al-Nâhârî, his authentic biography, regarding his educational attainments. While the Nikât describes him as an "ummi dimmî" the Manâbîh records that he read primary books like the Misân al-Sûrâ and Munsâbîh with Mullâ 'Tâhir Lâhawî, a well-known scholar of his days. His military assignment, however, suggests that he was fairly well educated.

He died at al-Madinâ on Friday, Shâwwal 13, 1053/December 25, 1643 and was buried in al-Bâkî near the tomb of 'Ughâm b. 'Abî. During his life-time he wielded great influence and at the time of his death more than 400,000 persons owed spiritual
allegiance to him. His meagre religious education, rigid attitude and contempt for State dignitaries was not confined to Al-Bakri, but he remained steadfast in his mission and won over to his side both scholars and laymen like Muhammad Amin Badakhsh, 'Abd Khālik Ḍaṣṭ, Shaykh Abū Naṣr Ambālāwī, his brother Masūd and Shaykh Muhammad also of Ambāla. Among his ḍalilī'ī are counted more than a hundred persons, including Ḥāfīz 'Abd Allāh of Akbarābād, spiritual guide of Ṣaḥḥ 'Abd al-Rahmān, father of Wali Allāh al-Dihlawī [g.r.], and Sayyid 'Alām Allāh, one of the ancestors of Ahmad Barā'ī [g.v.].

An incidental reference in the Nikāt al-Aṣrār reveals that he was 46 when the book, as internal evidence shows, was compiled during his sojourn in the Hijāz in 1052/1642-3. This means that he was born c. 1005-6/1506-7. His youngest son, Muhammad Muḥsin, was born at Gwalior in 1052/1642, while he was on his way to Mecca, a fact which further supports the view that he died at no very advanced age.

He has written: i) Nikāt al-Aṣrār, dealing with abstruse mystical problems and their Śūfī exposition, interspersed with personal experiences of the author in the spiritual field and casual biographical references; ii) Khudāṣat al-Muḍārī (in 2 vols.) is more or less a continuation of the former. The entire work is in Persian and is still in MS. He is also the author of a commentary on al-Faṣīḥa which forms the first part of the Naktādīj al-Haramayn, compiled by Muhammad Amin Badakhsh, who claims to have lived for fifty years in the Hedjaz and also accompanied Ahmad al-Banūrī on his pilgrimage to the holy cities.

Bibliography: Badr al-Dīn Sirhindī, Ḍaḍarāt al-Kuds (in Persian, still in MS.), Urb, Venet. Libr., Lahore 1923; Muhammad Amin Badakhsh, Manābkī al-Hadhārī, (being the third part of Naktādīj al-Haramayn), (MS. in Persian in the possession of Shaykh Yūsuf al-Banūrī of Karachi); Ahmad al-Banūrī, Nikāt al-Aṣrār (MS. in the possession of Yūsuf al-Banūrī; Maẓhar al-Dīn al-Fārsī, Manābiṣt al-Ḥaḍārī, (in Persian, still in MS.), Urdu trans. n.l-Kuds (buhayra) elsewhere. The lake exacted by the Arabs holding the countryside, as a tithe, Banzart became virtually indefensible for men of piety and a refuge for the local people, when they feared a Christian landing.

Following the invasion of the nomadic Hilāl and the abandonment of al-Kayrawān by the Zirid sultan al-Muẓīz, Banzart became virtually independent; soon, however, it was forced to pay tribute exacted by the Arabs holding the countryside, as a guarantee against being pillaged by them. Taking advantage of the rivalries which existed between the principalities of the North of Africa, the Arab chieftain Ward al-Lajmī entered Banzart and there set himself up as the ruler. He endeavored his capital with the requisites in hand and made the town relatively prosperous. His son succeeded him and the Banū 'Umar 'Ashārī dynasty continued in Banzart until the Almohad invasion (1154/1159). The seventh of this line, the amir al-Fārī, made his submission to 'Abd al-Muṭtin.

At the beginning of the 7th/13th century, Banzart was occupied by the Banū Ghāniya Almoravids and from that time entered on a decline, confirmed at the beginning of the 16th century by Leo Africanus. However, it received some Muslim emigrants from Spain, who founded the "suburb of the Andalusians" and, like all ports of the Barbary coast, it turned its attention to privateering. Having repudiated the Knights of Malta and bombardments, that of H22/1785 by the Venetians almost completely destroying the town. The Banyar territory corresponds, roughly speaking, to that of the MDHY in inscriptions (cf. art. MARSHAD). The Banyar once more or less a continuation of the former. The entire work is in Persian and is still in MS. He is also the author of a commentary on al-Faṣīḥa which forms the first part of the Naktādīj al-Haramayn, compiled by Muhammad Amin Badakhsh, who claims to have lived for fifty years in the Hedjaz and also accompanied Ahmad al-Banūrī on his pilgrimage to the holy cities.

silting up of the harbour brought about Banzart's ruin. Bizerta, now no more than a wretched village, was taken by the French in 1881. Considerable works were undertaken, which made it a great port, accessible to the largest ships, equipped with a military arsenal and defended by modern forts.

(G. Marcais)

Bäuoli, Urdu and Hindi word for step-well, of which there are two main types in India, the northern and the western. The northern variety is the simpler, consisting essentially of one broad flight of stone steps running from ground level to below the waterline, the whole width of the site; subsidiary flights may run opposite and at right angles to these below water-level, thus constricting the cistern itself into successively smaller squares, and these may be supplemented by cross-flights reducing the final cross-sectional area of the cistern to an octagon. The sides other than that composed of the main flight are vertical, of stone or, less commonly, of brick. The whole site is usually rectangular—the bäuoli outside the Buland darwaza at Fatehpur [sic] Sikri, associated with Shaykh Salim Chāhtī is a notable exception, the nature of the terrain having made an irregular polygon the only shape possible—with apparently no consistency in orientation: e.g., the bäuoli at the dargāh of Nizām al-Dīn Awleya, near Humāyūn's tomb, Delhi, runs north and south in alignment with the shrine, while that at the dargāh of Khwāja Kūṭh al-Dīn Bakhtīyār Kākā at Mahrawll, near Lālkot, Delhi, runs east-west and is not aligned with any major structure. Such bäuolis are functional structures, from which water may be drawn and in which ablutions may be carried out, and into which men dive, often from more than 20 metres, to recover alms cast in by pilgrims. They are usually unadorned, but often of a monumental beauty on account of their size: e.g., that of Nizām al-Dīn is 37.4 m. long by 16.2 m. broad, and some 20 m. deep from ground level to average water-level. Bäuolis are found at the principal shrines associated with Chāhte piras; besides the examples already noted, a fine rock-cut bäuoli is at the dargāh of Shaykh Mu'in al-Dīn Chāhtī at Ajmer. The reason for this particular association is not clear. Other bäuolis, smaller but of similar type, are not uncommon at other Islamic sites in N. India, concerning which there is no reason to suppose any Chāhtī connexion. Pre-Islamic examples are not recorded.

The western variety, generally known by the Gujāratī word wāv, is of high artistic and architectural merit as well as functional; it is more elaborate than its northern counterpart, consisting of two parts: a vertical circular or octagonal shaft, from which water may be drawn up as from an ordinary well, and a series of galleries connected by flights of steps, with pillared landings on the lower galleries supporting the galleries above; passages from each landing run to the shaft, where there are frequently chambers which form a cool retreat in the hot season. Such structures are known in Gujāratī from pre-Muslim times: Mātā Bhāvānī's wāv near Ahmadābād, the best preserved Hindu prototype, is probably 11th century A.D. (Burgess, ASWI, viii, i-3); Bāl Hari's wāv in Ahmadābād, which bears a Sanskrit inscription of A.D. 1490 and an Arabic one of 8 Djamād 1 I 906/30 Nov. 1500, has ornament very similar to that of the tracery in the niches of the minarets of local mosques. The wāv at Adalāji (ibid., 10-13) is cruciform, with three main flights down to the first landing. Other wāuos occur scattered throughout Gujarāt from Barawā (Baroda) northwards; one of these, at Māndvā on the left bank of the Vātrak, of peculiar construction, having a brick circular shaft with chambers in three storeys on one side reached by spiral stairs within the wall of the shaft itself.

The northern bäuolis are not dated; that at the dargāh of Nizām al-Dīn is said (Sayyid Ahmad Khān, Aṭār al-Sandād, Lucknow edition 1900, 42) to have been built by the Shaykh (1265-725/1238-1325) himself, and it is probable that other examples date from the same approximate period.

(B. Burton-Pace)

Bāoni, former a petty Muslim state in the Bundelkand Agency of Central India, is now administered as part of Madhya Pradesh (area: 122 square miles; population: 25,256, of which only 12% are Muslims). Its rulers were descended from Ḥmād al-Mulk Ghāš al-Dīn, the grandson of Asaf Džāh, the Nizām of Haydārābād. About 1786 Ghāš al-Dīn came to terms with the Marātāhs who granted him a ḡājar of 52 villages, the name Nizām being derived from bīwān (fifty-two). This grant was later recognised by the British. Because of his loyalty during the 1857 revolt, the nawāb was granted a sanad 1862 guaranteeing the succession. In 1884 the nawāb ceded lands for the Betwā canal and received the usual compensation. There is little else of historical importance to record.

Al-Bāra, place in northern Syria, belonging to what is called the region of the "dead towns", in the centre of the limestone plateau, some fifteen kms. west of the important township of Ma'arrat al-Na'-mān. In the Middle Ages, as attested by the Arabic and Western texts, it served as a fortified cathedral town and its site is still marked today by extensive ruins, among which the modern villages of al-Kafr and al-Bāra (names corresponding to the ancient Greek and Syriac terms, Kaproprob and Kpr'd Br'Y) rise on both sides of a wādī. In bygone days, local trade as well as the olive oil and wine industries ensured the growth of this "town of Apamea, situated between the two dominant massifs of the Djabal Zāwia, at a point which had to be passed through" (G. Tchalenko) and, in the Byzantine period, contained a complex assembly of churches, monasteries and living quarters. It continued to flourish
after the Arab conquest. But at the time of the Crusades, it was coveted from many sides, being taken in succession by Tancred and Raymond of St. Girons. Gilles in 1052–1053, reconquered by Riddan in 1066, then left to the Franks by the treaty of 1071 to be reoccupied in 1081 by Balak and again by Nur al-Din in 1094. Sorely tried by the Franks, it was finally taken by Nur al-Din in 1095, who died there in 1118. After his death it was reoccupied by the Franks in 1096 and again in 1102, then left to the Franks by the treaty of 1103. It was finally conquered by the Mamluks in 1260.}

**AL-BARA** — BARA SAYYIDS, the descendants of Sayyid Abu 'I-Farab of Wasi near Baghda, who with his twelve sons emigrated to India in the 7th/13th century and settled in four villages near Patiala in the sūba of Dihli. The four main branches of the family were named after these four villages. Sayyid Dā'ūd settled in Tihaṇpur; Sayyid Abu 'I-Fadl in Chatbanūr or Chatrauri; Sayyid Abu 'I-Fadlūn in Kūndī; and Sayyid Nazm al-Din Husayn in Jagni or Jhaīj. From this area they later migrated into the Muṣaffar nāvar district of the Ganges-Jumna doūb. The Kannīwār branch settled in Majher; the Chatbanūr branch near Sambalpur; the Jagni branch in Bidauli and Patī; and the Tihaṇpur branch in Dāḥār and Kunhera. The derivation of the term bārta is uncertain. Some derive it from bārta (outside), because the Sayyids, disgusted with the debaucheries of the Mina bārta at Dihli, preferred to live outside the city. Others derive it from the fact that the Sayyids, being Shī'īs, were followers of the twelve (bārta) Imāms. The authors of the Tabābād-i Akbari and the Tāsik-i Dāhārūtī derive the name from the twelve villages in which they settled in the district of Muṣaffaranagar. This is the most probable explanation. The contention of H. M. Elliot and M. Elphinstone that one of the Sayyid settlements was named Bāra has been shown to be incorrect (see W. Irvine, in *JASB* 1896, 175). Sayyid settlements in the district of Muṣaffaranagar can be traced back to the middle of the 8th/14th century. From the reign of Akbar onwards the Akbar Sayyids took part in every important campaign and became renowned for their courage. The Tihaṇpur branch was the most important. To this branch belong the famous Sayyid brothers, Ḥasan 'Ali and Ḥusayn 'Ali, the king-makers of the first two decades of the 18th century. They rose to prominence in the service of 'Aṣīm al-Shāh, the son of Muʿṣarrām al-Dīn who became the emperor Bahādūr Shāh. For their gallantry at the battle of Jālū (1707), which gave the throne to the father of their patron, the elder brother, Ḥasan 'Ali, afterwards known as 'Abd Allāh Khān, was entrusted with the government of Allāhābād and the younger brother with that of Fāra. On the death of Bahādūr Shāh in 1712, distrustful of the power of their enemies at Dihli, they overthrew Dājhānīr Shāh and replaced him by Farrukh-siyar. As his ministers they enjoyed the highest dignities that the emperor could confer. 'Abd Allāh Khān was appointed wazīr of the empire with the title of Kutb al-Mulk. Ḥusayn 'Ali became first bākhshū with the title of amīr al-ulāmī. They are generally given the credit for being the first to abolish the ghūṣa after the death of Arangzhīb, but the latest researches disclose that they were merely continuing the policy already introduced by the wazīr Dūl 'I-Fikr Khān (see *Jiyah* in the *Post-Aurangzeb Period* by S. Chandra, in *Proceedings of...*
BARA SAYYIDS — BARAA

The Indian History Congress, Ninth Session, 320-326.

Famikh-siyar was an ingrate who plotted against his benefactors. His efforts came to naught and eventually, in the seventh year of his reign, he was deposed, blinded, and finally executed by the infuriated Sayyids. The Sayyids next raised two miserable puppets to the throne, Rafi al-Daradiat and Rafi al-Dawla, both of whom were consumptive youths who died in the year 1719. In the same year the Sayyids crowned Muhammad Shah as Emperor. The administration of the six Deccan provinces was entrusted to Husayn 'All, the younger Sayyid brother, but he was soon recalled to Dihl by 'Abd Allâh, whose position was being undermined by court conspiracies in which the Emperor was involved. It was at this juncture that Nişâm al-Mulk, leader of the Turânî nobles and for that reason opposed to Sayyid predominance at Dihl, deemed it advisable to abandon Mâlîwâ, of which he was governor, and establish himself in the Deccan. This naturally alarmed the Sayyids who took immediate steps to coerce him, but before their forces had marched many miles beyond Ægra, Husayn 'All was assassinated and in a very short time 'Abd Allâh was overthrown by a powerful combination of Turânî and Írânî nobles at Dihl. This took place in 1720. In 1737 the descendants of the two brothers were slaughtered or dispersed when the Rohillas sacked Jansath. From this date their power rapidly declined. After the establishment of British paramountcy many Sayyids returned to their former villages only to fall victims to the wily money-lenders.

BARAA. I. — This substantive is derived from the Arabic root br', which is frequently used to denote the general idea of "release, exemption" (from a duty, from an accusation—therefore "innocence", from risk, from responsibility), a meaning to be found repeatedly in the Kur'ân. With this is connected the notion of "freedom from disease, cure", which is equally expressed by this root in classical Arabic. There is undoubtedly good reason to distinguish, as a borrowing from North-Semitic, the meaning, also Kur'ânic, of "create", when speaking of God (Jeffery, Foreign Vocabulary of the Kur'ân, Baroda 1938, 76).

The word barda itself occurs twice in the sacred book. In Sûra liv, 43, it means without doubt "immunity, absolution". On the other hand its interpretation, when it occurs as the first word of Sûra ix (and one of the titles given to this Sûra) is a matter of some difficulty: "Bara'at" of Allâh and his prophet towards those polytheists with whom you have concluded a treaty". The following verse, which accepts a sacred truce of four months, might give rise to the supposition that the reference here is to an immunity. But the traditional interpretation explains this barda on the basis of verses 3-5, according to which Allâh and his prophet will be "unbound" (barda) in regard to the unbelievers, whom the Muslims will then be able to kill with impunity (see the translation and notes of Blachere). The barda, refers then to the "breaking of the ties"—the religious and social ties,—a kind of dissociation or excommunication, the dire consequences of which are exactly the opposite of an immunity. Bara', indeed, is the term used for a person or persons who have broken off all relations with an individual or a group, mainly with fellow-tribesmen; the term barda enters into those phrases which mean "to exile or to remove from the protection of the law" (for the tabria, an Íbâdi penal sanction, see below), and the yamin al-barâ is the oath, condemned by the hadith (notably Abû Dâwûd, Sunan, no. 3258), but still in evidence today, by which a person renounces on his own behalf, if he should swear falsely, adherence to Islam or the protection of God. The Shi'îs advocate the "repudiation" (barda) of the 'Awliya' and his descendants, as opposed to the "attachment" due to this line; contra the whole practice of barâ-a-waliya, see the condemnation of the Êlbânî school apud H. Laoust, La profession de foi d'Ilm Bâbîa, Damascus 1958, 162. The evil implications of the barda, thus understood, justify, in the view of certain Muslim scholars, the exceptional absence of basmalâ at the beginning of Sûra ix.

In legal terminology, bâr'at al-hâmma, or simply barda is the "absence of obligation". Bayâ al-barâ, for example, is the sale without guarantee wherein the seller is freed from any obligation in the event of the existence, in the sale-object, of such a defect as would normally allow the sale to be rescinded (see Santillana, Institutions, ii, 149, for a striking resemblance of formulae in this regard between Muslim Egypt and Christian Tuscany). Hence the term tabria is variously used for all sorts of declaratory or constitutive acts which absolve from responsibility. One may cite the tabria of the present-day Moroccan Bedouin. This is an "indemnity paid by the parents of the murderer to those of the victim for continuing to live within the tribe" (Loubignac, Textes arabes des Zaïre, Paris 1952, 359); see the similar use of barda < barha noted in the Bethlehem region (Haddad, in ZDPV, 1917, 233).
The following derived technical terms may be noted here.

1. Mubdra'a: a form of divorce by mutual agreement where husband and wife free themselves by a reciprocal renunciation of all rights (Bergras-Schacht, Grundzüge, 85; Santillana, Istituzioni, i, 272; cf. Averroes, Biddya, ed. Cairo 1933, ii, 66, who gives an accurate definition by way of comparison with some similar forms of talāb).

2. Istibra* or "confirmation of emptiness", with two quite distinct connotations: a) temporary abstinence from sex-relations with a slave-girl, in order to verify that she is not pregnant, on the occasion of her transfer to a new master or a change in her circumstances [see ʿAmn], and b) an action of the left hand designed to empty completely the urethra, before the cleaning of the orifices or istidig* which must follow satisfaction of the natural needs (L.A., i, 25; Abu ʿl-Hasan on the Rīdā of Ibn Abī Zayd, ed. Cairo 1930, i, 144).

Proceeding now to the general theory of law as found in the classical works, the notion of barā'a is there to be found in the maxim, generally accepted by orthodoxy and vindicated by Ashʿarī doctrine: al-ʿaṣī barāʿat al-ḥishma, "the basic principle is freedom from obligation". This means, according to the standpoint one adopts: "exclusively obligations to which man is subject are those defined by God", or: "in the absence of proof to the contrary the natural presumption is freedom from obligation or liability".

In its first sense this barāʿa ʾaṣīyya embodies a theological notion: it contradicts the Muʿtazilite thesis which is founded upon the rationality of the legal values (akkhām) of human acts, and which holds that, before the promulgation of the revealed law, all those other acts which do not admit of a rationalist assessment are all illicit (according to some) or all permissible (according to others) or unqualified (according to a third group). See Ghaṣālī, Mustaṣṣāf, ed. Cairo 1937, i, 40-42, 127-132; or better: ʿAmīdī, ʿIkhām, ed. Cairo 1924, i, 130-135. Both these works refute the Muʿtazilite thesis. But for almost the totality of the orthodox scholars (two exceptions are indicated, for the Mālikīs, by Bāḍīʿ, ʿIshbārī, ed. Tunis 1351 A.H., 123, 130-131:—the work of Lapanne-Joinville in Travaux Semaîne Intern. Droit musulman, Paris 1932, 85, calls for certain corrections), the legal values are based, absolutely and exclusively, upon the revealed law; before this law and outside it, human acts have no ʿuḥm; and this kind of fundamental indiscernence, which must not be confused with permissibility, denies the notion of any obligation.

In its second sense, which, however, the authors do not attempt to distinguish from the first (the confusion is obvious in the Shafiʿī and Ḥanafi works entitled al-ʿAqīdā wa l-ʿNaṣīrī: Suyūṭī, ed. Cairo 1936, 39; Ibn Nūḍayyim, ed. Cairo 1298 A.H., 29), the barāʿa ʾaṣīyya, whether combined or not with the principle of the "continuance of facts" (istīshāb kāl), comes to support in theory innumerable solutions—whether strict legal rules or legal presumptions—throughout the whole field of fīsh (Lapanne-Joinville, op. cit., 82-88; Brunschvig, in Studi . . . Lenti Delia Vida, i, 75).

However, the word barāʿa has been increasingly employed in a concrete sense to denote written documents of various kinds (pl. barāʿāt or barāṣādāt) by virtue of a semantic development which starts from the idea of "discharge", or doubtless, to be more precise, "financial, administrative discharge"

(Shaṣrānī, ʿAbdī al-Qānim, ed. Cairo 1930, 37; Løkekgaard, Islamic Taxation, Copenhagen 1950, 159; Spuler, Iran in frühislam. Zeit, Wiesbaden 1952, 338, 458). This first sense is to be found, in the context of transactions concerning customs duties, in the treaties concluded with the Christian powers since the Middle Ages, notably by the Hafṣīds (14th-15th centuries); the Latin or Roman versions have: albarā, or arbara (Mas-Latrie, Traité de paix et de commerce, Paris 1866-72: refer to the glossary). Equally, one can see there the sense of "official licence" which the word had come to acquire. It was by now quite readily applied to what we would term a "licence, certificate, diploma", to various written documents originating from administrative bodies or addressed to them: for example "a demand for payment or a billeting order", "a passport" (Dozy, Suppl., i, 63), "a label to be attached by the amīr" to a piece of merchandise (Sakāṭī, Manuel de Hisba, ed. Colin and Lévi-Provençal, Paris 1931, 61), "a request or petition to the sovereign" (Brunschvig, Berbèrie Orientale, ii, 144, n. 3). The languages of the Iberian peninsula have collected and preserved meanings of the same kind: the Catalan albard, the Castillian albará, the Portuguese alvarā.

Neo-classical Arabic knows the term barāʿat al-ʾalańfīdā for the consular exequatur, and barāʿat al-ʾaṣīka for the diplomatic "credentials" (the dictionaries of Bercher and Wehr).

In the colloquial Arabic of N. Africa, barāʿa > brā is widely used, often in the diminutive form brāyya, with the meaning of a simple "letter, missive, note"; (whence the Berber brāṛi, with the same meaning). At Fez, semantic development has led to the name of brāyya being given, in Arabic, to a pastry consisting of a pâté enclosed in a pastry-case which is folded in the same way as a letter (Brunot, Textes arabes de Rabat, ii, Glossary, Paris 1952, 40).

Finally we must note the expression, very common in the East, "night of the barāʿa" (Arabic: layḥāt al-ḥishma, Turkish: berat gecesi, Persian: ḡābi-ʾi bārdā) to describe the night of mid-Shaʾbān, a religious festival (see the paper by H. H. Erdem, Berat Gecesi kakhindā bi rādāth, Ankara 1953). Here the precise meaning of barāʿa escapes the author, since none of the explanations offered by traditional interpretation or by Western scholarship are convincing: "immunity" (for those beings whose lot is favourably cast on that night), "revelation" (to Muhammad of his prophetic mission by the archangel Gabriel), "creation" (of the world: referring to the Hebrew berāʾa, Plessner, art. RAMĀDĀN in EL). It would first be expedient, in order to orientate etymological research, to determine, with such precision as is possible, the antiquity of the expression and the circumstances of its origin, for it is not commonly encountered in the mediaeval texts which deal with the mid-Shaʾbān celebration.

Under the Ottoman Turks the administrative use of the term was particularly developed in the form berāṭ [q.v.] (bārdā), which they distinguished from berāt, (berādāt).

(R. BRUNSchVIG)

II. — The theme of the barāʿa was particularly developed by the Kharījītes with their religious zeal and their emphasis on separation. In opposition to the wīlāya, which is the dogmatic duty of solidarity and assistance to the Muslim, the barāʿa was for them the duty to repudiate all those who did not deserve this title. Throughout the heresiologists can be found the particular applications given by
the numerous sects to the principle of barada. It is only by means of the Ibadi catechists that we can arrive at a direct and full exposition. The oldest text which has come down to us, that of Abū Zakariyya al-Džannawun (6th/12th century), imposes on a man who has reached puberty, and is in his right mind, repudiation of a) all the kafırin of both worlds, living and dead, known or unknown; b) the unjust šādūm; c) those who are censured (madžmūmūn) in the Kurʾān and acknowledged rebels (mahḍyūfūn bi l-maṣaṣṣa); d) the man who, personally known, has committed a grave sin.

A decision concerning the children of persons subject to the barada was postponed until they attained their majority. The barada was cancelled in respect of the sinner who had carried out the taʿwa.

**BARABA,** steppe of Western Siberia, situated in the oblast of Novosibirsk of the Russian Soviet Federal Socialist Republic, between lat. 54° and 57° North, and bounded on the East and West by the ranges of hills which skirt the banks of the Irtish and the Ob'. This steppe, which extends for 117,000 sq. km., has numerous lakes, most of which are salt; the biggest is Lake Cani. The ground, which is partly marshland, also has some fertile zones, but it is essentially a cattle-rearing region. It has only 6 to 9 inhabitants per sq. km. in the central and southern part, does not exceed 1 to 1.8 in the North. It is made up of a majority of Russian and Ukrainian colonists, with a Tatar minority, some of whom have emigrated from the Volga at a recent period, whilst others are autochthonous.

The latter, whom the Russians call "Baraba Tatars" or Barabintsl, form a small community near to the other Tatar groups of Western Siberia (Tobol Tatars, Tümen Tatars [q.v.]), which, however, shows signs of disappearing. Their very complex ethnonogenesis gives rise to contradictory hypotheses. It appears that they issued from autochthonous Ugrian peoples who became partly Turkised when they made contact with the Turkish tribes who emigrated at the time of the foundation of the Siberian Empire. This Turkisation, which continued during the 16th/17th centuries, was completed in the 19th century with the large-scale influx of Tatar immigrants from the Middle Volga.

From the conquest of the Siberian Empire by the Russians under Ivan IV until the time of Peter the Great, the Baraba steppe separated Russia from the Empire of the Kalmuks. The frontier region contained between the towns of Tara (on the Irtish) and Tomsk (to the East of the Ob') was then called "Baraba district" (Barabinskaya volost'); the indigenous population, in addition to speaking their own language, spoke Kazan Tatar and Kalmuk, and initially paid tribute to the Russians and the Kalmuks, though later to the Russians only. In the 18th century a large number of exiles from European Russia were settled in the Baraba as colonists. At the end of the 19th century, when the Trans-Siberian railway had been built, the steppe was systematically developed with the help of a new wave of Russian and Ukrainian colonists.

The autochthonous Tatar population, which in the 17th century was established in villages, was pushed back at the end of the 18th century towards the sterile zones of the steppe. Since then, its numerical importance has steadily declined. According to the data collected by Radlov in 1865, there were then 4,635 "Baraba Tatars" in existence. At the census taken in 1897, 4,433 were counted and, in 1926, only 39, the remainder having had themselves re-classified as "Kazan Tatars".

The Baraba Tatars at present occupy a small number of villages (wholly Tatar or Tatar-Russian) near the lakes Sabrali, Yurtush and Manglish and in the basin of the river Om', especially in the Kuybyshev district (formerly Kainsk), along the Trans-Siberian railway.

The Islamisation of the Baraba, which commenced in the 10th/11th century with Central Asia (Khwarezm and Bucharah) continued as the result of the activities of the Tatar merchants and missionaries of Kazan, who made their way up the Irtish. However, it seems most probable that it was only in the 17th century, after the Kazan Tatar colonists had established themselves in Western Siberia, that the majority of the autochthonous Tatars adopted Sunni Islam of the Ḥanafi rite.

Radlov saw several old men who remembered their fathers making pagan sacrifices in the manner of the inhabitants of the Altai and being dressed differently from the Muslims.

The Baraba Tatar dialect, which has not been studied much as yet, possesses certain phonetic peculiarities: (is in the place of i for example). It has almost entirely given way to Kazan Tatar and Russian.

Like the Russians, the Baraba Tatars live by agriculture, stock breeding and fishing; trapping animals for fur has greatly diminished.

(W. BARTHOLOM- [A. BENIGNES])

**BARABRA** (for Barabira; sing. Barbir): Nubian-speaking Muslims inhabiting the Nile Banks between the First and Third Cataracts. The term includes the Kunüz, Sukkût and Maḥas. The name Barбра is not commonly used by these peoples of themselves, and is stated by Lane (i, 177, col. 3) to be a late and modern application of the term used by earlier writers for the Berbers of the Maghrib. The Danakla (q.v.), who live above the Third Cataract, are linguistically and physically allied to the Kunüz but do not regard themselves as Barabra. The territory now inhabited by the Barabra formed the northern part of...
the Christian Nubian kingdom of Makurra, which entered into treaty-relations with 'Abd Allāh b. Sa'd in 31/652. Arabian settlement began with the migration of Rabī‘a into the Aswān region in 869. After the defeat of Abū Rakwā (396/1006), the Fātimid al-Ḥākim is said to have conferred the title of Kalān al-Dawlā on the Shaykh of Rabī‘a at Aswān (al-Makrī, al-Bayān wa'īl-‘īrab, 3:244, 4:202). After setting out peacefully on its course, the Danī plain, receiving the waters from many springs which meanders over the gentle slope of the Zabādate, making up for the lack of adequate regular rainfall (Damascus receives only about 200 mm.). It imparts humidity in the area. After setting out peacefully on its course, the Danī plain, receiving the waters from many springs which meanders over the gentle slope of the Zabadanī hollow at the foot of a limestone cliff over 1,000 m. high, the Western side of the Zabadanī hollow at the foot of which are formed of pliocene and eoo-23

century is fully described in J. L. Burckhardt, A Description of the Country of the Haurâ and the Ghuta: at Hama, on the left bank, the Nahr Thawra. At Dummar, on the right bank, N. Mizâwi carries water to the market-town of Mazza; then, still on the same bank, the Dārān which supplies Kāfār Sūs and Dârāyā; after that, on the left bank, the N. Thawra, of Aramaean origin, which by itself irrigates nearly 10,000 hectares of orchards and gardens, has pushed back the desert to a distance of 20 km. from the mountains; beyond the Ghūṭa, the Mardj is covered by extensive cultivation and from December to June displays a carpet of green meadows.

Water not absorbed by irrigation passes on towards the steppe where, in a trough devoid of outlet, it becomes stagnant in the marshes of Uthayba.

Going downstream the following canals lead out of the Baradā: at Hamā, on the left bank, the Nahr Yazid, of Nabatean origin, restored by the Caliph Yazid I, goes to swell the Nahr Thawra. At Dummar, on the right bank, N. Mizzawi carries water to the market-town of Mazza; then, still on the same bank, the Dârân which supplies Kāfār Sūs and Dârâyâ; after that, on the left bank, the N. Thawra, of Aramaean origin, which by itself irrigates nearly half the oasis. On the threshold of Rabwa, two canals, in the main urban, diverge: the Kanawāt, of Roman origin and restored by the Umayyads, swells the older watercourse: the N. Bânis (literary form) or Bâniyâs, an Aramaean creation. About 670, Arnulf mentions magna IV flumina, which are those existing in 724 under Hishâm b. ‘Abd al-Malik: Yazid, Thawra, Bânis and Kanawât, and in the 6th/12th century, in Ibn Asâkir’s time. According to a plan of Damascus prepared by German travelers in 1572, the Baradā is shown as a navigable waterway.

In the town, the Kanawāt, the Bânis and the Baradā itself provide water for hammâms, mosques, fountains and houses (drinking water has only recently been piped from ‘Ayn Fidjā to pass on again into the countryside. A most ingenious system of irrigation has made possible the creation of an artificial oasis of exceptional fertility. The manifold canals diverted from the Baradā weave a close network watering the villages and the vegetation of the Ghūṭa. The Baradā plays a major rôle, making up for the lack of adequate regular rainfall (Damascus receives only about 200 mm.). It imparts humidity...
to the atmosphere, gives rise to the autumnal and spring mists and renders plant and animal life possible and thus, the human habitat.

Yakkut (i, 369) designates a village with the name of Barad to the East of Halab. Lammens recognised it as Barad in the Diabul Sim'an. He also indicates (i, 69) a canal called Barad, excavated at al-Ramlah by the Umayyad Sulayman b. 'Abd al-Malik.

BARADAN or BARADAN, the ancient Cydnus, now Djayhan, a river rising in Cappadocia, which flows towards the West, irrigates the gardens near Mar'a and those of Tarsus, brings down alluvial deposits to the low-lying plain of Clicia and empties into the sea on the Western side of the Gulf of Alexander. In ancient times, small ships sailed up it as far as Tarsus.

Bibliography: Mas'udi, Muraddi, i, 264; Yakkut, i, 369, iii, 526; Le Strange, Palestine under the Moslems, 63, 378, 419; Cl. Cahen, La Syrie du Nord, 146-151. (N. ELISSEEVF)

BARADAN is a town in 'Irak in 'Abbsid times. According to the Arab geographers it was situated some 15 miles north of Baghdad on the main road to Samarra and at some distance from the east bank of the Tigris, a little above the confluence of the Nahr al-Khalis and the latter. The Khalis canal, a branch of the Nahrawan (or Diyala) received immediately north of the town. The caliph al-Manqur held his court here for a brief period, before he definitely resolved on building a new capital on the site of the modern Baghdad (cf. Yakkut, Buldan, 256). There was a bridge in Baghdad, a street and a gate (after this a cemetery also) in the eastern half of the town called after Baradan which was two post stations distant; cf. Le Strange, Baghdad during the Abbasid Caliphate (1900), 360 (index). When the author of the Marajisid made his account from Yakkut (about 700/1300), Baradan was quite desolate and unknown. It is doubtful to be sought for in the present mound of ruins at Badran, the position of which agrees admirably with the statement of Arab authors. Arab sources suggest that the name Baradan is arabised from the Persian barad-dan ("the place of the prisoners"), which suggests the possibility of a Jewish colony settled here presumably by Nebuchadnezar.

BARADUST or BARADUS, name of two Kurdish districts. The first in the south, between Ushnu, Rayat and Rawanduz, with Kani Reah as its chief town, perched on a crag, at an altitude of 4,372 feet. In the north it borders on Girdi (Shamdun), in the West on Shurwan and in the East on Biblas. The massif of Kandil (C. J. Edmonds, 252, 305, 313, 315, 356). Among the main tribes of Baradust, that which bore this
name has lost its importance. At present, the Bålaki tribe is the most powerful in the South, numbering some ten thousand families. Their territory in the massif of Kandil is difficult of access. Its centre is

the township of Rayat. Formerly, the amir Sohran Khalifa Hayran Emirdji. A story preserved by Yazidiloglu Bufrid of Tokat (the head of Braham (or Brahim) which signifies Nature and that they are thus regarded as the choicest part of mankind. Tahânawî, op. cit., asserts that they claim descent from Ibrâhîm, the Prophet, a doctrine which possibly reflects a much later Hindu opinion which wanted to claim this Judaic-Christian-Islamic figure as its own.

The only authentic source is undoubtedly al-Birûnî, who, although he wrote his work in ḥazna (about 1030 A.D.), had stayed in the north-western part of the Indian sub-continent, learnt Sanskrit, translated many works from that language and had acquired an intimate knowledge of Hindu philosophy, religion, law, literature, society and sciences, such as astronomy. In the preface he complains that no reliable work on Hindu India existed, that even Abû l-ʻAbbâs al-Îrânshâhîrî who had written accurately about Judaism and Christianity had failed to do so with regard to Hinduism and that he himself undertook to write this work at the instigation of his master Abû Sahl ʻAbd al-Munîm b. ʻAli b. Nûh. (Al-Mas'ûdî mentions the works of Abû l-ʼKasîm al-Balîkî and al-Ḥasan b. Mûsâ al-Nawbâkhîîtl. Al-Birûnî first narrates the difficulties which beset a foreign student: the difficulty and artificiality of the written Sanskrit, the utter difference between Hinduism and Islam and the almost total social Hindu taboos against foreigners, etc. Then follow six sections on Hindu Religion and Metaphysics and so on. The author gives a detailed description of the manners of the Brahmans in their way of life, etc.

In the works of Muslim travellers in India it is usually the yogis, their practices and way of life that gains prominence; there is little about Hindu philosophy or the Brahmans. The practices of Yoga, as a way of attaining spiritual bliss or knowledge, have sometimes aroused curiosity, but have generally been regarded as suspect if not altogether damnable.

(F. Rahman)
BARAK BABA — BARAKAT

In the Kur'ān, the word is used only in the plural: barakāt, like rahma and salām, are sent to man by God. It can be translated by "beneficent force, of divine origin, which causes superabundance in the physical sphere and prosperity and happiness in the psychic order". Naturally, the text of the Kur’ān (ba’dul-mu‘ādh) is charged with baraka. God can implant an emanation of baraka in the person of his prophets and saints: Muḥammad and his descendants are especially endowed therewith. These sacred personages, in their turn, may withhold his baraka and his father fled to Syria.

The last Sharīf of Dhawū Barakāt was cAbd Allah b. Husayn, a nephew of Barakat IV, whose potential to ordinary men, either during their lifetimes or after their death, the manner of transmission being greatly varied, sometimes strange. God, however, can withhold his baraka.

Among agricultural peoples, a baraka is recognised in cereals, causing them to multiply miraculously. Baraka is to be met with, here and there, attributed to the most diverse objects. Already in the Kur’ān, the olive tree and the 27th Ramadan are used only in the plural: barakāt, and the word ended up by taking the secular meaning of "very adequate quantity": mubdrak. The word has been studied by M. F. Köprüli, who sees in his...
reign was almost as brief as his uncle's. Placed in power in 1184/1770 by Muhammad Abū Dhabab, the general sent to the Hijārā by 'Abd Bāy [g.n.] of Egypt, he lacked the strength to maintain himself after Abū Dhabab's withdrawal. From then on the Sharifate remained the exclusive property first of Dhuwān Zayd and then of Dhuwān 'Abd Allāh.

**BARAKZAY** [see AFGHANISTĀN].

**AL-BARMAK** or **AL BARMAKI** (Barmakids), an Iranian family of secretaries and wazirs of the early 'Abbasid Caliphs.

1. Origins. — The name Barmak, traditionally borne by the ancestor of the family, was not a proper name, according to certain Arab authors, but a word designating the office of hereditary high priest of the temple of Nawbahar, near Balkh. This interpretation is confirmed by the etymology which is now accepted, deriving the term from the Sanskrit word *pārmaḥ* — “superior, chief”. The term Nawbahar, moreover, likewise derives from Sanskrit (*nāva vihara*—“new monastery”) and evokes the name of the famous Buddhist monastery, visited in the 1st/7th century by the Chinese pilgrim Hiuan Ts’ang, at Po-Ho, another name for Balkh (Hiouen Thsang, in *Weststätische Abh. Tschudi*, Wiesbaden 1954, 159 and 168). There Khalid seems to have been the first to be converted, followed by his brothers Sūlaymān and al-Ḥasan.

(W. BARTHOLD [D. SOURDUP])

2. Khalid b. Barmak.—Practically nothing is known of Khalid's activities until the moment he appeared, towards the end of the Umayyad period, in the ranks of the Hāshimite movement; he then entered with the distribution of the plunder in Khaṭṭābāb’s army. Shortly after that, the new Caliph al-Saffāh entrusted the management of the *dawān* of the army and land-tax (**al-джунд wa'il-šārādī**) to him, and then the control of all the bureaux, so that, as one chronicler says, he played the role of a wāriz; attached to the personal service of the Caliph, he had the honour of seeing his own daughter suckled by al-Saffāh's wife whilst his own wife acted as foster-mother to his sovereign's daughter. Under al-Maṣūr, Khalid continued to play an important role, without however being, as is so frequently averred, the right hand of the Caliph. He seems to have remained for at least a year director of the office of land taxation, though he was soon ousted from the central administration by the intriguer Abū Ayyūb. Appointed governor of Fārs, he appears to have stayed there for about two years. Later we see him at Baghdād persuading the Caliph, according to a well known tradition, to refrain from destroying the Iwān Kīrs, participating in 147/764-65 in the manoeuvres which led to 152/771, Mūsā agreeing to renounce his rights to the succession, proffering advice to Abū 'Ubayd Allāh Muʿāwiya, who was returning from al-Rayy. Subsequently appointed governor of Tābarīsān, he remained there for about seven years (coins struck in his name between 150/767 and 154/771 are known), took possession of the fortress of Ustunawand near Damāwand and made himself popular with the inhabitants of these regions, where he founded the new town of al-Maṣūrā. It was probably about this time that his grandson al-Faḍl b. Yahyā became the “foster-brother” of Hārūn, the son of al-Mahdī. Finally in 158/775, shortly before al-Maṣūr’s death, a heavy fine seems to have been imposed on Khalid, but he was pardoned and appointed governor of the province of al-Mawṣil, where a Kurdish revolt had broken out. At the beginning of the Caliphate of
Mahdi, we find him in Pars and, in 163/779-80, he appears to have further distinguished himself, at the same time as his son Yahyā, during the siege of Samalū in Byzantine territory, though he died shortly afterwards in 165/781-82, approximately in his 75th year.

The *Wisārā* and the fall of the Barma-kids.—When Yahyā b. Khālid was chosen as *wāzir* by Hārūn al-Rashīd, he already had a fairly long career behind him. After assisting his father in his various governorships, Yahyā had been appointed in 158/775 governor of *Ahdharbāyājān*. He was still at Khālid's side in Pars at the beginning of al-Mahdi’s Caliphate, and in 161/778 he had become secretary tutor to Prince Hārūn, in the place of Abū b. Sa’dāka, and had accompanied the Prince on the Samalū expedition, on which he had been especially entrusted with the commissariat of the army. A little later, when his pupil had been acknowledged as the second heir and appointed governor of the western provinces as well as of Ahdharbāyājān and Armenia, Yahyā had administered this part of the empire. After the death of al-Mahdi, through he was confirmed in his office, he found himself the object of the hostility of the new Caliph al-Hādī, who accused him of supporting Hārūn against him and of encouraging him to maintain his rights to the succession, which very nearly brought about his downfall. The very night, however, when Yahyā, who had been thrown into prison, was, we are told, to have been executed, al-Hādī was found dead and certain reports suggest that the Queen-mother al-Khayzūrān, who supported Hārūn, was not unconnected with the occurrence.

In any case, as soon as Hārūn had been hailed as Caliph, he hastened to summon Yahyā and entrusted him with the direction of affairs, investing him, according to tradition, with a general delegation of authority. The able secretary received the title of wāzir and from the outset associated his two sons al-Faḍl and Diāfar with his administrative and governmental duties. They frequently presided with him and also appear to have been styled *wisār*. Yahyā remained in office for seventeen years, from 170/786 to 187/803, this period being referred to by some authors as “the reign of the Barmakids” (*sulṭān Āl Barmaḵ*). Engaged in “righting wrongs” in the name of the Caliph, he was likewise empowered to choose his own secretaries, who acted as his delegates, and was in practice head of the administration; even the office of the Seal, initially withheld from him, was soon placed under his control. Tradition likewise has it that al-Rašjud handed his personal seal over to him, a symbol of the new authority enjoyed by the *wisār*. This seal, entrusted to Diāfar, subsequently returned to Yahyā, who relinquished it when he set out to stay in Mecca in 181/797; it was then entrusted to al-Faḍl and afterwards to Diāfar, being taken back by Yahyā after his return.

Yahyā’s two sons, al-Faḍl and Diāfar, were not satisfied with merely seconding their father. They likewise enjoyed important responsibilities. Al-Faḍl who was the eldest and, moreover, Hārūn’s “foster-brother”, played a major rôle in the early years. In 176/792 or perhaps even earlier, he was placed at the head of the Western provinces of Iran and was sent by the Caliph against the ‘Alid Yahyā b. ‘Abd Allāh, who had revolted. He obtained the latter’s submission by negotiation. In the following year he was appointed governor of Khurāsān, where he played the rôle of a conciliator and a builder. He pacified the country of Kābul and recruited a local army, part of which, we are told, was sent to Bagh-dād. Upon his return to Court, he left a deputy in his province, which he retained until 180/796. In 181/797, he appears to have been in charge of the government during his father’s absence. Nevertheless, he was the first to lose the Caliph’s favour. He gravely displeased Hārūn and was deprived of all his offices, except his appointment as tutor to the two princely heirs-apparent, for whom he had obtained recognition as heir-apparent in 178/794.

As for Dīafar, whose eloquence and legal erudition the authors are fond of stressing, in 176/792 he received the governorship of the western provinces, though he remained at Court, which he only left in 180/796 in order to suppress the risings in Khurāsān. He was next appointed temporarily governor of Khurāsān and was placed in charge of the caliphal bodyguard as well as being entrusted with the direction of the Post Office and of the offices of the Mint and textile manufactures (in fact his name appears on the coins struck in the East from 176/792 and, subsequently, also on those of the West). He was likewise tutor to Prince ‘Abd Allāh al-Ma’mūn, who was proclaimed second heir in 178/798. But above all he was the Caliph’s favourite, if not his Ga’nymede as has often been supposed, and willingly took part in his pleasure parties, of which his brother, on the other hand, disapproved.

Thus with Yahyā’s two sons entrusted with the tutelage of the two princely heirs-apparent, between whom an actual division of the empire was contemplated, power might have remained in the hands of the Al Barmaḵ for a long time, had al-Rašjud so permitted. The Caliph, however, on returning from the Pilgrimage which he accomplished with his suite in 186/802, suddenly decided to put an end to their domination; during the night of Saturday the 1 Safar 175/28-9 January 803, he had Dīafar executed, al-Faḍl and his brothers arrested, Yahyā placed under observation and the property of all the Barmakids (with the exception of Muḥammad b. Khālid), confiscated. Dīafar’s remains were left exposed in Bagh-dād for a year. Al-Faḍl and Yahyā himself, whose wish had been to share his sons’ fate, were conducted to al-Raḵka as prisoners; there Yahyā died in Muḥarram 190/November 805, 70 years of age, and al-Faḍl in Muḥarram 193/November 808, aged 45 years.

The brutal fall of the Barmakids came as a surprise to their contemporaries, who had no satisfactory explanation to account for it and therefore invented various fictitious reasons, such as the story of “Abbasā [*q.v.*],” which have too long been given credence. The origin of their fall still remains partly a mystery for modern historians; but it can hardly be seen as the result of a sudden caprice on the part of the Caliph. Even if it was not “prepared well beforehand”, as W. Barthold said, it was at least contemplated long in advance by a sovereign who had come to endure the tutelage of his ministers with increasing impatience and who at times accused them of pursuing a policy contrary to his own interests.

The vizirate of the Barmakids was not really the period of perfect harmony which came to be portrayed in later legend. In spite of what has been said on the matter, causes for disagreement did exist.
between the Caliph and his former tutor, whose hands were never completely free to govern. Not only was he obliged in the early years, as W. Darmesteter has pointed out, to render account to al-Khayzuryan, who, nevertheless, constantly gave him her support as long as she lived, but later he was often forced to come to terms with al-Rashid's wishes and to resort to that cleverness for which he was so highly reputed. In some cases he was not even successful in imposing his views, and the man appointed to replace al-Fadl in Khurshid in 180/796 was appointed against his advice. At other times he found himself having to plead highly compromised causes. Thus we see him hastening from Baghdad to al-Rakkà in 183/799 to divert the sovereign's ire from al-Fadl and succeeding only at the cost of condemning his son's behaviour. Very easily on also, intrigues had contributed to weaken his position and the Caliph, upon the death of his mother, had been eager to bestow honours on the accomplished courtier al-Fadl b. al-Rabi', in whom he had for long begun to take an interest and whom, furthermore, he appointed baghdîb in 179/795 in the place of the Barmakid Muhammad b. Khalid; the new dignitary exercised a growing influence at Court, where he stigmatised the shortcomings of his enemies and provoked the resentment of al-Rashid against them.

The Caliph's relationships with Yahyâ's sons were similarly not always harmonious. Al-Rashid did not think well of the pro-'Alid policy of al-Fadl, who does not seem to have been endowed with the same flexibility as his father. He was removed from power in 183/799, four years before the final disgrace of his family. Even Dja'far, who apparently enjoyed the Caliph's complete confidence, retaining his influence with him the longest, was not secure from the suspicions of a restive master and was reproached upon occasion for abusing his powers.

It was, of course, quite normal for the attitude of al-Rashid towards the Barmakids to become modified during the seventeen years of their supremacy. The Caliph, at his accession, when he was 23 years old, was content to follow his mother's advice and to delegate himself of certain responsibilities, by entrusting them to Yahyâ. Later, however, this humiliating situation began to weigh upon him, the more so since the desire to impose his own will increased with the years, whilst the Barmakids, filling the most important posts with their relatives and clients and preparing themselves to institute some kind of hereditary vizierate, constituted an actual State within the State. At the same time, they had amassed great wealth, which excited the cupidity of the sovereign and to which their proverbial generosity continually called attention. Yet if the different reasons are adequate to explain their fall, nevertheless the brutality of the treatment inflicted on Dja'far was doubtless the reason for the affections which was bestowed on him by the Caliph and which may perhaps have postponed the inevitable outcome.

On the other hand, imputations of impiety, which are sometimes levelled at the Barmakids during the period of their ascendancy, do not seem to have contributed to the disgrace which befell them. Such accusations do not even appear to have had any basis in fact. These secretaries of Iranian origin did, it is true, display a special interest in the literary masterpieces which came from Iran and India, as well as in the various philosophical and religious doctrines, which they liked to hear discussed; but these were tastes widely disseminated in Baghdad society of the period and were not necessarily accompanied by heterodox opinions. The Barmakids, moreover, had completely adapted themselves to the usages of the 'Abbasid Court at which they lived; they thought highly of Arabic poets and writers and, like so many other maâdil, displayed an ostentatious generosity, inspired by ancient Bedouin traditions. Though they frequently assumed a conciliatory attitude towards the inhabitants of the provinces or of certain tributary states, they appear to have made no attempt to favour al-Ma'mun, the "son of the Persian woman", at the expense of his brother. They seem primarily to have served the Caliphate effectively and loyally, pacifying Eastern Iran, repressing the risings in Syria and even Irtikâ, obtaining the submission of rebels, including 'Alids, directing the administration in an orderly fashion, guaranteeing to the State important resources, undertaking works of public interest (canals of Kâtûl and Sîhân), setting wrongs aright with equity in accordance with the requirements of Islamic law and reinforcing the judicial administration by the institution of the office of the great kâdî. Doubtless by their behaviour they accentuated the process of iranisation which became evident from the beginning of the 'Abbasid regime, imparting to the vizierate a style which did not fail to attract subsequent imitators; in spite of their new prerogatives and exceptional prestige, however, their influence was a highly personal thing, as was the tragedy which terminated it. It does not appear that they ever sought to transform the vizierate in accordance with a hypothetical Sasanid model.

The activity of the Barmakids was not merely political and administrative. An important cultural and artistic achievement is also due to them. Indeed they acted as patrons of poets, distributing rewards for their panegyrics through the intermediary of a special office created specifically for the purpose, the diwân al-ghîr; they favoured scholars and gathered theologians and philosophers in their home, in assemblies (maâdîl) which have remained famous. They encouraged the arts, and as great builders, left numerous palaces in Baghdad, the most famous of which, that of Dja'far, subsequently became the Caliphal residence.

Neither did the influence of the Barmakids disappear with their fall. It continued to be exerted during the ensuing years through the medium of the wâzîrs and secretaries who came to power under al-Ma'mun and who, for the most part, were their former clients and dependants, as in the case of the famous al-Fadl b. Sahî. It is actually known that, at the time of their ascendancy, the ministers of al-Rashid had gathered around themselves a group of especially competent kûlîb, whom they had trained in their methods, and the following Caliphs were unable to dispense with them.

Finally adâb literature laid hold of the Barmakids, stressing their edifying and remarkable traits of character, often with some exaggeration (Yahyâ's "wisdom" and his gift for foretelling events, al-Fadl's haughtiness and ostentatious generosity, the elegant language of Dja'far) whilst some stories, such as those later to be incorporated in the collection of the Thousand and One Nights, popularised the figure of Dja'far, the wâzi and intimate companion of al-Rashid.

Bibliography: L. Bouvat, Les Barméciades; D. Sourdel, Le vizirat 'abâdsîde (appearing shortly); Djâbihi, Kûlîb al-Wasârî, ibn 'Abd Rabbih, al- 'Id, Cairo ed. 1945-53, iii, 26-34; Ta'bar, Ya'qûbî, Mas'ûdî, index; Ibn Khallikân, s.v.
4. Other members of the Barmakid family.

—Yahya had a brother, Muhammad b. Khalid, who was asked by his father to join his army in 795/1393 and was the only one spared by the Caliph when they fell.

In addition to al-Fadl and Dja'far, he had two other sons, Muhammad and Mūsā, whom less brilliant, nevertheless played a role at Court. The latter, known for his military bravery, was governor of Syria in 176/792. They were thrown into prison in 187/803 with their father and brother, but were released by al-Āmīn who showed them generous towards them. Mūsā remained in Ṭīrāk and fought in the Caliphal army, subsequently rallying to al-Ma'mūn, who later appointed him governor of Sind. He died in 221/835, leaving a son `Imrān who succeeded him and distinguished himself in several expeditions. Muhammad, on the other hand, had joined the Court of al-Ma'mūn at Marw, where he had been preceded by his son Ahmad and his nephew al-Abbās, the son of al-Fadl.

Of the numerous descendants of the Barmakids, one especially was famous as a musician and father of letters: Ahmad b. Dja'far, surnamed Dja'hsa [q.v.], grandson of Mūsā b. Yaḥyā and intimate companion of the Caliph al-Muqtadī.

Bibliography: L. Bouvat, Les Barmécides, 101 ff.; Dja'hshyārī, K. al-Wuṣūrī, Cairo ed., 297-98. The nīsha al-Barmakī—This nīsha was also born by persons not belonging to the Barmakid family. A first category comprises their clients and their manumitted slaves with their descendants. Others were natives of the quarter of Baghdād which had received the name of al-Barmāmī. They included the singer Daḥnār, the man of letters Muhammad b. Dja'[h]m, an astrologer who was present at the siege of Samālū, a wazīr of the Sāmānīs and an envoy of the Ghaznawīs.

A number of dynasties, both in Iran and North Africa, were later to claim descent from the Barmakids (Sarbadārān in Khūrāsān, Barānūk at Touāt). Finally a tribe, from whom the dancing-girls called Ghawāzī were recently still being recruited in Egypt, obtained the permission to use the word barmaḵī the pejorative sense which it sometimes assumes in modern Egyptian.

BARANI, an old name for BULAND-SHAR (q.v.).

BARANI, Diya' al-Dīn, historian and writer on government under the Delhi sultanate. Born not later than 684/1285, (and probably earlier as he was old enough to remember witnessing convivial parties and to have read the whole of the Kur'ān in the reign of Djiālāl al-Dīn Khālīlī (689-91/1290-6), Barani was well connected with Delhi ruling circles. His father, Mu'ayyīd al-Mulk, was nābū to Arkālī Khān, second son of sultan Djiālāl al-Dīn Khālīlī, becoming nābū and Khādjiā of Bara in the first year of the reign of 'Alā' al-Dīn Khālīlī. Barani's paternal uncle, Malik 'Alā' al-Mulk was kōwāl of Delhi under 'Alā' al-Dīn Khālīlī and a prominent royal counsellor. His maternal grandfather, siyāh-sālrī Hūsān al-Dīn, wakālī-dār to Malik Barbak, was appointed to the shahmaḵī of Lak'hnawtī by Sultān Balban.

Barani himself became, for seventeen years and three months, a nādim of Sultan Muhammad b. Tughluq (752/1351-757/1351). The Siyar al-Awliyā describes him as an entertaining conversationalist and as having been a friend of the poets Amir Khusrū and Amir Ḥasan.

At the beginning of the reign of Frīrū Shāh Tughluq (752-90/1351-88) Barani was banished from court and, according to his own statement in the Fatīmāt Muḥammādī, was imprisoned for a time in the fortress of Pāhtēz. It is a possible hypothesis that he was associated with the attempt of Khwādja-Djahan Ahmad Ayāz to place a minor son of Muhammad b. Tughluq on the throne while Frīrū Shāh Tughluq and the army were extricating themselves from Muhammad b. Tughluq's expedition against Thattā in Sind.

Barani spent his remaining years in penurious exile, writing both in the hope of being restored to favour and of atoning for the sin to which he ascribed his misfortunes. He died not long after 728/1327 and was buried near the grave of Nizām al-Dīn Awliyā at Ghīyāhpūr. Four of Barani's works, the Ta'rikh-i Frīrū Shāhī, the Fatewā-yi Djiāhndārī, the Na'ti Muḥammādī and his translation of anecdotes on the Barmakids, the Akhbār-i Barmakīyyān, are known at present to be extant.

Barani is a significant (though in the total context of medieval Islam, not original) figure in Indo-Muslim thought on government. Holding the first four caliphs to have been the only truly godly rulers in the history of the community, Barani aimed in the Fatewā-yi Djiāhndārī, a work of the Fürstenspiegel type and in the Ta'rikh-i Frīrū Shāhī, to educate the de facto rulers of the day, the sultans, in their duty towards Islam in a corrupt age. In the form of dicta by Sultan Mahmūd of Ghazna, the Fatwā-yi Djiāhndārī advises sultans to enforce the shari'ā, to curb unorthodoxy (sci. especially falsafā), to abase the infidel, to employ only pious servants and to remain inwardly humble towards God though governing with the pomp and circumstance of pre-Muslim Persian kings, that is, in opposition to the ascetic sunna of the Prophet and the orthodox caliphs, as Barani, under Šūfi influence, conceived them.

The avowedly didactic Ta'rikh-i Frīrū Shāhī, dedicated to Frīrū Shāh Tughluq, shows what happens in history when the precepts in the Fatewā-yi Djiāhndārī are disregarded. It covers the period from the beginning of the reign of Balban (664/1266-87) to the sixth year of Frīrū Shāh Tughluq. The account of each sultan of Delhi is treated as a parable in which success or failure is explicable in terms of the sultan's adherence to or deviation from Barani's politico-religious theories. For example, Sultan 'Alā' al-Dīn Khālīlī is depicted as a successful sultan in so far as he subjugated the Hindus, overcame sedition, forbade strong drink and reduced the cost of living, but as an impious one since, Barani says, his motives were worldly, he neglected his own religious observations, wished to become a prophet, appointed low men to office and avoided the company of the religious— in particular of Shaykh Nizām al-Dīn Awliyā whose muṣāfīn and barakhdār were the true cause of the glory of the reign. Thus 'Alā' al-Dīn Khālīlī dies of suspected poisoning and within four years his family is exterminated. Barani's Ta'rikh-i Frīrū Shāhī is not an annal or chronicle; it is an important example of didactic historiography in Islam. (See further Ta'rikhī.)

BARÁNIS, name of one of the two groups of tribes which together constitute the Berber nation [q.v.], that of the other being the Butr. It represents the plural of the name of their common eponymous ancestor: Burnus; for a possible origin of this name see Butr.

According to Ibn Khaldûn, the Baranis comprised five great peoples: Awraba, 'Agilha, Azdajja, Mašmūda-Ghumār, Kutama-Zawāwa, Sanḥādja, Hawwāra. Whether, however, the last three belong to this group is a matter of controversy; they are considered by some to be descendants of Ḥimyar and therefore non-Berbers. Neither they nor the Mašmūda will be dealt with here.

The most ancient habitat of the Baranis in the true sense of the term is the massif of the Awrās, the northern province of Constantine and the two Kabylia where they used to live as sedentary mountain dwellers. At the time of the first Arab invasion, in the first quarter of the 1st/7th century, the Awraba of the famous Kusayla [q.v.] had to abandon the Awrās, after the defeat and death of their chief. They went to northern Morocco, where they established themselves from the massif of the Zarhūn to the river Wargha; the names of some of their old tribes are to be met with today along the banks of this river: Ludjaya, Mazyat(a), Raghiwa. Whether, however, the last three belong to this group is a matter of controversy; they are considered by some to be descendants of Ḥimyar and therefore non-Berbers. Neither they nor the Mašmūda will be dealt with here.

The most ancient habitat of the Baranis in the true sense of the term is the massif of the Awrās, the northern province of Constantine and the two Kabylia where they used to live as sedentary mountain dwellers. At the time of the first Arab invasion, in the first quarter of the 1st/7th century, the Awraba of the famous Kusayla [q.v.] had to abandon the Awrās, after the defeat and death of their chief. Neither they nor the Mašmūda will be dealt with here.

The Baranis-Awraba participated in the expeditions launched from Morocco against the Iberian Peninsula; some of them settled there and bequeathed their name to the Diābał al-Baranîs, now the Sierra de Almadén, to the North of Cordova.

Some of the Baranîs (from the North of Taza) in contact with the kingdom of Nukur which some of the Baranis arrived and established which contains a sub-group called the Werba, the present tribe (in dialect '1-Branes, ethnic '1-BarndvSi) which some of the Baranis and Awraba indications some of the Baranis and Awraba.

The role they played in connexion with Idrîs I [q.v.] is known.

We possess no information on the conditions in which some of the Baranis arrived and established themselves to the North of Taza. At all events, al-BAKîl indicates some of the Baranis and Awraba in contact with the kingdom of Nukûr [q.v.]. In the present tribe (in dialect '1-Branes, ethnic '1-Barnes) which contains a sub-group called the Werba, the memory of the prince of the Awraba who received Idrîs I (at Walîlî) has been retained and even the remains of his palace are shown there.

The Baranis-Awraba participated in the expeditions launched from Morocco against the Iberian Peninsula; some of them settled there and bequeathed their name to the Diābał al-Baranîs, now the Sierra de Almadén, to the North of Cordova.

Some of the Baranîs (from the North of Taza) formed part of the "Rif" contingents who took Tangier (1684). A village of the Ḥarkî of this latter town bears their name.

As for the Azdajja (and Misṭâsha) Baranîs, nothing is known of the reasons for their establishing themselves in the region of Oran; some of the Misṭâsha still live in the region of Bādis [q.v.]. There is the same lack of information concerning the Kutama of Morocco.

BARANTA — BARBA
central administrative organ (VTSIK) studied the
system of baranta in connexion with offences against the
customary law in the Republic of Kazakhstan
and the Oyrat Autonomous Region, under three
heads: simple, armed, and tribal.

BARATHA, the name of a residential quarter
on the western side of ancient Baghdad to the
south of the quarter of Bāb Muhawwal, originally
some 3 kms. from ancient Baghdad. There used to be
in Barathā a mosque, designed for the prayer of the
Shi'ite sect, which Yakut (ed. 1806/1228) mentions as
being totally demolished. He also remarks that
the quarter itself was destroyed without trace. This
mosque was built in 329/941, later on it was pulled down by the 'Abbāsid Caliph Al-Rādi b. Billāh;
later still, it was reconstructed and maintained its
normal function until after 450/1058, when it was
finally abandoned.

Prior to the building of Baghdad, Barathā was a
village where, as the Shi'īs claim, 'All b. Abī Tālib passed by and performed prayers on the site of
the mosque. The name Barathā, derived from the
Syriac word Baraythā, has the meaning of "outer".

BARAWA (Brava), a coastal town of Italian
Somaliad. The inhabitants, c. 9000, are mostly of
the Tuni tribe of the Digī Somali, who displaced the
Adīuran and are mingled with Boran Galla. The
soil is comparatively fertile; rice, grain and butter
are marketed and leather is worked. Barawa is perhaps
Yakūt's Bāwarī, which exported amber, and İdrīsī's
B'rwa (var. M'rwa) on the pagan frontier; other
Islamic geographers do not mention it. Barros,
following a Kilwa chronicle now lost, says Zaydīs
from Al-Aḥṣā' founded it soon after Māḏīghāh;
Stigand's informant attributed it to the Khalla
of Al-Makhādī b. Mawwād (1750-8). In the 8th/14th
century it was subject to Fata. The Chinese visited
"Pu la wa" about 821/1418. In 908-9/1503 12 shaykhs
captured by Rui Lourenço Ravasco made Barawa
tributary to Portugal. In 192/1517 Tristão da Cunha
and Albuquerque stormed and burnt it; Barawa
mustered 4-6000 defenders and afforded rich booty.
It recovered temporarily but decayed after the rise
of the Galla. Portuguese suzerainty was recognised
intermittently. Portuguese writers describe it as a
republik, governed by 12 shaykhs; Guilain mentions
a council constituted by the heads of 5 Somali and 2
Arab tribes with a monarch elected for 7 years, whom,
he was told, it had once been the custom to kill after
that time. Barawa was nominally subject to the
Al Bā Ṣa'īd [q.v.] who asserted their authority against
the Mazrūi c. 1238/1822, but tribute was sometimes
paid to Somali chiefs. For about 2 months in 1292/
1875-6 it was occupied by the Egyptians. The Anglo-
German declaration of 1930/1886 recognised Bā Ṣa'īd
rule. Three years later Italy announced a protectorate
over the coast and Barawa was subsequently leased
to her (see SOMALILAND). Harbour works were begun
in the hope of making it the port of the Diub (Juba)
region but were later abandoned.

BARBĀ, a name given by the Egyptians to all the
temples and ancient monuments. This statement by
Ibn Djbayr is corroborated by Yakūt, according
to whom barbā, "which is a Coptic word", is applied
to solidly constructed ancient buildings of pagan
times, which served as laboratories for magic: they
were wonderful buildings, full of paintings and
sculptures. Abd al-Latif, in turn, noted the excel-
lence of the construction of these temples and the
balanced proportions of their forms, the prodigious
volume of the materials employed, and was astounded by
the great multitude of inscriptions, figures, sunk
carving and relief sculpture. In the eyes of some
Arab writers, these various representations served
a utilitarian purpose, namely to reproduce the
techniques and tools of various crafts and to
preserve a description of the sciences for future
generations.

The Christian historian of the Patriarchs of
Alexandria, Severus of Ashmūnayn, employs the
word barbā in the very precise sense of pagan temple,
in contrast to the buildings of the Christian cult.
The Arabic word barbā is, in fact, a transcription of
the Coptic p'rbād "temple", and usage has
endowed it with a classical plural barbā. The
expression barbā is also reported by Leo Africanus.

Many authors recount impossible stories concerning
these temples, either that they tell of the means of
defending the country against external enemies by
means of talismans or that these talismans help in
discovering treasures, which they take a greater
delight in elaborating.

The only relatively serious description, from the
pen of Ibn Djbayr, concerns the temple of Alkūmān,
which no longer exists.

Bibliography: Fihrist, i, 355; ii, 188; Ṣa'īd,
Al-Barbahari, Al-Hasan b. Ali b. Khalaf Abū Muhammad al-Barbahari, a famous Hanbali theologian, who died at Baghdad at a great age. He was both a traditionist (fakih), being above all, one of those prominent preachers (wāqif), who, in the history of the Caliphate during the 4th/10th and 5th/11th centuries, played so important a role in the struggle of Sunnism against the Shi'ī missionaries (dā'ī) and who, without exhibiting the least spirit of compromise, successfully managed to oppose the progress of Mawdudiite and semi-Mawdudiite-inspired theology (khalid).

Al-Barbahari was schooled in Hanbali doctrine by Abū Bakr al-Marwazī (died 275/888) (cf. Ta'īrīkh Baghdādī, iv, 423-425; Tabāhādī al-Hanbiliya, i, 56-63; Iḥāyār, 32-34) who was supposed to have been one of Ibn Hanbal's favourite disciples and one of the most assiduous reporters of the great imam's (khalīf) sayings, both in the field of jurisprudence (fikr) and, more generally, in that of moral theology (taṣawwuf), the rules of civility (aḥād) and of religious beliefs (fākhadīd). The famous mystic Sahl al-Tustarī (died 283/896), who founded the Sūlimiyah school (cf. EI1, iv, 119) and who was to exert an influence on several other major representatives of Hanbalism, was likewise his teacher.

Al-Barbahari is the author of a profession of faith, the Kūdūl al-Sunnah, the text of which has been transmitted to us in great measure by the kādī Abu l-Husayn in his Tabāhādī (ii, 18-43), and which recalls that composed by Ahmad Ghulām Khalīl (died 273/888), an opponent of the extremist Sufism of Abū Ḥamza and al-Nūrī (died 297/910) and himself an author with Hanbali affinities (cf. L. Massignon, Textes indéchiffrés, 212-213). Abu l-Hasan al-Aghārī (died 329/941) is held to have composed his own Iḥāya after a discussion with al-Barbahārī. An assertion which a comparative study of the two professions of faith does not show a priori to be inadmissible.

Al-Barbahārī's profession of faith is primarily a polemic denouncing the multiplication of suspect innovations (bid'at) and energetically enjoining a return to the precepts of the "old religion" (din 'ulūlī), as it was understood at the time of the first three Caliphs, before the schism which followed the assassination of 'Uthmān b. 'Affān and the succession of 'Ali b. Abī Tālīb. The principle underlying this restoration resides in imitation (takāhid) of the Prophet, of his companions and their pious successors, among whom al-Barbahārī frequently cites, with Ibn Ḥanbal, Mālik b. Anas (died 179/795), 'Abd Allāh b. al-Mubārak (died 181/997), Fudayyl b. Qīyād (died 182/903), and Bishr b. al-Hārith (died 227/842). Al-Barbahārī does not condemn the use of reason (ṣabīl); on the contrary he perceives therein a grace diversely distributed by God among his creatures and necessary to final salvation. Neither does he entirely reject what is bid'at as opposed to what is šāhīr, that is to say, what is inward and profound in contrast to what is outward and in conformity with the letter of the text, provided this bid'at has its basis in the Kur'ān and the Sunna. What he condemns above all else are the pernicious deviations, which result from the personal and arbitrary use of reasoning (ahadīr, ra'y; biyād) in the domain of religious belief. His theodicy, on the problem of the divine attributes (piyād), is limited to an attempt to reproduce the data of the Kur'ān and the Sunna.

Politically, he appears as an energetic defender of the rights of Kuraysh to the Caliphate, though he none the less reminds believers of the duty incumbent on them to obey all established authority, except where disobedience to God is involved. He is particularly severe in his condemnation of all attempts at armed revolt (khuradī bi 'l-sayf), considering in fact that the re-establishment of the Law should be effected by appeal to public opinion, by the duty of missionary preaching (da'wā), of enjoining the Good (amr bi 'l-maḥrūf) and of proferring good counsel (ṣawā'if). This re-establishment of the Law, in a world in which Islam had split up into numerous sects, was incumbent especially on the "people of the hāдж", on the ahl al-sunnah wa l-jamā'ī, whose triumph God had definitely assured. True to his doctrine, al-Barbahārī conducted so vigorous a personal action against bid'at and against the sects (jirka), especially against Mu'tazilism and Shi'ism, that he was at times accused of entertaining political ambitions.

Indeed, al-Barbahārī's influence is to be discovered behind several popular demonstrations and insurrections which broke out in Baghdad between 309/921 and 329/941. He was not unconnected with the opposition encountered by al-Tabarī who, in 309, had to be buried at night in his own house because of the hostility of the mob (cf. on these incidents, especially Bidāya, xi, 132 and 145-146).

In 317/930 there was a brawl in Baghdad involving considerable bloodshed between al-Barbahārī's followers and their adversaries, arising from the interpretation given to verse xvii, 81: "Perchance thy Lord will send thee to a sojourn worthy of praise (al-bid'a), thereby he conceals himself, though a number of the Hanbali theologian's disciples were exiled to Basra (Kur'ān, viii, 204; Bidāya, xi, 172). The measures then taken by the Caliph al-Kāhir for the re-establishment of morality were designed in some degree to appease the Hanbali critics.

Although the supporters of al-Barbahārī do not seem to have played a direct rôle in 322/934 at the time of the trials of al-Shāhmaghānī and of Ibn Mūsim, nevertheless the Kur'ān reader Ibn Shahnābdī, likewise accused of publicly teaching Kur'ānic readings divergent from those of the recension of 'Uthmān, was brought to trial by the
was"r Ibn Mu'kla and sentenced (cf. al-Suli, trans. M. Canard, i, 109 and 145), apparently as the result of a noisy demonstration by the Hanbals of Baghdād. The agitation by al-Barbahārī's supporters resurfaced its activity in 323/939, at the beginning of al-Rāḍī's Caliphate, still under the viserāte of Ibn Mu'kla, on the eve of Ibn Rādū's appointment as amīr al-umārā. Muslim historians (al-Suli, i, 114; Kāmil, viii, 229-231; Bidāya, xi, 181-182) depict the Hanbals' looting shops, intervening in commercial transactions to impose the prescriptions of the Law, attacking the wine-sellers and singing-girls, smashing musical instruments, pushing their way into private dwellings and denounced to the Prefect of Police any man found in the street with a woman, not being her mabrām (cf. K. V. Zettersteen, EI, iii, 1169, s.v. Rāḍū). The Caliphal authorities then prohibited al-Barbahārī's supporters from meeting and teaching and the Muslims from praying behind an imām following the Ḥanballī doctrine. As the ardour of al-Barbahārī's supporters did not diminish, a decree by the Caliph al-Rāḍī (text in Kāmil, viii, 230) was issued in 323, condemning Ḥanbālīism and excluding it from the Muslim community; it accused it of developing an anthropomorphist theodicy (taṣbīḥ) and of forbidding the visiting of the tombs of the great imāms (ziyārat al-kubūr). This condemnation only prevented Ḥanbali demonstrations for a while.

Al-Barbahārī's supporters resumed their agitation with violence in 327/940 under the amīr of Baḍjakm; they molested people going to the mawṣūl festival, that is to say the ceremonies organised in some mosques during the night of the 14th/15th Sha'ban (cf. al-Suli, i, 204 and 205). The Prefect of Police issued orders for al-Barbahārī to be found, but once again he concealed himself, though one of his lieutenants, a certain Dalla 3, was executed.

The likelihood of disarming the hostility of al-Barbahārī's supporters was further diminished by the fact in 328/941 that the amīr Baḍjakm had the mosque of Bārāqā rebuilt. This mosque had been demolished under the Caliphalate of al-Muqtādīr and was considered by Sūnnis as the "nest of Ṣḥīḥism" (cf. al-Suli, i, 142 and 208). When in 329 the amīr Baḍjakm was assassinated by a band of Kurdish brigands, the Hanbals of Baghdad, who had not been satisfied, attempted to demolish the mosque of Barāqā and also attacked the quarter of the money-changers and bankers, in the Dār 'Awn, which was at the heart of the financial and commercial life of the ʿAbbāsid metropolis (al-Suli, ii, 16 and 19). The Caliph al-Muṭṭakīr was obliged to have a number of Ḥanbals arrested and to place the Shīʿī fiqh mosque under a heavy guard.

At this juncture, in Rādjab 329/April 941, al-Barbahārī died in the house of Tāzūn's sister, where he had hidden himself and where he was buried (Tabābāt al-Ḥanābīla, ii, 44-45; Bidāya, xi, 201). Al-Barbahārī's influence also manifested itself in several contemporary Ḥanbalī doctors, especially Ibn Baṭṭaṭ al-Ukbarī (died 387/997), who met him at Baghādād on a number of occasions and who drew instruction in his ʿAbū l-Baṭṭaṭ, where his influence is likewise to be encountered, through the medium of Ibn Baṭṭaṭ, on the kāfī Abū Ṭa'lī b. al-Farrāʾ (died 458/1066) and several of his disciples, especially Ṣhāfī al-Abū Ẓafar al-Ḥāfīm (died 471/1080), who instigated several violent popular demonstrations against bid'atān.

BARBAROSSA [see KEHAR AL-DIYN]

BARBAŠTURU, an ancient city on the R. Vero, a tributary of the Cinca, N.E. of Sarkansta (Saragossa), in the approaches to the Central Pyrenees (modern Barbastro). It lay 50 km. almost due E. of Washka (Huesca). Barbasturu is stated by Ibn Hayyān to have become Muslim at the time of the conquest of Spain, and to have remained in Muslim hands continuously thereafter for upwards of 360 years. It became a bastion of the defences of al-Thāqīf al-ʿAṭlā (the 'Upper Frontier'), in which system it formed a link between Sarkansta and Lērida (Lérida).

In an account of the expedition of ʿAbd al-Malik al-Muṣaffar in 396/1006 against Pampluna, Barbasturu is mentioned as the last place in the lands of Islam (Ibn ʿAbīr, iii, 12). At the time of its capture in 456/1064 (see below) it belonged to the Banū Ḥūd of Sarkansta, and evidently contained a large population and substantial wealth, though the figures given by the Arabic historians who, following Ibn Hayyān, describe this event, appear to be exaggerated. In the summer of 1064, a Christian force estimated at 40,000 men presented itself before Barbasturu. These included Normans under Robert Crespin — the name is given by a Latin chronicler — and others, who with Papal support were engaged in what has been described as una crusada antes de las cruzadas, 'a crusade before the Crusades'. After a siege of more than a month they succeeded in taking the town. Though the part played by the Christians of Spain is obscure, and though Barbasturu was retaken after a year, its fall marked a stage in the reconquest of the country. It was spoken of by contemporaries as an event without parallel, the greatest disaster which had ever happened in Muslim Spain, and Ibn Hayyān's painful reflections on the state of al-Andalus were prompted by what had taken place there (cited in Ibn ʿAbīr, iii, 414-255).

It was characteristic of the disunity among the Spanish Muslims that the ʿAbbadīd al-Mūṭṭaqīd sent only 500 horsemen to al-Muqtādīr b. Ḥūd of Sarkansta, his nominal ally, then assembling forces for a counter-stroke, though urged to march in person by al-Hawzānī, a noble of Seville (Ibn Saʿīd, Al-Mughrīb fi ḥulū al-Maghrīb, ed. Sh. Dāyf, i, 234). Thanks to a corps of crossbowmen, al-Muqtādīr b. Ḥūd succeeded in retaking the town. Yet Barbasturu was not destined to remain much longer in Muslim hands. It was finally taken for the Christians by Pedro of Aragon in 1101, an event which seems to have been known to Yakūt (cf. Muḥjam al-Buldān, s.v.).

BARBAT [see DAVES]

BARCELONA [see BARSALONA]

BARDASIR [see KIRMAN]

BARDESANES [see DJOYANN]

BARĐA'A, an Armenian Partav, modern Barcha, a town S. of the Caucasus, former capital of Arrān, the ancient Albania. It lies about 14 miles from the
BARDHA'SL — BARDJAWAN

R. Kür (2 or 3 farsakhs according to the Arabic geographers; Mas'ūdī says inaccurately 3 miles, Moriṣij, ii, 75) on a river of its own (Mukaddasī, 375), the modern Titter (Tabarrir, Yākūt, i, 560). It was built, according to Baladhurī (194), by the Sasanid Kubād (ruled A.D. 488-531). This is varied by Dimishqī (Cosmographie, ed. Mehren, 189), who mentions as founder a mythical Bardhā'a b. Amrīn (?), earlier than Kubād. The Arabs attempted to explain the name as from Persian barda-, 'place of captives', from the original purpose to which it was put.

Bardhā'a served the Sasanids and the Arabs later as a frontier fortress against invasion from the N. and W. At the time of the Arab conquest it was taken after a short resistance by Salmān b. Rabī'ā al-Bāhili (Baladhurī, 201), probably before 32/652, the date of the Arab debacle at Balāngīar (q.v.). Thereafter Arrān, the province of which Bardhā'a and its territory formed part, was usually joined with Armenia, sometimes with Armenia and Adharbaydījān, under a single governor. In the Caliphate of 'Abd al-Malik its fortifications were reorganised by 'Abd al-'Azīz b. Hātim (Dhahabi, Dīwān al-Islām, i, 40, sub anno 867/975) and perhaps further improved by Muhammad b. Marwān a little later (cf. Baladhurī, 203). After this Bardhā'a was well fitted to be 'the spearhead of Muslim domination and policy in those parts' (V. Minorsky) and is mentioned repeatedly during the second Arab-Khazar war and later under the 'Abbasids. As late as the 10th century the population retained their own Arrān dialect (Iṣṭaqhrī, 192).

When Iṣṭaqhrī wrote (circa 320/932), Bardhā'a was at the height of its prosperity, though decline was soon to set in. It covered an area of several miles in length and breadth in a fertile and well-watered region, and in mere size challenged comparison with Rayy and Isbahan. In the district of Andarab, beginning a mile or two from the town, gardens and orchards extended continuously in every direction for a day's journey or more. Hazel-nuts and chestnut-nuts of the finest quality and a local fruit resembling that of the service-tree were to be found in abundance. Bardhā'a also produced superior figs, and especially those of the service-tree were to be found in abundance. Hazel-nuts and chestnut-nuts of the finest quality and a local fruit resembling that of the service-tree were to be found in abundance. Hazel-nuts and chestnut-nuts of the finest quality and a local fruit resembling that of the service-tree were to be found in abundance. Hazel-nuts and chestnut-nuts of the finest quality and a local fruit resembling that of the service-tree were to be found in abundance. Hazel-nuts and chestnut-nuts of the finest quality and a local fruit resembling that of the service-tree were to be found in abundance. Hazel-nuts and chestnut-nuts of the finest quality and a local fruit resembling that of the service-tree were to be found in abundance. Hazel-nuts and chestnut-nuts of the finest quality and a local fruit resembling that of the service-tree were to be found in abundance. Hazel-nuts and chestnut-nuts of the finest quality and a local fruit resembling that of the service-tree were to be found in abundance. Hazel-nuts and chestnut-nuts of the finest quality and a local fruit resembling that of the service-tree were to be found in abundance.

When the town was attacked by the Russians in 332/943, the Russian occupation continued for many months (a year according to Yākūt, ii, 834), and they were only dislodged with the greatest difficulty, after an epidemic had decimated their numbers.

Ibn Hawkal mentions the ill effects of the Russian invasion but, as is now clear from the second edition of his work (see Bibliography), he does not ascribe the catastrophic decline of Bardhā'a in his time, illustrated by a report that there are now only five bakers in the town where formerly there were 1200, mainly to devastation caused by the Russians. Rather this was due, he tells us, to 'the injustice of its rulers and the management of lunatics' (1st ed., 241), phrases which are amplified and explained in his second edition (336) as fiscal molestations which have 'eaten up it and its people', and to 'the neighbourhood of the Georgians (al-Kurdj)' (2nd ed. 337, 339). The latter appears to have reference to interference from the direction of Gandja (Djanza), later Elizavetopol, only 9 farsakhs distant from Bardhā'a (Yākūt, i, 559), where the Shaddādīs ruled in the 2nd half of the 4th/10th century. Otherwise the misgovernment and excessive taxation of which Ibn Hawkal speaks must probably be ascribed to the Daylamite Musafirids, unwilling to see Bardhā'a recover its former position to the detriment of Ardabil. Bardhā'a may have revived somewhat, since an attack upon it by a king of the Abagārs is said to have provoked reprisals by the Saltik Alp Arslān in 661/1067. But it is scarcely mentioned in the Mongol period and the long interval which has elapsed since then can hardly have been much more than it is today, a village in the midst of ruins.

(D. M. Dunlop)

BARDJAWAN, ABDU'L-FUTŪH, a slave who was for a while ruler of Egypt during the reign of al-Hākim. He was brought up at the court of al-'Azīz, where he held the post of intendant (Kaḥīrī, ii, 5; Ibn Tağhrībdīr, Cairo, iv, 48; Ibn Khallikān, ii, 201). He was a eunuch, and was known by the title Uṣṭādī [q.v.]. His ethnic origin is uncertain—Ibn Khallikān calls him a negro, Ibn al-Kalānīst simply a white (abyād al-lawn), al-Maqrīzī either a Slav or a Sicilian, the readings Şaşlabī and Şiklī both occurring in the MSS. of the Kaḥīrī (cf. S. de Sacy, Chrestomathie, i, 130).

Bardjawān was appointed guardian of the young heir to the Caliphate by al-'Azīz, and on the latter's death in Rāmāḍān 386/October 996, he proclaimed
his ward as the Caliph al-Hākim. His rôle was at first limited to the guardianship of the young sovereign, the effective power in the state resting with the Wāsita [q.v.]. Ibn 'Ammār al-Kutāmī, the leader of the Berber troops and faction. Ibn 'Ammār's power was no doubt irksome to the young Caliph and his guardian; the supremacy of the Berbers undoubtedly angered the Turks and other Easterners in the army, and probably also the general Egyptian population. Bardjawan threw in his lot with the Easterners, and in 386/996 wrote to Mungutakin, the Turkish governor of Damascus, inviting him to come with his army and save Egypt and also the person of the Caliph from the tyranny of the Berbers. Mungutakin, with Turkish, Daylamite, Negro, and local Arab support, advanced against Egypt, but was defeated near 'Aškalān by a Berber force sent by Ibn 'Ammār and commanded by Suyaymān b. Dā'far b. Fahlāb. Bardjawan was compelled for the moment to submit to Ibn 'Ammār, but a little later the support of Dāyāb b. Sāmsāma, a disaffected Berber officer, enabled him to challenge Ibn 'Ammār again, this time successfully. In an open clash Ibn 'Ammār was defeated and driven into hiding, while Bardjawan took his place as wāsita and effective master of the state (28 Ram. 385/2 Oct. 997). Bardjawan dealt leniently with the defeated Berbers in Egypt, but the breaking of their power proved to be permanent. In Damascus the Berber governor was dismissed and his Kutāmī troops massacred. A period of disorder followed in Syria, which was ended by vigorous action on the part of Bardjawan. Arab rebels were suppressed in Palestine and Tyre, and Byzantine attacks by land and sea repelled. Diplomatic negotiations ended with a ten-year truce between the Byzantine and Fātimīd Empires. In the West, Bardjawan conquered Barka and Tripoli, both of which were placed under eunuch governors. The latter conquest was of brief duration.

Emboldened by these successes, Bardjawan adopted a high-handed attitude to the Caliph, even going so far, according to some sources, as to restrict his riding on horseback and his expenditure on gifts (Nuwayrif, Bar-Hebraeus). Nuwayrif tells a revealing story, according to which Bardjawan used to call al-Hākim 'the lizard' (inajda), and when al-Hākim summoned Bardjawan to his death, the message ran: 'Tell Bardjawan that al-Hākim is an obvious error; Ibn Khallikān, 1, 110 (Eng. tr. i, 253) and ii, 201; Ibn al-Āthir, ix, index; Ibn Khaldūn, Ibar, iv, 57; Bar-Hebraeus, Chronographia, Eng. tr. 160, 182; Ibn Ṭaḥārībīrī, Cairo, iv, index; Yahyā b. BARDJAWAN — BAREILLY

BARDJAWAN (Barell) a district town in the Uttar Pradesh, India, situated in 28° 22' N. and 79° and 24° E. stands on a plateau washed by the river Rāmganga. Population (1951): 194,679. Founded in 944/1537, the town derives its name, according to tradition, from Bās Dō, a Barīlā Rādjpūṭ by caste. It is popularly known as Bāns Bareilly, partly to distinguish it from Rām Barell, the birth-place of Sayyid Ahmad Bārīlī [q.v.], and partly due to the proximity of a bamboo (bāns) jungle.

During the reign of Akbar, a fort was built here to check the depredations of the Rādjpūṭ tribes of Rohilkhand. As usual a town gradually grew round the citadel, and, by 105/1556, it had developed into a pargāna head-quarters. It remained of little importance till the reign of Shāh Dāhān when it was made the capital of Kēthēr (the old name of Rohilkhand). In 108/1675, a new city was founded by Makhrand Rāy, who was appointed governor in place of 'Ali Kullān, who had held the office since 1038/1628. During the Mughal period the city was ruled by a governor. After the death of Awrangzīb in 1119/1707 the Hindus of Bareilly turned out the Mughal governor, refused to pay the tribute, and assumed power. They, however, were soon out among themselves, and invited 'Ali Muhammad Kān, the Rohillah chieftain, to assume the reins of power. He soon extended his sway right up to Almārā in Kumaun but in 1158/1746 Muhammad Shāh, King of Delhi, marched against him and took him a prisoner to Delhi. He, however, soon won back his freedom and returned to the governorship of Bareilly in 1160/1748. On his death in 1162/1749 he was succeeded by Hāfiz Rāhmat Kān, who after some sharp encounters with Awadh forces, strengthened by Mahrratta contingents, became the unquestioned ruler of Rohilkhand. In 1184/1770 Nāgīlā al-Dawīla defeated Rāhmat Kān with the help of Mahrratta troops under Sīndhīa and Holkar. Shudījāl-Dawīla,
however, came to the rescue of the Rohillas but soon afterwards fell upon them, killing their chief, Rahmat Khan. In 1186/1773 Sa'dat Yar Khan was appointed governor of Bareilly under the Nawabs. In 1719/1814 the town was attacked by a Berber confederation, led by the Masmuda group, and had to pay a high tribute. In 1821/1861 the town was again attacked by a Berber confederation, but was defended with heavy losses. In 1832/1816 the residents rose against the imposition of a local tax but were dealt with an iron hand. In 1253/1837 and 1257/1842 serious Hindu-Muslim riots took place.

The town was badly disturbed during the "Mutiny" of 1273/1857 when Khan Bahadur Khan, grandson of Hafiz Rahmat Khan, was proclaimed governor. After the fall of Delhi in September 1857, Tafqul Husayn Khan, Nawab of Farrukhabad, Nana Sahib from Bihar and the Mughal prince, Firuz Shah, the rebel leaders, made the city their stronghold. They were, however, defeated, and the city was re-occupied by the British on 5 May 1857. In 1287/1871 a Hindu-Muslim riot again took place and since then several religious riots have occurred. With the establishment of Pakistan in 1947 the bulk of the Muslim population migrated from Bareilly.

'General' Bahkt Khan [q.v.] of the Bareilly Brigade, who was appointed Commander-in-Chief of the rebel forces during the "Mutiny", was a native of this town. Ahmad Raju Khan (d. 1340/1921), a theologian and scholar whose followers formed themselves into the Hizb al-Ahmd, popularly known as the Barilevis, also belonged to this town. The Hizb al-Ahmd is a sub-sect of the Hanafis, who, contrary to other Sunnis, believe that the Prophet possessed prescience or knowledge of the future. It is an article of faith with the Barilevis and has occasioned much strife among the 'Ulama' in the Indo-Pakistan sub-continent.

The only building of note is the tomb of Hafiz Rahmat Khan, constructed by his son, Dhu'l-Fakar Khan, in 1265/1847. This tomb has been repaired several times, the last in 1902-3 by the British Government.

Ind.), index. (A. S. Bazmee Ansari)

Bârûrûsh, formerly Bârûrûsh ("the village where loads are sold") and renamed Bâbul in 1927, is the chief commercial town in the second Ustân (Mâzdârân). It is situated four miles to the east of the Bâbul river, midway between the foot of the Elburz range and the coast; it is also 12 miles from Bâbul-i Sar (formerly Maqâhîd-i Sar), the port of the mouth of the Bâbul river.

The town was founded at the beginning of the 16th century on the site of the ancient city of Mâmtir or Mâmârî (see Melgunov, Das südliche Ufer des Kaspischen Meeres, Leipzig 1868, 177). Shâh 'Abbâs I used to visit the town and he laid out a garden to the south-east called Bâghi Shâh or Bâghi al-Iram. Bârûrûsh remained a place of little importance until the reign of Farah-i Diwârhây-yi Irân, ii, 36, 37.

(L. Lockhart)

Bârghâsh b. Sa'id b. Sultân, sultan of Zanzibar, succeeded his brother Ma'jid, 7 Oct. 1870, and reigned till his death, 27 March 1888. He tried to seize power on his father's death in 1876, and again in 1879 when he was defeated by British intervention and sent to Bombay for two years. The British supported his accession but he at once resisted their efforts to suppress the Slave Trade, for he relied partly on the Ibâdî Mlawa faction which was hostile to all European intervention in such affairs. In 1873 Bârghâsh was obliged to suppress all slave markets and prohibit all export of slaves, even to other parts of his realm; he was then invited to London. In 1876 the movement of slave caravans on land was forbidden. To enforce this policy Lloyd Mathews began training African troops in 1877. The British agent Kirk won Bârghâsh's confidence and became the dominant personality in Zanzibar till he left in 1886. In the African hinterland Bârghâsh had inherited wide claims and some prestige but very little power. In 1877 the failure of negotiations with Sir Wm. Mackinnon for a concession for the development of the country between the coast and Victoria Nyanza ruined Bârghâsh's best chance of enforcing his authority in the interior. In 1881 his proposal that Britain should guarantee the throne to his family and should exercise a regency if he died leaving a minor as heir was rejected. In 1884 the German agent Peters concluded twelve treaties with chiefs whose suzerain Bârghâsh claimed to be; their territories lay along the trade route to Tabora and Ujiji. In 1885 Germany took them and the Sultân of Witu under her protection. Bârghâsh's protest was met by the visit of five German warships and an ultimatum which lack of British support forced him to accept. A commission of British, German and French representatives then met to determine the extent of territory over which his authority would be recognised. Under British pressure Bârghâsh accepted their decision (for details see 80 Sa'id).

His health was now broken and he died immediately on his return from a visit to 'Umân. Bârghâsh was an able and energetic ruler who did much for Zanzibar, supplied it with pure water, organised the import of cheap grain and worked hard to restore the clove industry after a cyclone in 1872. Contemporary Europeans often called him xenophobe but his position was extremely difficult. Britain, whom he was powerless to resist, especially after the collapse of France in 1870, forced him to adopt an anti-slavery policy highly unpopular with his subjects and at the same time gave him no support against the Germans.

Bibliography: R. N. Lyne, Zanzibar in Contemporary Times, 1905; Emily Rüte (Bârghâsh's sister who eloped with a German), Memoiren einer arabischen Prinzessin, 1886; R. Coupland, The Exploitation of East Africa, 1939, giving references to British official sources and the private papers of British officials.

(C. H. Becker—C. F. Beckingham)

Bârghawâtâ, a Berber confederation belonging to the Masmuda groups, established in the Tâmânsâ (q.v.) province, extending along the Atlantic coast of Morocco, between Salé and Safi, from the 2nd/8th to the 6th/12th century.
They were an important confederation, able, according to the Andalusian geographer al-Bakrī, to put more than 12,000 cavalry into the field simultaneously. They appear to have played a certain political role up to the arrival of the Almoravids (second half of the 5th/11th century). Prior to this time, our information on the Barghawātā is almost exclusively due to the Eastern traveller Ibn Ḥawkal (second half of the 11th/16th century); several subsequent chroniclers merely reproduce the latter’s narrative with slight variations of detail (see Bibliography). Al-Bakrī says that he derived his information from statements, evidently preserved in Spain, made by a Barghawātā emissary to the Umayyad Caliph al-Hakam II, who came to Cordova on a mission in 352/963-964. Indications of the rôle played by the Barghawātā at the time of the conquest of Morocco by the Almohad Ṭab al-Muʿmīn are to be found in the memoirs of al-Baydhak (Doc. inéd. d’Hist. almohade) and in the History of the Berbers of Ibn Ḥalda, (see bibliography). In addition to the political importance of the Barghawātā confederation, they practised a special religion, which was nevertheless clearly derived from Islam; al-Bakrī alone gives us some meagre information on this subject, and the other chroniclers confine themselves to reproducing this.

Undeniably the Barghawātā’s appearance in history is connected with the Khāridjīte revolt of Maysara; the populations known under the name Barghawātā (several chroniclers affirm without adequate proof that this was not their contemporaneous name) embraced the Khāridjīte cause and in 127/744-745, if we are to believe a number of them, grouped themselves around an individual called Ṭarīf, whose origin is much disputed: some introduce him as a chief of the Zanāta and Zuwāgha Berbers, some as deriving from a Berber group in Southern Spain (Barbāt, the distorted pronunciation of which was supposed to give Barghawātā), whilst others even accord him a Jewish origin. The Sunni authors, it should be noted, sometimes display a tendency to attribute such an origin to the strongest personalities of the dissident sects: e.g. the Shīʿī Mahdi ʿUbayd Allāh (see Goldziher, Muh. Stud., i, 204). Nobody, however, says that Ṭarīf was descended from a family established in the Tāmāsna in early times. Whether or not he was the promoter of a doctrine derived from Sunni or Khāridjīte Islam, he certainly does not seem to have professed it. His son Ṣāliḥ may perhaps have been the progenitor of the new belief after living and studying in the East. If we accept the chronology of al-Bakrī, completed by Ibn Ḥalda, Ṣāliḥ came to power about 131/748-749 and transmitted it to his son al-Yasāʾ about 178/794/795. It was only the latter’s son Yūnus who, openly professed and spread the new doctrine during his 43 years reign, from 228/842-843 to 271/884-885. We possess no information on the relationships which must have existed at this period between the Idrīsīs and the Barghawātā; nobody mentions any conflict between them. Nevertheless, there is an indication of a bloody battle supposed to have been won near the Wādī Bāḥt by Abū Ḥufayl, Yūnus’s nephew and successor (271-300/982-913).

The Barghawātā would thus appear to have attempted to take advantage of the decline of the Idrīsīs to expand their domination and propagate their doctrine.

In the mid-12th century, they appeared to Ibn Ḥawkal as infidels against whom the Sunnis tended to conduct a holy war from the redāts of the region of Sād, since they could have been prosperous, as they maintained commercial relations with Fās, Aghmāt, Sūs, and Sidjilmāssa. They attempted to open diplomatic relations with the Caliphate of Cordova. Soon, however, they were subjected to a series of attacks by Sayf al-Andalusī, a client of the Umayyads, in 367/977-978, by Buluggn b. Zirī, viceroy of the Fatīmids in Ifrikiya, from 368 to 372/978-983, and by Wadih, the manumed slave of al-Mansūr b. ʿAbd Ṭūnīr, in 393/998-999. The decline of the Caliphate of Cordova enabled them to recover their breath, but after 420/1029, they were subjected to attacks by Abu ʿl-Kamāl Tamīm, chief of the Banū Ḥfrān, who conquered them. His death in 424, gave them a new respite until the arrival of the Almoravids in 451/1059. After putting up a fierce resistance, which cost ʿAbd Allāh b. Yāsīn, the spiritual leader of the new conquerors, his life, the Barghawātā were completely defeated and destroyed. Some, however, still remained in the Ťāmāsna when the Almohad ʿAbd al-Muʿmīn undertook the subjugation of Morocco after the conquest of Marrakesh (541/1147). Since they had embraced the cause of rebels against the new authority, the Almohad chief sent several expeditions against them and finally got the better of them in 543/1148-1149. From that date their group ceased to exist and gradually their name disappeared: Leo Africanus (beginning of the 10th/16th century) no longer quotes their name, though he knows that the Tāmāsna was formerly inhabited by “heretics”.

Their doctrine, according to the glimpse which al-Bakrī affords of it, appears as a Berber distortion of Sunni Islam with a number of Shiʿī infiltrations and an entirely Khāridjīte austerity as regards morals. Ibn Ḥawkal stresses the ascetic life and good morality of the Barghawātā. Moreover, the institution of numerous prayers (five during the day and the same number at night) frequent fasts, very complete ablutions, the harshness of punishments inflicted on thieves (death), fornicators (stoning) and liars (banishment) can be ascribed to Khāridjīte strictness. On the other hand, the fact that Ṣāliḥ promised that he would return when the seventh chief of the Barghawātā had assumed power and declared that he was the Mahdi who would fight against the Antichrist (al-dajīd) at the coming of the end of the world with the help of Jesus, can be considered a sign of Shiʿī influence. The month’s fast in Radjab or Šawwāl, the communal prayer instituted in Thursday, the food taboos (no heads of animals, no fish, eggs or cocks), and the rules of marriage are merely distortions of Muslim Law, as was the existence of a Kurā in the Berber language of 80 sūras, bearing names of prophets, animals etc. The continual use of the Berber language, the frequent resort to astrology and magic, healing by means of applications of the saliva of members of the family of Ṣāliḥ) bear witness to the influence of the Berber milieu on the faith of the Barghawātā. It is to be regretted that apart from a few ritual expressions and the beginnings of a sūra cited by al-Bakrī, we possess no original documents on this religion. In such circumstances it is impossible to arrive at an accurate idea of it.

(R. Le Tournear)

BARHEBRAEUS [see Ibn al-'Ibri].

BARHût (also Barahût or Balahût), a wâdi in Hadramaut, in one wall of which is the famous Bi'r Barhût, now known to be a cave rather than a well. The wâdi, which lies east of the town of Tarim, empties into al-Masila, the lower stretch of Wâdi Hadramaut, from the south. At the mouth of Barhût is Kabr Hud [see Hud], the most sacred shrine in southern Arabia, which is the object of a ziyâra every Shâbân.

Early Islamic traditions describe Bi'r Barhût as the worst well on earth, haunted by the souls of infidels. Barhût probably came to be known throughout Arabia because of its association with the tomb of Hud, rather than vice versa (cf. Wensinck, citation von Kremer, in El 2, i, 328); it is unlikely that a mere cave would have acquired such notoriety. The true nature of Bi'r Barhût was first revealed by D. van der Meulen and H. von Wissmann, who explored it in 1931. About 300 feet above the floor of the valley they found "a typical limestone cave, with nothing whatever volcanic about it. The curious but innocent smell inside does not come from sulphurous vapour; it is probably due to the dust from the weathering of the rock or, perhaps, to bats". An examination of the main corridor and various side corridors failed to disclose any noteworthy remains.

Bibliography: For the old erroneous beliefs regarding Bi'r Barhût, see the references cited by J. Schleifer in El 2, i, 654, to which should be added C. von Landberg, Études sur les dialectes de l'Arabe méridionale, i, Leiden 1901, 432-47, 481-4. For the cave, see D. van der Meulen and H. von Wissmann, Hadramaut, Leiden 1932.

BARID, word derived from the Latin verusdi/ Greek herodes (of uncertain origin, perhaps Assyrian) "post horse", usually applied to the official service of the Post and Intelligence in the Islamic states, and likewise to the mount, courier and post "stage". The institution of the state postal service was known to the Byzantine and Sasanid Empires, from which it would appear the first Caliphs only required to borrow it, its foreign origin being confirmed by a partly Persian terminology. The barid operated from the Umayyad period and 'Abd al-Malik is considered as having strengthened its organisation, once he had re-established internal order. From the beginning of the 'Abbasid regime, the Post was one of the most important governmental services and its direction was entrusted to intimates of the Caliph, such as al-Ja'far the Barmaid, or to Palace eunuchs. The various Caliphs developed the system of stages which, in the middle of the 3rd/9th century, covered the whole Empire.

The actual organisation of the post in the 'Abbâsîd period is sufficiently well known thanks to the works of Ibn Khurraḍādhîb and Kudâmâ, composed for the use of the secretaries of state in the 3rd/9th and 4th/10th centuries, which provide lists of stages. The Empire contained no less than nine hundred and thirty stages (sikka, also called ribât in Iran and markaz al-barid in Egypt), theoretically, situated two farsâkhs (12 km.) apart in Iran and four (24 km.) in the western provinces; officials (muwaṭṭâbûn) were responsible for ensuring the transport of the post (al-kharâj) within the times allotted. The messengers (fuyûdî, furdûshî) used mainly mules in Iran and camels in the West, but sometimes horses as well. The organisation, however, remained flexible and several times a Caliph, a wâsr and even an ordinary governor were to be found temporarily strengthening the postal service on a particular route for political or military reasons. Pigeons were also employed for sending urgent news. The Post being an official service, it only transmitted private letters as an exception to the rule. The mounts also served to carry men, when these were agents of the State, and we even find the new Caliph al-Hâdî availing himself of the services of the barid to return to Baghdad from Djurâdân after the death of his father (al-Tabari, iii, 547 and al-Dhâlibîjâbûrî, K. al-Wuzârâ', Cairo ed., 185).

The Postmasters (wâshi al-barid), who came under the authority of the director of the department of the Post (sikka diwân al-barid) were not restricted in their duties to the transmission of official letters emanating either from local officials or from the central services. Thanks to a text of al-Tabari relating to the Caliphate of al-Manṣûr and to a diploma of investiture preserved by Kudâmâ, we are acquainted with the duties of these officials. They had to provide the central government with all necessary information on the state of their province and agents' activities, on the attitude of the commissioners for land taxation and Crown lands and that of the kâdis, and on the monetary and economic situation. Their supervision extended also to the governor of the district, as is shown by the episode of Tahir's [q.v.] autonomy. In addition, they were also entrusted with the duty of redressing grievances (Miskawayh, Eclipse, i, 25). In Baghdad the reports assembled by the director of the diwân were communicated directly to the Caliph, at least in the early period. In addition, there was a director of intelligence (Îkhabâr), entrusted with the supervision of the officials and officers of the capital, including the wâsr himself when necessary (Miskawayh, Eclipse, i, 24); this office, which seems to have been independent of the Postal Service properly so-called, was entrusted to eunuchs or amirs enjoying the sovereign's confidence.

If we are to credit the account in the Ta'rif of al-'Umâr, the Buwayhids "cut off" the barid so as to deprive the Caliph of his means of gaining information, thus bringing him more surely under their tutelage. It was in fact in their time that "runners" (su'dî) first appear in the East. Gradually the postal service seems to have become increasingly disorganised until its suppression by the Saldûkîs (455/1063), after which extraordinary "emissaries" alone were used. At the time of the Crusades, the Zangids and Ayûbîs had no real postal service at their disposal, but made use of runners, swift cameleers and pigeons.
In the Mamluk State, the postal service for a time recovered its former importance, and its workings are known to us through texts and archaeological remains. Its reorganisation was the work of Baybars, who not only drew upon the example of the 'Abbasid Caliphs, but also on that of the Mongol Empire, with which he had to contend. The Mamluk barid, an organ of the State closely linked with the Holy War, therefore, assumed primarily a political and military rôle, although later it was adjusted to favour commercial traffic. Directed initially by the sultan himself, it later passed into the hands of the secretaries of state, recruited from the famous family of the Banu Fadl Allah, who imparted to it a bureaucratic character, before passing back to the amir dawddar. In addition to couriers (baridi) commanded by a mubaddam al-baridyya and recruited among the mamluks of the sultan's household, the personnel included stage grooms (tāḥā) and "outriders" (sawaḍā). The postal service first operated in Egypt and on the Cairo-Damascus route (a distance normally covered in a week) and was subsequently extended to the towns of the Syrian coast and the fortresses on the Taurus borders. The stages for changing horses, theoretically four jarrabāgh apart, were first established in public caravanserais. Then special buildings were erected for this purpose, of which the almost universal type, apart from architectural improvements, corresponded to the requirements of "stabling the sultan's horses and housing the small number of men in charge of them" (J. Sauvaget). The routes were then adjusted to ensure a quicker and more regular service. At the same period, the reception of the couriers by the sultan was surrounded by a special ceremonial and their badge of office, known from its employment in Mamluk heraldry, was given a more sumptuous appearance. Pigeon post and a system of visual signalling were also developed. The invasion of Tmūr (803/1400), however, destroyed this organisation, and was known to us through texts and archaeological remains.

The institution of the Post existed in the various Muslim states, where it met practical requirements and harmonised with the essential principles of the Qur'ān, the inviolability of letters and state secrets; its form, however, was not always very developed. In Muslim Spain in the 14th/15th century, the State postal service had not the same importance as it possessed in the East; it employed messengers mounted on mules and Sudanese runners (raṭḥās), which reveals the sketchy character of the organisation, and was directed by a jāḥīb al-burud, a high official, who seems also to have had a network of agents at his disposal to provide intelligence. In the Ḥafṣid state in eastern Barbery, the Post assumed a more rudimentary aspect; the couriers had to provide their own mounts, and there were no fixed stages where they could change them. The Post also existed in Ṣafawid Iran as well as in the Ottoman Empire (see further POSTA, KAYKĀS, TARAR, ULAB).

resources and he did not hesitate to have his brother Abū Yusuf assassinated in Safar 332/November 943 for the simple purpose of possessing himself of his wealth. However, he himself died shortly afterwards in Shawwal 333/July 944 and was replaced by his son Abū 'l-Kāsim. The latter had to protect himself against the intrigues of his uncle Abu '1-Husayn who, seeking to obtain the governorship of al-Baṣra for himself, was in the end condemned to death and executed in Bagdad at the end of 333/944. He was then obliged to fight the Buwayhid Mu'taz al-Dawla who, in 356/967, expelled him from al-Baṣra. Forced to flee to the Carmathians of al-Bahrāyn, his political rôle came to an end. He died in 349/960. Abū ‘Abd Allāh had four other sons, to whom incidental references are made in the chronicles.

(D. Sourdel)

BARĪD SHAHĪS. A dynasty founded by Kāsim Barīd, who was originally a Turkish slave sold to Muḥammad Shāh III, the 13th of the line of the Bahmanids [q.v.]. A man of outstanding personality, a good calligrapher and musician, he also proved his mettle on the battlefield and rose to be the kotwal in the reign of Mahmūd Shāh, and after the death of Mālik Ḥasan Nizām al-Mulk, arrogated to himself the office of chief Minister of the tottering Bahmani State. He had often to contend with the more powerful fiefholders of the Kingdom who had become virtually independent at Bīdāpzūr, Ahmadnagar and Golkonda, but his chief strategy lay in his bring always at the capital, Bīdar [q.v.]. Kāsim died in 949/1542 and was succeeded by his son Amīr Barīd. The authority of the Bahmanī Sultāns had been shattered by Kāsim, and what was left of it was now put an end to by his successor, till, after the flight of the last titular monarch, Kālīm Allāh he became supreme at Bīdar. But he had to cope with the power of ‘Alī ‘Ādī Shāh of Bīdāpzūr who actually occupied Bīdar after routing the Barīdī ruler. The citadel was restored after a while, but only after the forts of Ḵāndār and Kāryānī had been annexed to Bīdāpzūr. Amīr Barīd tried to bring at least the small fiefholders under the direct control of the centre, much as Māḥmūd Gāwān had done [q.v.], but he was not successful. He died in 950/1543 and was succeeded by his son ‘Alī ‘Ālī Barīd was a lover of literature, art and architecture. However, the Rangī Mahal within the fort at Bīdar and his own well-proportioned mausoleum are two outstanding monuments to his taste. He was blessed with a long reign. He was the first of the Barīdīs who adopted the royal title, although for the simple purpose of possessing himself of his wealth and then by Kāsim II who was succeeded by his infant son known as ‘Arīrī ‘Alī Barīd Shāh. A relative, known as Amīr Barīd Shāh II put him aside and occupied the throne. He was succeeded by a ruler who is called in a bilingual inscription Mirzā Wāli Amīr Barīd Shāh. It was in his reign that the Barīdī dynasty came to an end and Bīdar annexed Bīdāpzūr in 1028/1619.

Very few Barīdī coins have been found. Although Ferištā, an historian of the late Bahmani period (pp. 151-60). The tomb of Bīdāpzūr is incomplete on his sudden death in 949/1542, without any date. These are all in the Haydarābd Museum.

(H. K. Sherwāni)

II. — Monuments. All the monuments of this dynasty are in the town of Bīdar [q.v.]; as successors to the well-established Bahmani dynasty they inherited many fine structures, and their building activity was more a matter of adaptation and rebuilding than of the erection of any major structures. The progress of the Barīdī style is well illustrated in their tombs, which form a royal necropolis some 6 km. west of the city walls, and occupy a large area on account of the vast garden-enclosures of each tomb. Page references in the following account are to G. Yazdani, Bīdar: its History and Monuments, Oxford 1947.

The tomb of Kāsim I, d. 910/1504, is a small insignificant building with a plain conical dome. The fortunes of the dynasty came quickly to a close after ‘Alī Barīd. He was followed by ‘Ībrāhīm and then by Kāsim II who was succeeded by his infant son known as ‘Arīrī ‘Alī Barīd Shāh. A relative, known as Amīr Barīd Shāh II put him aside and occupied the throne. He was succeeded by a ruler who is called in a bilingual inscription Mirzā Wāli Amīr Barīd Shāh. It was in his reign that the Barīdī dynasty came to an end and Bīdar annexed Bīdāpzūr in 1028/1619.
but is incomplete and presents surfaces of lime-laid masonry. Carved corner jambs show the Hindu ishta as part of their decoration (pp. 160-1). Both these tombs have a large dome, not stilted but recurved at the base to form a three-quarter orb, which appears somewhat top-heavy for the structure. This constriction of the dome is characteristic of the contemporary buildings of the Kutb Shāhī and 'Adil Shāhī [q.v.] dynasties at Golconda and Bijapur also. The single opening is reverted to in the tomb of Kasim II, which is better proportioned, but the open design is apparent in the dome over the mihrab of the Kāli (‘black’) masjid, pp. 166-7. The Džāmi' Masjid of the town (see Bīdar), a late Bahmani building, was restored during the Baridi period (chain-and-pendant motif in spandrels of the façade), pp. 103-4.

From the time of All Barid the buildings become more ornate in their minor detail, and the influence of the Hindu mason becomes more apparent; in some Baridi buildings—e.g., the Kāli masjid—the forms used in stone often seem more appropriate to wood-work. Much of the later work shows that meretricious character often apparent in the buildings of a dynasty in decline.

Bibliography: Fuller details of many of the above buildings are given in the article on Bīdar, [q.v.]. See particularly Yazdani, op. cit., for full references, extensive plates, drawings, plans, etc., and bibliography given in article Bīdar. (J. Burtou-Pagc)

BĀRĪH (Ar.), a term applied to a wild animal or bird which passes from right to left before a traveller or hunter; although opinions differ on this point, this is generally interpreted as a bad omen, because, it is said, it presents its left side to the hunter who does not have time to take aim at it; an animal which passes from left to right (ṣābī) is on the contrary of good omen. The nāṭḥ approaches from the front, and the kād from the rear.

BĀRĪMMĀ [see Hamrīn, Džabāl].

BĀRIRĀ, a slave woman who had arranged to buy her freedom in nine (or five) annual instalments, appealed to Ašīṣa who agreed to pay the whole sum. The owners were willing to sell her, but insisted on retaining the right of inheritance from her. When the Prophet heard this he told her to buy her, for the right of inheritance belonged to the one who set a person free. Ḥārīm therefore paid the money and set Barira free. She remained as Ašīṣa’s servant and is said to have died during the Caliphate of Yazid I (60-64/680-683). In the tradition of the Ile she was consulted regarding Ašīṣa (cf. Bukhārī, Sahāhāl, 15). Three sunnās are connected with her: (1) The Prophet said the right of inheritance belongs to the one who sets a person free. (2) She was given her choice about staying with her husband Mughlīh who was a negro slave, and when she refused in spite of the Prophet’s plea for Mughlīh she was told to observe the sīdā period appropriate for a divorced woman. Mughlīh is said to have followed her in the streets of Medina weeping. (3) Once when the Prophet came in when meat was being cooked and was given something else to eat he asked the reason. On being told that the meat was sadaqa given to Barira, he said it was sadaqa to Barira but a gift to him, meaning that one who had received sadaqa could give some of it as a present to another. Barira is said to have warned ‘Abd al-Malik b. Marwân that if he became ruler he must avoid shedding innocent Muslim blood.

BĀRKA, a word applied by the Arab writers both to a town—now al-Margj—and to the region which belonged to it, that is to say Cyrenaica, a broad African peninsula jutting out into the eastern Mediterranean between the Gulf of Bomba and that of the Great Syrtis, situated, therefore, between long. 20° and 30° east of Greenwich and the parallels 30° and 33° of latitude. To the east begins the Marmarica, whilst the vast eastern Libyan Sahara stretches away to the south.

The relief is made up of plateaux, resulting from the folding, in the Miocene age, of thick layers of Cenomanian limestone and lower Tertiary; they slope gently towards the south, where the Sahara table has not been raised up, giving way to low alluvial plains and falling away to the sea in graded levels. The high plateau, the Dżabāl Akhdar (Green Mountain) rises from 500 to over 600 metres, reaching its highest point at 868 to the south of the ruins of Cyrene. An intermediate plateau, from 250 to 400 metres, narrow in the north, then widens out to the west and south-west; it contains al-Margj and dominates the coastal plain of Benghāzī, which is also of limestone. That Cyrenaica is not a desert like its vast hinterland is due to the influence of sea and altitude: its temperatures are moderate in summer and it enjoys relatively high rainfall. January and July-August temperatures are 13.5° C. and 25.8° at Benghāzī, at sea-level, 10.4° and 23.9° at al-Margj at an altitude of 285 metres, and 8.4° and 22.3° at Cyrene, situated at 621 metres, where snow is not unknown. Rainfall, slight on the western littoral (266 mm. at Benghāzī) and inadequate for almost all cultivation without irrigation as the local soils are often heavy, increases in the northern parts of the first plateau with 471 mm. at al-Margj, and especially on the second, where more than 500 and even 600 mm. fall in the region of Cyrene. In contrast, rainfall declines towards the east (300 mm. at Derna) and, very rapidly, towards the south-east and the south. Likewise, the wādī running down towards the Sahara only have water after the heaviest rains and end in vast enclosed depressions; of the very short and deeply embanked Mediterranean tributaries, only the wādī Derna has a perennial flow of water. The waters filter away into the limestone of the plateaux and only reappear in a few “Vauclusian” springs at the base of certain escarpments. The plateaux have a “carstic” relief, with swallow-holes, sink-holes, extensive areas without surface drainage and grottos. The high plateau, the Dżabāl Akhdar, still supports, to the south of al-Margj and Cyrene, several fine forests of horizontal cypress (Cupressus sempervirens, var. horizontalis), green oaks, Aleppine pines and Phoenician junipers; in the main, however, it is covered by low forest and a scrub of mastics and wild olives. Cyrenaica comprises 110,000 hectares of forest and scrub. The clearings, extended by man, afford good pasturage and fertile brown and grey land for cultivation. This very limited good region quickly passes on the coast and to the south into scanty heathdominated by a few junipers and broken
by increasingly extensive stretches of steppe. The large rocky outcrops enclose somewhat narrow areas of red clay soils, relatively fertile, but for the most part requiring additional water for so slight a rainfall. 55 kilometres to the south-east of Benghazî and 60 to the south of Derna, begins the Sahara, with its very scanty pasturages and light soils.

"Serviceable" Cyrenaîca, a narrow fertile region and one favourable to sedentary life, isolated by the steppes of the Marmarica and Syrûtica and by the vast Libyan desert, has always been a dependency of the East. A land of nomadic Libyans, it became the sole African dependency of the Greek world with the five colonies of the Pentapolis founded between the 7th and 5th centuries B.C.: Cyrene, the first to be created, and admirably situated in the heart of the Diabal Akhdâr, its port Apollonia (Mârsâ Sûsî), Barkê (al-Mardjî), Euhesperidis (Benghazî) and Teuchira (Tocra). It was subsequently attached to Ptolemaic Egypt, at which time Ptolemâis (Toûlmeta) and Darnîs (Derna) originated. As a Roman province, it was beset by frequent disturbances and was far from prosperous. In the 4th century A.D., it was attached to the Eastern Empire and formed part of the Byzantine Empire down to the 7th century, without ever recovering its activity of the Greek period. On the eve of the Arab conquest, its agriculture was receding before the advance of pastoral life. Cyrenaça was occupied by the Arabs after two campaigns conducted by 'Amr b. al-Àsî in 22/642 and 643. Subsequent expeditions crossed it, gradually reaching and conquering the Maghrib. Thus it became a major thoroughfare, both military and commercial, from Egypt westwards, either via the southern depression and oases such as Awgjila or by the detour of the northern plateaux. The Berber tribes, the Lawată, the Hawâra and the Awriga, intermingled with Arab elements, took increasingly to stock-breeding, which spread at the expense of agriculture: exports to Egypt then consisted of live-stock, wool, honey and tar Bâkî, trans. de Slane, 153; Barbà remained the only considerable centre. The region, linked to Egypt, was, like the latter, dependent in turn on Damascus, Baghdât and then the Fâtimids. The Banû Hilál and Banû Sulaym invaded, who, in the 9th/10th century left Egypt and spread over the Maghrib, crossed the Barbà region, which gradually became completely bedouinised. In Ibn Khaldûn's time, in the 9th/10th century (Histoire, trans. de Slane, i, 164-165), its towns and villages were ruined and the population was made up entirely of semi-nomadic and nomadic herdsmen, living only in tents. The tribes formed two main groups, the Mrâbûtîn (Murâbûtîn) and the Sa'âdîf. The Mrâbûtîn are thought to have a Berber origin and comprise two groups: the Barbâthîn to the west, whose main tribes are the Maghârâba (Syrîtica), the 'Urfa and the 'Abbåd (al-Mardjî), and, on the other hand, the Harâtî, who include the Dorsa, on the littoral, the Hasa, the 'Aylet Fâ'îd and the Brà'âsà north and south of the central Diabal Akhdâr and especially the 'Abedât on the plateaux south of Derna and the Gulf of Bombà. As regards the Sa'âdîf, they lay claim to purely Arab origins: they are the Frâghyâr and the Awâghîrî on the steppes of the south-west, the minor tribes of the Marmarica and the nomads of the Awgjîlâ-Djâlî region. Outside the urban centres, the entire population were Sunnî Muslims of the Mâliîf rite; all spoke Maghribî type Arabic dialects, except the inhabitants of Awgîlâ in the south, the first Berber-speaking locality to be encountered going westwards.

It was not until the end of 1911, after determined resistance by the Beduin and Sanûsîyya, that the Italians became masters of the whole of Cyrenaîca with its hinterland. They did their utmost to colonise it. The first colonists settled, in rather hazardous conditions, on the unpropitious Benghazî plain and in the vicinity of al-Mardjî. Systematic effort, however, was directed towards the exploitation and settlement by Italians of the Diabal Akhdâr, where, between 1934 and 1939, a dozen villages were founded. "Demographic" and then "mass" colonisation was extended over a total of 80,000 hectares, producing wine and olive oil. On the 9th January 1939, Cyrenaîca, like Tripolitania, was integrated with its hinterland in Italian territory. By this time, the Italians had begun to provide Cyrenaîca on a large scale with the equipment and services of a colonial country in the course of modernisation: a railway line from Benghazî to al-Mardjî and Solûk (164 km.), a network of roads in the west and the north, ports (especially at Benghazî), aerodromes, educational establishments and hospitals, postal services, works to supply water, notably a pipe-line over 200 km. with pumping stations, reservoirs and branch conduits to serve the villages of the Diabal Akhdâr, etc. Cyrenaîca entered the war period in full development. But all Italians left the country in the face of the final victorious offensive of the British Eighth Army in November-December 1942 and it then came under British Military Administration. The British then placed Idris, the leader of the Sanûsîyya, at the head of the amirate of Cyrenaîca and, in 1949, assisted him to accede to the throne of the Libyan Federal Union, which, with Cyrenaîca, comprises Tripolitania and...
Barka. Nothing remains of the agricultural work of the Italians; the country has reverted to pastoral life, with a little barley being grown, and the villages have fallen into ruins. The wretched survivors supported the few industrial undertakings (fish canning-factories, breweries and distilleries, boot and shoe factories), which they had set up at Benghazi. Exports now only include a few products derived from stock breeding, salt and sponges harvested by the Greeks in the Gulf of Bomba and the Great Syrits. Cyrenaica, prolonged by its immense Saharan hinterland, stretching to lat. 26° and embracing the oases of Kufra, covers 855,400 km² (out of a total of 1,759,500 for the whole of the Federal Union of Libya), though it contains only 291,350 inhabitants, almost all in the North (out of a total of 1,091,800).

Its average yearly production is 360,000 quintals of cereals (barley and wheat), and it has a stock of between 450 and 500,000 sheep, 350 and 400,000 goats, 30 and 35,000 head of cattle and 20,000 camels. Sparsely populated, very poor in spite of the fertility of some of the regions in the north, deficient in financial resources and administrative personnel, Cyrenaica is dependent on the financial and technical help provided by Great Britain, by the United Nations and the United States.

Barka'Id, in 'Abbásid times one of the sequence of small towns on the main route between Nisibín and Mawsil, in the Djazira province, the others being Adhrama to the west, and Bā'aynatha and Balad (where the Mawsil-Sindjar road bifurcated south-westward) to the east. Barka'Id, of which the modern Tall Rumaylan, north of the railway line (and near to Tall Kokhe station thereon) may possibly mark the site, was probably just inside the Bet de Canard (eastward extremity of the modern Syrian province of Djazira), and lay some 55-55 miles from Nisibín, and 80 from Mawsil. It is described by a number of Arab geographers as a place of considerable size, especially in the 3rd/13th century, with its walls and three gates, excellent springs, 200 shops (largely wine-shops) and busy traffic. It was, in its best days, the country-town of the district of Baḥá', which covered most of the country between Mawsil and Nisibín. It continued as a recognised staging-post until the 7th/13th century, but much diminished in scale by reason of the natural decay of travellers and caravans to avoid a place always notorious—indeed proverbial—for its population of thieves and robbers; Barka'Id declined, therefore, to mere village status while its better reputed neighbours (notably, it is said, Bābahluz, on an alternative route) increased.

Barqūk, al-Malik al-Zahir Sayf al-Din, Mamlūk Sultan of Egypt. He was the first of a new series of rulers, to whom history refers as Circassians in memory of the country where they were originally purchased as slaves, and as Burjūl (see Burjīyā), because Barkūk was the first to have belonged to a regiment with their barracks in the dungeons (burdū) of the Cairo Citadel.

Barkūk provided the link between the two dynasties of Mamlūk sultans: before ascending the throne, he ruled Egypt as Marshal of the Armies, al-bāḥāk al-asākir (q.v.), during the turbulent reigns of two sultans, both minors, of the line of Kālāwūn. Purchased in the Crimea, Barkūk, unlike the rest of the Mamlūks, was no son of an unknown father but could state in his monumental inscriptions that he was the son of Anas; the latter was invited to come to Egypt, where he occupied a position of some standing.

Sold to the all-powerful Ylbūghā 'Umarī, the Marshal who had succeeded in breaking the ill-fated Malik Nāṣir Ḥasan, Barkūk was for a short while imprisoned after the execution of his master. He passed into the service of the Court, but was soon involved in the conspiracy which ended in the assassination of Malik Ashraf Shābān in 783/1377.

He was then promoted to be Marshal of the Armies by Malik Mansūr 'Ali, a seven-year-old child. He had to contend with the ambitions of his fellows, and there was continual warfare, from which he finally emerged the victor. He was then able to gather a group of clients round himself and, when the Sultan died of plague in 784/1382, Barkūk began by placing a brother of the late ruler on the throne, the eleven year old Ħājīdīl. In the end he threw off the mask and, on the pretext that an energetic ruler was needed for the protection of the country, at the end of the same year had the crown offered to himself by a council of the magistrates presided over by the Caliph.

Barkūk was soon up against serious difficulties, which were momentarily to make him lose power. They started with the revolt of the governor of the province of Aleppo, Ylbūghā Nāṣirī, who was joined by a dismissed Mamlūk named Minṭāsh. The rest of the Syrian governors joined the movement, including the governor of Shīb, on the remotest part of the frontier. When the Sultan, after causing his principal officers to renew their oath to him, made up his mind to take action, Ylbūghā already held the whole of Syria and it was beneath the walls of Damascus that he defeated the legitimate army, which came to bring him to his senses, in Rabī‘ I 791/March 1389.

The sultan raised a second army corps, making his preparations in some haste, for Ylbūghā's troops had penetrated into Egyptian territory at Katya and were encamped at Ṣālibiyā. The Sultan set out to take up his position at Manama, but returned to Cairo in despair, for the majority of his officers, guessing who would win, went over to the enemy camp. Nevertheless, he wished the matter to be decided by the arbitration of war and the battle was fought to the north of Cairo and beneath the city's walls on the 9th Dījmād/1st May, without any decisive result. Day by day, Barkūk saw the devotion of his men vanishing and, in the end, he left the Citadel in disguise and went into hiding.

He was discovered, and sent off to prison at Karak in the land of Moab, whilst Ħādīdīl was replaced on the throne. As his masters, the latter had the factious generals, who proceeded to indulge themselves in the trivial occupation of street fighting. Barkūk took advantage of this confused situation
and, escaping from imprisonment, gathered together an army composed in the main of Bedouin Arabs. After numerous vicissitudes, some of which read like an adventure story, he made his triumphal entry into Cairo in Safar 792/February 1390. Clearly Bağdırı could do nothing but withdraw, but apart from this he was not troubled. Sulṭān Bağrūk, moreover, had not disposed of his old opponent Mīnṭāsh and a campaign of two years was needed to get rid of him.

As can be seen, these two reigns of the Sulṭān Bağrūk were eventful but contributed nothing to the glory of Egypt: the last fifty years of the 8th/14th century were indeed lamentable.

Other events must be noted, though at the time the seriousness of their implication was not evident. Already in 788/1386, during Bağrūk's first reign, rumours had been current in Cairo that a certain "Mongol rebel named Timür" had marched on Tabrīz and this was soon confirmed officially by a dispatch from the Djalā'irid sultan of Isfahān, Ahmad b. Uways, who urged Bağrūk to be on his guard. The Mamluk government then sent one of their intelligence agents to conduct an inquiry on the spot in Rajab 780/July 1382, the latter brought back somewhat alarming news. Detachments of the Mongol army had entered Upper Mesopotamia and Asia Minor, at Edessa and Malatya, after having scattered the troops of the Turcoman ruler Kārā Muḥammad.

In the middle of the year 795/1393, Timūr again made his presence felt; an embassy from the Ottoman sultan Bāyāzīd urged the Egyptian government to take military precautions, whilst the Sultan of Bağdagdād, Aḥmad b. Uways, expelled from his domains by the Mongol hordes, took refuge in the Mamluk kingdom. Timūr had nevertheless approached Bağrūk amicably, though the latter, casting aside all prudence, had the Mongol ambassador put to death.

The Egyptian sultan had left for Syria at the head of an army; at that time only a few skirmishes occurred. Bağrūk made a certain number of appointments relating to the Syrian frontier, so that the fortresses of Malatya, Țarsūs, Edessa and Kāfāt al-Rūm received new commanders. Epigraphy, moreover, reveals that works were carried out at this time at the citadel of Ba'labak, the command post at the entrance to Cœle-Syria. Thus, thanks to these meagre indications, we may assume that in the course of his passage through Syria, Bağrūk saw to the defence of the territory; he was back in Cairo on the 13 Safar 792/8 December 1394.

The end of the reign is devoid of historical significance; the sultan died on the 15th Shawwāl 808/20 June 1399, as the result of an attack of epilepsy. Bağrūk was 63 years of age, and for over twenty years had governed Egypt firstly as Marshal of the Armies and then as sultan. The disturbances caused by the Syrian governors gave him much trouble. They can probably be explained by normal feelings of jealousy and instinct for intrigue, which at all times actuated the Mamluks. Certain synchronisms, however, are suggestive and one might well ask whether the great Syrian officers were not induced to rebel by skilful propaganda conducted by the emissaries of Timūr, who was to benefit from the disorders.

Under Barkyaruk, things developed differently and the Empire assumed the guise of a federation of autonomous princes. In Syria, the sons of Tughril, Dukak of Damascusa and Rudwan of Aleppo, acknowledged his sovereignty in principle, without, however, Barkyaruk ever being able to intervene in their affairs. In Khurasan, in the inaccessible mountain regions of the East, rebels persisted—a cousin of Malikshah, a descendant of Yabgu, Tughril Beg’s brother, etc., so that Barkyaruk deemed it prudent to constitute the whole of Khurasan an appanage for his brother Sandjar, assisted by a governor whom he appointed. He did the same thing for Adharbaydjân (with its frontier districts), another of the frontier marches, dangerously—as recalled by Isma’îl b. Yakût’s attempt—by reason of the numbers of Turkomans always ready to support any enterprise showing a likely prospect of booty. Here Barkyaruk installed his youngest brother, Muhammad, accompanied by an aâtabeg, whom he likewise appointed.

Barkyaruk’s difficulties, however, did not end there. Muhammad and Sandjar, co-uterine brothers (but by a different mother from Barkyaruk’s) were incited, especially by Nizâm al-Mulk’s son, Mu’ayyad al-Mulk, (who had been dismissed from the vizierate by Barkyaruk, in favour of a brother with whom he had quarrelled) to throw off all control by their elder brother and revert to the operations which were complicated by several amirs constantly changing sides, and in the course of which both protagonists were in turn forced to flee, an agreement was negotiated by the moderate elements of both sides. In accordance therewith, Muhammad was given the title of malik and received Adharbaydjân with Armenia, under the suzerainty of Barkyaruk, the sole sultan. Muhammad, dissatisfied, reopened hostilities, but was forced to flee into Armenia. Finally, however, in 492/1094, Barkyaruk, ill and weary of the war, agreed to an actual division of the sultanate. Though in addition to the Dîjdîr with Rayy, he retained Tabaristan, Fârs and Khuzistân, Baghdad and the Holy cities, in other words the towns of greatest consequence and the core of the central territories, he was obliged to acknowledge his brother in Isfahan, half of ‘Irâk, and all the western frontier territories from Adharbaydjân to Syria, and to accord him the direction of the Holy War. As for Sandjar, he was to pronounce the khutba for Muhammad and himself simultaneously, disregarding Barkyaruk. It is difficult to say what the outcome of this agreement might have been, if Barkyaruk’s death and the provisional reunification of the Empire which ensued under Muhammad had allowed time for it to come to fruition. In any event, even within the territories as attributed to each brother, the reality of their authority was far from being everywhere assured.

It had been impossible to keep watch over the attempts at regional independence, and the support of the amirs, vacillating between the pretenders, had had to be purchased. The result was that even in Upper Mesopotamia, Kerbûh and especially his successor Diekermezîsh were to be found almost independent at Mawṣil, whilst the Artuqids were taking the initial steps towards the unification of Dîjdîr Bakr to their own advantage. In Armenia, to the Turkomans principalities established in former Byzantine territory and that of the Rawwâdis of Adî, which continued to exist, there was added that of Sukmân al-Küfth, one of Ismai’îl’s former officers, who made himself the Shâh-i Arîmân at Akhblât, On the borders of ‘Irâk, the masters of the Batbha and the Mazyadid Arabs became powers to be reckoned with. Leaving aside Khurasan and the Caspian provinces, where autonomous principalities had always been accepted, and the old principalities, belonging to ancient Buyid and Kurdish families, had similarly been tolerated, the genesis can be observed in Iran and even Khuzistân of hereditary feudal families, issuing from great Saldûkî officers, the best known of them being that of the sons of Bursûk at Tustar. The successive viziers of Barkyaruk, the three sons of Nizâm al-Mulk, ‘Irâz al-Mulk (487/1094), Mu’ayyad al-Mulk, disgraced after a year, and Fakhr al-Mulk (493/1096), then ‘Abd al-Djâliî al-Djistânî, who fell in battle, and al-Maydbadî (495-498), were doubtless primarily occupied in finding money by all possible means (confiscation, pressure exerted on the Caliph, harassing the Christians, etc.) and in countering the intrigues of hostile clans; the difficulty confronting them lay in making themselves accepted by the amirs, as is illustrated by the assassination of the muskawî (Director of Finances) Majdî al-Mulk at Balâlsânî, on the pretext of Shî’ism.

It is true that, in comparison with Muhammad or the early Saldûks, Barkyaruk did not enjoy the reputation of being a militant defender of orthodoxy. The dissensions of his reign benefited the Nizârî Isma’îlîs of Hasan al-Sabbâh, who acquired impregnable fortresses in the mountains of northern Iran and around Isfahan, not to mention the former Ismai’îlî seigniory of Tabas in the desert, which went over to them. When the Nizâmiyya took Muhammad and Sandjar’s side, Barkyarûk’s lieutenant in Khurasan was even to be found enlisting considerable contingents from Tabas. However at the end of the reign, the influence acquired by the Isma’îlîs and the disaffection of Barkyaruk’s supporters, due to the toleration he had shown them, appeared dangerous to him and he encouraged massacres of Isma’îlîs at Baghdad and in Iran, without, however, anything being done to deal with the bases of their power.

Barkyaruk died in Rabî’ II 498/beginning of 1105, when 25 years of age. He was certainly not a great man and the clumsiness with which he alienated the Nizâmiyya, for example, was a grave error indeed. Yet it must be remembered that he was very young and it would be unjust not to recognise that the factors of disintegration which manifested themselves in his time were latent even in the regime of the Great Saldûks.

Bibliography: The sources will be examined in the article Saldûkî. The main ones are the History of the Saldûks of ‘Imad al-Dîn al-Isfahânî (ed. in the version of Bundarî by Houtsma, Recueil, ii, 1888), the relevant part of which is based on the Persian memoirs of the vizier Anušîrwan; the Kâmîl of Ibn al-Athîr, x, which combines copious information from ‘Irâk and Khurasan sources etc., with that provided by the above work; and the Sahlîh-nâmâ of Câhir al-Dîn Nishâpurî, ed. of an approximate text by Gelaleh Khâwar, Tehran 1953, with its derivative, the Râhîl al-Sâdâr of Râwandi, ed. Muî. Ikbâl, GMS 1921. To these may be added, for the revolt of Tutush, the Muslim and Christian sources of Syrian history, in particular Ibn al-Kalâmî, ed. Anedroz. See also the Mu’dilâm al-Tawdîkhî in Persian, anonymous, ed. Bahar 1938, short, but contemporary; and the Nizâmî chronicle of Mari etc. ed. Gismondi. Modern works: Defrémery, Recherches sur le règne du...
BARDA, formerly capital of the Indian State of the same name, now merged with Madhya Bharat, situated in 22° 15' N. and 73° 15' E. on the Vaghjimātr river. Population in 1951 was 212,407. It is known to the inhabitants as Wadhār, said to be a corruption of the Sanskrit word vādār which means in the heart of the banyan-trees, and the vicinity of the town still abounds in these trees. The word bar in Urdu also means a banyan-tree. An old name of the town is Viraksetra or Virāwati which means a land of warriors and was used by the 11th/17th century Mughal governor of Gudjarat, Shah Durrani in 1175/1761 in the third battle of Pālpat. On the death of Damadji, the town was recaptured by the authority of God, but the very next year (1145/1732) Piladji invested the town with the intention of turning it over to his insane eldest brother Sayadji Rao. The House of Gaekwar continued to rule the city independently until 1177/1766, when non-Muslims were the object of such a decree, and the town was recaptured by the authority of God, but the very next year (1145/1732), Piladji was murdered and Abhay Singh, the ruler of Nefusa, to attend the classes given by Shaykh Abu Bakr. When non-Muslims were the object of such a decree, they usually circumvented it by payment of a sum of money. But it may also be interpreted as a measure of defiance, for European privateers were then very active.

The city proper was enclosed by the walls of the old fort, which have now been demolished. The history of Baroda is closely linked with the history of Gudjarat. In 1140/1727 Piladji Gāekwār, the founder of the dynasty which ruled over Baroda till 1949, when the State was merged with the Indian Union, wrested Baroda from Sarbuland Khan, the Mughal governor of Gudjarat. In 1144/1731 Pesjhwa Badji Rao invested the town with the intention of turning it over to his insane eldest brother Sayadji Rao. The House of Gaekwar continued to rule the city independently until 1177/1766, when non-Muslims were the object of such a decree, they usually circumvented it by payment of a sum of money. But it may also be interpreted as a measure of defiance, for European privateers were then very active.

But it may also be interpreted as a measure of defiance, for European privateers were then very active.
active in the Mediterranean. Hence the Draconian decree: European property was impounded both in Egypt and Syria and no European was permitted to return to his own country. There then followed the temporary prohibition of the circulation of European currencies, a measure which had uncertain effects.

The government of Egypt also took serious military precautions, building a number of small forts on the coast and fitting out a flotilla of corvettes. The sultan, however, continued without respite, his preparations for the realisation of his great idea, an expedition against the island of Cyprus. After several preliminary reconnaissances, a large-scale attempt was launched; the only engagement, which was particularly bloody, ended unfavourably for the Cypriots, whose king, Janus, was taken prisoner and brought back to Cairo. He was led through the town in fetters; he only recovered his freedom and his kingdom on payment of a yearly tribute. A part of the booty was devoted to the restoration of various monuments in Mecca (830/1427).

Nevertheless, this relatively easy victory revealed a dangerous state of indiscipline among the troops and on the occasion of a frontier conflict with the army of the White Sheep Turkomân prince, Karâ-Yûlûk, the Mamlûks, after taking the town of Edessa by storm, perpetrated the most revolting atrocities there. This disagreement between neighbours severely impaired the prosperity of Upper Mesopotamia, which was alternately devastated by one side or the other. After considerable hesitation, Barsbay mobilised a large army, which finally proceeded to invest Amid (Diýârbakr). They were, however, unable to take the Turkomân capital, to Barsbay's great annoyance. Faced with the growing discontent of the army, the Sultan was obliged to resign himself to negotiate. Karâ-Yûlûk accepted his proposals for peace and, in several vague formulas, recognised the sovereignty of the sultan of Egypt. The Mamlûk army made its way back to Cairo; their progress was the stampede of a discontented soldiery. The troops proceeded in the greatest disorder, giving the impression rather of the hasty retreat of a defeated army (837/1433). The Sultan had left half the total strength of his army behind in Mesopotamia.

There then ensued a strange diplomatic struggle with the Timûrid sultan Shâh-Rûkh. The Mongol ruler claimed the right to cover the Ka'b with a veil. This was, in fact, a privilege of the Egyptians consecrated by immemorial custom and Sultan Barsbay, supported by his council of chief judges, was unwilling to relinquish it. The dispute, fanned by lawyers' quibbles and crude derisive treatment of the ambassadors, gave rise to the exchange of pithy diplomatic documents. However, it entailed no immediate consequences during the reign of Sultan Barsbay.

No doubt the policy of the ruler of Egypt was based on considerations of prestige, but primarily he wished to prevent the Mongol sultan from gaining a foothold in Arabia through official agents, which might possibly endanger Egypt's commercial interests.

Indeed, Barsbay had recently requested those merchants coming from India to land their wares at Djeddâ, instead of putting in at the port of Aden, as previously. It was a good beginning, but in his insatiable greed, Barsbay determined to force the merchants to proceed obligatorily to Cairo for the purpose of paying taxes. This vexatious regulation was soon formally modified, but though the merchants were excused from proceeding to the Egyptian capital, they still had to pay exorbitant dues at Djeddâ. This port, however, henceforth became a commercial mart of the first importance. Half the dues collected there went to the Sharif of Mecca and half to Egypt. The tax-collectors belonged to the Egyptian administration.

Barsbay's end is a pitiful and tragic tale. An epidemic of plague broke out and, fearing lest he might catch the disease, he resolved to suppress the vexatious economic measures to which we have referred; he proceeded to distribute alms in plenty, though at the same time he also had his two physicians put to death. On the 13th Dhu 'lt-Hijjah 841/7th June 1438, he fell a victim to the plague.

To summarise our impressions of Sultan Barsbay, we must bear two aspects of his character in mind. He was constantly haunted by the morbid fear inspired in him by his rival, Dîanjîbâb Süli, whom he had imprisoned at his accession and who made good his escape. This in itself induced him to make haphazard gestures, which, however, were milder than those suggested to him by his need of money. There flourished a series of practices which led the Mamlûk regime to disaster: the sale of offices, confiscation of fortunes which were too noticeable, the unprecedented extension of state monopolies and the institution of the compulsory purchase of primary commodities, bought up in advance by the Government. The Arab historians aver that Barsbay was an intelligent administrator, an able and poised politician, but the facts speak against this assessment. All his actions are dominated by the spectre of Dîanjîbâb and, precisely because of his erratic changes of mood, we can scarcely consider him as a wise and sagacious statesman. His preparations for the Cyprus and Diýârbakr campaigns appear to have swallowed up large sums of money and the latter was a resoundingly failure.

**BARSHALÔNA.** Spanish Barcelona, the old Iberian town of Barcino (compare Ruscino, from which Roussillon is derived), which incidentally has no connexion with Hamîlcar Barca. Barcelona, once the home of the Laetians, gradually supplanted Tarraco-Tarragona, situated to the south-west of it, as the capital of north-eastern Roman Spain (Hispania-Tarraconensis). From the fragments of the works of al-Idrîsî and al-Bakrî compiled by Ibn 'Abd al-Munîm al-Hîmyarî, it is clear that Barcelona in their day was already a large town. It was encircled by a strong rampart and its port was rockbound, so that only captains familiar with the channels could steer their ships into it. It was in Barcelona, the capital of his country, that the ‘King of Ifrandja' resided. This monarch owned armed ships for travel and corsair raids. The Ifrandjî (Catalans) were of an aggressive temperament which spurred them on to great daring.

The territory of Barcelona produced a great deal of wheat and other cereals, as well as honey in large quantity. There were as many Jews living there as Christians. In 96-98/714-16 it fell to the Arabs under ʿAbd al-ʿAzîz b. Mîsâh b. Nuṣayr after a single attack. In Arabic the town is called Barshinuna, a name derived from the low Latin Barcinona (Orosius already has Barcîlona, the Geographer of Ravenna Barcelona, cf. Hübner in Pauly-Wissowa,
BARSHALUNA — BARUD

s.v.), but it is still more commonly called Barsha-
luna, from which the present Barcelona derives.

The form Barsha-luna is rarer. This is in the origin of the name al-Barsha-luna, the short title which later Arab writers often gave to the king of Aragon and Catalonia (cf. J.A., 1907, ii, 275 ff.).

In 858/801 Louis, the son of Charlemagne, as king of Aquitaine, conquered Barcelona, which from that time became the capital of the Spanish borderlands of the Frankish Empire, and from 888, of the independent counts or marquesses of Barcelona or Catalonia. In 922/956 Barcelona was temporarily occupied by the Arabs (Al-Bayyân al-Mughribi, ii, 95-6). In 375/985, it was taken by assault in the last time by the great Almanzor (Dozy, Histoire des Musulmans, ii, 238-9), but in 987, Count Borell I reconquered it. In the twelfth century (1137) it was reunited with the kingdom of Aragon. Worthy of note is the order given in 450/1058 by the Muslim king of Denia, All b. Mudâjal al-Amirî, by virtue of which the Mozarabic bishops of Baleares (S.V.) like those of Denia and Orihuela were placed under the jurisdiction of the Archbishopric of Barcelona (Simonet, Historia de los Moradores de España — Memoria de la Real Academia de la Historia, vol. xii, Madrid 1905, 651-4; Campaner, Bosquejo histórico de la dominación islamica en las islas Baleares, Palma 1888, 184).

BARSISHAW [see NURORD]

Bares\da, the name of a pseudo-historical figure, a recluse, who is to be connected, according to a later interpretation, with the Antonian tradition. In its folk-lore aspect, the tradition concerning Barsïa must have assumed several forms, because at a late period Ibn Batûtah came across, between Tripoli and Alexandria, a hasr Barsïa al-'Abid, a name which recalls the career of St. Antony and his long period of seclusion in an old castle (siṣā). The Aramaic etymology of the name Barsïa calls to mind the highest sacerdotal office, whether one considers the siṣā as denoting the pectoral of the high priest, or the topknots of the sacerdotal coiffure. In Muslim tradition, Barsïa is the hermit who, after a long career of asceticism, succumbs to the successive temptations of the Devil who finally induces him to deny God, and then abandons him to eternal despair. These remarks refer to the commentary on the Kur'An, li, 16, which deals with hypocrites who tempt the faithful ... "in the likeness of the Devil, when he says to Man, 'Disbelieve,' but when he disbelieves, says, 'I am quit of thee; I fear Allah, the Lord of the Worlds'." There are two rival interpretations of "Man", and al-Tabari (xxviii, 31 f.) sets them before us: is it a question of a particular man, or of mankind as a whole?

The first four traditions which al-Tabari produces in the case of "Man" denoting a particular person, relate to a recluse, either a monk (râkhî) (Tabari, xxviii, 332), or an ascetic (radjul min Bâni Isrâ'il, 'Abid), or a Christian priest (kâds). The story about this pious man is relatively constant; three brothers entrust to him their sister, who is ill, while they are absent on a journey. The monk, yielding to the suggestions of Satan, seduces her, gets her with child, and then, in order to get rid of her and thus of the evidence of his fall, kills her and buries her in a secret place (under a tree, in his house). The brothers, on their return, believe at first that she died a natural death, but Satan reveals to them in a dream the ascetic's crime. The ascetic, panic-stricken at the realisation that his crime has been discovered, is approached in his turn by Satan, who offers to save him if he will prostrate himself before him and deny God. When the wretched man has stooped to this ultimate degree of sin, Satan mocks him, in the terms of the verse in the Kur'an, li, 16. After al-Tabari, Tradition rediscovered the name of Barsïa and applied it to the hero of this legend. In EI, Duncan B. Macdonald (s.v. Barsïa) enumerated these sources. The first author who seems to have mentioned the name of Barsïa is Abu Layth al-Samarkandi (d. 985 or 993), in his Tâbîkh al-Ghâdîn, who was followed by al-Baghwî (d. 1122).

Goldziher-Landberg, Legende vom Mönch Barsïa, fills in the history of the later development of the legend, as narrated in al-Kazwînî (ed. Wustenfeld, i, 368), in the Mûṣâṭarî of Ibn Isbâyî, chap. 64, in al-Suyûtî, and thence, in the Forty Vezirs, the Istanbul edition of which, 1303 A.H., 120-126, contains a long account, of greater length than the one translated by Pétis de la Croix and Gibb. This account, either via Spain, or through the medium of a translation of the Forty Vezirs, must have become the source of the 'Gothic' romance of Monk Lewis, Ambrosio or the Monk, in which every detail was dealt with at length and adapted to the taste of the day. Bibliography: Duncan B. Macdonald, in EI, 1, and Handwörterbuch des Islam, s.v. Barsïa, and addenda in IA s.v. Barsïa; Chauvin, Bibliographie des Ouvrages arabes, viii, 128 ff.; A. BARTANG [see BADAKSHAN].

BARUD.

1. — General

In Arabic, the word naft (Persian naft) is applied to the purest form (jâwa) of Mesopotamian bitumen (kîr—or kîr—bâbîlî). Its natural colour is white. It occasionally occurs in a black form, but this can be rendered white by sublimation. Naft is efficacious against catarrh and leucorrhoea; it has the property of attracting fire from a distance, without direct contact.

Mixed with other products (fats, oil, sulphur etc.) which make it more combustible and more adhesive, it constituted the basic ingredient of "Greek fire", a liquid incendiary compound which was hurled at people, the various siege weapons which were made of wood, and ships. The Muslims of the East, as is well known, made spectacular use of it against the Crusaders and the Mongols. This new product retained the name of naft. A specialist, nafît or sarrùk, discharged the "Greek fire" in the form of a jet, by means of a special copper tube: naffû, sarrûkha, makhûla; this instrument, the prototype of our flame-throwers, seems to have been a sort of huge syringe, similar to the "pumps" of the earlier firemen of Constantinople. "Greek fire" could also be discharged in "pots" (kârûra) hurled by various types of ballistic apparatus, or in cartridges fixed to arrows, in the "Chinese" fashion (iṣkûm bâryâna).

With the introduction of the use of salpetre, about 1350, the word naft assumed new meanings. During a remote period, the Chinese had known of the
igniting properties of nitre, but they only used it to propel rockets used in firework displays or in warfare. Knowledge of the properties of saltpetre (and of the procedure for refining it) by washing) probably passed from China to Persia; in Persian, in fact, in addition to the Iranian term "ghura" (archaic: "ghirag") "nitrous earth, nitre", there existed the synonym "namak-i čini "Chinese salt". In Arabic, in addition to "gawrafji", a loan-word from Iranian, and the vernacular forms "milh al-bārād" "sea salt" (cf. infra) and "milh al-dab'ābīt" "tanners' salt", one finds "talghi jini "Chinese snow", "talghi al-šīn "snow of China". One also meets the terms "zahrāt hājar asisā'īs, lit. "flower of the stone of Assos" (an ancient town of Troas or Mysia), a sort of marine saltpetre, a powdery salty efflorescence deposited by sea spray on friable rock resembling pumice-stone, something like aphyrnonit. Ibn al-Baytār gives bārād, the history of which will be traced below, as the Maghribi equivalent of the last three terms, which apply to pharmaceutical saltpetres.

Saltpetre was at first incorporated in the igniting powder of fireworks, which retained the name of naft. Shortly afterwards, the same name was used for gunpowder.

As far as our present knowledge goes, the first word used by the Arabic-speaking peoples to denote the new saltpetre-containing powder, a word of universal application, was dawāt "remedy, medicament, drug". It was in fact the term used by Hasan al-Rammān (died 694/1294) to denote the mixture used to fill the midīfā: 10 parts of bārād, 2 of charcoal and 1.5 of sulphur. This term is still used in Arabic (cf. Landberg, Glossaire datinois, i, 895). Semantically, it is parallel to the Persian dārū (see infra), although it is impossible to determine whether it is pure coincidence, or whether it is a case of a loan-word transmitted through translation, and in what sense the latter could have been effected.

Far more widespread, at least in the Mamlūk East, was the term naft, the name of the earlier "Greekg fire" transferred to the new compound. In Muslim Spain, the earliest recorded name (from 724/1324) is naft. In the Vocabulista (a Latin- Spanish Arabic vocabulary compiled in the region of Valencia, in the 13th century), one finds opposite Ignis and Ignem excutere, the word naft, but its meaning is not given with any precision; at all events, this term recurs at Beirut in the sense of "matches". At Tunis, neffāta is a fire-cracker. In many Arabic dialects, words derived from the root n-f-t (neffā, neffāta) have the meaning of "ampulla" (under the epidermis). This may perhaps be an echo of kawārīr al-naft.

The form of the word bārād, with d, is not classical. It seems to appear for the first time in the Diarimsī of Ibn al-Baytār (d. 646/1248). It is stated there that it is the name given in the Maghrib by the common people and physicians to the "snow of China" or "saltpetre", a substance with medicinal properties (cf. trans. Leclerc, i, 71). Al-Rammān uses the word in this sense in his formula for gunpowder. Again, for Ibn al-Kutubī (710/1310, cf. infra), bārād only meant saltpetre.

In his Tarīfi (1312 ed., 208), al-Umari (d. 748/1348) twice uses the word bārād. In one instance, he is talking about a substance incorporated in the "naphtha pots" (kawārīr al-naft), projectiles used in naval warfare. In the other, he is talking about makhdil al-bārād, where the word could be taken to refer to a propulsive saltpetre compound (see infra: ii)

It is thus difficult to state with any accuracy at what date and in what country "gunpowder" assumed the name of its principal ingredient.

In Muslim Spain, the change in meaning took place in the course of the second half of the 15th century. "Gunpowder" then became bārād, and "saltpetre" makāf al-bārād; naft (pl. ansafī) then denoted "cannon", and naftāt "gunner" (see Dozy, Suppl., s.vv.).

In this new sense of "gunpowder", the word bārād is widespread throughout the Arabic-speaking world; it is in general pronounced with an emphatic r. As subsidiary terms, Arabic recognises representatives of dawāt (cf. supra). Tunisia has kushī "cousin", and Kabylian kusku "derkin "black cousin", names (perhaps euphemistic) deriving from the resemblance of the two products, both rolled up (mofalāt) and granulated. In Libya, in addition to bārād, one finds bārīg, which can be connected either with the Arabic root b.r.k "to flash (lightning)" or with bārād, the Greek nītron.

The word is used in Turkish, mainly in the form bārāt, a pronunciation which recurs in various southern Arabic dialects: Uman, Hadramawt (and even bārīt, cf. Landberg, Glossaire datinois, i, 130). The Turkish term has been borrowed by Persian and by the Balkan languages: modern Greek, Albanian, Serbian, Bulgarian. From Persian, the word has passed into Kurdish and Hindustani; but in the latter, as in Afghānī, it has a rival in the Persian dārū, lit. "remedy" (= dawāt). Representatives of bīrūt recur in several African languages in the sense of "gunpowder": Amharic, Swahili, Hausa, etc. In addition to the current and popular term māzāpūr, borrowed from Turkish, modern Greek recognises, as a scholarly word, ρυγκη, which has been seen as the origin of bārād. But this etymology is not absolutely certain.

Al-Kafādī [q.v.], an Egyptian author who died in 1066/1659 after a long residence in Turkey, devoted to the word bārād, in his Shiqāq al-Qāhil (ed. Cairo, 1282, 55), a long notice in which he said: "this word is written with a dāl without a dot, and bārād is an erroneous form. In the Màl tā yasa al-Taṭbīq (the work of Baghdad physician Ibn al-Kutubī, written about 1330), one reads as follows: "this is, in the Maghrib, the name of the "flower of Assīyūs" (cf. supra, the quotation from Ibn al-Baytār). In their vernacular dialect, the people of Irāk apply this term to saltpetre (milh al-bārādī) which appears as an efflorescence on old walls, where it is collected. It is used in fireworks (dāmāl al-nār) which rise into the air and move about; thanks to it, the fireworks rise more rapidly and ignite more quickly". The Egyptian author resumes: "this is a post-classical word (muwallad), derived from burādā "iron filings", because of the similarity of the two products. At the present time, bārād is applied to a compound of this salt, charcoal and sulphur: it has assumed the name of one of its components". For the Irākīs of the beginning of the 8th/14th century, bārād still denoted only saltpetre, but was already used in pyrotechnics.

Equally interesting is the notice devoted to this word by Ibn Khāla al-Tibīrī (in his Persian dictionary Burhān-i Kātī (Tehran ed. 1330/1951): "it is the dārū-yi tufang "remedy of collyrium for the musket". In the Syriac language (murtamīnā) it is the name given to ghura "niter, saltpetre", which constitutes the principal element of burād. I do not know where the Persian lexicographer got his information from. But it is a fact that the Lexikon Syriacum of Brockelmann, (and. ed. 1928, 95),
records an instance of bărūd "nitrum", culled from an alchemical text.

From these two indications, the word bărūd could therefore have had an Aramaic origin, which would correlate well with its morphological pattern fāsīl.

In Armenian, the name of gunpowder is տարջ (for tarjaud, with a doted r) which, for phonetic reasons governing word-transference, could not be directly connected with bărūd. However, the Armenian word appears to have an etymology (popula) founded in Armenian itself: տարջ “to burn” and աու "air". Could the Aramaic word be of Armenian origin? (Information supplied by Professor Feydut, Paris).

De Goeye proposed for bărūd another etymology which seems to have been overlooked (cf. Quelques observations sur le feu grecqois, in Homenage a D. F. Codera, 1904, 96): it could stem from barud, in the first place a "soothing collyrium (hālā) used for inflammation of the eye", which in the end was applied to all powdery collyria (cf. Ibn al-Hashshāhī, Glossaire sur le Mansuri de Razes, ed. Colin and Renaud, 1941, 18). The Baghdādi physician Ibn Dīazla (d. 493/1100) in his Minhādī heralded the use of "flower of the stone of Assiyūs, or marine saltpetree, in collyrium to strengthen the sight and make it clearer and also to get rid of leucoma. As regards the change of quantity in the first vowel, other examples of the change a > ā are known in Maḥri Arabic nouns belonging to the same morphological pattern and also denoting medicaments: ḡāsāl (already in Ibn al-Baytārī, fāsākh "gum ammoniac", etc. One is encouraged not to pass over this hypothesis in silence by the fact that, in numerous Arabic-speaking countries, the term mubhīlah "collyrium tube" has been used for "musket". Let us not forget that the first Arabic word for gunpowder was dawd (medicament). In the field of Iranian linguistics, gunpowder is sometimes termed "medicament or collyrium of the musket". Finally, in an altogether different field, Malay too has obat bedil "medicament of the musket". In the case of "gunpowder", as in that of "fire-tube", it could have been a case, to begin with, of a euphemistic name. The Arabic dawd has further other senses of the same origin: "poison", "depository compound" (cf. Dozy, Suppl.). To sum up, the origin of bărūd is still obscure.

On feast days, the rural population of North Africa devotes itself to the ḥūn al-bărūd "gunpowder game", with guns charged with blanks, either on horseback (ḫūn al-khayl, the "lancing" of Europeans) in which the participants imitate the old act of al-farr wa-l-harr, or on foot ("the musket dance"). For an accurate picture (in dialectic Arabic), cf. G. Delphin, Recueil de textes..., 233, 255; V. Loubignac, Textes arabes des Zaer, 79; in French, L. Mercier, La chasse et les sports chez les Arabes, 254.

From bărūd has been formed the derivative bdrūdīyya "terrous sulphate", which is used as a black dye, is explained by the colour of the powder.

Encyclopaedia of Islam

ii. — THE MAGHRIB

The first firearms which appeared were siege engines. According to Ibn Khaldūn (8th/14th century), the Marinid sultan Yaḥyā, when besieging the town of Sijilmās in 677/1279, brought into action against this town mangonels (mangādūn) and ballistas (lbarādāt), as well as a naphtha engine (ḥindām al-naft) which discharged iron grape-shot (ḥāsā al-hadīd) expelled from a "chamber" (khaṣṣā) by the fire kindled in the bărūd (cf. Ibn Dīazla, Bulûk 1284, iv, 188, at the bottom). This precise information is unfortunately doubtful for such an early period. In fact, in his account of the same siege in his history of the kings of Tlemcen (ibid., 85), Ibn Khaldūn speaks only of siege engines (dīlā al-ḥṣār), without any reference to this marvellous invention. On the other hand, the source used by the author for his account of this siege appears to be the Rawd al-Kirīfūs and its parallel history al-Dhakhīrī al-Saniyyūsī, Fās, 225; ed. Bencheneb, 158; and these two texts mention only mangonels and ballistas.

It is not until the year 724/1324 that one comes across an indication of something which appears to have been a true firearm. At the siege of Huecscar (68 m. (110 km.) N-E of Granada), which was held by the Christians, the king of Granada Ismāʿīl used "the great engine which functions by means of nafft" (al-dīl al-ʿumr al-ḥalākhaba bi-l-ʿaft). The latter hurled a red-hot iron ball (kurāt ḥadīd mulmādūt) against the keep of the fortress. The ball, when discharged, threw out showers of sparks, and landed in the midst of the besieged, causing damage as great as that caused by a thunderbolt. Several poets celebrated this event (cf. Ibn al-Khaṭīb, al-taba, Cairo 1319, i, 231; idem, al-Lamḥa al-Badriyya, Cairo 1347, 72).

Nineteen years later, at the siege of Algeciras (743/1343), the Muslim defenders fired against the Christians, by means of truenos (lit. "thunderclaps") large thick arrows as well as heavy iron balls (cf. Cronica del rey Don Alfonso el oncono, ed. Ribadeneyra, Ch. 270, 344, and Ch. 279, 352). But what exactly is meant by "thunderclaps"? Actual firearms, or machines analogous to the "thunderers" or raʿḍūdū? It is only during the last years of the Naṣrīd period (1482-1492) that there begin to appear in the sources the terms bărūd "gunpowder" and nafft (pl. anfāfī) "cannon", siege cannon for the Castilians, fort artillery for the Granadans. At the siege of Moclin (1486), the Castilians employed cannon which hurled "rocks of fire" (māṣūr min nār); the latter soared into the sky and fell back as a mass of flame (ṣuḥṣūdī nār) on the town, killing and burning all on whom they fell. It should be noted that, during that period, the plural anfājī is in general accompanied by the word ʿudda, which is properly applied to classical engines of the catapult type. In fact, at the famous siege of the suburb of al-Bayyazin, at Granada (1486), anfāfī and mandājīnī were seen in action together (cf. Müller, Die letzten Zeiten von Granada, especially 18 and 20).

In his Vocabulista of the Arabic spoken at Granada (compiled in 1501), P. de Alcalá translated artilleria by ʿudda; but artilleria is nafftī, derived from naff "lombarda"; and trabuco "trebuchet" has as its corresponding term mandājīnī. He knew in addition a sort of culverin: uhrubīn, uhrubīn "robadoquin, passabolante". But he only mentions the arbalate, and does not speak of portable firearms.

The latter appeared, in the Maghrib, at the beginning of the 16th century. It was a Maḥribī who presented the first arquebus (bundubkīyya) to the Mamlūk sultan Kānsūh al-Ghawrī (906-22/1500-16), saying that this weapon, which had appeared in the territory of the Irfānī, was in use in all the lands of the Ottomans and of the Ghurāb (cf. Ibn Zumbul, Path, Paris MS. 1834, f. 20).

Leo Africanus, who left Morocco in 1516, gives us a picture of the army of the Banū Wathāṣ (q.v.) as furnished with cannon, and arquebuses carried
by horsemen. In regard to Tunis, at the same period, he mentions that the king had a band of footguards composed of Turks armed with blunderbusses (cf. Description de l’Afrique, trad. Épaulard, 230, 387). It was mainly under the Sa’dids (q.v.), however, that the use and manufacture of firearms was intensified. The sultans of this dynasty organised their army on the Turkish model; they formed corps of Turkish and Andalusian musketeers, and surrounded themselves with more or less renegade Europeans (’ulâd) who initiated them in new techniques, notably that of casting cannon.

In 1575, the army of the sultan Mawlay Muhammad possessed more than 150 cannon, among which was one with nine barrels (now in the Musée de l’Armée in Paris). In 1578, at the famous battle of Wâdî ’l-Makhâzin, the Moroccan army had 34 cannon; it also had 3000 Andalusian arquebusiers on foot and a thousand arquebusiers on horseback.

In 1591, the expeditionary force sent against the Sa’dids included 2,000 Andalusian arquebusiers and renegades on foot, and 500 renegade horsemen armed with blunderbusses; it carried off six mortars and numerous small cannon (cf. Hespéris, 1923, 467). These firearms facilitated the defeat of the Sudanese, who were armed only with assegais, bows and swords. At Timbuktu, the—extremely hybrid—descendants of the Moroccan musketeers still constitute a sort of class: the arma, from the Arabic rumâl.

In Morocco, during this period, “cannon” was naft (sic), while “musket” was midâf. It is only later, in the 17th century, that this latter word took on the meaning of “cannon”, while the new “flintlock” took the name mukhâla, which came perhaps from the East. The following fact is characteristic of the date of this change of meaning: in the part of his Naft al-Tib in which he reproduces a Granadan Arabic text of 1540, al-Makkârl from Tlemcen (d. 1641/1632), who wrote it true in the East, on several occasions substitutes the word madâfi for anâlî (cf. Naft, Bulâk ed., 1279, ii, 1265; Müller, Die letzten Zeiten von Granada).

In 1630, a Morisco who had fled to Tunisia wrote in Spanish an important manual of artillery, based on German techniques. It was translated into Arabic in a popular form in 1638 by another Morisco who had taken refuge at Tunis after having lived for a long time at Marrakesh, for the purpose of distribution to the Ottoman sultan Murâd and other Muslim rulers (cf. Brockellmann, II, 465; S II, 714. A slightly abridged version exists in the Bibliothèque générale at Rabat: D. 1342). It is stated in this work that midâf was denoted “cannon” at Tunis, but “musket” in Morocco; and that conversely, anâlî “cannon” in Morocco, denoted “fireworks” at Tunis, which the Moroccans called samâ’îyyâšt.

The bronze cannon cast by the Sa’dids in Morocco, in their workshops at Fez, Marrakesh and Taroudant (or on their orders, in Holland), are particularly graceful. Many of them still exist in the ports of Morocco, usually decorated with the ‘alâma (or fiqhâr) of the reigning sultan. Portable firearms were imported from Europe, usually as contraband.

The artillery of the ‘Alawid dynasty comprised mainly pieces seized from the enemy, on land or sea, and pieces brought as gifts by foreign ambassadors. Otherwise, cannon and mortars were bought abroad and then an engraved inscription in Arabic was superimposed. On the other hand, it was under this dynasty that the manufacture of muskets spread in Morocco, especially in the south, but also in the north, at Tetuan and Târâst.

However extraordinary it may appear, magíjânîk (accompanied by cannon and mortars) were used in Morocco up to 1729, not only in siege warfare but also in expeditions against enemy strongholds (cf. Archives morocaines, ix, 107, 162, 169, 180).

Throughout present-day North Africa, the general word for “cannon” is medâf; kâra (class. kura), coll. kür, is “cannon-ball, shell”; everywhere the artilleryman is called fiqhî. The “musket” is midâr; it throws a bomb, bunda, a Latin word received through Turkish. In Morocco, Algeria and Tunisia, the old locally made musket bears names derived from mukhâla, the two principal types are called: bâ-qaiber “fired by a flint”, and bâ-habba “fired by percussion-cap”. Secondary appellations are derived from the name of the armurier or from the place of manufacture, or even from the length of the cannon measured in spans (gîdr). The vocabulary of the Maghribi dialect preserves the memory of earlier portable weapons of European origin: kâbiis “pistoleter” (arcabas), midâk, (muskôt), sheshkhdn (escopela), karbilla (carabina), etc. In Morocco, the European breach-loaded military musket is called kâlâ (Spanish culata); the different types are named after the number of cartridges held by the magazine. In eastern Tunisia, in Libya, the local musket is called bindâ and the rifled carbine: sheshkhdn (from Persian, “with a sexangular barrel”, received through Turkish).

We have seen that, in the western Maghrib and up to the beginning of the 17th century, naft denoted “cannon” and midâf “portable firearm”. This semantic pair has been preserved to the present day (with the variant naft) in the Berber dialects of the same region; it is also found in the Arabic dialect of Mauritania. However, among the Twâreg Berbers, a musket is l-bârd. In Amharic, the meanings are reversed: naft “musket”, midâf “cannon”.

For the nomenclature of the Moroccan musket, cf. Joly, L’industrie à Tébouân, in Archives morocaines, xi, 361; Delhomme, Les armes dans le Sous occidental, in Archives Berbères, ii, 123.

The introduction of portable firearms, their employment for the gîdrâd, and the necessity for a period of training in the technique of shooting (rimâyâ), led to the creation of societies of musketeers (pl. rumâl) of a religious character (cf. Archives Morocaines, iv, 97; xvii, 73; xx, 242; L. Mercier, La chasse et les sports chez les Arabes, 134).

On the other hand, the use of such weapons for hunting forced the jurists from the beginning to study the question whether prey killed by this method was licî (kâlid) or not (the akhâm al-bunduq literature).

(iii. THE MAMLUKS)

In the present state of our knowledge, the earliest reliable information on the employment of firearms in the Mamlûk sultanate is from the mid-sixties of the fourteenth century, i.e., some forty years later than the corresponding information on the use of firearms in Europe. There exist in the sources earlier references to these weapons, but their authenticity needs further proof. If Ibn Fadal Allah al-’Umârl speaks of firearms in his al-Ta’rîf fi l-Musâfârât al-Sharîf, Cairo 1312 A.H., 208, ll. 17-22, which he compiled in the year 245/1341, this would mean that the Mamlûks started to use firearms several decades before the mid-sixties.

Some words may be said about the terms by which these weapons were designated. These were makhâlî (sing. mukhâla) al-naft and midâf...
(sing. midja') al-naff, or simply naft (pl. nufā'). Subsequently the first two terms were shortened into maddfī* and maddfīh. From the Mamlūk sources it cannot be learnt whether mukhulla and midja* designate different types of firearms or not. During the first years following the introduction of the weapon one comes across the terms sawdikh al-naft, dldt al-naft, hindām al-naft, which also mean firearms. But all these last-named terms soon died out. (For detailed proofs that the above mentioned terms mean firearms and not naptha or 'Gun Fire', which is also called in Arabic nafī, see D. Ayalon, Gunpowder and Firearms in the Mamlūk Kingdom, 9-44).

In Mamlūk historical sources the term būrūd as designating the whole mixture of gunpowder is extremely rare during the major part of the Circassian period (784/1382-922/1517); only during the last decades of Mamlūk rule do references to it become quite frequent. The term naft remains, however, dominant until the very end of the Mamlūk sultanate. It would appear that the final victory of būrūd over naft took place after the Ottoman conquest.

Though the use of artillery in the Mamlūk sultanate increased steadily since the closing years of the 8th/14th century, a long time had to elapse before they could entirely displace the veteran siege engine, the mangleon (mangjānika, pl. manglekkā). For many years the midja* and the mukhulla served only as auxiliaries to the mangjānik, fulfilling but minor tasks. The Mamlūk sources provide abundant information on the negligible damage they caused to targets against which they were aimed. At the end, however, artillery had the upper hand. The mention of mangjānika in action becomes rarer and rarer during the second half of the fifteenth century, though they manage to survive up to the very end of Mamlūk rule.

The Mamlūks used their artillery in siege warfare only (both as a defensive and offensive weapon), consistently refusing until the very end of their rule to use it in the battlefield.

The ever increasing participation of artillery in sieges in the Mamlūk sultanate on the one hand, and its total absence on the battle-field on the other, can by no means be ascribed to accident. The reason for its easy adoption in siege warfare is to be found in the fact that it did not, especially during its early history, bring about any sweeping changes in the traditional methods of siege. Cannon was preceded by the mangjānika which performed precisely the same function, and which for a long period was superior to firearms. In the open, however, conditions were entirely different. Here artillery constituted a complete innovation, no similar weapon having preceded it; here it was bound to effect changes in tactics and methods of warfare, thus causing the Mamlūk military hierarchy to adopt a course in sharp contrast to its very spirit.

Sulṭān al-Qawrī did make some concessions to the use of firearms which, though on the face of it considerable, were in reality not very significant. For in all these concessions one condition was implied: the existing structure of Mamlūk military society should not be subjected to any important change. Such an attitude amounted, in fact, to a death sentence on the scheme of reorganising the Mamlūk army and on preparing it for the final test; for without transforming Mamlūk society, along with all the conceptions for which it stood, there was no hope of making effective use of firearms. Nor was this all: al-Qawrī made up his mind, side by side with his decision to extend the employment of firearms, to revive traditional methods of warfare.

His plan had three main points, the first raising considerably the number of cannon cast; second, to renew jurūsiyya exercises and the traditional military training; and third, to raise a unit of arquebusiers. Of them, only the first and third concern us here.

The Casting of Cannon. A few years after his accession to the throne al-Qawrī started casting cannon at a rate and on a scale never known before in the history of the sultanate. Near his newly built hippodrome (māyaḍī) he established a foundry for cannon (masbak) which turned out great quantities of artillery at short intervals. Unfortunately our source (Ibn 1yās) does not as a rule indicate the number of guns involved on each occasion; in four cases, however, he does. In one there were 15 guns; in another 70; in a third 74; in a fourth 75.

This huge output of artillery was not intended at all to be used against the Ottomans in the open field. The bulk of it was directed to the ports of Egypt both in the Mediterranean and in the Red Sea in order to strengthen the coastal fortifications or to be used on board warships.

From the dispatch of so much artillery to the coast and to coastal fortifications it should be concluded that strategic centres inland were not supplied with considerable quantities of cannon. As to the interior of Egypt, there is no doubt that both in al-Qawrī's time and in the preceding generations a very great portion of the total output of cannon was allotted to the capital, including the citadel. This is first of all borne out by the fact that most of our information about the weapon comes from Cairo; it is further confirmed by the concentration of great quantities of Mamlūk artillery in the battle of al-Raydāniyya (January, 1517). As for Syria, our knowledge of the fortunes of artillery in that part of the Mamlūk realm is scanty, both in regard to the coast and to the interior. From Ibn Ṭūlūn's chronicle we learn that there were great quantities of firearms in Damascus. This leads us to suppose that more detailed histories of Syria than those we possess might reveal that artillery played there a far bigger part than may be concluded from the available sources.

The Creation of a Unit of Arquebusiers. Arquebuses (or hand-guns or portable firearms) are referred to in the Mamlūk sources by the term al-bunduk al-raṣāṣ ("the pellets of lead"). The later designation for the hand-gun, bundubīyya, stems undoubtedly from bunduk, while raṣāṣ, the bullet or cartridge, is derived from raṣāṣ. The fact that a considerable traffic of arms was conducted in the period under review by Venice (in Arabic: al-Bundukīyya) might also have contributed to the choice of the term bundubīyya. It would appear that the process of transformation from bunduk raṣāṣ to bundubīyya did not take long. Ibn 1yās himself mentions bundubīyya three times, while in the works of his contemporaries Ibn Zunbul and Ibn Ṭūlūn, who died only a few decades after him, bundubīyya, bundubīyyāl and bundālīk are already of most common occurrence. They also mention bunduk, but the combination bunduk raṣāṣ is already extinct in their works.

The aversion of the Mamlūk to the use of portable firearms was far more pronounced than their reluctance to employ of artillery in the open field. For artillery is the province of specialised
technicians, whose numbers form only a small part of the fighting force, requiring little change in the structure of the army. The arquebus, on the other hand, is a personal and mass weapon, and its introduction affects a large number of troops. Hence its large scale adoption was bound to involve far-reaching changes in the organisation and methods of warfare. To equip a soldier with an arquebus meant taking away his bow and, what was to the Mamluk more distasteful, depriving him of his horse, thereby reducing him to the humiliating status of a foot soldier, compelled either to March or to allow himself to be carried in an ox-cart.

Any attempt, therefore, to extend the use of the arquebus had to be based on non-Mamluk and thus socially inferior elements of the army. This is what the Mamluk sultans were forced to do from the very outset. As a result, a clash between the interests of the sultanate and those of the military hierarchy ensued. The growing danger from without did, to be sure, enable the sultan to widen somewhat the very narrow limits imposed on the use of the arquebus by Mamluk resistance to it and to incorporate into the arquebus regiment men from other units whose social position had been somewhat higher than that of the earlier arquebusiers. But his success did not go further than this, and hence the doom of the arquebus was inevitable.

The very date of the introduction of the arquebus by the Mamluk is significant. It is mentioned for the first time in the sources as late as 895/1490 (the rule of Sultan Kaytbay), i.e., only twenty-seven years before the destruction of the Mamluk sultanate and one hundred and twenty five years later than in Europe (the hand-gun began to be used in Europe in about 1569). Artillery, on the other hand, was introduced into the Mamluk sultanate only about forty years later than in Europe. The much greater time-lag in the adoption of the hand-gun in comparison with the adoption of artillery is by no means accidental.

The units operating firearms were mainly composed of black slaves ('abbd) and sons of Mamluk (awldn nās) (q.v.). Members of these two categories seem never to have served in the same unit. Sometimes the black slaves constituted the predominant element in the firearms personnel and sometimes the awldn nās.

Sultan al-Nasir Abu l-Sa'adat Muhammed (901/1495-904/1498), Kaytbay's son, who ascended the throne at the age of fourteen, made a very serious attempt to create a strong unit of arquebusiers composed of black slaves, on whom he wanted to bestow a higher social status. The Mamluk amirs intervened, however, forced him to disband the unit and made him promise never to raise it again.

About twelve years after the murder of al-Nasir Abu l-Sa'adat, in 916/1510, Sultan Kanish al-Ghawri, who enjoyed an incomparably higher prestige than the above-mentioned boy-king, and in whose time the need for the arquebus was far more pressing, made, with much greater caution, a second attempt to create a unit of arquebusiers. Though it fared better than his predecessor's unit, its existence was very precarious, its status very low and its achievements quite insignificant.

It was called al-faskar al-mulaffaf, i.e., "the motley army" or "the patched up army", because it was composed of heterogenous elements which, according to Mamluk criteria, were of low origin. It included in its ranks—besides awldn nās—Turkomans, Persians, and various kinds of artisans, such as shoe-makers, tailors and meat vendors. Only when Sultan al-Ghawri, in Djiumādā I 921/June 1512, launched his big expedition against the Portuguese, were Royal Mamluk joined to it. It is significant that in spite of its heterogenous character al-faskar al-khāmisīa is never said to have included black slaves.

Though the members of this unit occupied a very low rung in the socio-military ladder and received a much lower pay than the Royal Mamluk, a very heavy pressure was brought to bear on the sultan to abolish it, on the ground that it was favoured over other units and that its creation was the main cause for the emptiness of the treasury. The sultan gave way, at last, and dissolved it on Muharram 920/March 1514. This dissolution was, however, only a paper only. Al-faskar al-khāmisīa continued to exist because it was urgently needed on a very vital front.

The fact that the Ottomans adopted firearms in the proper way and on a gigantic scale, whereas the Mamluk and all the other important rulers of Islam neglected them, had a decisive influence on the destiny of Western Asia and Egypt. Within a matter of two and a half years (August 1514-January 1517) the Ottomans routed the Safawids, destroyed the Mamluk sultanate and added to their realm territories of the old Muslim world which they kept up to the very dismemberment of their empire in the twentieth century and which were far bigger than their combined conquest in Europe throughout their history. Without their overwhelming superiority in firearms such a swift and extensive expansion could never have taken place.

(D. Ayalon)

iv. The Ottoman Empire.

There is no evidence to show precisely when the Ottomans first began to use gunpowder and fire-arms. A passage in a Turkish register for Albania of the year 835/1431 permits, however, the inference that cannon had been introduced at least in the reign of Mehemmed I (1413-1421) and perhaps even somewhat earlier (Inalcik, in Belleten, xxi (1957), 509). Other sources mention the Ottoman use of guns for siege warfare in 1422, 1424 and 1430, and again in 1440, 1446, 1448 and 1450 (cf. the references listed in Wittek, 142 and in Inalcik, op. cit., 509). It is well known, moreover, that Mehemmed II (1451-1483) had a large number of cannon, when he besieged Constantinople in 1453 (Ducas, 247-249, 258, 273; Sprantrzes, 236 & princip.; Chalcoondylas, 385-386, 414-415; Critoibulos, bk. i, chaps. 20 and 29 (with additional references given in the notes); Wille, 101; Jähns, 791-792, 1141-1144). Field guns seem to have made their appearance amongst the Ottomans not long before the battle of Varna (1444), i.e., during the course of the Hungarian wars waged in the reign of Murad II (1421-1451). The first clear indication that the Ottomans employed the cannon of this type in a major field engagement relates to the second battle of Kosovo (1448) (Wittek, 142-143; Inalcik, op. cit., 509-510), but it was not until considerably later that advances in technique rendered possible the emergence of an effective Ottoman field artillery. The arquebus, too, was taken over in about 1440-1443 during the Hungarian wars under Murad II and its use much extended in the reign of Mehmed II. None the less, the change to a more general adoption of the new weapon, e.g., within the corps of Janissaries, was a slow and gradual one, destined to remain long incomplete (Wittek, 143; Inalcik, op. cit., 506, 510-512; Ayalon, 38 (note 89); Jorga, ii, 228. Cf. also Promontorio, 36 (serbottanico), Chalcoondylas, 356 (sarabotanas), Dolfin, 13 (sarabottanico), terms uncertain in meaning, but perhaps referring to the arquebus? See, in addition, Lokotsch, 172 (Ar. sarbatana) and Ayalon, 61: sahaba). After the reverses which the Ottomans endured in the Cilician war of 1458-1491 against the Mamluks of Egypt and Syria, Bâyazid II (1481-1512) increased the number of Janissaries and provided them, and other categories of his troops, with arms more efficient and of greater offensive power than the weapons previously available; the Sultan also spared no expense to create a more mobile and more com-

petently manned artillery force (Alberi, ser. 3, i, 21 (a report dated 1503); cf. also Inalcik, op. cit., 506). The arquebus, slow to load and cumbersome to handle, was ill-suited to the needs and capacities of horsemen. It found little favour therefore, in the 15th and 16th centuries, with the Ottoman timarlıs and the Sipahis of the Porte, i.e., the “feudal” and the “household” cavalry of the Sultan. The use of fire-arms in this field had, in general, to await the appearance of new and more manageable types of hand-gun, i.e., the earlier forms of the musket and the pistol. A corps of mounted “arquebusiers” was, however, to be found in Egypt soon after the Ottoman conquest of 1517 (Ayalon, 96-97 and 129 (note 247a); Fevzi Kortuğlu, in Belleten, iv (1940), 67 and 68: alü tuğra züümü). The troops concerned primarily with gunpowder and fire-arms, and with their practical application in time of war, can be listed thus: (a) the Djebedjiler, i.e., the Armourers, who had charge of the weapons and munitions of the Janissaries—bows, arrows, swords, etc., but also hand-guns (tufen), powder (bârül), quick-matches (fiit), lead for bullets (bârhân) and the like. Members of this corps served both at Istanbul and in the provincial fortresses of the empire (Uzunçarşı, Kapakulu Ocakları, ii, 1-31). Venetian reports written between 1571 and 1590 state that almost all the Janissaries had adopted the arquebus, the Ottoman model of this gun being made with a longer barrel than was normal amongst the Christians and loaded with large bullets, “come li archibugio barbaroschi” (Alberi, ser. 3, i, 431-442, ii, 99, ii, 220, 343; cf. also Bombaci, in RSO, xx (1914-1923), 296, 299 (hand-guns firing shot which weighed 40-50 dirhems) and Uzunçarşı, op. cit., i, 366 and ii, 8 (note 2: hand-guns that took shot 4 and 5 dirhems in weight, 13-14, 28-29). (b) the Topkular, i.e., the Artillerists, who were responsible for the actual production of guns and for their maintenance and operation in war. These specialised troops had as their chief centre the arsenal (Top-khâne) at Istanbul, but served also in the various fortresses of the empire and in provincial cannon foundries and munition depots (Uzunçarşı, op. cit., ii, 33-93). The Ottomans at first carried into the field supplies of metal, rather than complete, and ponderous and cast their cannon as need arose during the course of a given campaign (Ibn Kemâl, Tevârîh-i Âl-i Osman, 462-463; 462-463 (= 420-421, in the transcription); Dolfin, 101; Promontorio, 61, 85; Jorga, ii, 227; Wittek, 142; Inalcik, op. cit., 509). This procedure, still current during the reign of Mehemmed II, fell gradually into disuse as further advances in technique and in methods of transportation rendered it, in general, superfluous. Chemical analysis has shown an Ottoman gun cast in 868/1464 to be composed of excellent bronze, allowance being made for the imperfections of the smelting process in use at that time (Abel, in The Chemical News, 1868). A Spanish artillerist, Collado, in his treatise of 1592, describes Ottoman cannon as ill-proportioned, but of good metal (Manual de Artillería, 8 v: “la fundicion Turquesa por la mayor parte es fea, y desfectuosa, aunque es de buena liga”). An account of the methods employed in the Top-khâne at Istanbul for the casting of guns is given in the work of Ewliya Celebi (Seyyid-nâme, i, 436 ff. = Uzunçarşı, op. cit., ii, 41 ff.). (c) the Top Arâbogilârî, i.e., the corps responsible for the transport of guns and munitions (Uzunçarşı, op. cit., ii, 95-113). Wagons (araba), drawn by horses, oxen or mules, carried the cannon, both large and
small, but much use was also made of camels to bear the lighter types of gun, especially in difficult terrain (Promontorio, 33; Menavino, bk. v, chapt. xxxi: 176; Ibn Tūlūn and Ibn Zunbul, cited in Ayalon, 125 (note 206) and 127 (note 220); Alberi, ser. 3, ii, 432, 438, 435, 436). There is mention, here and there in the sources, of guns on wheels, i.e., passages which refer perhaps to the "araiba" itself or possibly to some form of wheeled gun-carrriage (Tauer, Campagne ... contre Belgrade, 48 (Persian text: 64); Viaggio et Impressa ... di Diu, 173 v; Giovio, ii, bk. XXX, 104 r). Moreover, the Ottomans maintained on the Danube a flotilla which had a major rôle in the transportation of the siege artillery, field guns and supplies needed for the great campaigns in Hungary (cf. Uzunçarşılı, Bahriye Teskilatı, 403-404 (also ibid., 404-405; the arsenal at Birecik di The Euphrates); and Alberi, ser. 3, iii, 153: mention of flat-bottomed boats (palandarie) which carried horses, cannon, stores, etc.). (d) the Khambaradililar, i.e., the bombardiers concerned with the production and use of grenades, bombs, portable mines, artificial fire, etc. (Uzunçarşılı, Kapüşhâlu Ocakları, ii, 175-177). (e) the Lazhimdililar, i.e., the sappers who, with the aid of the large labour forces set at their disposal, prepared the trenches, earthworks, gun-emplacements and subterranean mines indispensable in siege warfare (Uzunçarşılı, op. cit., ii, 129-133). 

The Ottomans, even before the death of Mehemmed II in 1481, had acquired the main types of weapon and technique involving the use of gunpowder, i.e., siege and field artillery, mortars, bombs, the arquebus, mines and artificial fire (Jorga, ii, 227-228). A large share in the transmission of these new arms fell to the peoples of Serbia and Bosnia. Artillerists and arquebusiers, recruited in these countries and still retaining their Christian faith, are known to have been in the service of Mehemmed II (Inalcık, Fatih Devri, i, 155, 154-156 and also in Belleten, xxi (1957), 511). Masters came, too, from still farther afield, e.g., Jörg of Nuremberg (Kissling, 336). Reliance on specialists of European origin—at first mainly German and Italian, but with French, English and Dutch elements becoming more numerous in later times—was to be henceforth a permanent and indeed essential characteristic of the various Ottoman corps concerned with gunpowder and firearms. 

Information of a technical nature about the types of cannon in use amongst the Ottomans can be found here and there in the Western sources of the 15th and 16th centuries. The guns are of course described in accordance with the system of classification then current in Europe (and indeed in the Ottoman empire too), i.e., in terms of the weight or size of the projectile thrown (Promontorio, 61 and 85; de Bourbon, 135 v, with mention of iron and bronze cannon, e.g., culverins, basiliaks, sakers and also mortars firing marble shot and copper or bronze "bouletz" filled with artificial fire; Ufano, 40 and 41). An Italian account of the campaign against Diu in 1538 lists some of the guns which the Ottomans had with them on that occasion (Viaggio et Impressa ... di Diu, 150 r, 152 r; cf. also Sousa Coutinho, 58 v, on the Ottoman basiliaks used in the siege. The princes of India held the Ottoman artillerists in high esteem and welcomed them into their armies: e.g., a Muşafat Rûmî fought under Bâbur, and a Rûmî Khan under the Şultan of Gudjarat). 

The tactical use which the Ottomans made of their cannon in time of war has not been studied in detail. Their normal formation, however, was the ḏiḥār, when a field battle had to be fought, i.e., the wagenburg with the gun-carts chained together and the cannon set between them—a device which seems to have been taken over from the Hungarians (Inalcık, in Belleten, xxii (1952), 510; cf. also von Frauenholz, 434 and Uzunçarşılı, Kapüşhâlu Ocakları, ii, 255-259). The method used by the Ottomans to breach the walls of a fortress is described in the work of the Spaniard Collado: medium guns, e.g., culverins, capable of deep penetration and firing along transverse and vertical lines, undermined and split the stone-work, large basiliaks which threw heavier and more destructive shot, violent in the force of their surface impact, being then discharged in salvo to bring down the enfeebled structure (Manual de Artilleria, 135, 20 r, 32 r; cf. also Pečević, ii, 193). 

The Ottomans had of course their own nomenclature for guns and related instruments of war (cf. Uzunçarşılı, Kapüşhâlu Ocakları, ii, 48-53) including adjectives of a purely poetical character (e.g., ether-dikan and mür-on: "dragon-mouthed" and "serpent-bodied"—cf. Najmî, i, 148 and names given to individual cannon (e.g., the "Kočyân", i.e., the gun captured from Khatzenauer, the Imperialist general whom the Ottomans defeated in 1537 near Esaek on the Danube—cf. Selânikî, 31) terms which have a precise technical sense can also be found here and there in the Turkish chronicles and documents. Among the types of cannon most often mentioned in these sources are (i) the bagâyalıkska or baddiaška, a large siege gun (perhaps the basiliak?): cf. Selânikî, 35, 37, 38, 41; Hadjidî Khalîfâ, Feddeke, i, 29 (guns of this kind firing shot which weighed sixteen okkas each), 31, 33; Collado, 135, 32 r; Uzunçarşılı, op. cit., ii, 49, 60, 81; (ii) the bałayemct (e.g., the "Faule Metze" (Kissling: cf. Pečević, i, 202; Ewliyâ Celebi, viii, 418, 492 (where it is described as a mensli topu, i.e., a long-range gun); Siliîdâr, ii, 46 and 47 (cannon shot using 10-40 okkas in weight are here defined as bałayemets). (iii) the bolonborna (cf. the Italian scudrino), i.e., the culverin: cf. Selânikî, 8; Ewliyâ Celebi, ii, 128; Hadjidî Khalîfâ, Feddeke, i, 29 (culverins which fired shot weighing eleven okkas each) and i, 33 (bolonborna); Siliîdâr, i, 300 and ii, 46 and 47 (cannon throwing shot of 3-9 okkas in weight are here classed as bolonborna); Uzunçarşılı, op. cit., ii, 49, 81; Viaggio et Impressa ... di Diu, 169 r; Collado, 135; Alberi, ser. 3, iii, 432. (iv) the škalados (cf. the Hungarian szakalás), apparently a kind of light cannon which threw small projectiles of stone or metal: cf. Selânikî, 35, 41, 145; Pečević, ii, 242; Suhâyî Unver, in Belleten, xvi (1952), 560; L. Fekete, Die Siydqat-Schrift, i, 61 and 694, and also in Magyar Nyelv, xxvi (1930), 264; Redhouse, s.v. škalados. References to guns that fired small shot can be found in Ducas, 211 (cf. also Jâhns, 811) and in Giovio, ii, bk. xxx, 104 r: (v) the škyba (cf. the Hungarian sajka), a name given to a certain type of boat, but also used for the mounted on such craft: cf. Hadjidî Khalîfâ, Feddeke, ii, 320; Ewliyâ Celebi, viii, 378 (a mention of cannon (škyba toplari) that fired stone shot weighing eighty okkas each), 382 (škyba nâm prânka toplari); Fevzi Kurtoğlu, in Belleten, iv (1940), 68; Uzunçarşılı, op. cit., ii, 49, 50, 81 (large, medium and small škyba cannon); L. Fekete, in Magyar.
Nyelv, xxvi (1930), 265. On the guns used in the boats which the Ottomans maintained on the Danube, see Giovio, ii, bk. xxvii, 152. (vi) the darbzan or darbuzan, a gun cast in various sizes (cf. L. Fekete, Die Siydqat-Schrift, i, 694, 695: small (300 dirhem shot), medium (2 okha shot) and also a darbusan-i šah-i burs (firing shot 36 okhas in weight): cf. Ibn Kemâl, Tavvir-i Âl-i Osman, 464, 509 (= 422, 438 in the transcription); Selânîkî, 8, 35 (daht darbzan toplari); Peçevî, i, 93 and ii, 140, 147, 156; Du Lîor, Voyages, 226-227 (chahs seminatandar = "basofon royaux"); Silihdar, i, 467, 484, 497; ii, 147, 47 and 57; Uzunçarşî, op. cit., ii, 49, 50, 76, 79, 81; Ayalôn, 89, 90, 119 (note 92), 127 (note 220).

The Ottomans, in their sea warfare, seem to have used in general the same types of guns as in their campaigns on land. Among the cannon employed in the Ottoman fleet can be numbered the holon-borna, the darbzan and the şahîya (Barozzi and Berchet, i, 274, ii, 20; Uzunçarşî, Babrîye Teskilâtî, 464, 465, 466, 469, 512-513. Further information about the naval armament of the Ottomans is available in Alberî, ser. 3, i, 68, 140, 292-293, ii, 100, 150, 342, iii, 223, 354-355; Barozzi and Berchet, ii, 165; Marsîgli, Pt. I, chapt. xxix, 171-172; de Warnery, 115) and also the pranghi or prangki (Tauer, in ArO., vii (1935), 195; Kemâlpâşâzade, Mahdîyânâmê, 54 (Turkish text); Bombaci, in RSO, xx 1941-1943, 292 and xxI (1944-1946), 190; Uzunçarşî, Kapûkulu Ôcaklarî, ii, 49, 83 and also Babrîye Teskilâtî, 462, 468, 469, 512-513.

The sources often mention instruments of war other than cannon, but based on the use of gunpowder, e.g., (i) the hánâyî (Selânîkî, 8 (cf. Hammer-Purgstall, iii, 426, note 1); Uzunçarşî, Kapûkulu Ôcaklarî, ii, 49) and the hâsîm (Ewliyâ Celebi, viii, 407, 419, 471, 472; Yûsuf Nâbi, 43; Silihdar, ii, 47), i.e., mortars which fired bombs and also shot of stone or metal (Promontorio, 131; de Bourbon, 131; Viaggio et Impresa ... di Dùo, 169; Mauvrand, 202; Scheithâr, 81; Marsîgli, Pt. II, chapt. ix, 30-31); (ii) the khûmbara or khumbara, i.e., bombs (Tauer, Campagne ... contre Belgrade, 53, 58 (Persian text: 79, 89); Selânîkî, 40-41; British Museum MS. Or. 1157, 74 (bombs made of glass, and of bronze: sîxîje khumbara, furu' khumbara): Ewliyâ Celebi, viii, 401, 414, 435, 483 (khârsan [kahzîm] hûmbâr); Barozzi and Berchet, ii, 160; Silihdar, ii, 47 (khûmbara hûnmînî); Scheithâtî, 75, Marsîgli, Pt. II, chapt. ix, 33; Bigge, 154; (iii) the el khûmbarast, i.e. hand-grenades (Ewliyâ Celebi, viii, 414, 432, 471 (grenades of glass, and of bronze: sírçı ve ludî el khumbarast)); Silihdar, i, 467, 484, 502; Scheithâtî, 77; Marsîgli, Pt. II, chapt. ix, 33); (iv) the šâghân i.e., explosive mines of various types and sizes (Hâdîgî Khâlîfah, Fedîçhe, ii, 255 and Na'tmâ, iv, 143 (a large mine containing 150 kanîrân of gunpowder); Ewliyâ Celebi, viii, 444 (a mine with three galleries and three powder-chambers), 425, 432, 495; Silihdar, ii, 55, 56 (a mine of the type known as pushûmsîr and holding 30 kanîrân of powder), 66; Scheithâtî, 72-73; Montecuccoli, iii, chapt. ixvii; Marsîgli, Pt. II, chapt. xi, 37). Numerous references to mines can be found in the Ottoman accounts of the Cretan War (1645-1669), e.g., in Hâdîgî Khâlîfah, Fedîçhe, ii, 239 ff., passim, in Silihdar, i, 409 ff., in Na'tmâ, iv, 116 ff., passim, and in Ewliyî Celebi, viii, 396 ff. (cf. also ibid., viii, 468 ff., enumerating the guns, munitions, etc. found in the fortress of Candia after its conquest from the Christians in 1669—an account rich in the military terminology used by the Ottomans at that time).
French and also the Swedes); Barozzi and Berchet, ii, 166, 173, 222, 231-232; Marsigli, Pt. II, chapt. ix, 23 (the Ottomans made cannon according to the designs of the Italian author Sardi, one of whose works had been translated into Turkish—probably L’Artiglieria di Pietro Sardi Romano, Venice 1621). The 16th and 17th centuries witnessed in Europe notable changes in the art of warfare (J. R. Hale, in The New Cambridge Modern History, ii, 481 ff.; O. Laskowski, in Teki Hicrastiq, iv (1950), 106 ff.; M. Roberts, The Military Revolution 1560-1660, also Gualtiero Adolphus and the Art of War, in Historical Studies, i, 69 ff., and Gustavs Adolphus, ii, 165 ff.). These changes imposed on the Ottomans a constant need to adopt or otherwise to meet in an effective manner the innovations made in the European practice of war—a process of adjustment which was at times slow and difficult. A Muslim from Bosnia, writing not long after the battle of Varna (1521), lamented that the Christians, through their use of new types of hand-gun and cannon, as yet neglected by the Ottomans, had won a definite advantage over the armies of the Sultan (L. Thallotzy, Staatschrift, 153-154; Garcin de Tassy, in JA, iv (1824), 284; Safvetbeg Basagid, Nizam ul Alem, 13; British Museum MS. Harleian 5490, 350 ff). None the less, as the appearance of new, or the more frequent use of hitherto unusual terms in the Turkish chronicles and documents will make clear, the Ottomans did in fact assimilate to a large degree the latest devices and techniques elaborated in Europe at this time (Bombaci, in RSO, xx (1941-1943), 303 (çagma toplar, i.e., guns firing a form of grape-shot: cf. also Hâddîjl Khalîfî, Fedhahe, i, 34 and ii, 245, 377, 319, 321; Silhê'dâr, i, 596, 598 (misiket); Pecevî, ii, 199 (cf. Na'îmî, i, 164: muskets which fired shot 15-20 dirhems in weight); Ewliya Çelebi, vii, 179 (muskât tigeri, with shot weighing 40-50 dirhems, and kol tufenkleri) and viii, 398, 415, 426, 467 (badâloço, nâm mîskêt); Inalcik, in Tarih Vehikalari, ii/II (1943), 377 (güle tabancalı tufên); Uzunçarşıli, Kapukaüolu Ocakları, ii, 8, note 2 (a tufenk); Pecevî, ii, 212-213 (cf. Na'îmî, i, 190: an account of how an agâddî top, i.e., a petrâri, was made). Further evidence can be found in the Western sources (cf. Alberi, ser. 3, ii, 452 (archibugieri a cavallo)), iii, 391 (a report dated 1594. in which it is said that the Ottomans had not yet adopted the pistol) and 404 (the increasing use of the arquebus in the Ottoman fleet); Barozzi and Berchet, i, 265 (the spahî di paga, during the Hungarian war of 1593-1606, had begun to arm themselves with the arquebus and the terzarollo, i.e., a short-barrelled arquebus) and ii, 16 and 158; Ryczaat, 349 (the Sipahi of the Porte made use of pistols and carbines, but had no great esteem for fire-arms); Marsigli, Pt. II, chapt. viii, 15 and 16: the Ottomans learned new methods from the Christians in the Cretan War (1645-1669); the Janissaries and most of the Ottoman horsemen carried pistols). It was in the time of the Köprüyü viziers that this gradual transformation attained its full effect. Men well qualified to judge like Scheiter, Montecuccoli and Marsigli, describe in much detail, and often with approval, the weapons employed by the Ottomans, noting the excellence, for example, of their mortars (Scheiter, 75), their muskets (Montecuccoli, iii, chapt. xiv), and their mines, in the construction of which the Armenian lashhêdjar had a pre-eminent rôle (Marsigli, Pt. II, chapt. xi, 37 ff.; cf. also Levinus Warnerus, 69, 101 and Ewliya Çelebi, i, 315 ff., Montecuccoli, iii, chaps. xxx and xxxi). Alberi, ser. 3, ii, 452 (archibugieri a cavallo), ed. Pavet de Courteille, Paris 1859; Selânikî, Ta'irîkh, Istanbul A.H. 1281; Pecevî, Ta'irîkh, Istanbul A.H. 1281-1283; Hâddîjl Khâlla, Fedhahe, Istanbul A.H. 1286-1287; Ewliya Çelebi, Seyyâhatname, i, Istanbul A.H. 1314, vii and viii, Istanbul 1928; Yusuf Nâbi, Ta'irîkh-i Wâliî-i Kemalî, Istanbul A.H. 1281; Na'îmî, Ta'irîkh Istanbul A.H. 1281-1283; Silhê'dâr, Ta'irîkh, Istanbul 1928; Ahmed Djewdet, Ta'irîkh, ii, Istanbul A.H. 1292; F. Tauer, Histoire de la Campagne du Sultan Suleyman I contre Belgrade en 1521, Prague 1924, and also Additions a mon ouvrage "Histoire de la Campagne... contre Belgrade en 1521", in ArO., VII, Prague 1935, 193-196; A. Bombaci, Le fonti turche della battaglia delle Gerbe (1600), in RSO, XIX, Rome 1940-1941, 297-304, xx, Rome 1941-1943, 297-304, xxi, Rome 1943-1944, 297-304.

V. THE ŞAFÂWIDS

A consideration of the use of firearms in Persia under the Şafavids falls under two heads: artillery (generic name, tâp), and hand-guns; the latter, used by both cavalry and infantry, comprised arquebuses, muskets and carbines, all of which were termed, without differentiation, tâp-i farang (AT, 290). According to the traditional account of European writers, artillery was introduced into Persia during the reign of Şâh 'Abbâs I by the English soldiers of fortune Sir Anthony Sherley and his brother Sir Robert Sherley, who arrived in Kazvin in December 1596. Among Sir Anthony's party of 25 persons (Sir E. Denison Ross (ed.), Sir Anthony Sherley and his Persian Adventures, London 1933, 13 and n. 3) was "at least one cannon-founder" (Browne, iv, 105). Sir Anthony's steward, Abel Pinçon, states that the Persians at that time had no artillery at all (Denison Ross, 163), but his interpreter, Angelo, asserts that Şâh 'Abbâs "has some cannon, having captured many pieces from the Tartars; moreover there is no lack of masters to manufacture new ones, these masters have turned against the Turk and have come to serve the King of Persia" (Denison Ross, 29). Purchas, writing in 1624, claims that such progress was made under the guidance of the Sherley brothers that "the prevailing Persian hath learned Sherelian arts of war, and he which before knew not the use of ordnance, has now 500 pieces of brass" (Denison Ross, 21).

There is abundant evidence, however, in both the European and the Persian sources, that the Persians were familiar with the use of artillery long before the time of 'Abbâs I. The Venetian ambassador d'Alessandri, who arrived in Persia in 1571, states that the Ottoman prince Bayazid, who sought refuge with Şâh Tahmâsî in 966/1559, brought with him thirty pieces of artillery (A Narrative of Italian Travels in Persia in the 15th and 16th centuries, London 1873, 228). Herbert (A Relation of Some Years Travails etc., London 1634, 298) states that the Persians "got the use of cannon from the vanquised Portugal", and Figueroa states that the Persian artillery was manipulated by Europeans "and particularly by the Portuguese" (Tadhkirat al-Mulûk, 33). We know that in 955/1548 the Portuguese furnished Tâhmâsî with 10,000 men and 20 cannon at the time of the Ottoman sultan Sulaymân's second invasion of Persia (A Chronicle of the Carmelites, i, 29). Direct evidence that artillery was used by the Persian army even earlier than this is found in the contemporary Persian chronicle Ahsan al-Tawârikh (ed. C. N. Seddon, Baroda 1931). In the Şafawid army which laid siege to Dâmgân in 935/1528-9 there was a certain Ustâd (i.e., "master" [of his craft]) Shaykhîn the gunner (tâpî) (AT, 212). In a pitched battle with the Ozbegs near Mashhad, later the same year, Tahmâsî stationed in front of his army the wagons containing the dârzan (probably a type of light cannon, cf. the Mamlûk term dârzanâ); see D. Ayalon, Gunpowder and Firearms in the Mamluk Kingdom, London 1956, 117, n. 220 and (tâp-i) farangî (AT, 214); the gunners and musketeers (tâpî-yân wa sulangî-yân) were, however, unable to use their guns because the Ozbegs did not approach from the front (AT, 217). In 943/1538-9 the besieging Şafawid forces destroyed the towers (bûrdî) of the fort of Birkhîn in Shîrvân by artillery fire (AT, 287). In 946/1539-40 we hear for the first time of a tâp-i bâdî (commander-in-chief of artillery), in an action against Amîra Kûbâhî, the rebel governor of Æstārî (AT, 293). From this time onwards artillery was frequently used by the Şafawids in siege warfare, for instance at Gulîstân and Darband (954/1547-8) (AT, 311-2). At the siege of Kiş near Shâkkî in 955/1547-2 the Şafawids used "Frankish cannon" (tâp-i farangî), and in addition a type of cannon called bâdîî (cf. P. Horn, Das Heer- und Kriegswesen des Grossmaghuls, Leiden 1894, 29), and mortars (kâzbûn), which are mentioned for the first time; the towers of the fort were destroyed after twenty days' bombardment (AT, 350).

It is clear, therefore, that the claim that the Sherleys introduced artillery into Persia is entirely without foundation. In fact, artillery was in regular use at least as early as 935/1528-9, that is, within a few years of the accession of Şâh Tahmâsî, and fifteen years after the Şafawid defeat at Çaldîrân [q.v.], a defeat for which the Ottoman artillery was largely responsible. It must be emphasised, however, that even before Çaldîrân, the Şafawids were familiar with the use of artillery, and that consequently the Şafawid lack of artillery at Çaldîrân can only be attributed to a deliberate policy not to develop the use of firearms in the Persian army. The Persians had an innate dislike of firearms, the use of which they considered unmanly and cowardly (Nasr Allah Falsâfi, Mad[Jalla-yi Dânîhâda-yi Adâbî-yât-i Tîrhân, i/2, 1953-4, 93), and in particular they disliked artillery, because it hampered the swift manoeuvres of their cavalry (Tadhkirat al-Mulûk, 33). It is remarkable that, although we have frequent instances of the use of artillery in siege
warfare, little attempt seems to have been made to emulate the Ottomans in the use of artillery in the field. At the battle of Maghaghd in 935/1528-9 (see above), the one occasion on which the sources specifically record the use of artillery in the field by Tahmāsp, its immobility rendered it ineffective, and we hear no more of field artillery until the time of Shāh ʿAbbās I. Even under the latter, however, the use of artillery was still mainly confined to siege warfare (Naṣr Ḵālīf Falsafi, Zinādīyā-yi Shāh ʿAbbās-i Amwāli, ii, Tehran 1338 solar/1959, 403).

It seems that in the use of artillery the Persian armies suffered greatly from a paucity of cannon, while on the other hand the Turkish armies in Asia were very well equipped in this arm, and they could effect much damage in their attack" (Don Juan of Persia, ed. trans. G. Le Strange, London 1926, 98). When a ʿAfšāwīd force of 10,000 men under Muhammad Beg Ustāḏjiḏ laid siege to Ḵūn Kāyfa in Diyar Bakr about the year 913/1507-8, they made use of "a mortar of bronze, of four spans, which they brought from Mirdin (Mārdin) ... This mortar was cast in that country at the time of Jacob Sultan (Yaʿḵūb Sulṭān Ak Ḵoyunlu, d. 896/1490), and by his orders ... and Custagialu (Muhammad Beg Ustāḏjiḏ) also had another larger one cast by a young Armenian, who cast it in the Turkish manner —all in one piece. The breech was half the length of the whole piece, and the mortar was five spans in bore at the muzzle" (A Narrative of Italian Travels in Persia, 153). About the same time (probably in 912/1506-7) ʿIsaʿīl sent a force of 10,000 men under Bayrām Beg (Kāramānli?) to lay siege to Wān. Bayrām Beg, "having two moderate-sized cannons in his camp, began to batter the castle; but they were able to do no harm, as the walls were too strong and the guns too little skilful". After besieging the castle for three months, 'the artillerymen succeeded in destroying the source of the defenders' water supply, and the castle was thus at their mercy (A Narrative of Italian Travels in Persia, 161-3). In 916/1510 Ismāʿīl is said to have captured four cannon from the ʿOzbek after his great victory at Marw (Ḍjamīl Ḵusānli, Ṭārikh-i Niṣāmī-yi Ἰrān, vol. i, Tehran 1315 solar/1926, 372; no authority is quoted for this statement). It seems, therefore, from the evidence available, that although the ʿAfšāwīd used cannon in siege warfare during the first decade of the reign of Ismāʿīl, the number of guns available was small, and the gunners were as yet inexperienced.

Sir Anthony Sherley has also been given the credit for the formation of a corps of musketeers by Shāh ʿAbbās I. In a letter dated 22 April 1619, the traveller Pietro della Valle says that the corps was created by Shāh ʿAbbās "a few years ago" on the advice of Sir Anthony Sherley (Tadhikrat al-Muluk, vi, London 1905, 409-10).

Apart from Sir Anthony's own testimony to the existence of a large and efficient body of musketeers in the Persian army before his arrival in Persia, there is conclusive evidence, again in both the European and the Persian sources, that Persian troops were equipped with hand-guns and skilled in their use long before the time of ʿAbbās I. One of Sir Anthony's companions, Manwaring, explicitly states that the Persians were already "very expert in their pieces or muskets; for although there are some which have written now of late that they had not the use of pieces until our coming into the country, this much, I must write to their praise, that I did never see better barrels of muskets than I did see there; and the King hath, hard by his court at Aspahan, above two hundred men at work, only making of pieces, bows and arrows, swords and targets" (Denison Ross, 222). Even earlier (c. 1571) is the valuable account of d'Alessandri: "they use for arms swords, lances, arquebuses, which all the soldiers can use; their arms also are superior and better tempered than those of any other nation. The barrels of the arquebuses are generally six spans long (A Chronicle of the Carmelites in Persia, London 1939, i, 53, gives "7 palms" = 1.75 m.; incidentally this version of the text contains an obvious mistranslation), and carry a ball a little less than three ounces in weight. They use them with such facility, that it does not hinder them drawing their bows nor handling the arquebus, keeping both in one hand and holding it at their saddle-bows till occasion requires them. The arquebus then is put away behind the back, so that one weapon does not impede the use of another" (A Narrative of Italian Travels in Persia, 227). Herbert (op. cit., 298) states that the Persians had used muskets "since the Portugals assisted King Tahmas with some Christian auxiliaries against the Turk (probably in 953/1548) so as now (i.e., in 1627) they are become very good shots". In the contemporary Persian chronicle Aḵsān al-Tawārīḵ, however, there is direct evidence that hand-guns (tufang) were in use in the Persian army even before the death of Ismāʿīl 1: in 937/1520-1 a detachment of the ʿAfšāwīd garrison at Harāt drove off the troops of Ubayd Khān Ozbek with arrows and hand-guns (tir u tufang) (AT, 174). This is the first reference to hand-guns in this chronicle, and from then on they are mentioned frequently. In 930/1523-4, the year of Shāh Ismāʿīl's death and Shāh Tahmāsp's accession, infantry armed with hand-guns (priyadāgan-i tufang-anddā) constituted part of the ʿAfšāwīd garrison at Harāt, and reference is made to two successful actions against the ʿOzbek in which hand-guns were employed (AT, 186). In 934/1527-8, when Harāt was besieged for four months by the ʿOzbek, the Ozbek amir al-
umard Yari Bej was killed by a shot fired from a hand-gun by one of the defenders (AT, 206). In 935/1528-9 Tähmäsp himself led an army to Khurāsān against the Ūzbegs, and laid siege to Dāmghān; his forces included a group of Rūmī tufangles (AT, 212). A few months later, the Ūzbegs laid siege to Mashhad; musketeers (tufangles) formed part of the Šafawid garrison (AT, 221). While the Ḩasan al-Tawārīḵ thus affords positive evidence of the use of muskets in the Persian army as early as 927/1520-1, there is a strong indication in A Narrative of Italian Travels in Persia that they were in fact in use even before the battle of Cādīrān. In the description of the siege of Hisn Kayfā by Šafawid forces about the year 913/1507-8, there is a reference to "guns" which, in the context, can only mean "hand-guns", and we are also told that the defenders possessed three or four muskets of the shape of "Azemi", i.e., of ʿAdāmi or Persian design; these muskets had a small barrel and, with the aid of a "contrivance locked on to the stock about the size of a good arquebuse", had a good range (op. cit., 153).

It is clear, therefore, that the claim that the Sherleys initiated the formation of a corps of musketeers, if it has any historical foundation at all, can only be true in the sense that Shāh ʿAbbas was the first to create a regular corps of musketeers, which formed part of a standing army paid from the Ḿusūl revenue, as opposed to the units in existence under Ismāʿīl I and Tähmāsp, which, like the rest of the Persian army at that time, were probably raised on a tribal basis and paid from the revenue of the dawīn-i māmālīk. There is no doubt, however, that the practical advice of the Sherleys was of great benefit to Shāh ʿAbbas, who held Sir Robert Sherley in such esteem that, after Sir Anthony's departure, he appointed him "Master General against the Turks" (G. N. Curzon, Persia and the Persian Question, London 1892, i, 574). In addition to the corps of musketeers (tufangles), 12,000 strong (Chardin, Voyages du Chevalier Chardin en Perse, ed. Langlès, Paris 1811, v, 305), who were intended to be infantry but were gradually provided with horses, Shāh ʿAbbas created two other corps to form part of the new standing army, namely, the artillery (tālpīydn), also 12,000 strong (Chardin, v, 312-3), and the "slaves" (būlar, Ḿulmān-i Ḿusūl i khāṣa-yi ṣarḥiṭa), a cavalry regiment recruited from Georgia and Circassia, armed inter alia with muskets, and numbering 10-15,000 (Taḥkhirat al-Mulākh, 33). The Šafawid army was at its strongest under Shāh ʿAbbas I; its numbers declined under his successor ʿAbd al-Qādir (d. 1052/1642) and were reduced still further by ʿAbābī II (d. 1079/1666), who took the extraordinary step of abolishing the corps of artillery; when the tālpī-bāght Husayn Kull Khān died in 1665, no successor was appointed (Chardin, v, 312-313), and artillery does not seem to have reappeared on the scene until the reign of Shāh Sultan Ḫusayn (1105-1135/1694-1722) (Taḥkhirat al-Mulākh, 53). At the battle of Gulaḥāb against the Afghāns (8 March 1722), the Persians had 24 cannon, under the command of the tālpī-bāght Ahmad Khān and under the supervision of a French master gunner named Philippe Colombe (L. Lockhart, The Fall of the Šafawī dynasty and the Afghan Occupation of Persia, London 1938, 135, who quotes Krusinski's scathing remarks on the incompetence of the tālpī-bāght; the artillery was over run by the Afghan advance, and both the tālpī-bāght and Philippe Colombe lost their lives (ibid., 142). It is not much to say that the Šafawīs never really made any effective use of artillery in the field.

vi. — India

Napthha (naft) was used by the Muslims in India by Muhammad b. Ḫāsim in 93/711 against Rāḍja Dāhir. Tīr-i dtish (fiery-arrows) were the simplest fire missile used by the Muslim Indian rulers in the early part of the 7th/13th century. The department of dtish-bāzā (fireworks) was placed under the Mīr dtišā. Firīghta's statement that Sultan Māmūd of Ghūzān employed tāp "cannon muskets" against Anand Pāl near Peshāwār in 999/1508 is an obvious anachronism. It may, however, refer to his use of a missile carrying napthha (ḥārūra-i naft)—a weapon mentioned by Firīghta in another place regarding Sultan Māmūd's campaign in India. Saltpetre, an important ingredient of gunpowder, is commonly found in India. The word Ḫūsh-i ṣuldān mentioned in the 13th century MSS., ʿAbī al-Mulākh (f. 118 b) and Tādīj-i Maʿādīhur (f. 3 a), needs a minute examination. The Farhang-i Ṣhārāl-nāma-i Ahmad Mūnīydrī (compiled in 875/1470) gives its meaning as: "a perforator, or an instrument for throwing stones or a gōlā (ball) projected by the expansive force of combustible substances". Stein-glass explains it as a cannon or cannon ball. According to the Bāhār-i ʿĀḏām, it is an instrument of war worked with gunpowder. From this it would seem that a machine which discharged balls by some explosive force was used in India by 628/1230. Sang-i Maḥāribī "Western stone", mentioned by both Baranf and Ṭāhsūr as being used under ʿAlāʾ al-Dīn Ḫūsārī (695/1296-1316) cannot be taken as denoting "gun". This new implement was borrowed from Spain and North Africa—countries which were called in Arabic "the West". Generally the besiegers employed this machine to bombard a fort. How the stones were thrown is not clearly stated, but this much is certain, that the stone balls were discharged by the force generated by gunpowder.

It is very difficult to discover the real nature of fire-arms used in the 7th/13th or the beginning of the 8th/14th century in India, as the term dtish-bāzā (fireworks) is applied to pyrotechnic displays as well to artillery, thus rendering the meaning of the passages ambiguous. However tāp and tufang are mentioned as being in frequent use from the middle of the 8th/14th century. When Sultan Māmūd fought against Timūr at Delhi in 800/1398, the former's elephants carried howdahs in which were raʿd-īndāz "throwers of grenades" and ṭahkhi-andāz "throwers of rockets". Artillery was improved under the Lodīs (855-932/1451-1526). ʿĪbrāhīm Lodī employed tāp and darbān "mortars" against Bābur at the battle of Panipat in 932/1526.

In the latter half of the 8th/14th and beginning of the 9th/15th century, the use of cannon became very common in the Deccan. The chief reason was that the Deccan States were in contact by sea with Arabia, Iran and Turkey, from which they received artillery and engineers. Firīghta records that Sultan Māmūd Shāh Bahmanī installed a firearms factory in 767/1365; he was the first of the Muslim rulers of the Deccan to do so. Sultan Māmūd Bāyḵārāb with the help of his Turkish gunners sank with his guns a large Portuguese ship at Diu in 915/1509. Bāḥādūr Shāh of Gujrat excelled his contemporaries in artillery; his master gunner, Rūmī Khān, cast many cannon. One of the reasons for Bahādur's success against the Portuguese was his superior
artillery. All these facts show that cannon were used in India long before Babur employed them at Panipat in 932/1526.

The Mughals paid much attention to the art of artillery. Babur had a limited number of heavy guns at Panipat. He uses the words "degh, firangi and dekh栏目", but does not mention their number. He used his artillery "chained together according to the custom of Rām with twisted bull-hides". Babur's gun could be discharged eight to sixteen times a day only and after improvement could cover a range of 1600 strikes. Rockets became common in India after 947/1540. The barrels of Akbar's (953-1014/1556-1605) matchlocks were of two lengths, 66 ins. and 42 ins. They were made of rolled strips of steel, with the two edges welded together. The longer of the two weapons could only be used by a man on foot. The flintlock was little known to the Mughals. The artillery was much improved, and was more numerous, in Awrangzib's reign (1068-1118/1658-1707). Besides Indians, Turks, Arabs and Portuguese, the Dutch were also employed by Awrangzib. There was one Dutch artillery engineer who served Awrangzib for sixteen years and went home in 1077/1667. Heavy field guns were used both by the Mughals and the Deccanis. The haft gazi in Bidar was constructed in 977/1570. It measures 32 ft. in length. The malish-i maydān "king of the battlefield" was built in 957/1549 by Burhān Nizām Shāh. The metal is an alloy of 80,427 parts of copper to 19,573 parts of tin. It weighs 400 maunds and the bore is so wide that a man can sit and move about in it easily. The shaped iron shot is ten maunds (Akbar's scale). The ba'la-buxā, used by Dārā in 1068/1658 at Sāmgarh, was made of 80% tin and measured 5 ft. in length. During the contest for the throne of Deccanis and the Deccanis, the Khedivial Library, and proposed the creation of a small town in the province of Lower Egypt: al-Bahira, called Itay al-Barud. He lost his father, then an official in the Dongola, at the age of seven.

After completing his primary studies, he entered, in 1267/1851, the Cairo Military Training School, during the reign of the Viceroy ʿAbbās I (1848-1854), and left it in 1271/1855 with the rank of bābādār (quartermaster-sergeant), at the beginning of the reign of Saʿīd I (1854-1863). His taste for poetry developed from this time onwards; his reading and personal researches, his contacts with the men of letters and poets of the period, made him, despite his military duties in his capacity as an officer which took up most of his time, one of the leaders of the literary renaissance in Egypt. A return to the true sources of poetry, that is to say to the great poets of the diāshiyya and particularly of the ʿAbbāsīd period, seemed to him essential; but he wished also to belong to his own epoch, and for this reason he took advantage of every opportunity to broaden his knowledge in all fields of literature, to begin with, Turkish and Persian, and later, French and English. He lived for some time in Constantinople, with the title of Secretary for Egyptian Foreign Affairs. At the time of the visit of the Viceroy ʿIsāmīl to the Ottoman capital, he brought himself to the notice of the new viceroy who had just succeeded Saʿīd (1279/1863). al-Barud found himself constrained to participate in various diplomatic missions. At the time of the Russian war in 1294/1877, al-Barud proved himself a brilliant and courageous officer, and as a result was promoted amir ad-dāy (colonel) of the 8th regiment of the Guard and, shortly afterwards, amir ad-dāy (colonel) of the 4th regiment of the same Guard.

He took part in the war in Crete in 1282/1865, and his services won him the Turkish decoration Wisâm ʿUthmānī, 4th class. ʿIsāmīl, who since 1283/1866 had been Khedive, kept al-Barud at the head of his Guard, and later appointed him private secretary and sent him to Constantinople, during the Serbo-Bulgarian war, to perform various diplomatic missions. At the time of the Russian war in 1294/1877, al-Barud proved himself a brilliant and courageous officer, and as a result was promoted amir ad-dāy (brigadier-general). From 1296/1879 to 1884, al-Barud busied himself with the reorganisation of the Egyptian General Staff, under the Khedive ʿAbd al-Karim who had succeeded ʿIsāmīl in 1296/1879. Meanwhile, appointed Minister of War as well as Minister of Wafrās, he became, in 1298/1881, Minister of War as well as Minister of Wafrās, and decorated with the Nishām Madīdī, he became, in 1298/1881, Minister of War as well as Minister of Wafrās, and thus found himself constrained to participate in the nationalist movement then in its infancy, and to intervene in the serious conflict between the locally recruited Egyptian army and the Turko-Circassian officers. From then on, al-Barud found
himself involved, either as a spectator or as an active participant, in what is known as Thawra 'Arabî Pasha or al-Thawra al-'Arabiyya, "the Revolt of 'Arabî Pasha" (the name is also pronounced 'Urâbî). Summary of events: fall of the minister Sharîf Pasha; formation of al-Barudi's Cabinet; proclamation of the constitution of 1299/1882; bombardment of Alexandria by the British fleet; landing of the British army; defeat of 'Arabî Pasha at Tell-al-Kebr (near Cairo); occupation of Egypt by Britain; exile of the leaders or promoters of the "Revolt," among whom were al-Barudi, 'Arabî Pasha and Shaykh 'Abdub.

For seventeen years, from the end of 1882 until the beginning of 1900, al-Barudi was obliged to reside in the island of Ceylon. He profited by his enforced leisure to study English, to devote himself to teaching his compatriots and co-religionists, and above all to take up again his favourite studies in Arabic poetry and to give his inspiration free rein to compose the major poems of his diwân.

When he returned to Egypt after having been pardoned by the Decree of 18 Mu'harram 1318/15 May 1900, he had amassed numerous poems selected with discrimination from the collections and diwâns of the 'Abbâsid period, and which, arranged in categories, constituted the most representative anthology of muwallad or muhaddhîth ("modern") poets. These categories are as follows: 1. Adab (moral or ethical); 2. Madîth (panegyric); 3. Rîthâ (threnody); 4. Sahîl (descriptive); 5. Nasîb (erotic); 6. Hîdîth (satire); 7. Zuhd (renouncement of the world). The poets quoted, arranged in chronological order, are thirty in number, and the total verses quoted under each of the above headings are respectively: 1,697, 24,185, 3,400, 3,397, 4,616, 1,225 and 473, making a grand total of 39,593 verses. The number of verses of the madîth category is particularly remarkable. More important, it seems to me, is the importance attributed to certain poets. Ibn al-Rûmî and al-Buhturî lead the field with 3,732 and 3,397 verses. Two poets have between 2,500 and 3,000 verses: Sibî Ibn al-Ta'sîwîdî and al-Sharîf al-Radî; four between 2,000 and 2,500 verses: al-Arâjânî, Abu Tammâm, al-Mutanabbi and al-Sarî al-Raffa; two between 1,500 and 2,000 verses: Ibn Nabîtâ al-Miṣrî and Mîhîyâr al-Dâyâli; five between 1,000 and 1,500 verses: al-Munâdîrî, al-Ghażî, Ibn Hâyûsî, Abu 'l-Fa'âlî al-Ma'sûrî, Surra'dur; eight between 500 and 1,000 verses: al-Tughrî, Abu Nuwâs, 'Umar al-Yamâni, al-Tihâmî, Ibn Hânî al-Andalusî, Ibn Sinân al-Khâfajî, Ibn al-Mutâzî and Ibn al-Khayyât; and, finally, seven between 90 and 500 verses: Abu Fîrâs al-Hamâdânî, Mîlîm b. al-Walîd, Abu 'l-Atâyâ, Ibn 'Umaiyn, al-Ahâb b. al-Ahnâf, Bashshâr b. Burd and Ibn al-Zayyât.

The Mukhtârs of al-Barudi did not appear in any bookseller's before the death of the author, but were published in Cairo in four volumes, two in 1327/1909 and two in 1329/1911, through the efforts of the scholar Yâkût al-Mursî.

Al-Barudi's diwân, which similarly did not appear until after his death, was first published, thanks to the scholar and commentator Mahmûd al-Manṣûrî, in three volumes in two (poems with rhymes hamsa to lâm), n.d., 536 and 631 pages, and was published a second time in 1940 with a preface by M. H. Haykal and a commentary by 'All al-Đârîm and Muhammad Shâfi' Ma'rîf; it reveals the same eclecticism. Occasional pieces are numerous; accurate descriptions of places enable one to follow the poet-statesman through his various étages; some of the poems composed at Colombo (Ceylon) are particularly moving. It is not possible, within the limits of this article, to go into the detail which would be required by a more profound critical appreciation of the subject matter, not to mention the form, of his poems. Let it suffice to say that al-Barudi attained an undisputed mastery of poetic language in its purest classical form; vocabulary, figures of speech, stylistic devices, held no secrets for him. He did not seek to make innovations in the pattern of the basîda or in the poetic metres (there is a rare exception in the diwân, i, 63-4), and remained faithful to his models. His admiration for the passed led him to imitate several famous poems, with astounding success. For example, his imitation of the Burda of al-Bûsîrî, using the same metre (basîd) and the same rhyme (mi), under the title of Ka'fî al-Qunüma ji Muhd Sayyid al-Umma (Cairo 1327/1909, i, 458, 48 pages, 447 verses, whereas the Burda only contains 172). The themes used in his diwân, however, are very modern and, in this respect, al-Barudi is justly considered to be one of the most effective pioneers of the renaissance of contemporary Arabic poetry.

Bibliography: The reader is referred to the very full references given by J. A. Dagher, in his Maṣâ'dîr al-Dîrâsâ al-Arâbiyya, ii: al-Rûhânî (1899-1951), Beirut 1956, 159-162. To these should be added, with regard to the Thawra 'Arabiyya, the following two works which give all necessary documentation: M. Sabry, La genèse de l'esprit national égyptien (1863-1882), Paris 1924, and Osman Amin, Muhammad 'Abdub, Essai sur ses idées philosophiques et religieuses, Cairo 1944.— Cf. also the notice in Brockelmann S III, 7-18.
ment of nurturing separatist ideas and plotting the founding of an Ibadite imamate. Proceedings were instituted against him, but the sentences pronounced were not fully executed because of the disturbances which they provoked, especially in the Djbabal. Finally he was granted an amnesty, but upon the Ottoman authorities requesting him to present himself in Constantinople, he fled to Cairo.

A man of unusual culture (having studied at Tunis, al-Azhár and in the Mzáb), he founded a printing office, which had the outstanding merit of disseminating several old Ibadí works. He also founded a newspaper, which however only enjoyed an ephemeral life, its circulation in the Ottoman provinces, Tunisia, and Algeria, being prohibited.

After the promulgation in Turkey of the constitution following the Young Turks' revolution, Sulaymán al-Bárúni was elected deputy in the ʿimāma wa mulūk al-Ibadīyya, thereupon he learnt Turkish in two months of intense study.

When Italy's designs on Libya became evident, al-Bárúni endeavoured to obtain consignments of arms from his government. After the Italian landing at Tripoli (11th October 1911), he was one of the most active promoters of the Arab resistance, which made Turkey decide to stand firm, and which continued even after the signing of the Turco-Italian Peace Treaty at Ouchy (or Lausanne, 18th October 1912). In the western Djbabal sector, where al-Bárúni was conducting operations and was aiming at the formation of a Berber amirate, the issue was decided at the battle of al-ʿAṣbāʿa (el-ʿAṣbāʿa) on the 23rd March 1913. Upon his return to Constantinople, al-Bárúni was appointed senator, receiving the title of pasha.

When Turkey entered the war on the side of the Central Powers (1914), al-Bárúni was sent to Sollum (October 1914) with the brother of Enver Pasha, Nûrî Bey, to induce the leader of the Sanüsí, Ahmad al-Sharif, to attack the British from the West. His mission failed; the plot to force the British to leave Tripolitania, to which al-Baruni was conducting operations and was aiming at the formation of a Berber amirate, the issue was decided at the battle of al-ʿAṣbāʿa (el-ʿAṣbāʿa) on the 23rd March 1913. Upon his return to Constantinople, al-Bárúni was appointed senator, receiving the title of pasha.

Nevertheless he managed to escape (January 1915). He resumed his role as an opponent of Italy, when the latter entered the war. However it was not until the end of 1916, when Turkey had appointed him Governor-General and Commander of Tripoli and its dependencies, that he landed at Misurata from a submarine. The Italians were in a precarious situation, having entrenched themselves at Tripoli, Homs (al-Kūms) and Zuara, but the Arabs also were in a state of complete confusion. Their leaders had divergent aims and the tribes were fighting amongst themselves; al-Bárúni restored harmony. Nevertheless, he soon lost his pre-eminence; after proceeding to western Tripolitania, he was there defeated by the Italians (16th and 17th January 1917). At the end of the same month of January, the Turks replaced him by a military man, the Nûrî Pasha referred to above. In November 1917, that is to say after the signing of the Armistice between Turkey and the Allies, the nationalists, under the influence of the Wilsonian principles, established the Tripolitanian Republic (al-Djum-hāriyya al-Tarabulusiya) in Tripolitania, to which Italy later granted (1st June 1919) the Tripolitanian Statute. Two movements then manifested themselves, one aimed at an agreement with Italy which would have meant complete independence, and the other, represented especially by the Berbers, favourable to collaboration with Italy by the appli-
ment here is the effect of a law of nature established by God.

In eschatology, the word barzakh is used to describe the boundary of the world of human beings, which consists of the heavens, the earth and the nether regions, and its separation from the world of pure spirits and God. See the pictures representing this conception in the Mat'rifat-nama of Ibrāhīm Ḥākī (Būlāk 1251, 1255); cf. also Carra de Vaux, Fragments d'eschatologie musulmane; R. Eklund, Life between Death and Resurrection recording to Islam, Upsala 1941.

The Šefs, too, use the town in the sense of space between the material world and that of the pure spirits; hence several shades of meaning; cf. C. E. Wilson, The Masmāvi, book ii, vol. ii, note 20.

The same expression is also found in the philosophy known as "illuminating" (al-bikmah al-maşrihiyya). It there denotes the dark substances, i.e. bodies: the barzakh or the body is dark by nature and only becomes light on receiving the light of the spirit. The celestial spheres are "animated" or "living" barzakhs, immaterial bodies on the other hand are "dead" barzakhs (cf. Carra de Vaux, La Philosophie illuminatrice d'après Suhravardi Mecitou, in JA, Jan.-Feb. 1902).

The term barzakh is sometimes rendered by Purat, on the analogy of the Christian idea of Purgatory, but this is inaccurate. It is used in the sense of "limbo". See further al-Tahānawi, Dīct. of Technical Terms, s.v. (B. Carra de Vaux*)

Bārzān, a Kurdish village on the left (eastern) bank of the Great Zāb river, approximately 80 km. due north of Arbil, in what was formerly the territory of the Zēbāri tribe. Šarāf al-Dīn Bīltīš, Šarār-nāma, i, 107, in 1005/1596, numbered it among the possessions of the Bahdīnā princes under the name of Bāzrān. Since the middle of the 13th/19th century Bārzān has been the residence of a Naḵghbandī šaykh. The šaykhās and their followers, now known as the Bāzrāni tribe, maintained a turbulent independence of Ottoman authority until, early in 1333/1925, the Mawīl authorities captured and hanged Šaykh Ābd al-Salām II. His successor, Šaykh Ahmad, temporarily declared himself a Christian in 1350/1931. This occasioned warfare with the neighbouring Brādōst tribe, necessitating the intervention of the government of Īrāk. The šaykh fled to Turkey, where he was arrested.

In midsummer 1362/1943 Mullā Ṩūṣṭāfā, brother of Šaykh Ahmad, escaped from seclusion at Sulaymānīyeh to Bārzān, where he gathered support and rebelled against the government. He had some initial success against government forces, but was finally obliged to retire, early in 1364/1945, to Persia. He assisted at the inauguration of the Kurdish People’s Republic at Mahābād on 10 Muḥarram 1365/15 December 1943 and was made a Field-Marshal. On the collapse of the Republic Mullā Ṩūṣṭāfā escaped to Soviet territory, while Šaykh Ahmad surrendered to the Īrāk government.

Barzanh, a village and township (dis冲刺tîn) in the district (qāhristān) of Ardabīl, county (būlāq) of Garm, lying in the mountains overlooking the plain of Muḥānā to the north. The name may mean “high place”. The village lies ca. 47° 40’ E. long. (Greenw.) and 39° 20’ N. lat.

A confusion between Barzan and Barzanji (near Tiflis) appears in several of the mediaeval geographers (cf. Yāḵūt, i, 526; Ḥudūd al-ʿAlām, 403). This confusion, together with a remark of Muhaddisī, 378, that Barzand was a market for Armeians, helps to explain why several geographers (e.g., Yāḵūt) placed Barzand in Armenia.

We find no notice of the place before the time of Afšin (q.v.), who in 220/835 made Barzand one of his headquarters in the campaign against Bābak (q.v.). Several sources say that Afšin rebuilt Barzand after he had found it in ruins (Schwarz, 1904). Bābak may have destroyed the town, since it was a strategic point on the main road from Ardabīl north to the Muḥānā steppe. After the time of Afšin Barzand became a large town with a prosperous bazaar, noted for textiles. It may have suffered during the Mongol conquests, for Ḥand Allāḥ Mustawī, Ṭuṣka, trans. G. L. Strange, 91, says the town was in ruins in his time (mid 8th/14th cent.). Later the area was included in the pasture land of the Šah Sewan tribe (q.v.), and the people spoke Adhārī Turkish as they do today.

At the present the township has a population (1950) of ca. 3820, and the central village is called Kala’-y Barzan.

Barzu-nāma, Persian epic, attributed to Abu ‘l-ʿAlā’ ʿAṭāʾ b. Yaʿqūb, known as Nakūk (called ʿAṭāʾ b. Yaʿqūb, known as ʿAṭāʾ Rāzī in Blochet, Catal. Mss. persans Bibli. Nat. Paris, iii, 15, no. 1189). According to Rīḍā Kūlī Ḵᵛān Hīdāyat, “some people have wrongly considered these two names to represent two poets. This is not so; they are the same person” (Maḏḥaʿ al-Fasāḥā, i, 342). ʿAṭāʾ was a poet in both Arabic and Persian (see his account in Bahkhal, Dumyat al-Ḵaṣr) and an official in the reign of the Ghaznavid sultan Ibrāhīm (1059-1099) who, dissatisfied with him, ruined him, imprisoned him and held him prisoner for more than eight years at Lahore. ʿAṭāʾ died in 491/1098, according to Awfī (Lubāb, i, 72-75). At the end of a remarkable elegy (marrātiya) his contemporary Maḏḥūḏ-i Ṣaʿīd-i Ṣalmān gave his name clearly: “az wafāt-i ʿAṭāʾ ŏn-i Yaʿqūb, tāzā-tar gūd wakhkhat-i ʿAlām” (by the death of ʿAṭāʾ son of Yaʿqūb the shamelessness of this nether world received a new stimulus”). His principal work was the Lay of Barzū (Barzū-nāma), the longest and one of the most important epic poems based on the ancient Persian traditions in imitation of the Book of the Kings (Shāh-nāma) of Firdawṣi (from which the Barzū-nāma in several parts is directly derived). Barzū, son of Suhrāb and grandson of Rustam, was born among the Tūrānians to a woman called Shahrū. Persuaded by Afrāṣiyāb, leader of the Tūrānians, he went to fight the Persians; at the end of protracted hostilities, Rustam recognised him and reconciled him to the Persians. Finally he died, killed traitorously in the course of a war against the Slavs, represented as demons (ḍūm) ruled over by the diw Shikbāb. Noldeke, seeing in these adventures (as J. Mōhli did before him) a variant of those of the heroes Suhrāb and Dīhāngir, assumed that the work was one of pure invention. The episode of the Tūrānian singing-girl Sūsān, who captured the chief
Persian heroes by a trick, and decided to send them in chains to Afrasiyab, when the Persian hero Faramurz came suddenly to rescue them, is one of the most brilliant parts of the poem; it may be considered as a work of art on its own merits. Fragments of the *Barzu-nama* (two MSS. in the Bibl. Nat. Paris, Blochét, Catal. ms. persans, iii, 15 and 16) were published by Turner Macan (Shah-nama, iv, 2160-2296), Kosegarten (Mines de l’Orient, V, 309), Vullers (Chryst. Schahnam., 87-99). It also seems possible to attribute to *Ata* the epic poem *Bijiq-nama*, concerning the exploits of another Persian hero, the last line of which is: "*Ja in dastan dil bi-paraxdtam, sad-i rasmi Barzu hami takhhtam*, "when I had freed my heart of this poem. I quickly began the Lay of Barzu" (Rieu, Catal. Persian Ms. Brit. Mus., 132-133).

**BARZÚYA,** Arabic name, attested by Yākūt, of a fortress to which modern writers, following a reference to it by his contemporary, prefer to apply the name Bourzy. The local people call it Kal'at Marza. The ruins of this castle, standing on the eastern slope of the Aloua massif, still dominate the marshy depression of the Ghâb. It had a troubled history from Hellenic times, when the impregnable position of Lysias was known. At the time of the Syrian expedition of the Emperor Tzimisces in 365/975, it passed from Hamdanid hands into those of the Byzantines. Subsequently it was occupied by the Crusaders and, forming one of the best defences of the principality of Antioch (at which time it appears to have born the name Rochefort) was retaken by force by Salâl al-Dîn in 584/1188. From the Manûlûk period it rapidly lost its importance and the chroniclers merely make passing reference to it.

**AL-BASASIRI,** Abu ‘l-Hârîm Arsân al-Muqaffar, originally a Turkish slave, who became one of the chief military leaders at the end of the Buwayhid dynasty. He owes his *nîsba* al-Basasîrî (al-Fâsâri) to his first master who was from Basâ (Fasa) in Fars. A mawât of Bahâ al-Dawlâ, he subsequently rose to the highest rank, though we only hear of him from the reign of Djalîl al-Dawlâ (416-433/1025-1044), in the struggles which the latter was obliged to maintain against his nephew Abû Kâlidjâr and the *Ukaylid* of al-Mawârî. During the reign of al-Malik al-Rahîm Khusrâw Firûz (440-447/1048-1055), a period of continuous troubles due to the indiscriminate of the Turkish troops at Baghâdâd, the struggle between Sunnis and Shi’i in the capital, the ambitions of the *Ukaylid*s and Buwayhid pretenders, the depredations of the Arab and Kurdish tribes, and, finally, the intervention of the Saljûqid sultan Toghrûl Beg in the affairs of Mesopotamia, al-Basasîrî came to play a major rôle (Abân taken from the *Ukaylid* Karwâsh, 441/1050, Basra taken from the brother of Malik al-Râhim, 441/1054, operations against the Arab and Kurdish brigands at Bawâzûdî, 445/1054), assistance given to the Mazyadî Shî’i Dubays, who had been attacked at al-Dâjânîn, the future Hilla, by the Banû Khâfâdjâ, etc.). However in 446/1054, he was unable to stop the rebellion of the Turks in Baghâdâd, followed by scenes of pillage and famine and an incursion by the troops of the *Ukaylid* of al-Mawârî, Kuraysh, to Barâdân, whence they carried off the camels and horses from his stables. In November of the same year, Kuraysh took Abân, al-Basasîrî’s fief, and, breaking with the Buwayhid, pronounced the *khutba* in the name of Toghrûl Beg.

At Baghâdâd al-Basasîrî had a powerful adversary, the Caliph’s vizier the ra’is al-ru’âsî’ al-Mulimâ, who, foreseeing the end of the Buwayhids, had already formed a connexion with Toghrûl Beg, because in 446/1054-1055, in which year the Turkish leader’s quarrel with the Caliph and his entourage became effective, al-Basasîrî accused him of having summoned Toghrûl’s Ghuzz, who had been at Hulâwân since 444/1052-3. The vizier prevented al-Basasîrî from taking action against supporters of Kuraysh who had come to Baghâdâd, to which he reacted by impounding one of the vizier’s boats, withdrawing the monthly pensions paid to the Caliph and the vizier, and, in March 1055, retaking Abân by force. Upon his return to Baghâdâd, he refrained from calling to pay his respects to the Caliph.

Al-Basasîrî probably already had Shi’i leanings. In 447/1055, at the time of the Sunni demonstrations in Baghâdâd, extremists, doubtless at the vizier’s instigation, seized a ship carrying wine destined for al-Basasîrî, who was then at Wâsit with Malik al-Râhim, and broke the wine-jars. As the wine belonged to a Christian, al-Basasîrî thereupon obtained a fatwâ declaring the smashing of the jars to be illegal. Thenceforth the vizier sedulously denigrated al-Basasîrî in the eyes of the Turks of the army, and of the Caliph al-Kâ’im. He accused him of being in communication with the Fâtimids al-Mustanjîr, caused his house in Baghâdâd to be pillaged and burnt by the Turks, and ordered the Buwayhid to send him away. Meanwhile the troops of Toghrûl Beg, who had announced his intention of performing the pilgrimage and of proceeding to Syria and Egypt to dethrone the Fâtimid, arrived before Baghâdâd. Al-Malik al-Rahîm again set out towards Baghâdâd, whilst al-Basasîrî went to his brother-in-law, the Mazyadî Dubays; the Turks of al-Mawârî, the Mâlikîs and Kurds, the intervention of the Saldjukid sultan Toghrûl Beg in the affairs of Mesopotamia, al-Basasîrî came to play a major rôl...
On Togrul's orders, Dubays was obliged to break with al-Basasiri, who proceeded to Raḥba on the Euphrates. He wrote to the Fātimid Caliph Mustansir asking him to receive him in Cairo. The vizier al-Yārūf did not agree, but the Caliph responded to his request for Fātimid aid to conquer Baghdaḍ in his name and prevent the Saljūqids from marching on Syria and Egypt; he gave him the governorship of Raḥba and sent him 500,000 dinars, clothes of a like value, 500 horses, 10,000 bows, 1,000 swords, and lances and arrows.

According to the autobiography of the Fātimid missionary Muʿayyad fi ʿl-Dīn al-Sḥirāzī, who was apparently the instigator of the revolt and a real Fātimid plenipotentiary in the affair, al-Basāṣīrī was not the first to approach Mustansir; Muʿayyad had written to him prior to Togrul’s arrival in Baghdaḍ, though the letters did not reach him until after the Saljūqids had entered the city. It was Muʿayyad who brought the money and supplies sent by Cairo to al-Basasīrī at Raḥba as well as the Fātimid Caliph’s patent of investiture.

The year 448/1056-7 was marked by intense Fātimid propaganda, attested by the numerous letters addressed by Muʿayyad to the amirs of Irāk and the Dhāʾira to win them to the Fātimid cause. The excesses of the Ghuzz favoured his success. The khubta was pronounced in the name of Mustansīr at Wasīṭ and other places in Irāk, and Dubays, who had been constrained to do likewise for Togrul, returned to the alliance with al-Basasīrī. The latter, reinforced by the Arab nomads and the Baghdaḍ Turks who had been despoiled by Togrul, marched in Dubays’s company with a considerable body of troops on the region of Sīndjār, where he inflicted a bloody defeat on the Saljūqids troops commanded by the vizier, near the racecourse, al-Kutlumush and his ally Kuraysh of al-Mawsīl. Kutlumush fled to Adharbājyan; Kuraysh was wounded and captured (29 Shawwāl 448/9 January 1057) and thenceforth made common cause with al-Basasīrī, who proceeded to al-Mawsīl where the Fātimid Caliph was acknowledged.

Togrul’s reaction was not long delayed. He left Baghdaḍ on the 10 Dhu ‘l-Ḵa’da’ 448/19 January 1057, and, after receiving reinforcements from Persia, marched on al-Mawsīl, took the city and then proceeded towards Nisibīn. Dubays and Kuraysh rallied to him, whilst al-Basasīrī returned to Raḥba with the Baghdaḍ Turks and a group of ‘Ukayl. However, after the arrival of the sultan’s brother, Ibrāhīm Ināl, who heartily disliked the Arabs, Kuraysh rejoined al-Basasīrī, whilst Dubays regained Dīmān via Raḥba. After wreaking his vengeance on Sīndjār for the affair of 448 and leaving Ināl at al-Mawsīl, the sultan returned to Baghdaḍ, where he was solemnly received by the Caliph, who conferred on him the title of King of the West and the East (26 Dhu ‘l-Ḵa’da’ 449/4 January 1058).

The sultan’s brother, Ibrāhīm Ināl, however, who coveted the sultanate, got into communication with al-Basasīrī and sent a messenger to the missionary Muʿayyad, who had come back to Aleppo, with a view to obtaining Fātimid support in wresting the sultanate from his brother, promising that the khubta should be pronounced in the name of the Fātimids. He abandoned al-Mawsīl, to which al-Basasīrī and Kuraysh returned. After the taking of the citadel, which held out for four months, al-Basasīrī returned to Raḥba. However, Togrul reconquered al-Mawsīl and marched on Nisibīn, whilst, according to Muʿayyad’s autobiography, al-Basasīrī, undoubtedly alarmed, directed his steps towards Damascus. Then it was that Ināl rose in rebellion and set out for the Dībāl. Togrul left Nisibīn on the 15 Ramaḍān 450/5 November 1058 and set off in his pursuit.

Now that ‘Irāk was free of the Saljūqids for a time, there was nothing to oppose al-Basasīrī’s return and counter-offensive. News was soon received of his arrival at Hit and then at Anbār. The Caliph Kāʾim hesitated as to the attitude to adopt and, in spite of the proposal of the Mazyādīd Dubays, who offered him a refuge, stayed on in Baghdaḍ, counting on being able to resist. On 8 Dhu ‘l-Kaʿda’ 27 December 1058, al-Basasīrī entered western Baghdaḍ with 400 poorly equipped cavalrymen accompanied by Kuraysh at the head of a further two hundred. The following Friday, 1 January 1059, the Shīʿa adḥān was heard and the khubta was recited in the name of the Fātimids at the Mosque of Mansūr. Then, re-establishing the bridge of boats, al-Basasīrī crossed the river and, on the 8th of January, the name of the Caliph Mustansīr was proclaimed at the Rusafa Mosque. The Caliph had his palace fortified, but al-Basasīrī not only had the Shīʿa of the Karkh on his side, but also the large numbers of Sunnis impelled by hatred of the Ghuzz and the lure of pillage. After defeating a group of Hāshimites and palace eunuchs urged on by the vizier, near the racecourse, al-Basasīrī attacked the palace on the 1 Dhu ‘l-Hijja, 19 January 1059, entering the harīm by the Bāb al-Nūbī. The Caliph, seeing that the game was lost, placed himself and the vizier under the protection of Kuraysh, who got them away, whilst the palace was sacked. Al-Basasīrī appropriated the Caliphal insignia, mīndī (turban), ṛiḍḍ (cloak) and ḥubbā (lattice screen), which were sent to Cairo as trophies. He solemnly celebrated the Feast of the Victims on 29 January 1059 at the masjid with the Egyptian standards. He agreed to leave the Caliph with Kuraysh, who placed him in safe-keeping at al-Ḥadīthah of ‘Ānā with his cousin Muhārīr, but insisted that his enemy, the vizier Ibn al-Muslinna, should be handed over to him. After parading him with ignominy, he had him put to a terrible death on 16 February 1059. Al-Basasīrī then took possession of Wasīṭ and Baṣra, but was unable to gain Khūzistan to the Fātimid cause.

But already al-Basasīrī was virtually abandoned by Cairo. Initially great hopes had been raised there by his action; Mustansīr relied on his bringing him the Caliph al-Kāʾim as a captive and had the Little Palace of the West at Cairo made ready for him, and the was made ready for him, and the was greatly displeased when al-Kāʾim was handed over to Kuraysh. In addition, the vizier Yāzūrī, blamed for ruining Egyptian finances to support al-Basasīrī, had been deposed and then put to death. From June 1058, Ibn al-Maghribī, a former secretary who had fled from al-Basasīrī at Baghdaḍ, was vizier. When the latter wrote to him, he replied in such terms as to leave him no expectations of support. Togrul, however, had triumphed over his brother in Dūnāsīn 11 451/July 1059 and was preparing to return to Baghdaḍ. He offered to leave al-Basasīrī in Baghdaḍ, provided he would pronounce the khubta and coin money in his name and restore the Caliph al-Kāʾim to the throne. In such an event, he himself would not return to ‘Irāk. He asked Kuraysh to leave al-Basasīrī in the event of his refusing to agree to this proposal. For his part, al-Basasīrī attempted to negotiate with the Caliph to persuade him to break away from the Saldjūqids, but without success. Kuraysh drew his attention to
Fatimid ingratitude and let him hope for a pardon
by Toghrul, but he would not accept the offer and
Took-flight, al-Basasiri accepted battle and fell,
his family on 6 Dhu 'l-Ka' 14 December, pro-
cceeding in the direction of Kufa and leaving the
Shi'is of Kirkh exposed to the reprisals of the
Sultans.

Al-Basasiri was swiftly overtaken by Toghrul's
cavalry and caught in the company of Dubays.
Whilst the latter, whose Arabs refused to engage,
took to flight, al-Basasiri accepted battle and fell,
his horse pierced by an arrow. He was killed by the
secretary of the Saljuk vizier al-Kunduri on 8 Dhu
'l-Hijja/15 January 1060 at Saky al-Furat, near
Kufa. His head was brought to the sultan.

Thus ended the adventure of al-Basasiri. For a
year he had gained acknowledgement of Fatimid
sovereignty at Baghdad. The Khûba in the name of
the Fatimids is said to have been pronounced there
forty times. This episode of attempted expansion,
Fatimid on the one hand and Saljuk on the other,
and more generally the struggle between Sunnis and
Shi'is, definitely profited by the causes of Sunnism and
Abbâsid legitimacy, of which Toghrul Beg showed
himself the interested champion.

BASHKURT [see PASHA].

BASHDJURT [see DAPTAĐAR].

BAŠDHJURT (BASHKURT) is the name of a Turkish
people living in Bashkurdistan in the S. Urals,
which is now a Soviet republic. Their place of
origin is doubtful; some evidence says that they
came from S. W. Turkish (see Togan, Türk Tarhi
Dosyleri, 1927, 125; Hamilton, Les Uygures, 1935, 5),
whilst others indicate that their present
habitat is their original home (the Pajur'tit, 
Tryuvoi, Tzongoi, Wurousoi, und Soubouyoi,
Potelma, iii, 5, 22, 24 and iv, 14, 9, 11 may be
identified with "Bâshqyr" and the tribal names
"Geyne", "Tabin", "Burud", and "Suvnî"). Ibn
Fdjlan, ed. Togan, 187, 327; Rashid al-Dîn, Paris,
says that the Bashkurs lived in a mountainous
and wooded country into which it was difficult to
penetrate, and that the centre of this region was
25 days journey from the Bulgars; and al-Bîrdîn
calls the Urals "the Bashkurt mountains". Ibn
Fdjlan, who made a personal survey of the country,
religion, and customs of the Bashkurs in 310/922
says that he came on their tents after crossing the
rivers Kinal and Sokh, i.e., on approaching the
borders of the Bulgars. He also states that they were
all qâṣâns (i.e., Shâmânis). Idrîsî, by combining
the stories of his contemporaries about this province
with those found in the Arabic translation of
Ptolemy, has given rather more complicated details
about their cities, iron and copper manufactures,
arms, exports of beaver and squirrel furs, etc., but
much of this probably refers to the Magyars. Con-
fusion arose because Muslim sources called the
Bashkurs "the inner Bashkurs" and the Magyars
"the outer Bashkurs", while the Bashkurs of the
Urals divided themselves into "inner" and "outer"
Bashkurs. To their neighbours the Kâzâks and
the Nogays they were after the 13th century known
as "Istek", which gave rise to the Ottoman term
"Heshek". The Yurmatî and Yenei tribes of the
Bashkurt were among the Turkish tribes that held
sway over the Magyars in the 12th century; and
theories that the Bashkurs were Magyars who did
not become Turkised till the time of the Mongols.
Yâfcut, who met some Bash-
kurs from Hungary who came to study at Aleppo,
relates traditions from them that their ancestors had
learnt Islam from the Volga Bulgars and states that
they were Hanafs, that they had 30 villages, spoke
the "Afrandj" language and served in the army of
the "Hungar" monarchs, though not taking part
in expeditions against Muslim countries. The 12th
century writer Abû Hâmid al-Andalusî, who lived for
some time among the Bashkurs in Hungary, states
that like the Bulgars they were Hanafs and says that
there were 78 Bashkurt towns in Hungary, extending
the name Bashkur to the non-Muslim Magyars.

The Bashkurt lands were close to the summer
camping-gounds of the Mongol Khâns of the Golden
Horde, and when they came under the Mongols they
were forced to serve in the Mongol army. They were,
however, allowed to have a separate Muslim judge.
Prominent in the service of the Ilkâns were the
Amir Bâshkur, who put down the rebellion of
Sülmânish in Asia Minor during the time of Ghâzân
Khan, and Sarkan Bâshkur, a lieutenant of Öl-
qaytu. Bashkurs were also found in the service of the
Egyptian Mamlûks, among them 'Alam al-Dîn
Sandjâr al-Bâshkurdi, who was Kalâwûn's deputy
in Syria.

In the first half of the 16th century the Tura
(Sîbâbân) Khâns hold the northern and eastern parts
of Bashkurdistan under their sway, while the Kazan
Khan Sâhib Gerey won influence over the "Kazan
Yoll" and the Nogay Princes gained S. Bashkurdistan.
Two of the Ulu Nogay princes, Isımaikhi Uru
Mirzâ and his nephew Isâhir Mirzâ, governed the
"Nogay Volyu", i.e., the S. Urals and Bashkurs on half
of the Kidûmûns till 1608. At one time Uru Mirzâ
made representations to Sultan Sulaymân I urging
him to annex the Volga basin. He also sent am-

FATIMID INGRATITUDE AND LET HIM HOPE FOR A PARDON
BY TÖGHRUL, BUT HE WOULD NOT ACCEPT THE OFFER AND TOOK FLIGHT,
Bashkurt ambassadors to Czar Ivan IV because the Russians occupying Kazan and Astrakhan had pressed on to the east of the Volga, had made Samara, Yaytikia and Ufa into Russian fortresses, and had imposed taxes on the neighbouring Bashkurts, and protested that the “Bashkurt-Isteks” paid taxes only to him, and that by taxing them the Russians were interfering in the internal affairs of the Nogay province (Pekarsky, Kogda ossosanoy goroda Ufa i Samara, 1872, 8). However, despite some conciliatory moves the Russians gradually extended their control. In 1670-80 Bashkurt families were under the Russians. By 1700 the number had risen to 7,000. Under the Russians the province was organised very much as it had been before. The community was divided into several classes: the mirzas (Russian Kniaiz) who came from the Mongol and Tatar aristocracy; the biys (Russ. stragina) and tarkhs who were tribal leaders; the asabes (Arabic ’asaba; Russ. voltimek) who held hereditary fiefs and served in the army; the yasakli who were peasants liable to military service, and the titfers who were peasants registered in place of fieholders; the bobils (old Turkish and Mongol bogol = captive) who were landless peasants; and the tasnaks who were nomads tied to a particular village. The mirzas, biys, and tarkhs used to meet to discuss general political questions at congresses (yayfa) held at Khan Tobie in the neighbourhood of Ufa. This is now the village of Hadji Yurmat. There were also departments called diwan (= divan) which dealt with the affairs of the province. The territory of the Yurmati tribe was the military centre of the province, and the asabes were stationed along four military roads leading from there: the Nogay road to the south, the Kazan road to the west, the Osa road to the north, and the Siberia road to the east. There was fierce resistance to Russian annexation and risings were frequent. The Küçümdis, the popularly chosen leaders of the Bashkurts, were generally at the head of these movements, which were sometimes combined with other movements in the Ukraine and N. Caucasus and with enterprises of the Crimeans, the Kalmuks and the Ottomans, with all of whom they had contacts. During the 17th and the first quarter of the 18th centuries the Bashkurs, joined in movements in W. Siberia, the lower Jaxartes, Astrakhan, Don and Daghistan regions and even in the Debreczen area of Hungary. It was in 1667, during the reign of Kudiim Kudic, that the Bashkurs, under the guidance of Kayip Khan with the support of the Kazak Khans, the movement was put down only with further risings occurring in 1755 and 1774. In 1778 was the Kalmuk Khan Ayuke who was responsible for the death of Kudic. The fighting was renewed in 1740 under a leader known as Karasakal. This was, in fact, Baybulat, last of the Kudimdis, who together with a nephew had been working with the support of the Crimean Khans among the Bashkurs since 1738 (Istor. Zapiski. vol. xxiv, 102). After two years fighting Karasakal was defeated by the Russians and fled to the Ortayiiz Kazak Khans and took refuge with the Bashkurs. After this nothing more is heard of the Küçümdis, but further risings occurred in 1755 and 1774. In 1798, in accordance with her policy of conciliating the Bashkurs, Catherine the Great divided the province into a traditional tribal cantons. She set up Bashkurt regiments, which were armed with bows and arrows and wore their national costume. These regiments were used in the Napolonic wars, and actually advanced as far as Paris. However in 1861 the cantons were abolished, as were the regiments in 1862, though some small units were not disbanded until 1882. In 1872 the Bashkurs, who had previously been dealt with by the Foreign Ministry, were given the same status as other Russian subjects, though they had their own administrative and land laws. The Bashkurs played no important part in the 1905 revolution. In 1917, in accordance with a resolution of “The General Assembly of the Muslims of Russia” held on May 1-10, which called for autonomy for Muslim Turkish regions, the Bashkurt
representatives set up a 3-man central committee (Zekl Welidi, S. M. Miras, Allah Berdi Jasafer) to deal with the administrative organisation of their provinces. They came to an agreement with the Kazak-Kirgiz and held the first Bashkurt Congress which urged that the Bashkurs should join with other peoples struggling for autonomy (the Kazaks and Uzbeks, etc.) (Bashkurt Aymalii, Ufa 1925, vol. 1, 3). In the autumn they began to form an army, and an administrative centre was set up in the Caravanserai at Orenburg under Bikbaurov Yunus. In 1918 this government was suppressed by the Russians and its members were imprisoned at Orenburg but later escaped. In June the Bashkurt rose again, formed 2 military divisions, and revived the government at Orenburg. In order to include Kazak-Kirgiz detachments the divisions were turned into a separate army corps under the command of General Ishbulatov. But the Allies, alarmed at the German drive in the Ukraine and Caucasus, wanted no national Kirgiz and Bashkurt army in the Urals and in the steppes and sought its disbandment. In accordance with their wishes General Koleak proclaimed that the army and government would not be recognised (21 Nov. 1918).

On 19 February 1919 the "Bashkurdistan" government concluded a peace treaty with the Soviets, which protected its army and its autonomy in internal affairs. Afterwards there were efforts to unite the Bashkurs with the Kazaks, but they were rejected by the Soviets, and interrelatian was the administrative centre for Bashkurdistan, and Aktube for Kazakstam. This was "Little Bashkurdistan", with an area of 84,874 sq. km and a population of 1,295,059, some 65-72% of whom were Turks. The premier was Yuumugul ogluo, afterwards Z. V. Togan (Validov). On 20 June 1920 the members of the government withdrew from office and went to Turkestan to take part in the movement of the Basmadis [q.v.] against the Soviets. A completely Soviet government was formed and the army was disbanded. In June 1922 the Soviets united Bashkurdistan with the province of Ufa, which was predominantly Russian, as "Great Bashkurdistan". According to the 1935 census its area was 151,840 sq. km and its population 2,972,400 only 51% of whom were Turks.

The Bashkurt dialect occupies an intermediate place between the Kazak and Kazan dialects. Under the Soviets it has been reduced to writing and books have been printed in it.

BASHIR-BOZUK, a term, meaning 'leaderless', unattatched, that was first applied late in the Ottoman period both to homndutsch vagabonds from the provinces seeking a livelihood in Istanbul and to such male Muslim subjects of the sultan as were not affiliated to any military corps. From this last usage it came to signify 'civilian' (cf. Redhouse, Turkish-English Lexicon, s.v.); and for this reason individual volunteers forming bodies attached to the Ottoman army at the time of the Crimean War were called bash-bosuk 'askeri ('civilian' or 'irregular' troops). These irregulars, largely recruited among Albanians, Kurds, and Circassians, furnished their own arms and mounts (some being cavalry) and had their own commanders. In the course of the war an attempt was made to subject them to normal military discipline; but this was not successful; and during the next Russo-Ottoman war (of 1877) the bash-bosuk 'askeri earned so much opprobrium for their savagery and love of loot that their employment was thereafter abandoned.

BASHIR B. SA'D, Medinese companion of the Khazâdi tribe, and an early convert to Islam. He attended the second 'Akaba meeting with the Prophet, and, after the Prophet's emigration to Medina, took part in all the ensuing battles and himself led two expeditions, one in Shab'ta in October-December 629 against the Banî Murra at Fadak, and the other later in the same year against a force of Ġhatâfân which 'Uyyayna b. Ḥiǧān was assembling between Wâdî al-Kūrâ and Fadak in order to attack Medina. The first expedition succeeded in dispersing the enemy forces and Bashîr himself fought bravely but was wounded and left for dead. During the night, he managed to reach the house of a Jew in Fadak where he sheltered for a few days before returning to Medina. The second expedition, carried out with 300 men, was unsuccessful; 'Uyyayna's force was dispersed and much booty captured. In the same year, when the Prophet visited Mecca for 'Umrat al-Kâdâ in accordance with the agreement of the previous year at al-Hudaybiyya, Bashîr commanded an armed contingent which escorted him but did not enter Mecca.

On the death of the Prophet, Bashîr supported the claim of Kurayj against the Medinese attempt, in the Sabîfâ meeting, to elect an Anṣârî successor, and was the first—or one of the first—to make the decisive move of paying homage to Abû Bakr. Later he joined the expedition to 'Irâq and was present when al-Hîra was captured by Khâlid b. al-Walîd. He died at 'Ayn al-Tamr in 12/633, though it is not certain whether he was killed in the fighting.
or died from a wound he had received shortly before. Bashir was one of the few who knew the art of writing. He was the father of al-Nu'mân b. Bashir (q.v.).

BASIR CELEBI, a physician who flourished in the middle of the 9th/15th century. According to the little treatise Hikâyet-i Basîr Celebi (of which one MS. has been published in facsimile by I. H. Erteylan as Tarih-i Edeire: Hikâyet-i Basîr Celebi, Türk Edebiyat Ornekeri i, Istanbul 1949), he was summoned from Konya to Edirne by Mehmed II very soon after his accession; he expounded to the Sultan the advantages of the climate of Edirne and recommended to him the site for the building of the New Palace (begun in 855/1451, cf. IA, article EDIRNE [M. Tayyib Gökgülbîn], p. 171b).

The Ottoman history attributed to him (Tevârîk-i Alî Osman, Türk Edebiyat Ornekeri iv, Istanbul 1949) is nothing but another MS. of the Giesel Anonymous Chronicles (as demonstrated by Adnan Erz in Bull. XXI, 1949, 181-3; the MS. is very close to Giesel's Wilen), cf. Flugel No. 983). Neither this History nor the Tarih-i Edeire is the work of Basîr Celebi.

BASHIR SHIHAB II, Amir of Lebanon, 1788-1840. Born in 1808/1797 in the village of Ghâzir, Bashir lost his father Amir Kâsim in his early years and was soon compelled to try his fortune in the field of politics in Dayr al-Kamar, the capital of Lebanon. Robust, intelligent, and circumspect, he soon attracted attention as a possible candidate for the governorship of Lebanon. Shaykh Kâsim Jumblat, a wealthy and powerful feudal lord, was the first to appreciate Bashir's gifts and possibilities. His first approaches were successful, and Kâsim and Bashir became friends and allies. Their chance for common action came in 1788. Wearied by the heavy exactions of the Turkish Pashas of Sidon, Tripoli, and Damascu, Amir Yusuf Shihab, governor of Lebanon, called the Notables of the Land to a meeting in Dayr al-Kamar to discuss the general situation. To their surprise, Amir Yusuf confessed his inability to come to an understanding with Jizzâzâr Paşâ (q.v.) of Sidon and called for advice regarding his successor. Shaykh Kâsim and his supporters suggested young Bashir, and Amir Yusuf agreed. Bashir made the usual journey to ʿAkka, Jizzâzâr's fortress, and came back Governor of Lebanon.

A rapacious intriguer, Jizzâzâr Paşâ stimulated in 1209/1794 a number of Lebanese notables to revolt and induced one of the sons of Amir Yusuf to make a bid for the governorship of Lebanon. He then promised support to Bashir in return for a large sum of money. Having satisfied the greed of the Pasha, Bashir immediately set himself to the task of internal consolidation. In 1794, he permitted the Jumbilts and the Amads to murder several Nakad chiefs in his own reception hall. Then, with the help of the Jumbilts, he forced the Amad chiefs to leave Lebanon and seek refuge elsewhere (1799, 1808, 1819).

In 1822/1827, he burdened the Jumbilts with very heavy contributions; and, in 1824, he demanded them in open battle and put them to flight. In the meantime, Bashir strengthened his local levies and made of them the strongest military contingent in all Syria-Palestine. His fifteen thousand men were more than equal to all the soldiers of all the Pashas of Syria put together. In addition, Lebanese levies were daring and extremely skillful in the manipulation of arms.

In the meanwhile, Bashir's grants in aid to Christian Patriarchs and Archbishops and his acts of toleration were winning for him clerical support and French consular aid. In 1817, Pope Pius VII wrote in person to thank the Amir for his policy of religious toleration; and in 1835, Pope Gregory XVI addressed the Amir as a faithful son and praised his conversion. With his own co-religionists, the Druzes, Bashir behaved differently. Until his time the Druzes had had only one religious head, the Shaykh al-Akl. Bashir introduced a second head and set him up against his colleague.

Bashir's greatest ambition was to ward off local Turkish intrigue and protect the historic autonomy of Lebanon. Circumspect and foxy, he refused to commit himself either for or against Napoleon at the time of his advance into Palestine. And, as soon as the French forces withdrew into Egypt, Bashir went down in person to the Grand Vizier's camp in al-Arish, 1799, and procured an Imperial firman which tied the Lebanon directly with the Sublime Porte. When the Grand Vizier died, this firman became null and void, and Bashir had to use other means. Jizzâzâr's successor, Sulaymân Paşa (1804-1819), was more humane; and Bashir courted his favour to stem the cupidity and inordinate desires of Kandî Paşa of Damascus. In 1820, Yusuf Kandî Paşa claimed direct control of the fertile valley of the Bekaa. When no amount of persuasion could change his desire, Bashir marched on Damascus at the head of a force, 15,000 strong, and Kandi fled to Egypt. In 1820, Bashir had to march again on Damascus and for the same reason. A year later, Darwish succeeded in gaining the good will of the Sublime Porte and marched against Bashir's ally, ʿAbd Allâh Paşa, with substantial assistance from his colleague the Paşa of Aleppo. ʿAbd Allâh then locked himself up in the fortress of ʿAkka, and Bashir sought help in Egypt (1821-1822).

Muhammad ʿAli Paşa [q.v.] of Egypt was then laying the foundation of independence. He had already sensed the hostile intentions of the Sublime Porte and was preparing himself for a war of liberation. He realised fully well the military importance of Amir Bashir and the strategic significance of Mount Lebanon. The two conferred together and soon arrived at a complete understanding of the situation. Muhammad ʿAli intervened in favour of ʿAbd Allâh Paşa at Constantinople and Bashir came back to Lebanon completely victorious.

In 1827/1831, Muhammad ʿAli decided to strike. The Sultan had lost heavily in both the Greek War of Independence and in the Russian War and had, in 1826, dissolved the Janissaries. Emissaries of the Porte promised full respect of the privileges of Mount Lebanon, but Bashir's answer was, "You should not expect help from those whom you have always neglected". Lebanese levies fought Ughmâni Paşa in Tripoli, joined in the march on Damascus, protected the Egyptian commissariat and rear as far north as Aleppo. In return, Muhammad ʿAli Paşa
recognised the ancient privileges of Lebanon, and promised to eschew direct interference in its internal affairs (1833-40). But as the Sultan could never consider the new situation consistent with his dignity and honour, Muhammad 'All had to remain prepared for another trial. This meant more men for his army and more money for his growing expenses, and actually led to disarmament, compulsory military service and increased taxation. Unable to understand the Lebanese mentality, he ordered application of his new regulations in Lebanon and in the Druze Mountain of the Hawran, and had to stand the consequences. Troubles flared up in the Hawran in the autumn and winter of 1837-38; and several thousand Egyptians perished. In the summer of 1835-38, the Egyptians were routed again in the Anti-Lebanon.

The impending clash between the Egyptian forces and the Ottoman Army took place in the early summer of 1839 at Nezib on the Turkish border. As the Egyptians put the Turks to flight and threatened to march on Constantinople, and as Russia was bound to come to the help of Turkey by the terms of the Treaty of Hunkar Iskelesi (1833), and as France had consistently favoured Muhammad 'Ali Pasha, the Eastern Question was open again for discussion. British and Turkish emissaries visited Lebanon in disguise trying to win over Amir Bashir to their side. Bashir himself procrastinated, but the Lebanese rushed to arms in open revolt. By the summer of 1836-40, France was isolated and the rest of the Big Powers, including Russia, signed the Treaty of London. Allied naval units arrived in Lebanese waters and a Turkish force was landed off the Bay of Junieh. Lebanese, Turks, and blue-jackets defeated Ibrahim Pasha at Bahrsaf, and Bashir III was proclaimed Governor of Lebanon. Bashir II surrendered to the British in Sidon and was carried to Malta in exile. Several months later, he was allowed to establish himself in Asia Minor. He passed away in 1851, and was buried in the Armenian Catholic Church in Galata, Constantinople. In 1946, when Lebanon achieved the sort of independence Bashir had sought, the Government of the Republic brought his new regulations to Lebanon and deposited them in the family vault in Bayt al-Din.

Bashma (see Bashem). Bashmaklik, a term applied under the Ottoman régime during the sixteenth and seventeenth centuries to fief revenues assigned to ladies of the sultan’s harem for the purchase of their personal requirements, particularly clothes and slippers (bashmak or pashmak meaning ‘slipper’ in Turkish). The word has not yet been found in any document earlier than the end of the sixteenth century, and ceased to be used from the beginning of the eighteenth. The ladies who qualified for the receipt of bashmaflik were the sultan’s mother (mālids), his sisters, his daughters, his kadıns, and his hāissiks; but information is lacking on the different values of those assigned to each of these ranks,—if indeed there was any fixed scale at all. We know, however, that they were assigned for life and that during the seventeenth century they were often improperly enlarged beyond the usual revenue limit of 20,000
abées a year by the addition to them of military fiefs that had fallen vacant. Though from early in the eighteenth century the term bashmaklık fell out of use, fief revenues were still assigned to these members of the imperial harem, being known thenceforward simply as bâds and consisting, since virtually all revenues were by that date collected by tax-farmers (mubādā‘a), of the advance payments made by contractors for certain such farms. Towards the end of that century the practice was adopted of granting mabādā‘a to the ladies concerned on mālikā, or life, tenures; but in the reform period such grants were finally abolished and annual cash allowances were paid to them in lieu.

BASHMUHASABA (see MĀLIYYA).

BASHSHĀR B. BURD, Abū Mu‘āammad, a famous 1Irākī Arabic poet of the 2nd/8th century. His family was originally from Tūhkhāristān or eastern Iran. His grandfather had been captured and taken to 1Irāk at the time of the expedition of Muḥallab (q.v.); his father, who was finally freed by an ‘Ukaylī Arab lady of Basra, was a bricklayer of that town. Bashshār was born in Basra, the date being uncertain (see A ghdnī, iii, 135). His career was of such importance up to the middle of the 9th/15th century (cf. Pellat, 158 ff.) that Bashshār was much in favour under the caliph al-Mansūr, whom he probably accompanied on pilgrimage to Mecca (see A ghdnī, iii, 153, 159, 188, 212, 219 especially Diwdn, 1, 257, 275 (bāṣidā‘a of 29 verses) and ii, 24); later relations between the monarch and the poet were to become strained (see infra). To these official connexions we owe much precious material on the poet’s life. But doubtless they are not as important as Bashshār’s connexions with the grammarians of Basra, such as Abū ‘Amr b. al-‘Alā‘, Abū ‘Ubayda or al-Asmā‘i (q.v.) or with religious folk in that town such as Ḥasan al-‘Arba‘ (q.v.) (d. 110/228; A ghdnī, iii, 169 f.) or Malik b. Dinār (q.v.) (d. 135/753), v. his anecdotes against a Shī‘ī poet’s pungent invective against his rivals or enemies, though other grounds should not be forgotten to explain the rancour of these quarrels on the ideological plane.

Bashshār’s religious views remain unclear; they are said to have been finally dedicated to the Abbāsid caliph al-Manṣūr (Aghdhnī, iii, 213 bottom; cf. al-‘Askari, Diwdn al-Manṣūrī, i, 126); if this fact is correct it is characteristic. Bashshār lived in Baghdad from the time of its foundation in 145/762 (see al-Marzubān, Mawṣū‘ah, 247-8). His panegyrics were then dedicated either to prominent figures in Basra such as Sulaymān al-‘Abd (governor in 142/759-60) or his sons (governor about 170/792) (see A ghdnī, iii, 165-7, 207; Pellat, 166, 280) or to such figures as ‘Ukba b. Salm (governor in 147/764) (see A ghdnī, iii, 174-5; cf. Pellat, index) or his son, Nāfi‘ (governor in 151/768) (see A ghdnī, iii, 230; cf. Pellat, 281); several anecdotes give the impression that Bashshār was much in favour under the caliph al-Manṣūr, whom he probably accompanied on pilgrimage to Mecca (see A ghdnī, iii, 153, 159, 188, 212, 219 especially Diwdn, 1, 257, 275 (bāṣidā‘a of 29 verses) and ii, 24); later relations between the monarch and the poet were to become strained (see infra). To these official connexions we owe much precious material on the poet’s life. But doubtless they are not as important as Bashshār’s connexions with the grammarians of Basra such as Abū ‘Amr b. al-‘Alā‘, Abū ‘Ubayda or al-Asmā‘i (q.v.) or with religious folk in that town such as Ḥasan al-‘Arba‘ (q.v.) (d. 110/228; A ghdnī, iii, 169 f.) or Malik b. Dinār (q.v.) (d. 135/753). His anecdotes show how lively these relations sometimes were (see ibid., iii, 137, 205, 223 bottom; al-Dījāhīz, Bayān, i, 30). His caustic temperament, his character and above all his sensitivity on the subject of his infertility and lack of inheritance explain in large measure the poet’s pungent invective against his rivals or enemies, though other grounds should not be overlooked to explain the rancour of these quarrels on the ideological plane.

Shu‘ūbism is one of these causes (thus Aghdhnī, iii, 138 and especially 174-5, against the Bedouin poet ‘Ukba b. Ru‘bā; v. also ibid., 166 the fragment against a Bedouin, and 203-4 in which a nobleman reproaches the poet with having stirred up the mawṣū‘ah against their Arab patrons). Bashshār’s position on the subject of Mu‘ātaxalimis his fluctuating opinion of Wāsil b. ‘Alā‘ (q.v.) (d. 131/748-9 in Basra), whom he satirises, having previously flattered him (see al-Dījāhīz, Bayān, i, 16 ff.), and again in Aghdhnī, iii, 145 f.; v. also the violent diatribes against each other of Bashshār and the Mu‘ātaxalite poet Sa‘fwan al-Anṣāri of Basra, on which see Pellat, Mīrū‘ al-baṣrīn, 175-7 with a translation of Sa‘fwan’s verses).

Bashshār’s religious views remain unclear; they seem to have fluctuated, and Bashshār, as an opportunist, to have concealed his true mind. The reservations he makes on the subject of poets he appreciates such as al-Kunayt or al-Sayyid al-Himyarī who lived in Basra from 147/764 to 157/773-4 (cf. Aghdhnī, iii, 225, VII, 237, but the facts are uncertain) would tend to indicate that he was not a Shi‘ī (but see Pellat, 175, who thinks that Bashshār brought together the Shi‘ī views of the Kāmilīyya, on which see id., 201). The accusation of sandūba made against Bashshār and the anecdotes
which illustrate it rather than give it substance point to his holding heterogeneous views; among these views there are in fact to be found Manichaean beliefs strongly tinged with Zoroastrianism (see al-Dżahîz, Bayân, i, 16: citation of the celebrated verse the Earth is dark and the Fire is resplendent and the Fire has been worshipped from the time that it existed; cf. the reference to this affirmation of Bâshshâr’s in the refutation of the Mu’tazilite Şafwân, ibid., i, 97, line 7; cf. also Fihrîst, 338, line 10, which puts the poet among the Zindîls-Manichaees of the 2nd/8th cent.).

But along with these beliefs there would seem always to have been a profound scepticism (see Aghânî3, iii, 227, line 1 ff.; Diwan, ii, 246) mingled with a fatalistic outlook leading Bâshshâr to pessimism and hedonism (ibid., 232, and the citation from Ibn Kutayba, ٨٤٠٣, i, 40 bottom). Like his fellows, Bâshshâr had to fall back on the tahrîyya and profess an orthodoxy and a pious zeal which was totally opposed to his real convictions (thus, his verses against the heretic Ibn al-‘Awgâlî3, who was executed at Kûfê, Aghânî3, iii, 147, and above all the verse of the Diwan, ii, 36, line 3, showing a strict Islamic orthodoxy).

His prudence in this respect was not allowed to obscure the scandal of his manners, his epigrams and his heterodoxy. A plot engineered in Basra, effected his ruin in the eyes of the caliph al-Mahdi (see the anecdotal accounts in Aghânî3, iii, 243 ff.), impinging as it did on matters of wider import, viz. the persecution under that ruler of all those covered by the name of sindî [q.v.] (see ibid., 246 bottom and ff.; especially, Gabrielli, Appunti, 158). Bâshshâr was seized, beaten, and thrown into a swamp in the Bahîâ (al-Tabârî, Cairo ed., vi, 401; Aghânî3, iii, 247-8). This occurred in 167 or 168/784-5 when the poet was over seventy years of age (not ninety, as has been said through an orthographic confusion; cf. Aghânî3, iii, 247, 249, giving the two figures, of which only the second features in al-Khâfish al-Baghdâdi, Târîkh Baghîdî, vii, 118 and Ibn Khallîkân, i, 88).

Bâshshâr was famous in his day as an orator and letter-writer or prose-writer (al-Djahîz, Bayân, i, 49), but he owes his renown above all to his poetic gifts. His work in verse was as abundant as it was varied, but he contrived to enrich this tradition with the wealth of his own interior universe, the hard experience born of his physical disgrace and his contact with a confusing and turbulent world. The importance of Bâshshâr’s place in the transitional period of poetry in the 3rd/9th century cannot be overestimated. The influence of the man and the artist is attested by the enthusiasm or hatred he awoke in his contemporaries. All in all he was considered one of the glories of Basra. His poems, often set to music, delighted the young and the feminine public, while the connoisseurs’ opinion emerges from the “value judgments” attributed to such scholars as Abû ‘Ubayda, al-‘Asma‘î, Khâlal al-‘A|mâr and a host of others (see Aghânî3, iii, passim). We know on the other hand what esteem al-Dzialhî held him (see Bayân, index). Finally, Bâshshâr profoundly influenced the following generation of poets; statements to this effect in the biographies of Abu ٨٤٠٣-‘Ata’îya [q.v.], al-‘Abbâs b. al-‘Ahnâf [q.v.], Abu Nuwâd [q.v.], Salm al-Khâlîsî and many others are confirmed by the study of their works. At the present day eastern critics have readily been able to see in Bâshshâr one of the greatest names in Arab poetry.

Bibliography: Ibn Kutayba, شُرْ [ed. De Goeje], 476-79 and index; Dzialhî, Bayân, ed. Hârînî, i, 49 and index (24 references of Bâshshâr); Aghânî3, iii, 133-249, iv, 15, 28-29, 33-34, 70-2, vi, 227, 229, 232, 237, 245 ff.; Fihrîst; Khâlîsî al-Baghdâdi, Târîkh Baghîdî, vii, 112-8; Marzubânî, Muwashshah, 246-50; Ibn Khallîkân, Cairo 1310, i, 89-90, ed. ‘Abd al-‘Hâmid (Cairo), i,
Bashshar b. Burd — Basiri

Bashshar b. Burd, also known as Bashshar bayna 'l-dīdād wa 'l-mudūn, was a poet from Persia who lived in Kufa during the second century A.H. According to traditions related by al-Kahshārī, he was repudiated and disowned by the Imam Dja'far b. Ahmad. Bashshar b. Burd, also known as Bashshar b. Burd, was nicknamed Al-Basir (per antiq., see Ibn Khakān) and praised them in his poems (see e.g., Ibn Shadijār, Ḥamāsā 117; Muḥarrar, Kāmil 6; Yaḥyā Ḥaribī vi, 122; Ibn Rashīkhī, ʿUmmā, i, 78). He was acquainted with Abu ʿl-Aynāʾ (q.v.), Saʿīd b. Huṣayn, Ibn Abī Tāhir b. Abī Ḥānīfa, and other men of letters; they addressed to each other witty verses and satirical lampoons. He was a gifted writer; some of his admirers ranked him even higher than Dārīr. He had a poor opinion of the poetry of Abū Nuwās and Muslim b. al-Walī (see Marzubānī, Muwāṣṣakhā 282 l.). Abu ʿl-Ḥasan Ibn al-Munajjadīm in the appendix to his father Khalīl b. Ḥāfīz Ibn Ḥāfīz Ibn al-Nakhar and Ibn Ḥāfīz Ibn al-Nuḥnām in his Akhbar al-Kutāb devoted both a chapter to his poems (Fihrist 144, i, 166, 23). His Diwān and the collection of his letters are lost. Amongst his verses which have come down to us, are some, that can be dated: e.g., a poem, composed in 247/861, when al-Mutawakkil went from Sāmarrā to his new residence al-Djāhirīyya (Yaḥyā, ii, 87; read al-ʿAbsīr instead of al-Basīr), a few lines of a long poem, urging al-Mustāʿn in 249/863 to appoint his son al-Ḥāfiẓ heir-apparent (Masāʾidī, Murūḏī vii, 346; read Abū ʿAlī al-ʿAbsīr) and congratulatory verses on the occasion of the accession of al-Muṭaʿz to the throne 4 Muḥarrar 252/25 January 866 (Masāʾidī, Murūḏī vii, 328). This shows incidentally that contrary to the statement of al-Marzubānī he did not die during the civil war 253/865. Ibn Ḥadār places his death in the reign of al-ʿAbsīr (256/979-980-92).

Bibliography: Fihrist 123; Marzubānī, Muwāṣṣakhā al-Nakharī 314 Krenkow; Ibn Ḥadār, Lisān al-Mizān iv, 438; Masāʾidī, Murūḏī vii, 328 ff., 346. See also ʿAlī, Amālī; Ibn Shadijār, Ḥamāsā (register s.v. a. ʿAlī al-Dārīr); Thālūṭī, Thimdr al-Kulūb 44, 154, 268, 463, 496; Amīnī, x, 108, xx, 41. (J. W. Fück)

Başiş, b. (c.1465-1535) Turkish and Persian poet. Although Latifi and others want to cast Başiş as the record that he came to Rûm from the realm of Persia, it is clearly stated in the taḥthira of Ṣuṭṭān that he was from Bağdād. Because of a diseased condition (barash) from which he suffered, he was known as Aladja (Biotchy) Başiş. He grew up in the scholarly and literary milieu of Harāt, and frequented the circles of Sultan Husayn Bāykarār (1438-1507), Dīmāl (1424-92), and Nawāt (1441-1501). As he is not mentioned in the last-named’s Maǧdīlī al-Nafāʾīs, he could not have yet won fame in that environment, but he is mentioned among the poets of Selīm I in the supplement written by Ḥakīm Muhammad Shāh-i Kazwī to his Persian translation of the Mağdīlī al-Nafāʾīs. Başiş left Harāt for Rûm some time before 1492, bringing the books and ghāzals of Dīmāl and Nawāt, and various commissions to execute for them. For a while he was in the service of the Aḵ Konyulu. When Ahmad Gōde, son of Uğurulu, came to the Aḵ Konyulu throne (1496), Başiş was sent as his ambassador to Sultan Bayazid II, reaching Istanbul in 1496 or 1497. On Ahmad Gōde’s death in battle in the neighbourhood of Iṣfahān in the latter year, Başiş decided not to return to Persia but to settle in Istanbul. He later attached himself to Muḥyīyālādā,
BAŞT WA MURAKKAB

The testimony of the taShaBcras is that it was Baskt who brought the diwan of Nawfi to Rumi. While he wrote Persian poetry, Baskt, being brought up in the circle of Husayn Bâyqarâ and Nawfi, had a detailed knowledge of Turkish language and literature. After his arrival in Rumi, he adapted himself to his new literary environment with such success, thanks to his powerful intellect, as to win the favourable mention of the authors of the taShaBcras. Being an elegant and witty versifier he was much in demand in the salons of the great. In the reign of Suleymân he was one of the associates of the defterdar Iskender Celbe, and was given an income from the awâbî of Aya Şofya and from the imperial treasury. His poems, both Persian and Turkish, show that he had a sound knowledge of the sciences which in that age were the necessary concomitants of poetry and on which poetry fed. The chief features of his poetry are wit, elegance, and particularly the devices of djinnâ and ihâm. Although it influenced the local literature, his work does not display the characteristics of 16th-century Anatolian classical literature, but is closer to that of 15th-century Persia. His neat lampoons and witicism offended no one. Some of these witicism are quoted in the taShaBcras and he himself incorporated them into a risâda. Apart from his Turkish divân, he wrote a Bengi- name. He died in Istanbul, in his 70th year.

Bibliography: Hakim Muhammad Shâh-i Kazwîni’s translation of Madâjîs al-Naf’ûs; the taShaBcras of Sehî Bey, Latifî, Hasan Celbe, ʿÂshîk Celbe, and Râyîsî; Kaâfî al-Zuwân. (Ali Nihâd Tarlan)

AL-BASIT, Span. Albacete, Spanish town, chief town of the province of the same name which comprises the north-western portion of the old kingdom of Murcia, situated s.-w. of la Mancha and New Castile, on the S.E. slopes of the Meseta of Central Iberia at an altitude of 700 m. The modern name derives from the Arabic al-Basît ("lugar ancho y extendido y llano y raso") and not from al-Basîtta ("the plain") as is still often stated. The place and the name are found for the first time in al-Dabbî of Cordova and Ibn al-Abâr of Valencia in the 7th/13th century, in connexion with the great battle of 20 Shâbân 540/February 1146, a date confirmed by a laconic passage in the Annales Toledoanos (ed. Huici Miranda 347, in Las Crónicas latinas de la Reconquista, I: 'Cahedola [Sayf al-Dawla al-Mushtânâr Ahmad b. Hûd] did battle with the Christians, and they killed him in the month of February 1146' (Spanish era = 116 Christian era). The battle, which was quite an ordinary engagement, was not between Alfonso VII of Castile and his tributary, the short-lived king of south-eastern Spain which was entirely subject to him, but between the latter and the Castilian Counts sent by Alfonso VII to subjugate the rebels of Baeza, Ubeda and Jaén, who withheld their tribute from Sayf al-Dawla. The rebels, seeing their lands pillaged by the Christians, again submitted to their amir in order that he might save them from the Counts, who refused to suspend operations and, when Sayf al-Dawla took up arms against them, routed him and took him prisoner. While he was being led to their camp, certain soldiers, called Pardos, put him to death, much to the regret of the Counts and Alfonso VII himself. With him was killed his ally the governor of Valencia ʿÂshîb Allâh b. Muhammad b. Sa'd; the latter is for this reason known by the Arabs as ʿÂshîb al-Basît, ‘Master (martyr) of Albacete’. The battle is also called the battle of al-Ludîjî (Ibn al-Abâr: bi l-mantîs al-ma’srî bi l-Ludîjî wa bi al-Ludîjî; al-šâbîn al-jîndî) in the vicinity of Chinchilla. Al-Ludîjî the place (and the river) may be identified either with Lezura to the west, or with Alatoz to the east of Albacete, on the northern slopes of the Sierra of Chinchilla (in the latter case it should read Latuṭdîjî). It is not possible to settle the problem; Faḥṣ al-Ludîjî is found as early as Ibn al-Kardabûs (cf. Dozy, Scriptorum arabum loci de Alm. Acceso ii, 19).

(C. F. Seybold-[A. Huici Miranda])

BAŞT [see ʿ Âšîb ʿ Al-Basî].

BAŞT WA MURAKKAB. Basît and murakkab (simple and composite) are translations of the Greek ἥπλος and σύνθετος. In Arabic grammar (but also in philosophy and medicine), the term mufrad is used for basît. In grammar, mufrad and murakkab correspond to simple nouns and their structural states, in medicine to constituents and their compounds. In logic, mathematics and music, again, the term mu‘allaq is more commonly used for murakkab, while it is in physics and medicine alone that the term munfassad is used sometimes as an equivalent of and sometimes as distinguished from murakkab, secundum prius et posterius.

Something can be simple either absolutely or relatively: an absolutely simple thing is that which cannot be further sub-divided into simpler parts either physically or conceptually; an atom is an example of the first, a highest genus of the second type (for the definition of the simple as indivisible see, e.g., Aristotle, Metaphysics, 988b 17). A relatively simple thing is a constituent in a further complex and in itself it may be divisible. Again, from the point of view of the ‘composition’ of form and matter (and the whole of the material world is so composite), either pure immaterial entities are simple or the primitive matter which is devoid of any property, although Aristotle and the Muslim philosophers restrict the term metaphysically to the former category.

In the actual material world (for the primitive matter does not exist), the four elements, fire, air, water and earth are regarded as the basic simple bodies by the composition of which every other material object comes into existence. According to Aristotle (the chief treatment of the subject is De Gen. et Corr, I, ch. 10), a form of composition in which the constituents retain their identity is σύνθεσις, e.g., when sugar is mixed with sand, while in a real composition, called μεταξιος, the parts lose their identity and share a common quality which in many cases, may be different from that of the individual constituents. The former kind of ‘composition’ is not mentioned by the Muslim philosophers. They say that in certain combinations, e.g., in the case of compound numbers, figures or tunes, a certain total quality emerges which does not belong to individual parts which also keep their identity, while in others the parts as such share the quality of the whole (e.g., in flesh) which is called mu‘allâbîkh al-adâdî (سُوَتُورِقُصُوكُ). Whereas in the animal organism, each part, e.g., flesh, bones etc. is separately constituted in this way, but not the total organism, in the case
of the heavenly bodies, each body is *mu'tashābīh al-adājāt*; the final qualitative pattern resulting from definite proportions of the constituents of a given mixture (i.e., hot, cold, moist and dry) is called *mīṣādīj* whereas the particular form which a compound takes on due to this *mīṣādīj* is called *sūra* (or *hay')a tarkibiyya. Thus the *mīṣādīj* (temperament) of a piece of living flesh is the final pattern of the mixture of the four primary qualities, while its *sūra tarkibiyya* is the form of “fleshiness” (cf. Aristotle, *De Part. An.* 642a 18 f.; *De An.* 406a 5 f.).

We said above that pure forms unmixed with matter are simple in the real sense. This is patently the case with intellect which not only knows pure universals but in whose act of knowing the duality of subject and object is removed. This kind of simplicity again admits of various degrees and works upwards from the human mind, through the separate intelligences, to God, in whose mind there is no multiplicity of objects. According to philosophers like Avicenna, who believe everything other than God to be composed of essence and existence, God alone is absolutely simple, not only in the operations of His mind but also in the necessary fact of His existence (see *māhiyya wa Ṽuẓū'ud*).

There is no special treatise on the subject and the various application of the term can be studied only within the contexts of the special doctrines of the philosophers, chiefly in their physical and metaphysical works. As a further Greek source of the Muslims' physical doctrine see Alexander of Aphrosias, *Scripta Minora* II, *perī khr̄seos* καὶ συνέργως. (F. Rahmān)

**BASMĀCĪS** (in Čebeke "brigand"), the name given by the Russians to a revolutionary movement of the Muslim peoples of Turkestan against Soviet authority which broke out in 1918 and lasted until 1930 or even later. See *Türekestan, Uzbek, Täği̇n, Khokand, Khiva, Türkmen, Enwer Pasha.* (A. Benningh)

**BASMĀLA** is the formula *bi'smāl l-lāh r-rahmān r-rahīm*, also called *tasmiya* (to pronounce the [divine] Name). Common translation: “In the name of God, the Clement, the Merciful”; R. Blachère's translation: “In the name of God, the Merciful Benefactor”, etc. The formula occurs twice in the text of the Kur'ān: in its complete form in Sūra xxvii, 30, where it opens Solomon's letter to the queen of Sheba: "It is from Solomon and reads: I am the Seal of the Prophets, and the tongue of Jesus (see *Doutté, Magie et Religion dans l'Afrique du Nord*, 211).

Problems.

1) In the *Kur'ān*. Zamakhshari informs us that the readers of the Kur'ān and the jurists of Medina, Baṣra and Syria did not count the *basmala* at the beginning of the Fātihā and the other Sūras as a verse. In their view its presence in these places served simply to separate the Sūras and as a benediction. This is also the opinion of Abū Ḥanīfa, and explains why those who follow his doctrine do not pronounce these words aloud during the ritual worship. On the other hand the readers and the jurists of Mecca and Kūfah did reckon the *basmala* as a verse and pronounced it aloud. This is the view of al-Shāfi’ī. It is founded upon the usage of the ancients, for they wrote the *basmala* on the leaves on which they recorded the Kur'ānic texts, whereas they omitted the word *amin*. This opinion is followed in the current official edition of Cairo.

2) In the acts of daily life. Acts which are classified as obligatory or praiseworthy should always be preceded by the *basmala* unless "the Law-giver has decided otherwise", as, for example, in the *salāt* which begins with *Allāhu akbar*; also, according to tradition, in the recitation of a *dhikr* (repeated mention of a divine Name). In all other cases the *basmala* must be written or pronounced. *Hadith*: "Every important matter which is not begun with the *basmala* will be cut off (or mutilated or amputated, according to the different versions)"; that is to say "will be defective and hardly blessed by God; apparently complete, it will be spiritually incomplete". Al-Bāḍūrī (†Hāshiyah, 3) comments: "The adjective "important" signifies: a thing having a legal value (ḥukm), that is to say having a certain relationship with the law. It is not, then, a question of a thing which is bad, nor of one which is forbidden or blameworthy". Particular applications. Solemn writings or acts ought to begin with the full formula. It is required in its abbreviated form before the commencement of the approved acts of daily life, especially before eating (cf. the *Risāla* of al-Ḥaṣwānī, 236). An act the quality of which may differ according to the circumstances will receive divine blessing if it is preceded by the *basmala* marital sex-relations for example (al-Bukhari, *waṣā'a*, 8). Finally the *basmala* is authorised where it is a question of an act which by accident becomes forbidden or blameworthy (al-Bāḍūrī, 464).

3) The meaning of "Rahmān" (s.n.). In general the Muslim commentators regard *rahmān* and *rahīm* as two epithets from the root *RH*M, whence the translations: element, or benefactor, or most merciful for *rahmān* and merciful for *rahīm*. However, contrary to the opinion of B. Carra de Vaux (*EI*, s.v. *Basmala*), it seems certain that *Rahmān* was in use prior to Islam in southern and central Arabia (Yaman and Yamāmā) as a personal name of God, meaning the single and merciful God. On the day following
the death of the prophet Musaylima still appears in the Yamama claiming to receive direct revelations from the Kur'an: 1) rahim alone appears in the list of the most Beautiful Names (adjectives), and it is to be found, in the mass of the text, sometimes as al-rahim and sometimes as rahim without the article; 2) the Meccans on the other hand is always preceded by the article; 3) the Meccans refused to recognise al-Rafymdn as a Name of God (cf. J. Jomier, Le nom deon al-Rahman dans le Coran, 366-367, with references to al-Tabari). It seems that this divine Name appears in the Kur'anic preaching in order to stress more fully the absolute Mercy of the Single God; furthermore “whatever is said in the Kur'an about al-Rahman is said elsewhere about Allah” (Jomier, 370).

That al-Rahman should have been the name of the single God in central and southern Arabia is in no way incompatible with the fact that, when adopted by Islam, it assumes a grammatical form of a word derived from the root RHM. The tripartite formula which “opens” each Kur'anic sura and each consecrated act of Muslim life evokes the mystery of the One God who is Lord of the Mercies. It is to this mystery that the basmala owes, in the eyes of the Muslim who pronounces it, its power of benediction.

AL-BASRA (in mediaeval Europe: Balsora; in Tavernier: Balsa; orthodox modern European: Basra, Basrah, Bascora), a town of Lower Mesopotamia, on the Shatt el-‘Arab, 279 m. (420 km.) to the south-east of Baghdad. In the course of history the site of the town has changed somewhat, and we may distinguish between Old Basra, marked today by the village of Zubayr, and New Basra, which was founded in the 11th/18th century in the proximity of the ancient al-‘Ubûlla [q.v.] and which is the starting point of the modern town of Basra, for the rapid growth of which the discovery of oil to the west of Zubayr is responsible.

I. Basra until the Mongol conquest (656/1258)

Although probably built on the site of ancient Diriditis (= Teredon) and more certainly on the site of the Persian settlement which bore the name of Vahishtabadh Ardashîr, the Muslim town can be considered as a new construction. After having camped, in 14/635, on the ruins of the old Persian post called by the Arabs al-Khurayba (“the little ruin”), the Companion of the Prophet ‘Uthba b. Ghazwân [q.v.] chose this location, in 17/638, to establish, on orders from ‘Umar b. al-Khaṭṭâb, the military camp which was the basis of the town of al-Basra (the name of which is probably derived from the nature of the soil: situated at approximately fifteen km. from the Shatît al-‘Arab, this camp was destined to afford a control over the route from the Persian gulf, from ‘Irâk and from Persia, and to constitute a starting base for the subsequent expeditions to the east of the Euphrates and the Tigris, while at the same time it contributed to the settlement of the Bedouin. At the outset the dwelling places were simple huts made out of rushes which were easily gathered from the neighbouring Baṭâlîh [see al-Bâbînîa]; they were subsequently strengthened with low walls, and then, after a conflagration, rebuilt with crude bricks. It was only under Ziyâd b. Abî Sufyân that the latter were replaced by baked bricks and that the town began to assume a truly town-like appearance, with a new Great Mosque and a residence for the governor; the rampart, bordered by a ditch, was not constructed until 155/771-2. At all times the supplying of al-Basra with drinking water posed a grave problem and, in spite of the digging of different canals and the utilisation of the bed of the ancient Pallacopas to provide the town with a river port, the inhabitants were forced to go as far as the Tigris to get their supplies.

This inconvenience, added to the rigours of the climate, would have been enough to prevent the military encampment becoming a great city, but political, economic and psychological factors were sufficiently strong to keep the Basrans in the town which owed its development to them, until the time when other factors intervened—in the first place the foundation of Bagdad, and then the degeneration of the central power and political anarchy which ushered in a decline as total as the growth had been rapid.

At the beginning of its existence, al-Basra provided contingents for the Arab armies of conquest, and the men of Basra took part in the battle of Nihâwand (21/642), and the conquests of Ištâkhr, Fârs, Khurâsan and Sîdjastân (29/650). At this stage the military camp was playing its natural rdle, but then the booty began to flow in and in 45/665, the military encampment became a great city, but that pace of events accelerated and the town became the stage for the first great armed conflict in which Muslims fought against their brother Muslims, the battle of the Camel (36/656 [see al-Dâmâl]). Before the fight the inhabitants had been divided in their loyalties, and the victory of ‘Ali b. Abî Tâlib served only to increase their disorder, but, on the whole, the population remained, and was to remain, more Sunni than Şî'î, in contrast to ʿAlîd Kûfâ. In the following year (37/657) men from Basra took part in the battle of Šîfîn [q.v.] in the ranks of ‘Ali, but it was, at the same time, also from Basra that a considerable number of the first Khârijîs were recruited. In 41/662 Muʾâwiya reasserted the authority of the Umayyads over the town, and then sent there, in 45/665, Ziyâd, who, to a certain degree, be considered as the artisan of the town’s prosperity. Basra was divided into five tribal departments (khums, pl. al-khums): Ahl al-‘Aliya (the inhabitants of the high district of ‘Ujlîâ), Tâmm, Bakr b. Wâālî, ʿAbd al-Kâys and Azd. These Arab elements constituted the military aristocracy of al-Basra and absorbed, in the rank of mamâlîk or slaves, the indigenous population (undoubtedly relatively few in number) and a host of immigrant peoples (Iranians, Indians, people from Ñind, Malay, Zanjî, etc.), who espoused
the quarrels of their masters, among whom the old tribal ʿabdiyya was slow to lose its force. The local situation was agitated under the rule of the governor ʿUbayd Allāh b. Ziyād, and on his death (64/683) serious disturbances broke out; after a period of anarchy the Zubayrīs seized control of al-BAṣra which remained under their authority until 72/693. During the following years the primary concern of the Umayyads was to be the suppression of a number of uprisings, the most important of which was that of Ibn al-ʿAṣṭur ʿalī [q.v.] in 81/799.

The period of calm which then prevailed until the death of al-Hadījīdī (95/714) was only to be further disrupted by the revolt of the Muhallabīs in 101-2/719-20 and certain seditions of a minor character. The town then passed, without too much difficulty, under the control of the ʿAbbāsids, but the proximity of the new capital was not slow in robbing al-BAṣra of its character of a semi-independent metropolis which it had possessed since its foundation; it became henceforth a simple provincial town, periodically threatened by revolts of a character more social than political; first the revolt of the Zun[ ḍ] [q.v.], who spread a reign of terror in the region from 205 to 220/820-35, then the Zandī [q.v.], who seized power in 237/851, and finally the Karmaṭians who plundered it in 311/923; shortly after this it fell into the hands of the Barīdīs [q.v.] from whom the Buwayhīids [q.v.] recaptured it in 336/947; then it passed under the sway of the Majzādīs [q.v.] and experienced a resurgence of prosperity, although the new rampart constructed in 517/1123, at a distance of 2 km. within the old one, which had been destroyed towards the end of the 5th/11th century, is sufficient proof of the decline of the town. The neighbouring nomads (in particular the Muṭafīq) took advantage of the political anarchy to subject the town to their depredations; from 537/1142-3, affirms a copyist of Ibn Ḥawkāl, a number of buildings were destroyed; and in our time there is nothing left of the ancient metropolis save a building known by the name of Māḏjīd ʿAllī and the tombs of Talḥa, al-Zubayr, Ibn Sīrīn and al-Ḥasan al-BAṣrī.

The town reached its zenith in the 2nd/8th century and the beginning of the 3rd/9th century. At this period it was fully developed and its population had increased to considerable proportions. Although the figures given are wildly divergent (varying from 200,000 to 600,000), al-BAṣra was, for the Middle Ages, a very great city and, what is more, a “complete metropolis”: it was at the same time a commercial centre, with its Mirbad which was halting place for caravans and its river port, al-Kallālī, which accommodated ships of fairly large tonnage; a financial centre, thanks to the Jewish and Christian elements and the bourgeois of non-Arab stock; an industrial centre with its arsenals; even an agricultural centre with its numerous varieties of dates; and finally the home of an intense religious and intellectual activity. “BAṣra, in fact, is the veritable crucible in which Islamic culture assumed its form, crystallised in the classical mould, between the first and 4th century of the Ḥijrā (from 16/637 to 311/923)” (L. Massignon). It is, in fact, worth remembering that it was here that Arabic grammar was born and made illustrious by Sibawayh and al-Khaṭṭīb, Ahmad in particular, and that Muṭāṣilism was developed with Wāṣil b. ʿAṭṭāʾ, ʿAmr b. Ḫubayl, Abū ʿl-Hudhaylī, al-Naẓẓām and so many others; here also it was that scholars such as Abū ʿAmr b. al-ʿAlī, Abū ʿUbayda, al-ʿAmrī and Abu ʿl-Ḥasan al-Madāʾīnī collected verses and historical traditions which nurtured the works of later writers. In the religious sphere the sciences shone with an intense brilliance, while al-Ḥasan al-BAṣrī and his disciples founded mysticism. In the field of poetry al-BAṣra can claim the great Umayyad poets and the modernists Bāshār b. Burd and Abū Nuwās; finally it was in this town that Arabic prose was born, with Ibn al-Muṣaffāʾ, Sahl b. Ḥārun and al-Ḥādjīzī. After the 3rd/9th century the intellectual degeneration is not so clearly marked as the political and economic decline, and, thanks to Ibn Sawwār, the town was endowed with a library whose fame was to endure; the Ikhwān al-Ṣafāʾ and al-Ḥarīrī made their contribution to the maintenance of the ancient city’s prestige, but Arab culture in general was already decadent, and Baghdād, as well as other provincial capitals, tended to supplant al-BAṣra completely.

**Bibliography:** The history of al-BAṣra was written by at least four authors—ʿUmar b. Ṣhabba, Madāʾīnī, Sādūq and Ibn al-ʿArabī—but their works have not been discovered and it is necessary to refer to the great historical, biographical and geographical texts of Balādhurī, Ṭabarī, Ibn Saʿād, Ibn al-ʿArīr, Ibn al-Fakhrī, al-ʿIsaḥākī, Muṣṭaddaṣī, ʿIdrisī, Yakūt etc. These works have, moreover, been used by L. Caetani, Annali, ii, 202-90, 276-84 (see also the same author’s Chronographia, passim) and Le Strange, 44-6, as well as by Ch. Pellat, Le milieu basrien et la formation de Gāhîs, Paris 1953, where there is to be found a history of the town from its foundation up to the middle of the 3rd/9th century and a bibliography, to which might be added particularly J. Saint-Martin, Recherches sur l’histoire et la géographie de la Mésopotamie et de la Charchème, Paris 1838, 47 ff., Rawlinson, The five great Monarchies, iii, 290 and Nāṣir-i Khusraw, Sofar-nāmah. The ancient topography of the town is the subject of a detailed monograph by Sālīh al-Ṣallī, Khatā al-BAṣra, in Sumer, 1952, 72-83, 281-303 (see also the subsequent numbers of Sumer), and of a stimulating paper by L. Massignon, Explication du plan de BAṣra in the Western Arch. of R. Tschudi . . ., Wiesbaden 1954, 154-74, with two sketch maps showing firstly the site of both ʿAṣrs and secondly the location of the akhmdās. The social and economic institutions of the 1st/7th century have been studied in a most profound way by Sālīh al-Ṣallī, al-Tanṣisīmāt al-idāmīyya wa-l-akhmdāsfi l-BAṣra, Baghdād 1953 (with a full bibliography). (Ch. Pellat)

**II. Modern BAṣra**

BAṣra, already much reduced in size and vitality in the 5th/7th/11th-13th centuries, was further and faster debilitated by the destruction, near-anarchy and neglect which followed Hullegi’s visit to ʿIrāk in 656/1258, and the installation there of an Il-Kahn government, for which BAṣra was the remotest of provinces, with periods of disturbance, insur- gence or secession. In the mid-8th/14th century Ibn Baṭṭūṭa found the city largely in ruins, and, while some principal buildings (including the great mosque) still stood, already tending towards transfer from its original site to another (its modern location), a dozen miles distant, on or near the site of Ubulla: a move dictated by reasons partly of security, partly by the deterioration of the canals. The great date-belt of the ʿShāṭ al-ʿArab remained the wealth and pride of the BAṣrans;
but its cultural and economic life declined throughout the Djalā'ir and Turkoman periods of 'Irāk history—740/1340 to 914/1508—and when at last in the latter date it fell with all 'Irāk to the Persian power of Shāh Ismā'il for a brief generation—914/1508 to 941/1544—it was, in its now established new position two miles upstream a main canal (the modern 'Ashār Creek), a provincial town of little interest apart from its sea-port status, its gardens, and its predilection for local independence from distant suzerains. The Ottoman conquest of 'Irāk in 941/1544, which further strengthened the Sunni elements in the population already prevalent, had little other effect on its status or fortunes; the Turkish paša of Baghdād was satisfied with a minimum of respect and tribute from the marsh-surrounded and tribe-threatened city of the far south; and when in 953/1546 the independent airs of Basra became too offensive, two expeditions from central 'Irāk succeeded in restoring some semblance of the Sultan's authority as against powerful local (tribal or urban) candidates for power. A longer and more successful attempt at quasi-independence, under merely nominal Imperial suzerainty, was made by a local notable of now unascertainable origins, Afrāsīyāb [q.v.], and his son and grandson 'Ali Pasha (1034/1624) and Husayn Pasha (c. 1060/1650). This interesting dynasty opened the gates of Basra and its waterways to the representatives and merchant-fleets of the Europeans—Portuguese, British, Dutch—then active in the commerce of the Persian Gulf; it survived, with vicissitudes and interruptions, for some 45 years against the armed and diplomatic efforts of the Pasha of Baghdād, the threats of the Safawī Shāh, and the intrigues of local rivals and turncoat tribesmen. And its restoration to the Empire was still incomplete until after a further full generation of local uprising and Persian penetration, tribal dominance (of the Huwayza tribes and the Muntafik), and declamation by plague.

Throughout the two centuries (12th-13th/18th-19th) following these events, Basra remained the metropolis of southern 'Irāk, the country's sole port however primitive and ill-equipped—the base for a decayed and microscopic trade, and the centre of the date trade, and the gateway to the tribes and princes of Arabia, Khūzistān, and the Persian Gulf. The city, whose administration evolved only after 1247/1831 slowly towards modernity, was ever at the mercy of tribal marauders and even invaders, notably by the great Muntafik tribe-group, and by plague and inundation.

During the campaigns of Nādir Shāh in 'Irāk in the mid-century Basra was threatened and for a time besieged, and his withdrawal was followed by the usual attempts at secession. Sound and vigorous government was witnessed under rare Mutasamims of higher quality, including Sulaymān Abū Layla from 1266 (1749) and Sulaymān the Great from 1282/1765. The establishment of European (British, French, Italian) permanent trading-posts, consulates and missions slowly gained ground, but disorder scarcely diminished and tribal threats increased with the rise, after 1256/1740, of the powerful Sa'dūn leadership in the Muntafik. The siege and occupation of the city and district in 1256-1258 by the Persian forces of Shādīq Khān, brother of Karim Khān Zand [q.v.] was a curiously detached episode of Basra's history; it was succeeded by the return of all the familiar conditions. Threats to Basra by the fleet of the Imām of Mašrak in 1213/1795 came to nothing, though rivals for tribal or governmental power in southern 'Irāk sought him as an ally, for example in 1241/1825. The great plague of Baghdad in 1247/1831 did not fail to infect the Port also, and increased its weakness and disorders.

The period 1248-1332/1832-1914 was one of slow development, improving security and increasing commercial links with Europe and America. Basra became a wādiyet in 1267/1850 and, among its eminent families and personalities, a centre of nascent Arab nationalism. During the British occupation of 'Irāk (from 1333/1914) and subsequent Mandate (1339-1351/1920-32), the transformation of Basra into its most modern form was rapid. The port was constructed on spacious modern lines and fully equipped, a deep channel at the mouth of the Shatt al-'Arab dredged, and the town itself and its suburbs improved by a variety of new roads, buildings and public services. It became the southern terminus of 'Irāk Railways, and an air centre of increasing importance. Under the 'Irāk Government it became the headquarters of a liwād which included the dependent bādās of Abu l-Khašāb and Kurna. The city, with its suburbs of Maqādīl and 'Asgār, contained in 1955 some 200,000 souls. With improved security and communications Basra took its place as by far the leading port and entrepôt of the Persian Gulf, and 'Irāk's indispensable outlet. During the three decades preceding 1377/1957 further important improvements were carried out to its town-planning, streets (including an imposing Corniche road), public and commercial buildings, and public services and facilities. The vast date gardens (within which, however, life remained poor and primitive) and the magnificent waterway of the Shatt al-'Arab offer a remarkable setting to the modernised city of Basra and its spreading suburbs with their characteristic mixture of the primitive, the medieval, and the fully modern. The date export trade has been further organised and centralised under a Board located at Basra. Exploration for petroleum by a Company of the 'Irāq Petroleum Co. group was rewarded by the discovery of an important oil-field near Zubayr in 1356/1938, followed by others (notably al-Rumāvīa) in the area. Export of oil, by pipelines to Fābīn began in 1371/1951. The industry developed rapidly and on a major scale, and became Basra's greatest source of employment, technical education and wealth. A small oil refinery was completed at Muftiyya in 1372/1953. Meanwhile the city and district continued to benefit greatly, as from 1353/1934 but increasingly after 1372/1952, from the enrichment of the central government of 'Irāk through its exploited oil-resources. Important developments in flood-protection, land reclamation and perennial irrigation were planned in the vicinity of the city.

**Bibliography:** The manuscript and printed sources for modern Basra history to 1318/1900 are given in S. H. Longrigg, *Four Centuries of Modern 'Iraq*, London 1953. 427-40; for the period 1318/1900 to 1370/1950 see idem, *'Iraq 1900 to 1950*, London 1953, 401-12.

(S. H. LONGRIGG)

**AL-BĀSRA,** a town in Morocco, not extant to-day, which owes its name to Basra in 'Irāk. Situated between two hills of reddish earth (whence its epithet al-'Hamārā), on a plateau commanding to the east the road to Wazzān, to the west the valley of the Wad Mda, and to the north-east that of the Wad Lekkus,
about 12½ m. (20 km.) south of al-Kaṣr al-Kabīr, it occupied, according to Tissot, the site of the Roman town of Tremulse. Founded about the same period as Arzila (Aṣīla [q.v.]), and probably therefore by Idrīs II, at the beginning of the 3rd/9th century, it was doubtless intended to be the summer residence of the Idrīsids of Fās. When Muḥammad b. Idrīs II partitioned his kingdom, al-Baṣra fell to the share of his brother al-Ḵāsim together with Tangier and its dependencies. In the following century, it became the capital of a small state comprising the Rif and Ghānūsīrland, the administration of which was entrusted to the Idrīsīd prince Ḫānūn b. Ḥammūn; it was soon afterwards captured (5 Muharram 363/6 October 973) by the army of the Umayyad caliph of Cordova, al-Ḥakam II; Yahyā b. Ḥammūn set himself up there as an independent ruler before being driven out by Buḍūgūn b. Ẓirī, who razed the fortifications of the town. These are almost the only definite statements we have on the history of al-Baṣra.

Despite the statement of al-Mukaddasī (ed. trans. Pellat, 27) that it was in ruins, the town seems to have preserved a certain prosperity in the 4th/10th and 5th/11th centuries, as is asserted by Ibn Hawkāl and al-Bakrī, who speak of its walls pierced by ten gateways, its baths, its mosque, and the gardens, pastures and fields of corn and cotton which surrounded it; nevertheless, it rapidly declined and eventually fell into complete ruin; at the time of Leo Africanus, it was inhabited by no more than 2,000 households, and its walls stood in the midst of deserted gardens; to-day, only the stone wall remains.

**BAST (Pers.),** "sanctuary, asylum", a term applied to certain places which were regarded as affording an inviolable sanctuary to any malefactor, however grave his crime; once within the protection of the *bast*, the malefactor could negotiate with his pursuers, and settle the ransom which would set him free. When Telegraphic communications were introduced into Persia in the second half of the 19th century, the telegraph offices were at first invested with the status of *bast*. About 1889 Naṣīr al-Dīn Shāh attempted without success to abolish the institution of *bast*. (For details of the violation of the *bast* of Shāh ʿAbd al-ʿAzīzm by Naṣīr al-Dīn Shāh in 1891, see the article *Bast* al-Dīn Al-Arōmān.)

In the present century, the institution of *bast* (also termed *tarāṣṣat*), assumed great importance during the events which led to the granting of the Persian Constitution by Muẓaffar al-Dīn Shāh in 1906. In December 1905 a group of merchants, *müllās* and students, in order to compel the Shāh to take note of their grievances, took refuge first in the Masjid-i Dāmī in Tehran, and then, after having been forcibly expelled from this sanctuary, in the shrine of Shāh ʿAbd al-ʿAzīzm, 6 miles SSE of Tehran. A month later, on the receipt of certain promises and assurances from the Shāh, the *bastis* left their sanctuary. The "Second Bast" occurred in July 1906, when some 12,000 people, led by the *ʿulamā*, merchants, and members of the trade guilds, took refuge in the garden of the British Legation in Tehran, and ultimately (August 1906) succeeded in obtaining from the Shāh the promise of the grant of a Constitution. During the disturbances which attended the election of the members of the National Consultative Assembly, which sat for the first time on 7 October 1906, the constitutionalists again took refuge in the British Legation in Tehran; in the provinces, British Consulates, notably those at Tabriz and Kirmānshāh, and telegraph offices were used by the constitutionalists as places of refuge. In June 1907 a group of *müllās* and others hostile to the Constitution took *bast* at Shāh ʿAbd al-ʿAzīzm in an unsuccessful attempt to rally opposition to the constitutionalist movement.

**BAST (A.),** a technical term of the Sūfīs, explained as applying to a spiritual state (hāl) corresponding with the station (maḥām) of hope (raḍājā): it is contrasted with ḥabībat [q.v.]. The Kur'ānic authority generally quoted for these terms is: "And God contracts (yaḥād) and expands (yaḥaṣṣat)" (ii, 245). As *bast* is a hāl, it bears no relation to personal mental or spiritual processes, but is a sense of joy and exaltation vouchsafed to the mystic by God. For this reason many Sūfīs accounted it to be inferior to ḥabībat, on the ground that, until God is finally attained and the human individuality is lost in Him, any feeling other than that of desolation is inappropriate. The following saying of al-Dīnawī illustrates this point: "The fear of God contracts me, and the hope for Him expands me . . . When He contracts me through fear, He causes me to pass away from self, but when He expands me through hope, He restores me to myself." (Kuṣayrī, Risāla, 43). These lines of Ibn al-Fārādī (al-Taqīyya al-kubrā,
ii, 646-7) summarise the Sufi theory excellently: "in the mercy of expansion the whole of me is a wish whereby the hopes of all the world are expanded, and in the terror of contraction the whole of me is an awe and over whatsoever I let mine eye range, it reveres me" (tr. Nicholson, in Studies in Islamic Mysticism, 256). Hudjwiri writes (tr. Nicholson, 374); "Kabūd denotes the contraction of the heart in the state of being veiled, and basf denotes the expansion of the heart in the state of revelation". The mood of basf appears to be similar to that in which Pascal cries: "The world hath not known Thee, but I have known Thee. Joy! Joy! Joy! Tears of joy!"

(A. J. Arbbery)

**BASTA**, Spanish Baza, Basti in ancient geography, now chief town of a partido of the province of Granada. It is situated to the north-east of Granada, 123 kilometres distant from it by road. Al-Idriṣī describes it as being of medium size, pleasantly situated, flourishing and well populated. It was a fortified town and had several bazaars. It was a commercial town where local artisans pursued a diversity of trades. Mulberry trees were prolific in the town and, in consequence, there was a large silk industry. Baza was also rich in olive groves and all kinds of fruit trees. It was here that the workshops (faras) for the weaving of prayer carpets (musall—called basf) were located. These carpets were made from brocade which had no equal. The galena (hubl or sulphide of antimony) used in eye washes was taken from deposits in the mountain known as Djabal al-Kuhl which was situated near the town. During the Umayyad Caliphate, Baza had an important Mozarab community with a bishopric subordinate to Toledo. The Basyūm in its last stage, at present in course of publication, gives the names of a number of the town's Almohad governors. In 635/1237, Baza came under the rule of Muḥammad b. ʿUṣuf b. ʿAmīd, founder of the Naṣīrī kingdom (see Naṣīrī).

**BAŞVEKALET ARŞIVI**, formerly also Başbakanlık Arşivi, the Archives of the Prime Minister's office, the name now given to the central state archives of Turkey and of the Ottoman Empire. The formation of the Ottoman archives begins with the rise of the Ottoman state, but the present collection, though containing a number of individual documents and registers from earlier times, dates substantially from after the Ottoman conquest of Constantinople in 1453. The archives became really full from about the middle of the 16th century, and continue to the end of the Empire. The organisation of the Ottoman records in the form of a modern archive collection dates from an initiative of the reforming Grand Vezir Muşafā Rashîd Paşa, who in 1316/1901 had erected a building for the archives in the grounds of the Grand Vezirate, and transferred to it a large number of record collections, previously kept in bales and boxes in various repositories and offices in different parts of the city. The building, designed by the famous architect Fossati, was provided with a staff and a director. This record office, in Ottoman times known as the Khatme-i Ewrb, originally consisted of two main groups of documents; the records of the Imperial Council (Dişên-i Hamdân) and of the Grand Vezir's office (Bâb-i Âlt or Paşa Kaptâ). To this core other collections were from time to time added, notably the finance departments and the registers of the cadastral survey office.

From the start, the Khatme-i Ewrb was attached to the establishment of the Grand Vezir. Under the Republic it was, after a brief period of uncertainty, attached to the office of the Prime Minister. The old name was replaced by the modern one by a law of 1937.

A new phase in the organisation and study of the archives had begun in 1911, after the formation of the Ottoman Historical Society (Ta'rikh-l-i ʿUlamâni Endûrûm). The opening address of two main groups of documents; the records of the Imperial Council (Dişên-i Hamdân) and of the Grand Vezir's office (Bâb-i Âlt or Paşa Kaptâ). To this core other collections were from time to time added, notably the finance departments and the registers of the cadastral survey office.

From the start, the Khatme-i Ewrb was attached to the establishment of the Grand Vezir. Under the Republic it was, after a brief period of uncertainty, attached to the office of the Prime Minister. The old name was replaced by the modern one by a law of 1937.

A new phase in the organisation and study of the archives had begun in 1911, after the formation of the Ottoman Historical Society (Ta'rikh-l-i ʿUlamâni Endûrûm). The opening address of the second issue of the society's journal, written by ʿAbd al-Rahmān Sherif, the last official historiographer and first collector of the ayyām al-ʿArab. In the Fāḥhīr, 76, in Tiberiš's Commentary on the ʿHamdsā 420 (on the authority of Abū Riḍād 339/950) and elsewhere four verses are put in the mouth of al-Basūs, addressed to Saʿd and indirectly compelling al-Djassas to take revenge on Kulayb; they are a fine specimen of tabrīd "incitement", and are cited in the Rasāʾīl ʿIkhwān al-Ṣafā, Cairo 1347, i, 133, as an example of the tremendous effect which poetry can have on man's actions.

The proverb ʿagāʾamu min al-Basūs was by some scholars thought to refer not the pathetic figure of the heroic age, but to her namesake, a Jewess, who by her stupidity forfeited the three wishes which God had granted to her husband.

(J. W. Fock)
president of the society, contained a statement of the society’s aims, the first of which was the classification, study, and publication of archive documents (TOEM, 1931, 919 and 65; cf. P. Wittek, Les Archives de Turquie, in Byzantion, xiii, 1938, 601-9).

In the years that followed, Turkish scholars working in the archives began to sort and classify the records, and also published many individual documents. This work was interrupted by the Revolution and war of Independence, followed by the transfer of the capital and a general mood of revaluation from the Ottoman past. In 1932, however, a new start was made, and since then work has continued in housing, organising, and cataloguing the records. In 1936-7 Professor L. Fekete was invited to advise on the methods to be followed in these tasks (see L. Fekete, Über Archivalien und Archivwesen in der Türkei, AO, Budapest, iii, 1953, 179-206).

The contents of the Başvekalet Arşivi may be divided broadly, according to the form in which they are preserved, into two groups—serak, papers, and defters, bound registers. The former, ranging from Imperial decrees drawn up in due form to odd notes and minutes by minor clerks, are estimated to number many millions, of which only a very small proportion has been catalogued. A first classification of papers was made in 1918-1921 by a committee under the direction of Ali Enuri, which sorted 180,316 documents in simple chronological order, by reigns from ʿAbd al-Malik I to ʿAbd al-Majid. The great majority are of the 18th and the first half of the 19th centuries. In 1921 a second committee, under İbnülemîn Mahmud Kemal, sorted 46,467 documents, from the 19th to the 20th centuries, into 23 subject groups, the largest of which are those of financial (12,201) and military (8,227 documents) affairs. Within each group the documents are in rough chronological order. A third team, under Muʿallim Cevdet (1936-7), worked from 1932 to 1937 along much the same lines as İbnülemîn, and sorted 184,256 documents into 16 subject categories. Here the largest groups are military (54,984), waḥf (33,351) and internal affairs (17,468 documents). These three classifications are normally cited as the taṣnis of the three persons who directed them.

Since 1937 this kind of pre-scientific classification has been abandoned, and a new start made on more modern lines. Papers are being completely separated from registers, and classified according to the offices and departments to which they belonged, as far as possible preserving the original order and sequence. In addition to the main classification, the archives staff has undertaken the preparation of a number of special series, such as ‘imperial writings’ (Khaṭṭ-i Humdâyin), decrees (iridda), treaties, waḥf documents, etc. A special catalogue is being prepared of the papers and records of ʿAbd al-Ḥamīd II, which were transferred to the Başvekalet Arşivi from the Yıldız Palace.

The defters, bound registers, are estimated to number about 60,000 in all Turkish collections, the great majority being in the Başvekalet Arşivi. They are of two basic types: statistical, containing figures and other factual information required and collected for various administrative purposes; and diplomatic, containing register copies of the texts of outgoing orders, letters, and other communications.

The defters may be considered in three main groups: a) the Imperial Council and Grand Vezirate. The latter, which in the 17th century grew into a separate bureaucratic organisation, eventually took over most of the functions of the former, and the archives of the two together thus record the workings of the chief centre of Ottoman imperial government. Of the many series of registers included in this section by far the most important is the Mühimme Deftersi (register of important, i.e., public affairs). This consists of 263 volumes, covering the years 962-1323/1553-1905. It is a day by day record of outgoing correspondence of all kinds, in simple chronological sequence. On the Mühimme see G. Elezović, Is Carigradskih Turskoj Arhivi Muhimme Defterleri, Belgrade 1951, and U. Heyd, Documents on Ottoman Administration of Palestine 1552-1615, A Study in the Mühimme Defterleri, Oxford, in the course of time a number of separate series were started, dealing with matters formerly included in the Mühimme. From 1059 to 1155/1649-1742-3 complaints from the provinces and the decrees answering them are dealt with in separate ‘Complaints Registers’ (gihaiyel defterleri). These are still in purely chronological order, but from 1155 to 1306/1742-3-1889-9 are replaced by the ‘Decrees Registers’ (ahham defterleri), geographically subdivided into 17 separate provincial series. The Complaints and Decrees registers together number about 530 volumes. Other off-shoots of the Mühimme include a series on military affairs (68 volumes, 1196-1326/1781-1908); a series of specially secret Mühimme (10 volumes, 1203-1294/1788-1877), and a series on Egyptian affairs, the last volume of which is secret (15 volumes, 1190-1333/1770-1914). Among the numerous other series contained in this section, are the Royal Letters (Nâme-i humdâyin, 17 vols., 1111-1336/1699-1917), the Tühtimâhı Council registers (30 vols., 1271-1333/1854-1914), as well as other series dealing with foreign consuls and merchants, privileges (imbuďâ), legal rulings (mufadâlât), treaties, sentences of confinement to fortresses (hürdâ), appointments, churches, minority communities, etc. etc. b) The Cadaster (tapu), comprising the great land and population survey of the Empire. It was formerly a separate department of the government [see Dasta-r-i Ḵwârqani], and was housed in the Defterkhâne, near the Sultan Ahmed mosque. The greater part of the registers was transferred to the Başvekalet Arşivi, which now reports the possession of about 1155 volumes. The remainder, about 250, are still in the General Survey Directorate (Tapu ve Kadastro umum Mühimme) in Ankara. The earliest, a register of timars in a sandjak in Albania, dated 835/1431, was edited by Halil İnalci (Süret-i Defter-i Sancak-i Arnavut, Ankara 1954). These registers, which were renewed at frequent intervals, cover almost all the provinces of the Empire in Europe and Asia, including parts of Transcaucasia and Western Persia. Arabia, Egypt, and North Africa are excluded. c) Finance (Mâhiyye). The surviving records of the Ottoman financial administration are now in the Başvekalet Arşivi, and comprise many series of registers, as well as vast quantities of papers. They include the accounts and records of the Chief Comptroller’s Department (Bashmahâsebe) from the 16th to the 19th centuries; of the various special commissioners’ departments (mûeṣbih) —e.g., cereals, meat, artillery depot, mints, kitchens, powder-magazines; of provinces, departments, paymasters, tax-farms, mines, customs, escheats, etc. A good example is the djizya series (418 vols., 958-1255/1551-1840). Part of the series is sub-divided by provinces, and some registers contain copies of djizya documents and receipts, with lists of djizya payers, sent in from provincial capitals.
Apart from the main collection in the Başvekalet Arşivi, there are numerous other smaller collections in Turkey. The most important are the palace archives preserved in the Topkapı Sarayi [q.v.], the records of the General Directorate of Wakf in Ankara, and the collections of legal documents known as sigilli, şerî'îye (see sigill).

(B. Lewis)

**BAŞVEKIL** (Başwakil), the Turkish for Prime Minister. The term was first introduced in 1524/1525, when, as part of a general adoption of European nomenclature, this title was assumed by the Chief Minister in place of Grand Vezir or Şâdi-i Âşâm (q.v.). The change of style was of short duration, lasting only for 14½ months, after which the old title was restored. A second attempt to introduce the European title was made during the first constitutional period. Introduced in Şafar 925/February 1878, it was dropped after 114 days, restored in Şa'bân 1296/July 1879, and then dropped again, after about 3½ years, in Muharram 1300/November 1882. Thereafter the title Grand Vezir remained in official use until the end of the Sultanate, when it was finally replaced by Başvekil (or, for a while, Baş-bakan), in the Republic.

(B. Lewis)

**AL-BÂTA'ÎHî** or **AL-BÂTHâRAHî** (Baţhârî), a small déclassé tribe (ghây y asîl, da'îf) of (approx.) only a hundred males, on the south Arabian coast between Ra's Naws and Ra's Sawfîkî, facing the Kurîa Murîa Islands. They live mainly by fishing and goat herding but have also some camels, frankincense trees, and trading boats. Besides Arabic, they speak Baţhârî (Baţhâ-riyê), in which *a'un* is preserved more than in the related southern Semitic oral tongues: Mahri of al-Mahra, Ḩarsûsî of al-Ḥarsâsa, Ṣâhâri of al-Ṣâhâra and their overlords al-Ḳârâ and, Sukûṭrî (basically Mahri but greatly mixed) of the people of Sukûṭrî. In religion al-Bätâhîra are Shî'î Muslims, and in political faction they are Ghafiris. Their overlords are the chief men of al-Djanaba and al-Mahra. With proppingy outweighing regard for purity of blood, the social status of al-Batâhîra does not preclude marriage with any of the neighboring tribes.

The neighbours nearest to them in their rough coastal district—small beside the area into which they claim to have once owned—are al-Karî (or, for a while, al-Shâhab), the eastern groups of al-Mahra in the interior, and al-Djanaba to the northeast. Hence, with regard to geographical names in their territory, great variety if not confusion exists between forms in non-Arabic languages and those in dialectal Arabic—especially that spoken by al-Djanaba. Because political and economic developments are accelerating the aggrandizement of Arabic, such toponyms may eventually be the principal if not the only surviving mementos of historic non-Arabic tongues, both here and elsewhere in southern Arabia.

For general reference: Youakim Moubarac, *Éléments de Bibliographie Sud-Sémitique*, in *REI* 1955 (pub. 1957); *Index Islamicus* (1906-1955), Cambridge 1958. (Esp. important are newer studies by Dr. Wolf Leslau, University of California at Los Angeles, and Dr. Ewald Wagner, Mainz).

(C. D. Matthews)

**AL-BÂTA'ÎHî** (see al-bâthîhā)

**AL-BÂTHâRAHî** (Baţhârî), called al-Mâ'Mûnî, Fâtîmîd waâri. Born of obscure parentage, his father having been an Egyptian agent (*gâsâsî*) in 'Irâk, al-Batâhî rose to power through the patronage of the celebrated Fâtîmîd waâri al-Afdâl, in whose assassination he was implicated (515/1121), and whom he succeeded as first minister of al-Amir (ruled 495/1099-1108) and as vizier (515/1121). In that year al-Batâhî managed to have the suspicion of the Caliph, and fell from power. Among the crimes reckoned against him was the construction of the observatory, and it was alleged that his naming it after himself 'al-Mâ'mûnî' was proof that he aspired to the Caliphate. When al-Batâhî was himself arrested, the Caliph refused to go on with the work, and none dared mention it to him. He gave orders for its demolition, and the materials were removed to the government stores. The workmen and experts fled. The latter included, as well as Abu Di'âfar Yusuf b. Ḥâdîy, the sâ'dî Abu 'I-Tâsh of Ta'râbulus the geometer, Abu 'I-Nâdîy b. Sînd of Alexandria the instrument maker (*ad-dâ'î*), and the geomcter Abu Muhammad ʿAbd al-Karîm of Sicily. Al-Batâhî himself was crucified by the Caliph's orders. His large house in Cairo was still used as a residence more than thirty years later, but Ibn Khallikân, who gives this
information (tr. De Slane, ii, 426), adds that in his
time it had become a Hanafi...

The fortified capital of the province of the same name,
then called Cordova, Batalyaws became the brilliant residence
of the Aftasids, who, from 1022 to 1094, reunited
in a single important kingdom the largest part of
the north of the former Lusitania. After the disastrous
defeat of the Christians at al-Zallaka (Sacralias) in
1086, north-east of Badajoz, the principality of the
Reyes de Taifas, became gradually subject to the
Almoravid Empire of North-West Africa, and, after
sending of prophets or the resurrection.

The soul is not naturally immortal and its existence
depends on God's will though some late passages
(ii, 149/154, iii, 163/168) imply the continuous
existence of the soul and that those who died for
refuge for a time at Saragossa. Ibn al-Sid, who, at
Saragossa, had had a notable disciple in Ibn Bagh-
kuwâl (q.v.), is the author of some twenty works,
including his commentary on the Adab al-Kâlib of
Ibn Khatuba (under the title of al-Ibtidâb fi Sharh
Adab al-Kulib, ed. 'Abd Allâh al-Bustânî, Beirut
1901); Kihâd al-Ibadah (ed. trans. Asin, 1940),
which had some influence on the philosophy of
religion among the Jews (see the Hebrew trans.
published by D. Kaufmann, Die Spuren al-Bataljusis
in der jüdischen Religionsphilosophie, Budapest 1880);
a Fahrasa; a commentary on the Muwatta' of Mâlik;
a commentary on the Saḥ al-Zand of al-Ma'arrî,
which is lost, but the criticisms made by Ibn al-'Arabi
about this work provoked a counterblast by Ibn
al-iband, entitled al-Indisâr min-man 'adala 'an al-
Istibsâr (ed. Hâmîd 'Abd al-Majîd [Magued], Cairo
1955); al-Indisâr fi 'l-Tanbih *ala 'l-Asdbb allati
awdjabat al-Ibtîdî, Cairo 1319 (cf. Goldziher,

BATH [see HÂMMÂM].

BATH (Ar.), literally "to send, set in motion";
as a technical term in theology it means either the
sending of prophets or the resurrection.

1. The Mu'tazila (q.v.) said that God could not
have done otherwise than send prophets to teach
men religion as He must do the best He can for
men; orthodoxy denied this but held that the
sending of prophets was dictated by divine wisdom.
One of the reasons for condemning Brahmins and
the Sumaniyya was that they denied the existence
of prophets.

2. Philosophy taught that resurrection (ba'ith, mâyâr, mâyâr) was of the soul only so orthodoxy condemned
it as a heresy, insisting on the resurrection of the
body. From the first Muhammad preached the
reality of the after life though he assumed that the
judgement came with the end of this world suddenly
(vi, 31), heralded by the sound of a trumpet (ixix, 13;
in xxxix, 68 are two blasts, each introducing a distinct
stage in the action) the graves open and all bury
to appear before the judge (xxxix, 75, lxxiii 23/24)
and the just will be given their records in their
right-hands (xvii, 73/71). For the signs which precede
the end of the world, see DABA, DAMDIR, 856.

The soul is not naturally immortal and its existence
depends on God's will though some late passages
(ii, 145/154, iii, 163/168) imply the continuous
existence of the soul and that those who died for
God’s sake are already in bliss. Later reports are little more than elaborations of these ideas, and do not form a consistent whole. The soul of a good man leaves the body easily, but that of a bad man has to be dragged out painfully (see 'ADHAB AL-KARR). The body decays in the grave except for the lowest bone of the spine to which the essential parts of the body will be restored. Most will remain in the grave till the judgement but a few are not so bound; some are in barasah [g.v.]. When Isaâfiq [q.v.] blows his trumpet, the world will return to chaos, the sun will be darkened and men will rise from the grave as they were created, barefoot, naked, uncircumcised, and will gather at the place of judgement, a level plain with no place in which or behind which a man may hide, perhaps it is in this world, perhaps specially created. Another version makes the first blast kill everyone except Iblis [q.v.] and the four archangels; a second blast brings all back to life. The heat of the sun is such that all sweat, a flood which with some will reach as high as the ears. They wait there 300 years or 50,000 without food or drink but worse than the physical pain will be the terror of the judge; each one will be so anxious for himself that he will pay no heed to others. They will turn to Adam to ask his intercession but all prophets in turn will refuse and refer them to Muhammad who accepts the task and to him God listens. Other forms of judgement are the bridge, thinner than a hair and sharper than a sword, over the fire; believers pass over safely but unbelievers fall off; the scales in which man’s life is weighed and the books in which his deeds, good and bad, are recorded. Sinners will be accompanied by the tools of their sin, a musician will have the instrument which distracted his mind from religion; a man’s good deeds will become an animal on which he will ride to judgement. Some believed that all living creatures would rise at the last day. It is obvious that much of this is older than Muhammad; the ancient Egyptians knew of the weighing of souls and the books of record and the Persians knew of the bridge. Later ideas are mixed. Some men turn to dust in the grave and their souls wander in the world of sovereignty (malahâdi) under the sky of this world; some sleep and know nothing till the trumpet wakes them and they die the second death; some stay two or three months in the grave and then their souls fly on birds to paradise; some ascend to the trumpet and stay in it for there are as many hiding places in it as there are souls. Muhammâd stayed on earth for thirty years till the murder of Husayn [q.v.] when he ascended to heaven in disgust.

**BA’TH** [see NABI?]

**AL-BATHIYA,** district in Syria, with Adhârî [q.v.] as capital. It is bounded by the Djaib al-Drûz to the east, the Lajhî plain and the Djaydur to the north, the Djawan to the west, and the hills of Al-Dîumal to the south, where the boundary is a little imprecise. Also called al-Nûr, “the hollow”, it corresponds to the ancient Batanaea mentioned together with Trachonitis, Auranitis and Gaulanites as part of the old kingdom of Bashan and referred to in the Old Testament. The region is fertile, as its name demonstrates; cf. Delitzsch, Assyrie, Handbuch, 1897, 115. In particular, the whole country between Muhammara in the south, a point beyond Kurna and extant burial mounds are proof of this. Since then its reputation for being the “granary of Syria” has been maintained. According to the Arab geographers, the area was throughout the Middle Ages densely populated; it lay on the main route of communication connecting Damascus with al-Urduin, a highway which owned as much to the Manluk barid as to the Syrian pilgrim caravans.

Conquered by the Arabs in 1365/3, al-Bathaniyya, like Hawrân, became barâhd land, and was subsequently joined to the al-dûnd of Damascus although more usually connected with the Hawrân region. During the period of the Crusades it suffered from Frankish incursions. Later under Ottoman rule it was affected by two important factors: the invasion of the nomadic ‘Anâza, followed by the Rwâla, which introduced a reign of disorder and insecurity lasting until the end of the 19th century, and the settlement on its soil of the Hawranese hill folk expelled from their homes by the Druzes. These latter had from the 17th century begun to infiltrate into the Hawrân, where in 1861 they were joined by certain elements from the Lebanon.

Al-Bathaniyya should be distinguished from the small plain situated to the north-east of the Djaib al-Drûz, called in antiquity Sacnea and in the Arab period arîd al-Bathaniyya. This term has been translated to mean the “marsh of Bathaniyya” but one of the local names Batheyne, leads one to suppose that the area had been considered rather as a “small Bathaniyya”.

**AL-BATHÂ’HA,** (“the marshland”), the name applied to a meadowlike depression which is exposed to more or less regular inundation and is therefore swampy. It is particularly applied by the Arab authors of the ‘Abbâsid period to the very extensive swampy area on the lower course of the Euphrates and Tigris between Kûfâ and Wasîf in the north and Baṣra in the south, also frequently called al-Batâ’ih (plural of al-Bathâ’ha) and occasionally, after the adjoining towns, the Baṭhat (Baṭîh) al-Kûfâ, al-Wâṣîf or al-‘Asrâ.

The existence of considerable swamps in southern Babylonia goes back to high antiquity. The alluvial plain is soft and almost flat, the river beds are shallow and exposed to rapid silting, the banks are soft and low, therefore the flood waters overflow the banks, causing extensive marches; these would normally disappear but for the annual floods, and the rivers change their courses which, in turn, leads to new marshes. Even in the cuneiform inscriptions the agamm (swamps) and apparti (reedlands) are often mentioned; cf. Delitzsch, Assyrie, Handbuch, 1897, 115. In particular, the whole country between Muhammara in the south, a point beyond Kurna and...
in the north, and beyond the river Kārūn to the east, must have been covered by an enormous swampy lake; cf. Delitzsch, 627; Dougherty, The Sasanian Dynasty, 1913.

The Greek and Roman writers are likewise acquainted with it (as Ἀλβαττα or chaldæicus lacus). Nearcush’s account is particularly instructive, for he crossed this area of water and gave its breadth as 600 stadia (80 miles). The Tabula Peutingeriana also defines the Babylonian swamps; on it, in addition to Paludes, is mentioned the name Diodaki, probably to be amended to Diodakhi = Baštāḥ. On the notices in cuneiform inscriptions and classical authors, cf. Andreas in Pauly-Wissowa, i, 736, 815, 1878 ff., 2812; Weissbach, ibid, iii, 2044 vi, 1201 ff.; Streck, v. 1147 (s.v. Diodakhi); Ainsworth; Researches ii, 180 ff.

Since ancient times the great marshy lake has been gradually filled up by the deposits of sediment brought down by the rivers, and the modern delta has arisen. Some places, however, remain under water. These places extend around the present Hor (Khawr) al-Ḥuwayza, Hor al-Ḥammār, Hor al-Ṣhamiyya, and probably further north.

The origin of the swamp may be a syncline which occurred in geological times: parts of it were filled by the huge amount of silt, while others remained low and were filled by water; they formed what mediaeval Muslims called al-Baštāḥ. The syncline may have eroded in historic times (cf. G. M. Lees and N. L. Falcon, in Bibliography History of the Mesopotamian plains in Geographical Journal. On the retreat of the sea, cf. De Morgan, i, 4-48; Seton Lloyd, 19.

The Sasanids as a rule devoted a great deal of attention to the irrigation system and drainage in Babylonia. This should have led to the decrease of swamps. Under later kings of this dynasty, however, large areas of flourishing country were swallowed up by floods, and the region of swamps grew to such an extent that the Arabs wrongly date the beginning of the Baštāḥ from this period. They claim that during the reign of Kubāḏ Fīrūz (457-484 A.D.) a large breach occurred near Kaskar, and inundated large areas of cultivated lands. It was not until the reign of Khusraw I Anūṣḥarwān (517-578) that the dykes were partially repaired, and some of the lands brought under cultivation. But in the year 6 or 7627, in the reign of Khusraw II Parwīz, the waters of the Euphrates and the Tigris rose again, in a flood such as had never been seen. Both rivers burst their dykes, causing huge breaches. The water reached the places of the swamps, inundating the farms of several ḫussādī there. During the succeeding years of anarchy, and when the Muslim armies began to overrun ḫrāk, breaches occurred in all embankments, and the ḫikhāns were powerless to repair the dykes so that the swamps increased in all directions (Baladhūrī, 292-4; Kudāmā, 240; Yāḵūt, 668-9; Masʿūdī, al-Mubarak; he thus reclaimed large areas of lands, which yielded a large income, but resulted in a decrease in the volume of water available for irrigation.

When the ʿAbbāsids came to power (132/750), new bursts occurred in the dykes which, in turn, increased the swamps. In the Euphrates region, similarly, thickets formed, parts of which were reclaimed. In the north-west, the Baštāḥ extended nearly to Kūfah and Nīffār, while farther to the east it began at a considerable distance from Wāsīṭ. This part is called by many mediaeval Muslim sources Baštāḥ al-Ḵūfa. Their crude maps (cf. Miller, Maps of Arabia) do not show them connected with the southern Baštāḥ, not do they mention any dwelling-places or cultivation there. Nevertheless 4th/10th century sources assert that the Euphrates discharged into the Baštāḥ between Wāsīṭ and Baṣra (Masʿūdī, Murāḍī, i, 215; Suhrāb, 118). The suggestion that the present lower Euphrates region was covered with Baštāḥ up to the 6th/12th century, when sources mention that the lower Euphrates joined the Tigris in Maṭṭārā (Yāḵūt, ii, 553). This must have been due to hydrographic changes, in the depression of Shīnāfiyya, which must have then been deeper, and the reduction of the amount of water and silt, owing to the numerous canals which took water from the Euphrates to irrigate north and central Babylonia (cf. Le Strange, 75 ff.).

The Tigris, from about the end of the Sasanid period to the first half of the 10th/16th century, flowed in the western bed (the modern Shāṭ al-Dudgājla) past Wāsīṭ and several towns until, in the 4th/10th century, it joined the Baštāḥ in Қaṭr (Murāḍī, i, 218; Suhrāb, 118-9, 135; Ibn Khurramādābehībī, 59; Ibn Rusta, 185). According to Mustawfi, Қaṭr is 30 parasangs (about 107 m. = 172 kms.) south of Wāsīṭ (Nuzha, 166), according to Kudāmā (193), 22 parasangs.

The southern limits of the Baštāḥ border on บาhra (Baladhūrī, 362; Ansūb al-ʿAṣrāfī, v. 257). Suhrāb (135) describes the Baštāḥ as consisting of four Hors: Bahāšā, Bakāṃṣa, Baṣaryāḥa and the Muḥammatayya. Each Hor had plenty of water, with no reeds, but each one was linked with the other by a narrow passage of reeds.
Muhammadiyya was the largest, and the reed passage extended from it to the Hála, Kawán, and then to the "one-eyed" Tigris (al-Diglá, al-Tafir'). Yákút mentions the Hors of Shálám, (iii, 311), Djará, (ii 56), Gháráf (iii, 581) and Rabbák, (ii, 134).

In the flat soft alluvial plain of south Babylonia hydrography could not be static, especially since the canal and irrigation system was subject to change according to the political and economic situation. Though these changes have not been yet studied in detail, nevertheless one may see an indication in the 6th/12th century, when Yákút mentions that the Tigris was divided below Wáṣíj into five arms which, together with the Euphrates, joined in Máṭirá which was a day's journey from Başrá (ii, 553). The area of the lands covered by the Batibá undoubtedly changed according to the amount of control exercised over the flood water and the amount of water used for irrigation in the north.

Although water covered most of the lands of the Batiba, nevertheless there were areas of dry land, farms, cities and villages as well as rivers and canals (Mükaddás, 119; Samğání, Amáb, s.v. Batibá; Ibn al-Áthir, Libáb, i, 129). Ibn Rútsa (95) says that "the higher places became mounds which are known in Baṭá‘íh and are called Sartughan, Tustaghan and as its rivers the canals of Abba, Khurz, al-Zút (i, 970). Mükaddás, (134) calls the Batiba a district (mákáya) with Suláyṣ as its chief town, and the further towns of Djamí’da, Harrár, Haddádiyya and Zubádiyya. Most of these towns were north-west of Wáṣíj. Yákút mentions as towns of the Batiba Hála (of Dubyás) (i, 594, ii, 323) Kháthýmiyya (iv, 884), Harrár (iv, 970). Mansúra (iv, 664) and other places, and as its rivers the canals of Abbá, Khurz, al-Zút (ii, 950, iv, 840) and Yammá (iv, 1026).

Of the western marshes of the Euphrates about the middle of the 19th century European travellers and archaeologists give fairly accurate descriptions. The main course of the Euphrates passed through Babylon, Hála and Dwiáníyya. Several branches and cuts diverged from this branch, many of them re-uniting near al-Káraym, which was at the head of the delta. During the season of the floods, water spread for about 30 miles in length, 7-14 miles west of the main channel and to a much greater distance on the east side. This repress forms the Lámúm marshes. Thirty years later, the bulk of the Euphrates' waters went through the western Hindiyá canal which was dug in the 17th century by the the Indian Ásaf al-Dawlá. This emerged into the plains further south and created the shallow Bahr al-Ádáf and Shínáfiyya marshes, which remained even after the erection of the Hindiyá barrage in 1911 to increase the water of the Hála branch. These swamps are situated in a large depression, wider in the mouth, about 40 m. (65 kms.) long and 15 m. (25 kms.) wide; the depth of the flood water varies from a few centimetres in the north to 2-3 metres in the middle. Several sub-Hors branch off from it; in the east are the Hors of al-Ádíja, al-Wurídít, Ibn Nádím, al-Khabás, Abú Ghárǎbál, al-Rammá, al-Áháwá and Abú Hídjá; to the west of the Shámáfiyya branch are Gháudút, Rughála, Gilbá, Abú Hüllána, Ziyáda and Hwiba; near the Kufán branch are the Hors of Tubug, Gházálát and Sháb. The areas of these Hors shrink after flood, and the land becomes excellent for rice cultivation.

The Tigris below Baghdad flows through a flat plain, and the banks are not high enough to retain the huge volume of flood water. This leads to a number of breaches and levees on both sides of the river which produce numerous marches. The largest of them between Búghárd and Kut is Hor Shawdíja, which is a natural depression formed by the several above-mentioned Hors. The total flowing into the Tigris by several channels which begin a short distance beyond Usáy."
1096 AL-BATIHA

Hammar are bare, uninhabited land, exposed to annual floods from the lake.

On account of its inaccessibility, the Batitha was a hiding place for all sorts of robbers and rebels, and an asylum for the discontented.

The Zuww [q.v.], who were transplanted with their vast herds of buffaloes in the marshes by al-Hasidî, made themselves, together with some other maawilî, in the early 'Abbâsîd period, a nuisance to 'Irâk by robbing and plundering, and disturbing communications and trade with the south. Their effect was felt to a greater extent at the time of Ma'mûn. It was only after strenuous efforts that the Caliph al-Mutâsîm succeeded in subduing them, and in removing them to the northern Syrian borders (Baladhuri, 171-375; Tabari, iii, 1144-5, 1167-70; Mas'ûdî, al-Tanbîh, 355). They have given their name to the Nahr al-Zutt (Yakut, iv, 840).

Far more dangerous, however, proved the great rising of the Zandj [q.v.] who, under the leadership of 'Ali b. Muhammâm [q.v.], stirred up near Basra a formidable rebellion (255-270/869-883) and dominated the Batîtha for several years (Tabari, iii, 1742 ff.; Nöldeke, Sketches from Eastern History, 146-175; F. al-Sâmîr, Thawrat al-Zandj, Baghdadh 1952).

In the following centuries the Banû Shâhîn (see 'Irâk b. Shânî) and after them the family of al-Mu'azzaffar [q.v.] founded a more or less independent kingdom in the swamp lands which they shared at a later period with the Mazyâdîs [q.v.] who ruled from 403 A.H. until 448 A.H. in Hilla. After the decline of the Mazyâdîs, the Banû 'l-Muntafik began to play their part, although the Caliph al-Mu'azzaffar succeeded in destroying their leaders, the Banû Ma'âdî, in 671/1220.

When the Mongols conquered 'Irâk (656/1253), the Batîtha fell in their hands, but the Arab tribes remained a source of disturbance. From then on it was called al-Diázarîr ("the islands") or al-Diawaizîr. It was conquered by Tamerlane (795/1338), and then by Úways the Diázarîrîd (826/1423); in the year 844 A.H. it was conquered by the Maghâshâ on [q.v.] who remained until the Ottoman sultan Sulayman occupied it in 953 A.H. A.A. Ottoman rule of the region; however, was not firm, and they could not destroy the several tribal principalities, e.g., the Ál U'layyân, who ruled over the Hammâm until they were destroyed in 975 A.H.; the Banû Lâm dominated the lower Tigris, until they were challenged by Álb b. Muhammad and gave the Ottomans a chance to control them. The al-Muntafik family ruled over the lower Euphrates up to the year 1281, when Midhat Pasha was able to establish a mutasarrîfiyya under the control of the governor of Baghdad (Longrigg, Four Centuries of Modern Iraq, Oxford; "A. 'Azzâwî, al-'Irâb bain Thalalâm, 8 Vols, Baghdad 1937-57; Field, The Anthropology of Iraq, in Field Museum of Natural History, Vol. 30, part i, no. 2, 1949).

Large numbers of the originally Aramaic (and Christian) population of Babylonia (the Nabats of Arab writers) remained in Batîtha for a long time, so that many sources call them the swamps of the Nabât (L.A., iii, 237; cf. also Mas'ûdî, al-Tanbîh, 161; Miskawiyah, ii, 409 Muckaddasi, 128). Probably another ancient remnant is the Mandaeans or Shûba, the mediaeval Mughatâsîla, cf. Ibn al-Nadîn, 340; Mas'ûdî, al-Tanbîh, 161); these Shûba still survive in a few places in the marshes such as Sûk al-Shûyôkî, Kal'at Sallû, and in Hor al-Hawîzâ (Hawîzâ) where the town of Hawîzâ is their chief centre (cf. Drower, in Bibliography).

Nevertheless some Arabs settled there. Ibn Rusta says that Yashkur, Bâhîla and Banû 'l-Anbar lived near the Batîtha before its formation. Baladhuri refers to the Bâhîli clients who joined the Zuww in their disturbances at the time of Ma'mûn. Tabari, iii, 1858, 1898, 1903 refers to some of the Bâhîlis who joined the activities of the Zandj in the 53/9th century. He refers also to Al'îlî in the Batîtha (iii, 1759). The Mazyâdîs domination must have brought Banû Asad [q.v. until they were destroyed by Al-Nâsîr. Ibn Khaldûn mentions Râbî'â who dominate this area (vi, 12), by whom he probably means the Muntafik [q.v.]. Ibn Batîtîa mentions Khâsâija and the Ma'âdî (ii, 2, 4).

The greater part of the modern inhabitants is composed of semi-nomads and farmers of Arab stock, organised on tribal lines. They are Shî'î Muslims except for a few Sunnis, the most prominent of whom are the Sa'dûn family.

The most important of these Arab tribes, which are themselves divided into a large number of subdivisions, are:

(1) The Banû Lâm who in the 16th century were able to establish their authority over the Tigris lands from Hawizâ as far as the environs of Baghdad in the north, and to the outer spurs of the Pusht-i-Kûh in the east. Kût al-Amâra was the residence of their Shaikh in the early decades of the 19th century, but their lands and authority diminished in the 19th century and became confined to the lands east of Tigris and north of Ìmârâ. They are a sheep owning tribe, and are still semi-nomadic.

(2) The Alûb (= Abû) Muhammâm. They also live east of the Tigris, beside the banks of the Çafla and its main tributaries where they settled ten generations ago, and have since expanded over the canals and marshes on either side of the Tigris in the 19th century, but their lands and authority diminished in the 19th century and became confined to the lands east of Tigris and north of Ìmâra. They are a sheep owning tribe, and are still semi-nomadic.

(3) The Alûbî, to the west of the Tigris. Their subdivision al-Mayyâh extends along the Gharrafi up to Shâtra, with Hâyî as their chief centre.

(4) Subayd, west of the Tigris. Their lands lie between Baghdad on the north and Kut al-Hâyî in the south-east. In the south they adjoin the land of the Khâzîlî.

(5) The Khâzîlî, south-west of the Subayd. They dwell from the district between Kefîl and the ruins of Nîffar, and along the Euphrates from Shammîyya to the south of Diwânîyya where they border on the country of the Muntafîk.

(6) The Muntafik, a loose confederation of tribes presided over by the al-Sâ' dîn who came in the 5th century from the Hidzî and were able to establish their authority over the tribes of the Lower Euphrates, and to expand at times even as far as Basra. They retained their semi-autonomous authority up to 1861, when Midhat Pasha was able to abolish their rule and establish a mutasarrîfiyya in Nâşiriyya.

The Muntafîk fall into three main divisions:

1) Al-Adiwaq, who dwelt from Dârráddî to the vicinity of Sûk al-Shûyôkî, and on the lower parts of the Gharrafi; 2) Banû Mâlîk, who live on the borders of Al-Handmâr; 3) Banû Sa'dî, who live near Karmâ bani Sa'dî.

(7) Al-Diázarîr. The Diázarîr ("islands") also called Diawîzir are the swamp lands as opposed to Shammîyya, the dry and desert land. The term has given its name to a confederation of tribes which are repeatedly mentioned in the Mongol and Ottoman
sources up to the 20th century. Their country was part of the Mushāqṭah state (Arzāwī, Taʾrīḫ, iii, 117, 174, 272) then of Al-Uyyān (Arzāwī, iv, 107), was conquered by the Ottomans (Arzāwī, iv, 50 quoting Mīr-i-Kābind, 137; Ebuliyâ Celebi iv, 414), at times dominated by the Persians and by the Mūntakhab, until it was finally brought under Ottoman control at the time of Midhat Pasha, who made attempts to reclaim some of its lands (Al-Zaaw, 568).

The tribes of Al-Dżazaʾr formed a federation composed of (1) Banū Asad [q.v.]; who settled between Kufa and Wasit (ii); Loftus (120-2) has described their primitive life and conditions. They are probably the Maʿādī who are mentioned by Ibn Baṭṭūta as dwelling between Kūfā and Wāṣīṭ (i); Loftus (120-2) has described their primitive life and conditions. They dwell in the marshes, are organised tribally in a small way, and have no cohesion on a large scale. They are fishermen, reed-gatherers, and breeders of buffaloes.

The settlements of the inhabitants of the swamps are usually on terraces and islands, which are not entirely submerged by the annual inundation, and sometimes form villages. They consist of long huts built of reeds and reed matting (sarifa) (Thesiger, xvi, 198, Note 1).

The most important product of the marshes is rice. Other products are barley, yellow maize, cotton, sugar, millet, lentils, melons, watermelons, and to some degree lady’s finger (bāmya, gumbo, okra) and onions.

One source of revenue is the reed, which is used for all household purposes and from ancient times has been much used for writing implements (see OLZ, ix, 190). The reed pens of mediaeval Wāṣīṭ and, in the 19th century, of Dīzīfīl were considered the best in the east (cf. Cl. Huart, Les Calligraphes et les miniaturistes de l’Orient Musulm., (1908), 13). Even at present 50-70 thousand tons of reeds are cut annually in the vicinity of Čābāyīr (Tams, 60).

In addition there is great abundance of fishes, which afford a continual food supply to the natives or are exported to other districts. Ibn Rusta (94) refers to the importance of the Bāṭīha products of fish and fish in mediaeval times. At present it produces about 2000 tons of fish annually, employing about 500 fishermen.

Buffaloes are an important source of wealth to the marshmen south of Īmāra and of the ʿĀmmār. The butter from their milk is exported to the surrounding cities and to Baghad. Sheep are also reared to a moderate extent, while cows are found in various places, especially in Kūfā.

As to the remaining fauna of the Bāṭihīa, water fowl of all sorts are numerous, such as gulls, wild duck, geese, swans etc.; there are flocks of cranes, pelicans, flamingoes, storks, bustards and bitterns. There are also some carnivorous animals. The lion, which was known in this country in ancient and mediaeval times, was last mentioned in the 19th century (Loftus, op. cit., 242 ff.). In addition, a number of leopards, jackals, wolves, lynxes and wild-cats have their lairs here. Wild-boar (Sus scrofa), wallow in large herds in the marshes.

The countless swarms of mosquitoes and midges form a terrible plague, and were a source of endemic diseases, e.g., malaria, which must have been an important factor in the decline of the district (cf. ʿĀbbās Sulaim Āl-Ṣabīḥīyyah, Vol. ii).

Al-Batin, though a historic route from al-Hasa to al-Hījāz, contains few known archaeological remains; the most prominent are the 42 steeled wells, which may be Yākūt’s Hafar Abī Mūsā, near the village of Hafar al-Batīn. The only settlement in al-Batīn, al-Hafar consists of 200 houses and the fort of the Amirate which reports to the Governorate of the Eastern Province at al-Dammām.

At an undefined point at the junction of al-Batīn and its tributary, al-'Awdja, the boundaries of Saudi Arabia, Kuwait, Ibrā, and the Saudi Arabia-Ibrā Neutral Zone converge, according to the al-'Uqayr agreements of 1922.

Al-Batīnīya, a lowland district in eastern Arabia lying between the coast of the Gulf of Oman and the mountains of al-Ḥadżār. It is bounded on the north by the headland of Khattat Milābā, and on the south by the village of Ḥayl al-ʿUmāy, southeast of the town of al-Sīb and west of the city of Muscat. The district varies in width from 10 to 20 miles. Near the coast the soil is sandy and dotted with many shallow wells. Farther inland the soil is clay, and then the ground becomes stony as the foothills of the mountains are approached. Numerous wādīs cut across the district and run down to the coast, where their beds broaden out. The name al-Batīnīa means the low-lying region, in contrast to al-Ẓāhirā [q.v.], the higher region on the western side of al-Ḥadżār, which is reached from al-Batīnīa by two important passes, Wāḍī al-Dījāy and Wāḍī al-Ḥawāṣīn.

Al-Batīnīa is primarily a region of fishing and date culture, though the interior supports a number of semi-nomadic folk with their herds. Along the sea coast stretches an almost continuous date-palm belt, which in places extends inland to a depth of about seven miles. Wheat, cotton, barley, sugar-cane, lucerne, mangoes, bananas, figs, limes, melons, and olives are also grown, being irrigated from the copious wells. Domestic animals are sheep, goats, donkeys, and especially the Bātīnīya riding camel, which among the three famous breeds of Oman is the one most noted for its comfortable gait. Fishing is often carried on in the Ṣhīdha, a non-sinkable craft of palm branches (diqv) similar to the Ṣarākibiyah of Kuwait. Larger vessels sail to the Persian Gulf, southern Arabia, Zanjībār, and Pākistān for trade.

Al-Batīnīa was first proselytised for Islām in 8/629 by Abū Zayd al-Ansārī and ‘Amm b. al-ʿĀṣ [q.v.], who were welcomed in Ṣuḥār [q.v.] by the house who were welcomed in Suhar in 928/1522. Although the Portuguese took the town, they did not continually, occupy the al-Batīnīa coast until 1025/1616. Until the expulsion of the Portuguese in 1053/1643 by the dynasty of al-Yaʿārība [see VAṢR], Ṣuḥār rivaled Muscat and Hormuz as a trading port. Persian attempts to regain possession of al-Batīnīa during the reign of Nādir Shāh [q.v.] were beaten off largely by the efforts of Ahmad b. Saʿīd of Al Bū Saʿīd (see BŪ SAʿĪD). His nine-month defence of Ṣuḥār in 1156/1743 brought him prestige which secured for himself the Imamate of Oman and for his descendants the Sultanate of Muscat.

The Sultan of Muscat has reigned at al-Sīb, Bārka, al-Maṣnaṣa, Suwayk, al-Khāibūrā, and Ṣuḥār. The customs and zakāt revenue from these places seldom exceeds the administrative expenses. The number of Bedouins roaming the interior is far less. Among the sedentary population, the chief tribes are Al Saʿīd and al-Ḥawāṣīn. Many of the Bedouins in the district come from the same two tribes and Banī Khāṣūr. Lesser tribes are al-Biduwāt, Ṣūḥār, Ṣuwayk, Al Djarad, Al Djarad, and al-Shubāl. The great majority of the people of al-Batīn are Ḥanāfī in politics and Ḥabīlī in religion, although the Balūchis and negroes tend to be Sunnī.

(R. L. Headley)

Bātīnīya, a name given (a) to the Ismāʿīlīs in medieval times, referring to their stress on the bātīn, the “inward” meaning behind the literal wording of sacred texts; and (b), less specifically, to anyone accused of rejecting the literal meaning of such texts in favour of the bātīn.

(a) Among the Ismāʿīlīs [q.v.] and some related Shīʿī groups there developed a distinctive type of taʾwīl [q.v.], scriptural interpretation, which may be called bātīm. It was symbolical or allegorical in its method, sectarian in its aims, hierarchically imparted, and secret. All branches of the Ismāʿīliyya as well as its Druze offshoots have retained the bātīm taʾwīl in one form or another. The like system of the Nuṣayrīs seems to be a survival from bātīm circles associated with the later Twelver imāms [see Shīʿī].

Certain aspects of this type of taʾwīl can be matched in Jewish and Christian prototypes (for instance, in the symbolical exegesis of Origen) and other aspects can be matched among the Gnostics. Its immediate origins, however, are Muslim. Like the symbolical taʾwīl ascribed to the imāms among the later Twelver Shīʿī (with which it has in common its symbolical and sectarian character and something of its secrecy), its beginnings can be traced to the Shīʿī Shihād of the 2nd/8th century in Ibrā. Thus
al-Mughira b. Saʿīd (d. 119/737) is said to have interpreted the mountains' refusal to undertake the task of building the Ka'bah as symbolising the imām alone being charged with its interpretation, taʾwil. Among the followers of Abu ʿl-Khaṭṭāb (d. 138/755-6) such allegoristic taʾwil seems to have been especially popular; some of them supposed that in each generation there is a speaker, nāʾīr, to declare publicly religious truth, and a silent man, ʿāmil, to interpret it to the elect. Presumably it was from the Khaṭṭābiyya that such elements of the bāṭiniyya, entered the Ismāʿīlī movement, where the taʾwil was elaborated till it became the hallmark of that movement.

The bāṭini system can be described in terms of four essential notions: bāṭin, taʾwil, ḥāṣa waʾīmm, and ʿāmil; all which were presupposed whatever particular doctrine was taught. It was held that every sacred text had its hidden inner meaning, the bāṭin, which was contrasted to the ẓāhir, "apparent" or literal meaning. Not only in passages which were in any case metaphorical, but in historical passages, moral exhortations, legal and ritual prescriptions, each person, act, or object mentioned was to be taken symbolically. The things symbolised often were explained one by one as objects of approval, obedience, hatred, and the like, according to the passage; but sometimes whole anecdotes were read as extended allegories. Number and letter symbolism was freely used. The same procedure applied to non-Muslim sacred books as well; and indeed to the whole of nature. For the bāṭin represented an esoteric world of hidden spiritual reality, parallel to the reality of the ẓāhir, the ordinary visible world, which cloaked and concealed it. The true function of scripture was to point to that hidden world even while keeping it disguised in symbols.

Taʾwil, the edifying of the bāṭin from the ẓāhir text, was therefore as fundamental as tanzil, the revelation of the literal sacred text itself, and was equally dependent upon divine intervention. For every prophet who was given an especial revelation to be proclaimed publicly to mankind, there must be a nāʾīr, an executor (in the case of Muḥammad, this was ʿAll) who was given the corresponding taʾwil, which he propounded privately to the worthy few, that is, the members of the sect which accepted his authority. Mankind, then, were divided into ḥāṣa, the elite who know the bāṭin, and ṣāmm, the ignorant generality. The ḥāṣa were those who had been ceremonially initiated into the sect, that is, into knowledge of and obedience to the imām, representative of ʿAll and sole authorised source of taʾwil in any given generation. Among the Ismāʿīlīs, a series of hierarchical ranks (ḥudūd) of teachers mediated between the imām and the simple initiate. To the latter the bāṭin was imparted only in gradual stages (the number of which varied) and in purely authoritarian fashion.

The bāṭin was "inward" not only in being unevident but also in being secret. Knowledge of it must not be imparted to the ʿāmil, the ordinary followers of the ẓāhir revelation, lest it be misunderstood in an unauthorised way and abused. The Shīʿite principle of lāḥiyya [q.v.], precautionary dissimulation of one's faith, was accordingly reinterpreted to imply the obligation not to reveal the bāṭin to any unauthorised persons even apart from any danger of persecution. For some, therefore, the practice of the ẓāhir ritual of the sharīʿa even in its frankly Shīʿite form came to be regarded as lāḥiyya, in that it kept the bāṭin concealed.

Despite an authoritarian hierarchism, the taʾwil (as we know it in its Ismāʿīlī form) never achieved any strict uniformity. For any given ritual action different authors gave widely differing bāṭin interpretations; even the same author sometimes gave multiple explanations in the same book. Thus the inner meaning of the obligation of ẓāhir was held to be that the ḥāṣa or fifth of one's income must be given to the imām; or that one should give all one's surplus to the poor; or that the only true wealth is knowledge. What the taʾwil did accomplish was to replace what seemed a "native" Kurānic world view with a more "sophisticated" intellectual system; one which seemed to go beneath the superficial differences among the quarrelling religious communities with their incompatible dogmatic claims, to reach a profounder common truth. A unity of spirit was given to the taʾwil among the Ismāʿīlīs by its being used for three large and interrelated purposes. It presented a cosmology derived from neo-Platonist sources; it interpreted eschatology in terms of cyclicist religious history (and sometimes of reincarnationism); finally, it justified the religious hierarchy of the sect, whose grades corresponded more or less to the several dignities of the neo-Platonist cosmos.

The desire for sophisticated freedom from common accepted dogmas made for a persistent tendency toward radical exaltation of the bāṭin. In official Fāṭimid Ismāʿīlism the ẓāhir and bāṭin were both held to have their own spheres of relevance, at least in matters of ritual and law, in which they were binding on the initiate. But there was a frequent recurrence among the bāṭiniyya of a total rejection of the ẓāhir meaning even of the sharīʿa, or at least of its ritual prescriptions, as superfluous for whoever knows the imām and hence the bāṭin; this happened, for instance, among the Nizārī Ismāʿīlīs after 559/1164. Those who rejected the ẓāhir altogether often tended also, consistently, to exalt the ẓāhir (ʿAll) to a higher rank than that of the Prophet (Muḥammad), since the taʾwil was worthier than the tanzil; this was the attitude of the Naṣāʾyris.

The bāṭiniyya movement seems to have left traces among such later groups as the Ḥurūfīs, the Rawshāns, and the Bābis, who also used symbolical exegesis, though in somewhat different contexts. Its terminology and conceptions, freed of their sectarianism, have likewise influenced the symbolism of Sūfī thought. Perhaps above all, however, the radical positions it took had the effect of rendering Muslim Orthodoxy all the more suspicious of any kind of symbolical taʾwil. Thus Ghazzālī used the Ismāʿīlī bāṭiniyya, in his al-Kūšān al-Mustaḵṣīm, as point of departure for his analysis of the legitimate limits of taʾwil in general.

(b) Sunni writers have subsequently used the term bāṭiniyya polemically to condemn any writers who, in their judgment, go beyond the recognition of a bāṭin meaning in scripture, to the rejection of the evident meaning of scripture in favour exclusively of such a bāṭin. Thus Ibn Taymiyya applies the term not only to the bāṭini Shīʿa but to some Sūfīs and to such jābliyya as Ibn Ruğdā. Sūfīs commonly hold that there are rich bāṭin meanings in the Kurān open to the properly contemplative spirit; but they
are generally careful to avoid a position which could be labelled bītin in this sense. Ibn al-ʿArabi, for instance, whose interpretation of scripture often seems particularly free, defends himself against the charge of being a bītin on the grounds that he accepts the ʿṣīr alongside the bātin. 

AL-BĀṬIYA [see NUGŪM].

BATJAN, a small island in Indonesia [q.v.], near the equator, at Long. 127° E., one of the earlier sultanates and centres of Muslim propaganda. It lost its importance as a spice-island about 1650 when the trees were destroyed as a result of a treaty between the sultan and the Dutch East India Company. (C. C. BERG)

BĀṬLAMIYOS, the almost exclusively used transliteration of the Greco-Latin Ptolemaeus; al-Masūdī, Tanbih, Ṭabakīt al-umam, i, 264, the former opinion deriving it from ḫulaylā (Suter, EI, s.v. Almages), has generally been abandoned. The Arabic form is al-Miḏiššt (so explicitly stated by Ḥāḍīḍī Khālfīa, v, 385); Barhebraeus also gives the correct Greek title Sūnīkkēs (ed. Salhani, 123). An elaborate survey of the contents of books i-iv in al-Yaṣāḥūbi, i, 151-154, cf. Klamroth, in ZDMG, 42, 17-18. Īṣākī al-Miḏiššt by Thābit b. Kura, cf. Brockelmann, i, 284, 1, 7a. The first translator is not Sahil al-Tabarī (and this man is not identical with Sahil b. Bishr, as proposed by Steinschneider, Arab. Lit. der Juden, 24), as stated by Sarton, IHS, i, 562. The whole problem has been discussed anew by Nallino, Lc., who also gives a new interpretation of the account in Fihrist (Raccolta, v, 263), and arrives at the conclusion that the first translator is unknown. The MS. Esc. 915 has been used by O. J. Tallgren, Un point d'astronomie gréco-arabe-romane, Neuropsychologische Mitteilungen, xxix, 1928, 39-44; cf. also the same, Survivance arabo-romane du Catalogue d'étoiles de Ptolémée, Stud. Or. Soc. Or. Fenn., ii, 1928, 202-283. A hitherto unknown commentary by Abu ʿAbd Allāh al-Ḵāṭīn (Brockelmann, i, 387) has been discovered by G. Vajda (Paris, BN, ar. 4821, 9, cf. RSO, xxv, 8), another one by ʿAbd Allāh b. Ḥayyān is only known by name, cf. Kraus, ʿAbd ʿAbd al-Ḥayyān, i, 1943, no. 2834. Ch. H. Haskins and D. P. Lockwood have stated that the first Latin translation has been made directly from the Greek, 12 years before Gerard of Cremona's version from the Arabic in 1175 (The Sicilian Translators of the 12th Century and the first Latin version of Ptolemy's Almagest, Harvard Studies in Classical Philology, xx, 1910, 75-102; cf. also J. L. Heiberg, in Hermes, xlv, 1910, 57-66, xlvi, 207-216). See also Carmody, r, and Millas, ch. xxxv.

b. The πρόγραμμα κανωνες (Tabulae manuales), cf. Steinschneider, in ZDMG, i, 217 and 341. Al-Yaṣāḥūbi, i, 159 = Klamroth, 25 calls the work which he analysed, ʿĪṣākī al-Ḵāṭīn fi ʿĪṣākī al-Nuqūm wa-Ḥisīkhā wa-Kismat ʿAgīṣkhā wa-Taqīkhā, but, as Honigmann, 118 f. shows, this is not Ptolemy's book. This last has already in Greek times been confounded with the commentary written by Theo Alexanderinus. This was known to some Arabic scholars, as shown by Honigmann, 120. Theo's commentaries upon Ptolemy influenced al-Kindī, as proved by F. Rosen-thal in his analysis of MS. Ayta Sefa 4830 (Studia . . . G. Levi della Vida, 1956, ii, 456 f.). Special attention must be paid to one of the Tables, the κανωνες βασειστης, ed. by C. Wachsmuth in his Einleitung in das Studium der alten Geschichte, 1895, 304-306, reprinted with transliteration in Arabic numbers and Christian years for every king in F. K. Ginzel, Handbuch der mathematischen u. technischen Chronologie, i, 1906, 139. The text is quoted by al-Yaṣāḥūbi, i, 161, for the Greek and Roman kings. In this table Alexander the Great comes after Darius
III, then Philippus (Arrhidaeus) “that one with Alexander the Builder”, then “the other” Alexander the Great (Brockelmann, iii, 1205 ad i, 392; it exists in Alexandria, Kuruf, 12).

According to Thorndike, The Latin Translations of (Loeb Class. Libr., together with Manetho), new Latin

Arba’a, c (Barh. 123: K. al-Arb’ Malidldt) fi Afrkdm al-Nudjum, Arba’a, c (K. fi Dhdt al-§afd*ib wa-hiya al-

Astrolabe called Baflamiyus fi tasjih al-kura, transl. by Thabit. Al-

e. Another pseudoepigraphic book, K. al-Malhama, is known from numerous quotations in Yâkût’s Geographical Dictionary, cf. the collection of place-names mentioned in it, and further literature in Honigmann, Sieben Klimata, 125-34. The meaning of malhama is not quite clear, and the quotations do not furnish sufficient evidence as to the real character of the book.

f. Recently, a short text has been edited which refers to Ptolemy, namely, Djabîr ma dâ?î fi l-nây’arâs ua-ahkâmûs mim-mâ jasarakh Baflâmîyûs al-bahâm wa-wadjadâhâ ‘an ‘ilm Dânîyûl (1), ed. from Ist. Murad Molla 338 by ‘Abd al-Salam Hârûn, Madâdir al-Malhidâtî, 5 (ii/l), 1373/1954, 45-48 (information from Mr. M. Schwarz of the Hebrew University Library). It discusses the significance of the week-day on which falls New Year.

g. A book on the images which rise in the 360 degrees of the celestial sphere named Liber imaginum Ptolaei and the like, exists in Latin in many MSS. cf. Steinschneider, Eur. Ubs., no. 1770, Carmody, 20, Thormäcke, Journ. Warb. Court., 118. An Arabic text entitled Risala fi Ǧwlar al-Darâmî ascribed to Ptolemy is one of the sources of the Sahînî al-Akhâm by a certain Hadrat al-Nuṣayrî, MSS Berlin Pet. I, 676 and Br. Mus. Add. 23,400 (the number in the Catalogue, 848, is distorted by Steinschneider, Arab. Ubs., Philos., 90 and General Index into 1348, Math., 217 into 843, and 353 into 874); but the identity of the Arabic and Latin texts has not yet been examined. For the meaning of the title cf. Boll, Sphaera, 426 ff.

h. The Liber ad Heristhonem or Aristonom de judicis (Steinschneider, Ar. Ubs., 218, no. 11) has been analysed by Millas, 175, cf. also for similar texts ascribed to Ptolemy, Carmody, 17 and 20.

i. Messealach (Mâ gâ?î Allâh) et Ptolomeus de electionibus, printed Venice, 1509, cf. Steinschneider, Eur. Ubs., no. 164d, and Arab. Lit. d. Juden, 22, no. 26, has been tentatively identified by Carmody, 43 i with a Kitâb al-Ḫhîyiyyârât, MS. Esc. 919. Another MS. with the same title is quoted in Brockelmann, iii, 1205 ad i, 392; it exists in Alexandria, kursî, 12. According to Thormäcke, The Latin Translations of
astrological works by Messahala, in Osiris, xii, 1956, 69, the work is erroneously attributed to Ma' ḍahb Allah, and its author is Sahil b. Bighr. The Venice print is not mentioned by him, and consequently he does not make clear whether Ptolemy's book is supposed to be a different work or whether the print points to common authorship. The matter is still open for investigation.

4. Geography.

J. H. Kramer's account on the Arabic translations of the Περί οὐσίας τῶν θεών of Proclus, Suppl., 1. [Egypt, Coptic] is by no means out of date, cf. also his contribution Geography and Commerce in The Legacy of Islam, 1931, 79-107. We refer the reader to the works quoted in those articles and to Steinschneider, Ar. Übes., para. 119, and Ruska's review of H. v. Mzik's publications, in Geographische Zeitschrift, 1924, 77-81. For the translation made for Mehməd Fathı, the conqueror of Istanbul, preserved in MS. AS 2356, cf. Honigmann, 114; Flessner, in Islamica, iv, 1931, 547; Büttner, in ibid., xix, 1931, 52 f., where another MS, AS 2610, is described too.

5. Harmonics.

6. Optics.

7. Alia.

(M. FLESSNER)

BATRIN [see BITRIN].

BATRIN (or BATHRUN), Graeco-Roman Bostrys and the Boutron of the Crusaders; a small town on the Lebanese coast, situated 56 kms. north of Bayrūt; it witnessed the passage of all the armies of conquest, covering as it does the Bayrūt–Ṭarābulūs road to the south of the precipitous promontory of Rās Shākka (Theoprosopoton). According to a tradition cited by Josephus (Antiq. viii, 3, 52), it was apparently founded by Ithobaal, king of Tyre. In reality it is of much older origin and is mentioned in the Tell al-Amarna letters (15th century B.C.) as a dependency of Bybios (Djubayl). At one time it was a nest of pirates, who were dealt with by Antiocchus III Megas. To judge from the remains of a vast amphitheatre, the city, already famed for its vineyards, must have been of some consequence in Roman times. Like all the coastal towns, it was destroyed by the earthquake and tidal wave of 16 July 551.

In the period of the Crusades, Boutron was the seat of a bishopric depending on the county of Tripoli. It was a port where the Pisans enjoyed a number of privileges. For a long while the Provençal family of d'Agout were its lords. In 1271, following a quarrel among the Franks, the manor was razed by the Templars. Sulṭān Kalawān took Batrūn in 1289 without difficulty. Under the Mamluks of Egypt, the town was attached to the niyyāba of Ṭarābulūs. In the 19th century the town enjoyed a certain prosperity due to sponge fishing which, however, today occupies only a few boats. The town now has a population of about 3,000, the majority of whom are Maronites.

Heyd, Histoire du Commerce au Levant, i, 321; Lammens, La Syrie, ii, 38; Dussaud, Topographie historique de la Syrie, 71; Grousset, Histoire des Croisades, iii, 688, 745; ʿĀdīl Ismaʿīl, Histoire du Liban du XVIe siècle à nos jours, i, 33, 114 (ElISSEFFER).

AL-BATTĀL, ʿABD ALLAH, famous ghāṭ of the Umayyad period who took part in several expeditions against the Byzantines. His surname means “brave”, “hero”, but has also a pejorative sense (cf. for example Ibn Ḥawkal, 85; and the dictionaries). Concerning this person there is a comparatively meagre historical tradition, a pseudo-historical tradition and, moreover, an Arab romance Sinārat Delhemma wa ʿl-Battāl, and related to it, a Turkish romance, Sayyid Battāl.

According to the early chroniclers (Al-Yaṣīyūb, Al-Tabari), al-Battāl does not appear before the year 109/727-28, during the reign of Hishām b. ʿAbd al-Malik (103-125/724-43). Likewise the Byzantine historian Theophanes and the author of the Syriac chronicle, known as Pseudo-Dionysius of Tell Mahre, only mention the year of his death, in 740. However a tradition already old, as it appears in the Persian recasting of al-Ṭabari done by Bahā'ī who wrote in 352/963, associates al-Battāl with Maslama b. ʿAbd al-Malik in his famous expedition against Constantinople in 98/717. We are dealing with a largely legendary account and we cannot know whether it contains reliable historical elements. Historically, al-Battāl at the head of the vanguard
of Mu'āwiyah b. Hishām conquered Gangra in Paphlagonia in 109/728. In 113/731-32 he took part in the expedition in which another celebrated Umayyad general, 'Abd al-Wahhāb b. Bukht. In 114/732-33, or 115, in the course of an invasion by Mu'āwiyah b. Hishām of Phrygia in the region of Akroinon, he routed and captured a Byzantine leader called Constantine. There is no further mention of him before his death in 122/740. During that year several parts of Anatolia were attacked by the troops of Sulaymān b. Hīghām. Al-Ṭāalles’s detachment, commanded by the governor of Malatia, Malik b. Shāhīb (or Shu‘ayb), was surprised and routed by the Emperor Leo III and his son Constantine near Akroinon. The two leaders perished, their survivors fleeing south towards Synnada where they managed to rejoin Sulaymān. The date of al-Ṭāalles’s death is nevertheless placed in 121, 123 or even in 113.

If the early chronicles do not appear to have attached much importance to his person, his military exploits were celebrated early by popular tradition in various accounts and anecdotes. In the period of al-Maṣʿūdī, the first half of the 4th-10th century, he was known as one of the illustrious Muslims whose portrait the Byzantines had hung in their churches (Muraḍī, viii, 74), beside that of the famous amīr of Melitene, 'Amr b. ‘Ubayd Allah al-‘Aḍaṭa, defeated and killed in 249/863. It is not impossible that the legend of both developed shortly after that date, as an after-effect of the first Byzantine success. In Balʿam’s account of Maslama’s expedition, al-Ṭāalles is appointed to hold one gate of Constantinople open while Maslama entered the city alone on horseback, and to enter in force should anything befall Maslama. Al-Ṭāalles is even associated with Maslama in the account of the siege of the Byzantine capital in the Kitāb al-'Uyun (5th/10th or 6th/12th centuries), where one finds as well under the year 565/1170 the romantic account of a single-handed combat by al-Ṭāalles. The popular account of Maslama’s expedition by the great Andalusian mystic Ibn al-'Arabi (d. 638/1240), related to that of Balʿam, attributes also an important rôle to al-Ṭāalles, commander of the contingents of Djazira and Syria, chief of Maslama’s guard and charged with the same mission before Constantinople as in Balʿam’s version.

In a long biographical notice going back to Ibn ‘Aṣākir (d. 571/1176), a Syrian tradition reproduced more or less completely by various historians including Ibn al-Aṭhir, Sibt Ibn al-Djāwizī, Ibn Shākir al-Kutubī, Ibn Faḍl Allāh al-ʿUmayrī and Ibn Katṣīr, one finds after a brief allusion to the rôle of al-Ṭāalles in Maslama’s expedition, romantic anecdotes of which certain reappear in the romance of al-Ṭāalles. These are 1) al-Ṭāalles the bogey: he appears one night in a Greek village where he hears a mother threaten her crying child with giving him al-Ṭāalles if he does not stop crying; 2) His entrance into a Greek convent: al-Ṭāalles, weakened by violent abdominal pains, is led by his horse to a convent where he is given asylum. He escapes the investigations of a Byzantine patriot thanks to the abbess, follows him when he leaves, kills him, and returns to the convent where he takes captive all of the nuns and marries the abbess; 3) His entrance into Amorium by a ruse: separated from his companions he arrives at Amorium where he gains access to the patrician by pretending to be a messenger from the Emperor, and forces him to indicate the whereabouts of the Muslim army, which he rejoins; 4) His death on the battlefield where the Emperor Leo attends his last moments, looks after him and permits his burial by the Muslim prisoners.

The authors who report these anecdotes distinguish them from the "lies" of the Strata Dilemmata of 'l-Ṭāalles (see below) of whose existence we know already during his period from the Jewish convert Samawʿal b. Yahyā al-Maghrībī, who wrote in 565/1169-70.

The early authors say nothing of the origin of al-Ṭāalles. According to later historians he came from Antioch (or from Damascus), lived in Antioch, and was a mausole of the Umayyad house, as was his companion ‘Abd al-Wahhāb b. Bukht, who also plays a major rôle in the Strata Dilemmata. His kunya is sometimes Abu Muhammad, sometimes Abu Yahyā, sometimes Abu 'l-Ḫusayn. His father’s name is Husayn or ‘Amr. On the origin of al-Ṭāalles, such as it is given, whether in the Strata Dilemmata or in the Turkish tradition of Sayyid Baṭṭāl, see the articles on these two romances.

AL-BATTĀL (SAYYID BAṬṬĀL GHULĀM), a champion of the Arabs in the wars against Byzantium in the Umayyad period, is transformed, in the Turkish romance devoted to his adventures, into a hero of the 'Abbāsid period. Al-Ṭāalles thus became the contemporary of the amīr of Melitene, 'Amr b. ‘Ubayd Allah al-‘Aḍaṭa (d. 249/863) and was incorporated into the epic cycle of Melitene. After the conquest of Melitene by the amīr Dānishmend in 495/1102, the Turks adopted the epic of Melitene, incorporating it in their own epic cycles and tracing their national heroes back to the legendary al-Ṭāalles. It is a Turkicised Baṭṭāl ennoblé by an 'Alīd connexion and answering to the name of Ḍja'far that we find in the Turkish version. The Turkish historians who used this epic romance as a historical source often took the legendary elements for historical facts and were even led to accept the chronology of the story. Thus Ewliya Celebi made
Battāl a contemporary of Hārūn al-Rāshīd, whose reign he transferred to 248/859—the year in which he made his siege of Constantinople. The same anachronism exists in the Turkish version of al-Ṭabarī; it was made by an anonymous translator who introduced into his work accounts taken from the Turkish epic tradition.

Al-Battāl appears in two great epic romances: the Arabic romance of Ḍālī al-himma (Delhemma) [see IHU 'l-HIMMA] and the Turkish romance of Sayyid Battāl. These two works, although related, were not subject to reciprocal influences; they probably both go back to an Arabic tradition—concerning al-Battāl of which we possess no written trace, but whose existence is confirmed by two pieces of historical evidence of the 6th/12th century (cf. M. Canard, in JA, ccviii, 116; id., in Byzantion, xii, 186).

The Turkish romance. After their conquest of Anatolia, the Turks adopted as their own the local epic traditions celebrating the Arabo-Byzantine Wars. These accounts transformed the addition of Turkish elements and Turkicised Persian elements, gave rise to a new Anatolian epic having as its subject the conquest of Asia Minor. The romance of Battāl is the prototype of this literature; however, from the first, elements of Turkish folklore crept in, containing events which took place in a fantastic world peopled with anthropomorphic demons and supernatural beings, themes taken from Persian fairy stories or epic tales, popularisations of the Shāh-nāma, motifs from historical romances of heterodox ideology, such as the Romance of Abū Muslim, a work found all over the Turkish world. The Turkish romance of Battāl appears as a mosaic where the elements of different times and sources amalgamated. Among these elements, the book which recounts the inscription and the capture of the heretic Bābak stands out from the rest of the work because of its historical basis, which is evident through the trappings of the legend. In this account, which takes place in the Caliphate of al-Mu'tasim (833-842), Batṭāl has been substituted for the real hero of the campaign, Aṣfān, whose name was proscribed after his disgrace and death in 225/839. This book is probably one of the Bābak-nāmas whose existence we know from Ibh ad-1bn al-Nadlm, and which is incorporated in the romance of Battāl.

Similarly in the Delhemma the Turkish romance contains reminiscences of the time of the First Crusade. It was probably composed during the 6th/12th century, or right at the beginning of the 7th/13th century, because the Romance of Malik Dānishmend, which celebrates the exploits of the first Turkish conqueror of Melitene and which was first written down in 643/1245, was conceived as a continuation of the romance of Battāl; some narrators of the Saltik period added a chapter in which they told how the tomb of the hero was discovered by the Saldjiiks of Anatolia. There exists a version of the romance of Battāl in verse, attributed to Bākāt, in the reign of Muṣṭafā III (1757-1774). Independently of the epic cycle, the name of Battāl still lives on in numerous Anatolian legends and in particular in the hagiographical stories of the Calaure and Bektashī sects [see NUSAYRIS, BEKTASHIYYA] who have adopted him as one of their heroes.

(I. Melikoff)

Al-Battānī (his full name is Abu 'Abd Allah Muḥammad b. Diābir b. Sinān al-Battānī al-Harrānī al-Ṣāḥīb), the Albatagni or Albatanius of our mediaeval authors, one of the greatest of Arab astronomers, was born before 244 (858) very probably at Harrān or in its neighbourhood; the origin of the nisba al-Battānī is quite uncertain. His family formerly possessed the Sabian religion, whence the name al-Ṣāḥib although his author was a Muslim. He spent almost his whole life at al-Raḵša on the left bank of the Euphrates, where several families from Harrān had taken up their abode; from 204 (822) he devoted himself to astronomical observations which he regularly pursued for the rest of his life. Having had occasion to go on business to Bagdad he died on his return journey at Kašr al-Dişp, a little to the east of the Tigris and not far from Samarrā in 317 (929).

He wrote: 1. Kitāb muʿrifat mutašīrīn al-burūdī fi maʿ bayna arbaʾ al-falak, "the book of the science of the ascensions of the signs of the zodiac in the spaces between the quadrants of the celestial sphere"; i.e., of the ascensions of the points of the ecliptic which are not, at the given moment, one of the four "awtād" or pivots [see the article NUGUM]; it deals with the mathematical solution of the astrological problem of the "direction" of the significator. 2. Risāla fi taḥkik awtād al-istiṣfālī, "a letter on the exact determination of the quantities of the astrological applications", i.e., the rigorous trigonometrical solution of the astrological problem of the proiectio radiorum [see the article NUGUM] when the stars in question have latitude (i.e., lie outside the ecliptic). 3. Shār al-muḥallāt al-arbaʾ il-ḫaṭamīyyas, "commentary on Ptolemy's Tetrabition", 4. al-Zīdī, "Astronomical treatise and tables", its principal work and the only one that has survived to us; it contains the results of his observations and had a considerable influence, not only on Arab astronomy but also on the development of astronomy and spherical trigonometry in Europe in the middle ages and beginning of the Renaissance. It was translated into Latin by Robertus Retinensis or Ketenensis (died at Pamplona in Spain after 1143 A.D.; the version is lost) and by Plato Tibasinus in the first half of the xiith century (an edition of the text without the mathematical tables was published at Nuremberg in 1537 and at Bologna in 1645). Alphonsus X of Castile (1252-1282) had it translated directly from the Arabic into Spanish (incomplete MS. in Paris). Three insignificant astronomical pamphlets, of which a Latin version exists in several manuscripts, which give their author's name as Bethem, Boetem, Bereni, Bareni, have been wrongly attributed to al-Battānī.

Al-Battānī determined with great accuracy the obliquity of the ecliptic, the length of the tropical year and of the seasons and the true and mean orbit of the sun, he definitely exploded the Ptolemaic dogma of the immobility of the solar apogee by demonstrating that it is subject to the precession of the equinoxes and that in consequence the equation of time is subject to a slow secular variation; he proved, contrary to Ptolemy, the
variation of the apparent angular diameter of the sun and the possibility of annular eclipses; he rectified several orbits of the moon and the planets; he pronounced a new and very ingenious theory to determine the conditions of visibility of the new moon; he emended the Ptolemaic value of the procession of the equinoxes. His excellent observations of lunar and solar eclipses were used by Dunthorne in 1749 to determine the secular acceleration of motion of the moon. Finally he gave very neat solutions by means of orthogonal projection for some problems in spherical trigonometry; solutions which were known to and in part imitated by the celebrated Regiomontanus (1436-1476).

**BATU** (in Arabic script _Batu_), a Mongol prince, the conqueror of Russia and founder of the Golden Horde (1227-1253), born in the early years of the 13th century, the second son of Djuchi [see 200 CI]. During Cingiz-Khan's lifetime Djuchi, as his eldest son, had received as his yurt or appanage the territory stretching from the regions of Kayalik and Khwârzam to Saksin and Bulghar on the Volga “and as far in that direction as the hoof of Tartar horse had penetrated”. The eastern part of this vast area, i.e., Western Siberia, the present-day Kazakhstan and the lower basin of the Srî-Daryâ, passed upon Djuchi's death in 624/1227 to his eldest son Orda, whilst to Batu fell the western part, i.e., Khwârzam and the Dashti-Kipchâk or Kipchâk Steppe to the north and north-east of the Black Sea. Of the first ten years of Batu's reign we know only that he was present at the _burultay_ or assembly of the Mongol princes held in 626/1229 in Mongolia, at which Ögedey was elected Great Khan, probably also at the _burultay_ of 632/1235 at which it was decided to renew the war against the Russians and neighbouring peoples; he was never again in Eastern Asia. In the army which set out in the spring of 633/1236 there were also sons of Caghatay, Ögedey and Toluy, but Batu was in supreme command. The Mongol forces are said to have reached the territory of the Volga Bulgars by the autumn of the same year, but the destruction of the town of Bulghar does not seem to have taken place until the autumn of 635/1237, during which year the Mongols were engaged in operations against the Kipchak Turks in what is now Southern Russia. In Rabî I-I 635/11 December 1237 they crossed the frozen Volga and attacked the Russian principalities, capturing city after city, until by _Râcib-Shâhâbân_ 635/March 1238 the road lay open to Novgorod. The Mongols had approached within 65 miles of the town when they suddenly withdrew to the south, evidently fearing that the spring thaw would render the roads impassable. After a long period of rest in the lower Don basin and minor campaigns in the Caucasus in 636-7/1239, the war against Russia was resumed in 637/1240 in a campaign which ended with the fall of Kiev on the 6th of December of the same year. From the Ukraine simultaneous attacks were launched upon Poland and Hungary. Through Poland the Mongols penetrated into Silesia defeating Duke Henry the Pious at Liegnitz on the 25 Râmâdân 638/9 April 1241 and then passed through Moravia to join the main army, which, led by Batu in person, had crossed the Carpathians into Hungary and inflicted a decisive defeat on the Hungarians at Mohi (27 Râmâdân 638/11 April 1241). The combined Mongol forces passed the summer and autumn on the Hungarian plain; and on Christmas Day Batu in person crossed the frozen Danube to take the town of Esztergom. The last major operation was an expedition through Croatia and Dalmatia to the shores of the Adriatic in pursuit of Béla IV of Hungary. The armies were apparently poised for a general assault on Western Europe when news arrived of the death of the Great Khan Ögedey (5 Dhumâdâr II 639/11 December 1241), and Batu decided to withdraw his forces. Retiring by way of the Balkans he finally reached his encampments on the Lower Volga late in 1242.

It was now that Batu laid the foundations of the Golden Horde. Of the lands invaded in the years 635-9/1237-1241 only Russia had remained subject to the Mongols. As early as 639-40/1000-1002 Grand Duke Yaroslav I of Vladimir came to Batu's ordur to pledge his loyalty and was confirmed by the Khan in his rank as "senior of all the princes of the Russian people"; in 1000/1243 Prince Daniel of Galicia had to be confirmed in the same way and do homage to Batu.

During this period Batu's attention was largely diverted to events in the East. Ögedey's eldest son Gûyûk, a personal enemy of Batu, had been raised to the throne in succession to his father at the _burultay_ of 644/1246. Batu had been represented at the ceremony by five of his brothers, excusing his own absence, according to Rashid al-Dîn, on the ground of physical infirmity. Early in 644/1247 the new Khan left Kara-Korum in a westerly direction. He gave it out, according to Rashîd al-Dîn, that he was proceeding, for reasons of health, to his yurt on the Emil in what is now eastern Kazakhstan, but Toluy's widow suspected that his real intention was to attack Batu, to whom she accordingly sent a warning. Gûyûk died suddenly en route in a place called Kum-Sengir on the Upper Urungu, according to the _Yûan shih_ in the third month (27th March-24th April) of 1248. Dîjumâyîn and Rashîd al-Dîn disagree as to Batu's whereabouts at the time of Gûyûk's death. According to Dîjumâyîn he was advancing eastwards to meet the Kân, at the latter's invitation, when he received the news of his death in a place called Ala-Kamâk, a week's journey from Kayalik, probably in the Alatusu mountains to the south of the Ili. On the pretext that his horses were lean Batu summoned the princes to meet him in this place. On the other hand, according to Rashîd al-Dîn, this meeting took place in Batu's own territory, and the sons of Ögedey, Caghatay and Gûyûk are represented as refusing to make the long journey to the Kipchak Steppe.

The result of the meeting, wherever held, was that Mûngke, the eldest son of Toluy, was, on Batu's
proposal, acclaimed as Great Khan in succession to Güyük; and it was decided that his enthronement should take place at a kuriltay in Mongolia in the following year. The ceremony did not in fact take place till the 9 Rabī‘ I 649/7 July 1251, Batu being represented by his brother Berke [q.v.]. A plot against the Great Khan was uncovered while the celebrations were still in progress; it was headed by certain princes of the Houses of Çağhatay and Ögedey, most of whom were punished by banishment to remote parts of the Empire. Yüsü, the son and first successor of Çağhatay, and Būrī, one of his grandsons, were hanged on a tree near Batu, by whose orders the latter, who had been involved in Batu’s quarrel with Güyük, was put to death.

The whole Empire was now in effect divided between Möngke and Batu. William of Rubruck quotes Möngke as saying in 651/1254: “As the sun sends its rays everywhere, likewise my sway and that of Baatu reach everywhere . . .”. The boundary between the respective territories lay, according to Rubruck, in the steppes between the Talas and the Cu, and more respect was shown to Batu’s people in Möngke’s kingdom than vice versa. It is certain that Batu, both as the senior Cingizid and as the man to whom Möngke owed his throne, enjoyed very considerable prestige. Even in such lands as Māwarra? al-Nahr, which lay outside his ancestral territories, he exercised certain sovereign rights. Thus, according to Diuwaynā, he confirmed the son of Temür Malik, the defender of Khudjand, in the possession of his father’s estate.

Rubruck tells us that Batu had twenty-six wives and Rashīd al-Dīn that he had four sons. In the latter years of his life he seems to have delegated some of his authority to his eldest son Sartak, a Nestorian Christian: it was Sartak who from 646-7/1249 onwards received the homage of the Russian princes. There is considerable divergence in the sources as to the date of Batu’s death: it seems most likely that he died in 653/1255. From Rubruck’s narrative it appears that towards the end of his reign he lived on the eastern bank of the Volga, ascending the river in the summer as far north as Lat. 52° and spending the winter near the mouth, where the town of Saray was founded by him at this period on the Akhūtha, a channel of the delta, 65 miles north of Astrakhān.

Batu, whom the Russians knew only as a cruel conqueror, was given by his Mongol contemporaries the epithet of sain, i.e., “good” or perhaps “wise”. He is praised as a just and sagacious ruler even by Djuzdīn, a writer by no means prejudiced in the politics of the Golden Horde for the following decades, and there were frequent struggles with the Ilkhans—in the Caucasus and on Lake Aral. During this process, the Caucasus came under

**BATUIDS, descendants of Batu [q.v.], a grandson of Čingiz Khan [q.v.], the ruling house of the Golden Horde from 1236/40 until 1502.**

After a short-lived advance by Mongol troops in 1223-24 into what is today the Ukraine (Russian defeat on the Kalka in that year), Batu, the second son of Čingiz Khan’s eldest son Djiči (who died early in 1227), succeeded in subjugating large parts of Russia in the years 1236-1241. Only the north west (with Novgorod as its centre), was spared, and apart from occasional payments of tribute—it remained independent. Similarly, the Caucasus (together with Georgia; see Gurgştān) was under Ba tu’d suzerainty until about 1260 and Danube-Bulgaria until about 1310. Advances into Galicia, Moravia, Silesia and Hungary in 1241 had no lasting result.

Batu gave the Western Mongolian Empire, thus created, a centre in the towns of Old, and later New, Saray [q.v.] on the lower Volga, which quickly developed into important centres of commerce and had a very mixed population (including a Russian diocese in Saray from 1261). The most extensive Mongol settlements were to be found in this area and in the Crimea, becoming absorbed into the indigenes Turks as well as into part of the Finnish and Eastern Slav peoples. In this way, the new tribe of (Volga) Tatars [q.v.] arose, speaking Turkish—also spoken by the population further to the north on the Volga, and particularly by a section of the Volga Bulgars [q.v.]. The structure of the population remained nomadic until about the middle of the 15th century. It has been described most vividly by John of Plano Carpini (1243-46) and Ibn Baštūtā [q.v.], 1333. The new state was called the “Golden Horde” by the Russians, and thus also in Europe—the corresponding Turkish *Altın Ordu* is a modern translation. (The name may possibly have been given because the ruler’s tents were paved with golden tiles, or else because of a borrowing of ancient Central-Asian colour symbolism—compare *šara*). In eastern literature, the country is usually referred to as the KipāCK Steppe, Orda, Batu’s elder brother, founded a subordinate state in Western Siberia, which is sometimes referred to as the “Blue” or the “White Horde”. It was under the sovereignty of the Golden Horde, but hardly anything is known of its history.

Batu was very much taken up with the affairs of the whole Mongol Empire, but refrained from accepting the title of Great Khan. He died in 1255-56. His brother and successor Berke (1255-67) was the first Mongol prince to become a Muslim (Sunni), and thereby he began the incorporation of the Tatars into Islam. By this action he distinguished them particularly (in contrast to their tribal brothers in Iran, China and Central Asia) from their subjects, the Orthodox Russians. A complete amalgamation of these two peoples has in consequence (hitherto) proved impossible. Berke made a treaty with the Mamūk rulers in Egypt, which was primarily directed against the Mongol Ilkhāns [q.v.] in Iran, who were Shamanists or Buddhists and who had already roused Berke’s bitter hostility by their fight against the Caliphate in 1238. This treaty greatly influenced the politics of the Golden Horde for the following decades, and there were frequent struggles with the Ilkhāns—especially in the Caucasus and on Lake Aral. During this process, the Caucasus came under
the influence of the Ilkhans. This political treaty was followed by a lively commerce with Egypt (many of the Mamluk slaves came from the Golden Horde). This commerce depended on the continued good will of the East Roman Emperor (a Paleologus from 1261) and therefore required agreements with him. There were also connections with the Saldjûks of Rûm [q.v.]. As a result of all this, it was possible for Islamic—especially Turkish (Saldjûk and Mamluk)—cultural influences to reach the Golden Horde. As a result of excavations, we are fairly well informed about the art and implements of the Volga-region (see particularly F. A. Balodis: Alt- und Neu-Sarai, die Hauptstädte der Goldenen Horde, in Latvijas Universitātes raksti, xiii, Riga 1926, 3-82). In Russia the Tatars confined themselves largely to raising tribute through Baskaks, and to recognising certain lesser princes, whose mutual quarrels were their best protection. The Russian Orthodox Church, to which the Tatars had granted certain privileges, was able to maintain its unity before these minor princes, and thus became the embodiment of Russian thought in general.

The death of Berke did not altogether put an end to Islamic influence, although to begin with all his successors were again Shamanists. The strength of the state was impaired through civil wars against the rising Prince Nokhai, a successful general in Poland (1259, 1286) and the Caucasus (1261, 1263), until Nokhai's death in battle in 1299 (cf. Nogai). In the beginning of the 8th/14th century, the political position changed, as the dealings between the Ilkhans (who were by then Muslims) and Egypt grew smoother. In the year 1332 a formal peace-treaty was signed. This reduced the commercial connections between the Golden Horde and Egypt. The collapse of the Ilkhânî Empire in 1335 brought the Golden Horde, under Özbeg Khan (1337-1357), once more into a position of great importance. A Muslim himself, he definitively strengthened the position of Islam on the Volga, and henceforth all the Khans adhered to that religion. The greater part of the Volga-Tatars was now also more and more drawn into Sunni-Islamic culture of a particular type found in Asia Minor, which was particularly active in the Crimea. The new tribe of Özbegs [q.v.] named after Özbeg, also came under its influence.

Western attempts at Christianisation at that time (in particular under Pope John XXII) proved to be of no avail, and religious wars (such as were fought in Persia) did not affect the Golden Horde. Certain centres resulting from these attempts, however, survived for some time; among these were the Genoese colonies (which began in 1265) (cf. Kaffa) in the Crimea [q.v.]. These were also commercially active, as middlemen in the supply of cloth from Flanders, ceramics, and jewellery to the Horde. Fur, fish and grain were the main articles exported in return.

The attempts made by both Djânîbeg Khan (1341-57), Özbeg's son, and Berdibeg Khan (1357-59), his grandson, to conquer Akharbâyjian in 1356-59 miscarried. It is possible that their aim was to bypass the Dardanelles, which had been in the hands of the Ottoman Turks since 1354, and to gain access to the Mediterranean through Syria. As this could not be achieved, the Golden Horde henceforth became an Eastern European continental power, thus more and more at the mercy of the rising Great Powers of Poland-Lithuania and Russia (Muscovy).

This development was accelerated by the internal disintegration caused by the conflict between innumerable pretenders (from 1359), thanks to which a Russian army was able to gain a victory over the Tatar armies (under Mamay) for the first time, on the Field of Snipe (Kulikovo Pole) on the Don in 1380. Thus the Grand-Duchy of Muscovy—which the Golden Horde had finally charged with the collecting of tribute in 1328, and in which the title of Grand Duke had become hereditary—established itself as a new power and as a 'Collector of all Russian Lands'.

Towards the end of the 8th/14th century, Tokhtamish [q.v.] of the "White Horde" attempted to unite the whole empire once more, but he was opposed by Timur, who defeated him in 1391, and in
1395 forced him to flee, and destroyed Saray. General Edigii (Russian: Yedigey) emerged as the true ruler of the Golden Horde. He had succeeded in holding his own and in checking the Lithuanian expansion through his victory on the Vorskla in 1399. He succeeded in guarding the independence of the state until his death in 1419. After this, the final disintegration started in earnest, and it was speeded by the formation of independent Khânâtes in Kazan (q.v.), Astrakhan (q.v.) and in the Crimea in 1438 (see GiRAy). The remainder, now generally referred to as the “Golden Horde”, could only hold its own in the region east of Kiev by treaties with Muscovy and (from 1460) with Poland-Lithuania, and in 1480 it was able once more to threaten Moscow. In 1502, the “Great Horde” was finally beaten; deserted by its allies, outlawed by the Ottoman sultan (who had been Protector of the Crimea—its main enemy—since 1475), it was vanquished by Crimea and Muscovy. The Khânâtes of Kazan, Astrakhan and Siberia also met their doom in the 16th century. The only remaining one was the Crimea, which survived until 1783. The Golden Horde is the only state which has ever actually subjugated Russia (and from the east at that). The “Tatar yoke”, which lasted for 2½ centuries, forms an important period in the history of Russia as well as in that of Poland-Lithuania, and resulted in the settlement of Turkish tribes on the Volga and in western Siberia. Even today, scattered Tatar remnants can still be found there, and the decisive element in their survival was their Islamic faith.

The cultural influence of the Tatars on the Russians can be traced for centuries in certain aspects of the administration, the army, ceremonial, and in the relationship between ruler and subject as well as in vocabulary, and in certain respects it makes itself felt even today. Furthermore, the fight of the Czars against the “Infidel” decisively shaped the political and popular consciousness of the Russians and of the eastern Slavs in general (concerning this cf. also TATARS”).

BATUMI (Batum), port in Soviet Transcaucasia on the Black Sea, capital of the autonomous Soviet Socialist Republic of Adjaraistan, built on the site of an old Roman port, Bathys, constructed in the reign of Hadrian and later deserted for the Byzantine fortress of Petra, founded under Justinian on the site of the present Trabibis-Tziri to the north of Batumi. A former possession of the Laz kingdom, the region of Batumi (the Adjarian district) was occupied briefly by the Arabs who did not hold it; in the 9th century it formed part of the principality of Taoklardjeti, and at the end of the 10th century of the United Kingdom of Georgia which succeeded it. From 1010 it was governed by the eristav of the king of Georgia. In the 8th/14th century, after the disintegration of the United Kingdom of Georgia, Batumi passed to the princes (miasar) of Guria.

In the 9th/15th century, in the reign of the miasar Kakhâber Gurieli, the Ottoman Turks occupied the town and district of Batumi, but did not hold them. They returned in force a century later after the decisive defeat which they inflicted on the Georgian and Immeretian armies at Sokhoista. Batumi was recaptured, first by the miasar Rostomi Gurieli in 1564, who lost it soon afterwards, and again in 1609 by Mania Gurieli. From 1627 Batumi was part of the Ottoman Empire.

With the Turkish conquest the Islamisation of the Adjarian region, hitherto Christian, began. It was completed by the end of the 18th century.

Under the Turks, Batumi, a large fortified town (2,000 inhabitants in 1807 and more than 5,000 in 1877) was already an active port, the principle centre of the Transcaucasian slave-trade.

Ceded to Russia by the treaty of San Stefano and occupied by the Russians on 28 August 1878, the town was declared a free port until 1886. The Adjarian region at first constituted a self-governing administrative unit; on 12 June 1883 it was annexed to the government of Kutais. Finally on 1 June 1903, with the Obrug of Artvin, it was established as the region (oblast') of Batumi placed under the direct control of the General Government of Georgia.

The expansion of Batumi began in 1883 with the construction of the Batumi-Tiflis-Baku railway completed in 1900 by the finishing of the Baku-Batumi pipe-line. Henceforth Batumi became the chief Russian oil port in the Black Sea. The town expanded to an extraordinary extent and the population increased very rapidly: 8,671 inhabitants in 1882, 12,000 in 1889, 45,382 in 1926.

The population of the town is cosmopolitan; the Muslims (Adjars, Laz and Turks) are only a minority in comparison with the Russians, Greeks, Armenians, Jews, and Georgians, but the region remains purely Muslim. In 1911 the oblast' totalled 170,377 people, of whom 70,918 were Adjars and 58,912 other Muslims (Laz, Turks, Kurds, etc.).

In April 1918, Batumi was occupied by the Turks; they were succeeded in the following spring by the British, who evacuated it in June 1919. After the fall of the Georgian Republic, the treaty of 16th March 1921, between the R.S.F.S.R. and Turkey, gave the regions of Kars and Ardagan back to Turkey, but left Batumi to the Russians. The Soviet régime was proclaimed on 18 March 1921 and, on 16th June in the same year, the region was established as the Soviet Socialist Republic of Adjaraistan, with its capital at Batumi, dependent on the R.S.S. of Georgia.

The Adjars constitute the largest community, and in 1926 they were still considered as a separate nationality from the Georgians and were registered in a separate census. They numbered at that time 71,350 people, all Muslims (Hanaf Sunnis), speaking the Gurian dialect, which has a vocabulary strongly influenced by Turkish and Arabic. Their material culture (the çada worn by the women, for example) was close to that of the Turks and bilingualism (the Gurian dialect and Turkish) was still a wide-spread phenomenon.
At the time of the census of 1939, the Adjars, considered from then on as a simple, ethnical group of the Georgian nation, were registered as Georgians. Batumi is at the present time a large port, the outlet for the Baku pipe-line (refineries) and quite an important industrial centre with factories producing preserved foods and machine tools. As the beginning of 1956 its population reached 27,000, of whom only a minority were Muslims.

The autonomous Adjars (area 3,017 sq. km.) comprised 238,000 inhabitants in 1956, of whom the majority were Muslims; Adjars and Laz in the valley of Coruh (about 2,000), Kurds (3,000 nomads in 1926 in the high valley of Adjars-Tskali) and a colony of Abkhaz (5,000 in 1926) near Batumi.

**al-Bâ'ûni**

This nizâh relates either to the village of Bâ'ûn (or Bâ'ûna) in Hâwar or to the village of the same name near Mosul. It is usually associated with a particular family descended from one Nawz b. Khâlifâ b. Farâdî al-Nâsîr al-Bâ'ûnî al-Shâfi'î, who started life as a weaver in the former village and left it about 750/1349 to settle in Nazareth (Sakhâwî, al-Dawâr al-Lâmî, etc., Cairo 1355/1364, ii, 235). The following table represents Nâsîr's descendants.

Little is known about him except that he became a Sûfi, and deputy kāfî at Nazareth, engaged in commerce and attained prominence (loc. cit. 308).

(2) Born in Nazareth c. 757/1350; he became kâfî of the Umayyad mosque and kâfî of Damascus, kâfî of the Aṣâr mosque in Jerusalem and (for two months) kâfî of Egypt. He wrote on tafsîr, composed a poem on dogma called al-`ā'īda, and was an impressive preacher, though he had little fikhr. For his tahlîlms of a poem by Ibn Zurayk (c. 420/1029) cf. Brockelmann I 82, S 1, 133. As kâfî he showed administrative competence and integrity, refusing sultan Barkûk a loan out of awlûd funds, an action which caused his momentary humiliation and imprison. He died in Damascus in 816/1411 (Ibn al-`Imâd, Shâhadâtî, vi, 118; Dawûd, ii, 231; Ibn Taghribîrî, vi, 267, 306, 314, 439).

(3) Born in Nazareth c. 777/1375, he studied in Damascus and Cairo. He deplored for his father as kâfi of Damascus when he became kâfî at the Umayyad mosque. He also became kâfî at the Aṣâr mosque and nâzîr al-karâma yaw in Jerusalem at which after post he showed considerable ability. His literary virtuosity is displayed in a treatise in which he employed only words without diacritical points and in a tafsîr of Ibn Mâlik's Al-Mukhtasar. His reputation was great, earning him the title of shaykh al-adab fi l-diyâr al-`âlîmiyya, and one of his innumerable pupils was the biographer Saîd Al-Bâ'ûnî. He died in Damascus in 871/1465 (Shâhadâtî, vii, 310; Dawûd, ii, 114; `Ulmâ al-`Uns al-Dali`î, etc., Cairo 1283/1866, ii, 382).

(4) Born in Damascus in 760/1363, he became kâfî at the Umayyad mosque and was appointed nâzîr [perhaps of the awlûd] of al-asrî wa l-`asâd. His works (for which cf. Brockelmann II 31, S II 38) include a verse summary of Islamic history down to the reign of Barsbay (Mu`âadh, 1908). His later years he spent in prayer and contemplation. He died in Damascus in 871/1465 (Shâhadâtî, vii, 310; Dawûd, ii, 114; `Ulmâ al-`Uns al-Dali`î, etc., Cairo 1283/1866, ii, 382).

(5) Born in Jerusalem in 805/1402, he studied in Damascus, Hebron, Ramla and Cairo and became kâfî in Safed, Tripoli, Aleppo and Damascus. In Damascus he reorganised the administration of the mîristân of Nûr al-Dîn, expanded its awlûd and added new sections to the building which were called after him (Dawûd, x, 298). His literary output (which included the versification of Nawawi's Minâdâd) was small although he had great facility in both verse and prose. He led a life of asceticism and piety and died in Damascus in 880/1475 (Shâhadâtî, vii, 320; Dawûd, ii, 87; `Ulmâ al-`Uns al-Dali`î, etc., Cairo 1283/1866, ii, 382).

(6) Born in Damascus, she grew up as a precocious child, learning the Kur'an by rote at the age of eight. In her the literary talents and Sûf tendencies of her family reached full fruition. She likewise inherited an independence of mind and outlook which is seen in her companionship with her men contemporaries on equal terms. In Cairo she was granted certificates authorising her to lecture and give fatwâs. A great friend of hers was Abu l-Thânâ` Mahmûd b. Aţâ, the last sâhib dawwâr al-mînhâd under the Mamûlûks (whom she praised in a ra`îyya quoted by Ghâzî in al-Kawâkib al-`âsîra etc. ed. Dja`bbur, Beirut 1945, i, 204). She carried on a correspondence in verse with the Egyptian scholar `Abd al-Rahîm al-`Abbhâsî (For selections of which cf. op. cit., i, 288) and met Sultan Ghârî in Aleppo in 922/1516.

Perhaps her most famous work is her bâdî`yya in praise of the Prophet entitled al-Fath al-Mubîn fi Mâdâs al-Amin (Brockelmann, II 340 no. 1), to which she wrote a commentary, thus following the practice first set by Sâfi al-Dîn al-`Hillî [q.v.] though she was probably more immediately under Ibn Hîdîdîa's influence. `Abd al-Ghânî al-Nâbulusî [q.v.] read and admired (though not uncritically) an autograph copy of her al-Fath al-Mubîn and was no doubt inspired by it to write his own bâdî`yya, Nasâmât al-Ashâr etc. in his commentary on which (Nawâbî al-Ashâr, etc., Cairo 1390/1871) he makes a continuous comparison with the corresponding lines in al-Fath al-Mubîn. Both al-Fath al-Mubîn and `Âjûsha's commentary on it are published in the margin of Ibn Hîdîdîa's Khatiṣnât al-`Adab, Cairo 1304/1915, 316-317. Her original works also include Kitâb al-Mâlîmî al-Shârîf wa l-`Âdâr al-Munîfî, and al-Fath al-Bâmîfî, both on Sûf themes (Kawâkib, i, 288). Her Ma`âsh al-Nâbi (Brockelmann S II 381, no. 14) is partly prose and partly verse and was published in Cairo in 1303/1883.
and 1310/1892 (Sarkis, Muqdiam 1928, 519).

She also versified Suyutl’s al-Muṣjid wa-l-Khaṣṣa‘ by al-Nabawiyya and 1892 (Sarkis, Mu’dfam 1928, 519)*

She also versified Suyutl’s al-Muṣṭadi‘ wa-l-Khaṣṣa‘ by al-Nabawiyya and 1892 (Sarkis, Mu’dfam 1928, 519)*. In another urdija she abridged Saghawt’s al-Kawal al-BAWAND, (Persian Bawand), an Iranian dynasty which ruled in Tabaristan for over 700 years (45-750/665-1349). The centre of the dynasty was the mountainous area, although they frequently ruled the lowlands south of the Caspian Sea. The name is traced back to an ancestor Baw who was either 1) named Isphahbad by Tabaristan in Khursaw Parviz (Rabino, 411), or 2) a prominent Magian of Rayy (Marquart, 128, where an etymology of the name is also given). The several rulers of the Bawand dynasty were called isphahbad or malik al-azamshah; they were usually independent, though sometimes tributary to caliphs or sultans.

The dynasty can be divided into three branches: 1) the Kayuya, which ruled 45-497/665-1006, when the isphahbad Shahiray revived against Kabus b. Washmghr, was captured and later put to death; 2) the Isphahbadiyia, which ruled 466-606/1073-1210, when Muḥammad Khurramshah invaded Tabaristan; 3) the Khâkhariyya (635-750/1237-

The second branch took its name from Kayus b. Kabud the Sâsânid, possibly the grandfather of Baw. The early history of the family is uncertain. The ninth ruler Karim b. Bawand, the only one to continue to rule in localities in the mountains. One of them, Muḥammad b. Wânderin, had a mausoleum erected in 1012, known as the Mîl-i Râdkân (cf. E. Diez, Chronisanische Baudenkmale, Berlin 1918).

The second branch had their capital in Sârî, ruling over Gilân, Rayy and Kumis as well as Tabaristan, and were vassals of the Sâlûdûs, then of the Khârazmshahs. Towards the end of their rule the Isna‘îlis spread in Tabaristan and obtained power at the expense of the Bawand dynasty. Finally the Khârazmshah assumed the rule when Shams al-Mulûk Rûstam Bawand was assassinated. After the Mongol invasion there was anarchy in Tabaristan, and finally a member of the Bawand family, Ḥosâm al-Dawla Ḍârah b. Khâkh was chosen ruler by the people. He moved his capital from Sârî to Amlû for safety’s sake. Under his rule (12 or 15 years) the Mongols invaded Tabaristan. His son, Ṣâm al-Mulûk, was put to death in 1263/1264 by Abâkâ Khân after ruling 18 years. This dynasty ruled as vassals of the Mongols but they suffered nonetheless from Mongol invasions and depredations.

In 750/1349 Fakhr al-Dawla Ḥasan, last of the Bawand family, was assassinated by members of the prominent family of Kayû.

BAWARD [see ABIWARD].

BAWÂTDJÎ, of Bawâtîdi al-Malîk, in ‘Abbâsîd times a town in the province of Mosul on the right bank of the Lesser Zâb, not far from its mouth. The name is the Syriac Bêt Wâzîk, “the house of Baw and Wazik, or a Nestorian of Shenna and Beth Wâzîk, or a Nestorian of Shenna (i.e., the village of Bârimmû) and Bêt Wâzik, or a Nestorian of Shennû (i.e., Sinn) and Bêt Wâzik. The ruins of the town have not yet been discovered.

BAY (Bey), name applied to the ruler of Tunisia until 26 July 1957, when the Bey Lamine (al-Amlûn), 19th ruler of the Husaynid dynasty, was deposed and a Republic proclaimed in Tunisia.

To discover the origin of this title, we must go back to the end of the 16th century. It was at that time that the Bey ‘Ulama‘ created the Office of Bey (in Turkish: bej), without consulting the Porte, whose vassal he was. He entrusted the holder of the office with command of the tribes, the maintenance of public order and the collection of taxes. Equipped with these extensive powers, the Bey soon became the most important man in the country. This was the title which the Agha of the soldiery, Husayn b. ‘Ali, founder of the Husaynid dynasty, subsequently assumed upon receiving the investiture at Tunis on 10 July 1705.

It was only later that the order of succession to the throne was regulated by a Charter included in the
Tunisian Constitution of 26 April 1861, article I of which decreed: "Succession to the throne is hereditary among the princes of the Hafsids family, by order of age, according to the rules in use in the Moslem Kingdom". This was in fact the codification of a traditional rule which, with two exceptions, was adhered to in regard to accession to the throne of Tunisia from the founding of the dynasty.

The enthronement of the sovereign was accompanied by a dual ceremony, the first private, in which the great men of the Kingdom and intimates participated, the second public, open to the broad mass of subjects. This recalled the old dual ceremony of doing homage (al-bay'a al-cnasra and al-bay'a al-baytama). As a result of the establishment of the Protectorate, the representative of France in Tunisia became associated with the ceremony of the enthronement of the Bey, bestowing on the new Bey the "solemn investiture" in the name of the protecting Power.

Articles 3 and 4 of the Decree of 26 April 1861 stated: "The Bey is the head of the State. At the same time, he is the head of the ruling family. He has full authority over the princes and princesses of his family, none of whom may dispose either of their persons or of their property without his prior consent. He exercises a paternal authority over them and is obliged to give them the benefits of such. Members of the family owe him filial obedience."

The titles borne by the Bey contained a number of expressions expressly designating his sovereign function. In official documents his appellation was: Sayyidun wa-mawdun ... Bagha Bay, yrib al-mamlaka al-sunnisiyya (= Our Lord and Master ... Pasha Bey, possessor of the Kingdom of Tunis). This old style, in part dating back to the Hafsids and partly to the middle of the 18th century, was augmented by a new element, namely Mushir (Marshal), bestowed by the Porte about the year 1839, which however was only borne by three Beys. Unlike the Hafsid styles, however, no titles (al-bayb) of a personal character occur.

Among the special insignia of sovereignty, mention must be made, in addition to the dynastic throne, of the ceremonial costume worn by the Bey on solemn occasions. These material attributes were enhanced by the kissing of hands encumbent on Tunisian subjects, and other marks of royalty. The Bey had a civil list, a guard of honour (the Bey's Guard), a standard, bestowed decorations (Nishan al-dam, 'Akh al-amân, Nishan al-sichhâr) and honorary military ranks. Finally, each Thursday there took place the Ceremony of the Seal, at which the Bey applied his seal to governmental decisions in the form of a decree, thus giving them executive force.

The heir apparent bore the title of Bey of the Camp (bay al-amhâl). This title originated in the duty incumbent on the heir apparent to proceed twice a year at the head of a military expedition to the south and north of the country both to assert the authority of the central government and to overawe tribes who might refuse to pay their taxes. The Bey of the Camp was head of the army by virtue of this institution, but it disappeared with the advent of the Protectorate. (Ch. Samarân)

BAY (= Arabic, to sell); two roots are used in Arabic to designate the contract of sale: b-y- and sh-r-y; in the first verbal form both usually mean "to sell", but also "to buy"; in the eighth form exclusively "to buy"; the function of expressing both sides of a mutual relationship is shared by these two roots with a number of other old legal terms. Bay optionally means the clasping of hands on concluding an agreement, sh-r-y perhaps the busy activity of the market. In the terminology of Islamic law, the normal term for selling is bâ'a, for the contract of sale, the infinitive bay, and for buying, ibdâ'a, or ishtarâ. The frequent use of sharâ for a profitable and of ishtarâ for an unprofitable transaction (in the metaphorical sense) in the Kurân is parallel to that of kasâba "to be credited" and thassâba "to be debited" (cf. Schacht, in Studia Islamica, i, 30 f.). Commercial law in pre-Islamic Mecca had undoubtedly reached a certain level of development; the trade on which alone the existence of the town depended, occupied such a predominant place there that the Kurân not only referred to it often but used a number of technical terms of commerce to express religious ideas. (On the other hand, the importance of the Meccan trade in absolute terms ought not to be overestimated; cf. G.-H. Bousquet, in Hesp., 1954, 233 f., 238 ff.). To this body of ancient Arab commercial law can be traced the ribâ contracts which the Kurân was to prohibit, certain dealings involving credit and speculation, and possibly the khîyûr al-majlis, a special right of option, which seems to go back to a local Meccan custom (cf. Schacht, Origins, 159 ff.); to all appearance the legal construction of the contract as being constituted by offer (idjâb) and acceptance (tabâl), as well as part of the terminology of Islamic law and, perhaps, some of its legal maxims, belong to this pre-Islamic stratum; the term idjâb itself seems to reflect another, unilateral, construction of the contract (cf. Schacht, in OLZ, 1927, 664 ff.). The Kurân directly envisages commercial law in the general exhortations to give full weight and measure and to carry out agreements, in the specific demand that forward deals should be put in writing (Sûra ii, 282 f.; in the system of Islamic law this injunction has been deprived of its binding character), and above all in the two prohibitions of interest (ribâ) and of games of chance (maysir), which include aleatory transactions (Sûra ii, 219, 275 f.; v. 90 f.); in contrast with the attitude of the contemporaries, bay, i.e. legitimate trade, is sharply opposed to ribâ. The implications of these prohibitions have been worked out to their last details in Islamic law. Tradition contains a certain number of teachings regarding commerce in general and the duties of the good and the punishment of the wicked merchant (see tigâra); it also elaborates the teachings of the Kurân. As legal principles which now appear for the first time may be mentioned; the recognition of the right of withdrawal (khîyûr), unconditional during the negotiation, and under certain conditions either agreed or fixed by law after the agreement has been made; the legal maxim al-kharâfj bi'l-damân ("profit goes where the responsibility lies"); the rule that the produce in existence at the moment of sale belongs to the vendor, unless the contrary is stipulated; the prohibition of a sale the object of which cannot be exactly defined (in the case of a sale of ripe fruits on a tree etc., the main group of traditions is satisfied with an estimate); the prohibition of a re-sale of foodstuffs or of merchandise in general before possession has been taken (a consequence of the prohibition of ribâ), or in general of the sale of things which are not already the property of the vendor; the exclusion of certain things from commerce, ritually impure or forbidden as well as things which, like surplus water, are common property; finally,
the special treatment, diverging from the general rule, of the case in which the vendor of a milking animal, in order to suggest a greater yield, does not milk it before the sale. The question whether nascent Islamic commercial law was influenced by the law and economic life of the peoples incorporated in the Muslim empire, has been much discussed in the past but can now be definitely answered in the affirmative (cf. Schacht, in XII Conseguo "Volatile", Rome 1957, 197 ff., and the literature mentioned there).

The contract of sale forms the core of the Islamic law of obligations. Its categories have been developed in most detail with regard to the contract of sale, and other commutative or synallagmatic contracts, such as idāra and kird (locatio conductio operarum and loc. rei), and even marriage, although regarded as legal institutions in their own right and not reduced to contracts of sale, are construed on the model of bay and sometimes even defined as kinds of bay. In its narrower meaning, bay is defined as an exchange of goods or properties and it therefore includes, beside sale proper, barter (mubāyāda) and exchange (sarf). The following is a short account of the main provisions of Islamic law, according to Ḥanafi doctrine, concerning bay.

The object of the sale must belong to the goods or properties (māl) which Islamic law recognizes as such; these include servitutes on real estate but exclude: 1. things which are completely excluded from legal traffic, e.g. animals not ritually slaughtered (musta'), blood; 2. things in which there is no ownership, e.g. pious endowments (wāhib) (q.v.), or which are public property, or constituent parts etc., in which there is no separate private ownership; 3. those slaves in whom there is only a restricted ownership, particularly the umm al-salād (q.v.); 4. things on the disposal of which there are restrictions, e.g. things which are ritually impure, such as wine and the pig, and other things without market value (māl ḥayr mubāsawīm) which are not rigorously defined; 5. things which are not in actual possession, such as things lost or usurped and run-away slaves: here the power to dispose of the property is refused, to exclude the risk. A sale concluded with regard to an object of this kind is not valid (ghair sahih); such a sale, according to the Ḥanafis, however, is not necessarily void (ḥātīl, as it is in the cases 1, 2, 3), but in certain circumstances only voidable (ḥāsid [q.v.]); in the other schools this term is used as a synonym of ḥātīl; even if the two parties have taken possession, a ḥāsid sale confers only a "bad ownership" (milh khabīl) and is liable to cancellation (waqīd) until the object is re-sold. A stipulation in favour of or against one of the parties is invalid and makes the contract ḥāsid. Conditional or deferred agreements are not admitted in this contract. Legally qualified persons who are of age (bīlīg) and of sound mind (tiḥrib), also the minor with the permission of his guardian and the slave with the permission of his master; the master can authorize his slave either to conclude an individual sale, or generally to engage in trade (this slave is called ma'zāhīm). Representation (wakāla) is possible; in this case the agent is regarded as a main contracting party with corresponding rights and obligations, but the rights of ownership accrue to the principal directly. In common with the other contracts, the sale is concluded by offer (tājī'ah) and acceptance (kabāl), which must correspond to each other exactly and must take place in the same meeting (madālīs); the term ṣaḥā ("clasping of hands") for the conclusion of the bargain dates from the pre-Islamic period, but Islamic law completely disregards the symbolic action which it expresses. Ownership (milh) is transferred through the conclusion of the sale, but completed only through the transfer of possession (tasālim "handing over", ḥādīd "taking possession") which, however, is dispensed with in the case of real estate; on the other hand, the existence of an option or right of withdrawal (qayiyīn, [q.v.]) prevents the transfer of ownership even though possession has been taken. In the case of eviction (istīkhāb), the vendor is responsible for a defect in ownership with the amount of the price paid; this is the so-called responsibility for darah or tabī'ā. On the prohibition of ribā, see the art. The prohibition of risk (gharar) implies that the obligations of the parties must be determined (mualām), in particular the object of the sale, the price and the term or terms. The first requirement is particularly strict in the case of goods covered by the prohibition of ribā, so that here no indefinite quantity (ḏīwāl) is permitted even if a price per unit is mentioned. A third prohibition which has far-reaching consequences, too, is that of selling or exchanging a debt (dayn) for another debt. In the field of sale proper, one distinguishes the thing sold from the price (gharām) or the value (kimā). As the price consists of fungible things (normally gold or silver), whereas the thing sold is, generally speaking, a non-fungible object, the rules applicable to both are not quite identical; the vendor, for instance, is permitted to dispose of the (fungible) price even before he has taken possession. Actually a special kind of purchase, although in the opinion of the Muslim lawyers a contract in its own right, is the salaf (q.v.) or salām, the ordering of goods to be delivered later for a price paid immediately; the term ra's māl ("capital") which is used for the price here, shows the economic meaning of the transaction: the financing of the business of a small trader or artisan by his clients. Because of its closeness to the subject of the prohibition of ribā, salām is carefully treated, and is subject to numerous special rules. Its counterpart, delayed payment for goods delivered immediately, is also possible, but this kind of transaction plays a minor role in Islamic law. The name "sale on credit" (bay al-šina) is given a potiori to an evasion of the prohibition of ribā which is based on this transaction. Barter of merchandise (mubāyāda) is hardly distinguished from sale in general; but money-changing and, in general, dealing in precious metals receive detailed treatment on account of the prohibition of ribā; these transactions are regarded as sales of "price" for "price" (cf. šārīf).

The actual practice of commerce in the Muslim middle ages was controlled not by these theoretical rules of Islamic law but by a customary commercial law which had been called into being by the normal needs of commercial life in the great cities of Islam, and was then elaborated by the legal advisers of the merchants, who were competent specialists in Islamic law. This customary law did not put itself into direct opposition to the sacred law of Islam, on the contrary, it maintained its main features, such as the prohibition of ribā, which it never dared openly to challenge but only managed to evade, just as it evaded, too, most of its rigid, restrictive rules, and it is characterized by a greater flexibility, accompanied by effective safeguards of fair dealing, which were made necessary by the lack of any official sanction. A unique source for the knowledge of this customary commercial law in ʿIrāk about
400/1000 is the younger edition of the Kitab al-Hiyal wal-Makhdidi spuriously attributed to al-Khassaf (ed. Schacht, Hanover 1923; cf. also the same, in I. XII Convene 1935, 218 ff.; R.Afr., 1952, 322 ff.). Similar, independent developments have occurred later in the Maghrib (cf. O. Pele, Le contrat de safqa au Maroc, Rabat 1932; J. Berque, Essai sur la méthode juridique maghrébienne, Rabat 1944, and numerous papers). This customary commercial law of Islam has, in its turn, influenced the law merchant of Europe in the early middle ages (cf. O. Pesle, “Volos”, 215).

(J. Schacht)

Bay’a, an Arabic term denoting, in a very broad sense, the act by which a certain number of persons, acting individually or collectively, recognise the authority of another person. Thus the bay’a of a Caliph is the act by which one person is proclaimed as head of the Muslim State. A synonymous expression is that of muháyá’a (cf. the verb bay’a: to make the bay’a).

I. Etymology. According to a view which has become traditional the term bay’a is derived from the verb ba’ā (to sell), the bay’a embodying, like sale, an exchange of undertakings. This explanation seems the most artificial. In most of the views of the author the bay’a owes its name to the physical gesture itself which, in ancient Arab custom, symbolised the conclusion of an agreement between two persons and which consisted of a hand-clasp (cf. the manusmissio of the ancient law of certain Western countries). Again, in a non-technical sense, “to make a bay’a in regard to some matter” (lubâyâ’a ‘ala ‘l-amr) means “to reach agreement on this matter” (cf. sa’āda, lit.: manusmissio, = agreement, contract). The physical gesture was termed bay’a because, precisely, it consisted of a movement of the hand and arms (ba’ā). And since the election of a chief (and the undertaking to submit to his authority) was demonstrated by a hand-clasp, it was naturally described by the very term which denoted this gesture.

The bay’a has two principal aims which differ both in their scope and nature. The first is essentially that of adherence to a doctrine and recognition of the pre-established authority of the person who teaches it. It is in this sense that the bay’a was practised in the relations between Muhammad and his newly acquired supporters (cf. Kurî, xlix, 10, 18; lx, 13). In the same sense, but with a more restricted purpose, the bay’a was served simply to recognise the pre-established authority of a person and to promise him obedience. Such was the case with the bay’a effected in favour of a new Caliph whose title to succeed had been established by the testamentary designation (‘âhid) of his predecessor. In its second sense the position of the bay’a is that of a person to a post of command and, in particular, the election of a Caliph, when a promise of obedience is implied. It was thus that the first Caliph, Abû Bakr, was designated by the bay’a of the so-called assembly of the Sahîha (13 Rabi‘ I 11/8 June 632); and the same invariably applied on all subsequent occasions that the seat of the Caliphate fell vacant and no successor designated by other means existed. Sunni doctrine, indeed, specifies the bay’a as one of the two procedures for designating the Caliph.

In Shî doctrine the bay’a has never been able to play this rôle, for the Shîs recognise only one method of designating the Imam—namely appointment by testament (nâs, wasiya) of one in the legitimate line of descent. However the Zaydi branch of the Shîs hold that the Imamate is acquired by election from within the ‘Ahîd family. Here, then, the bay’a was practised in the sense of an act of election.

II. Legal nature. The legal doctrine analyses the bay’a as a contractual agreement: on the one side there is the will of the electors, expressed in the designation of the candidate, which constitutes the offer, and on the other side the will of the elected person which constitutes the acceptance. This analysis may be admitted provided that it is not carried so far as to confuse the act of bay’a with the legal category of ordinary contracts. For the bay’a is a voluntary act sui generis which involves the general public. And again it must be stressed that the doctrinal analysis, even when so regarded, is only fully valid in regard to the bay’a of election and not in regard to the bay’a of simple homage. For in the latter case adherence becomes obligatory and no room is left for any freedom of decision.

What, particularly as regards the bay’a election, is the number of electors (ahl al-ikhtiyar) required for the validity of the procedure? On this point opinions are numerous and widely varied and range from one extreme to the other—from a view which requires that the bay’a should emanate from all “the upright men of the whole kingdom” to the opinion which is satisfied with the vote of a single individual. In fact, however, the body of electors was made up of the high dignitaries and notables of the State.

The bay’a is an act performed solely by agreement. Neither the physical gesture of manusmissio nor the confirmation of the bay’a by an oath is required as a condition of validity or even simple proof. No sacramental form is imposed for the manifestation of will; it suffices that this should be clearly and definitely expressed.

The form of the bay’a remains the same in both its roles—that of election and that of simple offer of homage.

The formalities of a single process of bay’a may be split up into two or even several sessions. Thus, as far as the Caliphs are concerned, the first step is generally what is termed the bay’at al-khâṣṣa (private bay’a) in which a very limited number of persons, the chief dignitaries of State and Court, participate. This is then followed by the bay’at al-dmna (public bay’a). Further, formal sessions for the offer of bay’a are held in the centres of the different provinces.

An innovation, which was introduced into the procedure from the Umayyad period, is the renewal
of the bay'a (tadżdid al-bay'a) whereby the Caliph or Sultan has recourse, during his reign, to a new bay'a in favour of himself or his heir apparent; and this may be repeated twice or more. The ruler resorts to this to establish the loyalty of his subjects.

III. Effects of the bay'a

A question peculiar to the bay'a—election is that of knowing whether it has the effect of investing the ruler with authority or whether it is simply confirmatory. It is in favour of himself or his heir apparent; and whether it is simply confirmatory. It is in favour

This effect, however, is limited by the law. For the bay'a is made on condition that its recipient remains faithful to the divine prescriptions, which means that if the ruler does not abide by these prescriptions those who have performed the bay'a in his favour are thereby released from their obligations.

Bayân, an Arabic word meaning lucidity, distinctness; the means by which clearness is achieved, explanation; hence, clarity of speech or distinctness, and the faculty by which clarity is attained. In technical language bayân develops from a (near-) synonym of baláţha, eloquence, to the designation of a particular aspect of it which, within the 'ilm al-baláţha is deal with by the 'ilm al-bayân. Common usage, however, continues to employ bayân in a wider variety of meanings (cf. also colourless phrases like bâb bayân or dar bayân-i, where nothing more than fi or dar is intended). Occasionally, tabîyân takes the place of bayân without suggesting a different shade of meaning; e.g., Ḵhattâbî (d. 996 or 998), K. Bayân I, 'Òdzîz al-Kurân, MS. Leiden 1654 (Cod. Warner 165), i, 114 (also: Ibn Ḵutaybâ, 'Uyun al-Ābkâr, Cairo 1343/954, ii, 173; Zahr, Cairo 1327/1909, i, 126): "Bayân means "that the word (ism; later one would have used kalâm, discourse) covers your idea completely and renders your intention (fully), lifting it from ambiguity, shirk, so you do not need the assistance of reflection (it is understood)". In this sense (bayân) must be free from constraint, tabâlîf, remote from artificiality, san'a, without obscurity,
ta'awul", and comprehensible without interpretation, ta'wil". (Translated from *Uyun and Zahr Baydn's text is somewhat longer; *Umūda, i, 225, offers a different but different phrasing.

What to my knowledge may be the first attempt to integrate bayān in a system of rhetorical analysis is preserved as the statement made by Ibn al-Kirri (d. 847) on letter, word and discourse or speech, where speech is divided in ten abwāb, seven of them "preliminaries", faqūltāt, and three, "comprehensive (qualities)". In this listing bayān al-kalām figures as the fourth of the faqūltāt among requirements such as "the encouragement to speak up", "refraining from clearing one's throat and hemming", being able to begin and end at will (quoted Kanūn al-Balāgha, 433).

‘Ibādīṣ or K. al-Hayawānī, Cairo 1325/1907, i, 17, notes that both men and animals possess the faculty of dalāla, the indication of a meaning; but only man possesses that of istiqlāl, the power of inferential thinking, along with it. The term bayān, however, in Diāhī’s view, covers both kinds of dalāla. Human dalāla (or bayān) has five forms: word, writing, counting on fingers or knuckles, *ukanad (not as Sandūbī vocalises)在我看来, and * insightful, or *chābra, and *haba, posture or attitude (not *haba as “abid, line 11); on *haba cf. Nallino, in KSO, 1919-21, 637-46, who lists, 640-47, later grammarians using this term; Diāhī repeats this doctrine of the five forms of expression in Hayawānī, i, 23, and Bayānī, i, 76. Ibn al-Muḍabbīr (d. 924), Risālāt al-‘Adhrawī, ed. Z. Mubārak, Cairo 1350/1931, 40, restates Diāhī’s fivefold division of bayān and adds the correct observation that the concept of *haba goes back to Aristotle (whose seventh category is ḥabā); Ḥusayn (d. 1061), Kudāma b. Dja, “sign, would seem to go back to Diāhī, too; the origin of the modifications is as yet unexplained. No later references to Diāhī’s theory are known to me.

Ishāk b. ‘Ibrāhīm b. Wahb, who after 335/946-7 wrote the K. al-Burhān fi Wudufih al-Baydn (“The Exposition of the various ways of explaining things”)—until recently wrongly attributed to Kudāma b. Diāfar and published under the title of Nakāb an-Nawhr by Ṣāḥib al-Husayn and ‘A. H. al-‘Abbādī (Cairo 1933)—undertook his work to correct the insufficiencies of Diāhī’s presentation of the subject. Ishāk b. ‘Ibrāhīm distinguishes four ways of expression: a. “things may become intelligible by their essences, *bawāt (i.e., by the very fact of their being as they are), even though the words which (commonly) express them are not used; b. they may become intelligible by coming into the heart when thought and intellect are applied [i.e., presumably Diāhī’s *istiqlāl]; c. they may become understandable through articulating sounds with the tongue; and, finally, d. by writing, which reaches those who are far away or do not (yet) exist.” (Trans. S. A. Bonebakker, *The Kitāb Nāqī al-Sīr of Qudāma b. Ga’far al-Kāthib al-Baghdādī, Leiden 1956, 16; words between brackets are the writer’s). It can easily be seen that Ishāk’s concept of bayān is very different, and both wider and narrower, than that which Diāhī envisaged to formulate. Regarding the manner in which Ishāk applies his concept to material it must suffice here to note that in his discussion. Of c. he lists, 44-54, sixteen *aksiq al-‘sūrā, categories of verbal expression, that include, without further classification, *ṣūrā *stymologica, comparison, suggestion ( RAMA), metaphor, parable, enigma and inversion.

A completely different strain of thought is represented in Rumānī’s division of balāgha in ten parts, *aksiq: concision, *idās, comparison, metaphor, and so forth, of which *husn al-bayān, successful exposition, is the tenth. In line with this concept, Ibn Ragīlī (d. 1064 or 1070), *Umūda, i, 225-28, has a chapter on bayān (with two pertinent quotations from Rumānī) paralleling as it were, on the other hand, classificatory level his chapters on balāgha, *idās, *nasr (composition), *mahās (transferred meaning), *isti’āra (metaphor), *al-mukhṭara wa ‘l-bādi (invention and the ‘original’), etc. It deserves notice that nowhere in the tenth and eleventh centuries is there an anticipation of that treatment of the bayān, especially in its relation to the bādi, that was later to become the dominant doctrine. Neither ‘Abbādī (d. 987), who in his K. al-Muṣūna bayna Abī Tammād wa ‘l-Būkturi, Constantiopolis 1287, 6, divides bādi in *isti’āra, *tādīs (paronomasy) and *tābā (anthroposis), nor Abū Ḥiṣāl al-‘Askārī (d. 1005), who in *Ṣīna‘ al-‘ayn, (e.g.) 205 and 290, treats *isti’āra and *kindāya (metonymy) on the same level as all other tropes, nor again Bākīllānī (d. 1013), Kudāma (d. 1073) and Abū Tāhir, who still subsume *dīrās and *kindāya under bādi, Kanūn, 425-459 (cf. in particular the list of forty-two rhetorical figures on 436), made any contribution to the development of the basic organisation of rhetoric, the *im al-balāgha, or as Abīl-Khādh al-Diurjānī (d. 1078), Dalal’ al-’idāt, Cairo 1313/1913, 4, still prefers to call it, the *im al-bayān, to him the greatest of all sciences. Diurjānī, to whom we owe *intās the aesthetically most sensitive analysis of the metaphor, notes, Dalal’, 349-50, that the development of the *im al-fasādha wa ‘l-bayān differs in two points from that of the other sciences: the early authorities of this *im expressed themselves in hints and metaphors rather than plainly and directly; and besides, in no other area were the opinions of the ancients transmitted with as little criticism. But Diurjānī’s interest is not in the theory of bayān and his innovations are made on another plane of literary analysis. This fact is reflected in Fakhr al-Dīn al-Rāzī’s (d. 1209) *Nikāyat al-’idās fi Dirāyat al-’idās, Cairo 1331, which according to the author’s statement, 3-5, is an attempt to organize Diurjānī’s Dalal’ and Asrār al-Balāgha (ed. H. Ritter, Istanbul 1934); German translation, Wiesbaden 1959), and which fails to offer any explicit discussion of bayān.

When Ibn al-Āṭīr (d. 1234) writes al-Mathāl al-Ṣā’ir fī Adab al-Kāthib wa ‘l-Shā‘ir thinking on bayān has taken a new turn. To what extent it was Ibn al-Āṭīr himself who was responsible for this change we have no means of deciding. Ibn al-Āṭīr places, p. 2, the *im al-bayān in the same relation to the composition of both poetry and prose as the science of the usul al-fikr to the individual judicial statutes or decisions, akhām. (On p. 114, he refers to the representatives of this field of learning as ulamā al-bayān). He divides his book in a preface, mukhaddima, dealing with the foundations, usul *im al-bayān, and two sections treating the handling of wording, al-sinā‘ *l-lajīfya, and of content, al-sinā‘ *l-ma‘nasīyya, respectively. The subject of the *im al-bayān is *fāzā and barakah whose content he investigates in regard to both wording and meaning. He shares with the grammarians,
Bayān — Bayān b. Samān al-Ṭamīmī

Bayān, his concern for the manner in which words indicate meanings; but he goes beyond the grammarians' interest by a concern for the aesthetic qualities of the various ways of verbal rendering of ideas (p. 3). In the terms of his criticism, Ibn al-Hadid (d. 1257), al-Falak al-Dā'ir 'alā 'l-Mathal al-Sā'ir, Bombay 1308, 41-42 (al-Mathal, 28-29). Ibn al-Athīr's 'ilm al-bayān is basically a "rational" science, his concern for the manner in which words indicate meanings; but he goes beyond the grammarians' interest by a concern for the aesthetic judgments empirically from Arabic literature, bi l-līm wa l-mádhīm min ash'ār al-‘Arab (for ḍhawq cf. also Ibn Khaldūn, Muḥaddīsī, ed. Quatremerre, Paris 1858, iii, 312-317; 349-50 trans. F. Rosenthal, New York 1958, iii, 358-62; 396-98). The heartpiece of the 'ilm al-bayān is to Ibn al-Athīr the doctrine of ḥabība and madjādī, the proper and the transferred use of words (p. 23). It is in the nature of his system that he does not differentiate between comparison, metaphor and metonymy on the one hand and the other tropes on the other—a differentiation which was to be one of the principal features of the system that was about to become dominant in Arabic rhetoric when Ibn al-Athīr wrote.

This doctrine originated with Ibn al-Athīr's contemporary, the Khorezmian al-Sakkākī (d. 1229) who, according to his own statement, K. Muṣṭāfā al-Ṭumn, Cairo n.d. (ca. 1588), 2-3, set out to treat the 'ilm al-bayān as "the arts of eloquence", which requires "prosody" as "rhythmic" as subsidiary branches of study. The 'ilm al-bayān deals fundamentally with three subjects, usu: (1) comparison, taqāḥa; (2) madjādī and ḥabība; (3) inkāṣya, metonymy. The remaining tropes are relegated to the end of the book, 224-229, under the heading al-badī'.

It is presumably due to Sakkākī's commentator, al-Kawzānī (d. 1338), and to the mujassar of the latter, al-Taftazānī (d. 1389), that Sakkākī's structuring of rhetoric received the more consistent form which has continued to make authority to this day. Kawzānī no longer wishes to deal with al-badā'. To him, al-badā' is the term for the science of rhetoric as a whole which he divides in the three branches of 'ilm al-mašā'ī, 'ilm al-bayān and 'ilm al-badī' (as the doctrine of the embellishment of speech) [cf. balāgha]. 'ilm al-bayān is now no more and no less than the science that deals with the various possibilities of expressing the same idea in various degrees of directness or clarity. Since the word used may indicate either the concept in its totality or merely a part of it, or again point to it through evoking an element external to it in which the hearer perceives a necessary connection with the concept actually intended, a certain number of modes of expression are open to the speaker. In their descriptive function and power, comparison, metaphor and metonymy correspond to those three basic possibilities of word-concept relations. For this reason they are treated apart from the other tropes that are dealt with under the general category of badī', embellishments. (This presentation of Kawzānī's views is based in part on his Taḥīṣṣ al-Mašā'ī, Cairo 1342/1923, iii, 256-290; also in A. F. Mehren, Die Rhetorik der Araber, Copenhagen and Vienna 1853, 6-7 of Arabic text, Trans. 53-54 of German text; and in part abstracted from the tenor of the Taḥīṣṣ as a whole; a rather full summary of Kawzānī's doctrine of bayān, ibid., 20-42.)

While al-Nuwāyri (d. 1332), Niḥāya, vii, 35, already follows the tripartite structure of 'ilm al-mašā'ī, bayān and badī' without, however, distributing the tropes accordingly, Ibn Ḥāṣim al-Djāziyya, Fawā'id, a work whose purpose is the analysis of the uniqueness and inimitability, ṣā'īda, of the Kurān, still uses 'ilm al-bayān for rhetoric as a whole and divides his presentation of it in sections (1) on ḥabība, balāgha, ḥabīka and madjādī, metaphor, comparison, tamāthlī (expression by way of a simile, analogy), concession, and reversion of word order; and (II) on 'ilm al-bayān proper which he subdivides in (a) eighty-four Sinnfiguren (including metonymy as no. 17) and (b) twenty-four further tropes; he notes, 219, that this second fuss of (II) is also called al-badī'. Like Ibn Ḥāṣim, Ibn Khalīd (d. 1406) sees the value of the ṣā'īda in its leading to the understanding of the ṣā'īda, and like him he uses 'ilm al-bayān, the name of the subsection first to be explored by Arab critics, as the designation of the "science of expression" as a whole. But the strictness of his systematisation sets him apart from Ibn Ḥāṣim. Bayān, the manifestation of ideas, is achieved either by verbal expression, ẓabān, or by writing, kūṣa (Muḥaddīsī, iii, 242-43; trans. de Slane, Paris 1862-68, iii, 264-65; trans. Rosenthal, iii, 281-82). The 'ilm al-bayān consist of the three sciences of balāgha, in Ibn Khalīd's description a combination of grammar and 'ilm al-mašā'ī, bayān and badī'. Ibn Khalīd adds that it is the Easterners who give special attention to bayān whereas the Westerners show particular interest in the badī' (Muḥaddīsī, iii, 289-94; trans. Slane, iii, 324 ff.; Rosenthal, iii, 332-39). Ibn Khalīd recognises the importance of Sakkākī and Kawzānī, with whose works he is clearly familiar and whose authority had already grown beyond challenge.

Bibliography: in the article.

Bayān b. Samān al-Ṭamīmī, 'Abū al-Muḥammad Bī, leader in Kūfah. (Otten, Imperatrix, 1910, p. 507; Bāni in Nawbakhtī, al-Nabāhī). He was a dealer in straw. According to Nawbakhtī, he was a disciple of Hamza b. 'Amārā, disciple of Ibn Karīb, men known for ḡululaww speculation on the imāmat of Muḥammad b. al-Ḥanāfiyya. He accepted the imāmat of Muhammad's son Abū Ḥāshim (d. ca. 99/717) [qf.] and was hostile to Muḥammad al-Ṭābi'ī. Bayān taught a literalist anthropomorphic interpretation of the Kurān; e.g., God is a man of light, all whose parts will finally perish except his face (Kurān xxviii, 88). When on al-Ṭābi'ī's death al-MugHIRA b. Sa'dī [qf.] left al-Ṭābi'ī's circle, he and Bayān evidently joined forces. After what may have been a forced premature rising, they were seized with a handful of followers and burned by Khalīd al-Kasīrī, Ḥāfiz al-Ṭābi'ī's governor, in 119/737. (There are several circumstantial but contradictory accounts of their death.) Iṣfahānī in al-Aghnī in very improbable has the rising be in the name of Dī'a'ar al-Ṣāmī' (Vol. 15, 121; but cf. Vol. 19, 58). Wākīdī has it be in the name of Muḥammad b. 'Abd Allāh, who rebelled against al-Mansūr twenty-six years later; possibly (cf. Tabārī and Ibn Ḥāzm) it was connected with the 'Abbhādī, who inherited Abū Ḥāshim's party in Kūfah in the name of all the family of the Prophet.

Bayān's followers apparently formed a party, the Bayānīyya (or Banānīyya, or the Samānīyya, said
to have ascribed to the imám's prophecy through an indwelling particle of divine light; to have expected the return of various religious figures after death; and to have discussed the "greatest name" of God. Some are said to have regarded Bayân as an imám, citing Kur'ân iii, 138. Like other Shí'ís they supported Muhammad b. 'Abd Allâh at least at first.

**BAYAZİD (DOĞU-BAYAZIT),** a small town belonging to the Turkish Republic and situated a little to the south of Mount Ararat (Ağrı-Dâğ), close to the frontier with Iran. It has been suggested that the town was named after the Ottoman Sultan Bayazid I (791-805/1389-1403), who, according to this view, fortified the site as a post of observation against Timûr Beg. A more recent interpretation is that the name derives in fact from a prince of the Dânjlâyir dynasty, i.e., from Bayazid, the brother of Sultan Ahmed (784-813/1382-1410). The Ottomans captured the town in 920/1514, but did not obtain definitive control over the region until after the Persian campaigns of Sultan Sulayman in 940-942/1533-1536, 955-956/1548-1549 and 990-992/1583-1585. Bayazid and its adjacent territories formed, under Ottoman rule, a sanjak which was dependent at times on the eyâlet of Van, but more often on the eyâlet of Erzurum. The Russians, in the course of their wars with the Ottoman Turks, occupied the town in 1828, 1854, 1877 and again in 1914. Bayazid, now included in the Turkish province of Ağrı, (Ağrı) had in 1935 a population estimated at 28,000 inhabitants, the comparable figure for the entire sanjak amounting to just over 20,000 people, most of whom are of Turkish or Kurdish descent. Sheep and cattle rearing, the production of wool, hides and leather and the weaving of carpets constitute the main economic activities of the area.

**BAYAZIS** [see PAYAS].

**BAYAT,** an Oghuz (Türkmen) tribe. The Bayat are understood to have taken part in the conquests of the Seldûqs in Anatolia. The nickname al-Bayâtî given to Sunûr, representative in Basra in 512-3/119 of the Seljukid amir Ak Sunkur al-Bulhârî, is quite probably connected with this tribe. There were numerous places called Bayat or Bayad in central and western Turkey in the 9th/15th and 10th/16th centuries of which few survive today. Most of these place-names, no doubt, belonged to the Bayat who participated in the conquest of Anatolia. There were Bayat among the Turkmen in northern Syria in the 8th/14th century. An important part of these, called Şâm Bayadî, used to go in the summer like other Turkmen tribes to the provinces of Diyarbakr, Kutahya and Tripoli. From the same century they are also seen in Iran, particularly around Kazzâz and Karahrud, to the south of Hamadhân. They numbered about 10,000 tents, and were perhaps more recently called Ak Bayat, probably to distinguish them from the rest of the Bayats in the country. The Ak Bayat reared some very fine horses known after them as Bayatî Nîchâdî, Şâm 'Abbâs used to send these horses as gifts to the ruler of India. The Bayatî mode (mahâbî) found in classical Turkish and Persian music has its origin in the songs of this tribe. It seems likely that these Bayats went to Iran from Syria with the Ak-Koyunlu conquest. Some of the Bayat clans in Iran live in Khurâsân and these are called, to distinguish them from the rest, Kârâ Bayats. One of the clans of the famous Kâdîrî tribe was of the Şâm Bayat. In fact, as shown by names of its clans, the Kâdîrî tribe has its origin in Turkey. Some Bayat are also found in Şirâk, particularly around Kûrkhû. The castle called Bayat south of Baghdad quite probably takes its name from them. This tribe produced a number of famous men; Korkut Ata (Dede Korkut), and Fuzûlî (Fudûlî) were of this tribe. Hasan b. Mahmûd Bayatî, author of Dîvân-i Dîvân âyâs, a work dedicated to the Ottoman Prince Dîvân, is, as indicated by his nisba, of the Bayat tribe.

**BAYÊN, B. SAMÑN AL-TAMIMI — BAYAZID I**

**BAYAZID (DOĞU-BAYAZIT),** a small town belonging to the Turkish Republic and situated a little to the south of Mount Ararat (Ağrı-Dâğ), close to the frontier with Iran. It has been suggested that the town was named after the Ottoman Sultan Bayazid I (791-805/1389-1403), who, according to this view, fortified the site as a post of observation against Timûr Beg. A more recent interpretation is that the name derives in fact from a prince of the Dânjlâyir dynasty, i.e., from Bayazid, the brother of Sultan Ahmed (784-813/1382-1410). The Ottomans captured the town in 920/1514, but did not obtain definitive control over the region until after the Persian campaigns of Sultan Sulayman in 940-942/1533-1536, 955-956/1548-1549 and 990-992/1583-1585. Bayazid and its adjacent territories formed, under Ottoman rule, a sanjak which was dependent at times on the eyâlet of Van, but more often on the eyâlet of Erzurum. The Russians, in the course of their wars with the Ottoman Turks, occupied the town in 1828, 1854, 1877 and again in 1914. Bayazid, now included in the Turkish province of Ağrı, (Ağrı) had in 1935 a population estimated at 28,000 inhabitants, the comparable figure for the entire sanjak amounting to just over 20,000 people, most of whom are of Turkish or Kurdish descent. Sheep and cattle rearing, the production of wool, hides and leather and the weaving of carpets constitute the main economic activities of the area.

(V. J. Parry)
mous Tawdrīkh, 27) which they did, and his only surviving brother (the others, called Savdjl and Ibrahim, were already dead) was immediately put to death to prevent a civil war. Lazar, the Serbian prince, was also executed on the field.

Bayezid spent the winter of 792/1389-1390 in taking Philadelphia (Alaşehir) and annexing the Turkish principalities in Western Anatolia, namely Aydın, Saruhanlı, Menteghe, Hamid and Germiyân. Süleyman, the Dündar Bey and Evrenuz (Ewrenos) [q.v.] were with him during this expedition. In Dümâdâ II 792/May 1390 he was in Karahisar (Afyon), preparing to march against Karaman-oghlu. He recaptured Beyşehir and laid siege to Konya. At this time Süleyman, back in Kastamonu, formed an alliance with Kâşif Burhan al-Din against Bayezid to help Karaman-oghlu. Apparently this threat made Bayezid give up the siege of Konya and sign a treaty with Karaman-oghlu in which he abandoned the whole region west of the Çarşamba river. The following year (793/1391) Bayezid attacked Süleyman, but Burhan al-Din defied him in support of his ally. In the spring of 793/1392 Bayezid made great preparations against Süleyman. A Venetian report of 12 Dümâdâ I, 794/6 April 1392 stated that as a vassal of Bayezid, Manuel Palaeologus was about to take part in the naval expedition against Sinop (Silberschmidt, 77). This expedition ended with the annexation of Süleyman’s territory (except Sinope) and his death. Then, in spite of Burhan al-Din’s protests and threats, Bayezid occupied Osmanlılar. But Burhan al-Din finally attacked Bayezid near Corumlu (Corum) and forced him to retreat. Burhan al-Din’s raiders reached as far as Ankara and Sivrihisar. Besieged by Burhan al-Din’s forces the Amir of Amasya handed over the castle to the Ottomans (794/1392). The next year Bayezid came and entered the city. Local dynasties such as Tağl al-Din-oghullarlı (in Çarşamba valley), Taşhan-oghullarlı (Merzifon region) and the lord of Baçra recognised Bayezid as their suzerain. Burhan al-Din harassed the Ottoman army on his way back (Başım u Râzım, 418-20).

Bayezid then found things more pressing in the west. After the victory at Kosoovo he had increased his control on Byzantium. His support first secured the throne to John VII (27 Rabî‘ II 792/14 April 1390) and then to John V and his son and co-emperor Manuel (16 Shawwâl 793/17 September 1391) who had showed his faithfulness to the sultan by accompanying him in his expeditions in Anatolia (Fr. Dilger, Johannes VII, 27-8). When Anatolian affairs kept Bayezid busy in the east, his Uğû beyliş [q.v.] by their raids held enemies under restraint on the western borders: Pasha-yigit submitted Vuk; Evrenuz (Ewrenos) [q.v.] conquered Kitro (Çitro) and Vodena and advanced into Hungary, but Burhan al-Din raiding in Wallachia, and Shâhinn was active in Albania. But Mircea cel Batran managed to take Silistre back and attacked with success, against the akâmîji in Karın-ovalı (Karnobat) when Bayezid was in Anatolia. Venetian activities in Morea, Albania and in Byzantium on the one hand, and Hungarian attempts in extending influence in Wallachia and the Danubian Bulgaria on the other made Bayezid decide to concentrate his efforts in the Balkans. He first occupied Trnovo (7 Râzâm 795/17 July 1393) which had been under Ottoman control since 790/1388 and Czar Shishman had to move to Nicopolis as an Ottoman vassal. In the winter of 796/1393-94 Bayezid summoned all of the Balkan princes and the Palaeologus to Serres and there attempted to strengthen their ties of vassaldom. In particular he wanted Theodore Palaeologus to hand over his main cities in the Morea against Venice. In despair, the Palaeologus, Theodore and Manuel turned against Bayezid and sought help in the West, especially in Venice. It seems that Bayezid then reconquered Thessalonica (Neshri, 88, gives the date as 19 Dümâdâ II 796/21 April 1394; the city was taken once in 796/1394 and lost probably in 797/1394). Bayezid also reconquered Thessaly, the conquered Salone, Neopatrai; Evrenuz entered Morea, but Theodore had given Argos to the Venetians (27 May 1394) (J. Loenertz in REB, i, 171-85). Another Ottoman division put southern Albania under direct Ottoman rule and Shâhinn exerted pressure on the Venetian possessions on the Albanian coasts [see Arnavutluç]. Bayezid also started the blockade of Constantinepol (796/Spring 1394) which lasted for seven years. In 797/1395 he invaded Hungary, and on his way attacked the castles of Slankamen, Titel, Beckserek, Temeghvar, Carashova, Caransebeş, Mehedia (see Actes du X. Congrès Int. d’Et. Byz., 220). Defeating Mircea on the Argesh river in Wallachia (26 Râdja 797/15 May 1395) he then put Vlad on the Wallachian throne. Bayezid then passed over the Danube to Nicopolis and seized and executed Shishman (13 Sha’bân 797/3 June 1395).

These bold conquests caused Hungary and Venice to conclude at last an alliance (796/1394) and to form a crusade in Europe against the Ottomans. When in 799/1396 Bayezid was making a major effort to take Constantinople the Crusaders under Sigismund came to lay siege to Nicopolis. Hurrying there, Bayezid inflicted a crushing defeat upon them (21 Dhu ‘l-Hijdja 798/25 September 1396) and took Vidin from Stratsimir, the last independent Bulgarian prince. Now the fate of the Balkans and Constantinople were in Bayezid’s hands. In the imperial capital Manuel had to agree to Bayezid’s settling there a Turkish colony with a şâbîl. Evrenuz took Argos and Athens (799/1397). Then the sultan went back to Constantinople because of the hostile movements of Karaman-oghlu during the crisis of Nicopolis. He defeated and executed Karaman-oghlu at Açıka and incorporated his territory with Konya (800/Autumn 1397). The following year he incorporated also the region of Dianik and the territory of Burhan al-Din [q.v.] and disregarding his alliance with Egypt against Timur (Tamerlane) [q.v.] conquered Albistan, Mala-tya, Belusini, Kahta and Divrigi: Fritiof Berg.

Marshal Boucicaut’s attack on the Turkish coasts and the small force he brought to Constantinople were not enough to relieve the city (800/Summer 1399),
so Manuel II went to Europe to ask more help (10 Rabic II 802/10 December 1399). In the Autumn of 1399 Timur once more appeared in eastern Anatolia, and hopes were high in the West as they were during his first invasion of eastern Asia Minor in 796/1394. From 802/1399 on Timur claimed suzerainty over all the rulers in Anatolia as the representative of the Djezgizkhândis whereas Bayazid claimed to be the heir of the Saldjûks there. Timur hesitated before attacking the sultan of the ghâzis. Timur gave refuge to the Anatolian rulers expelled by Bayazid by Karâ Yûsuf and Ahmad Djâlrâ. This exasperated Timur. He took and sacked Sivas (802/August 1400), to which Bayazid retaliated by capturing the Amir of Erzindjân, a protégé of Timur named Mutâshârten (803/1401). Finally Timur and Bayazid came to grips at Cubuk-ovaüs near Ankara (27 Dhu 'l-Hijjah 804/28 July 1402). Defeated and taken prisoner by Timur, Bayazid died in captivity at Akseheir (13 Sha'ban 805/8 March 1403) Bayazid's hastily founded empire collapsed. The Anatolian princes, who all regained their respective territories (804/1402), as well as the Ottoman princes, who divided the rest of the country among themselves, recognised Timur as their suzerain. It was not until Mehemmed II that the Ottomans again assumed the offensive in East.

Bayazid was responsible for the foundation of the first centralised Ottoman empire based upon the Kûl system and the traditional administrative methods perfected under Muslim-Turkish states in the Middle East. Popular tradition criticised him as an innovator in finances, administration and manners.

(Bàiit Iwhalîcî)

BAYAZID II, Ottoman Sultan (886/918/1481-1512), was born most probably in Shawwâl or Dhu 'l-Ka'da 851/December 1447 or January 1448 (some sources give the date of his birth, however, as 856 or 857/1452 or 1453). During the lifetime of his father, Mehemmed II, he was governor of the province of Amâsya and served in the war against Uzun Hasan, the leader of the Ak Koyûnlû Turco- mans, being present at the battle of Otluk Bell in 878/1473. On the death of Mehemmed II in 886/1481 a conflict for the throne broke out between Bayazid and his younger brother Djem, then governor of Karamân, with his residence at Konya. The support of the Janissaries and of a powerful faction amongst the great officials at the Porte ensured the accession of Bayazid to the throne. Djem, defeated in battle near Yeni-Shehir in Rabî' II 886/June 1481, with
Poland, however, made peace with Moldavia in April 1499, this agreement being soon followed by a renewal of the former truce between the Ottomans and the Poles.

The reverses experienced in the war against the Mamlûks, Bâyazîd sought to provide his troops with arms more efficient and of greater offensive power than the weapons hitherto available, and also to create a more mobile and more competently manned artillery force. At the same time efforts were made to increase the size and strength of the Ottoman fleet, numerous vessels of war being built in the ports of the Aegean and the Adriatic. A new war was indeed imminent, which would test the worth of these armaments and of the much augmented naval forces of the Sultân. Friction along the borders of the Venetian enclaves on the coasts of the Morea, Albania and Dalmatia, where the Ottoman ghâlis faced the Greek, Cretan and Albanian mercenaries in the service of the Signoria, and also the repeated occurrence of "incidents" at sea, induced Bâyazîd to make war on Venice in 904/1499. A decision influenced by the fact that, since the death of Djiem in 1495, some of the high dignitaries at the Porte had been urging the Sultân to pursue a more aggressive policy towards the Christians. Lepanto, lacking all hope of relief from the sea, because the Venetian fleet had been driven to take refuge under the guns of Zante, fell to the Ottomans in Muharram 905/August 1499. Meanwhile, the frontier warriors of Persia carried out a great incursion into the Friuli and then, reinforced after the capture of Lepanto, ravaged the Venetian lands as far as Vicenza. Modon, Coron and Navarino in the Morea yielded to the Ottomans in 906/1500, and also Durazzo on the Adriatic coast in 907/1501. Venice, finding the conflict too expensive, sought peace in 908/1502 and in the final agreement concluded in 909/1503 renounced all claim to Lepanto, Modon, Coron, Navarino and Durazzo. Bâyazîd could feel well satisfied with the outcome of this war, which had brought solid territorial gains in the Morea and on the Adriatic shore and, more notable still, had underlined the fact that the Ottomans were becoming a formidable power at sea.

The years 909-918/1503-1512 witnessed the growth of a major crisis in the East. Ismâ'il, the head of the religious order known as the Şâfawîyya, had begun in 904-905 a career of conquest which soon made him the master of Persia. The Şâfawîyya had long conducted, on behalf of the Şâfi'i faith, a vigorous propaganda amongst the Turcoman tribes of Asia Minor—a propaganda so successful that the armies of the new régime in Persia consisted to a large degree of warriors drawn from these tribes. As orthodox or Sunni Muslims, the Ottomans had reason to view with alarm the progress of Şâfi'i ideas in the territories under their control, but there was also a grave political danger that the Şafawîyya, if allowed to extend its influence still further, might bring about the transfer of large areas in Asia Minor from Ottoman to Persian allegiance. An additional threat arose from the fact that Şâfi'i beliefs flourished in those regions along the Taurus frontier which were in dispute between the Ottomans and the Mamlûks. Ottoman intervention here against the adherents of the Şafawîyya might well drive the Mamlûks, despite their profession of the Sunni faith, into an alliance with the new Şâfi'i state in Persia.

Bâyazîd, aware of the danger, ordered in 907-908/1502 the deportation of numerous Şâfi'i elements from Asia Minor to his recent conquests in the Morea. He also garrisoned his eastern frontier in force, when in 913-915/1508 Şâh Ismâ'il, then at war with 'Âlâ al-Dawla, the prince of Alhûstân, occupied Dîyûr-Bakr and large areas of Kurdistan. How critical the situation had become was made clear on the outbreak, in 917/1511, of a great Şâfi'i revolt in Tekke, a region of Asia Minor long noted as a centre of heterodox religious ideas. The rebels, after plundering Kutâhşa, advanced on Brusa, but then, retiring in the face of superior forces, suffered a total defeat between Kayseri and Sivâs in the summer of 917/1511—a conflict in which both the Ottoman Grand Vizier 'Ali Pasha and the rebel chieftain, Şâh Kûlî, were slain.

Meanwhile, the Ottoman empire had come to the verge of civil war. The practice that a new Sultân, on his accession to the throne, should order the death of all his brothers and their male children imposed on the sons of an ageing Sultân a dire pressure to prepare for armed conflict on, or even before, the death of their father. There had been war between Bâyazîd and Djiem in 886-887/1481-1482; now, the issue was to rest between Ahmed, who was governor of Amûsya, and Selîm, who had charge of the remote province of Trebizond (Kölküd, the eldest of the three surviving sons of Bâyazîd, enjoyed little favour at the Porte and had but a minor rôle in the events which now occurred). Selîm, in 916/1511, sailed from Trebizond to Kaffa in the Crimea and, having won the support of the Tatar Khân, moved with his forces across the Danube, demanding of his father the government of a province in the Balkans. Bâyazîd, reluctant to make war on his own son and worried about the revolt of Şâh Kûlî in Asia Minor, yielded to the wishes of Selîm and, in a formal agreement, conferred on him the great frontier province of Semendria. The news that the Grand Vizier 'Ali Pasha, who favoured the cause of Ahmed, had been sent with a strong contingent of Janissaries to crush the Şâfi'i rebellion aroused in Selim the fear that, if Şâh Kûlî should be defeated, 'Ali Pasha might make a bold effort to raise Ahmed to the throne. Selim now marched on Adrianople, where his father was in residence. Bâyazîd withdrew in the direction of Istanbul, but then stood firm at Uğrash-deresi near Çorû. The Janissaries, although well disposed towards Selim, refused to remain loyal to the old Sultân. Here, on 8 Dümâd 1 917/5 August 1511, their skill and discipline routed the Tatar horsemen of Selim, the prince himself fleeing from the battlefield to seek refuge in the Crimea.

Ahmed, after the defeat of Şâh Kûlî, advanced towards Istanbul, hoping to cross the Straits and ensure his own accession to the throne. Disturbances amongst the Janissaries at the capital in Dümâd 1 917/August 1511 overawed the adherents of Ahmed at the Porte. Ahmed, realising that the Janissaries had thus declared their support for Selim and their intention not to accept himself as Sultân, now used armed force to bring much of western Asia Minor under his control—a course of action which amounted to open rebellion against his father. The result was that Bâyazîd consented to recall Selim from Kaffa and to restore to him the province of Semendria. There was, however, a growing fear at the Porte that Ahmed would make an alliance with the Şâfi'i régime in Persia. This fear, together with the demand of the Janissaries that Selim should lead them in the now inevitable campaign against Ahmed, hastened the issue of events. Bâyazîd was compelled to abdicate in favour of Selim in Safer 918/April 1512. The old Sultân had chosen to retire to the town of
his birth, Demotika, but while travelling to this destination, died on 10 Rabūṭ I 918/26 May 1512.

When he was nearing sixteen, his father took him along on one of his trade journeys. Later, Bāyazīd made several more. On these he must have met Pir-i Kdmil (as in Tadhkira, f. 82b) the Mufyid (Isma, Tadhkira, f. 92). He claimed descent through Sh. Sirādī al-Dīn (his fifth ancestor) from (Abū) Ayyūb al-Ansārī, the famous Companion of the Prophet, (his 21st ancestor). His mother Aymana (varr. Biban, Biban, Mā-Shāhir al-4Uman, ii, 245), the second cousin of his father, was a daughter of al-Ḥādīḍi Abā Bakr of Jallandhar, in which city Bāyazīd was born c. 931/1525, i.e., a year before Bābūr had founded his Empire in India. His father left for Kānīgurām (Wazirāstān), his home-town, before the child had completed his forty days. Alarmed by the establishment of the Mogul supremacy, the people of Bāyazīd fled (c. 956/1549) to Bābār and thence went with him to Kānīgurām. 4Abū Allāh, who had another wife (and several children by her), now developed an aversion for Aymana and divorced her. Bāyazīd, then about seven, found his subsequent home life extremely unhappy and gradually he developed a life-long estrangement from his parents and step-brother. His early schooling was interrupted as he was called upon to attend to home affairs and trade, but he turned to his studies whenever possible, though always confining himself to what related to the questions of divine worship. He applied himself diligently to acquiring a detailed knowledge of, and a punctilious performance of, devotional exercises and other religious duties. But he felt himself baulked in every direction, for his father would not let him perform the ḥaḍīḍ or go elsewhere for further studies, or allow him to become a disciple of a Pir. When he was nearing sixteen, his father took him along on one of his trade journeys. Later, Bāyazīd made several more. On these he must have met (as in Tadhkira, f. 82b) the Multāb (Ismā’llī) Sulaymān, whose influence can be seen, among other things, in the excessive emphasis on the doctrine of the Pir-i Kdmil (as in the “perfect spiritual director”), the frequent use of τάλατα, etc., in certain Ḥūrif doctrines
The Tadhkira refers also to Bayazid’s association with Yogis, from whom he learnt the doctrines of transmigration of souls and of divine inspiration (ma’rifa). This is not expressly mentioned in the Hāl-nāma, but if, as some Ṣ añārīs of Jalandhar believe, he is identical with ‘Vaḍīd’ who compiled Shlokas (see Onkār Nāth, Vaḍīd ādi de shlokā, Lāhore n.d.) he shows considerable knowledge of popular Hindū lore, and some verses of the editor of the Hāl, 502 f., may indeed have been inspired by the shlokas directly or through the Khaṣȳr al-Bayzīd.

The time had now come to preach to others. He was going with a caravan to India, but he returned home from Kandahār, had an underground cell constructed, in which he made his wife and a few others observe Ṣillās, to begin with. Later, he received orders to preach openly. On the basis of dreams of his own and others, people began to call him “Mīrā Mīrā”. He met a great deal of local opposition, especially the Shinwāris and Mohmandzīs and was so impressed with their sincerity and devotion to his cause, that he and his sons and a daughter married among them. A dā’ī then converted the Kāsīs of the Kandahār region, especially the Shinwāris and Mohmandzīs and some Bārech and Sāṣīs of Kandahār.

After some years’ work among them, the dā’ī appeared among the Sindhis and Balōḍīs and made Sayyidpur (near Ḍhādarat-Sind) the centre of his activities. The Pīr and his agents (who were allowed to work only in his name and never in their own) had a remarkable initial success everywhere, in spite of the violent opposition aroused by the rival pīrs, ‘ulāmā’, etc., except in Turān, where such rivals do not seem to have existed. At this stage, Bayazīd sent his missionaries (from Kālla Dher in Ḥaḍhsīnagār, Mākhsān, f. 154 b) to the rulers, nobles and ‘ulāmā’ of the neighbouring countries inviting them to the acceptance of his claims. One of them was sent to the Emperor Akbar, another to Mīrā Sulaymān of Badagahshān. Some more were sent to India, Bālḵ and Būḵhārā. Sayyid ‘Alī Tirmūzī, the mūslih of the Aḥjūnī also got one (Tadhkira, f. 92 b).

His teaching: The central doctrine of Bāyazīd could be briefly stated thus (see Ṣirāl, 1): Gnosis of God (“the Truth”) is an imperative duty (fard-i ‘ayn). This gnosis without which obedience (fā’a), divine worship (‘ibāda), charities and good works, are not acceptable to God, cannot be obtained except through a Perfection of Spiritual Director (pir-i kāmil). He is one who is a man of law (shari’a), the Way (ṭariqa), of the Truth (ḥakība), of the gnosis of God (ma’rifa), of Nearness (burba), of Union (waṣla), of Oneness with God (waṣda), of Tranquillity (ṣukina = sakina of Ṣirāl, 110). He is a Reveler of the truths of divine secrets, an Embodiment of taqallud bi-ahhīd Allāh, i.e., his spirit acquires divine qualities (cf. ibid., 23). Seeking and obeying him is incumbent on all. Obedying him is obeying the Apostle of God, and therefore obeying God. Such a Perfect Director is Bayazīd himself, who was told both this in dreams and when awake, and those who sincerely obey him would be led by him through the above stages to taḥkīd (cf. Ṣirāl, 24 f.).

Special stress was laid on the neophytes’ repentance (taubah), retiring to cells, observing illsaṣ once a year, invoking the divine name in silence, meditation, and similar ascetic practices. When they had reached the last stage in their “ascent”, presumably they looked upon themselves as free from the obligations imposed by the shari’a (cf. Tadhkira, 88 a).

What Dabistan, 251 (Nasar 2), gives as his doctrines are probably his war regulations relating to the period in which he was at war with the Mughals and other Afghan tribes hostile to him.

His missionary work outside his home town. He began with a village a day’s journey from Kāṅgīrūm, met violent opposition and fled back to his home town, where too there were strong reactions against him, amounting almost to his ejection from the community. But he adopted a conciliatory attitude and that saved the situation for a time. A dā’ī of his having prepared the ground among the Dāws (or Dāwris) of the Tochī Valley in northern Wazīristān, he went there, and even performed some miracles. A clever agent of his then prepared the ground for him farther afield and in due course he appeared among the Bangāṣh, then worked his way up and won over the Orakzīs, Tirāṁs and Afīrīs. Passing on to the Ṣarābān land of Peshāwar, he converted numerous tribesmen of the Ḳalīl, Mohmand, Da’sīs, Gagāṁs, Yūsufās, Tūsīs and Sāṣīs. Complaints against him having reached Kābul he was hauled up by the young governor of the Province, Akbar’s brother Mīrā Muhammad Ḥakīm (b. 961/1554 d. 990/1583) and Bāyazīd had to face an inquisition conducted by Kāḏkhān, the Ṣadīq of Kābul. Bāyazīd gave clever answers and was allowed to return to Peshāwar. He now resumed his work among the Mohmandzīs and was so impressed with their sincerity and devotion to his cause, that he and his sons and a daughter married among them. A dā’ī then converted the Kāsīs of the Kandahār region, especially the Shinwāris and Mohmandzīs and some Bārech and Sāṣīs of Kandahār.
which brought down upon their heads the wrath of the authorities in Kabul, and the villagers carried into captivity. On the death of Bāyazīd, Mūsā Khan, the Governor of Peshawar, was ordered to arrest him, but he escaped to a hill in the Yūsufzī region and, being besieged there, successfully fought his way to Khaybar and Tirah. This first battle-ground was named by him Aqāzpur. The war lasted during the remaining 2½ years of his life, till his death in 980/1572-73. The details of it are supplied not by the tājīl-nīma, but by Mūllā Darwīza, according to whom Bāyazīd was finally defeated at Torragha by Muḥṣīn Kūhā Ghāzī, who had led an expedition against him from Djalālahbād. The Pir fled on foot to the hills, suffered pangs of exhaustion and thirst and ultimately died at Kālā Pānī but was buried in Hāshīnāger (Tadhkira, f. 91b). Some Gujārs were found desecrating the tomb at night, so Bāyazīd’s son and successor Sh. ‘Umar removed the coffin in which he was buried and kept it in front of him when on the march, until in the confusion of a battle (98/1569), it fell into the Indus. It is said that he has been recovered later and buried in Bhattapār. (Hāl, 483 f., 493-525). This place appears to have been three days’ journey from Kaniguram (Hāl, 156).

His literary and other cultural activities. Bāyazīd wrote an autobiographical-cum-propaganda work, and many tracts, to explain the tenets of the sect he had founded. Out of these treatises only 9, 113, 117, 125). His Arabic, from a literary point of view, is weak and ungrammatical, even allowing for the fact that the MSS. of his works which have reached us are late copies. His chief opponent and contemporary Mūllā Darwīza (Tadhkira, f. 80b) finds in the Khayr al-Bayān Arabic words strung together “without a sense of proper syntactical relationship” (biḥā tāriḵ-i tarkīb). These works were read and explained by him to the members of his family (Hāl, 689) and his other disciples, and the Khayr al-Bayān and Maḥṣūl al-Muʿminīn especially, acquired a semi-sacred character for them. He claimed that the former work had been revealed to him. Hotly pursued, on one occasion, at night, by the Yūsufzīs, his son ‘Umar halted his troops and waited till the work, which had been forgotten at some place on the way, had been retrieved (Hāl, 498). The Maḥṣūl al-Muʿminīn is said to have saved the life of another son of Bāyazīd (Djalāl al-Dīn), for, when he was carrying it, it shielded him by receiving the sword-cuts and dagger-thrusts from his enemies. A darwīsh heard a voice from the unknown asking him to retire to his home and devote himself to the study of these two books (Hāl, 390), and so on. Judging from what remains of his Afghan prose, it seems that he attempted to write in rhymed prose (ṣadf) following Arabic and Persian models, even to the detriment of the idiom of Pushto. Because of the nature of the subjects dealt with (religion, mysticism, morality), he had to use freely the familiar Arabic and Persian terminology along with the words of the Yūsufzī and Kandahār dialects of Pushto (see Urdu Encyclopedia of Islam, art. Bāyazīd Anṣārī). The following of his works are traceable:

1) Khayr al-Bayān, in 40 chapters (Hāl, 431). Some passages of it, according to the Tadhkira, were in Arabic and Persian, some in Afghan and Hindi (but cf. Dabestān 251) though “all the sections were inharmonious and incongruous” (nā mawṣūm wa nā muwāṣṣīk). The Ḥāfiz even asserts that part of the work was contributed by Mūllā Arzān Khweshd of Kasūr, a Ḥāfiz of the Pir. On his death-bed, when asked by his disciples for his last injunctions, Bāyazīd directed their attention to the Khayr al-Bayān, in which, he said, he had recorded unthinkingly whatever was revealed to him (Hāl, 483). The work is said to have attempted an affirmation of pantheistic belief (wakad-i ngalīd) (Maʾādhīr al-ʿUmarāʾ, ii, 243). No copy of it is known to exist except the one (transcribed in 1061/1651, ff. 167) which was sent to Sir Denison Ross by someone and is now said to be in-traceable. Prof. Morgenstierne (Oslo) published some extracts from it, with their English translation, in the Indian Antiquary. 2) Maḥṣūl al Muʿminīn (Arabic). Only two copies are known, one with me (with interlinear Persian translation), transcribed in 1224/1809, and the other in the Aṣfīyya transcribed a year later (see Cat. i 390/86, Brockelmann, 5, II 38). This handbook of the Rawshānīyya doctrine was composed by Bāyazīd at the request of his eldest son ‘Umar (who is occasionally addressed in it as “O! my dear son!”) for the benefit of the faithful who were to read, remember, and act according to it. It has 21 sections. The first thirteen forming more than half of the work, deal with such topics as Admonition, Reason, Faith, Fear, Hope, Spirit, Satan, Heart, Soul, This World and the Next, Trust in God, and Repentance; the last eight deal with the eight stages (see above) from sharīʿa to sakāna. 3) Šīrāt al-Taʾwīl (Arabic-Persian). This partly autobiographical treatise begins with a description of the stages of his spiritual development up to the time when he discovered the Pir-i Khūz in himself, and ends in a risāla addressed specially to kings and amirs. It contains an admirable detailed account of the course of his spiritual development, and describes the various disciplinary stages for the ascent of the soul of man, possible only under the guidance of the Perfect Pir. He urges them to seek repentance at the hand of such a Pir (Šīrāt, 71 f., 184 ff.). Bāyazīd tells those who had gone through spiritual exercises under his supervision or that of his disciples that they had won divine favour according to their capacity, for capacity and sincerity were indispensable for the ‘ascent’. It is stated in the colophon of the work that it was composed in 978/1570 and that “whoso studies it and acts according to it will learn Šīr al-Taʾwīl”. A copy of the work was sent by the author through a special messenger to the Emperor Akbar, who was pleased to receive it (Hāl, 468). A copy, ed. M. A. Shākūr, Pāshāwār 1952. The text is based on an original slightly defective at the beginning. 4) Fākhr (7), the MS. has 3 or 4) al-Tāḥīb (Hāl, 468 f.), a treatise sent by Bāyazīd to Mirzā Sulaymān of Badakhshān at the time he sent his works to the various princes. No copy is known to exist.

5) Hāl-nūma (Persian), an autobiography of Bāyazīd re-edited and amplified by ‘Ali Muḥammad “Mukhīs” b. Aḥā Bakr Ḵandāḫārī, a “home-born”
(khatamāt) of the sons of Bāyazid and a ḥālitāt of the sect.

There is one undated copy (ff. 526) in Aligarh (Subhan Allah Oriental Library No. 920-37). From it the Pandjab University copy was made recently (745, ll. 20), and the references given in this art. relate to this copy. No other copy of the work is known to exist, but Count Noer (A. S. Beveridge’s tr., ii, 148) refers to some “existing fragments” of it.

Abā Bakr, father of ʿAlī Muḥammad, had served Djalāl al-Dīn as a boy, and later, commended troops under Abād Dād, and still later came to India with the members of the family of Bāyazid when they moved to India. ʿAlī Muḥammad served Bāyazid’s grandson Rašīd Ḫān in the Deccan, and settled down in Rašīḍabād, a village in Shāmsabād Māʿū (Ḥāl, 714, Maʿāṭir al-ʿUmārāʾ, ii, 250), near Āgra (Gazet. of Jullundur District, 99).

The text of the Hāl-nāma of Bāyazid, the editor tells us in his preface, had become corrupt in course and continuation relating to the military exploits of his sons and grandsons had to be added. At the request of some friends he supplied this, drawing upon written and oral sources. The narrative, which is brought down to the accession of Awrangzīb (1659–60, Hāl, 729) is of a considerable literary merit, though it has lengthy digressions in prose and verse (often of his own composition) dealing with the doctrines of the sect and minor incidents relating to the faithful. The earlier part, giving a full and detailed account of the life of Bāyazid, has much fewer dates, and some of them, as compared with those in the latter part, are open to doubt, but the narrative of the life of Bāyazid lacks details of his war with the Mughals (fought in the last 2½ years of his life) and ends abruptly. But he gives a very full and up-to-date account of the descendants of the Pīr, both male and female, and their genealogies.

The Hāl-nāma (453 f.) claims that Bāyazid made definite contributions towards the cultural rise of the Afghān people. He was the first, according to this work, to compose ḥādasas, ḡazals, ṭubstäyyāl, ḥīfās, maḥānasāts etc. in Puṣhto, though before him people wrote only a few verses or two. This, however, is an exaggerated statement, as ḥādasas etc., of a much earlier date are known to exist. But it may be true that following his example, Bāyazid’s sons and disciples composed several Puṣhto diwāns, full of lofty truths and fine ideas. Other Afghāns, outside the sect, also followed these models, and an impetus was given to the more frequent use of Puṣhto as a literary medium.

The Pīr also made contributions towards the improvement of the music of the land. Ḥādīqī Muḥammad, a ʿalām of Mir Faḍl Allāh Walī (the Ḥurūfī? d. 796/1393), added some strings to the rebeck (rubāb) and as a result of his instructions the Afghān musicians produced new tunes, generally dance-tunes, but the players could not play them with proper rhythm, so Bāyazid improved their rhythm and under his guidance the musicians were able to compose surūd-i sulkāt (“the mystic’s song”), a sort of devotional music and other pleasing tunes, and the following six modes:

n. d. s. a. r. i. (dhanisāri?); pandj purda; tāhār purda; si purda (five, four and three melodies); martial notes (for the battlefield); and maḥām-i ḡāḳādād (“the mode of bearing witness or martyrdom”). Even as a boy Bāyazid had shown great sensitiveness to music and would dance in ecstatic delight when songs were sung (Ḥāl, 23 f.). Several of his sons and grandsons proved to be expert musicians and one of them, Abād Dād, employed musicians who took turns and played music day and night for his entertainment (Ḥāl, 581 ff.; see also 672, 680 etc.).

The Pīr is also credited with the popularisation of the Afghān script.

Decimated by internal and external wars, violently opposed by the ‘ulama’, and later mostly scattered in various parts of India, the followers of the sect almost disappeared. The tenets of the sect are said to be professed to-day only “by the immediate descendants of the founder in Tīrāb and Kohāt and some of the Bangāsh and Orakzai Pathans” (Gazetter of the Peshawar District 1897–98, 60; cf. J. Leyden, Asiatic Researches, xi, 363).

Bibliography: Apart from the standard Mughal historical works, particularly the Maʿāḍhir al-ʿUmārāʾ, ii, 242 (Bibl. Ind.), the following are important:

ʿAlī Muḥammad b. Abā Bakr Kandahārī, Hāl-nāma-i Pīr-i Ḥādīqī (Pandjab University Library MS.; Bāyazid Anšārī, Maḥānd al-Muʿāmmīn, my MS.; idem, Širāt al-Taufīkī, ed. Muḥammad ʿAbd al-Shākir, Peshāwar 1952; Aḥkund Darwīzā, Maḥānd al-ʿĪslām, my MS., f. 8b., 9b., also the Cat. of Persian MSS. in the Library of the India Office, nos. 2632–8; idem, Taḏkira al-Abrār wa-l-Āḥārīr (Persian), Pandjab University MS., f. 82 ff., s. a. A. H. 1021 (see also Rieu’s Cat., i, 28, Or. 222; J. Leyden, On the Roshenīan Sect and its Founder, Bāyazid Anšārī (Asiatic Researches, xi, 363 ff.); Graf Noer, Kaiser Akbar, ii, 180 f. (English tr. by A. S. Beveridge, Calcutta 1890, ii, 138); G. Morgenstierne, Notes on an old Puṣhto Manuscript containing the Khais-ul-Baydīn of Bāyazid Anšārī, in New Indian Antiquary, (Bombay), Vol. ii, No. 8 (Nov. 1939), 566 ff.; Maʿāḍirī (an Urdu Magazine publ. at Aṣḵandgarh), col. ix, no. 6 (1927), 450; Sayyid ʿAbd al-Dībbār Shāḥī Sīhānawī, ʿĪrātan i-ʿUlā-i-l-ʿAbdār (Urdū), 45 ff. (author’s autographe). See also the art. Rawshshānīyā (Mohammed Shāfar) BAYAZĪD AL-BĪSTĀMĪ [see Abu Yaṣīd al-Bīstāmī].

BAYBAR S. AL-MALIK AL-ZĀHIR RUKN AL-DĪN AL-SALIH, fourth Mamlūk sultan of the Bahri dynasty. He is said to have been born in 620/1223 and to have been one of a group of Ḥūrūfī Turk slaves purchased by the Ayyūbīd sultan Malik Saleh. His first master had been Aydakin Bundufcdar, whence his surname Bundūkdārī, which also explains in Marco Polo’s work (ed. Hambis, II), “Bondodaira, sultan of Babylonia”. He appears first in history in 636/1239, in prison with his master Malik Sāliḥ at Karak. Several months later he was fighting in Syria on behalf of the sultan of Egypt, serving there a rough apprenticeship in the military life, not to mention the intrigues of the last Ayyūbīd princes which offered a gloomy example for his contemplation. His first military accomplishment consisted in taking command of the Egyptian army on the battlefield at Mansūrah, which ended in the decisive victory of Fāraskūr and the capture of Louis IX king of France. It was then that upon his instigation that Tūrān-Shāh was assassinated in 648/1250, the plot unfolding in the guise of resistance to the enemy. This murder, whose odious character is scarcely disputable, settled nothing. Weakness was general. Baybars undoubtedly bore the responsibility for it, and in it the reign of the Mamlūk sultans had its beginning. The origins were bloody and when
Sultan Küçü realized power the Mongol hordes had begun their invasion of Syrian territory. A bloody encounter took place at Ayn Djilút [q.v.] in Palestine. Sultan Kutuz distinguished himself there with enormous valour, as well as the Mongol general who was killed. The Egyptian success was decisive, owing to the tenacity of a sultan against all odds that had managed to field an army. Baybars had fought in the vanguard.

We know little of the sequence of events which led to yet another tragic end; Küçü was assassinated in his tent; this deed being accomplished by a group of officers of which Baybars was one. Clashing ambitions have been mentioned; at any rate it was Baybars who gained the throne (658/1260).

There had already been two murders; but the glory of the sovereign will conceal from history the perfidy of the officer. We will examine his rule chronologically, for the evolution of events allows an evaluation of his activity, which can be confirmed by the written sources. His period cannot but recall that of Salahadin: the achievement of a unity of command, and the victorious war against the Franks. These are two elements of the comparison which accruing to the advantage of Baybars. He wiped out feudalism rather than created it: he lacked any family to provide for. Moreover, Salahadin's offensive, of which the title to glory is the capture of Jerusalem, was a blight of thunders without consequence. In this respect too the advantage lies with Baybars, whose forced marches, rapid and unexpected, were not without method: every inch of conquered land was put immediately in a state of defence.

Internally the organisation of the state manifests an exceptional harmony and equilibrium. Beyond his actions, which one can establish by deeds and dates, Baybars gives the impression of a man who dominates events with an imperturbable optimism.

From the year 659/1261 the new sultan consolidated the key points of his future offensives. Every citadel which had been destroyed by the Mongols, from Hims to Hawran, were put in order and provided with victuals and ammunition.

In his eyes these military precautions were insufficient. He insisted upon being informed rapidly, upon being able to group his officers of which Baybars was one. Clashing ambitions have been mentioned; at any rate it was Baybars who gained the throne (658/1260).

On the first of Rabî‘ II 663/21 January 1265, this enormous army, commanded by the sultan, left Cairo, for the first stage of the great offensive against the Franks, which would not terminate until 670/1271. Their strongholds were taken one after another. In 663/1265 it was the capture of the port of Caesarea which split the Frankish possessions in the south and isolated Jaffa; further north Aqîkh and Hayyâ were occupied. The towns were destroyed: in the event of a reverse they could not serve as supports for the enemy. Then the army turned south and took the port of Arsuf. In 664/1266 simultaneous attacks were made all along the front, but the principal effort was directed toward the town of Safad, to the northwest of Lake Tiberias: the place was taken after a heavy siege. In 666/1268 Baybars turned towards the enclave of Jaffa which did not hold out for a day. One may read the account of that exploit, still engraved on the gate of the great mosque at Ramla in Palestine: "He lay siege to Jaffa at dawn and took it, with God's permission, at the third hour of the same day". A few weeks later a new line of defense was forced: the river Litani and the castle of Beaufort, opposite Tyre, became Muslim. Suddenly the Egyptian troops appeared at the northern point of the Latin kingdom, and Antioch capitulated. This conquest had a considerable repercussion, perhaps greater than the capture of Jerusalem by Salahadin. Since the beginning of the Crusades, Antioch had not once left the possession of the Franks. The neighbouring fortresses could resist no longer and Baybars took advantage in concluding peace with the king of Little Armenia, who was obliged to surrender a part of his domain to the sultan of Egypt. A final offensive, starting from Hims, cut the distant defences of Tripoli. The strongholds of Safidhâ, the Cast of Crac and of Akkâr were taken in two months, in the course of 668/1271.

Meanwhile the sultan, habitually dividing his time between Cairo and Damascus, had made the pilgrimage in 667/1269. Negotiations led in 668/1270 the lord of the Ismâ‘îlî forces to pay tribute to the sultan, who, preoccupied with the expedition of Saint Louis to Tunis, thought for a moment of going to the aid of the Maghribi. Reconsidered, the expedition was set off again for the conquest of the Ismâ‘îlî fortresses, then returned to Cairo. The year 670/1272 was dedicated to a general inspection of Syria. The historians agree in their accounts of how the sultan would arrive unexpectedly, changing direction on route to preclude any foreknowledge of his itinerary. In 671/1272-73, he left Damascus for Bireglik, overwhelming a Mongol detachment near there. Other divisions of the army were operating in Nubia, in the region of Barka and in Armenia. The Franks had at last got a respite. After a year of calm, Baybars was again in Armenia, during 674/1275, where he took Sis and Ayas. The year 674 is marked by an expedition to Nubia, led by the sultan's lieutenants. In 675/1276 Baybars was in Asia Minor where he took Caesarea (Kayseri) in Cappadocia, after having defeated the Saïdjudjík and their Mongol allies. Then he returned to die at Damascus in the early part of 676/1277, at the end of a substantially full life.

The Crusaders never recovered. One can evaluate the territorial losses of the Frankish kingdom at the death of Baybars: the principality of Antioch virtually existed no longer; in the south the frontier had been pushed back from Jaffa to Acre. Everything considered, the Crusaders possessed
only a narrow strip of the coast, while the Mamluks held all of the crests.

The seventeen years of Baybars' reign show a balance of thirty-eight campaigns in Syria. Of the nine battles with the Mongols, only the last was due to the initiative of the sultan, the others being considered counter-attacks. There were five significant engagements with Little Armenia. The Ismâ'îll sectaries, the Assassins, suffered three attacks. On the Franks, the most abused, the Egyptian troops inflicted twenty-one defeats.

The military activity of the sultan was not the result only of the orders which he gave; he took personal command in fifteen battles, not fearing when it was necessary, to expose his own life. A few figures give an idea of Baybars' travels: he does not appear to have spent more than half the period of his reign in his capital at Cairo; he left it twenty-six times, and certainly covered more than forty thousand kilometres.

One sees in the rule of Baybars a splendid example of energy, bringing to light an unexpected political recovery. Under the impetus of this exceptional leader, Egypt, who had just undergone an internal revolution and had been the target of powerful enemies—Crusaders, Mongols, Ismâ'îll—was suddenly to impose its rule upon the Orient. The confusion following the fall of the Abbâsid caliphate in Baghdad, the bâtri of alliance between Crusaders and Mongols, the potential conspiracies of the disposed Ayyûbid princes, and the personal ambitions of the high-ranking Mamlûk officers, are all elements of the tragic combination which makes Baybars' success so extraordinary.

It was a stroke of genius on his part to welcome a refugee of the Abbâsid family, after the disastrous invasion of the Mongols in 656/1258, and to recognise him in Cairo as supreme pontiff. It was not merely a spiritual gesture, for the ruler had seen in it immediate and tangible consequences: suzerainty over the Holy Cities of the Hijâz. Finally, the Egyptian state might from that time on style itself the "Islamic Kingdom".

The exploits of this extraordinary warrior made him a legend in his own lifetime; the epic of Baybars is well below his actual biography. His life is indeed a story of adventure: the death of the hero, drinking a cup of poison prepared by another, is but part of the perfect romance.

Bibliography: The two chief primary sources for the life of Baybars are the biographies of Ibn ʻAbd al-Zâhir and of Ibn Ǧâhid, neither of which is fully extant. A British Museum manuscript of a version of Ibn ʻAbd al-Zâhir, covering the period up to the beginning of 666/1265, was published, with an English translation, by Mrs. S. F. Sadeque, Baybars I of Egypt, Dacca 1956. A more complete ms. of the same version, preserved in the Fâṭîmî library, is being edited by Mr. A. A. Khowaitir (see further B. Lewis, in Spectrum, xxvii, 1952, 488; C. C. Cahen in Arabica, v, 1958, 211-2; P. M. Holt in BSOAS, xxii, 1959, 143-5). A unique and incomplete manuscript of Ibn Ǧâhid's biography of Baybars, covering the years 670-76/1272-78, was found in Edirne by Ş. Yalıktay, who published an abridged Turkish translation of it (Baybars Tarîhî, Istanbul 1941) without the Arabic original. Further information will be found in the general historical sources (Maḳrîzî, Dhaḥabî, Ibn Taghribîrdî etc.). See also E. Quatremère, Souvenirs Mamlouks, ii; M. F. K. Hitti, Baybars, in Jâ'; M. D. S., al-Zâhir Baybars, Cairo 1938, and the general histories of medieval Egypt by G. Wiet (Histoire de la Nation égyptienne, iv, Paris, n.d., 367-82, 403-38) and S. Lane-Poole (A History of Egypt in the Middle Ages, London 1914, index). For inscriptions see RCEA, xi, nos. 4235, 4344; xii, nos. 4476 to 4478, 4485, 4501, 4528, 4552, 4553, 4556, 4557, 4592, 4595, 4598, 4599, 4600, 4608, 4611, 4612, 4623 to 4626, 4618, 4660, 4750, to 4662, 4673, 4686, 4690, 4692, 4714, 4723, 4724, 4726 to 4728, 4730, 4732 to 4735, 4737 to 4740, 4746, 4750 again, 4751, 4752. Further bibliography will be found in G. Wiet, Les Biographies du Manhal Sâfî, no. 708. (G. Wiet)
